2. The sign $+$ (plus) written between the symbols of two quantities or numbers, signifies the sum of those quantities or numbers. Thus $A + B$ means the sum of the quantities denoted by A and B, &c.

3. The sign $-$ (minus) written between the symbols of two quantities, signifies the difference of these quantities. Thus $A - B$ means the difference between A and B.

4. When a letter denoting a number is written close to a letter denoting any quantity, it signifies that the quantity is multiplied by the number, thus mA means m times A, also qmB means that B is multiplied by the product of the numbers q and m .

5. The quotient arising from the division of any quantity A by another quantity B is written thus $\frac{A}{B}$.

6. The sign $=$ signifies the equality of quantities denoted by the letters that stand on the opposite sides of it. Thus $\frac{mA}{mB} = \frac{A}{B}$ denotes that the quotient arising from the division of m times A by m times B is the same as the quotient arising from the division of A by B.

7. It is likewise supposed that the following principle in the arithmetic of fractional quantities is already known, namely, that if both the numerator and denominator of a given fraction be divided by the same number, the resulting quotients are the numerator and denominator of a fraction of the same value as the given one. It is upon this principle that the fractional quantity $\frac{mA}{mB}$ is concluded to

be equal to $\frac{A}{B}$, viz. by dividing both numerator and denominator by m , and so of other quantities.

DEFINITIONS.

34. When one quantity contains another a certain number of times exactly, the former is said to be a MULTIPLE of the latter, and the latter a PART of the former; thus 20 is a multiple of 5, and 5 a part of 20; and in general, m being any number, and A any quantity, mA is a multiple of A, and A a part of mA .

35. When several quantities are multiples of as many others, and each contains its part the same number of times, the former are said to be EQUI-MULTIPLES of the latter, and the latter LIKE PARTS of the former; thus 20 and 30 are equimultiples of 2 and 3, and in general mA and mB are equi-multiples of A and B; also, A and B are like parts of mA and mB .

36. RATIO is the proportion which one magnitude has to another.

Y y

tude

tude bears to another magnitude of the same kind, with respect to quantity.

NOTE. The measure, or quantity of a ratio, is conceived by considering what part or parts the leading quantity called the antecedent is of the other called the consequent. So the ratio of a quantity expressed by the number 2 to a like quantity expressed by the number 6 is denoted by 6 divided by 2, or $\frac{6}{2}$ or 3; the number 2 being 3 times contained in 6, or the third of it, and in general the measure of the ratio of A to B is expressed by the quotient of B divided by A, or the fraction $\frac{B}{A}$.

57. PROPORTION is an equality of ratios, and three quantities are said to be PROPORTIONAL when the ratio of the first to the second is equal to the ratio of the second to the third. As of the three quantities A (2), B (4), C (8); where $\frac{4}{2} = \frac{8}{4} = 2$, the same ratio.

58. Four quantities are said to be PROPORTIONAL when the ratio of the first to the second is the same as the ratio of the third to the fourth. As of the four quantities A (2), B (4), C (5), D (10); where $\frac{4}{2} = \frac{10}{5} = 2$, the common ratio.

NOTE. To denote that four quantities A, B, C, D, are proportional, they are usually placed thus A : B :: C : D, and read thus, As A is to B, so is C to D; but when three quantities are proportional, the middle one is repeated, and they are written thus, A : B :: B : C.

59. Of three proportional quantities, the middle one is said to be a MEAN PROPORTIONAL between the other two, and the last a THIRD PROPORTIONAL to the first and second.

60. Of four proportional quantities, the last is said to be a FOURTH PROPORTIONAL to the other three taken in order.

61. Quantities are said to be CONTINUALLY proportional, or in CONTINUED proportion, when the ratio is the same between every two adjoining terms, thus, 1, 2, 4, 8, 16, &c. are in continued proportion.

62. In a series of quantities continually proportional, the ratio of the first and third is said to be DUPLICATE to that of the first and second; and the ratio of the first and fourth is said to be TRIPPLICATE to that of the first and second, and so on.

63. INVERSE ratio is, when the antecedent is made the consequent, and the consequent the antecedent; thus, if $1 : 2 :: 3 : 6$; then, inversely $2 : 1 :: 6 : 3$.

64. ALTERNATE proportion is, when antecedent is compared with antecedent, and consequent with consequent, as if $1 : 2 :: 3 : 6$; then by alternation or permutation $1 : 3 :: 2 : 6$.

65. COMPOUNDED ratio is, when the sum of the antecedent and consequent is compared, either with the antecedent or consequent, thus, if $1 : 2 :: 3 : 6$; then by composition $1 + 2 : 1 :: 3 + 6 : 3$, and $1 + 2 : 2 :: 3 + 6 : 6$.

66. DIVIDED ratio is, when the difference of the antecedent and consequent is compared either with the antecedent or consequent, thus, if $1 : 2 :: 3 : 6$; then by division $2 - 1 : 1 :: 6 - 3 : 3$; or $1 : 2 :: 6 - 3 : 3$.

4. XXV. Equimultiples of any two quantities have the same ratio as the quantities them-

selves. Let A and B be any two quantities, mA, mB any equimultiples of them, number whatever; then will mA be to the same ratio as A and B, or A : B :

For $\frac{mB}{mA} = \frac{B}{A}$, the same ratio.

COR. Hence, like parts of quantities have the same ratio as the wholes, because the equimultiples of the like parts, or like parts of mA and mB.

THEOR. XXVI. If four quantities of the same kind are proportional, they will be also by alternation or permutation, the antecedents will have the same ratio as the

Let A : B :: mA : mB, then will A

For $\frac{mA}{A} = m$ and $\frac{mB}{B} = m$, both the same ratio.

THEOR. XXVII. If four quantities of the same kind are proportional, they will be proportional also or inversely.

Let A : B :: mA : mB, then will B

For $\frac{mA}{mB} = \frac{A}{B}$, both the same ratio

THEOR. XXVIII. If four quantities of the same kind are proportional, they will also be proportional, and by division.

Let A : B :: mA : mB.

Then will B + A : A :: mB + mA

or, B + A : B :: mB + mA

For $\frac{mA}{mB + mA} = \frac{A}{B + A}$ & $\frac{mB}{mB + mA} = \frac{B}{B + A}$

In like manner it will appear, that

B - A : A :: mB - mA : mA,

or, B - A : B :: mB - mA : mB.

For $\frac{mA}{mB - mA} = \frac{A}{B - A}$ & $\frac{mB}{mB - mA} = \frac{B}{B - A}$

THEOR. XXIX. If, of four proportions there be taken any equimultiples of the two antecedents, and any

whatever of the two consequents, the

resulting will still be proportional.

Let A : B :: mA : mB, and let pA

any equimultiples, of the two antec.

qB and qmB any equimultiples of the

consequents, then will pA : qB :: pmA : qmB

For $\frac{qmB}{pmA} = \frac{qB}{pA}$, the same ratio.

THEOR. XXX. If there be four

quantities, and the two consequents

added or diminished, by quantities

of the same ratio as the respective antec.

the results and the antecedents will still be

Let A : B :: mA : mB, and let pA

two quantities having the same ratio

antecedents; then will

A : B + pA :: mA : mB + pmA

Also A : B - pA :: mA : mB - pmA

For $\frac{mB + pmA}{mA} = \frac{B + pA}{A}$, the

THEOR. XXXI. If any number of

proportional, either of the antecedents

or consequents, as the sum of all the

to the sum of all the consequents.

GEOMETRY.

1

...ponding angles equal. Take DH equal to AC and DG equal to AB . Then $DG : DH :: DE : DF$, therefore GH is parallel to EF (Th. 36, Cor. 2); hence the triangles DGH, DEF are equiangular (Th. 10); wherefore $DG : GH :: DE : EF$ (Th. 38); $AB : BC$ (by hyp.); since therefore $DG : GH :: AB : BC$, and that DG is equal to AB , therefore GH is equal to BC . Thus the triangles DGH, ABC , having the three sides of the one respectively equal to the three sides of the other, are equiangular (Th. 5) therefore also the triangles ABC, DEF are equiangular.

THEOR. XL. fig. 55. Triangles which have one angle in the one equal to one angle in the other, and the sides about these angles proportional, are equiangular.

Let ABC, DEF be two triangles having the angles A and D equal, and $AB : AC :: DE : DF$; these triangles shall be equiangular. Make DG equal to AB , and DH to AC , and join GH : thus the triangles ABC, DGH are identical and equiangular (Th. 1.); therefore $HD : DG :: CA : AB :: FD : DE$ (by hyp.); therefore HG is parallel to FE , (Th. 36, Cor. 2.) and the triangles HDG, FDE , also CAB, FDE are equiangular.

THEOR. XLI. fig. 56. If four lines are proportional, the rectangle of the extremes will be equal to the rectangle of the means; and if the rectangle of the extremes be equal to the rectangle of the means, the four lines are proportional.

Let the four lines A, B, C, D be proportional, or $A : B :: C : D$, then will the rectangle of A and D be equal to the rectangle of B and C . Let the four lines be placed with their extremities meeting at a common point, and forming four right angles; and draw lines parallel to them to complete the rectangles P, Q, R ; where P is the rectangle of A , and D , Q the rectangle of B and C , and R the rectangle of B and D . Then the rectangles P and R will be to each other as A and B (Th. 35) and in like manner the rectangles Q and R will be to each other as C and D ; but the ratio of A to B is the same as the ratio of C to D ; therefore the ratio of P to R is the same as the ratio of Q to R , and consequently P and Q are equal.

Again, if the rectangle of A and D be equal to the rectangle of B and C , $A : B :: C : D$. For the rectangles being placed as before, it is evident that P and Q have each the same ratio to R ; but P is to R as A to B , and Q to R as C to D , therefore $A : B :: C : D$.

COR. If three lines are proportional, the rectangle of the extremes is equal to the square of the mean; and if the rectangle of the extremes be equal to the square of the mean, the three lines are proportional.

THEOR. XLII. fig. 57 and 58. If two lines meeting a circle cut each other, either within it, or without, the rectangle of the parts of the one will be equal to the rectangle of the parts of the other; the parts of each being measured from the point of meeting to the two intersections with the circumference.

Let the two chords, AB, CD , meet each other in E , the rectangle of AE, EB is equal to the rectangle of CE, ED . Join AD , and CB . The angles AED, CEB are equiangular, for the angles at D and B are equal (Th. 21. Cor. 1), and

the angles AED, CEB are opposite (fig. therefore equal (Th. 7.); or the angle common to both triangles (fig. 58), in either triangles are equiangular; therefore $DE : EB :: EC : ED$ (Th. 38), hence the rectangle EC is equal to the rectangle of AE, EB .

COR. If the line BAE , fig. 58.) be by revolving to come into the position AE , fig. 59, the distances BE, AE have become equal. Hence we have the $PROP.$ If from a point without a circle be drawn, one touching it, and the other secant, the rectangle of the distances of from the intersections of the cutting secant, is equal to the square of the tangent.

THEOR. XLIII. fig. 60. In a right angle, a perpendicular from the right angle is a mean proportional between the segments of the hypotenuse; and each of the sides about the right angle is a mean proportional between the segment, and the hypotenuse.

Let ABC be a right angled triangle, perpendicular upon the hypotenuse; $AB : DC :: DC : DB$, and $AB : AC :: AD$, and $AB : BC :: BC : BD$.

For the triangles ACB, ADC having angles at C and D equal, and the angle common, have their third angles equal, and equiangular; and in like manner it will be the triangles ACB, CDB are equiangular; these three triangles ACB, ADC, CDB equiangular, will have the sides about angles proportional; thus we get $AD : DC :: DC : DB$, and $AB : AC :: AC : AD$, $BC : AC :: AC : BD$. (Th. 18.)

THEOR. XLIV. fig. 61. Equiangular triangles are to each other as the square like sides.

Let ABC, DEF , be two equiangular triangles AB and DE being their homologous or and AL, DN squares on these sides. The triangle ABC is to the triangle DEF as the square AL to the square DN . Draw GG and HH parallel to AB and DE , and join BK and EH triangles ACG, DFH are equiangular (Cor. 3); therefore $AC : DF :: CG : FH$ but the triangles ABC, DEF being equiangular we have $AC : DF :: AB : DE$; therefore by equality of ratios, we have $CG : FH :: AB : DE$, and by alternation, $CG : A : DM$. Now $CG : AB ::$ triangle ABC : (Th. 35, Cor. 3); and in like manner $F : triangle DEF :: DME$, therefore tri. $ABC : tri. DEF :: tri. DMN$, and by alt. tri. $ABC : tri. DEF :: tri. ABK : tri. D$ the squares AL, DN being the doubles of the angles ABK, DFE , have the same ratio. Therefore the triangle ABC is to the triangle DEF as the square AL to the square DN .

THEOR. XLV. fig. 62. Similar rectilinear figures are to each other as the squares of their like sides.

Let $ABCDE, FGHIK$ be two similar figures the like sides being AB and FG, BC and GH on; the figure $ABCDE$ will be to the figure $FGHIK$ as the square of AB to the square of FG . Join BE, BD, GK, GI . Because the angles A and F are equal, and $BA : AE :: GF : FK$ triangles BAE, GFK are equiangular

EB : FK : KG, but AE : ED : FK
 73. therefore BE : ED : OK : KL
 74. angles AED, FKI are equal, and the an-
 FKG have been proved equal; there-
 75. fore BFD, GKI are equal; thus the
 76. ED, GKI are also equiangular, and in
 77. ay it may be shown that the triangles
 are equiangular. The triangle ABE
 78. as the square of BE to the square of
 79. E, as the triangle EBD to the triangle
 80. 14), and in like manner it will appear,
 81. as to KGI as DBC to IOH: Therefore
 82. figure ABCDE is to the figure FGIHK,
 83. as ABE to the triangle FOK (Th. 31);
 84. the square of AB to the square of FO

85. 111. From this proposition it may be
 86. ed, that circles are to one another as
 87. of their diameters. And in general,
 88. ilar plane figures whatever, are to one
 89. the squares of their like parts.
 90. BCDEF, GHKLMN, (fig. 63.) be any
 91. polygons, of the same number of sides,
 92. circles whose diameters are AD, GL.
 93. FO to the centre of the one polygon,
 94. GP to the centre of the other. The
 95. F, GPN, standing each upon the same
 96. whole circumference, are evidently e-
 97. consequently the isosceles triangles, AOF,
 98. imilar: Thus it appears that each of the
 99. made up of the same number of simi-
 100. 1; therefore the polygon, ABCDEF, is
 101. gon, GHKLMN, as the triangle AOF
 102. gle GPN; that is, as the square of AO
 103. re of GP, or as the square of the dia-
 104. to the square of the diameter GL. Now
 105. the number of the sides of the polygon,
 106. that their proportion to each other will
 107. namely, that of the squares of the dia-
 108. their circumscribing circles. By suppo-
 109. mber of the sides of the polygons con-
 110. cealed, it is evident that their areas will
 111. more and more to the areas of their cir-
 112. g circles, which may be considered as
 113. for it may be demonstrated, that a
 114. ay have its sides so numerous as to dif-
 115. fer area of its circumscribing circle by
 116. any assignable quantity. Hence we may
 117. that the area of the circles themselves
 118. to other the same proportion as their in-
 119. polygons; namely that of the squares of
 120. 121. 122.

III. Of Planes and Solids.

DEFINITIONS.

1. COMMON SECTION of two planes, is
 2. which they meet, or cut each other.
 3. straight line is PERPENDICULAR to a
 4. n it is perpendicular to every line which
 5. that plane.
 6. plane is PERPENDICULAR to another,
 7. right line in the one, which is perpen-
 8. their line of common section, is perpen-
 9. the other.
 10. INCLINATION of one plane to another,
 11. le they form between them, is the angle
 12. by two right lines, drawn from any

point in the common section, and at right angles
 to the same, one of these lines in each plane.

71. PARALLEL PLANES are such as being pro-
 duced ever so far both ways, will never meet, or
 72. which are every where at an equal perpendicular
 distance.

73. A SOLID is that which has length, breadth,
 and thickness.

74. A PRISM is a solid whose ends are parallel,
 equal, and like plane figures; and its sides con-
 75. necting those ends, are parallelograms. Fig. 64.

76. A PARALLELOPIPED, or PARALLELOPIPE-
 77. DON, is a solid bound by six parallelograms, every
 78. opposite two of which are equal, alike, and paral-
 79. lel. If the bounding planes are rectangles, it is a
 80. RECTANGULAR PARALLELOPIPEDON. Fig. 65.

81. A CUBE is a rectangular parallelopipe-
 82. don, whose six bounding sides are squares. Fig. 66.

83. A CYLINDER is a solid, conceived to be ge-
 84. nerated by the revolution of a rectangle about one
 85. of its sides, supposed to be at rest. The fixed line,
 86. about which it revolves, is called its AXIS. Fig. 67.

87. A PYRAMID is a solid, whose base is any
 88. right-lined figure, and its sides triangles, having
 89. all their vertices meeting at a point above the base,
 90. called the VERTEX of the pyramid. Fig. 68.

91. A CONE is a solid, conceived to be genera-
 92. ted by the revolution of a right angled triangle a-
 93. bout its perpendicular, which fixed line is called
 94. the AXIS of the cone. Fig. 69.

95. A SPHERE is a solid described by the revo-
 96. lution of a semicircle about its diameter; the fixed
 97. line, about which it revolves, is called the AXIS
 98. of the sphere. Fig. 114.

THEOR. XLVI, fig. 70. A PERPENDICULAR is
 the shortest line that can be drawn from any point
 to a plane.

Let AB be perpendicular to the plane DE, then
 any other line, as AC, drawn from the same point
 A to the plane, will be longer than AB. Join BC;
 then ABC is a right angle, hence BAC is less than
 a right angle, and consequently BA less than BC.
 (Th. 13.)

COR. A perpendicular measures the distance of
 any point from a plane.

THEOR. XLVII, fig. 71. The common section
 of two planes is a straight line.

Let ACBDA, AEBFA, be two planes cutting
 each other, and A, B two points in which the two
 planes meet; the straight line joining these points
 will be the common intersection of the planes.
 For, because the straight line AB touches both
 planes at the points A, B, it touches them in all
 other points (Def. 5.); this line is therefore com-
 100. mon to both planes, that is, their common inter-
 101. section is a straight line.

THEOR. XLVIII, fig. 72. If a straight line be
 perpendicular to two other straight lines, at their
 common intersection, it will be perpendicular to
 the plane of those straight lines.

Let the line AB make right angles with the lines
 AC, AD, it will be perpendicular to the plane
 CDE, which passes through these lines. For, if
 the line AB were not perpendicular to the plane
 CDE, another plane might pass through the
 point A, to which AB would be perpendicular;
 but this is impossible, for since the angles BAC,
 BAD,

$\angle A D$, are right angles, this other plane must pass through the points C, D . Hence this plane passing through the points A, C of the line AC , and also through the points A, D of the line AD , it will pass through both these lines, and therefore be the same plane with the former.

COR. If a straight line stand at right angles to each of three straight lines at the same point, these three lines are in one plane.

THEOR. XLIX. fig. 73. If two straight lines be perpendicular to the same plane, they will be parallel to each other.

Let AB and CD be both perpendicular to the plane EF ; these lines are parallel. Join the points B and D , and draw DG perpendicular to BD , in the plane EF ; make DG equal to BA , and join AD, AG . The triangles $B DG, DBA$, have the sides DG, BA , equal, and BD common to both; the angles $B DG, DBA$ are also equal, being right angles; therefore these triangles are identical, (Th. 1.) hence BG is equal to AD , and the triangles ABG, GDA have two sides AB, BG of the one, equal to two sides GD, DA of the other, each to each, and the side AG common to both; therefore these also are identical (Th. 5.) hence the angle ADG is equal to $B DG$, that is to a right angle. Hence it appears that DG is perpendicular to the lines BD, AD ; and it is also perpendicular to DC ; (Def. 68.) Therefore the lines BD, DA, DC are in the same plane (Th. 48, Cor.) Since it thus appears that AB, CD , lines in the same plane, are both perpendicular to a third line BD , the lines AB, CD are parallel. (Th. 8.)

COR. If two lines be parallel, and one of them perpendicular to any plane, the other will also be perpendicular to the same plane.

THEOR. L. fig. 74. If two planes cut each other at right angles, and a straight line be drawn in one of the planes, perpendicular to their common intersection, it will be perpendicular to the other plane.

Let the planes $ACBD, AEBF$, cut each other at right angles, and the line CG be perpendicular to their common section AB ; then will CG be perpendicular to the plane $AEBF$. For, let EG be perpendicular to AB , thus the angle CGE is the angle of inclination of the planes (Def. 70.), and is therefore a right angle; since therefore the line CG is perpendicular to the two lines AG, GE , it is perpendicular to the plane $AEBF$, in which these lines are drawn (Th. 48.)

THEOR. LI. fig. 75. Planes, which are perpendicular to the same straight line, are parallel to one another.

Let the planes EF, GH , be perpendicular to the same line AB ; these planes are parallel. For, draw any straight line CD parallel to AB , meeting the planes in C and D , join AC, BD . Then CD as well as AB is perpendicular to both planes (Th. 49. Cor.); thus $ABCD$ will be a rectangle, and consequently AB equal to CD , and in the same way it may be shewn, that all other perpendiculars terminated by both planes are equal; therefore the planes are parallel (Def. 71.)

COR. Hence straight lines perpendicular to one of two parallel planes are also perpendicular to the other plane.

THEOR. LII. fig. 76. If two straight lines be parallel to a third line, though not in the same plane with it, they will be parallel to each other.

Let AB, CD , be each parallel to the line EF , though not in the same plane with it; these lines shall be parallel to each other. For, let GH be perpendicular to EF , in the plane AF the parallels; then shall GF be perpendicular to the plane passing by HGI (Th. 48.); and will also be perpendicular to the same plane (Th. 49. Cor.), and therefore parallel. (Th. 8.)

THEOR. LIII. fig. 77. If two lines that are parallel to each other, be parallel to two other lines each other, though not in the same plane, the angles contained by these lines will be equal.

Let the lines AB, AC , be parallel to the lines DE, DF , then will the angles BAC, EDF be equal. For, take AB, AC, DE, DF , equal, and join EB, EC, BC, EF . Then the lines DE, BE being equal and parallel, the line EF will also be equal and parallel, (Th. 15.) the same reason AD, CF , are equal and therefore CF is parallel to BE , (Th. 5.) equal to it; hence BC is equal to EF . The triangles ABC, DEF , are in all respects equal (Th. 5.); and therefore the angles BAC, EDF are equal.

THEOR. LIV. fig. 78. The sections of a plane cutting two parallel planes are parallel to each other.

Let the parallel planes AB, CD , be cut by the plane $EFGH$, in the lines EF, GH . These lines are parallel. For, suppose EG, FH , to be parallel to each other in the plane $EFGH$; let EL, FK , be perpendicular to the line EF , and let IG, KH , be joined: Then EG, FH , are parallel, and EL, FK , being both perpendicular to the line EF , are also perpendicular to the plane CD , are also parallel to each other (Th. 49.) therefore the angle HEK is equal to the angle GEL (Th. 53.); but the angles ELG, EKH are equal, being right angles; therefore the triangles ELG, EKH , are equiangular, (Th. 1.) and the sides FK, EL , being equal, it follows, that the sides FH, EG , are equal (Th. 2.); but these two lines are parallel as well as equal; therefore also EF and GH join their extremities are parallel. (Th. 15.)

We have now given the most methodical demonstrations, of the most important propositions, of the first book of geometry, as far as relates to PLANE and to the positions and intersections of planes. As to what relates to SOLIDS, such as the proportion of similar solids, &c., the proportion of *Pyramids to Prisms*, the proportion of *Cone to the Cylinder*, and of the *Sphere to the Cylinder*, &c.; it can hardly be expected that we can find room for to part of geometry in so diffuse and rigorous as they are treated of in books professing upon the subject. We shall therefore proceed to such as with to acquire the true geometric reasoning, as are perpetual of Euclid and Archimedes; particularly of his sphere and cylinder, and of spheroids. In the 11th and 12th books and in Archimedes's works, we may find that very refined mode of geometrical

Method of Exhaustions, applied to determine relations which solids bear to each other bounded by plane or curve surfaces. This however, relating to the mensuration of solid bodies, may be more concisely, and more fully investigated by the methods of *moments*. See *FLUXIONS*. What has already demonstrated in this treatise will be found for connecting GEOMETRY with ALGEBRA, MECHANIC SECTIONS, PERSPECTIVE, NAVIGATION, TRIGONOMETRY, PLANE and SPHERICAL GEOMETRY, concisely state the principles and rules by which geometry is to be applied to the mensuration of all the figures, superficial or solid, that commonly occur in the ordinary affairs of life.

PART II.

PRACTICAL GEOMETRY,

APPLICATION OF THE PRINCIPLES.

BOOK I. GEOMETRICAL PROBLEMS.

LEM I. *fig. 79.* To divide a given line AB into equal parts.—1. From the points A and B, with any distance greater than half AB, describe arcs cutting each other in *m* and *n*. 2. Through these points draw the line *mn*, and where it cuts AB, will be the middle point required.

II. *fig. 80.* To divide a given angle ABC, into equal parts.—1. From the point, B, with any radius, describe the arc AC. 2. And from any point on the arc, with the same, or any other radius, describe an arc cutting each other in *n*. 3. Through the point *n* draw *nB*, and it will bisect the angle ABC, as required.

III. *fig. 81, 82.* From a given point C, to draw a straight line AB, to erect a perpendicular. I. When the point is near the middle of the line. *Fig. 81.*—1. On each side of the point C, set off two equal distances C*n*, C*m*. 2. From the points *n* and *m*, with any radius greater than C*n* or C*m*, describe arcs cutting each other in *s*. 3. Through the point *s* draw the line *SC*, and it will be the perpendicular required.

II. When the point is at or near the end of the line. *Fig. 82.*—1. Take any point *o*, and with any radius or distance *oC*, describe the arc cutting the line AB in *n*. 2. From the point *n* draw the line *nC*, and it will be the perpendicular required.

IV. *fig. 83, 84.* From a given point C, to draw a given line AB, to let fall a perpendicular. I. When the point is nearly opposite to the middle of the line. *Fig. 83.*—1. From the point C, with any radius, describe the arc *mn*, cutting the line AB in *n* and *m*. 2. From the points *n* and *m*, with the same or any other radius, describe two arcs cutting each other in *s*. 3. Through the point *s* draw the line *CG*, and CG will be the perpendicular required.

CASE II. When the point is nearly opposite to the end of the line. *Fig. 84.*—1. To any point *m* in the line AB draw the line C*m*. 2. Bisect the line C*m*, or divide it into two equal parts, in the point *n*. 3. From *n*, with the radius *nm*, or *nG*, describe the arc CG, cutting AB in G. 4. Through the point C, draw the line CG, and it will be the perpendicular required.

PROB. V. *fig. 85.* At a given point D, to make an angle equal to a given angle, ABC.—1. From the point B with any radius describe the arc *mn*, cutting the legs BA, BC, in the points *m*, *n*. 2. Draw the line DE, and from the point D, with the same radius as before, describe the arc *rs*. 3. Take the distance *mn* on the former arc, and apply it to the arc *rs*, from *r* to *s*. 4. Through the points *Ds* draw the line DF, and the angle EDF will be equal to the angle ABC, as was required.

PROB. VI. To draw a line parallel to a given line AB. *Fig. 86, 87.*

CASE I. When the parallel line is to pass through a given point C. *Fig. 86.*—1. To AB from the point C, draw any straight line C*m*. 2. From the point *m*, with the radius *mC*, describe the arc C*n* cutting AB in *n*. 3. And with the same radius, from the point C, describe the arc *mr*. 4. Take the distance C*n*, and apply it to the arc *mr* from *m* to *r*. 5. Through the points C*r*, draw the line CG, and it will be parallel to AB, as required.

CASE II. When the parallel line is to be at a given distance from AB. *Fig. 87.*—1. From any two points *r*, *s*, in the line AB, with a radius equal to the given distance, describe the arcs *n*, *m*. 2. Draw the line DG, to touch those arcs without cutting them, and it will be parallel to AB, as was required. *Note.* The former case of this problem, as well as several other operations of practical geometry, may be more easily effected by a mathematical instrument known by the name of a *parallel ruler*.

PROB. VII. *fig. 88.* To divide a given line AB, into any proposed number of equal parts.—1. From one end of the line A, draw A*m*, making any angle with AB; and from B the other end, draw B*n*, making an equal angle AB*n*. 2. In each of the lines A*m*, B*n*, beginning at A and B, set off as many equal parts, of any length, as AB is to be divided into. 3. Join the parts A*s*, *14*, *23*, &c. and AB will be divided as required. *Note.* B*n* may be drawn parallel to A*m* by means of a parallel ruler.

PROB. VIII. *fig. 89.* To find the centre of a given circle, or one already described.—1. Draw any chord AB, and bisect it with the perpendicular CD. 2. Bisect CD in like manner with the chord EF, and their intersection O will be the centre required. *Note.* The centre of a given circle, or any arch of it, may be found as in the next problem by taking three points in the circumference.

PROB. IX. *fig. 90.* To describe the circumference of a circle thro' three given points A, B, C.—1. From the middle point draw the lines or chords, BA and BC. 2. Bisect these chords perpendicularly with lines meeting each other in O. 3. From the point of intersection O, with the dis-

GEOMETRY.

1

OA, OB, or OC describe the circle ABC, and it will be that required.

PROB. X. *fig. 91, 92.* To draw a tangent to a given circle that shall pass thro' a given point A.

CASE I. When the point A is in the circumference of the circle. *Fig. 91.*—1. From the given point A, to the centre of the circle, draw the radius OA. 2. Through the point A draw CD perpendicular to OA, and it will be the tangent required.

CASE II. When the point A is without the circle. *Fig. 92.*—1. To the point A from the centre O draw the line OA and bisect it in *n*. 2. From the point *n* with the radius *nA* or *nO* describe the semicircle ABO, cutting the given circle in B. 3. Through the points A, B, draw the line BA, and it will be the tangent required.

PROB. XI. *fig. 93.* To find a third proportional to two given lines A, B.—1. From the point C, draw two right lines, making any angle FCG. 2. In these lines take CE equal to the first term A, and CG, CD, each equal to the second term B. 3. Join ED, and draw GF parallel to it, and CF will be the third proportional required: That is, $CE(A) : CG(B) :: CD(B) : CF$.

PROB. XII. *fig. 94.* To find a fourth proportional to three given right lines A, B, C.—1. From the point D, draw two right lines, making any angle GDH. 2. In these lines, take DF, equal to the first term A, DE, equal to the second term B, and DH, equal to the third term C. 3. Join FE, and draw HG parallel to it, and DG will be the fourth proportional required: That is, $DF(A) : DE(B) :: DH(C) : DG$.

PROB. XIII. *fig. 95.* To find a mean proportional between two given right lines A, B.—1. Draw any right line in which take CE equal to A, and ED equal to B. 2. Bisect CD in O, and with OD, or OC, as radius, describe the semicircle CFD. 3. From the given point E, draw EF perpendicular to CD, and it will be the mean proportional required. That is, $CE(A) : EF :: EF : ED(B)$.

PROB. XIV. *fig. 96.* To divide a given line AB, in the same proportion with which another given line C is divided.—1. From the point A draw AD equal to the given line C, and making any angle with AB. 2. To AD apply the several divisions of C, and join DB. 3. Draw the several lines *aa*, *bb*, &c. each parallel to DB, and the line AB will be divided as required:—That is, the parts A 1, 12, 23, 34, 4 B, on the line AB, will be proportional to the parts *oa*, *12*, *23*, *34*, *4b* on the line C.

PROB. XV. *fig. 97.* To make a triangle whose three sides shall be respectively equal to three given lines A, B, C.—1. Draw a line DE equal to one of the given lines C. 2. On the point D, with a radius equal to B, describe an arc. 3. And on the point E, with a radius equal to A, describe another arc, cutting the former in F. 4. Draw the lines DF, EF, and DFE will be the triangle required.

COR. Hence it is evident in what way an equilateral triangle may be described upon a given straight line.

Note. The three given lines must be of such a

length that any two of them must be greater than the third.

PROB. XVI. *fig. 98.* Upon a given line describe a square.—1. From the point B perpendicular, and equal to AB, and C, with the radius AB, describe two arcs cutting each other in D. 3. Draw the line AD, and the figure ABCD will be the square required.

PROB. XVII. *fig. 99.* To describe, whose length and breadth shall be equal to two given lines AB and C.—1. At the point B, in the line AB, erect the perpendicular BD it equal to C. 2. From the points B, D, with the radii AB and C, describe two arcs cutting each other in E. 3. Join EA and ED, and it will be the rectangle required.

PROB. XVIII. *fig. 100.* In a given triangle to inscribe a circle.—1. Bisect the angles A and B by the straight lines AO and BO. 2. The point of intersection O, let fall the perpendicular ON, and it will be the radius of the circle required.

PROB. XIX. *fig. 101.* About a given triangle ABC, to circumscribe a circle.—1. Bisect the sides AB, BC, by the perpendiculars *oa*, *ob*. 2. From the point of intersection *o*, with the same radius OA, OB, or OC, describe the circle, and it will be that required.

PROB. XX. *fig. 102.* To make a figure similar to a given figure ABCDE.—1. Take A the side of the figure required, and from A draw the diagonals AC, AD. 2. On the points *b*, *c*, *d*, draw *bc*, *cd*, *de*, parallel to *AC*, *CD*, *DE*, and *A bcde* will be similar to *ABCDE*. The same thing may also be done by the angles *b*, *c*, *d*, *e*, respectively equal to the angles *B*, *C*, *D*, *E*.

PROB. XXI. *fig. 103.* To construct chords to any given radius, AB.—1. Draw a perpendicular to AB, and on A as a centre, with the given radius AB, describe the arc BC, which will be a quadrant. 2. On B, as a centre, with the given radius AB describe an arc cutting the first arc at D, then BD will be an arc of 30 degrees. 3. Take an arc DE equal to the arc BD, and the quadrant BC will be divided into 3 equal parts each containing 30°. 4. Let each of the arcs ED, DC, be divided into 3 equal parts, and the quadrant must be divided into 9 equal parts, for it cannot be done by any direct geometrical method, and the quadrant will be divided into 90°. 5. And on B, as a centre, with the distance between B and each of the divisions as radius, describe arcs to meet BC, as in the figure, and the distance between B and any one of the divisions of the scale BC, will be equal to the corresponding arc of the quadrant.

PROB. XXII. *fig. 104.* To make a figure similar to a given figure ABCDE.—1. First 60 degrees from the scale of chords, take the point A, with this radius describe an arc *am*. 2. Take the chord of the proposed angle from the same scale, as from *n* to *m*. 3. From the point A draw *An* and *Am*, and they will form the triangle required. 4. If the given angle be greater than 60 degrees, it may be taken at twice.

XXIII. *fig. 104.* An angle, BAC , being found the number of degrees it contains — at the angular point A with the chord of 100 — describe the arc nm cutting the legs in ns and m . Take the distance nm lay it to the scale of chords, and it will be degrees required. 3. When the distance is greater than 90° , it must be taken at Nm . Both this and the last problem are performed by means of a protractor, and graduated are designed for the purpose. *fig. 105.*

XXIV. *fig. 106.* In a given circle, to describe a polygon of any proposed number of sides — 1. Divide 360° by the number of sides, and make be AOB , at the centre, whose measure be equal to the degrees in the quotient. 2. From points A, B , and apply the chord AB , to the circumference the given number of times, and draw the polygon required.

XXV. *fig. 106.* On a given line AB to describe a regular polygon of any proposed number — 1. Divide 360° by the number of sides, subtract the quotient from 180 degrees. 2. The angles ABO and BAC each equal to the difference last found. 3. From the point A with the distance OA , or OB , describe a circle. 4. Apply a chord, AD , to the circumference the proposed number of times, and draw the polygon required. *NOTE.* By this the circumference of a circle may be divided into any number of equal parts.

I. Of the MENSURATION of LINES and ANGLES, as applied to the DETERMINATION of HEIGHTS and DISTANCES.

Any magnitude is measured by a magnitude of the kind, called the *measuring unit*. Thus, a line is measured by a line, an angle by an angle, a surface by a surface, and a solid by a solid. Magnitudes being given, that is, their measures being determined by an actual application of the measuring unit, it is the business of mensuration to shew how the measures of others, depending on these, may be obtained. The part of mensuration that treats of lines and angles of a plane triangle, is called PLANE TRIGONOMETRY, which, as treated of, as a distinct science, is a part of our work, to which our present management necessarily refers it, is yet to be considered as forming a part of the general science of mensuration. By the mensuration and protraction of lines and angles, the lengths, heights, depths, distances, of objects are determined. ACCESSIBLE LINES are measured by applying to them, a certain measure a number of times, as an inch, or yard; but INACCESSIBLE LINES must be measured by a measurement of angles and distances, by means of proper instruments, and application of methods to be derived from the principles of geometry.

INSTRUMENTS commonly used for measuring heights and distances are, a *Chain*, a *Square*, and a *Theodolite*.

The *Chain* is used for measuring those distances, which are to be given sides of triangles.

C. PART II.

The English chain is in length 4 poles or 66 feet. It consists of 100 equal links, made of iron, each link, therefore, should be 7.92 inches long. Every ten links, from one end to the middle of the chain, is distinguished by a mark made of brass.

A *Square* is used for determining vertical angles; it is made of brass or wood, the radius being of any convenient length; the circumference is divided into 90 equal parts, and these parts subdivided as far as the dimensions of the quadrant will admit. Also a plummet is suspended by a thread from the centre, and two sights fixed on each of the radii. See *fig. 107.*

A *Square* is used for finding the proportion of the sides of a right angled triangle. It is made of the same materials. Two of its sides are divided each into 100 equal parts. This instrument is commonly called a *Geometrical Square*. See *fig. 109.*

A *Theodolite* is used for measuring horizontal, as well as vertical angles. It is a circle of brass divided into degrees, &c. having an index moveable above its centre, and is furnished with sights. The manner of applying these instruments will be explained in the following Problems.

PROBLEM I. To find the height of an accessible object standing upon level ground. *fig. 110, 111.*

I. By the *QUADRANT*, *fig. 110.* Let any convenient distance, BA , be measured by the chain, in a direct line from the foot of the perpendicular, BC , that falls from the top of the object. Then standing at the point A , let the quadrant be held as represented in the figure, so that the eye at D may see the top of the object C , along the side of the quadrant, DE . Now if the plummet hang freely, the line, FP , will be perpendicular to the horizon, and therefore parallel to BC ; hence the angles DPP , DCE , are equal, and their complements GPP , CDE , also equal. Thus GN , the arch of the quadrant that is remote from the eye, will shew the number of degrees in the angle of elevation CDE . Whence, in the right angled triangle CED , the side DE ($=AB$), and the angle CDE being given, we may find CE by this proportion; as radius to the tangent of CDE so is DE to EC to which DA , the height of the eye above the ground, being added, we get the whole height of the object. If the angle of elevation be 45° , then $DE = EC$; that is, the distance measured is equal to the height of the object above the eye.

II. By the *SQUARE*, *fig. 111.* Having measured AB as before, hold the square to the eye at D , as in the figure. Then, the plummet hanging freely, the line FP cuts off from the square a small triangle similar to CDE . Therefore we shall have the proportion of DE to EC ; and the former being given, the latter may be found by the rule of proportion. Let n represent the number of equal parts which the plummet cuts off from the side DH or HG , towards the end D or G . Then,

1. When the plummet cuts the side GH remote from the eye, it is as $100 : n :: DE : EC$. Hence, if in this case, $DE = 100$, then $EC = n$.

2. When it passes through the opposite angle H , we have a ratio of equality, $DE = EC$.

3. When it cuts the side DH contiguous to the eye, it is as $n : 100 :: D'E : EC$.

PROB.

PROB. II. To find the height of an inaccessible object. *Fig. 112.*

I. By the QUADRANT. From any convenient station B, measure the distance BA in a direct line with the foot of the object, and at both stations A, B, take the angles of elevation DAC, DBC. The difference of these angles will give the angle ADB. Then in the triangle ABD, from the principles of trigonometry we have this proportion; as sine of ADB to sine of DAB so is AB to DB; Next, in the triangle BDC, as radius to sine of B so is BD to DC; the height of the object as required.

II. By the SQUARE. At the station A, find by the square the proportion of AC to CD, and at the station B find the ratio of CD to CB; hence the ratio of AC to CB will be given, and consequently that of AB to BC, from which BC, and consequently CD may be found. Let $AB = d$, and $AC : CD :: m : n$ and $BC : CD :: p : q$, then

$$CD = \frac{n q d}{m q - n p}.$$

If at both stations the plummet cut the side of the square remote from the eye, $CD = \frac{n q}{q - n} \times \frac{d}{100}$. If the side contiguous to the

eye, $CD = \frac{100 d}{m - p}$. If the plummet cut the opposite angles of the square at the first station B, then $CD = \frac{n d}{100 - n}$.

PROB. III. To find the distance of a given place from an inaccessible object. *Fig. 113.*

Let A be the inaccessible object, it is required to find its distance from the given station B. Measure any convenient distance BC, as the base of a triangle, whose vertex is at A. Then, the theodolite being placed at B, let the diameter be directed towards the station C, and the moveable index towards the object A, and the intercepted arch shows the number of degrees in the angle ABC. In like manner let the angle BCA be measured, and the angle at A will be known by subtracting their sum from 180° . Then in the triangle CAB, BA may be found by the following proportion. As sine of A to sine of C, so is BC to BA.

PROB. IV. To find the distance between two inaccessible objects. *Fig. 114.*

Let a proper distance, CD, be measured as the base of two triangles whose vertices are at the objects A, B. Then the angles at C and D being measured by the theodolite, we find as in the last problem the sides AD, DB; and as the included angle ADB is given, the other angles of the triangle DBA may be found by the following proportion. As the sum of AD and BD, to their difference, so is the tangent of half the sum of the angles DBA, DAB, to the tangent of half their difference. Then $\frac{1}{2}$ the difference of these angles added to $\frac{1}{2}$ the sum gives the greater; and $\frac{1}{2}$ the difference subtracted from half the sum leaves the lesser. In the triangle BDA we now know all the angles; also two of the sides; hence we may find AB by either of these proportions. As sine of DAB to sine of ADB so is DB to BA; or, as sine of ABD to sine of ADB so is DA to AB.

The methods here pointed out for measuring heights and distances are generally applicable. But it will not be difficult for a person acquainted with the principles of geometry, who may be provided with instruments, to fall upon other methods of determining the angles, or the position of known lines to such as are to be measured. Thus if the height of an object be required, the length of its shadow can be found, 'tis easy to see that by measuring at the same time the shadow of an object whose height is known, we shall get the height required by the rule of proportion. For, from the nature of similar triangles, as the length of the shadow of either object to its height so is the length of the shadow of the other object to its height.

SECT. III. Of the MENSURATION of FIGURES.

THE AREA of any plane figure is the measure of the space contained within its extremes or without any regard to thickness. This is estimated by the content of the plane figure, is estimated by the number of little squares that may be contained in it; the side of those little measuring squares being an inch, a foot, a yard, or any other fixity. And hence the area is said to be measured in square inches, square feet, or square yards. Thus if the figure to be measured be the rectangle ABCD, *fig. 115*, and the little square whose side is one inch, be the measuring unit, then, as often as the said little square is contained in the rectangle, so many square inches the rectangle is said to contain, which in the present figure is 12. The least superficial measure is the square inch, other measures being derived from it, as is in the table given in ARITHMETIC, p. 64.

PROB. I. To find the area of any parallelogram, whether it be a square, a rectangle, a rhombus, or a rhomboid. *Fig. 13, 14, 15, 17.*

RULE I. Multiply the length by the perpendicular breadth, or height, and the product will be the area.

If two sides and an included angle of a parallelogram are given to find the area, then use the following rule.

RULE II. As radius to the sine of the included angle, so is the product of the two sides to the area.

PROB. II. To find the area of a triangle. RULE I. When the base and perpendicular height are given, Multiply the base by the perpendicular height, and half the product is the area.

RULE II. When two sides and the included angle are given, Multiply the two sides, and take half their product: Then say, as the sine of the given angle, so is that product to the area.

RULE III. When the three sides are given, Add together the three sides, and take half the sum. Next subtract each side severally from half the sum, thus obtaining three remainders; multiply the half sum and those three remainders all together, and extract the square root of the product for the area of the triangle.

PROB. III. To find the area of a trapezium. *Fig. 19.* Add together the two parallel sides, and multiply the sum by the perpendicular distance between them, and the product will be the area.

multiply their half sum by the perpendicular
lth or distance between them, and half the
uct will be the area.

os. IV. To find the area of any trapezium,
3. Divide the trapezium into two triangles
diagonal; then find the areas of these triangles
dd them together.

else let two perpendiculars be drawn to the
nal, from the opposite angles, the sum of
being multiplied by the diagonal; half the
ct shall be the area required.

os. V. To find the area of any irregular po-
. Fig. 116.

ow diagonals dividing the proposed polygon
rapeziums and triangles. Then find the areas
their separately, and add them together for
ntent of the whole polygon.

os. VI. To find the area of any regular po-
. Fig. 116.

LE I. Multiply the perimeter of the polygon,
m of its sides, by the perpendicular drawn
its centre on one of its sides, and take half
roduct for the area.

LE II. Square the side of the polygon; then
ply that square by the area, or multiplier, set
k its name in the following table, and the
ct will be the area.

° of deg.	Names.	Areas, or Multipliers.
3	Trigon or Triangle,	0.433013
4	Tetragon or Square,	1.000000
5	Pentagon,	1.720477
6	Hexagon,	2.598076
7	Heptagon,	3.639112
8	Octagon,	4.828427
9	Nonagon,	6.181824
10	Decagon,	7.694209
11	Undecagon,	9.365640
12	Dodecagon,	11.196152

. The numbers in the above table express
as of the regular polygons, when the linear
unity.

B. VII. To find the diameter and circumfe-
of a circle, the one for the other. Fig. 20.

to 22, so is the diameter to the circumfe-
Or, as 1 to 3.1416 so is the diameter to
umference.

2. VIII. To find the length of any arc of a

E. Multiply the degrees in the given arc by
ins of the circle, and the product again by
imal .01745 for the length of the arc.

B. IX. To find the area of a circle.

E I. Multiply half the circumference by
diameter. Or multiply the whole circum-
by the whole diameter and take $\frac{1}{2}$ of the
t for the area.

E II. Square the diameter and multiply that
by the decimal .7854, for the area.

1. X. To find the area of a circular ring.

2. Take the difference between the areas
ircles, as found by the last problem. Or,
s the same thing, subtract the square of the
meter from the square of the greater, and
r their difference by .7854.

PROB. XI. To find the area of the sector of a
circle. Fig. 22.

RULE I. Multiply the radius, or half diameter,
by half the arc of the sector, for the area. Or,
multiply the whole diameter by the whole arc of
the sector, and take $\frac{1}{4}$ of the product.

RULE II. As 360 is to the degrees in the arc of
the sector, so is the area of the whole circle to the
area of the sector. This is evident, because the
sector is proportional to the length of the arc, or
to the degrees contained in it.

PROB. XII. To find the area of a segment of a
circle. Fig. 21.

RULE. Find the area of the sector, having the
same arc with the segment, by the last problem.

Find also the area of the triangle, formed by
the chord of the segment and the two radii of the
sector.

Then take the sum of these two for the answer,
when the segment is greater than a semicircle: or
take their difference for the answer, when it is less
than a semicircle: As is evident by inspection.

PROB. XIII. To find the area of an ellipse.

RULE. Multiply the product of the transverse
and conjugate axes by the decimal .7854, the re-
sult will be the area.

PROB. XIV. To find the area of a parabola, its
base and height being given.

RULE. Multiply the base by the height, and $\frac{2}{3}$ of
the product is the area. •

SECT. IV. • Of LAND-SURVEYING.

THE most useful instruments for surveying are
the CHAIN, and PLANE TABLE. A statute acre
of land being 160 square poles, the chain is made
4 poles, or 66 feet in length, that 10 square chains,
or 100,000 square links, may make a square acre.
A chain of that length is commonly called Gunter's
chain, but in Scotland land is measured with a
chain 24 Scots ells, or 74 feet in length. Hence
it follows that the Scots acre is to the English in
the proportion of 1369 to 1089, or nearly as 5 to 4.
The plane table is used for drawing a plan of the
field, and taking such angles as are necessary to
calculate its area. It is of a rectangular form, and
surrounded with a moveable frame, by means of
which, a sheet of paper may be fixed to its sur-
face. It is furnished with an index, by which a
line may be drawn upon the paper in the direction
of any object in the field; and with scales of equal
parts; by which such lines may be made propor-
tional to the distances of the objects from the
plane table, when measured by the chain; and its
frame is divided into degrees for observing angles.

PROB. I. To measure a field with the chain.

Let $A \wedge BCD \eta$ (fig. 117.) represent the field to
be measured. Let it be resolved into the triangles
 $A \wedge B$, ABD , BCD , $A \eta D$. Let all the sides of the
large triangles ABD , BCD , and the perpendicu-
lars of the small ones, $A \wedge B$, $A \eta D$, from their ver-
tices m , η , be measured by the chain, and the areas
calculated: their amount is the area of the whole.

But if, on account of the curvature of its
sides, the field cannot be wholly resolved into tri-
angles, then either a straight line may be drawn
over the curve side, so that the parts cut off from
the field, and those added to it may be nearly e-

qual; or, without going beyond the bounds of the field, the curvilinear spaces may be taken so small, that they may be considered as a number of trapezoids and measured accordingly.

PROB. II. To measure a field with the plane table.

Let ABCDE (*fig. 118.*) be the field, and let the plane table be fixed about the middle of it, as at F, and its distances FA, FB, FC, &c. from the several corners of the field be measured with the chain. Let the index be directed from any point assumed on the paper, to the points A, B, C, &c. successively; and the lines Fa, Fb, Fc, &c. drawn in these directions. Let the angles which these lines contain be observed, and the lines themselves be made proportional to the distances measured, by means of a scale of equal parts, such as that represented by *fig. 107.* Then their extremities being joined, there will be formed a figure *abcde*, similar to that of the field; and the area of the field may be found, by calculating the areas of the several triangles of which it consists.

PROB. III. To plan a field from a given base line. *Fig. 119.*

Let two stations A, B, be taken within the field, but not in the same straight line with any of its corners, and let their distance be measured. Then the plane table being fixed at A, and the point *a* assumed on its surface directly above A; let its index be directed to B, and the straight line *ab* drawn along the side of it, to represent AB; also let the index be directed from *a* to an object at the corner C, and an indefinite line drawn in that direction; and so of every other corner successively.

Next let the plane table be set at B, so that *b* may be directly over B; and *ba* in the same direction with BA; and let a straight line be drawn from *b*, in the direction BC; then *c* the intersection of that line with the former, it is evident, will determine the position of the point C, and the triangle *abc*, on the paper, will be similar to ABC in the field. In this manner are all the other angular points to be determined; and these being joined, there will be formed a representation of the field.

If the angles at both stations were observed, as the distance between them is given, the area of the field might be calculated from these data; but the operation is too tedious for practice. It is usual, therefore, to measure such lines in the figure that has been constructed, as will render the calculation easy.

SECT. V. Of the MENSURATION of SOLIDS.

By the mensuration of solids are determined the spaces included by contiguous surfaces, and the sum of the measures of these including surfaces, is the whole surface or superficies of the body.

The measure of a solid, is called its solidity, capacity, or contents.

Solids are measured by cubes, whose sides are inches, or feet, or yards, &c.; and hence the solidity of a body is said to be so many cubic inches, feet, yards, &c. as will fill its capacity, or space, or another of equal magnitude. The least solid measure is the cubic inch, other cubes being taken from it, according to the proportion in the following TABLE.

1728	cubic inches, make	1 cubic foot
27	cubic feet,	1 cubic yard
166 $\frac{2}{3}$	cubic yards,	1 cubic furlong
64000	cubic poles,	1 cubic mile
512	cubic furlongs,	1 cubic league

PROB. I. To find the superficies of *Fig. 64.*

RULE. Multiply the perimeter of one of the length or height of the solid, and it will be the surface of all the sides. To

also the areas of the two ends when required. *Note.* The cube and parallelopiped to be understood as coming under the denomination of a prism, agreeably to Definition.

PROB. II. To find the surface of a pyramid. *Fig. 62, 69.*

RULE. Multiply the perimeter of the base by the height, or length of the side, and the product will be the surface of the sides. To which add the area of the end, required.

PROB. III. To find the surface of the frustum of a pyramid or cone, being the lower part of the top is cut off by a plane parallel to the base.

RULE. Add together the perimeters of the two ends, and multiply their sum by the slant height, taking half the product for the answer.

PROB. IV. To find the solid content of a prism or cylinder. *Fig. 64, 65, 66, 67.*

RULE. Find the area of the base, whatever the figure may be; and multiply it by the length of the prism or cylinder, for the content.

Note. The cube and parallelopiped may be considered as prisms, as in Prob. I.

PROB. V. To find the content of the frustum of a cone. *Fig. 68, 69.*

RULE. Find the area of the base, and multiply that area by the perpendicular height, and take $\frac{1}{3}$ of the product for the content.

PROB. VI. To find the solidity of the frustum of a cone or pyramid.

RULE. Add into one sum, the areas of the two ends, and the mean proportional between them, that is the square root of their sum; and multiply the sum by the perpendicular height, and take $\frac{1}{3}$ of the product for the content.

PROB. VII. To find the surface of a sphere. *Fig. 120.*

RULE I. Multiply the circumference of the sphere by its diameter, and the product will be the whole surface of it.

RULE II. Multiply the square of the diameter by $\frac{1}{2} \pi$, and the product will be the surface of the sphere.

If the surface of a segment or frustum of a sphere be required. Multiply the whole circumference by the height of the part required.

PROB. VIII. To find the solidity of a sphere. *Fig. 120.*

RULE I. Multiply the surface by the diameter, and take $\frac{1}{6}$ of the product for the content.

RULE II. Multiply the cube of the diameter by $\frac{\pi}{6}$ for the content.

PROB. IX. To find the solid content of a spherical segment. *Fig. 120.*

From three times the diameter of the segment, take double the height of the segment; multiply the remainder by the square of the diameter, and the product by the number .5236 for the content.

To three times the square of the radius of the segment's base, add the square of its height, and multiply the sum by the height, and the product by .5236 for the content.

To find the solid content of a spheroid.

A spheroid is a solid formed by the revolution of a semiellipse about either of its axes.

Multiply the square of the revolving radius by the fixed axis, and the product again by the height, and the result is the solidity required.

To find the solid content of the frustum of a spheroid, the ends being similar, or parallel to the revolving axis.

To twice the square of the middle diameter, add the square of the diameter of either of the ends, and this sum multiplied by the length of the frustum, and the product again by .2618 will give the solidity; where note, that .2618 is $\frac{1}{4}$ of π .

To find the solid content of a paraboloid, or paraboloid. Fig. 122.

A parabolic conoid is a solid formed by the revolution of a semiparabola about the axis, and the diameter.

Multiply the area of the base by half the height, and the product will be the content.

To find the solid content of the frustum of a paraboloid, when its ends are perpendicular to the axis of the solid. Fig. 122.

Multiply the sum of the squares of the radii of the two ends, by the height of the frustum, and the product again by .3927, and it will give the solidity; where it may be observed that .3927 is $\frac{1}{2}$ of π .

To find the solid content of a parabolic spindle. Fig. 123.

A parabolic spindle is a solid generated by the revolution of a parabola about its base or axis.

Multiply the area of the middle section by the length, and $\frac{8}{15}$ of the product is the solidity required.

To find the solid content of the frustum of a parabolic spindle. Fig. 123.

Add into one sum 8 times the square of the middle diameter, 3 times the square of the radius of the larger end, and 4 times the product of the radii of the two end diameters; multiply the sum by the height, and by the number .05236, and the result will be the solidity required.

SECT. VI. Of GAUGING.

GAUGING is commonly understood the art

of measuring the capacities of all kinds of vessels, and determining the quantities of fluids, or other matters contained in them. These are principally pipes, tuns, barrels, &c. also hacks, coolers, vats, &c. The solid contents of vessels of the most common figures may be found from the preceding rules in feet, or inches, &c. and thence their contents in liquid measure may be found, by considering that 231 cubic inches make a wine gallon, and 252 inches an ale gallon.

In ascertaining the contents of vessels it may also be useful to know that the Winchester bushel contains 2150 cubic inches; the barley firiot contains 31 Scots pints, and the wheat firiot 21 pints and 1 mutchkin. Concerning the capacity of the Scots pint, however there is some uncertainty, for although the standard jug which is kept by the borough of Stirling, was supposed to contain 105 cubic inches, yet, after several careful trials, it was found to contain only about 103 $\frac{1}{2}$ inches. The pint *stoups* however, are still regulated to contain 105 inches, and the customary ale measures are about $\frac{1}{8}$ above that standard.

It has been usual to divide casks into four varieties of forms, denominated as follows from the supposed resemblance they bear to the frustums of solids of the same names: viz.

1. The middle frustum of a spheroid.
2. The middle frustum of a parabolic spindle.
3. The two equal frustums of a paraboloid.
4. The two equal frustums of a cone.

The contents of casks of these different forms, may be found from the rules already given, for the mensuration of the figures which the casks are supposed to resemble the most; and thence their content in gallons, or pints, by dividing the content in cubic inches by the number of cubic inches contained in the respective measures.

The form that may be assigned to a cask, it is evident, is altogether hypothetical; and therefore it seldom happens, that the content, as found by experiment, agrees exactly with that found by calculation.

The calculations are also very troublesome and inconvenient, and for this reason excise officers generally determine the contents of casks by means of scales constructed for the purpose.

Dr Hutton, in his mensuration, gives the following general rule, which he says applies to all casks commonly to be met with; and at the same time is quite easy and very accurate, as having been often verified and proved by filling the casks with a true gallon measure.

RULE. Add into one sum, 39 times the square of the bung diameter, 24 times the square of the head diameter, and 26 times the product of these diameters; multiply the sum by the length of the cask, and the product by .00034, and this last product divided by 9 will give the content of the cask in wine gallons, and by 11 will give the content in ale gallons.

G E O

ORI. See EUPATRIDÆ.

ONICAL. *adj.* [*γῆ* and *οἶκος*; *geophos*

G E O

nique, French.] Relating to agriculture; relating to the cultivation of the ground.—Such expressions are

are frequent in authors *geoponical*, or such as have treated *de re rustica*. *Brown's Vulg. Err.*

* **GEOPONICKS**. *n. f.* [$\gamma\eta$ and $\tau\alpha\gamma\eta$.] The science of cultivating the ground; the doctrine of agriculture.

(1.) **GEORGE I.** king of Great Britain, the son of Ernest Augustus, D. of Brunswick Lunenburgh, and elector of Hanover, by Sophia, daughter of Frederick Elector Palatine, and grand daughter of K. James I. He succeeded to the British throne, in 1714, in virtue of an act of parliament, passed in the reign of K. William III. limiting the succession, after the demise of that monarch, and Q. Anne, without issue, to the princess Sophia and her heirs, being Protestants. He was born in 1660, created D. of Cambridge, in 1706, and died June 11th. 1727, aged 67. See **ENGLAND** § 76—78.

(2.) **GEORGE II.** the only son of K. George I. succeeded him in 1727, and enjoyed a long and glorious reign; dying amidst the most rapid and extensive conquests, in the 77th year of his age. See **ENGLAND**, § 79—82. He was succeeded by his grandson George III. our present sovereign, on the 25th Oct. 1760; leaving the character of a brave warrior, and an impartial lover of justice. It is recorded to his honour, that he never once pardoned murder, during the whole course of his long reign, though strongly importuned in some cases; particularly in that of Earl Ferrers, who was hanged for murdering his servant, and though a peer, could obtain no other mitigation of his sentence, than that of being hanged in a silken rope.

(3.) **GEORGE**, despot of Serviá. See **SERVIA**.

(4.) **GEORGE**, David, the founder of the sect of the **DAVIDISTS**. See **DAVIDIST**.

(5.) * **GEORGE**. *n. f.* [*Georgius*, Latin.] 1. A figure of St George on horseback, worn by the knights of the garter.—

Look on my *george*, I am a gentleman;

Rate me at what thou wilt. *Shak. Henry VI.*
2. A brown loaf. Of this sense I know not the original.—

Cubb'd in a cabin, on a mattress laid,

On a brown *george*, with lowly twobbers, fed.

Dryd. Pers.

(6.) **GEORGE FORT**, a strong and regular fortress of Scotland, in Inverness-shire. It has several handsome streets of barracks, and is seated on the point of Arderier, a peninsula running into the firth of Murray. It completely commands the entrance into the harbour of Inverness, and lies opposite to Fortrose, 15 miles N.W. of Inverness.

(7.) **GEORGE FORT**, a fort on New York at the S. end of LAKE GEORGE, (Nº 10.) 42 miles N. of Albany.

(8.) **GEORGE**, **PORT ST.** a town and fort of Asia, in the peninsula of India, belonging to Britain; called also *Mahamadabadpatam*. See **MADRAS**.

(9.) **GEORGE LAKE**, a lake of E. Florida, called also **GREAT LAKE**. It is 15 miles broad, and 20 feet deep. It is a debouché of the river St John, which runs through it.

(10.) **GEORGE LAKE**, a lake of New York, S.W. of Lake Champlain, 25 miles long from N.E. to S.W. and 10 to 15 miles broad. Its waters are 100 feet higher than those of Lake Champlain, into

which they run by a channel 1½ mil. is said to contain 365 isles.

(11.) **GEORGE ST.** or **GEORGE DOCIA**, a saint or hero, after whom se both military and religious, &c denor is famous throughout all the East, by the Greeks *Μεγαλομαχης*, i. e. the g. On some medals of the emperors Jo nuel Comneni, we have the figure o armed, holding a sword or javelin i and in the other a buckler, with this

an O, and therein a little A, and GE-

king O **ΑΓΙΟΣ ΓΕΩΡΓΙΟΣ**, *O holy George* rally represented on horseback, as bei to have frequently engaged in com manner. He is highly venerated thr menia, Muscovy, and all the countri here to the Greek rite; from the Gr ship has long ago been received int church; England and Portugal have him for their patron saint. Great dif been raised about this saint or her existence has been called in question. who wrote first and most about him with giving him entirely up, and se only a symbolical device; and Dr I turned him into a mere Basilidian sy toly. Mr Pegg, in a paper in the (Vol. I. 1.) has attempted to restore finally, Mr Gibbon, has sunk him in bishop, under Constantius and Julian

(12.) **GEORGE ST.** or **GEORGE DOCIAN**, was so surnamed, according bon, from his parents or education; a at Epiphania, in Cilicia, in a fuller's s this obscure and servile origin, he n by the talents of a paralytic; and the pa he assiduously flattered, procured for less dependent, a lucrative commiss tract, to supply the army with bac ployment was mean: he rendered He accumulated wealth by the b fraud and corruption; but his malice so notorious, that George was cor sence from the pursuits of justice. A grace, in which he appears to have a tune at the expence of his honour, b with real or affected zeal, the prest nism. From the love, or the ostentat ing, he collected a valuable library of tome, philosophy, and theology; an of the prevailing faction promoted G pation to the throne of Athanasius. dact in this faction is represented by as polluted by cruelty and avarice, a considered as a just punishment for of his life, among which Mr Geseo rthently ranks his *enmity to the G*; no modern ecclesiastic can *justify* avarice of the abominations and barb lous mythology and superstition. of his death, however, as narrated l cal writers, will not add anything to There was in Alexandria, a place presented to offer human sacrifices. Constantine gave to the church of Al

bishop ordered it to be cleared, toistian church on it. In doing this, red an immense subterraneous cavern, heathen mysteries had been performed were many human skulls. These, ings which they found in the place, e brought out and exposed to public he heathens, provoked at this exhibi- rms and rushing upon the Christians, of them. On this the Christians pro- rther in clearing the temple; but the using their advantage, seized the ie church, and put him in prison. y they dispatched him; and then fast- dy to a camel, dragged it about the y, and in the evening they burnt it d together. This late, Sozomen says, wed in part to his haughtiness while our with Constantius; and some say of Athanasius were concerned in this ut he ascribes it chiefly to the invete- heathens, whose superstitions he had ive in abolishing. His George, the A- of Alexandria, was a man of letters and aluable library, which Julian ordered for his own use; and in his orders t, he says that many of the books were hical and rhetorical subjects, though n related to the doctrine of the im- ans; (as he always affected to call the ' These books (says he) I could wish rly destroyed; but least books of va- e destroyed along with them, let these fully sought for.' But Mr Gibbon erent turn to the affair of George's vell as relates it with different circum- The Pagans (says he) excited his de- ; and the rich temples of Alexandria pillaged or insulted by the haughty, exclaimed, in a loud and threatening ' long will these sepulchres be permit- ?' Under the reign of Constantius, he l by the fury, or rather by the justice e; and it was not without a violent at the civil and military powers of the restore his authority, and gratify his he messenger who proclaimed at A- the accession of Julian, announced the the archbishop. George, with two of ous ministers, count Diodorus, and master of the mint, was ignominiously chains to the public prison. At the ays, the prison was forced open by a superstitious multitude, impatient of forms of judicial proceedings. The sds and men expired under their cruel lifeless bodies of the archbishop and s were carried in triumph through the ie back of a camel; and the inactivity rian party was esteemed a shining ex- vangelical patience. The remains of wretches were thrown into the sea; and leaders of the tumult declared their re- jappoint the devotion of the Christians, ept the future honours of these martyrs een punished, like their predecessors, ies of their religion. The fears of the e just, and their precautions ineffectu-

al. The meritorious death of the archbishop ob- literated the memory of his life. The rival of Athanasius was dear and sacred to the Arians, and the seeming conversion of these sectaries introdu- ced his worship into the bosom of the Catholic church. The odious stranger, disguising every circumstance of time and place, assumed the mask of a martyr, a saint, and a Christian hero; and the infamous George of Cappadocia has been trans- formed into the renowned St George of England, the patron of arms, of chivalry, and of the garter." *Hist. Vol. II. p. 404.*

(13.) GEORGE, ST, in geography, one of the AZORES. It has about 5000 inhabitants, who cul- tivate wheat in great quantities. Lon. 28. 0. W. Lat. 38. 39. N.

(14.) GEORGE, ST, an island of the United States, in the Strait of St Mary, which runs be- tween lake Superior and Lake Huron.

(15.) GEORGE, ST, in Italy. See GIORGIO, ST.

(16.) GEORGE, ST, CROSS OF, a red cross in a field argent, which makes part of the British standard.

(17.) GEORGE, ST, DEL MINA, a fort on the Gold Coast of Guinea, the principal settlement of the Dutch in those parts, who took it from the Portuguese in 1630. The fort is the best on the coast. Under it is the town called by the natives ODDENA, which is very long, and pretty broad. The houses are built of stone, though in all the neighbouring places they are composed only of clay and wood. It was once very populous, but the inhabitants were greatly reduced by the small pox. It is about 12 miles W. of Cape Coast Castle. Lon. 0. 21. W. Lat. 5. 0. N.

(18.) GEORGE, ST, KNIGHTS OF. See GAR- TER. There have been various orders under this denomination, most of which are now extinct; particularly one founded by the emperor Frederick III. in 1470, to guard the frontiers of Bohemia and Hungary against the Turks; another called *St George of Aragon*, founded by the kings of Ara- gon; a 3d and 4th in Austria and Carinthia; and a 5th, in the republic of Genoa, &c.

(19.) GEORGE, ST, RELIGIOUS OF. Of these there are divers orders and congregations; parti- cularly canons regular of St George in Alga, at Venice, founded by Bartholomew Colonna, in 1396, and established by Pope Boniface IX. in 1404. Pope Pius V. in 1570, gave these canons precedence of all other religious. There is an- other congregation in Sicily.

(20.) GEORGE THE 3d's ISLAND, KING, the name given by Capt. Cook to OTAHEITE.

(21.) GEORGE TOWN. See GEORGETOWN. GEORGEHAM, a town on the coast of De- vonshire, SW. of Ilfracomb.

GEORGENBERG, a town of Silesia, in the county of Oppeln, 9 miles N. of Beuthen.

GEORGENBURG, a town of Prussian Lithua- nia, 2 miles S. of Insterburg.

GEORGENTHAL, a town of Upper Saxony, in the county of Gotha, 6 miles S. of Gotha.

GEORGE'S BANE, ST, a fishing bank of Mas- sachusets, on the Atlantic, E. of Cape Cod; ex- tending between Lon. 67. 50. and 68. 40. W. and from Lat. 41. 15. to 42. 22. N.

GEORGE'S CAPE, ST, a cape of St George's Island, 18 miles E. of Cape Blaise. Lat. 29. 38. N. GEORGE'S

CHANNEL, ST. the channel between the coast of England and the SE. of Ireland.

GEORGE'S ISLAND, ST. an island of England, in Cornwall, opposite to E. and W. Loc.

GEORGE'S ISLANDS, KING. See KING.

GEORGE'S ISLANDS, ST. islands in the Gulf of Mexico, on the coast of E. Florida, situated opposite to the mouth of the Apalachicola. Lon. 84. 50. W. Lat. 29. 30. N.

GEORGE'S KEY, ST. a small island of North America, off the coast of Honduras. It is likewise called *Cape* or *Cayo Caimo*. By a convention, in 1786, the English logwood-cutters in the bay of Honduras were permitted, under certain restrictions, to occupy this island.

(1.) **GEORGE'S RIVER, ST.** a river of the United States, in the district of Maine, which becomes an arm of the sea, a league SW. of Penobscot Bay.

(2.) **GEORGE'S RIVER, ST.** a very broad but short river of Maryland, in St Mary's county.

(3.) **GEORGE'S, ST.** the largest of the Bermuda Islands, lying 500 miles E. of the continent of N. America. Lon. 63. 30. W. Lat. 32. 45. N.

(4.) **GEORGE'S, ST.** the capital of the island of Grenada, formerly called *Fort Royal*, from its fort. It is seated on the W. side of the island, on a spacious bay, and has one of the best harbours in the British W. Indies. It was lately fortified.

(5.) **GEORGE'S ST.** a small island of Maritime Austria, in the gulf of Venice, lying to the S. of Venice. In it there is a Benedictine monastery, whose church is one of the finest in Italy.

(6.) **GEORGE'S, ST.** a village of the State of Delaware, in Newcastle county, 45 miles SW. of Philadelphia.

(7, 8.) **GEORGE'S, ST.** two English villages: 1. in Gloucestershire; and, 2. in Somersetshire; both near Bristol.

GEORGETOWN, the name of a district and 7 towns, in the United States, viz.

1. **GEORGETOWN,** a large maritime district of S. Carolina, bounded on the NE. by N. Carolina, SE. by the Atlantic, SW. by the Santee and N. W. by Camden and Cheraws districts. It is 112 miles long from N. to S. and 63 broad; and contains 4 counties, viz. Liberty, Winyaw, Kingston, and Williamsburg. Its population in 1790, (which is said to have been under-rated) was 8991 citizens, and 13,131 slaves. It produces rice, Indian corn, cotton, indigo, wood, &c.

2. **GEORGETOWN,** the capital of the above district, situated near the junction of the Pedee and the Sampitt, 45 miles N. by E. of Charlestown. Lon. 79. 30. W. Lat. 33. 20. N.

3. **GEORGETOWN,** a town of Delaware, capital of Suffex county, 16 miles WSW. of Lewistown, and 103 S. of Philadelphia. Lon. 0. 38. W. of that city. Lat. 38. 46. N.

4. **GEORGETOWN,** a flourishing town of Georgia, on the NE. side of the Ogeechee, 55 miles from Augusta, and 801 from Philadelphia.

5. **GEORGETOWN,** a town of Kentucky, capital of Scott county, on the S. side of the Elkhorn, 11 NNW. of Lexington, and 20 E. by N. fort. Lon. 10. 8. W. of Philadelphia. 0. N.

6. **GEORGETOWN,** a town of Maryland, county, on the S. side of the Sassafras, W. of Warwick, and 61 SW. of Philadelphia. Lon. 0. 46. W. of that city. Lat. 39. 20. N.

7. **GEORGETOWN,** a town of Maryland, Montgomery county, on the NE. side of the Potomac. It has an academy founded by Protestants and Roman Catholics, on liberal principles, carries on trade with Europe and the W. Indies, and lies 8 miles N. of Alexandria, and 141 Philadelphia. Lon. 2. 3. W. of that city. 55. N.

8. **GEORGETOWN,** a town of Pennsylvania, Fayette county, on the SE. side of the Schuylkill, 16 miles SW. of Union.

(1.) **GEORGIA,** a country of Asia, bounded the N. by Circassia, on the E. by Daghestan, on the S. by Armenia, and on the W. by the Black Sea; comprehending the part of the ancient Colchis, Iberia, and Abasgia. About the etymology of the name, author the most probable opinion is, that it is a corruption by softening of KURKIA, from the whence also it is supposed that the name was called by the Persians indifferently *Gorgia* and *Guria*; and the country KURKISTAN and GURISTAN.

(2.) **GEORGIA, DIVISIONS OF.** Georgia is divided by a ridge of mountains into eastern and western; the former of which is again divided into the kingdoms of Kakheti, Cartli, and Guria; and the latter into the kingdoms of Abasgia, Mircia or Imeritia, and Guria. The other division is into Georgia Proper, and Mingrelia. A 3d division, and the most correct, is into 9 provinces; 5 of which (or were lately) subject to the famous patriarchus, forming what is commonly called the kingdom of Georgia, of which TIFLIS is the capital, and 4 are under the dominion of David, king the kingdom of Imeritia. See IBERIA.

(3.) **GEORGIA, GENERAL APPEARANCE, DUCE AND CLIMATE OF.** This whole country is so extremely beautiful, that some travellers have imagined they had here found the original garden of Eden. The mountains are covered with forests of oak, ash, beech, nut, walnuts, and elms, encircled with growing perfectly wild, but producing varieties of grapes. From these is annually produced much wine as is necessary for the yearly consumption; the remainder are left to rot on the vine. The wine is so rich, that the Persian monarch always has it at his table. The whole country is fertile, and abounds with cattle and wild beasts of various kinds. The bread is excellent, and the fruits, apples, pears, pomegranates, &c. of exquisite flavour. Cotton grows spontaneously well as the finest European fruit trees, wheat, millet, hemp, and flax, are raised in the plains, almost without culture. The valleys afford the finest pasturage: the rivers are full of fish; the mountains abound in minerals, and the climate is delicious; so that nature appears to have lavished on this favoured country every blessing that can contribute to the happiness of its inhabitants.

(4.) **GEORGIA, GOVERNMENT OF.** The government is

t of Georgia is despotic; but, were it the assistance of the Russian troops, the could frequently be unable to carry his into execution. The punishments in crimes are shockingly cruel; fortunately they frequent, because it is easy to escape into the neighbouring countries, and because he is more enriched by confiscating the of the criminal, than by putting him to death. Judicial combats are considered as a badge of nobility, and take place when the extremely intricate, or when the power of two claimants are so equal, that an force a decision of the court in his favour. This mode of trial is called *an appeal to the sword of God*.

GEORGIA, HISTORY OF. This country abounded with great cities, as appears from the ruins of many of them still visible, now that they must have been very large, and magnificently built. These were all destroyed by the northern barbarians from mount Caucasus, as the Alans, Huns, Suevi, and others, noted in history for their strength, courage, and conquests. In the 15th century, a king of Georgia divided among his 5 sons the provinces of Carduel and Caket, Imeritia, Mingrelia, and Abcassia. These petty princes were unable to unite for their common defence, and weak singly to resist a foreign enemy, or to check the incroachments of their great neighbours, who soon became independent. By forming a league among these nobles, the Turks gained possession of all the western provinces while the Persians occupied the government of Carduel and Caket. Since that period the unsuccessful attempts of the Georgians to recover their liberty have repeatedly produced the devastation of their country. Abbas the Great did to have carried off in one expedition the provinces of Carduel and Caket no less than 100 families; a number which, probably, was the whole actual population of those provinces. The most horrible cruelties were again done to the unhappy people, at the beginning of the 18th century, by the merciless Nadir; whose small evils, compared with those done in the internal dissensions of the great kingdom. This numerous body of men, idle, and proud and ferocious, possessed of an unlimited power over the lives and properties of their vassals, had no employment but that of arms, and no other grandizing themselves but by the plunder of their rivals, were constantly in a state of war, and as their success was various, and the spoils of the vanquished were constantly divided, and sold to the Turks or Persians, every day increased the depopulation of the country, in length they invited the neighbouring powers, by the hopes of plunder, to take part in their quarrels; and these dangerous allies, acquainted with the country, and being sensible of the weakness of its inhabitants, soon increased its desolation. A few squalid wretches, half starved, and driven to despair by the excessive exactions of their landlords, are scattered over the most beautiful provinces of the country.

2. The revolutions of Persia, and the

PART II.

weakness of the Turkish government, have indeed enabled the princes of the country to recover their independence; but the smallness of their revenue has hitherto disabled them from repressing effectually the tyranny of the nobles, and relieving the burdens of the peasants. Of all the Georgian princes, who of late have rendered themselves famous, by shaking off the Ottoman yoke, the most eminent is prince Heraclius. Of this prince, we have the following account by the late professor Guldenstadt when he travelled into these parts in 1770. "Heraclius, or, as he is called, the czar *Irakli*, is above 60 years old, of a middle size, with a long countenance, a dark complexion, large eyes, and a small beard. He passed his youth at the court and in the army of the celebrated Nadir Shah, where he contracted a fondness for Persian customs and manners, which he has introduced into his kingdom. He has 7 sons and 6 daughters. He is much revered and dreaded by the Persian khans his neighbours; and is usually chosen to mediate between them in their disputes with each other. When they are at war, he supports one of the parties with a few troops, who diffuse a spirit of courage among the rest, because the Georgian soldiers are esteemed the bravest of those parts; and prince Heraclius himself is renowned for his courage and military skill. When on horseback he has always a pair of loaded pistols at his girdle, and, if the enemy is near, a musket slung over his shoulder. In all engagements he is the foremost to give examples of personal bravery; and frequently charges the enemy at the head of his troops with the sabre in his hand. He loves pomp and expence; he has adopted the dress of Persia; and regulates his court after the manner of that country. From the example of the Russian troops, who were quartered in Georgia during the last Turkish war, he has learnt the use of plates, knives, and forks, dishes and household furniture, &c."

(6.) **GEORGIA, INHABITANTS OF.** "The inhabitants, (says Sir George Chardin,) are robust, valiant, and of a jovial temper; great lovers of wine, and esteemed very true and faithful; endowed with good natural parts, but, for want of education, very vicious. The women are generally so fair and comely, that the wives and concubines of the king of Persia and his court are for the most part Georgian women. Nature has adorned them with graces no where else to be met with: it is impossible to see them without loving them; they are of a good size, clean-limbed, and well shaped." Another traveller, however, of no mean character, thus expresses himself with respect to these women: "As to the Georgian women, they did not at all surprise us; for we expected to find them perfect beauties. They are, indeed, no way disagreeable; and may be counted beauties, if compared with the Curdes. They have an air of health that is pleasing enough; but, after all, they are neither so handsome nor so well shaped as is reported. Those who live in the towns have nothing extraordinary more than the others; so that I may, I think, venture to contradict the accounts that have been given of them by most travellers." The other inhabitants of Georgia are Tartars, Osli, and Armenians, called in the

Georgian language *Somakhi*. These last are found all over Georgia, sometimes mixed with the natives, and sometimes in villages of their own. They speak among themselves their own language, but all understand and can talk the Georgian. They remain partly the Armenian, and partly the Roman Catholic. They are the most respected of the old inhabitants, but are still distinguished by their distinctive monitory which every where characterizes their names. Besides these, there are in Georgia considerable numbers of Jews, called, in the language of the country, *Urm*. Some have villages of their own; and others are mixed with the Georgian, Armenian, and Tatar inhabitants, but mixed with the Jews. They pay a small tribute above that of the natives.

(7.) **GEORGIANS, MANNERS AND CHARACTER OF THE PEOPLE &c.** The Georgians are Christians of the Greek communion. Their dress nearly resembles that of the Cossacks; but men of rank frequently wear the habit of Persia. They usually dye their hair, beard, and nails with red. The Georgian women employ the same colour to stain the palms of their hands. On their heads they wear a cap or fillet, under which the black hair falls on the forehead; behind, it is braided into several tresses. Their eye-brows are painted with black, so as to form one entire line, and their faces are perfectly coated with white and red. Their robe is open to the girdle, so that they are reduced to conceal the breasts with their hands. Their air and manner are extremely voluptuous. Being generally educated in convents, they can all read and write; a qualification which is very unusual among the men, even of the highest rank. Girls are betrothed as soon as possible, often at 3 or 4 years of age. In the streets the women of rank are always veiled, and then it is indecent in any man to accost them. It is likewise uncivil in conversation to inquire after the wives of any of the company. These, however, are not ancient customs, but consequences of the violence committed by the Persians, under Shah Nadir. Travellers accuse the Georgians of drunkenness, superstition, cruelty, sloth, avarice, and cowardice; vices which are everywhere common to slaves and tyrants, and are by no means peculiar to the natives of this country. The descendants of the colonists, carried off by Shah Abbas, and settled at Perzia, near Ispahan, and in Masanderan, have changed their character with their government; and the Georgian troops, employed in Persia against the Afghans, were advantageously distinguished by their docility, their discipline, and their courage.

(3.) **GEORGIA, POPULATION &c.** The subjects of Heraklius have been estimated at about 60,000 families; but this, notwithstanding the present devastated state of the country, is probably an undervaluation. The peasants belonging to the queen, and those of the patriarch, pay no tax to the prince, and therefore do not appear on the books of the revenue officers. Many similar exemptions have likewise been granted by the prince to his favourites. Besides, as the impost on the peasants is not a poll tax, but a tax on hearths, the inhabitants of a village, on the approach of the collectors, frequently carry the furniture of several huts into one, and destroy the

remainder, which are afterwards very high. It is probable, therefore, that the elevation of Georgia does not fall into the fourth.

10. **GEORGIA, REVENUES.** There are
be estimated at about 1,000,000 rubles, or
1,500,000 roubles. 1. The custom, 1,500,000.
2. Rent paid by the farmers of
the fields, 1,500,000. The tribute paid
by the Khan of Erevan and Gushik, 1,500,000.
The money levied on the peasants, 1,500,000.
The common coin, here
about 1,500,000, and a fine
coin, stamped with the fruit of the
tree, a large quantity of gold and silver
is brought into the country from Persia
to exchange for money, butter, &c.
but little.

(TO) GEORGIA, TRADE OF. The
State, being fed by many rivers, exports
all fishes either in rapid or on shoals
at places of migration: the Black Sea
commerce and navigation might be in-
creased. There has been till very lately
exclusive possession of the Turks; the trade
is by land & recently obstructed by
monopolies of Circassians; and this ob-
stacle is removed by the removal of predatory
war with the Circassians in 1864.

(Hill) Guatemala, the most farther United States of America, bounded on the Atlantic Ocean, on the S. by E. and Africa, on the W. by the Mississippi, and NE. and N. by S. Carolina and Tennessee, 664 miles long and 162 broad, lying between 91° Lon. W.; and 16° 17' and 35°

(h.) GEORGIA, CLIMATE, SOIL AND
OF. The winters in Georgia are very
pleasant. Snow is seldom or never
seen. The soil and its fertility are various, ac-
cording to the situation and improvements. By culti-
vating rice, indigo, cotton, silk, Indian
corn, oranges, figs, &c. negroes, &c.
present is the staple commodity; but
attention is also paid to the raising of tobacco.

(III.) GEORGIA, COUNTIES AND CHIEF TOWNS. Georgia, before the revolution, was divided into parishes; afterwards into 3 divisions into two, called the *Upper and Lower*, are subdivided into 24 counties; 9 in the *Lower*, viz. Camden, Glynn, Liberty, Bryan, McIntosh, Effingham, Scriven, and 15 in the *Upper*, viz. Montgomery, Wilkes, Wilcox, Lincoln, Warren, Jackson, Bullock, Columbia, and 1. The chief towns are SAVANNAH, the capital of the state, AUGUSTA, the late seat of government, LOUISVILLE, the present seat. (See these articles;) Sunbury, Buena Vista, Washington, St. Patricks, Goldsboro, &c.

(iv.) **GEORGIA, GENERAL APPEARANCE.** The E. part of the state between the river and the ocean, and the Savannah and St. Marys rivers, is an entirely level tract of 120 miles N. to S. and from 40 to 50 broad, single hill or none. About 45 miles fr

lands begin to be uneven, ridges gra-
into hills, and these into mountains,
minate in the Allegany and Appala-
hians in New York.

GEORGIA, GOVERNMENT AND CONSTITUTION. By the constitution established, May
the legislative power is vested in a series
of representatives, both elected by the
large, and fitted the *General Assembly*.
consists of 24 members, one from each
of the 12 counties. A senator must be 28
years of age, 3 years a citizen of Georgia and 9
in the United States: He must also possess
at least 250 acres of land, and 2500 l. of
property. A member of the house of representa-
tives must be 21 years of age, two years a citizen
of Georgia, and 7 in the United States; he must
possess 100 acres of land, or property worth
1000 l. Five years residence entitles a citizen to
be a senator. There are only two judges in the superior
court, one presides in each district, and decides
all important causes: But there is an in-
ferior court of common pleas in each
district, with 3 judges who sit twice a-year. The
process is simple and the causes soon de-

GEORGIA HISTORY OF. The settlement of
between the Savannah and Altamaha was
first made in England in 1732, for the accom-
modation of poor people in Great Britain and
for the farther security of Carolina.
The passion and public spirit conspired to
the benevolent design. Humane and
enlightened suggested a plan of transporting a
number of indigent families to this part of Ameri-
ca. For this purpose they applied
to George II. and obtained from him
a charter, dated June 9, 1732, for legally carry-
ing out what they had generously pro-
posed. They called the new province *Georgia*,
in honour of the king who encouraged the plan.
The first ship, consisting of 21 persons, was con-
ducted by the name of, *The Trustees for settling
the colony of Georgia*. In Nov.
1732, the settlers embarked for Georgia, to be
entirely free of expence, furnished with
all requisite for building and for cultivat-
ing. Mr James Oglethorpe, one of the
most active promoters of the settlement,
was the head and director of these settlers.
They arrived at Charlestown early in 1733. Mr
Oglethorpe, accompanied by William Bull, shortly
after his arrival, visited Georgia; and after
examining the country, marked the spot on which
the new town should stand, as the fittest to begin their

Here they accordingly began and
built a fort; and a number of huts for their
accommodation. Such of the settlers
able to bear arms were embodied, and
furnished with officers, arms, and ammunition.
A friendship was concluded between the
English and their neighbours the Creek Indians,
who wore the aspect of peace and
prosperity. But the first English settlers
did not fulfilment of these expectations, it
was found that a hardy and bold race of men,
accustomed to arduous labour and fatigue, would be bet-
ter both to cultivate and defend the in-

stant province. Accordingly 570 adventurers, a-
mong whom were 130 Highlanders, and 170 Ger-
mans, were prevailed on to emigrate to Georgia
within 3 years after. But the fundamental regu-
lations established by the trustees of Georgia were
ill adapted to the circumstances and situation of
the poor settlers, and of pernicious consequences
to the prosperity of the province. Yet although
the trustees were greatly mistaken with respect to
their plan of settlement, it must be acknowledged
their views were generous. Like other distant le-
gislators, who framed their regulations upon prin-
ciples of speculation, they were liable to many er-
rors and mistakes; and however good their design,
their rules were found improper and impracticable.
These injudicious regulations and restrictions, the
wars in which they were involved with the Spani-
ards and Indians, and the frequent insurrections
among themselves, threw the colony into a state
of confusion and wretchedness too great for human
nature long to endure. Their oppressed situation
was represented to the trustees by repeated com-
plaints; till at length finding that the province
languished under their care, and weary with the
complaints of the people, they in 1752, surren-
dered their charter to the king, and it was made a
royal government. John Reynolds, Esq. was ap-
pointed governor, and a legislature similar to that
of the other provinces was established.—In 1740,
the Rev. George Whitefield founded an orphan-
house academy in Georgia, about 12 miles from
Savannah. From the time that Georgia became a
royal government in 1752, till the peace of Paris
in 1763, the colony struggled under many difficul-
ties arising from the want of credit, and the fre-
quent molestations of enemies. The good effects
of the peace were sensibly felt. From this time it
began to flourish under the care of gov. Wright;
and within 10 years only, from 1763 to 1773 its
exports arose from 27,021 l. to 121,676 l. Sterling.
During the American war, Georgia was over-run
by the British troops, and the inhabitants were
obliged to flee into the neighbouring states for
safety. Since the peace, the population, agricul-
ture, commerce and arts, have increased with
astonishing rapidity, though these have been a
good deal retarded within these few years by the
hostile incursions of the CREEK or MUSKOGULGE
Indians, who inhabit the middle parts of the state.
See MUSKOGULGE. In 1789, the constitution
was new-modelled upon a plan similar to that of
the other states. In 1790, a treaty of peace be-
ing concluded between the United States and the
Indians, the state of Georgia has been ever since
increasing in wealth and population.

(vii.) **GEORGIA, INDIAN NATIONS IN.** The
middle parts of this state are inhabited by the
CREEK or MUSKOGULGE Indians, the most nu-
merous nation of Aboriginal Americans within the
United States, consisting of about 20 different tribes
united. Their country is fertile, though hilly, and
extends from the Mobile to the Atlantic. The
CHACKTAW, CHICKASAW, and CHEROKEE,
have settlements in the N. and W. parts of the
state. See these articles.

(viii.) **GEORGIA, INHABITANTS OF.** In the
grand convention at Philadelphia in 1787, the in-
habitants of this state were reckoned at 90,000,

including 20,000 negroes. At present (1800) the total population is estimated at 100,000 including 30,000 slaves; so that the only increase seems to be in the number of that unfortunate race. The number of Indians in Georgia is estimated at about 32,000. No general character will apply to the citizens of this state. Collected from different parts of the world, as interest, necessity, or inclination led them, their character and manners must of course partake of all the varieties which distinguish the several states and kingdoms from whence they came. There is so little uniformity, that it is difficult to trace any governing principles among them. An aversion to labour seems predominant, owing in part to the relaxing heat of the climate, and partly to the want of necessity to excite industry. An open and friendly hospitality, however, particularly to strangers, is an ornamental characteristic of a great part of this people. As to religion the upper counties are supplied pretty generally by baptist and methodist ministers; but the greater part of the state is without ministers of any denomination.

(ix.) GEORGIA, ISLANDS OF. The whole coast of Georgia is bordered with islands, the principal of which are Skiddaway, Wassaw, Oflabaw, St Catharine's, Sapelo, Frederica, Jekyl and Cumberland.

(x.) GEORGIA, NATURAL CURIOSITIES OF. Near Augusta, there is a bank of oyster shells 90 miles from the sea: and in Wilkes county, near Washington, there is a remarkable spring which rises from a hollow tree, 5 feet long. The inside of the tree is covered with a coat of matter an inch thick, and the leaves around the spring are encrusted with a peculiar substance as white as snow. The water is said to be an effectual remedy for the scurvy, scrofula, gout, rheumatism and consumption.

(xi.) GEORGIA, RIVERS OF. The chief rivers in this state are the Savannah, Turtle river, Little and Great Satilla, Crooked river, and St Mary's which forms a part of the southern boundary of the United States. The rivers in the middle and western parts are the Apalachicola, formed by the Chatahouchee and Flint rivers, Mobile, Pascagoula, and Pearl rivers. All these run southward into the Gulf of Mexico.

(xii.) GEORGIA, TRADE OF. The commerce of this state has greatly increased of late. The articles chiefly exported are cotton, rice, tobacco, indigo, sago, lumber, naval stores, leather, deer skins, inkerooot, myrtle, bees wax, corn, and live stock; of which last, the farmers raise from 1000 to 1500 head annually. The exports in 1795 amounted to 695,985 dollars: and in 1799 to 1,396,759. The chief imports are West India goods, tea, wine, cloths, dry goods, fish; cheese, cyder, shoes, &c. Silk, indigo, and sago, are the chief manufactures.

(xiii.) GEORGIA, UNIVERSITY OF. A charter was passed in 1785, for erecting a college, with ample and liberal endowments, at Louisville, in a high and healthy part of the country, near the centre of the state. There is also provision made for the institution of an academy in each county of the state, to be supported from the same funds, and consisting of pupils and members of the same institution, under the general superintendence and

direction of a president and board of trustees pointed for their literary accomplishments in the different parts of the state, and invested with the customary powers of corporations. This institution thus composed is denominated *University of Georgia*. The funds for the support of this institution are principally in lands, amounting in the whole to about 50,000 acres, a great part of which is of the best quality, and is very valuable. There are also nearly 600000 dollars lying in bonds, houses and town lots in the city of Augusta. Other public property to the amount of 1000 l. in each county has been set apart for the purposes of building and furnishing the respective academies. The funds originally appropriated for the support of the orphan-house are now applied to the support of the same institution, and to the support of the orphan-house are now applied to the support of the same institution, and to the support of the orphan-house are now applied to the support of the same institution.

(xiv.) GEORGIA, WESTERN TERRITORY. This country extends from the Mississippi W. to the Flint and Apalachicola on the E. It is intersected by many rivers. Great part of it belongs to the Indians. (See § vii.) Millions of acres of it were sold a few years ago by the state of Georgia to several companies withstanding a very violent opposition occasioned a general ferment.

(III.) GEORGIA, a township of Vermont, Franklin county, on lake Champlain.

(IV.) GEORGIA, SOUTH, an island in the Pacific Ocean, discovered and named by James Cook in 1775. See COOK, N° III, § 9. It is 10 leagues long, and its greatest breadth is 5 leagues. It seems to abound with bays and harbours. The vast quantities of ice render inaccessible the greatest part of the year. Two rocky islands are situated at the N. end; one named *Hill Island* from the person who discovered it. *Bird Island*, from the innumerable flock of all sorts that were seen near it, from albatrosses down to the least petrels. porpoises and seals were likewise observed. There are perpendicular ice-cliffs, of considerable height, like those at Spitzbergen. Pieces were observed breaking off, and floating out to sea. Between 33. 13. and 35. 34. W. Lat. 5. 54. 57. S.

(V.) GEORGIA, WEST. See N° II, GEORGIANS, the people of Georgia.

(1.) * GEORGICK. *an. f.* [Georgic; a poem; Fr.] Relating to the doctrine of agriculture.

Here I peruse the Ma. Juan's georgic
And learn the labours of Italian swain.

(2.) * GEORGICK. *n. f.* Some part of husbandry put into a pleasing context set off with all the beauties and embellishments of poetry. *Addition.*

(3.) GEORGICS are poetical compositions on husbandry. Hesiod and Virgil are the best masters in Georgics. The moderns have produced nothing in this kind, except Rapin's of Gardening; and the celebrated poem of Cyder, by Mr Philips, who, if he has the advantage of Virgil's language, was never second to Virgil in a much nearer approach to the subject.

GEORGIEV, a town of Russia, in the government of Caucasus, 32 miles WNW. of Jekaterinburg.

G, ST. See **GIORGIO**, ST.

Z, a town of Walachia, 18 miles north, and 24 SE. of Tergovisto.

IM SIDUS, or the **GEORGIAN PLANET**, *Index*. The late Prof. W. Jersey, in his *Researches into the Planets*, says, "The encouragement of the arts, by his beneficence and example, certainly entitles him to the name of a living sovereign to the home. But it is not very probable it will. The satellites of Jupiter were first discovered, Galileo, *Pianeti Medicei* of his patrons, the Medici. This name was discontinued. Had Mr Hersey given the name of some of the ancient planets, it would have been universally among that number, *Minerva* descending from its beauty and brilliant planet Mars has been so called from the goddess of war. The new planet, being a telescope, is said to denote the modesty of the discoverer." Foreign astronomers have named this planet **HERSCHEL**, after its discoverer.

ASTRONOMY, certainly entitles him to the name of a living sovereign to the home. But it is not very probable it will. The satellites of Jupiter were first discovered, Galileo, *Pianeti Medicei* of his patrons, the Medici. This name was discontinued. Had Mr Hersey given the name of some of the ancient planets, it would have been universally among that number, *Minerva* descending from its beauty and brilliant planet Mars has been so called from the goddess of war. The new planet, being a telescope, is said to denote the modesty of the discoverer." Foreign astronomers have named this planet **HERSCHEL**, after its discoverer.

PY, *n. f.* [from *πῦρ*, earth, and *σκοπεῖν*, observation of the different qualities] *Bailey*.

G, town of Saxony in Misnia, on the river Elbe, 11 miles SSW. of Leipzig, and 68 W. of Berlin. Lon. 11. 56. S. Lat. 50. 50. N.

G, [גֶּרָה, Heb.] the smallest silver coin among the Jews, in value 7½d sterling.

GER, a town of Norway, in the diocese of Trondheim, 22 miles SSW. of Romſdal.

GER, in natural history, an appellation given to such of the semipellucid gems as are of a spot resembling a crane's eye.

GERANIUM, **CRANE'S BILL**, in botany, a geeraniaceae order, belonging to the monochlamydeae class of plants; and in the natural method under the 14th order, *Gruinales*. There are these: the flower has a permanent, composed of 5 small oval leaves, or heartshaped petals, spreading open, in some species equal, and in others are much larger than the 5 lower. The calyx is permanent, alternately longer than each other, than the petals, and terminated by oblong lobes. In the bottom of the flower is situated the germen, which is permanent. The ovary is succeeded by 5 seeds, each being wrapped in a fleshy husk of the beak, where they are gathered together at the point, so as to form the

resemblance of a stork's beak. There are above 80 species. The common wild sorts, and those which are brought from the colder climates, are hardy enough, and require little care; but the African species, and the others from hot countries which make so very beautiful a figure in our green-houses, require great care in their culture and propagation. These may be propagated by seed, which should be sown toward the end of March in beds of light earth, carefully shading them from the sun, and giving them frequent but gentle waterings, till they are well rooted. The mats with which these beds are covered are to be taken off in gentle showers, and always in the hot weather at nights, that the plants may have the benefit of the dew. They should remain about two months in this bed, by which time they will have taken root. Some pots of about 7 inches wide should then be filled with light earth, and the plants taken up with as much as possible of their own earth about them, and planted severally in the middle of these pots; when they are to be set in a shady place, and watered at times till they have taken root. When well rooted, they should be set in a more exposed place to harden them, and should stand out till the middle of October; but when the mornings begin to grow frosty, they must be removed into the green-house, and then placed as near the windows as possible, and the windows should be opened upon them till the weather is very cold. During the winter they must be often watered a little at a time, and their dead leaves should be pulled off. They must not stand under the shade of other plants, nor near any artificial heat. Those who wish that their plants should be large and flower soon, sow the seeds on a moderate hot-bed in the spring; when they are come up, they should not be drawn weak, and the pots into which they are transplanted should be plunged into another moderate hot-bed; shading them from the sun till they have taken root, and gradually inuring them to the open air, into which they should be removed in the beginning of June, and placed in a sheltered situation with other exotic plants. The shrubby African geraniums are commonly propagated by cuttings, which planted in a shady border, in June or July, will take good root in 5 or 6 weeks; and they may then be taken up and planted in separate pots, placing them in the shade till they have taken new root; after which they may be removed into a sheltered situation, and treated as the seedling plants. Geranium is recommended as one of the greatest vulneraries and abstersgents of the vegetable world, and is highly extolled for its power of stopping profluvia of the menses, and hæmorrhagies of all kinds. Experience confirms this, especially among the poor people in the country; and it were to be wished, that the plant could be brought into more esteem in the shops, where at present it is disregarded.

GERANZAGO, a town of the Cisalpine republic, in the dep. of Tessino, and late principality of Pavia.

GERAR, or **GERARA**, in ancient geography, the south boundary of Canaan near Berseba; situated between Cades and Zur; two deserts, the one facing Egypt and the other Arabia Petrea.

(1.) **GER**

(1.) GERARD, Alexander, D. D. professor of divinity in King's college, Aberdeen, and one of his majesty's chaplains for Scotland. He was eldest son of the rev. Gilbert Gerard, minister of Chapel of Garioch, and was born the 22d Feb. 1728. He received the rudiments of his education at Forveran, in Aberdeenshire; but his father dying when he was only ten years old, his mother and the family removed to Aberdeen, where he made such progress at the grammar school, that in two years he was deemed fit for the university. He accordingly entered student at Marischal college, and in 4 years afterwards was admitted A. M.: after which he studied theology at the universities of Aberdeen and Edinburgh. Having been licensed to preach in 1748, he was chosen assistant to prof. D. Fordyce, in 1750, and was afterwards appointed his successor, upon his untimely death, in 1752. See FORDYCE. In 1754, a material alteration being made in the order of teaching philosophy in the university, prof. Gerard was appointed to lay before the public the reasons which had influenced them to deviate from the former practice; which he accordingly did in a small pamphlet, that gave universal satisfaction; wherein he pointed out the inconveniences of the old, and the advantages of the new plan; which was at this time adopted by both colleges. About this time too he was an active member of a respectable literary society, which met once a fortnight at Aberdeen, and of which Drs Blackwell, Beattie, Gregory, Reid, Campbell, and other eminent literary gentlemen were members. On the 5th of Sept. 1759, he was ordained a minister of the church of Scotland; on the 11th of June, 1760, he was appointed professor of divinity in the Marischal college, and minister of the Gray-friars church at Aberdeen; and about the same time he was created D. D. On the 18th June 1771, he resigned both these offices, and was appointed professor of divinity in king's college; in which station he continued equally esteemed by his colleagues, and revered by his pupils, till his birthday 1795, when having just entered his 68th year, he died in consequence of a schirrous tumour, which had begun to appear in his face in 1794; and gradually impaired his constitution. Dr Gerard's character in private life was amiable and exemplary. Kindness to his relations, affability with his dependants, steadiness and warmth in his attachments to his friends, and hospitality to strangers without extravagance or ostentation, were conspicuous in his general conduct. His public discourses, as a minister and professor, were equally marked by distinctness of arrangement, accuracy of composition, and justness of reasoning. His friend, Dr Beattie, (who himself stands high in the republic of letters) assures us, that "he had improved his memory to such a degree, that, in little more than an hour, he could get by heart any sermon of ordinary length; though far from availing himself of this talent, as many would have done, he composed with care all the sermons that he preached." He was author of, 1. An Essay on Taste: 8vo. 1759. 2. Dissertations on subjects relating to the genius and evidences of Christianity: 8vo. 1766. 3. An Essay on Genius: 8vo. 1774. 4. Several Sermons on various subjects, published

from 1760 to 1782; and 5. A part of a gical course, entitled *The Pastoral Office*, published in 1799, by his son, Dr Gilbert who succeeded him in his professorship. Lay on Taste gained the gold prize medal of the Philosophical Society of Edinburgh.

(2.) GERARD, John, a learned Lutheran professor of divinity, and rector of the of Jena, his birth-place. He wrote, 1. *mony of the Eastern Languages*; 2. *A the Coptic Church*; and other works esteemed. He died in 1668.

(3.) GERARD, Tung, or Tom, founder Grand Master of the Knights hospital John, or Knights of Malta, was born in Italy, in the 11th century. In A. D. assumed a religious habit, with a white the breast, and, with many others, e vows of chastity, poverty, and to relieve tians in distress, &c. He died in 1120 succeeded as grand master by Raymon See MALTA.

GERARDE, John, surgeon in London, greatest botanist of his time, and many gardener to Lord Burleigh; who was great lover of plants, and had the best in the kingdom, among which were introduced by Geraide. In 1597, he his *Herbal*, which was printed at the J. Norton, who procured the figures for fort. In 1663, Thomas Johnson, an publisher an improved edition of Gerard which met with such approbation by the ty of Oxford, that they conferred upon degree of M. D. and it is still much The descriptions in the herbal are plain liar; and are calculated to make the derstand the characters of the plants.

GERARDI, Christopher, an eminent of landscapes, grotesque and historical born at Florence in 1500. He died in

GERARDIA, in botany; a genus of ospermia order, belonging to the didym of plants: and in the natural method under the 40th order, *Ferjonatæ*. The cal quefid, the corolla bilabiate; the under tite; the side lobes emarginated, and t one bipartite; the capsule bilocular and

, a town of Russia, in the government the Colva, 152 miles N. of Perm.

CHANSKOL, a fort of Siberia.

VT. *adj.* [*gerens*, Latin.] Carrying; 7.

DORF, a town of Austria, 3 miles ns.

D, a town of Negropont.

FALCON. *n. f.* A bird of prey, in a vulture and a hawk, and of the 9th next to the eagle. *Bailey*.

ALCON. See FALCO, N^o 22 and 31.

GERGAR, a town of Spain, in Granada.

GERGEFALVA, a town of Transylvania.

GERGENTI. See GIRGENTI.

GERGESA, in ancient geography, a Transjordan town, 10 otherwise known than by the *Ger- gesenes* of St Matthew, GERGESÆI of Moses; sup- posed to have stood in the neighbourhood of Ga- dara, and near the sea of Tiberias. See GADAR- ENORUM AGER.

GERGESÆI, or } one of the 7 ancient nations
GERGESENES, } of Canaan, less frequently mentioned than the rest. They appear to have been less considerable and more obscure: their name is from *Girgasi*, one of Canaan's sons. See GIRGASHITES.

GERGINSWALDE, a town of Saxony, in the circle of Leipzig, 4 miles NE. of Rochlitz.

GERHARDSBRON, a town of Germany, in Anspach; 28 miles W. of Anspach.

GERISIM, } or GARIZIM, in ancient geo-
GERIZIM, } graphy, a mountain of Samaria, at the foot of which stood Shechem; so near, that Jotham could be heard by the Shechemites from its top; (*Judges ix. 7.*) famous for the temple built on it by Sanballat, in favour of his son-in law Ma- nasseh, by the permission of Alexander the Great; and destroyed 200 years after, by John Hyrcanus, son of Simon the 4th in succession of the Asmone- ans. *Josephus*.

GERLA, a village of the Cisalpine republic, in the dept. of the Benaco.

GERLATZKOL, a fort of Russian Siberia.

GERM. See GERME, and GERMEN.

(1.) GERMAIN. or ST GERMAIN, a town of France, in the department of Seine and Oise, and ci-devant province of the Isle of France. It has a magnificent palace, embellished by Lewis XIV, who was born in it, with a fine forest and elegant gardens, &c. long the asylum of K. James II. It is seated on the Seine, 10 miles NW. of Paris. Lon. 2. 15. E. Lat. 48. 52. N.

(2.) GERMAIN LAVAL, ST, a town of France, in the dept. of Rhone and Loire, and late province of Forez; 18 miles S. of Roanne, and 225 SE. of Paris. Lon. 4. 2. E. Lat. 45. 50. N.

GERMAINS, ST, a borough of England, in Corn- wall, formerly the largest town in the county, and a bishop's see. Part of the old cathedral is used as the parish church, and the priory is still stand- ing. It is 10 miles W. of Plymouth, and 224 W. by S. of London. Lon. 4. 24. W. Lat. 50. 22. N.

(1.) GERMAN, or GERMANIC, *adj.* belonging to Germany.

(2.) * GERMAN. *adj.* [*germanus*, Lat.] Related. Obsolete.—Not he alone shall suffer what wit can make heavy, and vengeance bitter; but those that are *german* to him, though removed fifty times, shall come under the hangman. *Shakspeare*.

(3.) * GERMAN. *n. f.* [*germain*, Fr. *germanus*, Lat.] Brother; one approaching to a brother in proximity of blood: thus the children of brothers or sisters are called cousins *german*, the only sense in which the word is now used.—They knew it was their cousin *german*, the famous Amphialus. *Sidonius*.—

And to him said, go now, proud miscreant,
Thyself thy message do to *german* dear. *F. Q.*
—Wert thou a bear, thou wouldst be kill'd by the
horde;

horse; wert thou a horse, thou wouldst be seiz'd by the leopard; wert thou a leopard, thou wert german to the lion, and the spots of thy kindred were juries on thy life. *Shak. Timon.*—You'll have your nephews neigh to you; you'll have coursers for cousins, and genets for *germans.* *Othello.*

(4.) GERMAN, in genealogy, signifies whole, entire, or own. *Germani, quasi eadem stirpe geniti. Fossus.* Hence, BROTHER GERMAN, denotes a brother both by the father's and mother's side, in contradistinction to uterine brothers, &c. who are only so by the mother's side. And COUSINS GERMAN, are those in the first degree, the children of brothers or sisters. See CONSANGUINITY, and COUSIN, § 1, 2.

(5.) GERMAN, in geography, a township of Pennsylvania, in Fayette county.

(6.) GERMAN FLATS, a town and township of New York, the capital of Herkemer county, containing 4194 citizens in 1790, of whom 684 were electors: seated on the Mohawk opposite Herkemer; 60 miles W. of Schenectady, 80 NW. by W. of Albany, and 340 N. of Philadelphia. Lon. 0, 5. E. of that city. Lat. 42. 58. N.

(1.) * GERMANDER. *n. f.* [*germandrée, Fr. chamaedrys, Lat.*] A plant. *Miller.*

(2.) GERMANDER, in botany. See TEUCRIUM.

(3.) GERMANDER, ROCK. See VERONICA.

GERMANICUS CÆSAR, Claudius, the son of Drusus, and nephew to the emperor Tiberius, who adopted him. By his mother Antonia, daughter of Mark Antony and Octavia, he was grand-nephew to Augustus. He was much renowned as a general, but still more for his virtues. He took the title of *Germanicus* from his conquests in Germany; but though he refused the empire offered to him by his army, Tiberius, jealous of his success and popularity, caused him to be poisoned, A. D. 29, aged 34. He was a protector of learning; and composed some Greek comedies and Latin poems, some of which are still extant.

GERMANO, ST, a town of Naples, at the foot of Mount Cassano, with an abbey on the top of it. Lon. 13. 59. Lat. 41. 13. N.

(1.) GERMAN, the people of GERMANY.

(2.) GERMAN, CHARACTER AND MANNERS OF THE ANCIENT. The ancient Germans are described by the Greek and Roman writers as resembling the Gauls; and differing from other nations by their tall stature, ruddy complexion, blue eyes, yellow bushy hair, haughty and threatening looks, strong constitutions, and being proof against hunger, cold, and all kinds of hardships. Their native disposition appeared chiefly in their martial genius, and in their singular fidelity. The former they indeed carried to such an excess as came little short of downright ferocity: and as to the latter, they not only valued themselves, but were greatly esteemed by other nations for it; inasmuch that Augustus, and several of his successors, committed the guard of their persons to them, and other nations either courted their alliance, or hired them as auxiliaries: though it must be owned, that their extreme love of liberty, and their hatred of tyranny and oppression, often hurried them to treachery and murder, especially when they thought themselves ill used by those who hired them; for in such cases they were easily provoked,

and extremely vindictive. In other cases tells us, they were noble, magnanimous, beneficent, without ambition to aggrandize their dominions, or invade those from whom they had received no injury; rather choosing to increase their strength and valour defensively than to preserve their own than to ravage their neighbours. Their friendship and integrity rather a compound of honest blunt simplicity, than of wit, humour, or gallantry; and strangers were sure to meet with a kindness from them to the utmost of their ability: those who were not in a capacity to defend themselves, reckoned it a duty to introduce those who could; and nothing was held more testable, than to refuse them either the one or the other. They do not seem, indeed, to have had a taste for elegant entertainments; they were content with every thing, in their houses, furniture, and dress, rather plainness and simplicity, than richness and luxury. If they learned of the Greeks and Gauls the use of money, it was because they found it more convenient than the ancient way of bartering one commodity for another; and then they preferred those coins which had been stamped during the time of Roman liberty, especially such as were stamped with the image of a free man, because they could so easily cheat in them as in some others which were frequently nothing but copper or lead over with silver. This last metal they preferred before gold, as more convenient and as they became more feared by them, as they learned how to draw enough of it to supply their whole country, besides what was imported from other nations. As to marriage, the German man was contented with one wife, except a few of their nobles, who kept a plurality of wives for shew than pleasure; and both parties were faithful to each other, and chaste, truly interested, in their conjugal affection, they preferred their manners in this respect to those of the Romans. The men sought not to seduce their wives, but bestowed them upon their youth, in those cold climes, did not begin to feel the warmth of love as those in hot climates; it was common with them not to marry until they were old, and those were most esteemed who were longest in celibacy, because they reckoned the most effectual means to make them grow tall and strong. To marry, or be concerned with a woman when they were full 20 years old, was accounted a dishonourful wantonness. The women shared with their husbands not only the care of their families, but the education of their children, but even in times of war. They attended them in the field, cooked their victuals, dressed their wounds, and cited their courage to fight against their enemies, and sometimes by their own bravery secured victory when it was upon the point of being lost. In a word, they looked upon such attendance on them, not as a servitude, like that of man and woman, but as a duty and an honour. What appears to have been still an harder task for the ancient German ladies was, that they excluded all those who were not of their race, *Odin*, or *Woden*, excluded all those who were not of their race, *valhalla*, or paradise, who did not, by their valour, merit death, follow their deceased husbands.

GERMANS, FUNERALS AND FEASTS OF THE ANCIENT. There is scarcely any thing in Germany, though nearly allied in most her customs to the Gauls, were more different than in their funerals. Those of the former were performed with great pomp and those of the latter with the same simplicity which they observed in their religious rites. The only grandeur they affected was, to burn the bodies of their great men in peculiar kinds of wood; but then the funeral pile was neither adorned with the clothes nor the furniture of the deceased, nor perfumed with fragrant herbs and gums: each man's arms, as it is, his sword, shield, and spear, were deposited with him, and sometimes his riding horse. The funeral pile, flung into the funeral pile of a great man, silver, and other precious things, were deposited with him, who walked in a gloomy procession to the fire, exhorted the bystanders to follow him into it in honour of the deceased. The Romans deposited their ashes in urns, like the Germans, &c. as plainly appears, from the numbers which have been dug up in the country, and illustrated by dissertations on them, by several learned moderns of France. And the sacrifices they offered for the presents they made to them at their feasts, and all the other superstitious rites at them, were done in consequence of a belief in the immortality of the soul, which their ancient religion had. (see § 4.) as to the immortality of the soul, or misery of a future life. At their feasts, as well as in all their other feasts, they were used for drinking to excess; and one of the chief promoters of health strength, and bravery; upon which account, they exerted themselves to the utmost in them, not only at feasts, and before battle, but even in their daily meals.

GERMANS, RELIGIOUS OPINIONS AND BARBARISM OF THE ANCIENT. As the ancients did not commit any thing to writing, none of the ancient writers have given us any account of it, it is impossible to guess how much of their great Woden, and his paradise, was received among them. It may have been older than the times of Tacitus, and we know nothing of it, from their care in their religion from strangers; but as they communicated their doctrines to posterity by songs and most of their northern poets tell us, have drawn their intelligence from poems, which were preserved among them, may justly suppose, that whatever doctrines were contained in them, were formerly propagated by the generality of the nation, especially their ancient practice conformable to it. The surest road to this paradise was, to perform great martial deeds, and to die intrepidly in the field; and as none were excluded from the rewards, and betrayers of their country were punished.

It is natural to think, that the signal and excessive bravery of the Germans flowed from this ancient belief of theirs: and, if their females were so brave and faithful, as not only to share with their husbands all the dangers and fatigues of war, but at length to follow them by a voluntary death, into the other world; it can hardly be attributed to any thing else but a strong persuasion of their being admitted to live with them in that place of bliss. This belief therefore, whether received originally from the ancient Celtes, or afterwards taught them by the since deified Woden, seems, from their general practice, to have been universally received by all the Germans, though they might differ one from another in their notions of that future life. The notion of a future happiness obtained by martial exploits, especially by dying sword-in-hand, made them bewail the fate of those who lived to old age, as dishonourable here, and hopeless hereafter: upon which account, they had a barbarous way of sending them into the other world, willing or not willing. And this custom is said to have lasted several ages even after their receiving Christianity, especially among the Prussians and Veneti. These murders were preceded by a fast and followed by a feast.

(5.) **GERMANS, STATURE, CHARACTER, AND MANNERS OF THE MODERN.** The modern Germans in their persons are tall and strong built. The ladies have generally fine complexions; and some of them, especially in Saxony, have all the delicacy of features and shape, that are so bewitching in Britain. Both men and women affect rich dresses, which in fashion are the same as in France and England; but the superior ranks are excessively fond of gold and silver lace, especially those in the army. The ladies at the principal courts differ not much in their dress from the French and English, only they are not so fond of paint as the former. At some courts they appear in rich furs; and all of them are loaded with jewels, who can obtain them. The female part of the burgher families, in many German towns, dress in a very different manner, and some of them inconceivably fantastic, as may be seen in many prints published in books of Travels; but in this respect they are gradually reforming, and many of them make quite a different appearance in their dress from what they did 40 or 50 years ago. The peasants and labourers dress as in other parts of Europe, according to their employments and opulence. In Westphalia, and most other parts of Germany, they sleep between two feather-beds, or rather the upper one of down, with sheets stretched to them, which by use becomes a very comfortable practice. The most unhappy part of the Germans are the tenants of little needy princes, who squeeze them to keep up their own grandeur; but, in general, the circumstances of the common people were far preferable to those of the French, before the revolution. The Germans are naturally a frank, honest, hospitable people, free from artifice and disguise. The higher orders are ridiculously proud of titles, ancestry, and show. The Germans, in general, are thought to want animation, as their persons promise more vigour and activity than they commonly exert even in the field of battle.

But when commanded by able generals, especially Italians, such as Montecuculi and prince Eugene, they have done great things, both against the Turks and the French. The Imperial arms, it has been said, seldom made any remarkable figure against either of those two nations, or against the Swedes or Spaniards, when commanded by German generals. This possibly might be owing to the arbitrary obstinacy of the court of Vienna; but in the two last wars, as well as in the present, the Austrians exhibited prodigies of military valour and genius. Industry, application, and perseverance, are the great characteristics of the German nation, especially the mechanical part of it. Their works of art would be incredible were they not visible, especially in watch and clock making, jewellery, turnery, sculpture, drawing, painting, and certain kinds of architecture. The Germans have been charged with intemperance in eating and drinking; and perhaps not unjustly, owing to the vast abundance of their country in wine and provisions of every kind. But these vices seem now to be wearing out. At the greatest tables, though the guests drink pretty freely during dinner, yet the repast is commonly finished by coffee after 3 or 4 public toasts. But no people have more feasting at marriages, funerals, &c. The German nobles are generally men of so much honour, that a sharper in other countries, especially in England, meets with more credit if he pretends to be a German, than of any other nation. The merchants and tradesmen are very obliging. All the sons of noblemen inherit their fathers titles, which greatly perplexes the heralds. This perhaps is one reason, why the German husbands are not quite so complaisant as they ought otherwise to be to their ladies, who are not intitled to any pre-eminence at the table; nor indeed do they seem to affect it, being neither ambitious nor loquacious, though they are said to be fond of gaming. Many of the German nobility, having no other hereditary estate than a high-sounding title, enter into their armies, and those of other sovereigns. Their fondness for title is attended with many other inconveniences. Their princes think that the cultivation of their lands, though it may treble their revenue, is below their attention; and that, as they are a species of beings superior to labourers, they would demean themselves in being concerned in the improvement of their grounds. The domestic diversions of the Germans are the same as in England; billiards, cards, dice, fencing, dancing, and the like. In summer, people of fashion repair to places of public resort, and drink the waters. As to their field diversions, besides their favourite one of hunting, they have bull and bear baiting. The inhabitants of Vienna live luxuriously, a great part of their time being spent in feasting and carousing; and in winter, when the several branches of the Danube are frozen over, and the ground covered with snow, the ladies take their recreation in sledges of different shapes, such as griffins, tigers, swans, scollop-shells, &c. Here the lady sits, dressed in velvet, lined with rich furs, and adorned with laces and jewels, having on her head a velvet cap; and the sledge is drawn by a horse of tag, set off with plumes of feathers, rings, and bells. As this diversion is taken chiefly

in the night time, servants ride before the sledges with torches, and a gentleman sitting on the sled behind guides the horse.

(1.) GERMANTOWN, a town of New York in Columbia county, containing 316 citizens 1796.

(2.) GERMANTOWN, the name of two towns in North Carolina: 1. in Hyde county, New district: 2. the capital of Stokes county, a branch of the Dan, 523 miles SW. by S. of Philadelphia.

(3.) GERMANTOWN, a town of Pennsylvania Philadelphia county, chiefly inhabited by Germans. It has one principal street, mostly of stone buildings, 2 miles long, with Lutheran and Quaker churches, Quaker meeting house, &c. Stock are manufactured to a great extent, and there several tanneries. It is 7 miles N. of Philadelphia.

(4.) GERMANY, a very extensive empire in Europe, but which, in different ages, has had different limits. The name, according to the probable conjecture, is derived from the German words, *Ghar man*, signifying a warlike man, which their other name, *ALLMAN*, or *ALL*, likewise alludes.

(5.) GERMANY, ANCIENT ACCOUNTS AND TENT OF. The ancient history of the Germans altogether wrapped up in obscurity: nor do we, many ages, know any thing more of them, what we learn from the history of their wars, the Romans. The first time they are mentioned by the Roman historians, is about A. C. 100, when Marcellus subdued Insabria and Lusatia, and defeated the *Qesates*, a German nation living on the banks of the Rhine. From this time till the eruption of the Cimbri and Teutones, is silent with regard to all these northern nations, inhabited the most northerly parts of Germany. The event of their enterprise will be found recorded under the articles AMBRONES, CIMBRI, and TEUTONES. We must not, however, imagine, that these people invaded Italy at the same time, therefore their countries were contiguous. Cimbri and Teutones only dwelt beyond the Rhine; while the Ambrones inhabited the country between Switzerland and Provence. It is indeed very difficult to fix the limits of the country called Germany by the Romans. The southern Germans were intermixed with the Gauls, and northern ones with the Scythians; and the ancient history of the Germans includes the the Dacians, Huns, Goths, &c. till the destruction of the western Roman empire by them. As Germany, therefore, we may reckon to have included the northern part of France, the Netherlands, Holland, Germany so called at present, Prussia, Poland, Hungary, part of Transylvania, and Muscovy.

(6.) GERMANY, ANCIENT DIVISION OF. The Romans divided Germany into two regions, BELGIC or Lower Germany, which lay to the southward of the Rhine: and, 2. GERMANY PROPER or HIGH GERMANY.

I. GERMANY, BELGIC, or LOWER GERMANY, lay between the rivers Seine and the Rhine; in this we find a number of different nations, the most remarkable of which were the following: 1. The Ubi, whose territory lay between

rhine and the Mosæ, (or Mæse,) and whose capital was Cologne. 2. Next to them were the *Tungri*, supposed to be the same whom Cæsar calls *Eburones* and *Condrusi*; and whose metropolis, then called *Attuatica*, has since been named *Tonnes*. 3. Higher up from them, and on the other side of the Moselle, were the *Treviri*, whose capital was Augusta Trevirorum, now *Triers*. 4. Next to them were the *Tribocci*, *Nemetes*, and *Vandiones*. The former dwelt in Alsace, and had Argentoratum, now *Strasbourg*, for their capital: the others inhabited the cities of Worms, Spire, and Mentz. 5. The *Mediomatrici* were situated along the Moselle, about the city of Metz in Lorraine: and above them were situated another German nation, named *Raurici*, *Rauraci*, or *Rauriaci*, who inhabited that part of Helvetia, above Basil. To the W. and S. of these were the *Nervi*, *Suessones*, *Silmarer*, *Leuci*, *Rhemii*, *Lingones*, &c. who inhabited Belgic Gaul. Between the heads of the Rhine and Danube were seated the ancient kingdom of *Vindelicia*, whose capital was called *Augusta Vindelicorum*, now *Augsburg*. Below it, on the banks of the Danube were the kingdoms of *Noricum* and *Pannonia*. The first of these was divided into *Noricum Ripense* and *Mediterraneum*. It contained a great part of the provinces of Austria, Styria, Carinthia, Tyrol, Bavaria, and the others of less note. The latter contained the kingdom of Hungary, divided into Upper and Lower; and extending from Illyricum to the Danube, and the mountains *Cætii* in the neighbourhood of *Vandobona*, now *Vienna*.

II. GERMANY, PROPER, UPPER, OR HIGH GERMANY, lay beyond the Rhine and Danube. Between the Rhine and Elbe were the following nations. 1. The *Chauci*, Upper and Lower; who were divided from each other by the river *Visurgis*, or the *Wefer*. Their country contained what is now called *Bremen*, *Lunenborg*, *Friesland*, and *Emmigen*. The upper Chauci had the *Cherusci*, and the lower the *Chamavi* on the SE. and the German Ocean on the NW. 2. The *Frisii*, upper and lower, were divided from the lower Chauci by the river *Amisia*, now the *Ems*; and from one another by an arm of the Rhine. Their country retains the name of *Friesland*, and is divided into *East* and *West*; but the latter has been long separated from Germany, as one of the Seven United Provinces, and now forms the department of *Fris* in the Batavian republic. 3. Beyond the *Amisia*, (now the *Yssel*), which bounded the country of the *Frisii*, were situated the *Bructeri*, who inhabited that tract now called *Broccmorland*; and the *Marfi*, about the river *Luppe*. On the other side of that river were the *Usippii* or *Uspites*; and these were famed for often changing their territories, and therefore found in other places. 4. Next to these were the *Juones*, or inhabitants of *Juverna*, between the Mæse and the Rhine. 5. The *Catti*, another ancient and warlike nation, inhabited Hesse and Thuringia, from the Haartzian mountains to the Rhine and Wefer; among whom were comprehended the *Mattiaci*, whose capital by some thought to be *Marpurg*, by others *Meissen*. 6. Next to these were the *Seducii* bordering upon Suabia; *Narisci*, or the ancient inhabitants of Northgow, whose capital was Nu-

remberg; and the *Marcomanni*, whose country anciently reached from the Rhine to the head of the Danube and to the Neckar. The *MARCOMANNI* afterwards went and settled in Bohemia and Moravia, under their general or king *Mirobodius*; and some of them in Gaul, whence they drove the *Boii*, who had settled themselves there. 7. On the other side of the Danube, and between the Rhine and it, where the *HERMUNDURI*, who possessed the country now called *Misia* in Upper Saxony; though some make their territories to have extended much farther, and to have reached to, or even beyond Bohemia, then the seat of the *Boii*, whence its name. 8. Beyond them, on the N. of the Danube, was another seat of the *Marcomanni* along the river *Albis*, or *Elbe*. 9. Next to Bohemia were situated the *QUADI*, whose territories extended from the Danube to Moravia, and the northern part of Austria. These are comprehended under the ancient name of *SUEVI*; part of whom at length forced their way into Spain, and settled a kingdom there. 10. Eastward of the *Quadi* were situated the *BASTARNÆ*, and parted from them by the *Granna*, now *Gran*, a river that falls into the Danube; and by the Carpathian mountains, from them called *Alpes Bastarnicæ*. The country of the *Bastarnæ* indeed made part of the European Sarmatia, and so was without the limits of Germany properly so called; but we find these people so often in league with the German nations, and joining them for the destruction of the Romans, that we cannot but account them as one people. Between those nations, seated along the other side of the Danube and the Hercynian forest, were several others whose exact situation is uncertain, viz. the *Martigni*, *Burii*, *Borades*, *Lygii*, or *Loxiones*, and some others, who are placed by our geographers along the forest above-mentioned, between the Danube and the *Vistula*. On this side the Hercynian forest, were the famed *RHÆTI*, (now *GRISONS*), seated among the Alps. Their country, which was also called *Western Illyricum*, was divided into *Rætia Prima* or *Propria*, and *Secunda*; and was then of much larger extent, spreading itself towards *Scythia*, *Bavaria*, and *Austria*. On the other side of the Hercynian forest were, 1. The *SUEVI*, who spread themselves from the *Vistula* to the river *Elbe*. 2. The *LONGOBARDI*, so called, according to some, on account of their wearing long beards; but according to others, on account of their consisting of two nations, viz. the *Bardi* and *Lingones*. These dwelt along the river *Elbe*, and bordered southward on the *Chauci* above-mentioned. 3. The *BURGUNDI*, of whose original seat we are uncertain. 4. The *Semnones*; who, about the time of *Tiberius*, were seated on the river *Elbe*. 5. The *ANGLES*, *SAXONS*, and *GOTHS*, were probably the descendants of the *Cimbri*; and inhabited the countries of Denmark, along the Baltic sea, and the peninsula of Scandinavia, containing Norway, Sweden, Lapland, and Finmark. 6. The *VANDALS* were a Gothic nation, who, proceeding from Scandinavia, settled in the countries now called *Mecklenburgh* and *Brandenburgh*. 7. Of the same race were the *DACIANS*, who settled themselves in the neighbourhood of *Palus Mæotis*, and extended their territories along the banks of the Danube.

(4.) GERMANY, ANCIENT HISTORY OF, TILL CAESAR'S EXPEDITION. The above are the names of the German nations, who performed the most remarkable exploits in their wars with the Romans. We also find mention made of the SCORDISCI, a Thracian nation, who afterwards settled on the banks of the Danube. About A. A. C. 113, they ravaged Macedon, and cut off a whole Roman army sent against them; the general M. Porcius Cato, grandson to Cato the censor, being the only person who escaped. After this, they ravaged all Thessaly; and advanced to the coasts of the Adriatic, into which, because it stopped their further progress, they discharged a shower of darts. By another Roman general, however, they were driven back into their own country with great slaughter; and, soon after, Metellus so weakened them by repeated defeats, that they were incapable, for some time, of making any more attempts on the Roman provinces. At last, in the consulship of M. Livius Drusus and L. Calpurnius Piso, the former prevailed on them to pass the Danube, which thenceforth became the boundary between the Romans and them. Notwithstanding this, in the time of the Jugurthine war, the Scordisci repassed the Danube on the ice every winter, and being joined by the TAINALLI, a people of Lower Mœsia, and the Daci of Upper Mœsia, penetrated as far as Macedon, committing every where dreadful ravages. So early did these northern nations begin to be formidable to the Romans, even when they were most renowned for warlike exploits. Till the time of Julius Cæsar, however, we hear nothing more concerning the Germans.

(5.) GERMANY, HISTORY OF, FROM CAESAR'S EXPEDITION TO HIS DEATH. About A. A. C. 58, Cæsar undertook his expedition into Gaul; during which, his assistance was implored by the Ædui, against Ariovistus, a German prince who oppressed them. Cæsar, pleased with this opportunity of increasing his power, invited Ariovistus to an interview; but this being declined, he next sent deputies desiring him, to restore the hostages he had taken from the Ædui, and to bring no more troops over the Rhine into Gaul. To this a haughty answer was returned; and a battle soon after ensued, in which Ariovistus was entirely defeated, and with great difficulty made his escape. In A. A. C. 55, Cæsar having subdued the Suevones, Bellovaci, Ambiani, Nervii, and other nations of Belgic Gaul, hastened to oppose the Usipetes and Tencteri. These nations having been driven out of their own country by the Suevi, had crossed the Rhine with a design to settle in Gaul. As soon as he appeared, the Germans sent him a deputation, offering to join him, provided he would assign them lands. Cæsar replied, that there was no room in Gaul for them; but he would desire the Ubii to give them leave to settle among them. Upon this, they desired time to treat with the Ubii; but in the mean time fell upon some Roman squadrons: which so provoked Cæsar, that he immediately marched against them, and coming unexpectedly upon them, defeated them with great slaughter. They fled in the utmost confusion; but the Romans pursued them to the Rhine and the Maese, where they were renewed with such fury, that

about 400,000 of the Germans perished. At this, Cæsar, being resolved to spread the terror of the Roman name through Germany, built a bridge over the Rhine, and entered that country. In this expedition, however, which was his last in Germany, he performed no remarkable exploit. A little before his death, indeed, he had planned the conquest of that as well as of many other countries; but his assassination prevented the execution of these projects.

(6.) GERMANY, HISTORY OF, FROM CAESAR'S TIME, TILL THE DEATH OF DRUUS. Not farther is recorded of the Germans till about A. C. 17, when the TENCTERI made an invasion into Gaul, and defeated M. Lollius, procurator of that province. At last, however, they were repulsed, and forced to retire with great loss to the Rhine. Soon after this the Rheri invaded Italy, where they committed the greatest depredations, putting all the males they met to the sword without distinction of age; and when they began to take women with child, they compelled their husbands to know whether the child was male or female; and if they pronounced it a girl, the mother was immediately massacred. At this time these barbarians was sent Drusus, the second son of Livia, a youth of extraordinary valor and great accomplishments. He brought them to battle; in which the Romans proved victorious, and cut in pieces great numbers of them, with very little loss. Those who escaped the slaughter, being joined by the Vindelici, retired towards Gaul, with a design to invade that province. But Augustus, upon the notice of their march, dispatched against them Marcus with several chosen legions. He was not so successful as Drusus had been; for having transported his troops over the lake Rhenanum, to CONSTANCA, he fell unexpectedly on the enemy, gave them a total overthrow, took most of their strong holds, and obliged the whole nation to submit to his own terms. Tiberius, to keep the conquered countries in awe, planted two colonies in Vindelicia, and opened from thence a road to Rætia and Noricum. One of the cities to be built for the defence of his colonies, he called from his father Drusus, *Drusomagus*; the other by the name of Augustus, *Augusta Vindelicorum*, which cities are now known by the names of MÜNCHEN and AUGSBURG. He next engaged the Pannonians, who had been subdued by Agrippa, but revolted on hearing the news of that great commander's death, which happened A. A. C. 11. Tiberius, however, with the assistance of the Scordisci, soon forced them to submit. They delivered up their arms, and hostages, and put the Romans in possession of all their towns and strong holds. They spared their lives; but laid waste their lands, plundered their cities, and sent the best of their youth into other countries. In the same time, Drusus having prevented the Gauls from revolting, prepared to oppose the Germans who dwelt beyond the Rhine. They had collected the most numerous and formidable army that ever been seen in those parts; with which they were advancing towards the Rhine, when Drusus defeated them: so they attempted to

and, pursuing his advantage, entered of the Usipetes, now *Relinchusen*, and advanced against the Sicambri in the wood of the Lyppe and Yffel. There was a great battle, laid waste their most of their cities, and following the Rhine, approached the Germaning the Frisii and the Chauci between the Elbe. In these marches they were extremely for want of provisions;

himself was often in great danger of being killed, as the Romans who attended him were unacquainted with the flux and reflux of the river. The Roman forces went into their winter quarters; and next year (A. D. 12) Drusus marched against the Tencteri, easily subdued. Afterwards, passing (now the Lyppe) he reduced the Catuvunci, extending his conquests to the Visurgis (or Weser); which he would have done had he not been in want of provisions, having laid waste the whole country. Retiring, the Germans unexpectedly met him in a narrow passage; and having cut off the Roman army, cut a great number of pieces. But Drusus having animated them to a bloody conflict, which lasted till the Germans were defeated with such slaughter that the ground was strewed for several days with dead bodies. Drusus found in their camp a quantity of iron chains, which they had left for the Romans; and so great was their reverence, that they had agreed before the division of the booty. After this Drusus built two forts to keep the countries in awe; the one at the confluence of the Lyppe and the Alme, the other in the country of the Catti on the Rhine. He also made a canal, called in honour of him *Passus Drusi*, to convey the waters of the Rhine into the Elbe, which extended 8 miles; and was very convenient for conveying the Roman troops by water to the Frisii and Chauci. The emperor (A. A. C. 9.) Augustus, bent on the conquest of the whole of Germany, advanced to the Rhine, attended by Tiberius and the former he sent against the Daci, to the S. of the Danube; and the complete the conquest he had so success- in the western parts of Germany. He easily overcame the Daci, and transported them into Gaul. The latter, following the Rhine, subdued all the nations over to the Elbe; but having attempted to cross this last, he set out for Rome: never, was put to his conquests and violent fever, with which he was seized on his return.

GERMANY, HISTORY OF, FROM DRUSUS'S DEATH TO THAT OF VARUS. After the death of Drusus, Tiberius again over-ran all those countries which Drusus had spent the preceding year in conquering, and struck some of the northern nations in error, that they sent deputies to sue for peace. This, however, they could not obtain; the emperor declaring that he would not conclude a peace with one, unless they should first submit to him.

the Sicambri, could not be prevailed upon to submit; so that the war was carried on, though in a languid manner, for about 18 years. During this period, some of the German nations had quitted their forests, and begun to live in a civilized manner under the protection of the Romans; but Quintilius Varus being sent to command the Roman forces in that country, he so provoked the inhabitants by his extortions, that not only those who still held out refused to submit, but even the nations that had submitted were seized with an eager desire of throwing off the yoke. Among these was a young chieftain of extraordinary parts and valour, named *Arminius*. He was the son of Sigimer, one of the most powerful chiefs among the Catti, had served with great reputation in the Roman armies, and been honoured by Augustus with the privileges of a Roman citizen, and the title of knight. But his patriotism prevailing over his gratitude, he resolved to improve the general discontent among his countrymen, to deliver them from the Roman yoke. With this view he engaged, underhand, the leading men of all the nations between the Rhine and the Elbe, in a conspiracy against the Romans. To put Varus off his guard, he advised him to show himself to the inhabitants of the more distant provinces, administer justice among them, and accustom them to live after the Roman manner. Varus, being a man of a peaceable temper, readily consented to this insidious proposal; and, leaving the neighbourhood of the Rhine, marched into the country of the Cherusci. Having there spent some time in hearing causes, Arminius persuaded him to weaken his army, by sending out detachments to clear the country of robbers. This done, some distant nations of Germany rose up in arms by Arminius's directions; while those through which Varus was to pass in marching against them, pretended to be in a state of tranquillity, and ready to join the Romans against their enemies. On the first news of the revolt, Varus marched against the enemy with three legions and six cohorts; but being attacked by the Germans as he passed through a wood, his army was almost totally cut off, while he himself and most of his officers fell by their own hands.

(8.) GERMANY, HISTORY OF, FROM GERMANICUS'S FIRST EXPEDITION TO HIS RETURN. This terrible overthrow, though it raised a general consternation in Rome, did not, however, cause Augustus to abandon his enterprise. About two years after (A. D. 12), Tiberius and Germanicus were appointed to command in Germany. The death of Augustus, which happened soon after, prevented Tiberius from going on his expedition; and Germanicus was for some time hindered from proceeding in his, by a revolt of the legions, first in Pannonia, and then in Germany. About A. D. 15, Germanicus having brought over the soldiers to their duty, laid a bridge across the Rhine, over which he marched 12,000 legionaries, 26 cohorts of the allies, and 8 alæ (squadrons of 300 each) of horse. With these he first traversed the Cœsian forest (part of the Hercynian, supposed to lie partly in the duchy of Cleves, and partly in Westphalia), and some other woods. On his march, he was informed, that

that the Marſi were celebrating a feſtival with great mirth and jollity. Upon this he advanced with ſuch expedition, that he ſurprized them in the miſt of their debauch; a terrible maſſacre enſued, and the country was deſtroyed with fire and ſword for 50 miles round, without the loſs of a ſingle man on the part of the Romans. This general maſſacre roused the Bructeri, the Tumbantes, and the Ulipetes; who beſetting the paſſes through which the Roman army was to return, fell upon the rear, and put them into diſorder; but the Romans ſoon recovered themſelves, and defeated the Germans with conſiderable loſs. The following year, (A. D. 16.) Germanicus, taking advantage of ſome intestine broils which happened among the Catti, entered their country, where he put great numbers to the ſword. Moſt of their youth, however, eſcaped by ſwimming over the Adrana, (now the Eder,) and attempted to prevent the Romans from laying a bridge over that river: but being diſappointed in this, ſome of them ſubmitted to Germanicus, while the greater part, abandoning their villages, took refuge in the woods; ſo that the Romans, without oppoſition, ſet fire to all their towns, and villages; and having burnt their capital, began their march back to the Rhine. Germanicus had ſcarce reached his camp, when he received a meſſage from Segestes, a German prince, in the intereſt of the Romans, acquainting him that he was beſieged in his camp by Arminius. On this he inſtantly marched againſt the beſiegers, entirely defeated them, and took a great number of priſoners; among whom was Thuſfeldis, the wife of Arminius, and daughter of Segestes, whom the former had carried off, and married againſt her father's will. Arminius then, more enraged than ever, for the loſs of his wife, whom he tenderly loved, ſtirred up all the neighbouring nations againſt the Romans. Germanicus to avoid engaging ſuch numerous forces at once, detached his lieutenant Cæcina, at the head of 40 cohorts, into the territories of the Bructeri; his cavalry, under the command of Pedito, entered the country of the Friſii; while he himſelf embarked the remainder of his army, conſiſting of four legions, on a neighbouring lake; and tranſported them by rivers and canals to the place appointed on the Ems, where the three bodies met. In their march they found the ſad remains of the legions conducted by Varus, which they buried with all the ceremony their circumſtances could admit. After this they advanced againſt Arminius, who retired and poſted himſelf advantageuſly cloſe to a wood. The Roman general coming up with him, ordered his cavalry to advance and attack the enemy. Arminius, at their firſt approach, pretended to fly; but ſuddenly wheeled about, and giving the ſignal to a body of troops, whom he had concealed in the wood, to ruſh out, obliged the cavalry to give ground. The cohorts then advanced to their relief; but they too were put into diſorder, and would have been puſhed into a moras, had not Germanicus himſelf advanced with the reſt of the cavalry to their relief. Arminius did not think it prudent to engage theſe freſh troops, but retired in good order; upon which Germanicus alſo retired towards the Ems. Here he embarked with four

legions, ordered Cæcina to reſound four by land, and ſent the cavalry to march along the ſhore. Though Cæcina was to return by known, yet Germanicus adviſed him to go with all poſſible ſpeed, a cauſeway, called the *Weg*, which led acroſs vaſt marſhes, on all ſides with woods and hills. He having got notice of this, arrived at the ſame place before him, and filled the woods with his troops, who, on the approach of the Romans, and attacked them with great fury. The Romans were obliged to yield; and would have been entirely defeated, had not night put an end to the combat. The Germans, encouraged by ſucceſs, inſtead of ſleeping ſpent the night in diverting the courſes of the rivulets in the neighbouring mountains; ſo that, the next day, the camp of the Romans was ſurrounded by water, and their works were overturned. At laſt reſolved to attack the enemy by land, and having driven them to their tents, he ſent them there, till the baggage and what ſhould paſs the cauſeway, and get on my's reach. But when his army was ſtationed, and occupied a field beyond the legions poſted on the wings, Cæcina followed them, but the baggage was ſtuck in the mire, as he attempted to croſs, which greatly embarraſſed the ſoldiers. Perceiving this, began the attack, and ſaid, "This is a ſecond Varus, the ſame to him and his legions," fell on the Romans with expreſſible fury. As he had ordered his aim chiefly at the horſes, great numbers were killed; and the ground became ſtrewed with their blood, the reſt either fell on their knees, or galloping through the rain in diſorder. Cæcina diſtinguiſhed himſelf but his horſe being killed, he would have been taken priſoner, had not the ſirſt legions ſaved him. The avarice of the enemy, however, ſaved the Romans from deſtruction; for juſt as the legions were quite ſpent, and on the point of ſurrendering, the Germans ſuddenly abandoned their baggage. During this reſt the Romans ſtruggled out of the marſh, and ed the dry fields, formed a camp with ſpeed. The Germans having thus loſt the opportunity of deſtroying the Romans, conſulted the advice of Arminius, attacked them the next morning, but were repulſed with great ſucceſs, after which they gave Cæcina no more trouble till he reached the banks of the Rhine. In the mean time, having collected his legions he had with him down the Rhine, to return by ſea to the Rhine, ſending his veſſels overloaded, delivered 14th legions to P. Vitellius, deſiring him to ſend them by land. But this march to great numbers, who were either killed by quickſands, or ſwallowed up by the tide, to which they were as yet unaccuſtomed. Thoſe who eſcaped, loſt their arms, and provisions; and paſſed a melancholy and ſhort journey, which they had gained up to the chin. The next morning

y a hasty march, reached the USINGIS, (he thought to be the HOERENSTER,) on the city of Groningen stands. There Ger-
is, who had reached that river with his
look the legions again on board, and con-
them to the mouth of the Rhine, whence
returned to Cologne, where it was report-
y were totally lost.

GERMANY, HISTORY OF, FROM GERMA-
NUS'S RETURN TO HIS DECISIVE VICTORY
ARMINIUS. This expedition cost the Ro-
very dear, and procured very few advan-

Great numbers of men had perished; and
most part of those who had escaped so ma-
jors returned without arms, utensils, hor-
se, half naked, lamed, and unfit for service.
Next year, however, Germanicus, bent on the
reduction of Germany, made vast prepara-
for another expedition. Having found that
Germans were chiefly indebted for their safety
to woods and marshes, their short summers
and long winters; and that his troops suffered
more from their tedious marches than from the e-
nemy, he resolved to enter the country by sea,
thus to begin the campaign earlier, and
surprise the enemy. Having therefore built 1000
ships with great dispatch, during winter, he
sent them early in the spring, (A. D. 16.) to
the Rhine; and appointed the island of
Batavians for the general rendezvous of his
fleet.

When the fleet was sailing, he detached
one of his lieutenants, with orders to make
an irruption into the country of the Catti;
in the mean time, he himself, upon hearing
a Roman fort on the Lupias was besieged,
sent with six legions to its relief. Silius was
prevented, by sudden rains, from doing more than
take some booty, with the wife and daughter of
the king of the Catti; neither did those who
besieged the fort wait the arrival of Germanicus.
In the mean time, the fleet arriving at the island
of Batavians, the provisions and warlike en-
sues were put on board and sent forward; ships
assigned to the legions and allies; and the
army being embarked, the fleet entered the
strait formerly cut by Drusus, and from his name
called *Fretum Drusianum*. Hence he sailed prosper-
ously to the mouth of the Ems; where, having
his troops, he marched directly to the Weser,
where he found Arminius encamped on the op-
posite bank, and determined to dispute his passage.
The next day Arminius drew out his troops in or-
der for battle: but Germanicus, not thinking it
wise to attack them, ordered the horse to
pass under the command of his lieutenants
Silius and Emilius; who, to divide the ene-
my's forces, crossed the river in two different
places.

At the same time Carvalda, the leader
of the Batavian auxiliaries, crossed the river where
the most rapid: but being drawn into an am-
bush, he was killed, together with most of the
nobility; and the rest would have been
cut off, had not Stertinius and Emilius
come to their assistance. Germanicus in the
evening passed the river without molestation.
Soon after ensued; in which the Germans
were killed with so great a slaughter that the
river was covered with arms and dead bodies

for more than 10 miles round: and among the
spoils taken on this occasion, were found, as for-
merly, the chains with which the Germans had
hoped to bind their captives.

(10.) GERMANY, HISTORY OF, FROM GER-
MANICUS'S VICTORY, TO THE INVASION BY THE
DACIANS. In memory of this signal victory,
Germanicus raised a mount, upon which he plac-
ed as trophies the arms of the enemy, and inscrib-
ed underneath the names of the conquered na-
tions. This so provoked the Germans, though
already vanquished and determined to abandon
their country, that they attacked the Roman ar-
my unexpectedly on its march, and put them in-
to some disorder. Being repulsed, they encamp-
ed between a river and a large forest surrounded
by a marsh except on one side, where it was in-
closed by a broad rampart formerly raised by the
Angrivarii as a barrier between them and the
Cherusci. Here another battle ensued; in which
the Germans behaved with great bravery, but in
the end were defeated with great slaughter. Af-
ter this second defeat, the Angrivarii submitted, and
were taken under the protection of the Romans,
and Germanicus put an end to the campaign.
Some of the legions he sent to their winter- quar-
ters by land, while he himself embarked with the
rest on the river Ems, in order to return by sea.
The ocean proved at first very calm, and the
wind favourable: but all of a sudden a storm aris-
ing, the fleet, consisting of 1000 vessels, was dis-
persed: some of them were swallowed up by the
waves; others were dashed in pieces against the
rocks, or driven upon remote and inhospitable
islands, where the men either perished by famine,
or lived upon the flesh of the dead horses with which
the shores soon appeared strewed; for, in order
to lighten their vessels, and disengage them from
the shoals, they had been obliged to throw over-
board their horses and beasts of burden, nay,
even their arms and baggage. Most of the men,
however, were saved, and even great part of the
fleet recovered. Some of them were driven upon
the coast of Britain; but the petty kings who
reigned there generously sent them back. On the
news of this misfortune, the Catti, taking new
courage, ran to arms; but Caius Silius being de-
tached against them with 30,000 foot and 3000
horse, kept them in awe. Germanicus himself,
at the head of a numerous body, made a sudden
irruption into the territories of the Marfi, where
he recovered one of Varus's eagles, and having
laid waste the country, he returned to the fron-
tiers of Germany, and put his troops into winter
quarters; whence it was soon recalled by Tibe-
rius, and never suffered to return into Germany
again. After the departure of Germanicus, the
more northern nations of Germany were no more
molested by the Romans. Arminius carried on a
long and successful war with Maroboduus king of
the Marcomanni, whom he at last expelled, and
forced to apply to the Romans for assistance; but,
excepting Germanicus, it seems they had at this
time no other general capable of opposing Armi-
nius, so that Maroboduus was never restored.
After the final departure of the Romans, how-
ever, Arminius having attempted to enslave his
country, fell by the treachery of his own kindred.

The Germans held his memory in great veneration; and Tacitus informs us, that in his time they still celebrated him in their songs. Nothing remarkable occurs in the history of Germany from this time till the reign of Claudius I. A war indeed is said to have been carried on by Lucius Domitius, the father of Nero. But of his exploits we know nothing more than that he penetrated beyond the river Elbe, and led his army farther into the country than any of the Romans had ever done. In the reign of Claudius, however, the German territories were invaded by Ca. Domitius Corbulo, one of the greatest generals of his age. But when he was on the point of forcing them to submit to the Roman yoke, he was recalled by Claudius, who was jealous of the reputation he had acquired. In the reign of Vespasian, a terrible revolt happened among the Batavians and those German nations who had submitted to the Romans; an account of which will be found under the article *ROME*. The revolted were with difficulty subdued; but, in the reign of Domitian, the Dacians invaded the empire, and proved a more terrible enemy than any of the other German nations had been.

(II.) *GERMANY, HISTORY OF, FROM THE DACIAN INVASION TO THE DEATH OF DECEBALUS.* After repeated defeats, Domitian was at last obliged to consent to pay an annual tribute to Decebalus king of the Dacians; which continued to the time of Trajan. But this warlike prince refused to pay tribute; alleging, when it was demanded of him, that "he had never been conquered by Decebalus." Upon this the Dacians passed the Danube, and began to commit hostilities in the Roman territories. Trajan, glad of this opportunity to humble an enemy whom he began to fear, drew together a great army, and marched with the utmost expedition to the banks of the Danube. As Decebalus was not apprised of his arrival, the emperor passed the river without opposition, and entering Dacia, laid waste the country. At last he was met by Decebalus with a numerous army. A bloody engagement ensued, in which the Dacians were defeated; though the victory cost the Romans dear: the wounded were so numerous, that they wanted linen to bind up their wounds; and to supply the defect, the emperor generously devoted his own wardrobe. After the victory, he pursued Decebalus from place to place, and at last obliged him to consent to a peace on the following terms: 1. That he should surrender the territories which he had unjustly taken from the neighbouring nations. 2. That he should deliver up his arms, his warlike engines, with the artificers who made them, and all the Roman deserters. 3. That for the future he should entertain no deserters, nor take into his service the natives of any country subject to Rome. 4. That he should dismantle all his fortresses, castles, and strong holds. And, lastly, that he should have the same friends and foes with the Romans. This peace was of short duration. Four years after, (A. D. 105), Decebalus began to raise men, provide arms, entertain deserters, fortify his castles, and invite the neighbouring nations to join him against the Romans as a common enemy.

The Scythians hearkened to his call, but the Jazyges, a neighbouring tribe, refusing to bear arms against Rome, decided their country. Hereupon Trajan marched against him; but the Dacian, being unable to withstand him by open force, recourse to treachery, and assassinated the emperor murdered. His design proved abortive, and Trajan pursued him into Dacia. That his troops might easily pass and repass the Danube, he celebrated a bridge over that river. See *TURKEY, INDEX*. To guard the bridge two castles to be built; one on each bank. Trajan, however, as the season advanced, did not enter Dacia this year, contented himself with making the preparations. Early in the next spring, Trajan set out for Dacia; and having passed the Danube by the new bridge, reduced the country, and would have taken Decebalus himself had he not put an end to his own life by falling into the hands of the Romans.

(12.) *GERMANY, HISTORY OF, FROM THE DEATH OF DECEBALUS, TO THAT OF AURELIUS.* After the death of Decebalus was reduced to a Roman province, several castles were built in it, and garrisons sent to keep the country in awe. At the death of Trajan, the Roman empire declined, and the northern nations became more formidable. Dacia indeed was not the Romans till the reign of Gallienus, who succeeded Trajan, caused the bridge over the Danube to be broken, lest the barbarians should make themselves masters of it, and invade the Roman territories. At the time of Marcus Aurelius, the Marcomanni and Quadi invaded the empire, and emperor a terrible overthrow. He fought a war, however, with better success, and invaded their country in his turn. During this war that the Roman army has been saved from destruction, by that event related under the article *CHARS*. In the end, the Marcomanni and Quadi, after repeated defeats, brought to the verge of ruin; insomuch that their country would have been reduced to a Roman province. Marcus Aurelius been diverted from his conquests by the revolt of one of his sons.

(13.) *GERMANY, HISTORY OF, FROM THE DEATH OF M. AURELIUS, TO THE DEATH OF CHARLEMAGNE.* After the death of Aurelius, the Germanic nations became more and more formidable to the Romans, from being able to invade and attempt the conquest of these northern countries, the greatest difficulty to repress the violence of their inhabitants. But for a particular their various invasions of the Roman empire, its total destruction by them at last. The immediate destroyers of the Romans were the Huns; who, under their leader, dethroned Augustulus the last Roman emperor, and proclaimed Odoacer king of Italy, 476. The Heruli were soon expelled

hs; and these in their turn were subdued by Justinian I, who re-annexed Italy to the eastern empire. But the popes found means to obtain temporal as well as spiritual jurisdiction over a considerable part of the country, while the Lombards subdued the rest. These last proved very troublesome to the popes, and at length besieged them in their capital. In this distress he applied to Charles the Great king of France; who conquered both Italy and Germany, and was crowned emperor of the west, A.D. 800. See FRANCE, § 13—15.

§ 15. GERMANY, HISTORY OF, FROM THE ESTABLISHMENT OF THE EMPIRE BY CHARLEMAGNE, TO THE ESTABLISHMENT OF ITS PRESENT CONSTITUTION. The extensive empire erected by Charlemagne the Great, which he himself imprudently attempted to divide among his sons during his own life, (see FRANCE, § 1, 16.) was not long enjoyed by his posterity. In France the Carlovingian race continued to reign for 183 years after Charlemagne; but in Germany, it continued only 104 years, producing within that period 6 emperors: Lewis I. his son, Lothair I, and Lewis II. his sons; Charles II, his great-grandson; Lewis III, son of Charles II, and Charles III, who was deposed in 888. The history of these unfortunate emperors is related under the article FRANCE, § 1, 16. On the deposition of Charles III, the German princes resumed their ancient independence; and, rejecting the Carlovingian race, (according to some: elected Arnulph, king of Pomerania. Others, however, say, this Arnulph was the son of Carloman, a descendant of Charlemagne. As it may, he reigned 12 years, and conquered his rival Guido, or Guy, who had been in opposition to him, and crowned king of Germany, by pope Formosus in 892; who also, on the death of Guy, next year, crowned his son Lambert. Arnulph, however, reigned till 899, when he died, and was succeeded by his son Lewis, from whom some stile the last of the male line of Charlemagne. Upon his death, in 911, the nobles elected Otho, duke of Saxony, but he being old, recommended CONRAD, duke of Franconia, whom they elected accordingly in 912. Conrad dying, recommended to their election, Henry I, surnamed the Fowler, the son of Otho. Henry conquered the Danes, Huns, Vandals, and Bohemians, and was succeeded in 937 by his son OTHO I, surnamed the Great; who after reigning 26 years king of Germany, was crowned emperor in 962. Thus he reigned other 10 years; and in 973, was succeeded by his son, Otho II; who dying in 983, was succeeded by his son Otho III, a boy of 3 years of age. The reigns of most of these monarchs contain little remarkable, except their contests with the popes; for which see ITALY. What immediately merits attention is the progress of the empire in Germany, which was in a great measure opposite to that of the other kingdoms of Europe. When the empire erected by Charlemagne fell asunder, all the independent princes retained the right of election; and those now distinguished by the name of *electors* had no legal or moral right to appoint a successor to the emperor. They were only the officers of the emperor's or king's household, his secretary, steward, &c.

ard, chaplain, marshal, or master of horse, &c. By degrees, however, as they lived near his person, and had independent territories of their own, they increased their influence and authority; and in the election of Otho III, A.D. 984, acquired the sole right of electing the emperor. Thus, while in the other kingdoms of Europe, the dignity of the great lords, who were all originally allodial or independent barons, was diminished by the power of the king, as in France, and by the influence of the people, as in Great Britain; in Germany, on the other hand, the power of the electors was raised upon the ruins of the emperor's supremacy, and of the people's jurisdiction.

(15.) GERMANY, HISTORY OF, FROM THE ESTABLISHMENT OF THE IMPERIAL CONSTITUTION, TO THE ACCESSION OF THE HOUSE OF AUSTRIA. Upon the death of Otho III, in 1001, an interregnum of 4 months ensued; after which the princes elected Henry II, surnamed *the Lamb*, the grandson of Henry I, who reigned 23 years. Of this emperor's successors, till the accession of the house of Austria, it is only necessary here to give a brief chronological list, as their most important transactions will be noticed under the article ITALY. Conrad II, surnamed *Salicus*, the son of Herman, duke of Franconia, was elected in 1024; (see CONRAD II;) and after reigning near 15 years, was succeeded, in 1039, by his son Henry III; who, in 1056, was succeeded by his son Henry IV, though not without opposition, from Rodolph of Suabia, and Herman of Luxemburg. Henry IV, after having reigned no less than 50 years, was deposed in 1106, by his unnatural son Henry V; on whose death in 1125, Lothaire II, duke of Saxony, was elected. He died in 1137, and next year, the diet chose CONRAD III, duke of Franconia, the son of Frederic, duke of Suabia. He was succeeded in 1152, by his brother Frederic I, surnamed *Barbarossa*, who having embarked against the infidels, and taken Iconium, was drowned in Syria, in 1190. He was succeeded by his son, Henry VI, who behaved so villainously to Richard I. of England, (see ENGLAND, § 24,) and who was at last poisoned by his wife, Constance, and succeeded by his son, Otho IV, in 1197. But a party of the princes having chosen Philip, duke of Suabia, Henry's brother, a civil war ensued, which ended in favour of Otho, Philip being assassinated in 1208. But 4 years after, Otho was deposed, and Frederic II, his younger brother, then king of Sicily, was elected emperor, and crowned by pope Honorius III, in 1220. Having afterwards offended pope Gregory IX, by making peace with the Sultan of Babylon, Frederic was excommunicated, which gave rise to the factions of the *Guelphs* and *Gibelines*, who by their inveterate virulence against each other, disturbed the empire for several ages. See GUELPHS. Conrad IV. was elected emperor on the death of his father Frederic II, in 1250. See CONRAD IV. He died 4 years after, and was supposed to have been poisoned. His son was still more unfortunate. See CONRAD, N° 6. After an interregnum of two years, Richard, duke of Cornwall, brother to Henry III, king of England, was elected emperor, in 1257; but that prince residing mostly in England, Alphonso X, king of Castile, was elected in opposition to him. See ALPHONSO X.

VII. OF Luxembourg was then elected, upon whose death in 1313, an interregnum of a year took place, when Lewis V, the son of Lewis D. of Bavaria, by Matilda daughter of Rodolph I, was chosen by one party of the electors, and Frederic, the son of Albert I, by another. But Frederic, being taken prisoner, was obliged to renounce his dignity; and Lewis, being killed by a fall from his horse, in 1347, was succeeded by his other competitor, Charles IV, the son of John, king of Bohemia, and grandson of Henry VII. This prince was a great encourager of learning, and in his reign the golden bull, establishing the Germanic constitution, was given by Pope Innocent VI, in 1356. Charles, dying in 1378, was succeeded by his son Wenceslaus, who was twice imprisoned by the Bohemians, and at last deposed in 1400, when Rupert, Prince Palatine, was elected. Rupert was succeeded in 1410, by Jodocus Margrave of Moravia, who, in 1411, was displaced by Sigismund, K. of Hungary and Bohemia, the son of Charles IV. Albert II, D. of Austria, having married this monarch's daughter, succeeded him in all his dominions in 1437, but reigned only two years. His son Frederic III, archduke of Austria, &c. was elected emperor in 1440; and from this period the imperial dignity continued in the male line of that family for 300 years. His successor Maximilian I. married the heiress of Charles duke of Burgundy; whereby Burgundy and the 17 provinces of the Netherlands were annexed to the house of Austria. Charles V. grandson of Maximilian, and heir to the kingdom of Spain, was elected emperor, A. D. 1519. Under him MEXICO and PERU were conquered by the Spaniards; and in his reign happened the REFORMATION in several parts of Germany; which, however, was not confirmed by authority till 1648, at the treaty of Westphalia.

(17.) GERMANY, HISTORY OF, FROM THE RE-

to much divided, as to threaten a civil war. His ambition, however, was to reconcile them; but the Bohemians refused, and threw the imperial committee out of the window at Prague. This gave rise to a long and bloody war, which lasted 30 years. Matthias, who had attempted to have exterminated both parties; and who had formed a confederacy, called the *Erasmian League*, which was counterbalanced by a Catholic League, died in 1618, was succeeded by his cousin FERDINAND II.; but the Bohemians refused to give him their crown, and offered it to Frederic the elector of Saxony, the most powerful Protestant prince, and son in law to K. James I. The emperor was so imprudent as to accept of the crown, and lost it, being entirely defeated by the Protestants at Prague; and he was even deprived of his Bohemian electorate, the best part of which was given to the elector of Bavaria. The Protestant princes, however, had among them at this time several able commanders, who were at the head of the army, and continued the war with wonder. Among these were the margrave of Brandenburg, Christian duke of Brunswick, and Gustavus Adolphus, king of Sweden, in the field. Christian IV. king of Denmark, was also engaged in them; and Richelieu, the French minister, was not fond of seeing the house of Austria so weakened. The emperor, on the other hand, had several excellent generals; and Christian, having been defeated by Tilly, an Imperialist of great reputation. The Protestants formed a new confederacy at Leipzig, of which the emperor's cousin, GUSTAVUS ADOLPHUS king of Sweden, was the head. An account of his glorious victories is given under the article SWEDEN. At last he was killed at the battle of Lutzen in 1632. The Protestant cause did not die with him. F

with both. Lewis XIV. had the two generals Condé and Turenne in his service; the latter had already distinguished himself by exploits against the Spaniards; and, in possession of Leopold, the court of France saw the opportunity of confirming the treaty of 1664, and attaching to her interest several elector-princes of Germany. The tranquillity now took place, however, was not upon any permanent basis. War with Spain broke out in 1668; and the great successes of Louis in the Netherlands excited the ambition of Condé, to attempt the conquest of Compiègne, then under the protection of the Emperor of Austria. This was accomplished in 1677: but the rapid success of Lewis had excited the jealousy of his neighbours to such a degree, that a league was formed against him by Holland, and Sweden; and the French, dreading to enter the lists with such formidable enemies, consented to the treaty of Aix-la-Chapelle, by which, among other articles, Compiègne was restored.

GERMANY, HISTORY OF, FROM THE TREATY OF AIX-LA-CHAPELLE, TO THAT OF UTRECHT. The flames of war were soon renewed by the insatiable ambition of Lewis XIV; who, entering into an alliance with Charles II. of England, aimed at the total overthrow of the Dutch Republic. The event of that war will be related under the article UNITED PROVINCES.

The misfortunes of the Dutch excited the compassion of the emperor and king of Spain, who declared themselves their allies. Turenne was opposed by the prince of Orange and the celebrated general Montecuculi, whose artful conduct eluded even the penetrating eye of Turenne. He sat down suddenly before Bonn, which was joined by the prince of Orange, who defied the vigilance of the French.

Bonn soon surrendered, and several others in Cologne fell into the hands of the French. He likewise cut off the communication between France and the United Provinces; so that they were soon obliged to recall his armies, and all his conquests with greater rapidity had been made. In 1674 he was defeated by his ally Charles II. of England, and the emperor and elector of Cologne were constrained to renounce their allegiance to him; but notwithstanding these misfortunes, he continued to make head against his enemies, and effected new conquests. With a powerful army he invaded Franche Comté in person, and in a few weeks reduced the whole province to obedience. In Alsace, Turenne defeated the emperor's general at Sintzheim, and ravaged the country; surprised 70,000 Germans; cut in considerable detachment at Mulhausen; defeated the elector of Brandenburg, who had been sent with the chief command, near Colmar; and gave a similar fate at Turkheim; and the whole German forces at last to evacuate the province and repass the Rhine. In consequence of these disasters Montecuculi was recalled to oppose Turenne. The military skill of the two commanders seemed to be nearly equal; but the French superiority could be adjudged to either,

Turenne was killed by a cannon ball, in reconnoitering a situation for erecting a battery. By his death the Imperialists obtained a decided superiority. Montecuculi penetrated into Alsace; and the French, under de Lorges, nephew to the deceased general, were happy in being able to avoid a defeat. Part of the German army now sat down before Treves, where they were opposed by Marschal Crequi; but his negligence exposed him to such a dreadful defeat, that he was obliged to fly into the city with only 4 attendants. Here he endeavoured in vain to animate the people to a vigorous defence. The garrison mutinied, and, when he refused to sign the capitulation they made, delivered him up prisoner to the enemy. Lewis in the mean time had taken the field in person against the prince of Orange; but the disastrous state of affairs in Germany induced him to recall the prince of Condé to make head against Montecuculi. In this campaign the prince seemed to have the advantage. He compelled the Germans to raise the sieges of Hagenau and Saverne; and at last to repass the Rhine without having been able to force him to a battle. This was the last campaign made by these celebrated commanders; both of whom now retired from the field to spend the remainder of their days in peace. The excellent discipline, however, which the two great French generals had introduced into their armies, still continued to make them very formidable. In Germany, the duke of Lorraine, who had recovered Philipsburgh, was repeatedly defeated by Marschal Crequi, who had been ransomed. In Flanders, the prince of Orange was overmatched by the duke of Orleans and Marschal Luxemburg. A peace was at length concluded at Nimeguen in 1679, by which Lewis secured Franche Comté with many cities in the Netherlands; while the king of Sweden was reinstated in those places of which he had been stripped by the Danes and Germans. This tranquillity, however, was of short duration. Lewis prepared for new conquests; possessed himself of Strasburg by treachery; and dispossessed the Elector Palatine and the Elector of Treves of the lordships of Falkenburg, Germansheim, and Valdeutz. On the most frivolous pretences he had demanded Alost from the Spaniards; and on their refusal, seized upon Luxemburg. His conduct, in short, was so intolerable, that the prince of Orange, his inveterate enemy, found means to unite the whole empire in a league against him. Spain and Holland became parties in the same cause; and Sweden and Denmark seemed also inclined to accede to the general confederacy. Notwithstanding this formidable combination, Lewis seemed still to have the advantage. He made himself master of Philipsburg, Mannheim, Frankendal, Spire, Worms, and Oppenheim; the palatinate was ravaged dreadfully; the towns were reduced to ashes; and the people, driven from their habitations, were left to perish through the inclemency of the weather and want of provisions. By this cruelty his enemies were rather exasperated than vanquished: the Imperialists, under the duke of Lorraine, resumed their courage, and put a stop to the French conquests. At length all parties, weary of a destructive war, consented to the treaty of Ryswick in 1697.

(20.) GERMANY, HISTORY OF, FROM THE TREATY OF RYSWICK TO THAT OF UTRECHT. By the treaty of Ryswick, Lewis XIV. gave up to the empire, Fribourg, Brisac, Kehl, and Philippsburg; and consented to destroy the fortifications of Strasburg. Fort Louis and Trarbach, the works of which had exhausted the skill of the great Vauban, with Lorrain, Treves, and the Palatinate, were resigned to their respective princes; inasmuch that the terms to which he now consented, after so many victories, were such as could scarce have been expected under the pressure of the greatest misfortunes. The views of Lewis, however, in consenting to this apparently humiliating treaty, were beyond the views of ordinary politicians. The health of the king of Spain was in such a declining way, that his death appeared to be at hand; and Lewis now resolved to renew his pretensions to that kingdom, which he had formerly by treaty solemnly renounced. His designs in this respect could not be concealed from the vigilance of William III. of Britain; of which Lewis being sensible, and knowing that the emperor had claims of the same nature on Spain, he entered into a very extraordinary treaty with William. This was no less than the partition of the whole Spanish dominions, in the following manner: To the young prince of Bavaria were to be assigned Spain and the E. Indies; the dauphin, son to Lewis, was to have Naples, Sicily, and the province of Guipuscoa; while the archduke Charles, son to Leopold, was to have only the duchy of Milan. By this scandalous treaty the indignation of Charles was roused, so that he bequeathed the whole of his dominions to the prince of Bavaria. This scheme, however, was disconcerted by the sudden death of the prince; upon which a new treaty of partition was concluded between Lewis and William. By this the kingdom of Spain, with the E. India territories, were to be bestowed on the Archduke Charles, and the duchy of Milan upon the duke of Lorrain. The last moments of the Spanish monarch were disturbed by the intrigues of the rival houses of Austria and Bourbon; but the haughtiness of the Austrian ministers so disgusted those of Spain, that they prevailed upon their dying monarch to make a new will. By this the whole of his dominions were bequeathed to Philip duke of Anjou, grandson to Lewis XIV; who, prompted by his ambition, accepted the kingdom bequeathed to his grandson, excusing himself to his allies in the best manner he could for departing from his engagements. For this, however, he was made to pay dear. His insatiable ambition and his former successes had alarmed all Europe. The Emperor, the Dutch, and the king of England, entered into a new confederacy against him; and a bloody war ensued which threatened to overthrow the French monarchy entirely. While this war (of which an account is given under ENGLAND, § 69—74.) was carried on with such success, the emperor Leopold died in 1705. He was succeeded by his son JOSEPH I., who put the electors of Cologne and Bavaria to the ban of the empire; but being ill served by Prince Lewis of Baden, general of the empire, the French partly recovered their affairs, notwithstanding their repeated defeats. The duke of Marlborough had not all the

success he expected or deserved. Joseph was suspected of a design to subvert the liberties; and it was plain by his conduct he expected England should take the oar in the war, which was to be entire for his benefit. The English were disappointed and selfishness; but he died in he had reduced the Hungarians; and male issue, was succeeded by his brother VI., whom the allies were endeavouring on the throne of Spain, in opposition to the duke of Anjou, grandson to Lewis XIV.

(21.) GERMANY, HISTORY OF. TREATY OF UTRECHT, TO THE DEATH OF CHARLES VI. When the peace of Utrecht was made in 1713, Charles at first made a design to continue the war; but found himself that he was forsaken by the British, who before was obliged to conclude a peace at Baden in 1714, that he might attack the Turks in Hungary; who had obtained a total defeat from Prince Eugene at Peterwaradin. They received a victory of equal importance from the same general before Belgrade, which fell into the hands of the Imperialists; and next year the peace of Rastatt, between them and the Turks, was concluded. Charles employed his leisure in making arrangements for increasing and preserving his dominions in Italy and the M. Happily for him, the crown of Britain was transferred to the house of Hanover; an event which gave him a very decisive weight in European negotiations between George I. and II. of Great Britain. Charles was sensible of this; and matters went so high a head, that in 1724 and 1725, a breach ensued between George I. and the emperor, which was the cause of all over Europe at that time, the powers often changed their old alliances, and concluded new ones contradictory to the former. It is sufficient to observe here, that the Hanoverians, and its allies, were the object of the British animosity; and that it was the establishment of the present dynasty, and the fear of his death, for the late emperor, having no male issue, settled his dominions upon his youngest son, who was then between George II. and Charles VI.; the elector of Saxony, married with the daughter of the throne of Poland, reigned in the Austrian succession. The emperor had very bad success in a war with which he had undertaken chiefly for himself for the great trouble he had to the house of Bourbon. Prince then died, and he had no male issue. The system of France, by Cardinal Fleury, expanded to the point obtained for him, from the Turks, was more than he had reason to expect. On the death of the German and other powers early in his death, given his eldest daughter, who afterwards empress queen, in the duke of Lorrain, a prince who succeeded in power to the Austrian died in 1740.

(22.) GERMANY, HISTORY OF, FROM

Charles VI. was no sooner in the grave than ad so long laboured for must have been own, had it not been for the firmness of II. The young king of Prussia entered conquered Silesia, which he said had been ably dismembered from his family. The Spain and elector of Bavaria set up claims incompatible with the pragmatic sanction, his they were joined by France; though powers had solemnly guaranteed it. The throne, after a considerable vacancy, was by the elector of Bavaria, who took the title les VII, in Jan. 1742. The French poured nies into Bohemia, where they took Prague; Q. of Hungary, to take off Prussia, ceded nce the most valuable part of the duchy a by a formal treaty. Her youth, her beautifullings, and the fortitude with which she sm, touched the hearts of the Hungarians, ose arms she threw herself and her young id though they had been long remarkable r disaffection to the house of Austria, they d unanimously in her favour. Her geneve the French out of Bohemia; and K. of II. at the head of an English and Hano-army, gained the battle of Dettingen, in Charles VII. was at this time miserable on perial throne, and would have given the of Hungary almost her own terms; but she ily and impolitically rejected all accommod-though advised to it by his Britannic majestbest and indeed only friend. This obstive a colour to the king of Prussia to invade ia, under pretence of supporting the imperity; but though he took Prague, and subne greatest part of the kingdom, he was orted by the French; upon which he aded all his conquests and retired into Silesia. rent confirmed the obstinacy of the queen of ry: who came to an accommodation with perer, that she might recover Silesia. He on after in 1745, and FRANCIS I, D. of 3, then grand duke of Tuscany, consort to en of Hungary, after surmounting some es, was chosen emperor.

GERMANY, HISTORY OF, UNDER FRAN- The bad success of the allies against the and Prussians in the Low Countries, and of the battle of Fontenoy, retarded the oas of the empress queen against the K. of . The latter beat the emperor's brother, arles of Lorraine, who had before driven the us out of Bohemia; and the conduct of the e-queen, was such, that his Britannic majesty a proper to guarantee to him the possession ia, as ceded by treaty. Soon after, the king ita, alleging that he had discovered a secret tion between the empress-queen, the emf Russia, and the king of Poland, to strip his dominions and to divide them among res, suddenly drove the king of Poland out ony, defeated his troops, and took posses- Dresden; which he held till a treaty was under the mediation of king George II. ch the king of Prussia acknowledged Fran- or emperor. The war, however, continu- ce Low Countries, to the disadvantage and t of the Austrians and Dutch, till it was fi-

nished by the treaty of Aix-la-Chapelle, in April 1748. By that treaty Silesia was once more guaranteed to the king of Prussia. It was not long before that monarch's jealousies were renewed and verified; and the empress of Russia's views falling in with those of the empress queen and the king of Poland, who were unnaturally supported by France in their new schemes, a fresh war was kindled. The king of Prussia declared against the admission of the Russians into Germany, and his Britannic majesty against that of the French. Upon those two principles all former differences between these two monarchs were forgotten, and the British parliament agreed to pay an annual subsidy of 670,000 l. to Frederick during the war. The flames of war now broke out in Germany with more violence than ever. The armies of his Prussian majesty, like an irresistible torrent burst in Saxony; totally defeated the imperial general Brown at the battle of Lowositz; forced the Saxons to lay down their arms, though almost impreguably fortified at Pirna; and the elector of Saxony to flee to his regal dominions in Poland. After this, the K. of Prussia was put to the ban of the empire; and the French poured, by one quarter, their armies, as the Russians did by another, into the empire. The conduct of Frederick on this occasion is the most amazing to be met with in history: for a particular account of which, see PRUSSIA. At last, however, the taking of Colberg by the Russians, and of Schweidnitz by the Austrians, was on the point of completing his ruin, when his most formidable enemy, the empress of Russia, died Jan. 5, 1762. George II, his only ally died on the 25th Oct. 1760. The deaths of these illustrious personages were followed by great consequences. The British ministry of George III, sought to finish the war with honour, and Peter III. of Russia, recalled his armies. Frederick the Great was, notwithstanding, so much reduced, that the empress-queen, probably, would have completed his destruction, had it not been for the wise backwardness of other German princes, to annihilate the house of Brandenburg. At first the empress queen rejected all terms proposed to her, and ordered 30,000 men to be added to her armies. The visible backwardness of her generals to execute her orders, and the new successes obtained by the king of Prussia, at last prevailed on her to agree to an armistice, which was soon followed by the treaty of Hubertshburgh, which secured to Frederick the possession of Silesia. Upon the death of her husband, in 1762, her son Joseph II. who had been crowned king of the Romans in 1764, succeeded him.

(24.) GERMANY, HISTORY OF, UNDER JOSEPH II. This prince shewed an active and restless disposition, much inclined to extend his territories by conquest, and to make reformations in the internal policy of his dominions, yet without taking any proper methods for accomplishing his purposes. Hence he was almost always disappointed; insomuch that he at last wrote for himself the following epitaph: "Here lies Joseph, unfortunate in all his undertakings." In 1788, a war commenced betwixt him and the king of Prussia; in which, notwithstanding the impetuous valour of that monarch, Joseph acted with such caution, that his adversary could gain no advantage over him;

court procured their possessors an influence over other members, and their general residence there gave them a solid advantage in their constant and early presence at the diet of election. For in times of turbulence several emperors were elected, when princes had not an opportunity to attend. And hence sprang up a faction to that right, which the high officers of the household had assumed, of electing without any consultation of the other members of the empire. Pope Gregory X. too, either conceiving that they did possess, or willing that they should acquire, this right, exhorted them in a bull to terminate the troubles of Germany by electing an emperor. And since that period they have been held as the sole electors. But the possession of this high power was strengthened by a league amongst themselves called the *electoral union*, which received additional confirmation from the emperor Lewis of Bavaria, and was formally and fully ratified by that famous constitution of Charles IV. termed the *golden bull*; according to which, the territories and the high offices by which the electoral dignity is conveyed, must descend according to the right of primogeniture, and are indivisible. The golden bull declares the number and titles of the electors. (See ELECTORS, § 3.) And this number cannot be increased by the emperor without a previous election by the electors themselves; who, being thus capable of electing and of being elected, may style themselves *Coemperatores*; and they actually exercise part of the imperial authority, when a vacancy happens. But when or before this occurs, the election of the emperor is proceeded to after the following manner: The elector of Mentz, within a month after the emperor's death, summons, as great chancellor of the empire, the rest of the electors to attend on some fixed day within the space of three months from the date of the summons. The electors generally send their ambassadors to the place of election, which is held at Frankfort on the Mayne; but saving the right of that city, it may be held elsewhere. When the diet of electors is assembled, they proceed to compose the capitulation, to which the emperor when elected is to swear. The capitulation being adjusted, the elector of Mentz appoints a day for the election. On that day, the gates of the city are shut, and the keys delivered to the elector of Mentz. The electors or their ambassadors, who are catholics, repair in great pomp to mass: and after its celebration they take a solemn oath to choose, unbiassed and uninfluenced, the person that appears most proper for the imperial dignity. After this they repair to the sacristy, where the elector of Mentz asks, if there be any impediment known against their proceeding at present to an election; and next obtains a promise, that the person elected by the majority shall be received as emperor. The declarations of the electoral ambassadors, on these two points, are recorded by two notaries. Then all witnesses withdraw; and the elector of Mentz collecting the suffrages, which are given *crâmes*, and giving his own last, the witnesses are recalled, and he declares the person chosen. But the election is not complete, nor is the new emperor proclaimed, until the capitulation be sworn

to, either by himself or by his ambassador absent. From this time he is styled *Romanus* until the coronation takes place. The ceremony confers the title of emperor, according to the golden bull, it should be at Aix la Chapelle, out of respect to Charlemagne who resided there; but saving the right city, it may take place elsewhere. The election is performed by the Abp. of Mentz, archbishop of Cologne. And when he is seated on the throne, the duke of Saxony delivers into the sword of Charles the Great, with which he makes some knights of the holy Roman empire, and confers that honour upon such others nominated by the respective electors. The election proceeds to dinner in the great hall, where at a table elevated two steps higher than the electors, and is served by counts of the empire. The electors, each of whom has a table, are attended by the gentlemen of the respective courts. During the reign of an emperor, his presumptive successor may be elected by the Romans. But by an express article of the capitulation, the king of the Romans swears not to interfere with the government during the emperor's life; but on his decease, he confirms him emperor without a second election. When the king of the Romans has been elected, and the throne becomes vacant, the government is administered by the vicars of the emperor, who are the electors Palatine and of Saxony, the palatine and archbishop of the empire, the archbishop of Mainz, and the archbishop of Cologne, who has his district, and tribunal of the vicars by the golden bull all acts of the vicars, but they are afterwards confirmed by the emperor; which confirmation, by his capitulation, he is bound to give. There are also vicars of the emperor, constituted by a delegation of power to any prince of the empire, when he is unable to execute it himself. But these vicars are accountable to the emperor; their acts are null and their offices revoked, being contrary to the will of the emperor. When Charlemagne ceased to govern in Germany, the princes and states associated to continue the empire; and to choose an emperor. From that time all electors and princes, except the emperor, receive investiture of their counties and free cities from the Archbishop of Mainz. But this investiture is only a sign of subordination to the majesty of the empire, which is due to the emperor. For as the electors and princes of the empire are dependent on that college from which they derive protection, they shew this dependence on the emperor, who represents the majesty of that union or empire; but in all other respects they are independent and free. These princes or sovereigns even wage war with the prince wearing the imperial crown, as possessed of other titles, and unconnected with his imperial rank. The sovereignty of any member is as long as he remains loyal to the emperor, whose loyalty constitutes his duty, and secures his protection. But should he be guilty of rebellion against the emperor, as head of the empire, such a crime would commit him to the punishment of its laws, and he would be put

For this crime would be against that collective body of sovereigns whose union constitutes the empire; and therefore any violation of that union is justly punished with deprivation of these prerogatives which render such sovereigns members of the empire. Nor can this punishment of the emperor derogate from the dignity of those princes who derive their sovereignty from this constitution, whose subjection is an act of their own consent; never, no member of the empire can be put under the ban without being first heard, and without the concurrence of the electors, princes, and states, being previously obtained. The diet is that assembly of the states in which the legislative power of the empire resides; and is composed of the electors, princes, prelates, counts, and cities of the empire. It has sat since 1663, and is held usually at Ratisbon. The emperor, in present, presides in person; when absent, his commissary, whose communication of proposals from the emperor to the assembly is called *imperial decree*. The elector of Mentz, as chancellor of the empire, is director of the diet; to his chancery are all things addressed, that are to be submitted to the empire; the reading of which by his secretary, to the secretaries of the other ministers at the diet, is denominated *per litteras*, and constitutes the form of transmitting orders or memorials to the dictature of the empire. The diet is composed of three distinct colleges, each of which has its particular director. The first is that of electors; of which the abp. of Mentz is the first elector. The 2d is that of princes, which consists of princes, archbishops, and bishops; prelates, abbots, and counts, who are not considered as princes. Each prince spiritual and temporal has a vote, but prelates and counts vote by benches. The prelates are divided into two benches, the counts into four; and each bench has only one vote. The archduke of Austria and the abp. of Salzburg are alternately directors of the college of princes. The 3d college is that of the cities of the empire; the director of which is the minister of the city in which the diet happens to sit. In all these colleges, the sentiments of the majority are decisive, except in respect of fundamental laws, which affect the whole empire, in which matters as relate to religion. In these matters must be unanimous. Where religion is concerned, the proceedings are also different. The diet is then considered as consisting of two colleges, the evangetic and the catholic; and if a religious point be proposed, it must meet not only the unanimous concurrence of the proposing college, but must have the majority of the other to confirm it. This distinction arose from a constitution called the *evangetic body*; which was established by the Protestant states and princes to protect the Protestant interest in Germany, by binding over the laws for the security of their religion, and, in case of violation, by obtaining redress from the imperial throne. For in any part of the empire, where the count is a Papist and the princes are Protestants, should oppressions arise, petition would be made to the evangetic body, and not to the director. The elector of Saxony is the head of the evangetic body, though he is a Papist, but therefore his representations in favour

of the Protestants have the more force; and besides, should he abuse an office which invests him with considerable weight and influence, he could be instantly deprived of it. The first two colleges are styled superior, and in effect constitute the diet: for all points that come before the diet, are generally first deliberated in the college of electors, and pass from that to the college of princes; in which, if any objection arise, a free conference takes place between the directors of each college. And should they, in consequence of this free conference, concur, they invite the 3d college to accede to their joint opinion; which invitation is generally complied with: but should this college return a refusal, the opinion of the other two colleges is in some few cases engrossed in the chancery, and delivered to the emperor's commissary as the opinion of the empire. The opinion of the 3d college is merely mentioned at the close. However, though the superior colleges do in effect constitute the diet; yet the received maxim is, that no two colleges constitute a majority, that is, the majority of voices at the diet; nor can the emperor confirm the opinion of two colleges as an opinion of the diet. By the peace of Westphalia, a decisive vote was recognized as a right of the imperial cities, which the two superior colleges should not infringe upon: their vote being, by the fundamental law, of equal weight with that of the electors and princes. After a measure is approved by the colleges, it is submitted to the emperor, to receive his negative or confirmation. Should he approve the point, it is published in his name as the resolution of the empire, which states are exhorted to obey, and tribunals desired to consider as such. The diet not only makes and explains laws, but decides ambiguous cases. It must also be consulted before war is made; appoints the field-marshal who is to command the army, and assigns him his council of war. The diet also enters into and makes alliances, but usually empowers the emperor to negotiate them; and foreign states have their ambassadors at the diet, but the diet sends no ministers to foreign courts. See § 33, 35, and 36.

(33.) GERMANY, MODERN GOVERNMENT OF. In the commencement of the empire, justice was administered in the districts of the provinces by counts, and appeals lay from their courts to that of the emperor before the count palatinate. But as civil broils shook the power of the emperor, they interrupted also the course of justice. The consequent inconveniences caused several solicitations to be preferred from the states to different emperors for the establishment of a court of justice, which should take cognizance of great as well as small causes. And at length such a court was erected by Maximilian I. under the title of the *Imperial Chamber at Worms*, in 1495; but was removed to Spire in 1533, and to Wetzlar in 1696, where it is now held. The members of this court are a judge of the chamber and 25 assessors, partly Protestants partly Papists. The president is appointed by the emperor, the assessors by the states. The court receives appeals from inferior jurisdictions, and decides dubious titles; and all causes before it between princes and princes, or princes and private persons, are adjudged

according to the laws of the respective parties, or according to the Imperial law. This tribunal is under the inspection of visitors appointed by the states; and, during their visitation, the sentences of the court are subject to revision. Appeals lie afterward also from the judgment of the visitors, to that of the diet. The emperors finding themselves deprived of many of their powers, wished to raise their prerogatives by forming a tribunal, of which they should name the judges, and before which causes in the last resort should come. But Maximilian forelaw, in respect to the new tribunal, that though a consciousness of its importance made the states struggle for its erection, the enforcements of its establishment would make them neglect its support; and the event bore witness to his sagacity. But when, through the commission and negligence of the states, there happened to be a cessation in the distribution of justice by the Imperial chamber, he revived his project of the count Palatine, or AULIC COUNCIL. And in order to gain the quiet acquiescence of the states, under the mask of a partition of power, and of generous moderation, he desired them to add 8 to the number of assessors, and the salaries of all should be discharged by him. The states swallowed the bait, but soon perceived that they had lost part of their liberty. The emperor, by keeping the tribunal always open, by filling its seats with men of first-rate talents, and by having its sentences duly and speedily executed, drew all causes before it. The states remonstrated, declaring, that the Imperial chamber ought to be not only the supreme, but sole tribunal of that kind. The emperor answered, that he had erected the Imperial chamber in consequence of their solicitations; but as they had not supplied the tribunal with judges, he provided for that deficiency by a constant administration of justice in the establishment of another. The Aulic council now subsists with equal authority, each receiving appeals from interior jurisdictions; but neither appealing to the other, as the *derrière resort* from both must be had to the diet. However, to the Aulic council belong the reserved rights of the emperor; and to the Imperial chamber also are annexed peculiar powers. The Imperial chamber subsists during a vacancy of the throne, under the authority of the vicars of the empire; whereas the Aulic council does not exist until appointed by the succeeding emperor. The Aulic council consists of a president, vice-president, and 17 assessors, of whom 6 are Protestants. The vice-chancellor of the empire is also intitled to a seat; and all decrees issuing from the council pass through his hands to those who are to execute them. This tribunal obtains for the emperor, through the appeals from the courts of other princes, a new authority beside that which he possesses from his reserved rights; but electors and some princes, as those of Hanover, Austria, Brunswick, Swedish Pomerania, and Hesse, are free from this dependence on the emperor, in whose Aulic council their subjects cannot appeal; nor can it take cognizance of ecclesiastical or criminal causes, both of which appertain to territorial justice; which we shall presently consider. The division of the empire into circles is a regulation coeval with the establishment of the Imperial chamber

by Maximilian, in order to strengthen justice with vigour to enforce its due original division was into six circles, called the *ancient circles*. These are Franconia, Suabia, Lower Saxony, per Rhine, and Westphalia; but the princes, who at first declined bringing them under the form of circles, were obliged, at the request of the emperor, to adopt them, and increase the number to ten, the four new circles of Austria, Bohemia, Hungary, and Upper Saxony. Over these preside directors, to whom the princes commit the execution of their decrees. The old circles have two directors each, the new have one each. The office of director is not hereditary, as it belongs to the first prince in the circle, upon whom high authority; for all the decrees of the Imperial chamber and Aulic council avail, unless the director will execute them. The directors of the circles are not only of war but of peace; for in case of imperial war, they are to collect the troops of the circle; and if any state or prince of the empire suffers violation from others, they are to yield protection and enforce the law. Should there be any tumultuous spirit among the people, the suppression of such disorders is their duty. The emperor is the executive in the whole empire; the directors are such executive parts called circles; the security of which being at stake, the presidents must hold frequent diets of the respective circles, to consult on and adopt measures for their safety and welfare; interests of those near to us are generally blended with our own, that neither can be pursued without the concurrence of both, there arise negotiations between the circles, which are therefore called *negotiating circles*; and these negotiations being managed by the electors of the Upper and Lower Westphalia, they are denominated *negotiating circles*.

(34.) GERMANY, POPULATION OF. Total population before the present war estimated at 30 millions.

(35.) GERMANY, POWERS OF THE EMPEROR. The emperor, though his power is reduced, (See § 32 and 33.) still enjoys a great deal, and his power partly appears in his reserved rights, or the peculiar powers annexed to the imperial dignity. He invests the investiture of their dominions; this he is bound as the law directs, to do, but promises that they shall be only on such persons as will maintain the title; and can support their rank. He can count on the power or privilege of election alone. But in some instances even of high importance. For the descendants are incapable of succession, if their inferior rank to their father; but the acquisition of a title ennobles her and removes the collateral line conflicts. The emperor

id universities, grant the privilege of holding. He can also dispute with the tedious minority, and empower princes to assume or age the government of their own do-

He decides all rank and precedence, power of *primæ preces*, that is, of grant-ice in every chapter of the empire a va-

GERMANY, POWERS OF THE PRINCES ry prince is sovereign in his own coun- may enter into alliances, and pursue by al measures his own private interest, as reigns do; for if even an Imperial war ed, he may remain neuter if the safety pire be not at stake. Each state or io- ppoints in general three colleges for its nt. The first is the *geheimderath*, or ncil; the second is the *regierung*, or re- he third the *rentkammer*, or chamber of

Each of these has a president; and a of the first college is always president of id. The *geheimderath* represents the id superintends the other two. The re- gulates limits of territories, holds coun- with other princes, and is in most coun- urt of justice: however, in some states lso a court of justice called *justitz departe*- nd besides the right of conferences assign- regering by the sovereign, when there es between princes, there is also an *au*- arbitration, appointed to decide them.

must be paid to this privilege of prin- must be called on to appoint an austrage ort be had to the Imperial tribunal, but there still lies an appeal from the judg- he austrage. The *rentkammer* attends ulation of domains and estates, to the

revenues, and management of the taxes. ereign or prince is arbitrary in laws of ut not of revenue; for no new tax or n be laid on his country without the con- e nobles and subjects. For this purpose, *tag*, or day on which his subjects are vened, which is once in the period of re years, and at no other time can he them, he calls together the nobles and ries or deputies of the towns of his domi- he nobles usually attend in person, but representatives. To this assembly the oposes the taxes, &c. and a majority of poses of the measures. Villages, though le, send no deputies to this assembly; hey are either already represented by ective lords, or because they rank too g in a state of vassalage when compared ; for their inhabitants must mend high- l can be impressed as soldiers; from both inhabitants of towns are exempt. On tag, the respective quotas also of each

place are fixed, in order to discharge the prince's contingent in case of an imperial war.

(37.) GERMANY, RELIGIONS ESTABLISHED IN. The 3 religions principally established in the empire are the Roman Catholic, the Lutheran, and the Calvinist. The first prevails in the dominions of the emperor, in the ecclesiastical electorates, and in Bavaria; the 2d in the Circles of Upper and Lower Saxony, great part of Westphalia, Franconia, Suabia, the Upper Rhine, and in most of the Imperial towns; and the 3d in the dominions of the landgrave of Hesse-Cassel, and of some other princes. But Christians of almost every denomination are tolerated in many parts of the empire, and there is a multitude of Jews in all the great towns. The Romish superior clergy consist of 8 archbishops, and 40 bishops. The Protestant clergy are governed by consistories under the sovereign prince of each state.

(38.) GERMANY, REVENUE OF. The actual revenue of all Germany has been calculated at nearly 18,000,000l. Sterling, or 100 millions of dollars. The revenue of the emperor, in time of peace, is only about 20,000 crowns, being the contributions of a few imperial towns; but in case of war, extraordinary aids, called *Roman months*, laid on by the diet, are contributed by the different circles, at the following rate for raising 1½ millions of florins, viz.

	Florins.	Xtr.
Upper Saxony	156,360	15
Lower Saxony	156,360	15
Westphalia	156,360	15
Upper Rhine	161,411	30
Lower Rhine	105,654	5
Franconia	113,481	25
Austria	306,390	20
Bavaria	91,261	5
Suabia	156,360	15

Total 1,343,539 25

The ci-devant circle of Burgundy or Belgium formerly contributed 156,360 fl. 15 Xtr.

(39.) GERMANY, RIVERS OF. The principal rivers of Germany are the Danube, Elbe, Maine, Oder, Rhine, and Weiser.

(40.) GERMANY, SOIL, CLIMATE AND PRODUCE OF. From the great extent of the empire, every variety of soil and climate is to be met with; but it is upon the whole more fertile than otherwise; and in general temperate and healthy. The middle parts are most productive in corn and cattle; the southern abound with excellent wines and fruits, and grain of all kinds. The northern parts, from their coldness, are rather unfavourable to vegetation: yet agriculture throughout improves exceedingly.

(41.) GERMANY, STATE OF LITERATURE IN. Literature is at present in a very advanced state throughout almost all Germany, but particularly in the Protestant states. It is but about half a century since the German language has been purified and cultivated; since which various works of taste and elegance, as well as superior productions in the different sciences, particularly in the dramatic line, have appeared in it.

(42.) GERMANY, TOWNS AND VILLAGES IN. The number of towns in the empire, before the

way, has been estimated at upwards of 2,300; and that of the villages at 80,000.

(43.) GERMANY, TRADE OF. From the central situation of Germany, its commerce with the rest of Europe is very extensive. Its minerals are decidedly the first native articles for trade; after which its medicinal waters, salt, hemp, flax, linen, silk, wines, fruits, corn, cattle, huffs, cloths, timber, porcelain, wrought iron and steel, drugs, oils and colours, are the principal. The French artizans, exiled by the revocation of the edict of Nantz, enabled Germany to stand in no need of the wrought silks of other countries. Great commercial fairs flourish in Germany.

(44.) GERMANY, UNIVERSITIES, &c. IN. There are 38 universities in Germany; 19 Protestant, 17 Catholic, and two which partake of both; besides a number of literary societies and academic institutions: and education in general is particularly attended to even in the very lowest ranks.

(II.) GERMANY, a township of the United States, in York county, Pennsylvania.

(1.) * GERME. *n. f.* [germen, Latin.] A sprout or shoot; that part which grows and spreads. — Whether it be not made out of the *germe*, or treadle of the egg, doth seem of lesser doubt. *Brown's Vulgar Errors.*

(2.) GERME, among shipping, a kind of bark used in the shallows on the coast of Egypt, as drawing but little water. They are strong and well built; but have no decks. They have one, 2, or 3 masts according to their sizes. The yards are fixed to the top of the masts, and, as well as the sails, are unmanageable from below. To effect the smallest change, the seaman must go aloft. The burden of these boats is 3 or 6 tons. They are chiefly used to convey goods from Alexandria to Rosetta. In two of these awkward and unmanageable boats, Mr Bray, the carpenter of the *Tigre*, worked two 68 pound carronades with great effect, under Sir Sidney Smith, in 1799.

(1.) GERMEN, the seed-bud; See BOTANY, *Index*. In assimilating the vegetable and animal kingdoms, Linnæus denominates the germen, the *ovarium* or *uterus* of plants; and affirms its existence to be chiefly at the time of the dispersion of the male dust by the antheræ; as, after its impregnation, it becomes a seed-vessel.

(2.) GERMEN, by Pliny and the ancient botanists is used to signify a bud containing the rudiments of the leaves. See GEMMA.

GERMERSHEIM, a town of Germany, lately in the Palatinate of the Rhine, now included in the French republic, and dept. of Mont Tonnere. It was erected into a town by Rodolph I, who died in it, in 1190. It was taken in Jan. 1794, by the French; who, however, were defeated near it, on the 29th May, 1794, by the Austrians, with the loss of 1000 men: 400 being killed and 600 taken prisoners. It is seated at the confluence of the Queich and the Rhine, 5 miles S. of Spire, and 5 W. of Philipsburg.

(1.) GERMIGNY, a town of France, in the dept. of Yonne, 3 miles SE. of St Florentin.

(2.) GERMINGY, a town of France, in the dept. of Seine and Marne, 3 miles E. of Meux.

* GERMIN. *n. f.* [germen, Lat.] A shooting or sprouting seed. Out of use.—

Though palaces and pyramids do
Their heads to their foundations;
treasure

Of nature's *germins* tumble all tops
Even 'till destruction heken; answer
To what I ask you. *Shaks.*

Thou all-shaking thoud
Strike flat the thick rotundity o' th
Creak nature's mould; all *germins*
That wake ingrateful morn. *Shaks.*

GERMINAL, from *germin*, Lat.
to bud or spring, *g. d.* the spring month
month in the new French calendar.
March 21st, and ends April 19th.

* To GERMINATE. *v. n.* [*germ*
To sprout; to shoot; to bud; to
This action is furthered by the chak
hath within a spirit that will put forth
note, as we see in the chymical trials,
Hoff — The seeds of all kinds of *vege*
planted near the surface of the earth,
niet soil, amongst matter proper for it
of vegetables, would *germinate*, grow
ple with the fact of the earth. *Woodes*

(1.) * GERMINATION. *n. f.* [*germ*
French, from *germinate*.] The act
or shooting; growth. — For accelerati
on, we shall handle the subject of
rally. *Bacon*. — The Duke of Buckingh
this kind of *germination*; and surely,
a plant, he would have been reckoned
forte nascentes. *Wotton* — There is be
lutue between a tedious humidity,
germinations. *Glans*. *Scepis*. — Suppo
should be carried to the great distanc
there the whole globe would be one t
there would be no life, no *germinatio*

(2.) GERMINATION, among botanist
prehends the precise time which the s
rise after they have been committed
The different species of seeds are long
in rising, according to the degree of h
proper to each. Millet, wheat, and f
grasses, rise in one day; blite, spr
mustard, kidney-beans, turnips, and
days; lettuce and dill, in 4; cucum
melon and cress, in 5; radish and
barley, in 7; orach, in 8; purslane,
bage, in 10; hyssop, in 30; parsley, in 4
peach, almond, walnut, chestnut, pe
poppy, hyssop, and ranunculus
one year; rose bush, cornel tree, haw
lar, and hazel nut, in two. The se
species of orchis, and of some liliaceo
ver rise at all. Some seeds require t
almost as soon as they are ripe, other
not sprout or germinate. Of this l
seeds of coffee and fraxinella. Other
ly those of the pea-bloom flowers, p
germinating faculty for a series of ye
danfon asserts, that the sensitive plant
virtue for 30 or 40 years. Air and w
agents of germination. The humidit
alone makes several seeds to rise that
to it. Seeds too are observed to ri
without the intervention of earth; bu
out air is insufficient. Mr Homberg's
on this head are decisive. He put

an exhausted receiver of an air-pump, with establish something certain on the causation. Some of them did not rise at all; greatest part of those which did, made weak and feeble productions. Thus it is for air that seeds, which are buried at a very depth in the earth, either thrive but indifferently or do not rise at all. They frequently preserve, however, their germinating virtue for many years in the bowels of the earth; and it is usual, upon a piece of ground being newly ploughed to considerable depth, to observe it soon adorned with several plants, which had not been there in the memory of man. Were this frequently repeated, it would doubtless be a means of recovering certain species of plants which are regarded as lost; or which perhaps have been unknown to the knowledge of botanists. Some seeds require a greater quantity of air than others. The turnip, for instance, which does not rise till after lettuce has done so, rises before it *in vacuo*; and both will grow out little, or perish altogether, while cress will grow as freely as in the open air.

GERMINATION, CHEMICAL EXPERIMENTS ON. The late discoveries in chemistry, have thrown much light on this subject. In 1793, Humboldt discovered, that simple metallic acids are not favourable to the germination of seeds, but that metallic oxyds favour it in proportion to their degree of oxidation. This led him to search for a substance with which oxygen might be so weakly combined as to be easily separated, and he tried oxygenated muriatic acid diluted with water. Cresses (See *LEPIDIUM*), when placed in this acid threw germs at the end of 6 days, and in common water at the end of 32 days. The action of the acid on the vegetable is announced by a great number of air-bubbles covering the seeds, which did not take up water till the end of from 50 to 45 days. These experiments, published in Humboldt's *Flora Subterranea Fribergensis*, and in his *Lectures on the Chemical Physiology of Plants*, have been repeated by Messrs Ullar, Plenck, Willdenow, &c. See *Dictionnaire de Physique, par Gebelin*. They were made at a temperature of from 50° to 60° of Reaumur. In 1796, Humboldt made new experiments, and found that, by joining oxygen to oxygenated muriatic acid, vegetation was still more accelerated. He threw equal quantities of the seeds of cresses into pure water and oxygenated muriatic acid, at a temperature of 58° F. Cresses germinated in the acid in 3 hours, but in the water till the end of 26 hours. In the muriatic or sulphuric acid, there was no germ, though according to the experiments of Berzelius, the nitric acid accelerates germination, when greatly diluted with water. Prof. Sprengel caused the seed of a new species of *ORBITA* to germinate in oxygenated mud, though taken from Bocconi's collected plants, 110 or 120 years old. Jacquin Vander Schott at Vienna threw into oxygenated muriatic acid all the old seeds, which had been kept 20 or 30 years at the botanical gardens, every attempt to produce vegetation in them proved fruitless, and the greater part of them even the hardest seeds germinated. Among

these were the yellow bonduc, or nickar tree, (See *GUILANDINA*, N° 1.) the pigeon pea, (See *CYTISUS*, N° 2.) the *Dodonaea Angustifolia*, the climbing mimosa, (See *MIMOSA*, N° 19.) and some new species of the *HOPEA*. There are now shewn at Vienna very valuable plants, which are entirely raised by the oxygenated muriatic acid, and are from 5 to 8 inches high. Humboldt made the *clusia rosea* to germinate, the seeds of which had been brought from the Bahama islands by Boose, and had resisted every previous effort to make them vegetate. For this purpose he used a new process, which will be easier for gardeners who cannot procure the oxygenated muriatic acid. He formed a paste by mixing the seeds with the black oxyd of manganese, and then poured over it the muriatic acid diluted with water, in the proportion of half a cubic inch of the acid to 3 of water. The vessel containing this mixture must be covered, but not shut close, lest it should burst. At the temperature of 95°, the muriatic acid becomes strongly oxydated; the oxygenated muriatic gas which is disengaged passes through the seeds; and during this passage the irritation of the vegetable fibres takes place. *Philos. Mag.*

GERMISCH, a town of Bavaria, in the bishopric of Freysing, 21 miles S. of Weilheim.

GERMOR, a village in Cornwall.

GERMS, a town of Austria, 4 m. W. of Zwettl.

(1.) **GERN**, a town of Bavaria, 15 miles W. NW. of Brannau.

(2.) **GERN**, a town of Russia, 28 m. SW. of Tula.

GERNOI, a fort of Russian Siberia, in Koliwan, on the Irtysh. Lon. 96° E. of Ferro. Lat. 51. 44. N.

GERNRODE, an abbey of Saxony, founded in 960; 22 m. W. of Bernburg, and 30 of Dessau.

GERNSHEIM, a town of the French republic, in the dept. of Mont Tonnerre, lately in the electorate of Mentz, seated on the Rhine, 18 miles SSE. of Mentz.

GERNYOSZEG, a town of Transylvania.

GERODA, a town of Germany, in the circle of the Lower Rhine, 8 miles NE. of Duderstadt.

GERODOT, a town of France, in the dep. of the Aube, 9 miles E. of Troyes.

GEROLDSECK HOHEN, a castle and county of Suabia. The castle is seated on the Kinzig, 3 miles SSE. of Gensfenbach.

GEROLDSGRUN, a village of Franconia, in Bayreuth, 4 miles SW. of Lichtenberg.

(1.) **GEROLDSTEIN**, a town of Germany, in the late county of Blankenheim, now included in the French republic, and dep. of the Rhine and Moselle: seated on the Kill, 14 miles N. of Treves.

(2.) **GEROLDSTEIN**, a town of Germany, in the circle of the Upper Rhine, 7 miles S. of Nastede.

GEROLTZHOFFEN, a town of Franconia, in the bishopric of Wurzburg, 30 miles NE. of Wurzburg.

GERON, or **GERON POINT**, a cape of Ireland, in Antrim county, 15 miles NE. of Antrim, and 32 N. of Belfast. Lon. 5. 50. W. Lat. 55. 3. N.

GERONA, **GIRONA**, or **GIRONNA**, an ancient town of Spain, in Catalonia, and a bishop's see. In 1694, it was taken by the French and restored at the peace of Ryswick. In 1705, it was taken by

by the Austrians, and in 1711, it was again taken by the French, under the D. of Noailles. It is situated on a hill, near the Onhal, 44 miles S. of Perpignan, and 47 NE. of Barcelona. Lon. 2. 52. E. Lat. 42. 10. N.

GERONICON, [from *geron*, Gr. an old man.] a book famous among the modern Greeks, containing the lives of the ancient monks.

GERONTES, [from *geron*,] in antiquity, a kind of judges, or magistrates, in ancient Sparta, answering to what the Areopagites were at Athens. See AREOPAGUS. The senate of gerontes was called GERUSIA, i. e. the assembly or council of old men. They were originally instituted by Lycurgus: their number, according to some, was 28; and, according to others, 32. They governed in conjunction with the king, whose authority they were intended to balance, and to watch over the interests of the people. Polybius defines their office in few words, when he says, *per ipsos, & cum ipsis, omnia administrari*. None were admitted into this office under 60 years of age, and they held it for life. They were succeeded by the EPHORI.

GERONTIC, *adj.* belonging to old men.

GEROPOGON, in botany, a genus of the polygamia æqualis order, belonging to the syngenesia class of plants; and in the natural method ranking under the 49th order, *Compositæ*. The receptacle is paleaceous, with the points of the paleæ sharp or bristly; the calyx is simple; the seeds of the disc have a feathered pappus; those of the radius have a pappus of five awns.

GERRETZ. See REMBRANDT.

(1.) GERRI, a town of Spain, in Catalonia, 37 miles N. of Balaguer.

(2.) GERRI, a town of Nubia, on the Nile, 130 miles NNE. of Sennar. Lon. 30. 34. E. Lat. 16. 15. N.

GERRISH, an island of the United States, on the coast of the district of Maine.

GERRISHEIM, a town of Germany, in the circle of Westphalia, and duchy of Berg, 4 miles E. of Dusseldorp.

GERRY, a township of Massachusetts, in Worcester county, containing 14,000 acres, and 740 citizens, in 1795: 30 miles NW. of Worcester and 65 of Boston.

(1.) GERS, a department of France, bounded on the N. by those of Landes, and Lot and Garonne; on the E. by that of Upper Garonne; on the S. by those of the Upper and Lower Pyrenees; and on the W. by that of Landes. It includes the ci-devant provinces of Armagnac and Gascony; and extends 25 miles in length, and from 22 to 45 in breadth. Agen is the capital.

(2.) GERS, a river of France, which rises in the dept. of the Upper Pyrenees, crosses and gives name to that of the Gers, N. and falls into the Garonne, 3 miles S. of Agen.

(1.) GERSAHL, a district of the Helvetic republic, in the canton of Schwytz, which, before the late revolution, was a republic of itself, though only 6 miles long and 3 broad, and containing but 1000 citizens.

(2.) GERSAHL, the capital of the above territory, seated N. of the lake of Four Cantons, and 6 miles SW. of Schwytz.

GERSCHITZ, a town of Bohemia

ply some time; and they differ from tenses so called, in that they express the *manner*, he tenses do not.

GERUNDA, in ancient geography, a town of Setani, in Hispania Citerior, on the S. or S.E. of the Sambroca; now called GERONA.

GERUNDENSES, the people of GERUNDA.

GERUNDIVE, *n. s.* in grammar, an adjective of a gerund.

GERUS, in ancient geography, a river of Althalia that runs into the Caspian sea.

GERUSIA. See GERONTES.

GERON, or **GERON** in fabulous history, a king of the YONES, in Gades, in Iberia, who had a hundred bodies, and fed his cattle with human flesh. His monster was slain by Hercules, who carried off his head. Hyginus makes him the son of Chrysaor, brother of the winged horse Pegasus, and grandson of Neptune, by Medusa, one of the Gorgons.

The fable is supposed to mean that he was king of 3 contiguous Spanish islands; or as some think, there were 3 brethren kings, all so united, as to seem to have but one soul.

GERZAT, a town of France in the dep. of Doubs, 4 miles N.E. of Clermont.

GERZEN, a town of Germany, in Bavaria, 11 E. of Dingelzingen, and 11 E. of Landshut.

GERAS, a town of Silesia, in Neisse.

GERE EL AUBE, or **GIR-GIR**, a species of acacia described by Mr Bruce, as growing plentifully at Ras el Peel, on the borders of Abyssinia. The leaves are long, pointed, narrow, and of a green tinge. They shoot plentifully, soon turn yellow, and fall to the ground. Goats prefer it for food. A very small glutinous juice, called gomme, is often seen on the leaves. The root of the branch arises two and sometimes three stalks. The flower and seed are well described.

The head, when in perfection, is of a brownish brown. This plant begins to shoot in the month of April, and advances rapidly to its full growth, which is 3 or 4 inches. It is ripe early and decays soon after.

GERKE, a town of Germany, in Westphalia, 14 E. of Lippstadt, and 14 N. of Ruden.

GERHAUSEN. See GESTUNGHAUSEN.

GERHEN. See AMBA-GESHEN.

GERIS, a town of Germany, in the county of Gers, 4 miles E. of Feldkirk.

GEROLD, a town of Germany, in the bishopric of Osnaburg, 12 miles S.E. of Vorden.

GESNER, Conrad, M. D. a celebrated naturalist and naturalist, born at Zurich in 1516. He finished his studies in France, he travelled in Italy, and taught medicine and philosophy at Zurich, with extraordinary reputation. He was so much in natural history, that he was called the *German Pliny*. He died Dec. 9, 1565, leaving 66 works behind him, on botany, zoology, grammar, natural history, &c. Of his principal are, 1. A history of animals, and fossils: 2. *Bibliotheca Universalis*: A Latin lexicon. Boerhaave emphatically calls him *Monstrum Eruditionis*, "a prodigy of learning." Those indeed (as Mr Coxe observes in his Letters on Switzerland) "who are acquainted with the works of this great naturalist

cannot repress their admiration at the amplitude of his knowledge in every species of erudition, and the variety of his discoveries in natural history. Their admiration is still further augmented, when they consider the gross ignorance of the age which he helped to enlighten, and the scanty succours he possessed to aid him in thus extending the bounds of knowledge; that he composed his works, and made those discoveries which would have done honour to the most enlightened period, under the complicated evils of poverty, sickness, and domestic uneasiness." During his last 24 years, however, his salary as a professor, enabled him to live in easy circumstances.

(2.) **GESNER**, John Matthew, an acute German critic, born at Neuburg, in 1691. After superintending the public school of Weinheim for 11 years, he removed to Anspach, and thence to Gottingen, where he was made professor of humanity, and public librarian, &c. He died at Gottingen in 1761. His most esteemed works are, an excellent Latin Dictionary, and his editions of the Classics.

(3.) **GESNER**, Solomon, the celebrated author of the *Death of Abel*, was the son of John Conrad Gesner, bookseller and member of the Great Council, and was born at Zurich in 1730. In his early years he showed no signs of superior abilities; and his progress in education was so slow, that his master gave him up as incapable of any greater attainments than writing and the four first rules of arithmetic. Upon this he was placed under a clergyman, a relation of his father's, who showed himself better acquainted with the art of discovering the natural inclinations of his pupils. He often carried young Gesner with him into the fields, to survey the beauties of nature; and finding that he took pleasure in such lessons, and listened to them with peculiar attention, he repeated some of the most striking passages of the ancient authors, who have written on these subjects, in the most agreeable manner. By this ingenious artifice, young Gesner's mind began to open, and its powers to expand; and it is, perhaps, owing to this circumstance, that he became so fond of the language of Virgil and Theocritus. When he arrived at a proper age, he chose his father's profession. Of 5 printing houses at Zurich, two were occupied by Gesners. The house in which our poet's father had a share, was known by the firm of *Orell, Gesner, and Company*, and was famed for the elegance of the works which it published. But Mr Gesner did not damp his genius, by the drudgery of business. He indulged himself freely in pursuing his favourite object, and his partners never grudged him that time which he devoted to study. In 1752, he made a tour through Germany, not so much to extend his commerce, as to see and be acquainted with those authors who have done honour to their country. The following anecdote is strikingly characteristic of that timidity which often accompanies true genius. When Mr Gesner was at Berlin, he was admitted into a literary society, of which Gleim and Lessing were members. Every member read in turn some pieces of his own composition, and Gesner was very desirous of submitting to these able critics a small work, which was

his first attempt. As each member had done, reading, Gesner was observed to move his hand with a kind of tremour towards his pocket, and to draw it back again without producing any thing. Having not yet published any work, none of the company could guess the cause of a motion which his modesty prevented him from explaining. The piece which he wished, but had not the courage, to show, was his poem, intitled *Night*, which he published on his return to Zurich in 1753. It was considered as an original, of which no model is to be found among the moderns; but in Gesner's opinion, it was only a piece of imaginary painting, or, to use his own words, in one of his letters to Mr Huber who translated his works, "A caricature composed in the moments of folly or intoxication." In this little poem he has introduced a short episode on the origin of the glow-worm, containing a poetical explanation of this natural phosphorus, which has all the beauty of Ovid's *Metamorphoses* without their prolixity. The success of this essay emboldened him to publish a pastoral romance, called *Daphnis*, in three cantos. The applause deservedly bestowed upon this performance induced him to publish his *Idylls* and other rural poems in imitation of Theocritus. Pastoral poetry, which was then little known in Germany but by translations, began to be preferred to every other kind. The only author of note who had preceded him in this line, was Mr Rost of Lipsick, who had the art to unite spirit and simplicity in a kind of writing, which appears insipid without the former, but becomes unnatural and disgusting if it is too abundant. He sometimes throws a delicate veil over those images which are deficient in decency, but it is often too slight. Such was the rival with whom Gesner had to contend. But our poet pursued a different course. Instead of placing, like Rost, his scenes in modern times, he went back with Theocritus to the golden age. The characters of Gesner's *Idylls* are taken from those societies which exist no longer but in the remembrance, or rather in the imagination. His shepherds are fathers, children, and husbands, to whom generosity, beneficence, and respect for the Deity, are sentiments no less familiar than love. These *Idylls* were the favourite object of his pursuit, and that part of his work which acquired him the greatest reputation. His *Death of Abel*, was first published in 1758. It is written, like the rest of his pieces, in poetical prose; and went through three editions in one year. The French edition was followed by others, in Italian, Dutch, Danish, and, lastly, two in English, one in prose and the other in verse. He next published his *First Navigator*, a poem in 3 cantos, which many consider as his masterpiece. He produced likewise, in the dramatic stile *Evander and Alcmee* in 3 acts; and *Brasilius*, in one act, which was represented with applause at Lipsick and Vienna. But though poetry was Gesner's darling pursuit, and though he enriched German literature with works which will immortalize his name, he did not confine himself to it. In his childhood he had received a few lessons in drawing, and had pursued this study, but without any intention of becoming an artist. At the age of 30, being ex-

cited by the sight of a beautiful collection by his father-in-law, Mr Heidegger, to this treasure, composed principally of Flemish pieces; and to this new taste most sacrificed every other. He at first only to delineate some decorations for 1 pieces of his books; but in 1765, he painted landscapes etched and engraved by his other pieces appeared in 1769; and after attempts, he executed ornaments for which came from his press; among his own work; and a German translation from Mr Gesner's enthusiasm for his pursuits, and from the time and attention bestowed upon them, we might conclude found little leisure for discharging his citizen. The contrary, however, was for he passed almost the half of his life employments of the state. In 1765 he to the grand council, in 1767 to the 1768 he was appointed bailiff of Eulibach the four guards in 1776; and in 1781 fix ant of waters, which office in 1787 was to him for six years. In all these stations ner discharged his duty with the most fidelity. He died of a paralytical disorder ad March, 1788, aged 58. As a past Gesner, if he has been equalled by any, excelled by none. Pastoral poetry is to be very limited, but those who read works will be convinced, that it is susceptible of much variety. His pastoral romance is not inferior in natural simplicity to the brated work of Longus; but it surpasses variety of images and incident. *Erastus*, *der* are instructive and interesting poem count of the contrast between the work ture which reigns throughout them; an Navigator unites the mildest philosophy the splendour and imagery of Fairy l dramatic poems abound with interesting characters well delineated, and situation novelty. His language is that of the the chastest ears might listen to the which he has described. If he has some humour of Sterne and Fontaine, it their licentiousness. The severest taste in his writings no phrase deserving representation. Gesner's character, as a man, was no less as a husband, a father, a friend, a and a citizen, his virtues were equally ous. He was naturally of a melancholic but was no enemy to rational mirth; mildness of his temper rendered his co ways engaging. Possessed of noble united with great modesty, he was simple external appearance, as well as in his cor His language was lively and animated reserve before strangers resembled that it was only in the presence of those with was acquainted, that his real character in its full lustre. His reputation and vi known even in the remotest parts of The late empress, Catharine II, pres with a gold medal as a mark of her excellers thought they had seen only th Switzerland, if they had not been to the of Gesner, or procured some of his

It way he had acquired so much reputation; he was ranked among the best artists any; and Mr Fueslin, who was himself, in the preface to the 3d vol. of his essay on the painters, engravers, architects, sculptors, who have done honour to art, gives a distinguished place to Mr. . . . though then living.

ERIA, in botany: A genus of the angiosperm order, belonging to the didynamia class and in the natural method ranking twentieth order, *Personatae*. The calyx is . . . and placed on the germen; the corolla . . . and then recurvated; the capsule . . . bilocular.

NE, a town of Bohemia, in Boleslau.

SO, Point, a cape of Ireland in Sligo 11 miles W. of Sligo. Lon. 8. 33. W. 2. N.

NE, a town of Naples, in Abruzzo Citra, E. of Civita Borella.

PS, a town of the United States in 8 miles SSE. of Fort William.

RIACUM, in ancient geography, a station for ships of the Morini in Gallia. In Cæsar's time, according to Dio, no town; but Florus speaks of it as the *Gessorincenses Muri* are mentioned in his Panegyric. The author of *Ætiosiana*, commonly called *Pentenger's* expressly, that Gessoriacum was in his *Bononia*. It is now called *Bonogne*.

EST. *n. f.* [*gestum*, Latin.] 1. A deed; an achievement.—

fair them quites, as him befeemed best, dly can discourse with many a noble *gest*.

Spenser.

representation.—*Gests* should be interpreted the Persian manner, by ages, young

3. The roll or journal of the several stages prefixed, in the progresses of our life of them being still extant in the heart. [from *giste*, or *gite*, Fr.] *Hanmer*.—

I'll give you my commission, in there a month, behind the *gest*, for's parting. *Shak. Winter's Tale*.

; so much of a journey as passes with- out. In all senses obsolete.—He dis- down the *gests* and progress thereof.

r, in geography, a town of France, in ment of Maine and Loire; 10½ miles S. nt.

a town of Sweden, in W. Gothland. **NTEs**. See BEARER, § 3.

time of *gestation*, should the nourish- ried to the embryo in the womb, er times goeth not that way? *Ray on*

ATION. See MIDWIFERY.

or **GEISTE**, a river of Germany, in ich runs into the Weser.

PART II.

* **To GESTICULATE**. *v. n.* [*gesticular*, Lat. *gesticular*, Fr.] To play antick tricks; to shew postures. *Ditt*.

* **GESTICULATION**. *n. f.* [*gesticulatio*, Lat. *gesticulation*, Fr. from *gesticulate*.] Antick tricks; various postures.

GESTINEN, a town of the Helvetic republic, in the canton of Uri, 15 miles S. of Altorf.

GESTRICIA, or . . . a province of Sweden,

GESTRICKLAND, } bounded by Helſingia on the N. by the gulf of Bothnia on the E. by Up- land, Westmanland, and Dalecarlia, on the S. and by Dalecarlia on the W. It abounds with mines, forests, lakes, and rivers; and is 17 miles long and 10 broad. **GEFLE** is the capital. The Dahl, the finest river in Sweden, meanders through it.

GESTUNGHAUSEN, or **GESHAUSEN**, a town of Saxony in Coburg, 7 miles E. of Coburg.

(1.) * **GESTURE**. *n. f.* [*gero*, *gestum*, Lat. *geste*, Fr.] 1. Action or posture expressive of sentiment.

—Ah, my sister, if you had heard his words, or seen his *gestures*, when he made me know what and to whom his love was, you would have match- ed in yourself, those two rarely matched together, pity and delight. *Sidney*.—When we make pro- fession of our faith, we stand; when we acknow- ledge our sins, or seek unto God for favour, we fall down; because the *gesture* of constancy be- cometh us best in the one, in the other the beha- viour of humility. *Hooker*.—

To the dumbness of the *gesture*.

One might interpret.

Shak. Timon.

—Humble and reverend *gestures* in our approaches to God express the inward reverence of our souls.

Duty of Man. 2. Movement of the body.—

Grace was in all her steps, heav'n in her eye,

In ev'ry *gesture* dignity and love! *Milton.*

—Every one will agree in this, that we ought ei- ther to lay aside all kinds of *gesture*, or at least to make use of such only as are graceful and expres- sive. *Spectator*.

(2.) **GESTURE**, (§ 1. *def. 1.*) consists principally in the action of the hands and face; and may be defined, a suitable conformity of the motions of the countenance, and of several parts of the body, in speaking to the subject of discourse. See **DE- CLAMATION** and **ORATORY**.

* **To GESTURE**. *v. a.* [from the noun.] To ac- company with action or posture.—Our attire dis- graceth it; it is not orderly read, nor *gestured* as becometh. *Hooker*.—He undertook so to *gesture* and muffle up himself in his hood, as the duke's man- ner was, that none should discern him. *Wotton*.

GESVALDO, a town of Naples, in the Prin- cipato Ultra, 12 miles NW. of Conza.

(1.) * **To GET**. *v. a.* pret. *I got*, anciently *gat*; part. pass. *got*, or *gotten*. [*getan*, *gettan*, Saxon.] 1. To procure; to obtain.—

Thine be the cosset, well hast thou it *got*. *Spenser*.

—Of that which was our father's hath he *gotten* all this glory. *Gen. xxxi. 1.*—We *gat* our bread with the peril of our lives. *Sam. v. 9.*—David *gat* him a name when he returned from smiting of the Syrians. 2 *Sam. viii. 13.*—Most of these things might be more exactly tried by the Torricellian experiments, if we could *get* tubes so accurately blown that the cavity were perfectly cylindrical. *Boyle*.—Such a conscience, as has not been want-

ing to itself, in endeavouring to get the utmost and clearest information about the will of God, that its power, advantages, and opportunities could afford it, is that great internal judge, whose abridgement is a rational and sure ground of confidence. *Saunders*.—He insensibly got a faculty, without perceiving how; and that is attributed wholly to nature, which was much more the effect of use and practice. *Locke*.—The man who lives upon alms, gets him his set of admirers, and delights in superiority. *Spenser*.—

Sphinx was a monster that would eat
Whatever Prenter she could get;

Unless his ready wit disclosed.

The subtle riddle she propos'd.

Addison.

—This practice is to be used at first, in order to get a fixed habit of attention, and in some cases only. *Harris*.—The word *get* is variously used: we say to get money, to get in, to get off, to get ready, to get a stomach, and to get a cold. *Harris's Logick*. 2. To force; to seize.—Such hells and scatterings cannot easily, by any constable, or other ordinary officer, be gotten, when they are challenged for any such fault. *Peiser on Insult*.—

The king seeing this, started from where he sat,
Out from his trembling hand his weapon gat.

Daniel.

All things, but one, you can restore;

The heart you get returns no more. *Waller*.

3. To win by contest.

Henry the sixth had lost

All that which Henry the sixth had gotten. *Shak*.

—He got his people great hurt, and he made battles, projecting the host with his sword. *1 Mac. iii. 3*.—To get the day of them of his own nation, would be a most unhappy day for him. *2 Mac. v. 6*.—Auria held that course to have drawn the galleys within his great ships, who thundering amongst them with their great ordnance, might have opened a way unto his galleys to have gotten a victory. *Knolles's Hist.* 4. To have possession of; to have. This sense is commonly in the compound preterite.

Then forcing thee, by fire he made thee bright;

Nay, thou hast got the face of man. *Herbert*.

5. To beget upon a female.—These boys are boys of ice; they'll none of her: sure they are bastards to the English, the French never got them. *Shak*.

Women with study'd arts they vex:

Ye gods destroy that impious sex;

And if there must be some t'invoke

Your pow'rs, and make your altars smoke,

Come down yourselves, and, in their place,

Get a more just and nobler race. *Waller*.

—Children they got on their female captives.

Locke.—If you'll take 'em as their fathers got 'em, so and well; if not, you must stay 'till they get a better generation. *Dryden*.—

Has no man, but who has kill'd

A father, right to get a child?

Prior.

Let ev'ry married man, that's grave and wise,

Take a tartuff of known ability,

Who shall so settle lasting reformation;

First get a son, then give him education. *Dorset*.

The god of day, descending from above,

Mixt with the day, and got the queen of love.

Granville.

6. To gain as profit.—Though creditors will lose one fifth of their principal and use, and landlords

one fifth of their income, yet the debtors will not get it. *Locke*. 7. To get into or advantage.

If they get ground and advantage

Then join you with them like a rook.

8. To gain; to get, by labour.—Hark

not pay other way of getting or keep

but by trade, so much of our trade

much of our riches must necessarily

lose. *Locke*.—If it be so much pains to count

I would spend what labour did it cost

to get it? *Locke*. 9. To receive

reward.—Any tax laid on foreign goods

England raises their price, and makes it

get more for them; but a tax laid on

made commodities lessens their price.

To learn.—This defect he frequently

being harder with him to get one sort

than to pay twenty. *Fell*.—Get by his

common and useful words out of his

vocabulary. *Harris*. 11. To proceed

shall then how we may get it soon and

afterwards preserve and keep it so.

To put into any state.—None can

make certain vessels of a tree, without

down, not with cutting, but with fire.

Take no reprisal, whatever she

put, or you gone, she doth not mean.

—He who attempts to get another's

state of peace, does thereby put his

state of war with him. *Locke*.—Before

being forth, they may be pretty well

them a little into heart. *Morison*.—

was taken up in embalmings the bodies

place very frequently: his greatest pleasure

how to get the lovers out of it, the

watched. *Guardian*. 13. To prevail

duce.—Though the king could not get

gage in a life of business, he made him

his chief companion. *Spenser*. 14

to hook.—With much communicational

tempt thee, and smiling upon thee get

eternity. *Brutus*. xiii. 11.—By the mar

grandson Ferdinand he got into his

kingdoms of Bohemia and Hungary

After having got out of you every thing

spare, I scorn to trespass. *Guardian*.

take; to remove; implying haste or

you to bed on th' instant; I will

forthwith. *Shak. Othello*.—Arise, get

this land. *Gen. xxi. 13*.—Left they

our enemies, and fight against us, and

up out of the land. *Exodus i. 10*.—

speed got himself with his followers

town of Mega. *Knolles's Hist.* 16. To

force or art.—She was quickly got off

gain. *Knolles*.—The roving fumes of

in evaporating, would oftentimes fall

gold in such plenty, as would put

trouble to get them off from his

When mercury is got by the help of

of a metal, or other mineral body,

pose this quicksilver to have been a

of its own kind. *Boyle*.—They would

get out those weeds which their own

planted, and which now have taken

to be easily extirpated. *Locke on Education*.—Get on thy boots; we'll ride all

GET off. To sell or dispose of by some exchange.—Wood, to *get* his halfpence *off*, offered ten pounds in his coin for seventy in silver.

To GET. v. n. 1. To arrive at any state or by degrees with some kind of labour, or difficulty: used either of persons or things.—Phaustus was entrapp'd, and saw round him, but could not *get* out. *Timon*.—

A man knew he walk'd o'er perils, on an edge likely to fall in than to *get* o'er. *Southey*.—A stranger shall *get* up above thee very high, and then come down very low. *Dante*.—When the fox bragged what a number of hills were he had to *get* from the hounds; and said he had but one, which was to climb *Bacon*.—Those that are very cold, and icy in their feet, cannot *get* to sleep. *Bacon's* *Maxims*.—I utterly condemn the practice of the mes, that some who are pricked for sterility, re sit, should *get* out of the bill. *Bacon's* *Maxims*.—He *got* away unto the Christid hardly escap'd. *Knolles*.—He would be back before they could *get* out of Arminius's Hill. *Knolles*.—She plays with his rage, and gives his anger. *Dryden*.—The latent air away in hubbles. *Boyle*.—There are few whole minute parts stick so close together, that it is possible to meet with some other of these small parts may *get* between, and to them. *Boyle*.—There was but an insensibility of the liquor upon the recess of what was that *got* through the cork. *Boyle*.—All the universe, and every part thereof, are of full excellency, yet the multiplicity is so various, that the understanding falls in a kind of despondency of *getting* through a task. *Hale's Origin of Mankind*.—If there be any leak at the bottom of the vessel, a little water would *get* in, because no air *get* out. *Wilkins's Math. Magis*.

Heav'n, in what a lab'rinth am I led!
I'd *get* out, but she detains the thread! *Dryden*.—I have I seen some fearful hare maintain her life, 'till tir'd before the dog she lay;
Then, stretch'd behind her, pants upon the plain,
pow'r to kill, as she to *get* away. *Dryden*.—The more oily and light part of this mass would rise above the other, and swim upon it. *Burnet's* *History*.—Having *got* through the foregoing part, let us go on to his next argument. *Locke*.—The moving of the pains we feel, is the *getting* misery, and consequently the first thing to be avoided, in order to happiness, absent good. *Locke*.—Having *got* into the sense of the epistles, we may compare what he says, in the places where he treats of the same subject, we can hardly be mistaken in his sense. *Locke*.—I *got* up as fast as a cat, girt on my rapier, and snatched up my sword when my landlady came up to me. *Tatler*.—No shalms would let no body *get* upon him under the Great. *Addison*.—

Prison'd fires, in the close dungeons pent,
To *get* loose, and struggle for a vent;
By their way, and undermining all,
With a mighty burst whole mountains fall. *Addison*.

When Alma now, in different ages,
Has finish'd her ascending stages,
Into the head at length she *gets*,
And there in publick grandeur sits,
To judge of things. *Prior*.

—I resolv'd to break through all measures to *get* away. *Swift*. 2. To fall; to come by accident.—Two or three men of the town are *got* among them. *Tatler*. 3. To find the way; to insinuate itself.—When an egg is made hard by boiling, since there is nothing that appears to *get* in at the shell, unless some little particles of the water, it is not easy to discover from whence else this change proceed: than from a change made in the texture of the parts. *Boyle*.—

He raves; his words are loose

As heaps of sands, and scattering wide from sense:

So high he's mounted in his airy hopes,
That now the wind is *got* into his head,

And turns his brains to frenzy. *Dryden*. *Sp. Fryar*.

—A child runs to overtake and *get* up to the top of his shadow, which still advances at the same rate that he does. *Locke*.—Should dressing, feasting, and balls once *get* among the Cantons, their military roughness would be quickly lost. *Addison*.—The fluids which surround bodies, upon the surface of the globe, *get* in between the surface of bodies, when they are at any distance. *Cheyne's Phil. Princ*. 4. To move; to remove.—

Get home with thy fessel made ready to set;
The sooner, and easier carriage to *get*. *Tatler*. 5. To have recourse to.—The Turks made great haste through the midst of the town ditch, to *get* up into the bulwark to help their fellows. *Knolles*.—Lying is so cheap a cover for any miscarriage, and so much in fashion, that a child can scarce be kept from *getting* into it. *Locke*. 6. To go; to repair.—They ran to their weapons, and furiously assailed the Turks, now fearing no such matter, and were not as yet all *got* into the castle. *Knolles's* *History*.—A knot of ladies, *got* together by themselves, is a very school of impertinence. *Swift*. 7. To put one's self in any state.—They might *get* over the river Avon at Stratford, and *get* between the king and Worcester. *Clarendon*.—We can neither find source nor issue for such an excessive mass of waters, neither where to have them; nor, if we had them, how to *get* quit of them. *Burnet's* *History*.—Without his assistance we can no more *get* quit of our affliction, than but by his permission we should have fallen into it. *Hale's* *Principles for Death*.—There is a sort of man who pretend to divest themselves of partiality on both sides, and to *get* above that imperfect idea of their subject which little writers fall into. *Pope on Homer*.—As the obtaining the love of valuable men is the happiest end of this life, so the next felicity is to *get* rid of fools and scoundrels. *Pope to Swift*. 8. To become by any act what one was not before.

The laughing sot, like all unthinking men,
Bathes and *gets* drunk; then bathes and drinks again. *Dryden*.

9. To be a gainer; to receive advantage.—

Like jewels to advantage set,

Her beauty by the shade does *get*. *Waller*.

10. To GET off. To escape.—The gallies, by the benefit

benefit of the shores and shallows, *got off*. *Bacon's War with Spain.*—

Whate'er thou dost, deliver not thy sword;
With that thou may'st *get off*, tho' odds oppose thee.

Dryden.

11. *To GET over.* To conquer: to suppress; to pass without being stopped in thinking or acting.

—'Tis very pleasant to hear the lady propose her doubts, and to see the pains he is at to *get over* them. *Addison.*—I cannot *get over* the prejudice of taking some little offence at the clergy, for perpetually reading their sermons. *Swift.*—To remove this difficulty, Peterborough was dispatched to Vienna, and *got over* some part of those disputes. *Swift.*

12. *To GET up.* To rise from repose.—Sheep will *get up* betimes in the morning to feed against rain. *Bacon's Nat. History.*

13. *To GET up.* To rise from a seat. 14. To remove from a place.—*Get you up* from about the tabernacle of Koran, Dathan, and Abiram. *Num. xvi.*

15. *To get*, in all its significations, both active and neutral, implies the acquisition of something, or the arrival at some state or place by some means; except in the use of the preterite compound, which often implies mere possession: as, *he has got a good estate*, does not always mean that he has acquired, but barely that he possesses it. So we say *the lady has got black eyes*, merely meaning that she has them.

(1.) GETA, M. Septimius Antoninus, the son of the emperor Severus, and brother to Caracalla. In the 8th year of his age, he was moved with compassion at the fate of some of the partizans of Niger and Albinus, who were to be executed, and his father struck with his humanity retracted the sentence. After Severus's death, he reigned at Rome conjointly with his brother; but Caracalla, who envied his virtues and was jealous of his popularity, ordered him to be poisoned; and this not being effected, he murdered him in the arms of his mother Julia, who in attempting to defend him, received a wound in her arm, from the hand of her worthless son, A. D. 212. Geta had not reached the 23d year of his age, and the Romans lamented the death of so virtuous a prince, while they groaned under the cruelties and oppressions of Caracalla.

(2.) GETA, in geography. See GASTA.

GETÆ, an ancient nation of Thrace, who dwelt on both sides of the Ister, near Scythia, supposed to be the ancestors of the Dacians and Goths; or according to others, of the Walachians or Moldavians.

GETCHAO, a town of China, in the province of Chang tong, 27 miles ESE. of Lu.

GETHIN, Lady Grace, an English lady of uncommon parts, daughter of Sir George Norton of Abbots-Leigh in Somersetshire; was born in 1676; and became the wife of Sir Richard Gethin, of Gethin-Croft in Ireland. She was mistress of great accomplishments, natural and acquired, but did not live long enough to display them; for she died in her 21st year. She was buried in Westminster abbey, where a beautiful monument with an inscription is erected over her; and, to perpetuate her memory, provision was made for a sermon to be preached in Westminster abbey yearly, on All-Wednesday for ever. She wrote in loose

papers, a work which, after her death, rhodized, and published under the title *quæ Gethiniana*; or, Some remains of ingenious and excellent lady, Grace lately deceased. Being a collection of courses, pleasant apophthems, and witty ces. Written by her, for the most part of essay, and at spare hours." Lond. 1

GETHSEME, [גתסמא. Heb. i. e. ley of fat, or fertility,] in ancient geography a village at the foot of Mount Olivet, which Christ sometimes retired in the night-time in a garden belonging to this village thence the agony in which he sweated blood was arrested by Judas and his band. It is described by Maundrel as an even plot of not above 57 yards square, lying between of Mount Olivet and the brook Cedron.

GETHYLLIS, in botany: A genus of the monogynia order, belonging to the dodecandria of plants; and in the natural method rather the 9th order, *Spathaceæ*. The corolla is cleft, and the stamina are in six different positions; the capsule is trilocular.

GETSTORFF, a town of Germany in 6 miles SE. of Meissau.

GETTENDORFF, a town of Austria in 8. of Aigen.

* GETTER. *n. s.* [from *get*.] 1. One who cures or obtains. 2. One who begets on —Peace is a very lethargy, a *getter* of tard children than war's a destroyer of men.

* GETTING. *n. s.* [from *get*.] 1. Acting; acquisition.—Wisdom is the principle therefore get wisdom; and with all the get understanding. *Prov. iv. 7.* 2. Gain.—Who hath a state to repair may not despise small things; and it is less dishonour to bridge a petty charge than to stoop to great things. *Bacon.*—The weaker families retain their share of their *gettings*, to be a portion to the child. *Swift.*

GETTYSBURG, a town of Pennsylvania, 9 miles N. of the Maryland line, and 118 W. by S. of Philadelphia.

GETULL. See GATULL.

GETULLIA. See GATULLIA.

GETZENDORF, two towns of Austria, one on the Rottenbach, 12 miles SE. of Vienna, and four miles S. of Zellerfeld.

GEVAUDAN, or } a ci-devant province of France, in Languedoc, bounded on the N. by Auvergne, E. by S. by Cevennes, and W. by Rouergue; mountainous and barren; and now forming a part of LOZERE.

GEVELSBERG, or GÄTTERSBERG, a town of Westphalia, in the county of Mark, 11 miles SE. of Bielefeld.

GEVER, or St GOAR. See GOAR.

GEVES, a town and river of Africa, in the river St Domingo.

GEVEZE, a town of France, in the diocese of Vilaine, 7½ miles NNW. of Rennes.

GEVIEZ, a town of Moravia, in the district of Olmutz, 12 miles SW. of Muhlitz.

(1.) GEUL, a river of Germany, which flows into the Meuse, 5 miles below Maastricht.

UL, a town of the French republic, in the Lower Meuse, and ci-devant duchy of Luxembourg, 5 miles N. of Wyck.

AVENS, or **HERB BENNET**, a genus of the *Lygamaia* order, belonging to the icosandria of plants; and in the natural method under the 35th order, *Senticosæ*. The leaf is divided into 10 parts; there are 5 petals, the seed has a jointed awn. There are 5 of which the 2 following, both natives of France, are the most remarkable:

M RIVALE, with a very thick, fleshy, tuberous root, hairy leaves, and upright stalks, 2 feet high, terminated by purple flowers growing on one side. Of this there are varieties, some with yellow flowers. The root is said to be efficacious in curing the dropsy; and it is daily used for this purpose by the peasants and other inhabitants of North France.

Sheep and goats eat the plant; cows, and swine, are not fond of it.

M URBANUM, with thick fibrous roots, a bitter taste, rough, serrated leaves, and round, hairy stalks, terminated by large flowers, succeeded by globular fruit. The plant is sown in spring before the stem comes out of the ground, give it a pleasant flavour, and its growing sour. Infused in wine, it has a stomachic virtue. The taste is mild and aromatic, especially when the plant is dried in dry situations; but in moist places it has little virtue. Both these species are propagated either by the root or seed.

Y, a town of France, in the dep. of the Côte d'Or, 7 miles S. of Dijon.

ITZ, a town of Saxony, in the bishopric of Meissen, 3 miles E. of Zeitz.

Z, a town of Saxony, near Cothen.

EWGAW. *n. s.* [*gewaw*, Sax. *iorau*, Fr.] a rattle; a toy; a bauble; a splendid plaything of metal they exchanged for the mean and *gewaw* which the others could not value.

bot's World.—Prefer that which Providence pronounced to be the staff of life, bearing *gewaw* that has no other value than vanity has set upon it. *L'Esrange*.—

Children, when they throw one toy away, a more foolish *gewaw* comes in play.

Dryden.

ry gewaw, call'd a crown, that spread his temples, drown'd his narrow head, would have crush'd it. *Dryd. Juvenal*.

Some loose the bands of friendship, cancel nature's laws of honesty and tawdry *gewaws*. *Philips*.

Images were fans, silks, ribbands, laces, other *gewaws*, which lay so thick that the heart was nothing else but a toyshop.

guardian.

VGAW. *adj.* Splendidly trifling; showy.

ic.—Let him that would learn the religion, see the poor *gewaw* hap-

iciana. *Law's Serious Call*.

a ci-devant territory of France, in the

of Bresse; bounded by Mount Jura, the lake of Geneva, and Switzerland.

to France by the duke of Savoy, in

now forms the department of Ain.

(2.) **GEX**, a town of France, in the dep. of Ain, at the foot of Mount St Claude; 10 miles NNW. of Geneva, and 36 NE. of Mantua. Lon. 6. 1. E. Lat. 46. 20. N.

GEYER, a town of Upper Saxony, among the mines. Vitriol, sulphur, alum, arsenic, &c. are manufactured in it. It is 6 miles WSW. of Wolkenstein.

GEYERSBERG, a town of Bohemia, 28 miles ENE. of Koniggratz, and 28 ENE. of Chrudim.

GEYRACH, a town of Germany in Stiria.

GEYSA, or } a town of Germany, in the circle

GEYSS, } of the Upper Rhine, and bishopric of Fulda; 15 miles NE. of Fulda.

GEYSS-RUCKEN JAFFELER, a mountain of Germany, between Upper Carniola and Cilley, 6 miles NE. of Stein.

GEZAEI, a town of Turkey in Irak Arabic, on the Euphrates, 120 miles NE. of Bassora.

GEZAN, or **DSJEZAN**. See **DSJESAN**.

GEZIRA, a town of Asiatic Turkey, in the prov. of Diarbekir, in an island formed by the Tigris, 70 miles NW. of Mousul. Lon. 40. 50. E. Lat. 36. 36. N.

GEZIRAT, a town of Turkey, in Diarbekir, 60 miles SE. of Diarbek.

GEZIRET IDDAHAD, or the **ISLE OF GOLD**, an island of Egypt, in the Nile, 2 miles S. of Fou.

GEZULA, or **GAZULA**, a country of Africa, S. of Morocco, the inhabitants of which are allies of the emperor. They are numerous, and are reckoned the most ancient people of Africa. They have no towns, but live in camps and villages, and are hospitable to strangers. They have an annual fair, which lasts 2 months. The country abounds in corn, pasture, copper and iron.

GEOLI, a town of Austria, 8 m. W. of Crems.

GHALIEKA, a town of Arabia Felix.

GHANA, or } a town of Africa, in Wangara,

GHANARA, } on the Niger. Lon. 15. 56. E. Lat. 15. 30. N.

* **GHASTFUL**. *adj.* [*gast* and *fulle*, Saxon.] Dreary; melancholy; dismal; fit for walking spirits. Obsolete.—

Here will I dwell apart,
In *ghastful* grave, 'till my last sleep
Do close mine eyes:
Help me, ye baneful birds, whose shrieking sound
Is sign of dreary death. *Spenser's Pastorals*.

* **GHASTLINESS**. *n. s.* [from *ghastly*.] Horror of countenance; resemblance of a ghost; paleness.

* **GHASTLY**. *adj.* [*gast*, or *ghost*, and *like*.] 1. Like a ghost; having horror in the countenance; pale; dreadful; dismal.—

Why looks your grace so heavily to-day?
—O, I have past a miserable night;
So full of ugly sights, of *ghastly* dreams,
So full of dismal terror was the time. *Shakespeare*.

—Envy quickly discovered in court Solymán's changed countenance upon the great bassa, and began now to shew her *ghastly* face. *Knolles's Hist.*

Death

Grinn'd horrible a *ghastly* smile, to hear
His famine should be fill'd. *Milt. Par. Lost*.

—Those departed friends, whom at our last separation we saw disfigured by all the *ghastly* horrors of death, we shall then see assisting about the ma-

jestick

jestick throne of Christ, with their once vile bodies transfigured into the likeness of his glorious body, mingling their glad acclamations with the hallelujahs of thrones, principalities and powers. *Boyle.*

He came, but with such alter'd looks,
So wild, so *ghastly*, as if some ghost had met him,
All pale and speechless. *Dryd. Spanish Fryar.*

I did not for these *ghastly* visions stand;
Their sudden coming does some ill portend.
Dryden's Indian Emp.

2. Horrible; shocking; dreadful.—

To be less than gods
Disdain'd; but meaner thoughts learn'd in their
flight,
Mangled with *ghastly* wounds through plate and
mail. *Milton.*

I who make the triumph of to-day,
May of to-morrow's pomp one part appear,
Ghastly with wounds, and lifeless on the bier!
Prior.

* **GHAISTNESS.** *n. f.* [from *ghast*, Sax.] Ghastliness; horrow of look. Not used.—

Look you pale, mistress?

Do you perceive the *ghastness* of the eye. *Sh. Oth.*

(1.) **GHEDI**, a district of the Cisalpine republic, in the department of Mela, containing 5 parishes, and 7000 souls.

(2.) **GHEDI**, a well built town in the above district, between the Naviglio and Seriola, containing 3200 citizens.

GHEIRA, a town of Asiatic Turkey in Natolia.

GHEIVE, a town of Natolia, 20 m. E. of Isnik.

GHEME, a town of Italy, in the Novarese, 13 miles NNW. of Novara. The Novarese was annexed to the Cisalpine republic, in Nov. 1800.

GHEENT, or **GAUNT**, a city of the French republic, capital of the department of the Scheldt, and late capital of the ci-devant province of Austrian Flanders. It is seated on 4 navigable rivers, the Scheldt, the Lys, the Lieve, and the Moeze, which, with a great number of canals run through it, and divide it into 25 little isles, over which there are 300 bridges. Among these there is one remarkable for a statue of brass of a young man who was condemned to cut off his father's head; but as he was going to strike, the blade flew into the air, and the head remained in his hand, upon which they were both punished. There is a picture of the whole transaction in the town house. Ghent is surrounded with walls and other fortifications, and is tolerably strong considering its circumference. The streets are large and well paved, the market places spacious, and the houses built with brick. The largest market-place is remarkable for the statue of Charles V. which stands upon a pedestal in the imperial habit. That of Corneille has a fine walk, between several rows of trees. In 1737 a fine opera-house was built, and a guard-house for the garrison. Near the town is a very high tower, with a handsome clock and chimneys. The great bell weighs 11,000 lb. Ghent was anciently the capital of the Nervii, and after them of the Vandals, who gave it the name of *Wanda*, or *Fanda*, whence *Ganda* and *Ghent* are supposed to have been derived. Odoacer of Flanders first surrounded it with walls; and in 1397 Philip, the 2dth E. of Flanders, enlarged it. Prince John, the 3d son of Edward III, of England, was born

in it, hence named *John of Gaunt* the emperor Charles V; but the inheritance no reason to venerate his memory; repeated oppressions, he provoked them 1539; whereupon he put to death 26 pal citizens, banished many others, and their estates; deprived the city of arms and artillery; fined the citizens of crowns, and ordered the magistrates in procession with ropes about their necks. It is famous for the pacification signed for settling the tranquillity of the 17 was taken by Lewis XIV, in 1678, at the treaty of Nimeguen. The possession of it again after the death of Spain. In 1706, it was taken by Marlborough; and by the French it was retaken the same year. The F by surprise after the battle of Fontenoy the peace of Aix-la-Chapelle it was retaken the 14th Nov. 1792, it was taken by the French under Gen. Labourdonnais welcomed by the inhabitants. In 1815 they evacuated it, upon the desertion of the French; but recovered it again in July the Austrians under Clairfaut retreated well seated for trade, on account of canals. It carries on a great commerce and has linen, woollen, and silk. The number of citizens is about 70,000. The population is not proportionable to which Charles V. thus boasted to "I have a *glorie*" (said he, alluding to the name *Gand*), "in which I could put 100 cities of Paris." Ghent lies 25 miles S. of Antwerp, and 30 S. of London. Lon. 3. 49. E. Lat. 51. 4. N.

GHEKEDE, a town of Turkey.

GHERGISTAN MOUNTAINS, mountains in Asia, 15 leagues N. of Candahar.

GHERGONG. See **GHERGONG**.

GHERIAH, or **GHERLAH**, a town in Corcan, on the W. or pirate coast, capital of the pirate Angria, taken by Adm. Watton and Col. C. when his fleet was destroyed, and by the British and Madagascars. It is NNW. of Goa, and 295 S. by E. Lon. 73. 8. E. Lat. 16. 45. N.

* **GHERKIN.** *n. f.* [from *garcin*, cucumber.] A small pickled cucumber.

GHERMA, or **GERMA**, a town in the desert of Berber. Lon. 18. 20. E.

GHERMANSLI, a town of Turkey.

GHERKEZE, a town of Africa, in the desert of Berber.

* **To GHESS.** *v. n.* [See **To GUESS**.] To guess; to conjecture; to consider as the true; but *guess* has universally prevailed.

GHEURLI, a town of Natolia in Angria.

GHEUTSI, a town of Caramani in Cogni.

GHEYSSQUAS, a nation of Hottentots inhabit a district of S. Africa, near which, as well as from the country and Braquas, it is separated by a chain of mountains. In dress, weapons, instruments of husbandry, and in the manner of dancing and hunting, &c. the

ring nations, except that their ornaments, and composed of the bones of sheep's feet, to which, by some peculiar process, a dazzling whiteness. Their women are lively, and cheerful; yet with all their gaiety, they are remarkable for modesty, and so warm a climate, is doubtless a virtue to be admired. M. Vaillant, who visited this people near Orange river, nowhere met with a nation so truly generous, though he had nothing to give in exchange, except the two days that he staid with them, he gave them eight bowls of milk, evening and morning, from every hut. Their chief brought him a present of a lamb, and several sheep for his tribe. A practice, for which no satisfactory reason has been assigned, universally prevails among their tribes, of semi-castration, by excising the left testicle. Yet, as Kolben observes, this operation is commonly performed by the natives, on the birth of the child, though sometimes till the 3d year is completed.

NELO, a town of the Cisalpine republic, in the department of Tessino, and ci-devant city of Pavia.

KILAN, or **KILAN**, a province of Persia, bordering on Russia. See **KILAN**.

KILAN, ST. See **GHISLAIN**, ST.

KINALE, a kingdom of Africa.

KINALE, or **GUINALE**, the capital of the kingdom, seated on the river Grande. Lon. N. Lat. 10. 20. N.

GHANAH, or **GHANAH**. See **GHANAH**.

GHUC, a town of Turkey, in Natolia.

GONG, or **GHERGONG**, a city of India, the capital of Assam. It is encompassed by a round hedge of bamboos, and has 4 gates. The king's palace is surrounded by a causeway, on each side with a close hedge of bamboo, and a ditch on the outside. It is adorned with ice-work and carving. Plates of brass like mirrors are placed within and without. It is said that 3000 carpenters and 1200 labourers were employed in this work for two years, before it was completed. The wealth of Assam is in Ghirgong. Gold being found in every part of the country, among the sand of the rivers, is a source of revenue. From 12, to 20,000 men are constantly employed in washing the gold, and paid by the rajah. The country around Ghirgong is fertile, and abounds with gum lac, excellent fruits, as mangoes, plantains, oranges, citrons, cocoa nuts, limes, pine apples, &c. **GHILAN**, a species of tamarind, of an excellent quality. Rice and lentiles are the chief crops. There are numerous in the neighbouring forests. **GHIRGONG** is seated on the Burrampooter, 150 miles E. of Patna. Lon. 95. 35. E. Lat. 26.

GHILAIN, ST. or **ST GHILAN**, a town of the Cisalpine republic, in the dept. of the North, ci-devant prov. of French Hainault, seated on the Scheldt, 5 miles W. of Mons. It was taken by the French, in June, 1792. Lon. 3. 53. E. Lat. 50. 28. N.

GHILAN, a town of the Cisalpine republic, in

the dept. of the Lario, and late duchy of Milan; 30 miles NW. of Milan.

(1.) **GHIZNI**, or **GAZNA**, an ancient empire of Asia, formerly very powerful. See **GAZNA**.

(2.) **GHIZNI**, or **GAZNA**, the capital of the above empire, lies 54 miles S. of Cabul, and 150 E. of Candahar. See **GAZNA**. Lon. 68. 20. E. Lat. 33. 40. N.

GHOER, a town of the Batavian republic, in the dept. of Yssel, and ci-devant prov. of Overijssel; seated on the Regge, 10 miles NNE. of Borkeloo.

(1.) * **GHOST**. *n. f.* [*gast*, Sax.] 1. The soul of man.—

Vex not his *ghost*: O, let him pass! He hates him,

That would upon the rack of this rough world Stretch him out longer. *Shak. King Lear.*

Often did I strive

To yield the *ghost*; but still the envious flood Kept in my soul. *Shak. Rich. III.*

2. A spirit appearing after death.—

The mighty *ghosts* of our great Harrys rose, And armed Edwards look'd with anxious eyes, To see this fleet among unequal foes, By which fate promis'd them their Charles should rise. *Dr. den.*

3. To give up the **GHOST**. To die; to yield up the spirit into the hands of God.—

Their shadows seem

A canopy most fatal, under which

Our army lies ready to give up the *ghost*. *Sink.*

4. The third person in the adorable Trinity, called the Holy Ghost.—

(2.) **GHOST**, *y. i. def. 2.* See **APPARITION**, § 3; and **SPECTRE**.

(3.) **GHOSTS**, ANCIENT OPINIONS RESPECTING. The ancients supposed every man to be possessed of three different ghosts, which after the dissolution of the body were differently disposed of. These ghosts they distinguished by the names of *Manes*, *Spiritus* and *Umbra*. The *manes*, they fancied, went down into the infernal regions; the *spiritus* ascended to the skies; and the *umbra* hovered about the tomb, as being unwilling to quit its old connections. Thus Dido (*Verg. Æn. iv. 384.*) threatens Æneas after death that she will haunt him with her *umbra*, whilst her *manes* rejoice in his torments below. This idea of a three-fold soul is very clearly expressed in those lines, which have been attributed to Ovid:

Bis duo sunt homini: MANES, CARO, SPIRITUS, UMBRA:

Quantum illa loci bis duo suscipiunt.

Terra tegit CARNEM, tumulum circumvolat UMBRA,

Orcus habet MANES, SPIRITUS, atra petit.

(4.) **GHOSTS**, MODERN SUPERSTITIOUS NOTIONS RESPECTING. "A Ghost" (says captain Grose in his *Provincial Glossary*,) "is supposed to be the spirit of a person deceased, who is either commissioned to return for some especial errand, such as the discovery of a murder, to procure restitution of lands or money unjustly withheld from an orphan or widow—or having committed some injustice whilst living, cannot rest till that is redressed."

Ed.

fed. Sometimes the occasion of spirits revisiting this world, is to inform their heir in what secret place, or private drawer in an old trunk, they had hidden the title deeds of the estate; or where, in troublesome times, they buried their money and plate. Some ghosts of murdered persons, whose bodies have been secretly buried, cannot be at ease till their bones have been taken up, and deposited in consecrated ground with all the rites of Christian burial." For a farther enumeration of the popular superstitions respecting ghosts, we refer the reader to Capt. Grose's work, above quoted.

(5.) GHOSTS, PHILOSOPHICAL INQUIRY INTO THE SUBJECT OF. See SPECTRES, § 2.

(1.) * To GHOST. v. a. [from the noun.] To haunt with apparitions of departed men. Obsolete.—

Julius Cæsar,

Who at Philippi the good Brutus *ghosted*,

There saw you labouring for him. *Shak.*

(2.) * To GHOST. v. n. To yield up the ghost; to die. Not in use.—Euryalus taking leave of Lucretia, precipitated her into such a love-fit, that within a few hours she *ghosted*. *Sidney.*

* GHOSTLINESS. n. f. [from *ghostly*.] Spiritual tendency; quality of having reference chiefly to the soul.

* GHOSTLY. adj. [from *ghost*.] 1. Spiritual; relating to the soul; not carnal; not secular.—Save and defend us from our *ghostly* enemies. *Comm. Prayer*.—Our common necessities, and the lack which we all have, as well of *ghostly* as of earthly favours, is in each kind so easily known, but the gifts of God, according to these degrees and times, which he in his secret wisdom seeth meet, are so diversely bestowed, that it seldom appeareth what all receive; what all stand in need of, it seldom lieth hid. *Hooker*.—The graces of the spirit are much more precious than worldly benefits, and our *ghostly* evils of greater importance than any harm which the body suffereth. *Hooker*.—To deny me the *ghostly* comfort of my chaplains, seems a greater barbarity than is ever used by Christians. *King Charles*. 2. Having a character from religion; spiritual.—

Hence will I to my *ghostly* friar's close cell,
His help to crave, and my dear hap to tell.

Shak. Romeo and Juliet.

The *ghostly* father now hath done his shrift.

Shak. Hen. VI.

GHOUMEL, a town of Africa, in the kingdom of Pholey, on the Joto. Lon. 11. 15. W. Lat. 16. 11. N.

GHOUBOND, a town of Africa, in Cabul, 42 miles NW. of Cabul. Lon. 67. 52. E. Lat. 34. 55. N.

GHOWRI, a town of Asia, in the kingdom of Balk. Lon. 66. 56. E. Lat. 15. 40. N.

GHUNFUDE, a sea port of Arabia, on the Red Sea, belonging to the Sherife of Mecca, 145 miles S. of Mecca. Lat. 19. 7. N.

* GIABER, or GEBER. See GEBER, N. 1.

* GIAFFA. See JAFFA, and JOPPA.

GIAGH, in chronology, a cycle of 12 years, in use among the Turks and Cathayans. Each year of the giagh bears a name of some animal; the first that of a mouse; the 2d that of a bullock; the 3d a lynx or leopard; the 4th a hare; the 5th a

crocodile; the 6th a serpent; the 7th a sheep; the 8th a snake; the 9th a monkey; the 10th a dog; and the 11th a hog. The giagh divide the day into 12 parts, called *gi*, distinguish them by the names of animals. The giagh contains two of our hours, and is divided into eight *hebs*; so that a *heb* is a quarter of an hour.

GIADHOFF, a town of Stiria, 2 miles S. of Graz.

(1.) * GIALALINA. n. f. [Italian.] a bright gold colour, found in the M. of Naples, very fine, and much valued by Woodward's *Met. Foss.*

(2.) GIALALINA, or } in natural hill
GIALLOLINO, } fine yellow pig-
ment also NAPLES YELLOW.

GIALU, a town of Transylvania, SSW. of Claufenburg.

GIAMANI, a town of Persia, 28 miles S. of Susa.

* GIAMBEUX. n. f. [*jambes*, French.] armour for legs; greaves.—

The mortal steel dispiteously entail
Deep in their flesh, quite through the
That a large purple stream adown the
beux falls.

GIAMOBASH, a town of Asiatic Turkey, 20 miles SSE. of Smyrna.

GIANNONI, Peter, an Italian author, born in Naples in 1680. He wrote a History of which is admired for its purity of style and force of sentiments. It gave such offence to the court of Rome that he was obliged to flee; where he died in 1748.

(1, 2.) * GIANT. n. f. [*geant*, French; Latin.] A man of size above the ordinary men; a man unnaturally large. It is observed the idea of a giant is always associated with brutality, and wickedness.—

Now does he feel his axle

Hang loose about him, like a giant's
Upon a dwarfish thief. *Shak.*

Gates of monarchs

Are arch'd so high that giants may jet

And keep their impious turbans on,

Good-morrow to the sun. *Shak.*

Woman's gentle brain

Could not drop forth such giant rude i

Such Ethiop words. *Shak. As.*

Fierce faces threat'ning wars,

Giants of mighty bone, and bold en

—Those giants, those mighty men, as renowned, far exceeded the proportion, or strength of those giants remembered by his own time. *Raleigh's Hist.*—

The giant brothers, in their ca-
found

GIANTS, ARGUMENTS RESPECTING THE
CE OF. The traditions of all ages have
us with so many extravagant accounts
of incredible bulk and strength, that
nce of such people is now generally dis

It is commonly thought, that the
man has been the same in all ages; and
even pretended to *demonstrate* the im-
of the existence of giants mathematical-
hese our countryman M^r Laurin has been
explicit. But his arguments and com-
drawn from the disproportion between
ion of parts in small models and large
f human workmanship, are by no means
; because, along with an increase of
any animal, we must always suppose a
nal increase in the cohesion of the parts
ly. Large works sometimes fail when
d on the plan of models, because the
of the materials whereof the model is
of the large work, are the same; but
e in this respect will produce a very re-
difference in the ultimate result. Thus,

model is made of fir wood, the model
m and strong enough; but a large work
of fir, when executed according to the
he model, may be so weak that it will
ce from its own weight. If, however,

use of iron for the large work instead
a whole will be sufficiently strong, even
ade exactly according to the plan of the

The like may be said with regard to large
animals. If we could find an animal
nes exceeded in hardness and strength

of other animals as much as iron ex-
such an animal might be of a monstrous
et be exceedingly strong. In like man-

suppose the flesh and bones of a giant
tly superior in hardness and strength
other men, the great size of his body

o objection at all to his strength. The
troverisy therefore, concerning the exis-

ants, must rest on the credibility of the
given by those who profess to have seen

not on any arguments drawn *à priori*.
ipture we are told of *giants*, who were

from the marriages of the *sons of God* with
daughters of men. See ANTEDILUVIANS, § 6.

ge indeed has been differently interpre-
to render it doubtful whether the word

giants does there imply any extraordi-
e. In other parts of scripture, how-

s, with their dimensions, are mentioned
anner that we cannot possibly doubt;
aic of Og king of Bashan, Goliath, and

n. 1 Chron. xx, 4—8. The rev. Mr
ter of Latheron, in Caithness, mentions

atherland the last proprietor of Berry-
who lived in the end of the 15th cen-

measured 9 feet 5 inches high. See
air's Stat. Acc. xvii. p. 27,—30.

NTS, M. LE CAT'S ACCOUNT OF. M.
a memoir read before the Academy of
Rouen, gives the following account of

are said to have existed in different a-

ine historians have given 7 feet of height

their first hero; and in our days we

en 8 feet high. The giant who was

Part II.

shown in Rouen in 1735, measured 8 feet some
inches. The emperor Maximin was of that size;
Shenkus and Platerus, physicians of the last cen-
tury, saw several of that stature; and Goropius
saw a girl who was 10 feet high.—The body of

Orestes, according to the Greeks, was eleven feet
and a half; the giant Galhara, brought from A-

rabia to Rome under Claudius Cæsar, was near
10 feet; and the bones of Secondilla and Pusio,

keepers of the gardens of Sallust, were but six
inches shorter. Funnam, a Scotsman, who lived

in the time of Eugene II. King of Scotland, mea-
sured 11½ feet; and Jacob le Maire in his voyage

to the Straits of Magellan, reports, that on the
17th Dec. 1615, they found at Port Desire several

graves covered with stones; and having the curi-
osity to remove the stones, they discovered human

skeletons of 10 and 11 feet long. The chevalier
Scory, in his voyage to the peak of Teneriffe,

says, that they found, in one of the sepulchre
caverns of that mountain, the head of a Guanche

which had 80 teeth, and that the body was not
less than 15 feet long. The giant Ferragus, slain

by Orlando nephew of Charlemagne, was 18 feet
high. Rioland, a celebrated anatomist, who

wrote in 1614, says, that some years before there
was to be seen in the suburbs of St Germain the

tomb of the giant Iloret, who was 20 feet high.
In Rouen, in 1509, in digging in the ditches near

the Dominicans, they found a stone tomb con-
taining a skeleton whose skull held a bushel of

corn, and whose shin-bone reached up to the
girdle of the tallest man there, being about 4 feet

long, and consequently the body must have been
17 or 18 feet high. Upon the tomb was a plate

of copper, whereon was engraved, "In this tomb
lies the noble and puissant lord, the chevalier

Ricon de Vallemont, and his bones." Platerus,
a famous physician, declares, that he saw at

Lucerne the true human bones of a subject which
must have been at least 19 feet high. Valence in

Dauphiné boasts of possessing the bones of the
giant Bucart, tyrant of the Vivarais, who was

slain by an arrow by the count De Cabillon his
vassal. The Dominicans had a part of the shin-

bone, with the articulation of the knee, and his
figure painted in fresco, with an inscription, show-

ing that this giant was 22 feet and a half high
and that his bones were found in 1705, near

the banks of the Morderi, a little river at the foot
of the mountain of Crussol, upon which (tradition
says) the giant dwelt." M. Le Cat adds, that

skeletons have been discovered of giants, of a still

more incredible height, viz. of *Theutobachus* king

of the Teutones, found Jan. 11. 1613, 25½ feet

high; of a giant near Mazarino, in Sicily in 1516,

30 feet; of another in 1548, near Palermo, 30

feet; of another in 1550, of 33 feet; of two

found near Athens 33 and 36 feet; and of one at

Totu in Bohemia, in 758, whose leg bones alone

measured 26 feet! But whether these accounts are

credited or not, we are certain that the stature of

the human body is by no means fixed. We are

ourselves a kind of giants in comparison of the

Laplanders; nor are these the most diminutive

people to be found upon the earth. The Abbé

la Chappe, in his journey into Siberia, to observe

the last transit of Venus, passed through a village

inhabited

inhabited by people called *Wotjacks*, who were not above four feet high. The accounts of the *Patagonians* likewise, which cannot be entirely discredited, render it very probable, that somewhere in South America there is a race of people very considerably exceeding the common size of mankind, and consequently that we cannot altogether discredit the relations of giants handed down to us by ancient authors; though what degree of credit we ought to give them, is not easy to be determined. See *PATAGONIA*.

(4.) *GIANTS*, *REBELLIOUS*, in ancient mythology, the sons of *Cælus* and *Terra*. According to *Hesiod*, they spring from the blood of the ground which *Cæus* received from his son *Saturn*. *Hyginus* calls them sons of *Tartarus* and *Terra*. They are represented as endued with strength proportioned to their gigantic size. Some of them, as *Cottus*, *Briareus*, and *Cyges*, had each 30 heads and 100 arms, and serpents instead of legs. They were of a terrible aspect, and their hair hung loose about their shoulders. *Pallene* and its neighbourhood was the place of their residence. The defeat of the *Titans*, to whom they were nearly related, incurred them against *Jupiter*, and they all conspired to dethrone him. Accordingly they reared Mount *Ossa* upon *Pelion*, and *Olympus* upon *Ossa*; and from thence attacked the gods with huge rocks, some of which fell into the sea and became islands, and others fell on the earth and formed mountains. *Jupiter* summoned a council of the gods; when being informed that it was necessary to obtain the assistance of some mortal, he by the advice of *Pallas* called up his son *Hercules*; and with the aid of this hero he exterminated the giants *Enceladus*, *Polybates*, *Alecyon*, *Porphyrion*, the two sons of *Alceus*, *Rhialtes* and *Othus*, *Eurytus*, *Clytus*, *Typhus*, *Pallus*, *Hippolitus*, *Agrius*, *Thoon*, and *Typhon*; the last of whom it was more difficult to vanquish than all the rest. *Jupiter*, having thus gained a complete victory, cast the rebels down to *Tartarus*, where they were to receive the full punishment of their enormous crimes; according to some of the poets, he buried them alive under Mount *Ætna* and different islands.

(II.) *GIANT'S CAUSEWAY*, in geography and natural history, a vast collection of *Basaltic pillars* in the county of *Antrim* in *Ireland*. See *BASALTES*, § 5. The principal or grand causeway (for there are several less considerable and scattered fragments of them,) consists of a most irregular arrangement of many hundred thousands of columns of a black kind of rock, hard as marble: almost all of them are of a pentagonal figure, but so closely and compactly situated on their sides, though perfectly distinct from top to bottom, that scarce any thing can be introduced between them. The columns are of an unequal height and breadth; some of the highest, visible above the surface of the strand, and at the foot of the impending angular precipice, may be about 20 feet; they do not exceed this height, at least none of the principal arrangement. How deep they are fixed in the strand, was never yet discovered. This grand arrangement extends early 200 yards, visible at low water; how far beyond is uncertain: from its declining appearance, however, at low water,

it is probable it does not extend under distance any thing equal to what is seen. The breadth of the principal causeway runs out in one continued range of columns in general, from 20 to 30 feet; at two it may be nearly 40 for a few yards; account are excluded the broken pieces of the true kind of columns detached from the sides of the range, and they do not appear to have ever been to the principal arrangement, though frequently been taken into the width. It been the cause why many very distinct columns of this causeway have been the highest part is with a row, at the the impending cliff from whence they fall, where, for 4 or 5 yards, it is 10 or 15 feet wide. The columns of this incline from a perpendicular a little ward, and form a slope on their tops, unequal height of the columns on the side when an ascent is made at the foot from the head of one column to the gradually, to the top of the great causeway at the distance of 6 yards from the perpendicular position; and lowering the height, widens to about 20 or 30 feet, and for 100 yards nearly above water. The tops of the columns length being nearly of an equal height a grand and regular parade, that is walked on, rather inclining to the west from high water mark, as it is washed by the beating surges on either side, the platform lowers considerably becomes more and more uneven, so walked on but with the greatest caution at distance of 150 yards from the cliff, it to the east for 20 or 30 yards, and into the sea. The figure of these columns most unexceptionally pentagonal, or 5 sides; there are very few of any other some few are of 3, 4, and 6 sides, but the reality of them are five-sided, and must look very nicely to find any other construction: yet what is very extraordinary there are not two columns in ten to be found, that either have their sides themselves, or whose figures are composed. Nor is the composition of these columns serving attention. They are not of one in an upright position; but composed short lengths, curiously joined, not 1 faces, but articulated into each other socket, or like the joints in the vertebrae of the larger kinds of fish, the one containing a cavity, into which the converse opposite one is exactly fitted. This is able but by disjoining the two stones of the concavity or convexity is not 3 or 4 inches: And the convexity, and respondent concavity, are not conformable to the external angular figure of the columns round, and as large as the size of the column will admit. Consequently, of these columns are in general external the circular edges of the joint are furnished with more than 2 or 3 sides of

d from the edge of the circular part of the o the exterior files and angles they are plain. It is still further very remarkable, the articulations of these joints are frequently 2; in some the concavity is upwards, in the reverse. This occasions that variety of concavities and convexities on the the column, which is observable through the platform of this causeway, yet without considerable regularity with respect to the of either. The length of these particular from joint to joint, is various: in general, 8 to 24 inches, and, for the most part, toward the bottom of the columns than the top, and the articulation of the joints being deeper. The size or diameter of the is as different as their length and figure; and, they are from 15 to 20 inches. There are traces of uniformity discovered throughout the whole combination, except in the form of the which is invariably by an articulation of the into the concave of the piece next above it; nor are there any traces of a finishing part, either in height, length, or breadth, of this curious causeway. If there is here and a smooth top to any of the columns above there are others just by, of equal height, the more or less convex or concave, which seem to have been joined to pieces that have crumbled or by other means taken off. And evidently those parts that are always above the wave, from time to time, been made even; the remaining surfaces of the joints must have been worn smoother, by the constant of weather and walking, than where the every tide, is beating upon it, and continuing some of the upper stones and exposing the joints. As these columns preserve their forms from top to bottom, in all the exterior which have 2 or 3 sides exposed to view, it may be with reason inferred of the interior columns whose tops only are visible. Yet very extraordinary, and equally curious, notwithstanding the universal dissimilitude of the columns, both as to their figure and diameter, and though perfectly distinct from top to bottom, yet is the whole arrangement so closely united at all points, that hardly a knife can be inserted between them either on the sides or

It is really a most curious piece of enter-
tainment, to examine the close texture and mixture of such an infinite variety of angular figures are exhibited on the surface of this grand

From the infinite dissimilarity of the figure of these columns, this will appear a most surprising circumstance to the curious spectator, and incline him to believe it a work of human art; it is not inconceivable, that the invention of man could construct and combine such an infinite variety of columns, which should have a general resemblance, and yet be so universally dissimilar in their figure, as that, from the minutest inspection, not two in 10, or 20,000 should be whose angles and sides are equal among themselves, or of the one column to those of the other. That it is the work of nature, the attentive spectator cannot doubt, who carefully surveys

the general form and situation, with the infinitely various figure of the several parts of this causeway. There are no traces of regularity or design in the outlines of this curious phenomenon; which, including the broken and detached pieces of the same kind, are extremely scattered and confused, and, whatever they might originally, do not at present appear to have any connection with the principal causeway, as to any supposable design or use in its first construction; and as little design can be inferred from the figure or situation of the several constituent parts. The whole is, indeed, extremely confused, disuniform, and destitute of every appearance of use or design in its original construction. But what, beyond dispute, determines its original to be natural, is, that the very cliffs, at a great distance from the causeway, especially in the bay to the eastward, exhibit at many places the same kind of columns, figured and jointed in all respects like those of the grand causeway. Some of them are seen near to the top of the cliff, which in general, in these bays to the E. and W. of the causeway, is near 300 feet in height; others again are seen about midway, and at different elevations from the strand. A very considerable exposure of them is seen in the very bottom of the bay to the eastward, near 100 rods from the causeway, where the earth has evidently fallen away from them upon the strand; and exhibits a most curious arrangement of many of these pentagonal columns, in a perpendicular position, supporting, in appearance, a cliff of different strata of earth, clay, rock, &c. to the height of 150 feet or more, above. Some of these columns are between 30 and 40 feet high, from the top of the sloping bank below them; and, being longest in the middle of the arrangement, shortening on either hand in view, they have obtained the appellation of *organs*, from a rude likeness in this particular to the frontal tubes of that instrument; and as there are few broken pieces on the strand near it, probably the outside range of columns that now appear is really the original exterior line, toward the sea, of this collection. But how far they extend internally into the bowels of the incumbent cliff, is unknown. The very substance, indeed, of that part of the cliff which projects to a point, between the two bays on the E. and W. of the causeway, seems composed of this kind of materials; for besides the many pieces that are seen on the sides of the cliff that circulate to the bottom of the bays, particularly the E. side, there is, at the very point of the cliff, and just above the narrow and highest part of the causeway, a long collection of them seen, whose heads or tops just appearing without the sloping bank, plainly show them to be in an oblique position, and about half-way between the perpendicular and horizontal. The heads of these, likewise, are of mixed surfaces, convex and concave; and the columns evidently appear to have been removed from their original upright, to their present inclining or oblique position, by the sinking of the cliff.

(III.) GIANT'S GRAVE, a village of Ireland, near Sligo, where there are some massive ancient monuments of stone resembling those of STONEHENGE.

(IV.) **GIANT'S HEAD**, a cape on the E. coast of St Christopher's, E. of Ragged Point.

(V.) **GIANT'S LOAD**, a large rock in Louth county, Ireland, supposed to be about 40 tons weight, supported by three irregular bones set upright.

(VI.) **GIANT'S STAIRS**, a large rock near Cove in Cork, Ireland, having the form of steps.

* **GIANTESS**. *n. f.* [from *giant*.] A she giant; a woman of unnatural bulk and height.—I had rather be a *giante*, and lie under mount Pelion. *Shak.*—Were this subject to the cedar, she would be able to make head against that huge *giante*'s. *Howel.*

* **GIANTLIKE**. } *adj.* [from *giant* and *like*.]

* **GIANTLY**. } Gigantik; vast; bulky.—Single courage has often, without romance, overcome *giantly* difficulties. *Decay of Poetry*.—Notwithstanding all their talk of reason and philosophy, which they are deplorably strangers to, and those unanswerable doubts and difficulties, which, over their cups, they pretend to have against Christianity; persuade but the covetous man not to chafe his money, the proud man not to adore himself, and I dare undertake, that all their *giantlike* objections against the Christian religion shall presently vanish and quit the field. *South.*

* **GIANTSHIP**. *s. f.* [from *giant*.] Quality or character of a giant.—

His *giantship* is gone somewhat crest-fallen,
Stalking with less unconscionable strides,
And lower looks. *Milton's Argonites.*

GIAVENNA, a town of Piedmont, in the marquise of Susa, at the foot of the Cottian Alps, near the Sangon. It has an ancient wall with four gates; and contains 3000 inhabitants. It is 20 miles E. of Susa, and 14½ W. of Turin.

GIAMI, a town of Sardinia, 21 miles ESE. of Algeri.

GIAMLE. See **GRULE**, N° 2.

GIB, the rev. Adam, minister of the Associate Congregation at Edinburgh, and for many years an useful and active member of that communion, was born on the 7th of April 1714, at Easter Castletown, in the parish of Muckhart, and county of Perth. He was the 9th son of Mr John Gib, of Easter Castletown. He gave very early proofs of a quick capacity, and strong natural parts. His progress in classical learning and philosophical study was considerable; and his natural sound judgment, and close application remarkably qualified him for the conspicuous office which he filled. After completing the usual course of study at the University of Edinburgh, he was licensed to preach in 1740, and ordained in 1741. He wrote several tracts of which the most distinguished were, his *Sacred Contemplations*, in 3 parts; among which his *Essay on Liberty and Necessity* attracted very general attention. He died at Edinburgh on the 18th of June 1788, much regretted by those who knew him well.

GIBBAROW, a river in Doonagel.

* **GIBBE**. *n. f.* Any old worn out and

For who that's but a queen, fair,
Would from a paddock, from a baw,
Such dear conceivings hide? *Shak.*

GIBBIO, **CASTELLO DI MONTE**, the Cisalpine republic in the dep. of late duchy of Modena; seated on a where wells are dug, from 200 to 250 the waters of which afford a yellowish

off once a fortnight, and is used in var-
embalming, and medicine.

ON, Edward, Esq; a late celebrated
historian, born at Putney in Surrey,
th, 1737. He was the eldest son of Ed-
ward, Esq; and Judith Porten, daughter
Porten, merchant in London. His family
ended from John Gibbon, architect to
III, who possessed lands in Kent. His
on till his 15th year was extremely feeble,
those of his brethren and sisters who all
infancy: and he complains, that "the
his education was broken, as often as he
d from the school of learning to the bed
is." To the care and attention of his
aunt he ascribes his preservation from a
e death. In 1745 he was sent to the
school at Kingston; in Jan. 1749, to
Westminster: and in April 1752, to that of
where he matriculated in Magdalen col-
professors of which he blames greatly
remissness and inattention to his moral
and religious principles. In consequence
became a convert to the Roman catho-
n his 16th year. To cure the young ca-
his errors, and bring him back to the
faith, his father, within 3 weeks after
conversion, (June 30th, 1753) sent him to
Lausanne, and entrusted him to the tutorage
of William, a Calvinist minister at Lausanne,
whom Gibbon mentions with gratitude, as a
valiant preceptor. Under his tuition, he
made progress in the Latin, Greek, and
Hebrew; in history, geography, logic, and
metaphysics; and was also soon reclaimed from
of Popery: so that on Christmas 1754,
he took the sacrament in the church of Lau-
sanne, thus had he communicated with 3 differ-
ent churches before he was 18 years old. These
various opinions however, successively adopted
and rejected, and the repeated changes so rapidly
made from the one to the other, perhaps contri-
buted to weaken our author's faith in revelation,
and led to his final change to Deism, as much
as the use of M. Voltaire's writings, or his
correspondence with that author, to whom he in-
debted himself in 1757. About this time Mr
Gibbon fell in love with Mad. Susan Curchod,
daughter of the minister of Crassy, a lady whom
he considered as possessed of every accomplishment,
both body and mental, that can adorn a woman. But
the consent of the young lady and her pa-
rents was easily obtained, yet his father's tyranni-
cal opposition, which, "after a painful struggle,"
ultimately prevailed, deprived him of this inestimable
source of matrimonial felicity for life. He
thereafter married to a man who will be
remembered in history, as our author is in litera-
ture, the celebrated M. Neckar. In spring
1761 he was recalled to England, and was agreed
on by his father; at whose house at
Hampshire, he finished a work he had
begun at Lausanne, entitled *Essai sur l'étude de la*
which he published in 1761, in 2 vols., in
dedication to his father. Previous to this
he had been appointed a captain in the
shire Militia, in which he served two
years, which was of use to him, by making

him better acquainted with English manners,
principles, and parties, than perhaps he might
otherwise have been. After the peace in 1763,
he went abroad; and after visiting Paris, where he
was introduced to Mess. D'Alembert and Diderot,
returned to his favourite residence at Lausanne.
Having spent some time there, he made the tour
of Italy; and at Rome, on the 15th Oct. 1764,
while musing amidst the ruins of the capitol, the
idea of his great work first started into his mind.
Upon his return to Hampshire in June 1765, he
found his father involved in pecuniary difficulties,
and to relieve him, consented to the sale of part of
the estate. After commencing a history of the
revolutions of Switzerland, which he suppressed,
he engaged in a Journal entitled, *Memoires Lite-
raires de la Grand Bretagne*, and published 2 vols
for 1767 and 1768; but his partner in this under-
taking, a native of Switzerland, going abroad,
when the 3d vol. was nearly finished, the work
was discontinued. Bp. Warburton having about
this time published an interpretation of the 6th
book of Virgil's *Æneid*, he criticised it with equal
asperity and success. But it is thought, that if
the bishop had then possessed his former mental
vigour, he would have chastised Mr Gibbon in
such a manner, as to have made him afterwards
somewhat more modest in his great work; in
which, with all his petulant confidence, he often
shows great inaccuracy in his quotations. Nor
could it well be otherwise, as he himself acknow-
ledges, that he often contented himself with bor-
rowing his quotations, not from the original au-
thors, but at second hand. But the taste of the
times, favouring the spirit of scepticism that ap-
peared in his work, errors of this kind, which in
a defender of Christianity would have been reck-
oned unpardonable, as so many *pious frauds* in-
tended to deceive the reader, were either entirely
overlooked, or considered as very venial faults,
in the *History of the Decline and Fall of the Roman*
Empire. Of this work the 1st vol. was published
in 1776, and met with extraordinary success; the
the 2d and 3d vols appeared in 1781; and the
4th, 5th, and 6th, in 1787, established Mr Gibbon's
fame as a historian. Eulogiums were lavished on
him from all quarters, to such a pitch indeed, that
some of them, particularly those of Mr Hume and
Dr Robertson, have even been reckoned *suifome*.
That Mr Hume should have been highly delighted
with a work tending strongly to enforce his own
principles, is not surprising; but the high pane-
gyric bestowed by a *Minister of the Gospel*, upon
a work, one main object of which is to prove that
Christianity is not of divine original, is certainly
quite out of character. Dr Zimmerman repre-
sents Mr Gibbon as even excelling both these emi-
nent historians in point of style. "All the dignity,
(he adds,) all the charms of historic style, are united
in Gibbon; his periods are melody itself, and
all his thoughts have nerve and vigour." But o-
thers, while they give our author full credit for
acuteness of penetration, fertility of genius, luxu-
riance of fancy, elegance of style, harmony of
language, and beauty of epithets," &c. object,
that, "the uniform stateliness of his diction some-
times imparts to his narrative a degree of obscu-
rity, unless he descends to the miserable expedi-

ent of a note to explain the minuter circumstances: and that, "his style on the whole is much too artificial; and this gives a degree of monotony to his periods, which extends almost to the turn of his thoughts." "But a more serious objection (they justly add,) is his attack upon Christianity; the loose and disrespectful manner in which he mentions many points of morality, regarded as important on the principles of natural religion; and the indecent allusions and expressions, which too often occur in the work. An attack upon Christianity is not censurable merely *as such*; it may proceed from the purest and most virtuous motives: but in that case, the attack will never be carried on in an insidious manner, and with improper weapons; and Christianity itself, so far from dreading, will invite every mode of fair and candid discussion. Our historian often makes, when he cannot readily find, an opportunity to insult the Christian religion. Such indeed is his eagerness in the cause, that he stoops to the most despicable pun, or to the most awkward perversion of language, for the pleasure of turning the scripture into ribaldry, or calling Jesus an impostor. Yet of the Christian religion has Mr Gibbon himself observed, that "it contains a pure, benevolent, and universal system of ethics, adapted to every duty and every condition of life." Such an acknowledgment, and from such a writer, too, ought to have due weight with a certain class of readers, and of authors likewise; and lead them seriously to consider, how far it is consistent with the character of good citizens, to endeavour by sly insinuations, oblique hints, indecent sneers, and profane ridicule, to weaken the influence of so pure and benevolent a system as that of Christianity, acknowledged to be admirably calculated for promoting the happiness of individuals and the welfare of society." (*Supplem. to the Encyc. Brit.* Vol. I. p. 707.) Various answers to Mr Gibbon's attack on Christianity, were published by Dr Chelsum, Dr Randolph, Lord Hailes, Dr Watson Bp. of Llandaff, Dr White, Mr Apthorpe, Mr Davis, Mr Taylor, Dr Priestley, and others. To most of these our author, made no reply, though his posthumous memoirs show he felt the weight of these answers, particularly those of Lord Hailes, Dr White, and Mr Taylor. Mr Gibbon's chief arguments on this subject, with satisfactory answers, are inserted under the article CHRISTIANITY, § 8, 9. Notwithstanding our author's zeal for the modern opinions in religion, he was no friend to the new opinions in politics. Being introduced into the House of Commons, as M. P. for Liskeard, in 1774, he uniformly supported administration with his vote, during the American war; and upon the French Revolution he adopted Mr Burke's creed, in every thing but his reverence for church establishments. Soon after the downfall of Lord North's administration, he returned to Lausanne, but his Swiss friend dying, and French politics prevailing in Berne, he left his *Paradise*, as he styled it, and returned to London in June 1793. He did not however enjoy this retreat long. His constitution had suffered much from repeated attacks of the gout, and a swelling of his ancles; and after having been "appressed for a hydrocele, he died at London, ^{gout in his stomach,} on the 16th-Jan. 1794;

in the 57th year of his age. Of his shall only say, that his erudition, his conversation captivating, his memory his penetration uncommon, and his eloquence ready and elegant, though at advantages he was not a public speaker, his private correspondence and journals, seems to have been a dutiful son, a friend, and an affectionate friend.

(1.) * GIBBOSITY. *n. f.* [*gibbus, gibbosus.*] Convexity; prominence; protuberance.—When ships, sailing contrary ways, sight one of another, what should take sight of ships from each other, but the interjacent water? *Ray.*

(2.) GIBBOSITY, in surgery, a protuberance or convexity of the body, as the hump-backed. Infants are much subject to gibbosity than adults, and it exceeds from external than internal cause, blow, or the like, frequently thus a tender bones of infants. When it proceeds from an internal cause, it is generally from a relaxation of the ligaments that sustain the caries of its vertebrae; though the spine is flexed forward, and the vertebrae thus a too strong and repeated action of the muscles. This, if not timely redressed, and fixed as the bones harden, till it is totally irretrievable: but when the disease is recent, and the person young, there is cure. The common method is by a pasteboard, wood, or steel, which presses principally on the gibbous part; long wearing may set all right. There have also a different instrument, called much more efficacious, though not convenient in the wearing. By the use of parts are always prevented from growing, and are often cured. During the application parts should be often rubbed with spermaceti, volatile alkali, or proof spirit, and with a strengthening plaster.

(1.) * GIBBOUS. *adj.* [*gibbus, Lat. French.*] 1. Convex; protuberant; 2. to inequalities.—The bones will rise, &c. *gibbous member. Wifeman.*

A pointed stony rock, all bare and
Grew gibbous from behind the mountain

—The sea, by this access and recess, flung empty shells, wears them away, red that are concave and gibbous to a *Sh. Nat. Hist.* 3. Crook-backed.—I demand camels of Bactria came to have two lumps on their back, whereas the camels of Arabia have one? How oxen, in some countries, continue gibbous, or hunch-backed? *B.*

(2.) GIBBOUS, in astronomy, is used to the enlightened parts of the moon, is moving from the first quarter to the full to the last quarter: for at the dark part appears horned or falcate light one hunched out, convex, or gibbous.

* GIBBOUSNESS. *n. f.* [from *gibbus*] Prominence.—To make the countenance discernible, suppose a man lifted in the air, he may have a spacious horizon; but

distance, the convexity and *gibbous* vanish away, and he would only see a flat. *Beattie*.

JAMES, A. M. a celebrated Scottish born at Aberdeen, in 1674. He was Peter Gibbs of Footsculmire, merchant n, who was a Roman Catholic, but a nour; for, parties running high about named his two dogs *Whig* and *Tory*, in both parties;—an offence for which ates of Aberdeen summoned him before condemned the two dogs to be hanged! Young Gibbs was educated at the College, where he took his degree of out 1694, he travelled into Holland, pent some years with an eminent archi- where, in 1700, he was introduced to f Mar; who generously assisted him y and recommendatory letters, to ena- complete himself under the best Italian About 1710, he left Italy and returned , where he found his noble patron in r with the queen. An act being passed ; 50 new churches, Mr Gibbs was employ- re a specimen of his abilities by planning ing St Martin's church, St Mary's in the d several others. Among many other dices planned by him, and built by his ve shall only mention the Radcliffe Libra- rd; the King's College, Royal Library, : House at Cambridge, and the D. of 's monument. He died 5th Aug. 1754, , leaving a fortune of £15,000.

AT. n. f. [*gib* and *cat.*] An old worn-

as melancholy as a *gibcat*, or a lugg'd r.

n. f. [from the verb.] Sneer; hint of y word or look; scoff; act or expres- n; taunt.—

the fleers, the *gibes*, and notable scorns tell in ev'ry region of his face. *Shak.*

The rich have still a *gibe* in store,

be monstrous witty on the poor. *Juv.*
old hate from the bottom of their hearts,
on would be too strong for little *gibes*
ient. *Spectator*.—

ie dean, if this secret should come to his

er have done with his *gibes* and his jeers.

To GIBE. v. a. To reproach by con- hints; to flout; to scoff; to ridicule; th scorn; to sneer; to taunt.—

rioting in Alexandria, you

ket up my letters. and with taunts

my missive out of audience. *Shak.*

the beasts as I describe them,

eir features, while I *gibe* them. *Swift.*

To GIBE. v. n. [*gaber*, old French, to dicule.] To sneer; to join censorious- contempt.—They seem to imagine that ected of late a frame of some new reli- urniture whereof we should not have from our enemies, lest they should af- ough and *gibe* at our party. *Hooker*.—

en he saw her toy, and *gibe*, and geer,
s the bounds of modest merry-make,
ance he despis'd.

Spenser.

Why that's the way to choke a *gibing* spirit,
Whose influence is begot of that loose grace
Which shallow laughing hearers give to fools.

Shakespeare.

Thus with talents well endu'd

To be scurrilous and rude,

When you perty raise your snout,

Flee and *gibe*, and laugh and flout. *Swift.*

GIBEAH, a city of Benjamin, lying N. of Je- rusalem about 20 or 30 furlongs, and built upon a hill, as its name imports. This city gave birth to Saul, the first king of Israel, for which reason it is often called *Gibeab of Saul*.

GIBEL, or **MONT GIBELLO**, the modern name given to Mount *Ætna* by its inhabitants. See *ÆTNA*, and *ETNA*.

GIBELIN, a town of Palestine, 8 m. E. of Gaza.

GIBELINS, or } See **CONRAD III**, **GERMANY**,
GIBELLINS, } § 14, and **GUELPHS**.

(1.) **GIBELLO**, a town of Italy, in the Palavi- cin, 2½ miles NE. of Buffetto.

(2.) **GIBELLO**, **MONT**. See **GIBEL**.

GIBELYN, Count, a French author born in 1725, who wrote a celebrated work entitled, *Le Monde Primitif comparé a Monde Moderne*; for which the French Academy twice awarded him their annual prize of 1200 livres. He died in 1784.

GIBEON, a city seated on an eminence about 40 furlongs N. of Jerusalem, and not far from Gi- beah. See **GABA**. It was the capital of the **GIBONITES**.

GIBEONITES, an ancient nation of Canaan, who, hearing of Joshua's great conquests, saved their lives at the expence of their liberty by a repre- sentation of their belonging to a very remote country, and their desire of making an alliance with the He- brews. See **Joshua**, ix. 3—27. The Gibeonites were descended from the **HIVITES**, and possessed 4 cities; viz. Chephirah, Beeroth, Kirjathjearim, and Gibeon; which were afterwards given to the Benjamites, except the last, which fell to the tribe of Judah. The Gibeonites continued subject to those burdens which Joshua had imposed on them, and were very faithful to the Israelites, till the dispersion of that nation.

* **GIBER. n. f.** [from *gibe*.] A sneerer; one who turns others to ridicule by contemptuous hints; a scoffer; a taunter.—You are well under- stood to be a more perfect *giber* of the table, than a necessary benchman of the capitol. *Shak. Cor.*—

He is a *giber*, and our present business

Is of more serious consequence. *B. Jonf. Cat.*

* **GIBINGLY. adv.** [from *gibe*.] Scornfully; contemptuously.—

His present portance.

Gibingly and ungravely he did fashion

After th' inveterate hate he bears to you. *Shak.*

(1.) * **GIBLETS. n. f.** [According to *Minsheu* from *gobbet*, *gobbet*; according to *Junius* more properly from *gillet*, game, Fr.] The parts of a goose which are cut off before it is roasted.—

'Tis holyday: provide me better cheer:

'Tis holyday; and shall be round the year:

Shall I my household gods and genius cheat,

To make him rich who grudges me my meat?

That he may loll at ease; and pamper'd high,

When I am laid, may feed on *giblet* pie? *Dr. Perf.*

(2.) **GIBLETS** include the heart and liver, with

See

the salt, gizzard, &c. Giblets make a considerable article in cookery: they are boiled and stewed; made into ragouts, giblet-pies, &c.

GIBLOU. See GEMBOUR.

GIBOLDEHAUSEN, a town of Germany, in the circle of the Lower Rhine, and territory of Eichsfeld; 6 miles N. of Duderstadt.

GIBON, a town of Cuba, 22 m. NE. of Bayamo.

GIBRALEON, a town of Spain, in Seville, on the Odier, 44 miles W. of Seville. Lon. 9. 45. E. 46. Tenersse. Lat. 37. 20. N.

(1. 1.) GIBRALTAR, a famous promontory, or rather peninsula, of Spain, in Andalusia, but belonging to Great Britain. By the ancients it was named *Gaiura*, and was also called one of the *Pillars of Hercules*; by the Arabians it is called *Gebel Tarek*, that is, "the mount of Tarek," from *Tarek*, the name of the Saracen general who conquered Spain in the beginning of the 8th century. The whole is an immense rock, rising perpendicularly about 440 yards, measuring from N. to S. about two English miles, but not above one in breadth, from E. to W.

(2.) GIBRALTAR, a town on the above promontory, (N. 1.) which lies along the bay on the W. side of the mountain on a decline; by which the rains pass through it, and keep it clean. The old town was considerably larger than the new, which at present consists of between 400 and 500 houses. Many of the streets are narrow and irregular: the buildings are of different materials; some of natural stone out of the quarries, some of a facitious or artificial stone, and a few of brick. The people are supplied with fresh provisions chiefly from the coast of Barbary, with fruit, roots, and vegetables of all sorts from thence, or from their own gardens. Besides what is properly called the town, there are several spacious and commodious public edifices; such as barracks for the soldiers, apartments for their officers, magazines of different kinds, storehouses for provisions, &c. The town may be said to have two ports; the first lying to the N. and proper only for small vessels; the other is very commodious for large vessels, and has a fine stone quay. It lies 16 miles N. of Ceuta, 45 SE. of Cadiz, and 70 S. of Seville. Lon. 5. 17. W. Lat. 36. 8. N.

(3.) GIBRALTAR, BAY OF. The bay is very beautiful and capacious, being in breadth about 5 miles, and in length 8 or 9, with several small rivers running into it. It is very advantageous to the place. There is no ground to be found in the middle of it at 100 fathoms depth, so that a squadron may lie there in great safety; the breezes from it are very refreshing; and it contributes likewise to the subsistence of the inhabitants, by supplying them with plenty of fish.

(4.) GIBRALTAR, HISTORY OF, TILL ITS CAPTURE BY JOHN DE GUZMAN, IN 1462. This important fortress seems to have been first particularly noticed as a place of consequence in the year 712. At that time the general of the caliph Al Walid landed with an army of 12,000 men, on the isthmus between Mons Calpe and the continent; and that he might secure an intercourse with Africa, ordered a castle to be built on the face of that hill. Part of the building still remains: and from an inscription discovered above the principal gate, ap-

pears to have been finished in 725. It was in the possession of the Saracens till 1462, when it was taken by Perez de Guzman, under Ferdinand IV, king of Castile. In 1533, it was surrendered to the son of the emperor Fez, who came to the assistance of the king of Granada. An attempt was made in 1549 by Alphonso XI, king of Castile, when the fortress had been reduced to extremity, a pestilential fever broke out in the camp, which carried off the king and great part of his army; after which the place was abandoned. The fortress continued in possession of the Saracens of Fez, until when it was taken by Joseph III, king of Granada. A design of attacking it was formed by de Guzman in 1435; but the enterprise miscarried through his imprudence, he was defeated and slain. However, it was at length taken, after a gallant defence, by his son, Guzman in 1462; since which time it has been in the hands of the Christians.

(5.) GIBRALTAR, HISTORY OF, TILL IT WAS TAKEN BY THE ENGLISH. In 1540, it was surprised and pillaged by Piali Hay of Barbarossa's corsairs; but the pirates fallen in with some Sicilian galleys, were defeated, and all either killed or taken. In the reign of Charles V. the fortifications of it were modernised, and such additions made to render them almost impregnable. But in consequence of the resolution adopted by the court of Britain, to assist the archduke Charles in his pretensions to the Spanish crown, Sir John Rooke was sent with a powerful fleet to the Mediterranean, and an attempt on Gibraltar resolved upon. On the 21st of July, 1704, 11 ships of the line, 10 frigates, and 10 transports were landed upon the isthmus under the command of Sir John Rooke; and on the refusal of the governor to surrender, a cannonade was begun between the fleet and the town, which lasted in 5 or 6 hours the Spaniards were driven from many of their guns, especially at the rear. The admiral perceiving, that by this part of the fortification, the reduction of the town would be facilitated, ordered out some boats to take possession of it. On their approach the Spaniards sprung a mine, which destroyed part of the works, killed two lieutenants, and wounded about 60 more. Notwithstanding this disaster, the assailants kept possession of the work, and took a small bastion, (now the gun battery,) half way between the mole and the town. On this the governor capitulated, and the prince of Hesse took possession of the town on the 24th. The garrison, consisting of 130 men, was ordered out with the honours of war; and the Spaniards who chose to remain were allowed the privileges they had enjoyed under Charles V. The works were found very strong, and the place provided with ammunition and military stores; yet the capture was held of little value to the British court. See ENGLAND, § 72.

(6.) GIBRALTAR, HISTORY OF, TILL THE END OF THE SIEGE IN 1704—5. This was achieved with the loss of about 600 men, and 116 wounded on the part of the English; the prince of Hesse remained governor; and

were left at Lisbon under the command of Sir John Leake, to succour the garrison if there was an occasion. The loss of such an importance, however, having alarmed both the courts of Madrid and Paris, orders were sent to the Marquis de Villadarias, a Spanish grandee, to go to it. The prince of Hesse immediately wrote to Sir John Leake for assistance; but he had no time to comply with his request. A French fleet arrived, and debarked six thousand men to assist the Spaniards; after which they retired to the westward, leaving only six frigates in the bay. The trenches were opened on the 10th, about which time Sir John arrived with five English and Dutch ships; but hearing the French were about to attack him with a superior force, he returned to refit. Having left Lisbon to make preparations for this purpose, he accomplished the work with such exactness that on the 29th he returned, and sent forth the bay 3 frigates, a fire ship, two frigates, a tartan, and a store ship. After receiving some reinforcements, supplied the garrison with six months provisions, and sent on board sailors to assist in repairing the breaches. The Spaniards supposing that the garrison would be able to hold their guard, on account of the vicinity of the sea, formed the rash design of attempting to retake the place though the British admiral forbade it. In this mad attempt 300 brave men, associated, taking the sacrament never to be taken unless they accomplished their purpose, were conducted by a boat-herd to the south side of the rock near the cave-guard. This they did, and lodged themselves the first night in the ruins of St. Michael: the next they scaled the King's Wall; surprised and massacred the garrison on the hill; where afterwards, by ropes and pulleys, several hundreds of the party designed to retake the place were hauled up; but being surprised they were attacked by a party of grenadiers, all either killed or taken. Notwithstanding these misfortunes the Spaniards continued their operations, and fitted out a strong squadron of ships, to intercept the provisions sent to the garrison, expecting that, on the arrival of their reinforcements, they would be obliged to retire, and the place would surrender. They continued their fire with additional fury, dismounted many guns, and did essential injury to the works in several different places. The prince of Hesse, ever, exerted his utmost to disappoint their operations. As it was probable that they would not storm the curtain, a curvette was sent to the ditch, which was filled by the tide, and a row of palisades placed parallel to the ditch, the chambers of the mine under the ditch were loaded; but on a sudden the Spaniards changed their design, and threatened an attack on the flank the garrison had on the declivity of the rock. While affairs were in this situation, the succours they had long expected arrived in the bay, Dec. 7, 1704; and in two days the remainder came in with near 2000 men and a proportionable quantity of ammunition. These had sailed from Cape St. Vincent, and were in danger of falling into the hands of the enemy, whose fleet they mistook for their own; but escaped by being becalmed, so that they could not get up to them. Sir John Leake, having thus powerfully reinforced the garrison, set sail for Lisbon, where he arrived about the end of the year. In the beginning of 1705, the Spaniards were reinforced by a considerable body of infantry, and on the 11th Jan. made an attack on the King's Lines, but were repulsed. The attack was renewed next day by 600 grenadiers, French and Walloons, supported by 1000 Spaniards, under lieutenant-general Fuy. They showed an intention to storm a breach which had been made in the Round Tower at the extremity of the King's Lines, and another in the entrenchment on the hill. The retrenchment which covered the latter, with part of the entrenchment joining the precipice of the rock, was defended at night by a captain, 3 subalterns, and 90 men; but the captain usually withdrew, with two subalterns and 60 men, at day-break. The Round Tower was defended by 180 men, commanded by a lieutenant-colonel. The marquis, by deserters from the garrison, had obtained intelligence of the strength of these posts, and planned his attack accordingly. The detachment for the upper breach mounted the rock at midnight, and concealed themselves in the clefts until the captain had withdrawn; after which, advancing to the point of the entrenchment, they threw grenades on the subaltern and his party, so that they were obliged to leave the place. At the same time 300 men stormed the Round Tower, where lieutenant-colonel Bar made a vigorous defence, though the enemy annoyed them on the flanks with great stones and grenades. Observing, however, the Spaniards marching down to cut off his retreat from the town, he retired; and, by getting over the parapet of the King's Lines, descended into the covered way, where the English guards were posted. Thus the garrison were alarmed; all the regiments were assembled at their proper posts; and captain Fisher endeavoured to stop the progress of the enemy with 17 men, but they were repulsed, and himself taken prisoner. At last, however, the Tower was retaken by lieutenant-colonel Moncal at the head of 400 or 500 men, after it had been in the possession of the enemy upwards of an hour. The garrison were now farther reinforced by six companies of Dutch troops and 200 English soldiers, with provisions and stores. The assailants, however, were still determined to go on. The marquis de Villadarias was superseded by Marischal Tesse a Frenchman, with whom Admiral Pointis was desired to co-operate in blocking up the place. The Marischal joined the army with 4 fresh battalions, besides 8 companies which had been sent before; the ordnance, which had been greatly injured, was exchanged, and the works put into the best repair. On the part of the English, a reinforcement was ordered under Sir Thomas Dokes and Sir John Hardy, to join Admiral Leake at Lisbon: which being effected, the whole fleet, consisting of 28 English, 4 Dutch, and 8 Portuguese men of war, having on board two battalions of land forces, set sail from Lisbon. And happily for the besieged, the incessant rains and storms had retarded the operations of the land forces, and great-

ly distressed the enemy's fleet; 8 of their ships having been forced from their anchors. At this critical period Sir John Leake, with the allied fleet, entered the straits, when the few remaining French ships put out to sea, and he immediately gave chase. Three men of war were taken; the admiral's ship and another driven on shore, and burnt; and the rest made the best of their way to Toulon. The garrison was now so well supplied, that Marischal Tessé withdrew his troops from the trenches, and formed a blockade, drawing an intrenchment across the isthmus to prevent the garrison from ravaging the country. The prince of Hesse remained for some time in the place, where he repaired the batteries, and made fortifications; after which he joined the archduke Charles at Lisbon. As the latter, however, was resolved to try his fortune with the earl of Peterborough in Valencia and Catalonia, the prince was sent back to Gibraltar to prepare part of the garrison for embarkation, and soon after was followed by the whole fleet. Major General Ramos was now appointed governor of Gibraltar, in which only two new battalions were left, as nothing was to be feared from the enemy. In the course of this siege the Spaniards lost 10,000 men including those who died of sickness; while the garrison lost only 400. The new governor brought with him 400 men for the greater security of the place; but soon resigned his government to Col. Roger Elliot, during whose time Gibraltar was made a free port by a special order from queen Anne.

(7.) GIBRALTAR, HISTORY OF, TILL THE END OF THE SIEGE IN 1727. Col. Elliot was succeeded by Col. Congreve before 1714, and he by Col. Cotton soon after. In 1720 the Spaniards threatened another attack, but the design was abandoned. At last, however, in the end of 1726, they assembled an army near Algeiras, encamping, on the 26th Jan. 1727 on the plain below St. Roche, and erecting a battery on the beach to protect their camp. Though Adm. Hopson was then at anchor in the Bay of Gibraltar, yet, as he had not heard of the commencement of hostilities between Britain and Spain, he allowed the boats of the latter to pass with provisions, arms, and ammunition, between Algeiras and the camp, at the same time that brigadier Kane, who had been a second time sent from Minorca, lay under similar embarrassments. The operations of the Spaniards, however, seemed to evidently to tend towards an attack, that the governor thought proper to order no part of the militia as yet to enter the town to leave it, and to send nothing more to either under his guns. The comte de Les Domes, commander of the Spanish force, knowing of near 2000 men and 10000 arms and 10000 camp, he advanced within 1000 of the garrison. The governor sent out a detachment to keep out of his reach, and with 1000 men to follow him; but so little the Spanish commander expected, that he thought only to attack the enemy's orders, and having no other expectation, he did not, however, move. On the 1st Feb. 1727, the governor sent out a detachment of 1000 men to the beach, and the British army, which had been sent out, was ordered to follow him, and to keep out of his reach, and to follow him; but so little the Spanish commander expected, that he thought only to attack the enemy's orders, and having no other expectation, he did not, however, move.

Spanish general had commenced hostilities, encroaching so far on the liberties of the British. Still, however, the governor sent to the Spaniards to know the reason of breaking ground upon the British garrison; but received for answer, that it was in his master's territories, and was not subject to any other person for his conduct. This the governor opened the batteries of the New Mole and those of Willis upon the Spaniards; however, they persisted in carrying on their operations, and at night marched a detachment to the Devil's Tower, where they began to open communication with their other works. The governor was now informed by some deserters that the enemy were forming a mine in a trench near Willis's Battery, with a design to blow it up. The plot being thus discovered, a party was immediately stationed to cut off the communication. On the 22d Feb. the Spaniards opened on the garrison with 17 pieces of cannon and mortars; and the day following brought a reinforcement of 1000 men. On the 2d of March the enemy opened a new battery of 22 guns, on the Old Mole; on the 8th another of 15 guns, built upon the same Mole, the guns of which were directed upon the western flank of their approach. At this time the garrison had kept up a constant and well directed fire from the batteries upon the works of the enemy: but the shells being old frequently burst; by which the Spaniards suffered more than from the fire of the batteries. The latter were also greatly distressed by the fire of the enemy's ships. Under Adm. Hopson and Sir Charles W. Boscawen, since the beginning of the siege, had been stationed their home bound ships, and greatly benefited the garrison by bringing tea, prizes into the harbour, and the arrival of a reinforcement from England. They fired to the westward, leaving the garrison to defend themselves the best way they could. The enemy continued to augment their batteries, and erect new ones, until they amounted to 62 cannon besides mortars: and on the 15th of May, the governor received intelligence that a general assault was intended. However, it was deferred on the 16th, when news was received that the preliminaries of a general peace were signed. The course of this siege, therefore, is now computed at near 3000 men, besides the British garrison, which could not be ascertained. The garrison amounted only to 3000; a very small number, considering that during the siege the enemy had 62 cannon besides 30 mortars, both on the batteries,

(8.) GIBRALTAR, HISTORY OF, THE
TORIES OVER THE SPANISH FLEET.
For upwards of half a century, no facts
were made on Gibraltar: but the hosti-
lities by the Spanish ambassador
of London, at the commencement of the
war, was soon followed by an inter-
communication betwixt Spain and G.
direct intention of attacking it, howe-
infected till the 10th of July 1794, we
was completely blocked up by a fleet
of 20 gun ships, several frigates, galleys
days after they began to form a camp
below St. Rocco, 3 miles from the G.
garrison at this time consisted of 2,500

officers, with a company of engineers and artillery; but the greatest expectations were formed from the abilities and valour of Gen. Eliott, governor. See ELIOTT. As soon as the breaking of the communication with Spain indicated approaching hostilities, the governor took every precaution that could be suggested by military men; but though informed of the rupture between the two courts, and though he beheld the operations of the enemy, he used no means to interrupt them till the 12th Sept. when the batteries of Green's Lodge, Willis, and Queen Charlotte were opened for a few hours, with a view to disturb the workmen. From this time to the arrival of 1780 the enemy continued the blockade both by sea and land, but without doing any damage to the works or garrison; and it was not till the 12th of January that a single person was killed. This happened to be a woman, who, sitting near one of the houses, was slightly hurt by a shot from the enemy. In the mean time, however, the usual supplies of provisions being cut off, the garrison began to feel all the horrors of famine. All the necessaries of life were very scarce, and to be procured only at most exorbitant prices. Veal, mutton, and beef, sold at from 1s. to 4s. per lb. fresh pork from 2s. to 3s. 1d. beef and pork 1s. 6d. fowls 18s. per couple; 21s.; fire wood, 8s. per cwt.; a pint of brandy and water, 1s. 6d.; a small cabbage, 5s.; and a small bunch of outer leaves, 1s. 6d.; Irish butter 2s. 6d. per lb.; and eggs 6d. each. The rock, however, is almost surrounded by water, it was natural to suppose, that in such a situation of other provisions great benefit would have been derived from the ocean; but the fishermen being all foreigners, and under no regulation, took advantage of the scarcity in the garrison, and exacted a most exorbitant price for the fish. Matters remained long in this state, the fortress must have fallen into the hands of the enemy. They were however, effectually relieved in consequence of the repeated victories gained by Admiral Rodney over the Spanish fleets, on the 8th and 16th Jan. 1780: (See ENGLADD, § 102.) proved equally serviceable to the garrison and a mortal blow to the enemy, who were now in great want of provisions and materials for shipping. News of the last of these important victories reached at Gibraltar on the evening of the 17th, and two days more the garrison was completely relieved by the arrival of the fleet and convoy; they were farther reinforced by a regiment of Highlanders, consisting of 1051 men, officered by Lord. An opportunity was also taken of sending with the fleet all the invalids and women in the garrison; with whom they set sail on the 10th leaving in the bay only the Edgar and Panther ships of the line, with two frigates.

GIBRALTAR, HISTORY OF, TO THE DEPARTURE OF THE BRITISH FLEET. On the departure of the British fleet the blockade was immediately resumed; and notwithstanding the supplies lately received, the garrison soon began again to experience the want of fresh provisions. It had hitherto received these in abundance from the coast of Barbary; but the friendship of the emperor of Morocco was now trans-

ferred from Great Britain to Spain in a manner totally unprecedented. His partiality towards the latter was the more surprising, as Britain had given no provocation, and the enmity between Spain and Morocco seemed to be founded on such causes as could never cease to operate. Thus, however, the garrison became daily more and more distressed, from being obliged to make constant use of their salt provisions, and even this with the strictest economy. The industry and resolution of the brave British seamen and officers, indeed, sometimes overcame all obstacles, so that they found means to procure the necessary refreshments; though in so doing they were exposed to the utmost danger from the enemy. At the same time the defence of the garrison was so vigorous, that while it continued to be supplied even in this scanty manner, the Spaniards began to lose all hope of reducing it; for which reason they formed a project of burning all the British shipping in the bay. The night fixed for executing this scheme was the 6th of June 1780, when ten fire ships, favoured by an uncommon darkness, stood over from the Spanish to the British side of the bay. Their design was to set fire to the store-houses and shipping nearest the water side; but having been too precipitate in firing their ships, they met with a very heavy cannonade, and the attempt was frustrated. On this occasion the skill and intrepidity of the British seamen was eminently displayed. Having manned their boats, they grappled the fire-ships already in flames; and, notwithstanding the danger of their exploding, towed them clear of the vessels under the walls, and extinguished them. The failure of this project was a grievous disappointment to Don Barcelo the Spanish admiral, who lay ready with his squadron to intercept the British vessels that might attempt to escape; while the batteries on their lines were ready to bombard the town, if the fire-ships had succeeded in causing any conflagration on shore. The failure of this attempt was soon followed by other disasters. As soon as they had, with great labour, constructed new batteries, they were destroyed by the besieged; and their mortification on these occasions was the greater, as the governor allowed them to complete their works before he commenced his destructive operations. Thus the labour of many days was often lost in a few hours, and was again resumed with as little prospect of success as before. The garrison were now considerably annoyed by the Spanish gun-boats, to which indeed the shipping were equally exposed. These were vessels from 30 to 40 tons burden, constructed so that they lay low in the water, which rendered them difficult to be aimed at. They had 15 oars on a side, carried 40 or 50 men, with a 26 pounder on the prow; and, from the facility of managing them, two were deemed, in calm weather, to be a match for a frigate of moderate size. All their efforts, however, could only reduce the garrison to great straits for want of provisions; and to this dreadful inconvenience the British submitted with the most stoical resignation. From Adm. Rodney's departure in Feb. 1780 to October, almost the only provisions in the garrison were such as tended to produce the scurvy; which accordingly re-

ged in such a manner as to threaten the most fatal consequences. The allowance of salt provisions had hitherto continued undiminished; but now it was judged necessary to reduce the allowance of bread and meat, and to enforce the strictest economy with regard to food. Every thing of this kind that could be practised, however, seemed insufficient to preserve the garrison from absolute want. In the beginning of 1781 provisions became exceedingly scarce, by the almost total expenditure of the public stores, and the vigilance of the enemy's cruisers. About the middle of February the bakers left off work for want of flour; and many of the poorer sort wanted bread. The price of fresh provisions again rose to a most enormous height. Small pigs sold at two guineas: turkeys at three; geese at 30s.; fowls and ducks at 10s.; damaged biscuit 1s. per lb.; pease, 18d.; and all other necessaries in proportion; while the scarcity of fuel was such, that it was sometimes scarcely procurable in quantity sufficient to dress their victuals. The garrison had hitherto derived assistance occasionally from the gardens on the neutral ground, though vast quantities of vegetables had been removed thence by the enemy. Towards the end of October 1780, however, the Spaniards expelled the British from these gardens entirely. From this time the supply of vegetables depended entirely upon cultivation; which, happily for the garrison, was attended with such success, that the produce came at last to be nearly equal to the demand. At last, on the 12th April 1781, supplies were brought by the British fleet under Adm. Darby, Digby, and Ross, though they could not be got in without great difficulty. The gun boats were now much increased in number and strength; infesting the bay in such a manner as greatly to interrupt the debarkation of the stores. As no vessels of the same kind had been prepared to oppose them, they could scarce be prevented from effecting their purpose of burning the storeships. With this view they had approached them every morning in hazy weather to the number of between 20 and 30, several of them carrying mortar-pieces; and as they used both sails and oars, they eluded all pursuit, by withdrawing on the rise of any breeze. To keep off these troublesome guests several stout frigates were stationed along the bay to protect the shipping; but notwithstanding the activity of the British sailors, it was seldom that they could come near enough to do them any damage. In spite of all their endeavours, however, the garrison was effectually relieved; which so irritated the court of Spain, that they determined to exert their utmost force rather than fail in obtaining their favourite object. The works before the town were therefore carried on with more vigour than ever, and the most tremendous preparations made to cause the obstinate garrison feel their resentment. Their batteries were mounted with guns of the heaviest metal, and mortar-pieces of the largest size; the number of the former augmented to near 200, of the latter to upwards of 80. For 3 weeks this prodigious artillery continued to pour forth an almost incessant shower of shot and shells, insomuch that they consumed 200,000 lb. of gunpowder, and threw into the town 4, or 5,000 shot and

shells every 24 hours. By such an bombardment the town was almost totally ruined. The inhabitants experienced every that could arise from the destruction of habitations: several of them were killed or forced to leave the town, and take their tents with what accommodation could be had for them in such scenes of horror and confusion. Numbers took the opportunity with the fleet; while many that remained reduced from a state of opulence to want. The conduct of Governor Eliott humane and compassionate, allowing them a free passage to England, and supplying provisions for the voyage. During this time, not only the greater part of the effigies to the inhabitants were destroyed, but confiscations were in many places greatly injured; the remainder was destroyed by the soldiers had arrived at such a pitch of licentiousness they neither regarded nor would obey the laws. They were incited to this destructive conduct by the advice of some of the inhabitants, who hoarded up and concealed a quantity of articles, to procure an advanced price for them now, therefore, kept no bounds in waste, and extravagance; a remarkable proof of which is given by Captain Drake, that he roasted a pig by a fire made of gunpowder. To put a stop to these atrocious proceedings measures were of necessity adopted; it was intimated, that any soldier caught being drunk or asleep upon his post, or marauding, should be immediately executed. The loss of human lives during this bombardment was less than might have been expected. By the beginning of June 1781, the enemy relaxed considerably in their firing, seldom firing 600 shot in a day; and continued gradually to diminish this number so remarkably, that by the end of August they seldom fired in and only discharged 6 or 7, and sometimes none at all, in the night. The batteries, however, were succeeded by the gun-boats, renewed their attacks every day, keeping the garrison in continual alarm, and never failing to execute more or less execution. To restrain the force, a battery of guns capable of throwing shot to a great distance was erected as near as possible to the enemy; and as it reached the camp, it was determined to open it upon them as often as the gun-boats made their attack being soon perceived, they thought it prudent to desist in some measure from that mode of attack. They continued still, however, to improve their works, and for this purpose employed engineers both of France and Spain; so that by the end of November 1781, they had them brought to such a state of perfection, as filled the Spaniards with the most sanguine expectations. Gov. Eliott, however, far from being dismayed at these formidable bulwarks, sufficient to proceed without molestation to the execution of his scheme, that he might in a moment do the labour of so many months, and thus render the disappointment the greater. In the night of 27th Nov. a chosen party of 2000 men landed, by the assistance of the Spaniards, and

and their success was equal to their most
 expectation. They marched out in great
 and silence about 3 o'clock A. M. under
 general Ross; after which they proceed-
 in the same circumspection, but with the ut-
 elerity, to the enemy's works, which they
 and overthrew with astonishing rapidity.
 paniards were instantly thrown into confu-
 and fled on every side; the guns and mor-
 the batteries were all spiked up; and the
 y-men, artificers, and sailors, exerted them-
 vigorously, that in an hour the magazines
 down up, the storehouses of arms, ammu-
 and military implements, and all the works
 had been constructed, were set on fire, and
 consumed; the whole damage done on this
 being estimated at upwards of two mil-
 sterling. For several days after this disaster
 paniards continued inactive, without even
 any attempt to extinguish their batteries,
 still continued in flames; but in the begin-
 December, as if suddenly aroused from
 torie, upwards of 1000 men were set to
 prepare a great number of fascines, from
 it was concluded that they designed to
 their works. In this they proceeded with
 perseverance and diligence; but as the
 methods of attack had constantly failed, it
 was, that if the place could be reduced at
 all be by some means hitherto unattempt-
 for the reduction of this single fortress,
 the monarch determined to employ the
 strength of his empire. Among the various
 formed, that of the chevalier D'Arcon, a
 engineer, proved the most acceptable,
 the expence attending it was immense.
 was to construct such floating batteries as
 either be liable to be sunk nor set on fire.
 view their bottoms were made of the
 timber, and their sides of wood and cork
 and in water, with a layer of wet sand be-
 tween. Their thickness was such, that they
 were impenetrable to cannon shot; and to prevent
 the escape of red-hot balls, a number of pipes were
 fitted to carry water through every part of the
 and pumps sufficient to furnish a constant
 for the purpose. The people at the batte-
 were sheltered from the bombs by a rope-net-
 work sloping, that they might roll off, and
 with wet skins to prevent fire. Ten of these
 were constructed out of the hulls of large
 ships of 50 or 60 guns, cut down for that
 purpose and carrying from 10 to 28 guns each.
 The half as many in reserve, in case of ac-
 tion. Each gun was served by 36 artillery-
 men. These floating batteries were to be se-
 cured by 80 large boats carrying guns and mor-
 tar heavy metal; a great number of ships of
 the line, frigates, with some hundreds of small
 boats to accompany them with troops, for
 the execution of what might be judged ne-
 cessary. On this occasion upwards of 1000 pieces
 and 80,000 barrels of gunpowder were
 sent. A body of 12,000 of the best troops of
 the army were now added to the Spanish army be-
 sieging; the body of engineers was the best
 the kingdom could produce; and numbers
 of the best families in both, attended
 them. Many military gentlemen also came

from various parts of Europe, to be witnesses of
 what passed at this celebrated siege, which was
 now compared to the most famous recorded in
 history. The conducting of it was committed to
 the duke of Crillon; who had distinguished himself
 by the conquest of Minorca. Two princes of the
 blood royal of France, the count of Artois, and
 the duke of Bourbon, came to be witnesses of this
 extraordinary enterprise. These behaved with the
 greatest politeness both to the governor and garrison.
 The count of Artois transmitted a packet of letters
 for various individuals in the garrison, which had
 been intercepted and carried to Madrid, and which
 he requested that he might be the means of convey-
 ing to those for whom they were designed. Both
 he and the duke of Bourbon signified to general
 Elliott the high regard they had for his person and
 character; and the duke of Crillon expressing the
 same sentiments, intreated him to accept of some re-
 freshments. Gen. Elliott returned a polite answer,
 but accepted of the present with reluctance, and re-
 quested him for the future not to confer any favours
 of that kind upon him. Such a prodigious armament
 raised the confidence of the besiegers so high, that
 they looked upon the conquest of the place as an
 absolute certainty; and the commander in chief
 was thought by far too modest, when he said, that
 the garrison might hold out a fortnight. "It ap-
 peared (says Captain Drinkwater) that they meant,
 previous to their final efforts, to strike if possible
 a terror through their opponents, by displaying an
 armament more powerful than had probably ever
 been brought before any fortress. Forty-seven sail
 of the line, including three inferior two deckers;
 ten battering ships, deemed perfect in design, and
 esteemed invincible, carrying 212 guns; innumera-
 ble frigates, xebecs, bomb ketches, cutters, gun
 and mortar boats, and smaller craft for disembark-
 ing men, were assembled in the bay. On the land
 side were most stupendous and strong batteries and
 works, mounting 200 pieces of heavy ordnance,
 and protected by an army of near 40,000 men,
 commanded by a victorious and active general. In
 their certainty of success, however, the enemy
 seemed entirely to have overlooked the nature of
 that force which was opposed to them; for though
 the garrison scarcely consisted of more than 7000
 effective men, including the marine brigade, they
 forgot that they were now veterans in this service,
 had long been habituated to the effects of artille-
 ry, and were by degrees prepared for the arduous
 conflict, that awaited them. We were at the
 same time commanded by officers of approved
 courage, prudence, and activity; eminent for all
 the accomplishments of their profession, and in
 whom we had unbounded confidence. Our spirits
 too were not a little elevated by the success attend-
 ing the firing of red hot shot, which in this attack
 we hoped would enable us to bring our labours to
 a conclusion, and relieve us from the tedious cruel-
 ty of a vexatious blockade." This was suggested
 by lieutenant-governor Boyd, and on the 8th Sept.
 1782, their advanced works were almost destroy-
 ed by it. But as a prelude to the dreadful storm
 which was about to be poured forth on this gar-
 rison, the enemy on the 9th Sept. opened a bat-
 tery of 64 of their largest cannon, accompanied
 with a terrible fire from other batteries, and a
 great

great number of mortars. On this and the following day an attack was made upon the batteries erected on EUROPA POINT, which at that time were entirely under the management of Captain Curtis of the Brilliant frigate, who had distinguished himself, and commanded a brigade of seamen by whom the batteries were served. By these the fire of the Spaniards was so warmly returned, that they not only could make no impression, but were forced to retire, after being so much damaged, that two of their principal ships were obliged to withdraw to the bay of Algeiras to refit. On the 12th the enemy made preparations for their grand and decisive attack. Accordingly, on the morning of the 13th, the 10 floating batteries came forward, under Don Buenventura de Moreno, a Spanish officer of great gallantry, who had signalled himself at the capture of Minorca. Before ten o'clock they had all got into their proper stations, anchoring in a line about 1000 yards from the shore. They then began a heavy cannonade, and were seconded by all the cannon and mortars in the enemy's lines and approaches, at the same time that the garrison opened all its batteries both with hot and cold shot from the guns, and shells from the howitzers and mortars. This terrible fire continued on both sides without intermission until noon; when that of the Spaniards began to slacken, and the fire of the garrison to obtain a superiority. About two o'clock the principal battering ship, commanded by Don Moreno was observed to emit smoke as if on fire, and some men were seen busy upon the roof, searching from whence it proceeded. The fire from the garrison was now kept up without the least intermission or diminution, while that from the floating batteries was perceived sensibly to decrease: so that about 7 P. M. they fired but few guns, and these only at intervals. At midnight the principal's ship was seen on fire, and an hour after was completely in flames. Eight more of these batteries took fire successively; and on the signals of distress made by them, the multitude of relances, launches, and boats, with which they were surrounded, all came to their assistance, and began to take the men out of the burning vessels. Captain Curtis, who lay ready with the gun-boats to take advantage of any favourable circumstance, came upon them at two A. M. and forming a line on the enemy's flank, advanced upon them with such expedition as to throw them into immediate confusion. At this unexpected attack they were so astonished and disconcerted, that they fled precipitately with all their boats, totally abandoning their floating batteries to be burnt, and all who were in them to perish in the flames. This would undoubtedly have been their fate, had not Capt. Curtis extricated them from the fire at the imminent risk of his own life and that of his men. In this work he was so eager, that while his boat was along-side of one of the largest batteries, it blew up, and the fragments of the wreck spreading all around to a vast distance, some heavy pieces of timber fell into his boat and pierced through its bottom, killing one man and wounding several others. He escaped with difficulty out of this boat, which was sunk, as well as another, by the accident. The floating batteries were all consumed; and the violence with which they exploded was such, that

doors and windows at a great distance on shore burst open. About 400 people were saved; many of whom were picked up from rafts and pieces of timber. Indeed the blow of the batteries as the flames reached their rooms, and the discharge of the guns in such as the metal became heated by the fire, rendered an attempt to save them very dangerous. This catastrophe took place in sight of the fleets of France and Spain. It had been proposed that they should co-operate upon this important occasion, by attacking the garrison at Europa and such places as appeared most exposed to tempt by sea: which must have occasioned a partial division of the garrison's force, and have weakened considerably the vigorous defence used in those parts which were attacked. The reason assigned for this was the want of wind.

(10.) GIBRALTAR, HISTORY OF, TO THE YEAR 1783. Though this terrible repulse convinced the Spaniards that Gibraltar could be taken by force, some hope still remained without any further exertions on their part the garrison would be obliged to surrender from want of ammunition and provisions. With this they continued to blockade it closely, and cut off all communication, flattering themselves that Britain would not be able to collect a fleet sufficient to drive their fleet from the bay. The fortress was reduced to extremity; and they imagined must be the case in a few days. Such diligence, however, had been used by a part of the British, that a fleet was already assembled at Portsmouth, consisting of 25 sail of the line, in excellent condition, and filled with the best officers and sailors in Europe. The command was given to Lord Howe, accompanied by Admirals Barrington, Milbank, Hood, Sir John Hughes, and commodore Hotnam, all of whom were of their profession. At the same time a large fleet of merchantmen had just arrived from the Baltic; and a Dutch squadron had been cruising on their own coasts, unable to penetrate southwards to join the British, had retired into port, and given up the idea of effecting any junction for that season. At the same time the progress of the ships was delayed by contrary winds, and it was not until they had reached the southern coast of Portugal, that they received information of the defeat of the enemy's fleet on the 13th Sept. On the 11th Oct. Lord Howe entered the Straits, and several of the ships destined for Gibraltar came fire to anchor, and the cannon of the fort, without any molestation from the enemy. The combined fleet in the bay had been much damaged by a storm; two more were driven out of the bay into the Mediterranean; others lost their masts, and many of them suffered considerably. One in particular, a ship of 70 guns, was carried by the storm to the bay, and ran aground under the works of Gibraltar, where she was taken by the garrison. Her whole complement of men, consisting of 1000, notwithstanding the endeavours of the British to destroy her, she was safely got off, and repaired. The combined fleet, however,

the 13th, with a view to prevent the rest of the ships that had overshot the bay to the making good their entrance into it; and the time to rejoin the two ships that had separated from the main body by the storm. At the advantage of the wind, they bore down upon the British fleet, which drew up in battle to receive them; but notwithstanding their superiority, they declined coming to an action. On the wind becoming more favourable the next day, Lord Howe took the opportunity to bring in the storeships that were in command the day following the remainder were sent to Gibraltar, the troops for the reinforcement of the garrison were landed, with a supply of powder, and provisions. As they passed through the Straits they were threatened with engagement by the combined fleets; but the latter had a superiority of 12 ships of the line, they kept at a wary distance. Some action indeed took place, but it was attended with no effect on either side. This last relief proved decisive; for though the blockade continued, news arrived of the preliminaries of peace signed, in the beginning of February, 1783, no attack was made. The news of the peace were received with the utmost joy by the British. Mutual civilities passed between the commanders in chief, and the duke of Crillon by handsome compliments to the governor of Gibraltar for their noble defence; declaring that he had exerted himself to the utmost of his ability and though he had not proved successful, was happy in having his sovereign's approbation of his conduct.

GIBRALTAR, IMPORTANCE OF, TO GREAT BRITAIN. Gibraltar is esteemed of very great consequence to Britain. It not only gives the command of the Straits, and their navigation, but affords refreshment and accommodation to our fleets in time of war, and to our merchantmen at all times. It hinders a ready communication by sea between the different ports of France and Spain, it hinders the junction of their fleets and squadrons, or at least renders it so difficult as to put a perpetual check upon the ambition of these powers.

It awes also the piratical states of Barbary, and the emperor of Morocco; insomuch, that commerce is more safe than that of any other European power, which gives us great advantage in point of freight. It is otherwise highly valuable to our trade in the Mediterranean and the Black Sea. It procures us the respect of the Indian and other powers; who, though far distant, consider this as an instance of her power, and do not hurt or assist them. It also saves us the expense of squadrons and convoys, upon any disturbances that may happen among the powers, and which would otherwise be necessary for the protection of our navigation.

GIBRALTAR, POPULATION OF. The inhabitants, exclusive of the British subjects dependent on the garrison, or who reside there from occupation, consist of some Spaniards, a few Genoese, a considerable number of Genoese, but as many Jews; making in the whole, according to Dr Campbell, between 2, and 3,000, not reckoning the garrison, which usually con-

sists of between 3, and 4,000 men; but during the last siege was double that number.

(13.) **GIBRALTAR, STRAITS OF,** a narrow sea, which forms the communication between the Atlantic ocean and the Mediterranean, thereby dividing Europe from Africa; and runs from W. to E. about 13 leagues. In this strait there are 3 remarkable promontories or capes on the Spanish side, and as many opposite to them on the Barbary side. The first of these, on the side of Spain, is Cape Trafalgar, opposite to which is Cape Spartel; and in the neighbourhood of this stood the fortress of Tangier, once in the possession of the British. The next on the Spanish side is Tarifa; and over against it lies Malabata, near the town of Alcazar, where the straits are about 5 leagues broad. Lastly, Gibraltar, facing the mountain of Abyla, near the fortress and town of Ceuta, which make the eastern entry of the straits.

(11.) **GIBRALTAR,** a town of South America, in Terra Firma, and prov. of Venezuela, E. of Lake Maracaibo; famous for excellent cocoa and tobacco. It was burnt by the French in 1679. It lies 50 miles SSE. of Maracaibo. Lon. 49. 50. W. of Ferro. Lat. 10. N.

(1.) **GIBSON,** Dr Edmund, bishop of London, was born at Knipe in Westmoreland, in 1669. He early displayed his knowledge in several writings and translations, which recommended him to the patronage of Abp. Tension, who appointed him his domestic chaplain; and soon after rector of Lambeth, and archdeacon of Surry. Becoming thus a member of the convocation, he defended his patron's rights, as president, in 11 pamphlets; he then completed his scheme of the legal duties and rights of the English clergy, under the title of *Codex Juris Ecclesiastici Anglicani*, in folio. Abp. Tension dying in 1715, and Dr Wake, bishop of Lincoln being made Abp. of Canterbury, Dr Gibson succeeded him in the see of Lincoln, and in 1720 was promoted to the bishopric of London. He was extremely jealous of the privileges of the church; and therefore, continually opposed all attempts to repeal the test acts. But his laudable opposition to those licentious assemblies, called *masquerades*, gave great umbrage at court, and effectually excluded him from all further favours. He spent the latter part of his life in publishing letters, charges, occasional sermons, and tracts against the prevailing immoralities of the age. His pastoral letters are justly esteemed masterly productions against infidelity and enthusiasm. His other publications are, 1. An edition of Drummond's *Polemica Middinia*, and James V's *Canonica Rustica*, with notes. 2. The *Chronicon Saxonum*, with a Latin translation, and notes. 3. *Reliquia Spelmaniana*, the posthumous works of Sir Henry Spelman, relating to the laws and antiquities of England. 4. An edition of *Quintilian de Arte Oratoria*, with notes. 5. An English translation of Camden's *Britannia*, with additions, 2 vols. folio: and, 6. A number of small pieces, that have been collected and printed in 3 vols. folio. He died, aged 70, in Sept. 1748. With regard to his character, he was a true friend to the established church and government, and as great an enemy to persecution. He was usually consulted by the most learned and exalted personages in church and state, and the greatest

greatest deference was paid to his judgment. He possessed the social virtues in an eminent degree; his beneficence was very extensive; and he had so much justice as well as generosity, that he freely gave 2,500*l.* left him by Dr Crow, who was once his chaplain, to Crow's own relations, who were very poor.

(2.) GIBSON, RICHARD, an English painter, commonly called the *Dwarf*, was originally page to a lady at Mortlake; who, observing that his genius led him to painting, generously got him instructed in that art. He devoted himself to Sir Peter Lely's manner, and copied his pictures to admiration. His paintings in water colours were also esteemed. He was in great favour with Charles I. who made him his page of the back-stairs; and he had the honour to instruct in drawing Q. Mary II. and Q. Anne, when they were princesses. He married Anne Shepherd, who was also a dwarf; on which occasion K. Charles I. honoured their marriage with his presence, and gave away the bride. Mr Waller wrote a poem on this occasion, intitled "The Marriage of the Dwarfs;" in which are these lines:

"Design or chance makes others' wife,
"But nature did this match contrive;
"Eve might as well have Adam fled,
"As the deny'd her little bed
"To him, for whom heav'n seem'd to frame
"And measure out this only dame."

Mr Fenton, in his notes on this poem, observes that he had seen this couple painted by Sir Peter Lely; and that they were of an equal stature, each being 3 feet 10 inches high. However, they had 9 children, 5 of whom arrived at maturity, well proportioned, and of the usual standard of mankind. But what nature denied this couple in stature, she gave them in length of days; for Mr Gibson died in the 75th year of his age; and his wife, having survived him almost 20 years, died in 1709, aged 89.

* GIBSTAFF. *n. f.* 1. A long staff to gage water, or to shove forth a vessel into the deep. 2. A weapon used formerly to fight beasts upon the stage. *Dub.*

* GIDDILY. *adv.* [from *gidly*.] 1. With the head seeming to turn round. 2. Inconstantly; unsteadily.—

To roam

Giddily, and be every where but at home,
Such freedom doth a banishment become. *London.*

3. Carelessly; heedlessly; negligently.—

The parts that fortune hath bestow'd upon her,
Tell her, I ho'd as *giddily* as fortune. *Shakefp.*

* GIDDINESS. *n. f.* [from *giddy*.] 1. The state of being giddy or vertiginous; the sensation which we have when every thing seems to turn round.—Merrims and *giddiness* are rather when we rise after long sitting, than while we sit. *Bacon's Nat. Hist.*—This blessed thistle, which is so sovereign a medicine against the *giddiness* of the brain; 'tis thus will settle it. *Holyday.*

Vain show and noise intoxicate the brain,

Begin with *giddiness*, and end in pain. *Young.*

2. Inconstancy; unsteadiness; mutability; changeableness.—There be that delight in *giddiness*, and count it a bondage to fix a bias. *Bacon.* 3. Quick rotation; inability to keep its place.—The indig-

nation of Heaven rolling and turning length such a *giddiness* seized upon; that it fell into the very dregs of *lethargy*.

4. Frolic; wantonness of life.—

Thou, like a coquette painter
Charitably warn'd of thy fine, do't
These vanities and *giddinesses*.

GIDDRI, a town of Albania, 2 *m* Alessio.

* GIDDY. *adj.* [*gidig*, Sax. I know whether this word may not come from *guder*, to be in motion, *gad*, *gid*, *giddy*,] ginous; having in the head a whirl, of circular motion, such as happens by drunkenness.—

Them rev'ling thus the Tentyri
By *giddy* heads and flagg'ring legs;
Tate

1. Rotatory; whirling; running round rotary.—

As Ixion fix'd, the wretch shall
The *giddy* motion of the whirling mill

3. Inconstant; mutable; unsteady; ch
Our fancies are more *giddy* and un
More longing, wavering, sooner lost
Than womens are. *Shakefp. Temp.*

—It may be gnats and flies have their
more mutable and *giddy*, as small birds
have. *Bacon.*—

Thanks to *giddy* chance, which we
That mortal birds should last for length
She cast us headlong from our high
And here in hope of thy return we sit
Dryden

The *giddy* vulgar, as their fancies
With noise say nothing, and in parts

GIÉZ, a river of France, in the dep. of Rhone
 and Loire, and ci-devant province of Lyonnais.

GIÉZIN, a town of Samogitia, 22 miles ESE.
 of Rokenne.

GIFANIUS, Obertus, or Hubert, LL. D. a
 learned critic and civilian, born at Bueren in Guel-
 derland, in 1534. He studied at Louvain and Pa-
 ris, and erected the German Library at Orleans,
 where he took his degree, in 1567. He taught
 civil law and philosophy at Strasburg, Altdorf, and
 Ingoldstadt, and wrote several tracts, besides com-
 ments on ancient authors. Though bred a Pro-
 testant, he turned Roman Catholic, and was made
 counsellor to the Emperor Rodolph. He was very
 avaricious, and is accused of suppressing the MSS.
 of Fruterius, a youth of extraordinary genius,
 who died at Paris, aged 25, and left them to his
 care. Gifanius died at Prague in 1604.

GIFFAUMONT, a town of France, in the dep.
 of the Marne, 12 miles SE. of Vitry.

GIFFEN, or **GUFFEN,** a river of Wales, in
 Caernarvonshire, running into the Conway.

(1.) **GIFFORD,** Andrew, D. D. an eminent
 English divine and antiquarian, born Aug. 17th,
 1700. He was the son of Emanuel Gifford, mi-
 nister of the Baptist church at Bristol, and was e-
 ducated at Tewksbury, under the rev. Mr Jones,
 and the celebrated Dr Ward. He joined his fa-
 ther's church, and was baptised in 1723; preach-
 ed to the meeting at Nottingham in 1725; and
 was ordained and settled at London, Feb. 5, 1730.
 In 1731, Sir Richard Ellys appointed him his
 chaplain. In 1754, the Marischal college of Ab-
 berdeen presented him with a diploma, creating
 him D. D. He was also admitted a member of
 the Society of Antiquaries, and, in 1757, was ap-
 pointed assistant Librarian to the British Museum.
 He was much esteemed as a pathetic and evange-
 lical preacher; and died 19th June, 1784, leaving
 his museum and library to the Baptist Academy at
 Bristol.

(2.) **GIFFORD,** a village of Scotland, in East Lo-
 thian, in Yester parish, containing about 400 in-
 habitants in 1790.

(3.) **GIFFORD,** a small river in East Lothian, re-
 markable for an extraordinary flood on the 4th
 Oct. 1755, which carried down many trees and
 most of the bridges in the parish of Yester, though
 no uncommon quantity of rain had previously
 fallen.

GIFHORN, a town of Germany, in Lunen-
 burg-Zell, on the Aller, 19 miles E. of Zell.

GIFONI, a town of Naples, in Principato Citra,
 7 miles ENE. of Salerno.

(1.) * **GIFT.** *n. s.* [from *give*.] 1. A thing given
 or bestowed; something conferred without price.

H h h

—Thy

—They presented unto him *gifts*, gold, and frankincense and myrrh. *Mat. ii. 11.*—

Recall your *gift*, for I your pow'r confess;
But first take back my life, a *gift* that's less.

Dryd. Aureng.

3. The act of giving.—

Creator bounteous, and benign,
Giver of all things good, but fairest this
Of all thy *gifts*, nor envyest. *Milton.*

Ther all things living gaze on, all things thine
By *gift*. *Milton.*

4. The right or power of bestowing.—

They cannot give;

For had the *gift* been theirs, it had not here
Thus grown. *Milton.*

—No man has any antecedent right or claim to that which comes to him by free *gift*. *South.* 4. Oblation; offering.—Many nations shall come with *gifts* in their hands, even *gifts* to the king of heaven. *Job. xiii. 17.* 5. A bribe.—Thou shalt not wrest judgment, thou shalt not respect persons, neither take a *gift*; for a *gift* doth blind the eyes of the wise. *Deut. xvi. 19.* 6. Power; faculty.—

And if the boy have not a woman's *gift*,
To rain a shower of commanded tears,
An onion will do well for such a shift. *Shak.*

She was lovely to attract

Thy love, not thy subjection, and her *gifts*
Were such as made government well seem'd
Unseemly to bear rule. *Milton.*

—He who has the *gift* of ridicule, finds fault with every thing that gives him an opportunity of exerting his talent. *Addison.*

(1.) *GIFT*, (*Donatus*) in law, is a conveyance which passeth either in lands or goods; and is of a larger extent than a grant, being applied to things moveable and immoveable; yet as to things immoveable, when taken strictly, it is applicable only to lands and tenements given in tail; but *gift* and *grant* are too often confounded.

(2.) *GIFTS*, NEW YEAR'S. See *STRENÆ*, and *YEAR*.

* *GIFTED*. *adj.* [from *gift*.] 1. Given; bestowed.—

Maid of my enemies the scorn and gaze,
To grind in brazen fetters, under task.
With my heav'n *gifted* strength. *Milt. Agon.*

2. Endowed with extraordinary powers. It is commonly used ironically.—Two of their *gifted* brotherhood, Hacket and Coppinger, got up into a pease cart, and harangued the people to dispose them to an insurrection. *Dryden*.—There is no talent so pernicious as eloquence, to those who have it not under command: women, who are so liberally *gifted* by nature in this particular, ought to study the rules of female oratory. *Add. Freeb.*

(1.) * *GIO*. *n. f.* [Etymology uncertain.] 1. Any thing that is whirled round in play.—Playthings, as tops, *gigs*, and battledores, should be procured them. *Locke*. 2. [*Gigia*, *Islandic*.] A riddle. Now out of use.

(2.) *GIG*, } *GIGG*, or *JIG*, in music or dance.

(1.) *GIGA*, } cing, a gay, brisk, sprightly composition, and yet in full measure, as well as the *minuet*, which is more serious. *Manège* takes the word to arise from the Italian *giga*, a musical instrument mentioned by *Dante*. Others suppose it to be derived from the Teutonic *gig*, or *glugke*,

“a riddle.” This is a favourite air in nations of Europe: its characteristic is a marked $\frac{6}{8}$, or $\frac{12}{8}$: it consists of two bars out any determinate number of bars.

(2.) *GIGA*, in geography. See *GIGANTICK*. *adj.* [*gigantes*, Lat.] to a giant; big; bulky; enormous; like ed; atrocious.—

Others from the wall descend
With dart and jav'lin, stones, and fire;
On each hand slaughter and *gigantic*

I dread him not, nor all his giant brood
Two' fame divulg'd him father of fire
All of *gigantick* race, Goliath chief.

The son of Hercules he justly seen
By his broad shoulders, and *gigantic* De.

The Cyclopean race in arms arise
A lawless nation of *gigantick* foes.

GIGANTOMACHY, *n. f.* in the war of the giants. See *GIANT*, §

GIGEAU, a town of France, in the Hérault, 7 miles S. of Montpellier.

GIGG. See *GIG*.

* To *GIGGLE*. *v. n.* [*gigelen*, D.] laugh idly; to titter; to grin with mirth. It is retained in Scotland.—

We flew our present joking, *giggle*
True joy consists in gravity and *grin*
Garrick

* *GIGGLER*. *n. f.* [from *giggle*.] a titterer; one idly and foolishly merry
A tad wife vaunter is the brave cox
That leads the van, an' i swallows up
The *giggler* is a milk-maid, whom
Or the fir'd beacon, frighteth from

GIGGLEWICK, a town in the W. Yorkshire, half a mile from Settle, on a moor, at the foot of a mountain, is a most noted in England for ebbing & sometimes thrice in an hour, and the tides three quarters of a yard at the red the sea is 30 miles off. At this town next free grammar school; and near it of flags, slate, and stone, with a good

(1.) *GIGHA*, *GIGA*, or *GIGO*, a Scotland, on the W. coast of Kintyre shire, 11 miles ESE. of Ilay; 7 miles NE. to SW. and 2½ broad. The soil is arable. The W. coast is high and the E. there are several dangerous inlets well as some good harbours for small fish, particularly lobsters, crabs, cod-zor or spout fish, abound on the shore, weighing from 6 to 16 lb. each, ling, large haddocks, &c. also about high duty on salt prevents any export from being carried on. In 1790, 3 b men were employed in this fishing, a sent to market, and in 1791, 8 bo 60 people are employed in the ber There is a regular ferry between *Gig tyre*. Before the late repeal of the carried coastwise, fuel was so scarce, prietors allowed the people to cut

d meadow grounds; and "in many

lying on the SW. side of the Caspian
s supposed to be the HYRCANIA of the

It is very agreeably situated, having

the sea on one side and high mountains on the o-
ther; and there is no entering it but by narrow
passes, which may easily be defended. The sides
of the mountains are covered with many sorts of
fruit trees, and in the highest parts of them there
are deer, bears, wolves, leopards, and tigers;
which last, the Persians have a method of taming,
and hunt with them as we do with dogs. Gilan
is one of the most fruitful provinces in Persia;
and produces abundance of silk, oil, wine, rice,
and tobacco, besides excellent fruits. The inha-
bitants are brave, and of a better complexion than
the other Indians; and the women are extremely
handsome. Resht is the capital.

GILARZA, a town of Sardinia, SE. of Bosa.

GILATTELK, a town of Transylvania.

GILBERT, or William, a physician, born
(1.) GILBERT, at Colchester, in 1540, the
eldest son of the recorder of that borough. Ha-
ving spent some time in both universities, he went
abroad; and at his return settled in London, where
he practised with considerable reputation. He
became a member of the college of physicians,
and physician in ordinary to Q. Elizabeth, who
gave him a pension. He was also physician to K.
James I. He died in 1603, aged 63, in Colches-
ter, where a handsome monument was erected to
his memory. His books, globes, instruments,
and fossils, he bequeathed to the college of phy-
sicians, and his picture to the school gallery at Ox-
ford. He wrote, 1. *De Magnete, magneticisque corpo-
ribus, et de magno magnete tellure, physiologia nova*;
Lond. 1600, fol. 2. *De mundo nostro sublanari, phi-
losophia nova*; Amsterdam, 1651, 4to. He also in-
vented two mathematical instruments for finding
the latitude at sea without the help of sun, moon,
or stars. A description of these instruments was
afterwards published by Thomas Blondenille in
his *Theoriques of the planets*.

(2.) GILBERT, Sir Humphrey, a brave officer
and skilful navigator, born about 1535, in Devon-
shire, of an ancient and honourable family. He
inherited a considerable fortune from his father.
He was educated at Eaton and Oxford. Being
introduced at court by his aunt Mrs Catherine
Ashley, then in the queen's service, he was diver-
ted from the study of the law, and commenced
soldier. Having distinguished himself in several
military expeditions, particularly that to Newha-
ven, in 1563, he was sent over to Ireland to assist
in suppressing a rebellion; where, for his signal
services, he was made commander in chief and
governor of Munster, and knighted by the lord
deputy, Sir Henry Sidney, Jan. 1, 1570. He re-
turned soon after to England, where he married
a rich heiress. In 1572, he sailed with a squadron
of 9 ships to reinforce Colonel Morgan, who me-
ditated the recovery of Flushing. In 1576, he
published his book on the NW. passage to the
East Indies. In 1578, he obtained an ample pa-
tent, empowering him to possess in N. America
any lands then unsettled. He sailed to Newfound-
land, but soon after returned to England without
success; nevertheless, in 1583, he embarked a se-
cond time with five ships, the largest of which put
back on account of a contagious distemper on
board. He landed on Newfoundland on the 31
Aug. and on the 5th took possession of the har-
bour

bour of St John's. By virtue of his patent, he granted leases to several people; but though none of them remained there at that time, they settled afterwards in consequence of these leases; so that Sir Humphrey deserves to be remembered as the real founder of the vast N. American empire. On the 20th of Aug. he put to sea again on board a small sloop; which on the 27th foundered in a hard gale of wind. Thus perished Sir Humphrey Gilbert; a man of quick parts, a brave officer, a good mathematician, a skilful navigator, and of a very enterprising genius. He also was remarkable for his eloquence, being much admired for his patriotic speeches in the English and Irish parliaments. His work entitled "A discourse to prove a passage by the north-west to China and the East Indies," is a masterly performance, and is preserved in Hakluyt's collection of voyages, vol. iii. p. 21. The style is superior to most, if not to all, the writers of that age; and shows the author to have been a man of considerable reading.

GILBERTINES, an order of religious, thus called from St Gilbert of Sempringham, in Lincolnshire who founded it about 1148: The monks observed the rule of St Augustine; and were accounted canons; and the nuns that of St Benedict. The founder erected a double monastery, or rather two contiguous to each other, the one for men, the other for women, but separated by a very high wall. He founded 23 monasteries of this order, viz. 4 for men alone, and 9 for men and women together, which had in them 700 brethren and 1500 sisters. At the dissolution there were about 25 houses of this order in England and Wales.

GILBERT'S ISLAND, an island near the SW. coast of Terra del Fuego. Lon. 71. 7. W. Lat. 55 13. S.

GILBERTSTOWN, a town of Virginia, 30 m. N. of Charlottesville.

GILBOA, in ancient geography, mountains of Samaria, stretching from W. to E. on the confines of the half tribe of Manasseh, and of the tribe of Issachar; and to the S. of the valley of Jezreel, beginning westward at the city of Jezreel, at the foot of these mountains, reaching almost quite to the Jordan, 6 miles from Scythopolis. They are famous for the death of Saul and Jonathan, and the defeat of the Israelites by the Philistines.

GILCHRIST, Dr Ebenezer, an eminent Scots physician, born at Dumfries in 1707. He studied medicine at Edinburgh, London and Paris; and obtained the degree of M. D. from the university of Rheims. In 1732, he returned to Dumfries, where he practised medicine till his death. Few physicians of the 18th century have exercised their profession in a manner more respectable or successful than, Dr Gilchrist. Endowed by nature with an acute judgment and an active genius, he soon distinguished himself by departing from established but unsuccessful modes of practice. Several of his improvements have procured him great and deserved reputation at home and abroad. His usefulness was not confined to his own neighbourhood. He was often consulted by letter from the most distant parts of the country. In different collections are to be found several of his valuable performances: But those which do him the great-

est honour, are two dissertations on Nerves, in the Medical Essays and Observations published by a Society in Edinburgh; and on the use of Sea voyages in medicine; in 1757, and 1771. By the former, the art of physicians was first turned to a track which is now found to prevail universally in every country; and the liberal use of wine, was the first among the moderns to be adopted in these fevers; and has since been adopted in these fevers by judicious physicians of the present age. His use on sea voyages proves from experience its utility in various distempers, particularly the scurvy. Dr Gilchrist died in 1774.

GIL'D, or GILD. See GILD.

* To GILD, v. a. pret. *gilded*, or *gilt* Saxon; 1. To wash over with gold, with tinctured gold.—

The room was large and wide,
As it to me *gilt* or solemn temple was
Many great gilded pillars did uprear
The misty roof.

To *gilt* refined gold, to paint the
To throw a perfume on the violet.

Shak

And the *gilded* ear of day
His glowing axle doth allay
In the deep Atlantick stream.

Partaking with our time and we
We seek our freedom in a *gilded* snare

When Britain, looking with a just
Upon this *gilded* majesty of Spain,
And knowing well that empire must
Whose chief support and sinews are

Her joy in *gilded* chariots, when all
And love of ombre after death pursues

2. To cover with any yellow matter.—

Thou did'st drink

The stale of horses and the *gilded* pux
Which beasts would cough at.

Shak. Ant

3. To adorn with lustre.—

No more the rising sun shall *gild* th
Nor evening Cynthia fill her silver horn

Pope

4. To brighten; to illuminate.—The
passion of joy was not that trivial, van
pericious thing, that only *gilds* the app
and plays upon the surface of the so
5. To recommend by adventitious orna

For my part, if a lie may do thee
I'll *gild* it with the happiest terms I can

Shak

Yet, oh! th' imperfect piece move
light;

'Tis *gilded* o'er with youth, to catch
Dryden's

GILDAS, surnamed *the Wise*, a celest
tish monk born in Wales in 512. Who
educated is uncertain. Some say he was
Ireland; others, that he visited France
All agree, that after his return to E
became a most assiduous preacher of t
Du Pin says he founded a monastery at
Britain. Gildas is the only British au
6th century whose works are printed.
ry of Britain is valuable on account of

as containing the only information we concerning the times of which he wrote; his style is inelegant.

MEHAUSZ, a town of Germany, in the Westphalia, 3 miles SW. of Benheim.

GILDER. *v. s.* [from *gild*.] 1. One who lays the surface of any other body.—*Gilders* have a piece of gold in their mouth, to be the spirit of the quick-silver. *Bacon's Nat. Ve* have here a *gilder*, with his anvil and *Broome*. 2. A coin, from one shilling hence, to two shillings. *Phil.*—

I am bound

et fia, and want *gilders* for my voyage. *Shak.*

GILDING. *v. s.* [from *gild*.] Gold laid surface by way of ornament.—Silvering ly and canker more than *gilding*, which, ight be corrected with a little mixture of here is profit. *Bacon's Phys. Rem.*—The of the Annunciation, all but one corner covered with statues, *gilding*, and paint. *on Italy.*—

ould laureate Dryden Pimp and Fry'rengage, I not strip the *gilding* off a knave, plac'd, unpension'd, no man's heir or slave?

Pope.

GILDING signifies also the art of spread-covering a thing over with gold, either in liquid.

GILDING, ANCIENT ACCOUNTS AND MODS OF. This art was known among the *Es*, though it never arrived among them at *fection* to which the moderns have carried *ney* assures us, that the first gilding seen at *was* after the destruction of Carthage, under *eforship* of Lucius Mummius, when they to gild the ceilings of their temples and *;* the Capitol being the first place on *this* enrichment was bestowed. But he *that* luxury advanced on them so hastily, *a* a little time you might see all, even *nd* poor persons, gild the very walls, vaults, *f* their houses. We need not doubt but *nd* the same method with us, of beating *nd* reducing it into leaves; though they *carry* it to the same height. Pliny relates, *hey* only made 750 leaves of four fingers out of a whole ounce. But he adds, *hey* could make more; that the thickest *alled* *bractes Prænestine*, from a statue of *ne* at Prænestine gilt with such leaves; and *he* thinner sort were called *bractes quæstoræ*. *ncients* had no way to lay the gold on *ho* *nt* would not endure the fire, but with whites *or* size, neither of which will endure the *;* so that they could only gild such places *re* sheltered from the moisture of the weather. *Greeks* called the composition on which they *nd* their gilding on wood *LEUCOPHÆUM* or *serum*; which is described as a sort of gluticom-pound earth, serving in all probability *ke* the gold stick and bear polishing. But *rticulars* of this earth, its colour, ingredients. antiquaries and naturalists are not a-
apon.

GILDING, MODERN METHODS OF. The *ne* gilders also use gold leaves of divers thick-
; but there are some so fine, that a thou-

sand do not weigh above 4 or 5 drachms. The thickest are used for gilding on iron and other metals; and the thinnest on wood. But we have another advantage over the ancients in the manner of using or applying the gold: the secret of painting in oil, discovered in later ages, furnishes us with means of gilding works that shall endure all the injuries of time and weather, which to the ancients was impracticable. The lustre and beauty of gold have occasioned several inquiries, and discoveries concerning the different methods of applying it to different substances. Hence the art of gilding is very extensive, and contains many particular operations and various management. It is divided into true and false gilding.

i. **GILDING, FALSE.** A colour of gold is given by painting and by varnishes, without employing gold. Thus a very fine golden colour is given to brass and to silver, by applying upon these metals a gold-coloured varnish, which, being transparent, shows all the brilliancy of the metals beneath. Many ornaments of brass are varnished in this manner, which is called *gold lathering*, to distinguish them from those which are really gilt. Silver leaves thus varnished are put upon leather, which is then called *gilt leather*. See **LACKER**. Amongst the false gilding may also be reckoned those which are made with thin leaves of copper or brass, called *Dutch leaf*. In this manner are made all the kinds of what is called *gilt paper*.

ii. **GILDING, TRUE.** In the true gilding, gold is applied to the surface of bodies. The gold intended for this purpose ought in general to be beat into thin leaves, or otherwise divided into very fine parts.

(1.) **GILDING OF METALS.** One method of applying gold upon metals is this: The surface of the metal to be gilt is first to be cleaned; and then leaves are to be applied to it, which, by means of rubbing with a polished blood-stone, and a certain degree of heat, are made to adhere perfectly well. In this manner silver leaf is fixed and burnished upon brass in the making of what is called *French plate*, and sometimes also gold leaf is burnished upon copper and upon iron. Gold is applied to metals in several other manners. One of these is by previously forming the gold into a paste or amalgam with mercury. To obtain a small amalgam of gold and mercury, the gold is first to be reduced into thin plates or grains, which are heated red-hot, and thrown into mercury previously heated, till it begins to smoke. Upon stirring the mercury with an iron rod, the gold totally disappears. The proportion of mercury to gold is generally as 6 or 8 to one. With this amalgam the surface of the metal to be gilded is to be covered; then a sufficient heat is to be applied to evaporate the mercury: and the gold is lastly to be burnished with a blood-stone. This method of gilding by amalgamation is chiefly used for gilding copper, or an alloy of copper with a small portion of zinc, which more readily receives the amalgam; and is also preferable for its colour, which more resembles that of gold than the colour of copper. When the metal to be gilt is wrought or chased, it ought to be previously covered with quicksilver before the amalgam is applied, that this may be easier spread: but when the surface

be sufficiently durable: the upper chimney may reach above a foot and a half the level of the fire: over this is a large tube, leaving an interval of six or eight inches all round between it and the chimney, rising to the height of 10 or 12 feet, the better. The external air, passing between the chimney and the outer pipe, prevents from being much heated, so that the fumes will condense against its sides. Quicksilver, which, falling down to the bottom, is there caught in a hollow rim, forming inwards a portion of the lower chimney, conveyed, by a pipe at one side, into a receiver. Some metals, particularly silver, may be gilt in the following manner: Let gold be dissolved in aqua regia. In this solution pieces of silver may be dipped, and burnt to black ashes, being rubbed on the surface of the silver with a wet linen rag, apply the particles of gold which they contain, and which by this means adhere very well. The remaining silver is to be washed off; and the surface of the silver, which in this state does not reflect light, is to be burnished with a blood-stone, to acquire a fine colour of gold. This gilding is very easy, and consumes a small quantity of gold. Most gilt ornaments, such as boxes, and other toys of much value, are nothing but silver gilt.

GILDING OF UNMETALLIC BODIES. As gold does not adhere well merely by contact to other unmetallic substances, when gold is applied to the surface of an unmetallic substance, the surface must be previously covered with a sticky and tenacious substance by which the gold may be made to adhere. These substances are called *sizes*. Some of these are animal and vegetable glues, and others of mineral and drying matters. Upon them the gold is applied, and pressed down with the finger or a hard's foot: and when the work is to be finished and polished, a hard instrument, called a *dog's tooth*,

When the work is required to be capable of resisting rain or moisture, it ought to be prepared with a composition of drying oil and turpentine ground together: otherwise a water varnish, which is prepared by boiling turpentine or white leather in water, and adding to this some chalk or whiting: several layers of this size must be laid upon the wood, and a layer of the same size mixed with red lead. Lastly, another mixture called *gold size*, applied above these; upon which the gold leaf is to be fixed. This gold size, the purpose of which is to make the gold leaf capable of adhering, is composed of tobacco-pipe clay mixed with some ruddle or black lead, and thickened with a little tallow or oil of olives. The surface may be gilt by applying first a very thin varnish, upon which the gold leaf is to be laid when the varnish is hardened, may be removed. This varnish is prepared by boiling turpentine with linseed oil in a brass vessel over a slow fire, and by diluting the varnish with 4 or 5 times its quantity of oil

of turpentine; and that it may dry sooner, it may be ground with some white lead. Gold leaf may also be applied to glass, porcelain, and other vitrified matters. As the surface of these matters is very smooth, and consequently is capable of a very perfect contact with gold leaves, these leaves adhere to them with some force, although they are not of a metallic nature. This gilding is so much more perfect, as the gold is more exactly applied to the surface of the glass. The pieces are then to be exposed to a certain degree of heat, and burnished slightly to give them lustre. A more substantial gilding is fixed upon glass, enamel, and porcelain, by applying to these substances powder of gold mixed with a solution of gum arabic, or with some essential oil, and a small quantity of borax; after which a sufficient heat is to be applied to soften the glass and the gold, which is then to be burnished. With this mixture any figures may be drawn. The powders for this purpose may be made, 1. By grinding gold leaf with honey, which is afterwards to be washed away with water. 2. By distilling to dryness a solution of gold in aqua regia. 3. By evaporating the mercury from an amalgam of gold, taking care to stir the mass near the end of the process. 4. By precipitating gold from its solution in aqua-regia, by applying to it a solution of green vitriol in water, or some copper, and perhaps some other metallic substances.

(1.) GILEAD, the son of Machir, and grandson of Manasseh. His posterity had their inheritance allotted them in the mountains of Gilead, so named from him.

(2.) GILEAD, a descendant of the above mentioned patriarch, and the father of JEPHTHAH.

(3.) GILEAD, BALM OF. See N° 4. and AMYRIS, y 3, 4.

(4.) GILEAD, MOUNTAINS OF. The mountains of Gilead were part of that ridge which runs from Mount Lebanon southward, on the east of the Holy Land; gave their name to the whole country which lies on the east of the sea of Galilee, and included the mountainous region, called in the New Testament, TRACHONITIS. Jer. (xxii. 6.) seems to say, that Gilead begins from mount Libanus. Jacob, at his return from Mesopotamia, came in six days to the mountains of Gilead, (Gen. xxxi. 21. &c.) where this patriarch, with Laban his father-in-law, raised a heap of stones, in memory of their agreement and covenant, and called it *Galead*, i. e. "an heap of witnesses," and which Laban called *Jegar jubadutba*. These mountains were covered with trees abounding with gum, called the *balm of Gilead*, which the Scripture commends much. (Jer. viii. 21. xvi. 11. li. 8.) The merchants who bought Joseph came from Gilead, and were carrying balm into Egypt, Gen. xxxvii. 25.

GILEADITES, the descendants of GILEAD. Being invaded by the Ammonites, &c. they chose Jephthah for their general, who vanquished all their enemies.

(1.) GILES, John, D. D. and M. D. a native of St Albans, who flourished in the 13th century, and was the first Englishman who entered among the Dominicans. He was physician in ordinary to

justly accommodated to our great and divine; who, so far as the distinctions of the gospel are concerned, I an error which he did not force upon holds, nor ever encountered an error he did not baffle and subdue. and labours, were exceeded only by the sanctity of his life and conversation. His entrance on the ministry to the dissolution, not one of his most industrious was ever able to charge him with shadow of immorality. Himself, his writings, demonstrated that the race does not lead to licentiousness."

sums up Dr Gill's character by observing "while true religion and sound sense are a single friend remaining in the British works and name of Gill will be revered." He died at Camberwell, 18, aged 73 years, 10 months and 10 days. 18 the Doctor married Mrs Elizabeth whom he had many children, two of whom survived him. Mrs Gill died in 1764. 1. A Commentary on the Old and New Testament, in 9 vols fol. 2. A Body of Divinity, 4to. 3. The Cause of God and Man, 8vo. 4. A Treatise concerning the Prophecies of the Old Testament respecting the Messiah. 5. A Dissertation on the antiquity of the Hebrew Language, Letters, Vowel Points, &c. 6. Sermons on the Canticles, folio; a great number of sermons and controversies on different subjects.

GILL. *n. f.* [*agulla*, Spanish; *gula*, Lat.] The gill-plates at each side of a fish's head.—

The leviathan,
like a promontory, sleeps or swims,
as a moving land, and at his gills
spouts out a sea.

Milton.
The form of respiration under water by the gills. He hath two gill fins; not behind the most fishes, but before them. *Walton*.
The eye, of farther passage quite bereft,
The mesh with gills entangl'd left.

King's Fisherman.
The gills that hang below the beak of a fowl. A cock hath great and swelling gills, a hen hath less. *Bacon's Nat. Hist.* 3. The gill of the chin.—In many there is no pale, but, contrariwise, redness about the gills, which is by the sending forth of the appetite to revenge. *Bacon's Nat. Hist.* 4. The long bag of flesh hanging down from the chin of the people in Piedmont. *Swift*. 4. [From *gillian*, Latin.] A measure of liquids, the fourth part of a pint.—Every bottle rinsed with wine: some, out of the cask, will rinse a dozen with the wine at every second bottle: some enough. *Swift*. 5. A kind of measure used by the tanners.—They measure their beer by the gill, which containeth a pint. In the northern counties it has half a pint for a measure. 7. [From *gillian*, the old name of writing *Julian*, or *Jubana*.] The name of a woman in ludicrous language.—
PART. II.

I can, for I will,
Here at Burley o' th' Hill,
Give you all your fill,
Each Jack with his Gill. *Ben Jonson's Gypsies*.
8. [*Ciclidonium*.] The name of a plant; ground ivy. 9. Malt liquour medicated with ground ivy. (3.) GILL, in geography, a township of Massachusetts in Hampshire county, on the W. bank of the Connecticut.

(4.) GILLS of Fish. See ZOOLOGY.

GILLEM'S BAY, a bay on the S. coast of St Christophers, half a league W. of Basseterre.

GILLES, Peter, a learned and enterprising French author, born at Albi, in 1490. After studying the Latin and Greek languages, philosophy, natural history, &c. he travelled through France and Italy. In 1533, he dedicated a work to Francis I, wherein he advised that monarch to send learned men to travel into foreign countries for the improvement of science; in consequence of which the king sent Gilles into the Levant. But having received no remittances from France, during his journey, he was at last obliged to enlist for subsistence in the army of Soliman II. In another voyage he was taken by a pirate, and carried into Algiers. By the generosity of cardinal Armagnac, he obtained his liberty; after which he went to his benefactor at Rome; where he died in 1555.

GILLESKAAL, a town of Norway.

(1.) GILLESPIE, the rev. James, D. D. an eminent divine of the church of Scotland, late Princ. of St Mary's College, in the University of St Andrews. He was the son of Mr Jas. Gillespie, Minister of Arngask; born in 1722, and studied at St Andrews, where he received all his academical honours. He was ordained minister of Abdie, in Fifeshire, on the 18th March, 1747; translated to Dumbarny, about 1750; and thence to St Andrews, Nov. 3d, 1757. This charge he resigned, on being appointed Principal, on the 14th Sept. 1779. He married, 1st. Isabella Dick, daughter of Mr W. Dick, minister of Cupar in Fife, in 1748, by whom he had 11 children: and 2d Jean Fortune, daughter of Capt. Geo. Fortune, in 1772, by whom he had 4 children. Of these 12 have survived him. He died 2d June, 1791, aged 69. Twelve Sermons, selected from his MSS. by his successor, Dr G. Hill, and which, (to use the Doctor's words,) form "a valuable accession to the stores of sacred literature," were published after his death, at Perth, in 8vo, 1796; with a prefatory advertisement, from which we extract the following brief sketch of his character, drawn more at large by Dr Hill, in his funeral sermon:—"In the private intercourse of life, he was gentle and amiable. Although little disposed to obtrude himself in conversation, he contributed to the cheerfulness of every company, both by his polished address, and by the happy art of introducing, in the most pleasing manner, something suited to the time, the place, and the persons. His long experience in the management of affairs led him to disapprove of rash and violent measures, and he was always a counsellor of peace. Yet he was ever ready to make allowance for those who did not listen to the counsels, which he mildly suggested. Forbearing, fair, and candid, he never failed to put the best construction upon the motives and actions of

of all around him. He studied to gain his brother by kindness, and he knew how to turn away wrath by a soft answer. The world can ill spare spirits such as his."

(1.) GILLESPIE, the rev. Thomas, a late pious and popular divine of the church of Scotland, who, in consequence of a very singular and unprecedented stretch of ecclesiastical power, by the ruling party in that establishment, was deposed in May 1752, not for any immorality, but merely for acting according to his conscience; and became afterwards the founder of the sect, since denominated the Church or Presbytery of Relief. See RELIEF. Mr Gillespie was born at Cleithurn in the parish of Duddingstone, 3 miles SE. of Edinburgh, where his father kept a brewery. After receiving the rudiments of his education at Edinburgh, he completed his studies under the rev. Dr Doddridge at Northampton. He was ordained minister of Carnock, in Fifeshire, in 1741, and had been 10½ years minister of that parish, when he was ejected. His friends soon after built a church for him in Dunfermline, and Mr Boston of Jedburgh and some others joined in communion with him. He lived about 20 years after this, during which period he saw many Relief churches planted in different parts of the kingdom. He published a small tract, entitled *An Essay on the Continuance of Immediate Revelations of Facts and Future Events, in the Christian Church*; and after his death was published his *Treatise on Temptation*. The rev. Dr Erskine of Edinburgh wrote prefaces to both these tracts. Mr Gillespie married Miss Rickale, but they had no children. He died in April 1775. The following character of him is extracted from *Historical Sketches of the Relief Church*, published in 1771, soon after his death, by the rev. Mr James Smith, who succeeded him in the Relief church at Dunfermline. "This good man was acknowledged even by his enemies, to be eminently pious. Though his natural faculties were no way uncommon, he was exceedingly diligent in the discharge of his duty; he was remarkably zealous for religion. Though his pulpit talents were not the most shining, yet his zeal, his piety, and the persecution he suffered, rendered him very popular. His manners were rigid; his mind austere. The integrity of his heart made him liable to imposition. Little acquainted with the world, he was far from being a scheming politician, insinuating flatterer, or calculated to take a lead in society. To a warmth of temper was added an inflexibility of mind, which inclined him to adhere tenaciously to all his opinions: convinced that he suffered for righteousness' sake, he gloried in his persecution. His ejection out of the church was the mean of bringing him into public view. He once was tainted with Independent principles, yet afterwards heartily approved of the Presbyterian scheme," &c.

* GILLHOUSE. *n. f.* [*gill* and *house*.] A house where *gill* is sold.—

Three shall each alchouse, three each *gillhouse* have.

And as they sing ginshops sower sighs return. *Pope*.

GILLIES, John, D. D. a late learned and pious divine of the Church of Scotland, author of a History of the propagation of the Gospel in America, during the 16th, 17th, and 18th centuries. He was

born in 1712, and after having passed the usual course of study, at the university, was ordained one of the ministers of Glasgow 19th July, 1738. He died at Glasgow 29th March, 1796, in the 84th year of his ministry, much regretted by the congregation and numerous acquaintance. He was fond of literature, his manners, and zealous for Christ. liberal to Christians of all denominations. He wrote notes on *Alison's Paradise Lost*.

(1.) GILLINGHAM, a parish of Kent, 3 miles below Chatham, and on the side of the Medway. Part of Chatham is in this parish; and here is a castle well furnished with guns that command the river, there being more than 170 embrasures for cannon; which the progress of any enemy who should be driven to the sea, before they could reach here are almost impossible. At this place many who came over with the prince of Wales, were barbarously murdered by the king. It was in remote times the property of the Bishops of Canterbury, who had here an elegant old hall at which is now converted to a school.

(2.) GILLINGHAM, a parish of English fethire, on the Stour, near the forest, is one of the largest parishes in the county, 41 miles in circuit, and containing 64 hamlets on the borders of Wilts and Dorset NW. of Shaftsbury. It has a manufactory. Near it are the traces of an ancient of Norman or Saxon king, 320 feet long and broad, surrounded by a rampart of earth. It resided here, and king John repaired the expense of the county. Edward I. Christ is here in 1270; the house was of the latter L, in length 180 feet by and the foot of the letter 48 by 40. The house contained 168,000 square feet encompassed by a moat, now dry, in 19 feet deep, and 20 broad. The ramparts have been 30 feet thick. In 1694, received damage of near 4000l. by a fire.

(3.) GILLINGHAM FOREST, an ancient Dorsetshire, near the above parish, (1) miles long, and one broad; famous for the Dines by King Edmund Ironside.

GILLORI, an island of W. Florida.

GILLSAY, an island of Scotland, betwixt Lewis and N. Uist.

(1.) GILLY, or LOUGH GILLY, a lake, in Sligo county, 2 miles W. of Sligo.

(2.) GILLY SUR LOIRE, a town of the dep. of Saone and Loire, 4½ miles S. from Lancy.

(1.) * GILLYFLOWER. *n. f.* (Either from *July-flower*, or from *grosse*, Fr.) C or rather *July-flowers*, so called from the time they blow in, may be reduced to these and white, purple and white, scarlet and *Mortimer's Flybundry*.—In July come 3 of all varieties. *Baron*.—

Fair is the *gillyflower* of gardens (in Fair is the *marygold*, for pottage meat).

(2.) GILLYFLOWER. See CHALKWORTH.

GILMANTOWN, a township of N.

Strafford county; containing 775 citizens and 2613 in 1790.

SILOLO, a large island of the Pacific Ocean of the Moluccas, lying between 1° Lat. 2° Lat. N. and between 125° and 128°

It belongs to the Dutch; but does not contain any of the fine spices, though it lies near the islands. The natives are fierce and cruel.

SILOLO, the capital of the above island.

SILPIN, Bernard, an eminent English divine, descended from an ancient and honourable family in Herefordshire, and born in 1517. Being bred in the Roman Catholic religion, he for some time studied at Oxford, and at Oxford held a disputation with the Jesuits, afterwards bishop of Worcester, and afterwards for the Protestant faith; but was afterwards another disputation with Peter Martyr, and again seriously to examine the contested points.

Being presented to the vicarage of Northampton, he resigned it, and went abroad to visit eminent professors on both sides: and after years absence returned a little before the death of Q. Mary I. satisfied in the doctrines of the reformation. He was kindly received by the Dr. Tonstall, Bp. of Durham; who soon afterwards presented him the archdeaconry of Durham, and the rectory of Essington. Though the persecution was at its height, he boldly preached against the errors, and corruptions of the times, especially in the clergy; on which a charge consisting of 13 articles was drawn up against him, presented in form to the bishop. But Dr. Tonstall dismissed the cause in such a manner as that his nephew, without endangering himself, soon after presented him to the rich living of Houghton-le-Spring. He was again accused by the bishop, and again protected; when his enemies, enraged at this second defeat, laid their complaint before Dr. Bonner, Bp. of London; who immediately gave orders to apprehend him. Upon this Mr. Gilpin bravely prepared for martyrdom, and ordering his steward to provide him a garment that he might make a decent appearance at the stake, set out for London. Luckily, however, he broke his leg on the journey; which retarded his arrival until the queen's death. Immediately set at liberty, he returned to Northampton, where he was received by his parish with the sincerest joy. Upon the deprivation of the Popish bishops, he was offered the see of Northampton, which he declined; and confining himself to his rectory, discharged all the duties of a minister in the most exemplary manner. He was satisfied with the advice he gave in public, and used to instruct in private; and made his parishioners come to him with their difficulties. He was in a most engaging manner towards those whom he thought well-disposed; his very reproof was softened, that it seldom gave offence; the gentleness, with which it was urged, made it appear the effect of friendship. By these means in a few years he made a great change in the neighbourhood, and gave an evidence what reason a single man may effect, when he has it. He was particularly anxious to improve the minds of the younger part of his flock; pressing them to mix religion with their labours, and

amidst the cares of this life to have a constant eye upon the next. He attended to every thing which might be of service to his parishioners, and was very assiduous in preventing law-suits. His hall is said to have been often thronged with people, who came to him about their differences. Though little acquainted with law, he decided equitably, and that satisfied: nor could the royal commission have given him more weight than his own character gave him. His hospitable manner of living was the admiration of the whole country. He spent in his family every fortnight 40 bushels of corn, 20 bushels of malt, and a whole ox; besides a proportionable quantity of other provisions. Strangers and travellers found a cheerful reception. All were welcome that came; and even their beasts had so much care taken of them, that it was said, "If a horse was turned loose in any part of the country, it would immediately make its way to the rector of Houghton's." Every Sunday, from Michaelmas to Easter, was a public day with him. During this season he wished to see all his parishioners and their families. For their reception, he had three tables well covered: the first for gentlemen, the second for husbandmen, and the third for day-labourers. This piece of hospitality he never omitted, even when losses, or a scarcity of provision, made its continuance rather difficult. When he was absent from home, no alteration was made in his family expences; the poor were fed, and his neighbours entertained as usual. Notwithstanding the extent of his parish, Mr. Gilpin thought the sphere of his benevolence too confined. It grieved him to see everywhere, in the parishes around, so great a degree of ignorance and superstition, occasioned by the negligence of the clergy in those parts. To supply, as far as he could, what was wanting in others, every year he regularly visited the most neglected parishes in Northumberland, Yorkshire, Cheshire, Westmoreland, and Cumberland; and that his own parish in the mean time might not suffer, he was at the expence of a constant assistant. In each place he stayed 2 or 3 days, called the people about him, and laid before them, the danger of leading wicked or even careless lives; explaining to them the nature of true religion: instructing them in the duties they owed to God, their neighbour, and themselves: and showing them how greatly a moral and religious conduct would contribute to their present as well as future happiness. As he had all the warmth of an enthusiast, though under the direction of a very calm judgment, he never wanted an audience, even in the wildest parts; where he roused many to a sense of religion, who had contracted the most inveterate habits of inattention to every thing serious. And wherever he came, he used to visit all the gaols, few in the kingdom having then any appointed minister. By his labours, and affectionate manner of behaving, he is said to have reformed many very abandoned persons in those places. He employed his interest likewise for criminals, whose cases he thought attended with any hard circumstances, and often procured pardons for them. There are two tracts upon the borders of Northumberland, called READSDALE and TINEDALE, of all barbarous places in the north at that time

the most barbarous. Before the Union, these places were called the *debatable land*, as subject by turns to England and Scotland, and the common theatre where the two nations acted their bloody scenes. They were inhabited by a kind of desperate banditti, rendered fierce and active by constant alarms; who lived by theft and plunder on both sides of the barrier; and what they plundered on one side, they exposed to sale on the other; thus escaping justice on both sides. In this dreadful country, where no man would even travel who could avoid it, Mr Gilpin never failed to spend some part of every year. He generally chose the Christmas holidays, because he found the people at that season most disengaged, and most easily assembled. He had set places for preaching, which were as regularly attended as the assize towns of a circuit. If he came where there was a church, he made use of it: if not, of barns, or any other large buildings; where great crowds of people were sure to attend him, some for his instructions, and others for his charity.— This was a very difficult and laborious employment. The country was so poor, that what provision he could get, extreme hunger only could make palatable. The inclemency of the weather, and the badness of the roads, through a mountainous country, and at that season covered with snow, exposed him likewise often to great hardships. Sometimes he was overtaken by the night, the country being in many places desolate for several miles together, and obliged to lodge out in the cold. At such times, he made his servant ride about with his horses, whilst he himself on foot used as much exercise as his age and the fatigues of the preceding day would permit. All this he cheerfully underwent, esteeming such services well compensated, by the advantages which he hoped might accrue from them to his uninstructed fellow creatures. The disinterested pains he took among these barbarous people, and the good offices he was always ready to do them, drew from them the warmest and sincerest expressions of gratitude. Indeed, he was little less than adored among them, and might have brought the whole country almost to do what he pleased. One instance is related, that shews how greatly he was revered. By the carelessness of his servants, his horses were one day stolen. The news was quickly propagated, and every one expressed the highest indignation at the theft. The thief was rejoicing over his prize, when by the report of the country, he discovered *whose* horses he had taken. Terrified at what he had done, he instantly came trembling back, confessed the fact, returned the horses, and declared “he believed *the devil would have seized him directly*, had he carried them off knowing them to have been Mr Gilpin’s.” The value of Mr Gilpin’s rectory was about 400 l. a-year: an income, indeed, at that time considerable, but yet in appearance very disproportionate to the generous things he did: Indeed, he could not have done them, unless his frugality had been equal to his generosity. His friends, therefore, could not but wonder to find him, amidst his great and continual expences, propose to build and endow a grammar-school: a design, however, which his exact economy soon en-

abled him to accomplish, though the cost it amounted to upwards of 5000 l. His no sooner opened, than it began to flourish: there was so great a resort of young people that the town was soon not able to accommodate them. He put himself, therefore, to the inconvenience of sitting up a part of his own that purpose, where he seldom had fewer than 30 children. Some of these were persons of distinction, whom he board rates; but the greater part were poor, whom he not only educated, but maintained: he was at the expence of boarding in the town many other poor. He used to bring several every year from parts where he preached, particularly from Tinedale. As to his school, he needed able masters in it, whom he procured from Oxford, but himself likewise constant in it. To encourage and quicken the assiduity of his boys, he always took particular notice of the most forward: he called them *his sons*, and sent for them often into his study to examine them himself. When he met a poor man on the road, he made trial of his capacity by questions, and if the answers pleased him, he provided for his education. Besides those sent from his own school to the university, there wholly maintained, he likewise supported others, who were in circumstances too indigent for themselves, what farther assistance he could give. By these means he induced many to allow their children a liberal education, which otherwise would not have done it. He did not think it enough to afford the means of an academical education to these young men, but he endeavoured to make it as beneficial as he could. With this view he held correspondence with their tutors; and the youths themselves frequently wrote to give him an account of their studies. Every other year he made a journey to the university to inspect their behaviour. This care was not fruitless; for many of them became ornaments to the church, and instances of piety. Every Thursday of the year, a very large quantity of bread was sold wholly for the poor: and every Sunday what quantity of bread they wanted, four of the poorest were supplied with it. Four times in the year a dinner was given to them; when they received from him a certain quantity of corn, and a sum of money. At Christmas they had always an ox killed for them. In his walks abroad, he was always home with him poor people, and he was clothed as well as fed. He took great pains to inform himself of the circumstances of the poor, that the modesty of the sum might prevent his relief. But the money was, in his opinion, that which chiefly relieved them. It was one of his greatest pleasures to see the faces of his laborious neighbors brightened up by their taking under them. If he had lost a beast, he would send him a new one; if a farmer had had a bad year, he would send him an abatement in his tythes. If he was able, he took the misfortune

elf; and, like a true shepherd, exposed his flock. But he was most forward of those who had large families; such never parted with his bounty, when they wanted their children in the world. In the villages where he preached, as well as in the neighbourhood, his generosity and beneficence continually exercised; particularly in the parts of Northumberland. "When on his journey," says an old MS. life of him, "he would have 10l. in his purse; and, at home, he would be 20 nobles in debt, but would always pay within a fortnight after the gaols he visited, he was not only to give the prisoners proper instructions, but to purchase for them likewise what they wanted. Even upon the public-house he never let slip an opportunity of doing good. He has often been known to take off his hat, and give it to an half-naked traveller; and when he has had scarce money enough in his pocket to provide himself a dinner, yet would give away part of that little, or the whole, if any who seemed to stand in need of it. On returning home, he saw in a field several people crowding together; and judging something extraordinary had happened, he rode up, and found that one of the horses in a team had dropped down dead. The owner of it, being how grievous a loss it would be to him, he bade him not be disheartened: "I'll have," says he, "honest man, that horse of pointing to his servant's.—" Ah! mistaken the countryman), my pocket will not reach a beast as that." "Come, come (said the man,) take him, take him; and when I de- y money, then thou shalt pay me." This man, divine, who deservedly obtained the glo- ries of the Father of the Poor, and the As- the North, died in 1583, in the 66th year of his age.

GIMON, a township of New Hampshire, in Rockingham county.

GILT. *n. f.* [from *gild*.] Golden show; laid on the surface of any matter. Now ob- served in the

our gayness and our *gilt* are all besmirch'd, in rainy marching in the painful field. *Shak.* Thou wast in thy *gilt*, and thy perfume, deckt thee for too much curiosity: in thy thou knowest none, but art despis'd for the y. *Shak.*

GILT. The participle of **GILD**, which signifies here the *gilt* chariot never mark'd its way. *Pope.*

GILT-HEAD. *n. f.* [*gilt* and *head*.] 1. A bird. 2. A bird.—He blended together the *gilt-heads*, the brains of pheasants and peacocks, and the tongues of phenicopters, and the melts of the. *Hakewill.*

GILT-HEAD, in ichthyology. See **SPARUS**.

GILT-TAIL. *n. f.* [*gilt* and *tail*.] A worm from his yellow tail.

GIM. *adj.* [An old word.] Neat; spruce; effed.

BAR, a town of Cuba, 6 m E. of Havannah.

BORN, a lordship and citadel of Ger- in Westphalia, 8 m. SSW. of Wipperfurt.

* **GIMCRACK**. *n. f.* [Supposed by *Skinner*, to be ludicrously formed from *gin*, derived from *engine*.] A slight or trivial mechanism.—

For tho' these *gimcracks* were away,
However, more reduc'd and plain,
The watch would still a watch remain;
But if the horal orbit ceases,
The whole stands still, or breaks to pieces.

Prior.

—What's the meaning of all these transgrams and *gimcracks*? Jumping over my master's hedges, and running your lines cross his grounds? *Arbutnot's John Bull.*

GIMESCH, a town and castle of Hungary, 10 miles W. of Buckans.

GIMIGLIANO, a town of Naples, in Calabria Ultra; 10 miles E. of Nicastro.

* **GIMLET**. *n. f.* [*gibelet*, *guimbelet*, Fr.] A borer with a screw at its point.—The *gimlet* hath a worm at the end of its bit. *Moxon.*

* **GIMMAL**. *n. f.* [Supposed by *Skinner* and *Ainsworth* to be derived from *gimellus*, Lat. and to be used only of something consisting of correspondent parts, or double. It seems rather to be gradually corrupted from *geometry* or *geometrical*. Any thing done by occult means is vulgarly said to be done by *geometry*.] Some little quaint devices, or pieces of machinery. *Hanmer.*—

I think by some odd *gimmals* or device
Their arms are set like clock-, still to strike on,
Else they could not hold out so as they do.

Shak. Henry VI.

* **GIMMER**. *n. f.* [See **GIMMAL**.] Movement; machinery.—The holding together of the parts of matter has so confounded me, that I have been prone to conclude with myself, that the *gimmers* of the world hold together not so much by geometry as some natural magick. *More.*

GIMONE, a river of France, which runs into the Garonne, near Riviere Verdun.

GIMONT, a town of France, in the department of Gers, 12 miles E. of Auch.

* **GIMP**. *n. f.* [See **GIM**. *Gimp*, in old English, is neat, spruce.] A kind of silk twist or lace.

(1.) * **GIN**. *n. f.* [from *engine*.] 1. A trap; a snare.—

As the day begins,
With twenty *gins* we will the small birds take,
And pastime make. *Sidney.*

Which two, thro' treason and deceitful *gin*,
Have slain sir Mordant. *Spenser.*

So strives the woodcock with the *gin*;
So doth the coney struggle in the net. *Shak.*

Be it by *gins*, by snares by subtilty. *Shak.*

If those, who have but sense, can shun
The engines that have them annoy'd;
Little for me had reason done,

If I could not thy *gins* avoid. *Ben Jonson.*

I know thy trains,
Though dearly to my cost; thy *gins* and toils
No more on me have pow'r, their force is
null'd. *Milton.*

He made a planetary *gin*,
Which rats would run their own heads in,
And come on purpose to be taken,
Without th' expence of cheese and bacon.

Hudibras.
Keep

Keep from flaying scourge thy skin,

And ankle free from iron *gin*. *Hudibras*.

2. Any thing moved with screws, as an engine of torture.—

Typhæus' joints were stretched on a *gin*.

Shak.

3. A pump worked by rotatory sails.—The delfs would be so flown with waters, it being impossible to make any adits or foughs to drain them, that no *gins* or machines would suffice to lay and keep them dry. *Ray*.—A bituminous plate, alternately yellow and black, formed by water driving on the outside of the *gin* pump of Mostyn coalpits. *Woodw. on Fossils*. 4. [Contracted from GENEVA, which see.] The spirit drawn by distillation from juniper berries.—

This calls the church to deprecate our sin,
And hurls the thunder of our laws on *gin*.

Pope.

Gin shops sourer sighs return.

Pope.

(2.) *GIN*, in mechanics, a machine for driving piles, fitted with a windlass and winches at each end, where eight or nine men heave, and round which a rope is reeved that goes over the wheel at the top: one end of this rope is seized to an iron-monkey, that hooks to a beetle of different weights, according to the piles they are to drive, being from eight to thirteen hundred weight; and when hove up to a cross-piece, near the wheel, it unhooks the monkey, and lets the beetle fall on the upper end of the pile, and forces the same into the ground: then the monkey's own weight overhauls the windlass, in order for its being hooked again to the beetle.

(3.) *GIN*. See GENEVA, N° V, § i, ii.

(4.) *GIN*, in geography, a town of China, of the 3d rank, in Fetcheli, 10 miles S.E. of Chun-te.

GINAIRI, a town of Africa, in Kumbo.

GINASERVIS, a town of France, in the dep. of Var, 9 miles N.W. of Barjols.

GINERCA, a town of Corsica, seated on a small bay, so named, 13 miles S. of Calvi.

GINESTAS, a town of France, in the dep. of Aude, 7½ m. N.W. of Narbonne, and 9 E. of Axille.

GINGEE, a town of Indostan, on the coast of Coromandel, formerly capital of a kingdom of that name. It is seated on a mountain whose top is divided into 3 points, on each of which is a castle; 34 m. N.W. of Pondicherry, and 70 S.W. of Madras. Lon. 79. 56. E. Lat. 12. 16. N.

GINGEN, an imperial town of Suabia, 16 m. N. of Ulm. Lon. 10. 13. E. Lat. 48. 39. N.

(1.) * *GINGER*. *n. f.* [*zingiber*, Lat. *gingero*, Italian.] The flower consists of five leaves, shaped somewhat like those of the iris: these are produced in the head or club, each coming out of a separate leafy scale. The ovary becomes a triangular fruit, having three cells which contain seeds. *Miller*.—The root of *ginger* is of the tuberous kind, knotty, crooked, and irregular; of a hot, acrid, and pungent taste, though aromattick, and of a very agreeable smell. The Indians eat both the young shoots of the leaves and the roots themselves. *Hill's Mat. Med.*

Or waiting *ginger* round the streets to go,
And visit alehouse where ye first did grow.

Pope's Dunciad.

(2.) *GINGER*. See AMOMUM.

(3.) *GINGER*, in geography, one of Islands belonging to Britain, 10 miles Virgin Gorda.

* *GINGERBREAD*. *n. f.* [*ginger* and kind of farinaceous sweetmeat made of that of bread or biscuit, sweetened with and flavoured with ginger and some other tick seeds. It is sometimes gilt.—An' one penny in the world, thou should'st buy *gingerbread*. *Shak.*—

Her currans there and gooseberries
spread,

With the enticing god of *gingerbread*.

King

—'Tis a loss you are not here, to part a
weeks frost, and eat *gingerbread* in a
fire upon the Thames. *Swift*.

* *GINGERLY*. *adv.* [I know not derived.] Cautiously: nicely.—

What is't that you

Took up so *gingerly*?

* *GINGERNESS*. *n. f.* Niceness; tenderness.

GINGIDIUM, in botany, a genus of gynia order, belonging to the pentandry plants. The calyx is an involucre, near leaves; the corolla consists of 5 or 6 petals; the stamens are 5 filaments; the antheræ roundish; the pericarpium truncated fruit, with 8 striæ; there are 8 seeds, in some places plane, and convex.

GINGIRO, or ZINDERO, a barbarous name of Africa, S.W. of Abyssinia. See AFRICA.

GINGIVÆ, the gums. See GUMS.

* *GINGIVAL*. *adj.* [*gingiva*, Lat.] relating to the gums.—Whilst the Italians fix a thread in their pronunciation between so to sweeten it, they make the occlusal especially the *gingival*, softer than we do a little of perviousness. *Holzer*.

* *GINGLE*. *n. f.* [from the verb.] 1. A resounding noise. 2. A fluctuation in the periods.

(1.) * *To GINGLE*. *v. t.* To shake sharp shrill clattering noise should be made.

Her infant grandame's whistle next

The bells the *gingled*, and the whistle

(2.) * *To GINGLE*. *v. n.* 1. To utter clattering noise; to utter a sharp noise succession.—

The foot grows black that was with
brown'd,

And in thy pocket *gingling* halfpence.

Gay

Once, we confess, beneath the patriot
From the crack'd bag the dropping gun
And *gingling* down the backstairs, told
Old Cato is as great a rogue as you.

2. To make an affected sound in periodence.

* *GINGLYMOID*. *adj.* [*ginglymus*, a Resembling a ginglymus; approaching to lymus.—The malleus lies along, fixed to panum, and on the other end is joined to

gle, or *ginglymoid* joint. *Holder's Elements*.

GLYMUS. *n. f.* A mutual indenting into each others cavity, of which the instance. *Wise man*.

GLYMUS. See **ANATOMY**, *Index*.

a town of Germany, in Pomerania, of Bergen.

a town of Germany, in the county of Munzenburg, 3 miles WNW. of the Maine, and 11 W. of Hanau.

See **MAURITIA**.

a town of Naples, in Abruzzo Ultra, of Teram.

G. *n. f.* [*γῆς*.] A nag; a mule; a breed. Hence, according to some, erroneously, a Spanish *gennet*, imputed for *ginnet*.

in botany: A genus of the monodelicous, belonging to the dodecandria class of the natural method ranking with the order is doubtful. The calyx 5 parts; the petals six; the capsule adnate, divided, coloured, and polyspermous.

GENG. *n. f.* [I suppose *Chinefe*.] A root brought into Europe, of a brownish colour, and somewhat yellowish within; and fine, that it seems almost transparent; a very agreeable and aromatick taste, not very strong. Its taste is acrid, and has somewhat bitter in it. It comes from China and America. The Chinese root at three times its weight in oil.

GENG, in botany. See **PANAX**.

STORFF, a town of Austria, 5 miles of Ebenfurth.

STORFF, a town of Austria, 6 miles of Erford.

a town of Scotland, on the N. coast of pinshay.

a town of Turkey in Diarbek.

or **GEDDAH**, a sea-port of Arabia, ft of the Red Sea. It is the port of carries on a good trade. Lon. 39. 30. N.

a town of Transylvania, near Maros, of Mlilenbach.

or **BEMBO**, Flavio, the celebrated Mariner's Compass. See **BEMBO**.

IA, two towns of Naples: 1. in the zzo Ultra, 7 miles SE. of Celano: 2. lari, 14 miles SSW. of Conversano. 3. town of Naples, in Calabria Ultra; 4. Vicotera.

IO, Lucas. See **JORDANO**.

I, a town of Walachia, on the N. of the Danube; near which the Russians defeated the Turks, on the 2d June, 1771; killing 5000 Turks, and taking 180 pieces of cannon, with arms for 30,000. It is 40 miles SW. and 235 NNW. of Constantinople.

IO, ST, or ST GEORGE, a strong Alpine republic, and suburb of Mantua, of Mincio. It was taken by the Bonaparte, on the 15th Sept. 1796,

after an obstinate resistance from the Austrians, who lost 2500 men and 20 pieces of cannon. On the 15th Jan. 1797, Gen. Provera penetrated thus far with 6000 men to relieve Mantua, but was forced to surrender next day, with his whole troops, provisions, ammunition, &c.

(2.) **GIORGIO**, ST, a village of Maritime Austria, in Dalmatia, in the isle of Lefina. Roman urns are found in a hill near it.

(3, 4.) **GIORGIO**, ST, a commune and village of Maritime Austria, in the Veronese.

(5.) **GIORGIO**, ST, IN ALGA, an island of Maritime Austria, W. of Venice; so named from the sea-ware on its coast. It is inhabited by Carmelite friars. Its church and convent were burnt in 1716.

(6.) **GIORGIO**, ST, MAGGIOR, a beautiful island of Maritime Austria, on the coast of Venice, inhabited by Benedictine Monks since A. D. 982. It has a magnificent church with a marble front, fine statues and paintings; a convent and library.

GIORGIONE, an illustrious Venetian painter, born in 1478. He received his first instructions from John Bellino; but studying afterwards the works of Leonardo da Vinci, he soon surpassed them both, being the first among the Lombards, who found out the admirable effects of strong light and shadows. Titian became his rival in this art; and excelled him. The most valuable piece of Giorgione in oil is that of Christ carrying his cross, now in the church of San Rovo in Venice; where it is held in great veneration. He died of the plague, in 1511.

GIORNICO, a town of the Helvetic republic, in the canton of Uri; 13 miles N. of Bellinzona.

GIOSEPPINO, an eminent painter, so called by way of contraction from *Giuseppe d' Arpino*, i. e. *Joseph of ARPINO*, the town where he was born, in 1560. Being carried to Rome very young, and employed by painters then at work in the Vatican to grind their colours, he soon made himself master of the elements of design. His wit and humour gained him the favour of popes and cardinals, who employed him. Gregory XIII. showed him great respect; and Lewis XIII. made him a knight of St Michael. He acquired a light and agreeable manner of designing, though De Piles says, his style neither partook of true nature nor of the antique. His battles in the Capitol are the most esteemed of all his pieces. He died at Rome in 1640.

GIOSTAH, a town of Africa, in Mozambique, on a bay near Sofala.

GIOTTO, an ingenious painter, sculptor, and architect of Florence, born in 1276. He was the disciple of Cimabue; but far superior to his master in the air of his heads, the attitude of his figures, and in the tone of his colouring; though he could not express liveliness in the eyes, tenderness in the flesh, or strength in the muscles of his naked figures. He was principally admired for his works in mosaic; the best of which is over the grand entrance of St Peter's church at Rome. Alberti says, that in that piece, the expression of fright and amazement of the disciples, at seeing St Peter walk upon the water is so excellent, that each of them exhibits some characteristic sign of his

his terror. He died in 1336, and the city of Florence honoured his memory with a statue of marble over his tomb.

GIOVANAZZO. See **GIOVENAZZO**.

(1.) **GIOVANNI**, ST., a town of the Cisalpine republic, in the dep. of Lario.

(2.) **GIOVANNI**, ST., a village of Maritime Ancona, in the isle of Brazza, in Dalmatia.

GIOVELLINO, a town of the French republic, in the island and dep. of Corsica; 25 miles E. of Corte.

GIOVENAZZO, a town and fort of Naples, in the province of Bari, near the sea; 11 miles ESE. of Trani. Lon. 16. 50. E. Lat. 41. 26. N.

* **To GIP.** *v. a.* To take out the guts of heri-
rings. *Boiler.*

(1.) **GIPPING**, a river of Suffolk, which joins the Orwell, and falls into the Stoure.

(2.) **GIPPING**, a small town in Suffolk.

* **GIPSY.** *n. f.* [Corrupted from *Egyptian*; for when they first appeared in Europe, they declared, and perhaps, truly, that they were driven from Egypt by the Turks. They are now mingled with all nations.] 1. A vagabond who pretends to foretell futurity, commonly by palmistry or physiognomy.—The butler, though he is sure to lose a knife, a fork, or a spoon every time his fortune is told him, shuts himself up in the pantry with an old *gipsy* for above half an hour. *Addison.*

A frantick *gipsy* now, the house he haunts,
And in wild phrases speaks dissembled wants.

Prior.

In this still labyrinth around her lie
Spells, philters, globes, and spheres of palmistry;
A sign in his hand the *gipsy* bears,
In th' other a prophetick sieve and sheers.

Garth's Dispensat.

I, near yon stile, three fallow *gipsies* met;
Upon my hand they cast a poring look,
Bid me beware, and thrice their heads they
shook. *Gay.*

2. A reproachful name for a dark complexion.—
Laura, to his lady, was but a kitchen-wench;
Dido a dowdy; Cleopatra a *gipsy*; Helen and He-
ro hidings and harlots. *Shak.* 3. A name of slight
reproach to a woman.—The widow play'd the
gipsy, and so did her confidant too, in pretending
to believe her. *L'Estrange.*

A slave I am to Clara's eyes:
The *gipsy* knows her pow'r and flies. *Prior.*

GIRAGLIA, a small island near the N. coast
of Corsica, 23 miles N. of Bastia.

GIRALD BARRY, or } See **BARRY**, N° 4.

GIRALD OF WALES, }

(1.) **GIRALDI**, Lilio Gregorio, an ingenious
critic, and one of the most learned men that mo-
dern Italy has produced, born at Ferrara in 1479.
He was at Rome when it was plundered by the
emperor Charles V.; and having thus lost all he
had, and being tormented by the gout, he strug-
gled through life with ill fortune and ill health. He
wrote, nevertheless, 17 performances, which were
collected and published at Basil, in 2 vols folio in
1580, and at Leyden in 1696. Cassaubon, Thua-
nius, and other authors of the first rank, have be-
stowed the highest eulogies on him.

(2.) **GIRALDI**, John Baptist Cantio, an Italian

poet of the same family with the pre-
ceding, born in 1504. He was secretary
of Ferrara, and professor of Rhetoric;
died in 1573. His works, which com-
prised tragedies, were collected and published
by his son Celso Giraldi, in 1583, with
him among the best tragic writers in-
duced.

GIRALDUS CAMBRENSIS. See **GIRAN**.

 Are now confin'd two mighty monarchies.

Shak. Henry V.

3. The zodiack.—Great breezes in great circles,
 such as are under the girdle of the world, do re-
 refrigerate. *Bacon.*

(2.) The GIRDLE, [*Cingulus* or *Zona*,] in anti-
 quity, was a belt or band of leather or other mat-
 ter, tied about the reins to keep that part more
 firm and tight. It was anciently the custom for
 bankrupts and other insolvent debtors to put off
 and surrender their girdle in open court. The
 reason was, that our ancestors used to carry all
 their necessary utensils, as purse, keys, &c. tied
 to the girdle; whence the girdle became a symbol
 of the estate. History relates that the widow of
 Philip I. duke of Burgundy, renounced her right
 of succession by putting off her girdle upon the
 duke's tomb. The Romans always wore a girdle
 to tuck up the tunica when they had occasion to
 do any thing: this custom was so general, that
 such as went without girdles, and let their gowns
 hang loose, were reputed idle, dissolute, persons.

(3.) GIRDLE, MAIDEN'S, or VIRGIN'S. It
 was the custom among the Greeks and Romans
 for the husband to untie his bride's girdle. Ho-
 mer, lib. xi. of his *Odyssey*, calls the girdle *μαρ-
 τήριον ζώνον, maid's girle*. Festus relates, that it was
 made of sheep's wool, and that the husband un-
 tied it in bed: he adds, that it was tied in the
 Herculean knot; and that the husband unloosed
 it, as a happy presage of his having as many chil-
 dren as Hercules, who at his death left 70 behind
 him.

(4.) GIRDLE OF VENUS. The poets attributed
 to Venus a particular kind of girdle called *CESTUS*,
 to which they annexed a faculty of inspiring the
 passion of love. See *CESTUS*, § 2.

* To GIRDLE. *v. a.* [from the noun.] 1. To
 gird; to bind as with a girdle.—

Lay the gentle babe, girdling one another
 Within their innocent alabaster arms. *Shak.*

2. To inclose; to shut in; to environ.—

Those sleeping stones,
 That as a waist do girdle you about. *Shak.*

Let me look back upon thee, O thou wall,

That girdlest in those wolves. *Shak. Timon.*

* GIRDLEBELT. *n. f.* [*girale* and *belt*.] The
 belt that encircles the waist.—

Nor did his eyes less longingly behold
 The girdlebelt, with nails of burnish'd gold.

Dryden's Æneid.

GIRDLE NESS, a cape on the E. coast of Scot-
 land, 2 miles E. of Aberdeen.

* GIRDLER. *n. f.* [from *girdle*.] A maker of
 girdles.

* GIRE. *n. f.* [*gyrus*, Latin.] A circle describ-
 ed by any thing in motion. See *GYRE*.

GIREST, or } a town of Persia, in Kerman;
 GIRET, } 30 miles S. of Ferabat. Lon.
 57. 55. E. Lat. 27. 30. N.

GIRGASHITES, or GERGESENES, an ancient
 people of Canaan, whose habitation was beyond
 the sea of Tiberias, where we find some relics of

K k k

their

their name in the city of GERUSA, upon the lake of Tiberias. The Jewish rabbies inform us, that when Joshua first came into the land of Canaan, the Gergashites resolved rather to forsake their country than submit to the Hebrews, and accordingly retired into Africa. Nevertheless, it is certain that a great number of them staid behind, since Joshua (xxiv. 11.) informs us, that he subdued the Gergashites, and they whom he overcame were certainly on this side Jordan. See GADARENES.

GIRGEE, a town of Egypt, capital of Said, 400 yards from the Nile, and 4 miles in circumference. It has several mosques, bazars, and squares; and lies 160 miles N. of Syene, and 215 S. of Cairo. Lon. 49. 8. E. of Ferro. Lat. 26. 10. N.

GIRGENTI, a town of Sicily, which occupies part of the site of the ancient AGRIGENTUM. It has only one street fit for carriages, though it has about 15,000 inhabitants. The only antiquities are a Latin inscription of the time of the Antonines, relative to some association between Agrigentum and Lilybæum, and a piece of ancient masonry in the foundations of a church said to be the remains of a temple of Jupiter. At some distance, on the old ground in the vale, stands the cathedral, a clumsy building patched up by barbarous architects with various discordant parts. The baptismal font is made out of an ancient sarcophagus faced with very beautiful lava-reheves. This see is the richest in Sicily, but is less enlightened than the rest of the island. Among the curiosities belonging to the cathedral is an Etruscan vase of rare size and preservation. There are also some golden pateras of extreme rarity. The monastery of San Nicolo is admirably situated on a little eminence in the centre of the city. The range of hills towards the SE. sinks gradually, so as to admit a noble reach of sea and of plain, terminated on each side by thick groves of fruit-trees. Above appear the remains of ancient grandeur, wonderfully contrasted with the humble straw cottages built at their feet. In the orchard of this convent is a square building with pilasters, supposed to have been part of the palace of the Roman prætor. Girgenti has a harbour, formed by a pier carried out in 3 sides of an octagon, with a battery at the head; the light-house is erected on the cliffs on shore. The work is strong and neat, but the Sirocco commands it entirely, and drives in great quantities of sand, which will in time choak up the port. Ships of burden find it difficult to get in, but the magazines in the rocks along the shore are very spacious. Girgenti is seated on the St Rafe, 3 miles from the sea, and 47 S. of Palermo. Lon. 23. 24. E. Lat. 37. 28. N.

GIRIA, a town in Cefalonia.

* GIRL. *n. f.* [About the etymology of this word there is much question: *Merie Casaubon*, as is his custom, derives it from *garrula* of the same signification; *Minsheu* from *garrula*, Latin, a prattler, or *girella*, Italian, a weathercock: *Junius* thinks that it comes from *berlode*, Welsh, from which, says he, *barlot* is very easily deduced. *Skinner* imagines that the Saxons, who used *ceorl* for a man, might likewise have *ceorla* for a women, though no such word is now found. Dr *Hicks* derives it most probably from the Islandick *karlinna*, a wo-

man.] A young woman, or female of unblest days was my wife a girl.

I will love thee ne'er the less,

Girvan, N° 3.

n, a post town and burgh of barony in

ish, (N° 1.) at the mouth of the Gir-

pposite to Ailsa. Its harbour is good

but might be much improved. Vessels can get
out to sea with almost any wind. Girvan contains
above 1000 inhabitants, and is governed by two
barlies and a council of ten. Above 100 looms
were employed in weaving cotton cloth, in 1791.
Leather and shoes are also manufactured. Gir-
van lies 14 miles SSW. of Ayr, and is 27 NNW.
of Wigton.

GIRY, Lewis, a French lawyer, and one of the
first members of the French academy, was born
at Paris, in 1595. He translated Tertullian's A-
pology and several other works; and died in 1665,
aged 70.

GISBORN, a town in the West Riding of
Yorkshire, 37 miles SE. of Manchester, 60 W.
of York, and 219½ NNW. of London. Lon. 2.
22. W. Lat. 53. 55. N.

GISBOROUGH, a town of England, in the
N. Riding of Yorkshire, on the road from Whit-
by to Durham, 4 miles from the mouth of the
Tees, where is a bay and harbour for ships. It
had formerly an abbey, and a church, which, from
its ruins, seems to have been equal to the best ca-
thedrals in England. The soil is fertile, and has
a constant verdure, adorned with field flowers al-
most all the year. There is some iron and mines
of alum, which were first discovered in the reign
of K. James I. and have been since very much im-
proved. Sir Paul Pindar, who first farmed them,
paid rents to the king 12,000l. to the Earl Mus-
grave 1640l. and to Sir William Penniman 600l.
and had 800 men by sea and land in constant pay;
yet he was a considerable gainer, as there was
then scarce any other to be had, and the price
was 26l. a ton; but as there are now several o-
ther alum works in this country, the works here
have for some years lain neglected. Gisborough
is 11 miles E. of Stockton, and 22 NW. of Whit-
by; but its distance from London, by some stated
at 224 miles, is by Mr Cruttwell, said to be 248
N. and by Dr Brookes and J. Walker, only 155
N. by W. Lon. 0. 55. W. Lat. 54. 35. N.

GISCO, son of Hamilco the Carthaginian gene-
ral, was banished from Carthage by the influence
of his enemies. Being afterwards recalled, he was
made general in Sicily against the Corinthians, a-
bout A. A. C. 309; and by his success and intre-
pidity, he obliged them to sue for peace. See
CARTHAGE, § 5.

* To GISE Ground. v. n. Is when the owner
of it does not feed it with his own stock, but takes
in other cattle to graze. *Bailey.*

GISGI, a town of Transylvania, near Maros.

GISHUBEL, a town of Bohemia, 20 miles E.
NE. of Koniggratz.

GIZING, a town and fort of Hungary.

GISLAVY, a town of Sweden, in Smaland.

* GISLE. Among the English Saxons, signifies
a pledge: thus *Fredgile* is a pledge of peace;
Gislebert an illustrious pledge, like the Greek *Ho-*
merus. *Camden.*

GISLEN, Auger, lord of Busbec, a man il-
lustrious on account of his embassies, was born at
Commines, in 1522; and educated at the univer-
sities of Louvain, Paris, Venice, Bologna, and
Padua. He was engaged in several important ne-
gociations, and particularly was twice sent am-
bassador by the king of the Romans to the empe-

for Soliman. He collected inscriptions, bought MSS. searched after rare plants, inquired into the nature of animals, and, in his 2d journey to Constantinople, carried with him a painter, that he might be able to communicate to the curious the figures of the plants and animals that were little known in the west. He wrote a Discourse of the state of the Ottoman empire, and a relation on his two journeys to Turkey, which are much esteemed. He died in 1592.

GISORS, a town of France, in the dept. of Eure, and ci-devant province of Normandy, seated on the Ept; 27 miles NE. of Evreux, and 28 SE. of Reuen. Lon. 1. 43. E. Lat. 49 17. N.

GISSA, in ancient geography, an island of Dalmatia, now called Pago.

GISTAIN, a town of Spain, in Arragon, among the Pyrenees, near France, 15 miles N. of Ainsa.

GISTITZ, a town of Bohemia, in the circle of Bolellau, 4 miles N. of Nimburn.

GISUND, a town of Norway, in Drontheim, 44 miles NW. of Drontheim.

GITH. *n. f.* [*nigella*]. An herb called Guinea pepper.

GITI, a town of Asia, in Thibet, 254 miles NNE. of Delhi. Lon. 79. 16. E. Lat. 31. 10. N.

GITSCHIN, a town of Bohemia, 22 miles N. W. of Koniggratz, and 44 NE. of Prague.

GITTAIM, a city of Benjamin, to which the Reerothites fled after the death of K. Saul. It was rebuilt after the return from the captivity.

GITTITES, the people of Gath. See GATH.

GITTITH, a Hebrew word occurring frequently in the Psalms, and generally translated *vine press*. Some think it signifies a sort of musical instrument; others, that the psalms with this title were sung after the vintage; and others, that the hymns of this kind were invented in the city of Gath. Calmet is of opinion, that they were sung by virgins born in Gath: Psal. viii. 1. lxxxii. 1. lxxxiv. 1. Dr Hammond thinks that the psalms with this title were all set to the same tune, and made on the defeat of Goliath the Gittite.

GIVA, a town of Asiatic Turkey, in Natolia, 31 miles SE. of Mileta.

GIVANIROTONDO, a town of Naples, in the Capitanata, 9 miles W. of Mont St Angelo.

GIUBA, FORT, an old castle of Maritime Austria, in the Isle of Pago, and prov. of Quarnaro.

GIUDECCA, a district of Venice.

GIUDUCCA, or ZUSCCA. See ZUSCCA.

(1.) * To GIVE. *v. a.* preter. *gave*; part. pass. *given*. [*gifan*, Saxon.] 1. To bestow; to confer without any price or reward; not to sell.—I had a master that gave me all I could ask, but thought fit to take one thing from me again. Temple.

Constant at church and change; his guins were sure,
His *givings* rare, five farthings to the poor.

Pope.

While tradesmen starve these Philomels are gay;

For gailyous lords had rather give than pay.

Young.

Half useless doom'd to live,
Pray's and advice are all I have to give. Horat.

2. To transmit from himself to another in speech, or writing; to deliver, whom thou gavest to be with me of the tree, and I did eat. Gen. were eating and drinking, marrying marriage. Matt xiv 38.—Those I did not only every week, but also count of the whole year was give Thursday before Christmas. *Gave* an account of these phenomena. Aristotle advises not poets to put false and impossible into their poems, licence to run out into wilds.

3. To put into one's possession; to import; to communicate.—*Gave* for our lamps are gone out. *Makke* gives us many children and friends away; but takes none away to gain. Temple—*Gave* me, says Arch to stand firm, and I will remove the—If the agreement of men fill any one's hands, or put a crown that almost must direct its course.

4. To pay a price or reward, or more that a man hath will he give for his

 glow. *Tickel.*

say.—The applause and approbation I give
 your speeches. *Shak. Troil. and Cress. 15.*
 r; to vent; to pronounce.—

you must be the first that gives this sen-
 ence,

as that suffers. *Shak. Meas. for Meas.*

Rhodians seeing their enemies turn their
 gave a great shout in derision of them.

Hist.—Let the first honest discoverer give
 about, that Woe's halfpence have been

and caution the poor people not to re-
 sem. *Swift. 16.* To exhibit; to shew.—

ance gives the impossibility of an eternal
 e in any thing essentially alterable or cor-
 rupt. *Hale. 17.* To exhibit as the product of

action.—The number of men being divided
 number of ship-, gives 424 men a piece.

108. 18. To do any act of which the con-
 ce reaches others.—As we desire to give no

our selves, so neither shall we take any at-
 tention of judgment in others. *Barnet. 19.*

hibit; to send forth as odours from any bo-
 oranges the ripping of the rind giveth

or finel more. *Bacon. 20.* To addict; to

—The Helots, of the other side, shutting
 tes, gave themselves to bury their dead,

their wounds, and rest their wearied bo-
 dies.—After man began to grow to num-

ber, the first thing we read they gave themselves
 as the tiling of the earth and the feeding

er. *Hooker.*—Groves and hill altars were
 made, in regard to the secret access which

superstitiously given, might have always
 into with ease. *Hooker.*—

the duke is virtuous, mild, and too well gi-
 ven,

ream on evil, or to work my downfall.

Shak.
 or him not, Cæsar, he's not dangerous:

a noble Roman, and well given. *Shak.*

name is Falstaff: if that man should be
 given, he deceives me; for, Harry, I see

in his looks. *Shak.*—Huniades, the scourge
 of Turks, was dead long before; so was alio-

so: after whom succeeded others, given all to
 and ease. *Knolles's Hist.*—Though he was

pleasure, yet he was likewise desirous of
Bacon's Hen. VII.—He that giveth his mind

law of the most High, will seek out all the
 of all the ancients. *Eccles. xxxix. 1.*—He

is much given to contemplation, and the viewing of
 this theatre of the world. *More against Atheism.*

—They who gave themselves to warlike action
 and enterprises, went immediately to the palace

of Odin. *Temple.*—Men are given to this licentious
 humour of scoffing at personal beauties and de-

fects. *L'Estrange.*—Besides, he is too much given
 to horseplay in his raillery; and comes to battle,

like a dictator from the plough. *Dryden.*—I have
 some business of importance with her; but her

husband is so horribly given to be jealous. *Dryd.*

Span. Fygar.—What can I refuse to a man so cha-
 ritably given? *Dryd. 21.* To resign; to yield up

—Lining ourselves in the midst of the greatest
 wilderness of waters, without victual, we give

ourselves for lost men, and prepared for death
Bacon's New Atl.—

Who say, I care not, those I give for lost;
 And to instruct them will not quit the cost.

Herbert.

Virtue giv'n for lost,
 Dearest and overthrown, as seem'd;
 Like that self-begott'n bird
 From out her airy womb now teem'd.

Milton's Agon.

Since no deep within her gulph can hold
 Immortal vigour, though oppress'd and fail'n,
 I give not Heaven for lost. *Milt. Par. Lyz.*

—For a man to give his name to Christianity in
 those days, was to let himself a martyr. *South.*—

One gives himself for gone; you've watch'd
 your time,

He fights this day unarm'd, without his rhyme.
Dryden.

—The parents, after a long search for the body,
 gave him for drowned in one of the canals. *Spekt.*

—As the hinder feet of the horse stuck to the
 mountain, while the body reared up in the air,

the poet with great difficulty kept himself from
 sliding off his back, in so much that the people

gave him for gone. *Guardian. 22.* To conclude;
 to suppose.—

Whence came you here, O friend, and whi-
 ther bound?

All gave you lost on far Cyclopean ground.
Garth's Ovid.

23. To Give away. To alienate from one's self;
 to make over to another; to transfer.—The more

he got, the more he shewed that he gave away
 to his new mistress, when he betrayed his promi-

ses to the former. *Sidney.*—

If you shall marry,
 You give away this hand, and that is mine;
 You give away heav'n's vows, and those are

mine;
 You give away myself, which is known mine.

Shak.

Honest company, I thank you all,
 That have beheld me give away myself
 To this most patient, sweet, and virtuous wife.

Shak.

—I know not how they sold themselves; but thou,
 like a kind fellow, gav'st thyself away gratis, and

I thank thee for thee. *Shak. Henry IV.*—Love
 gives away all things, that so he may advance the

interest of the beloved person. *Taylor's Rule.*—

But we who give our native rights away,
 And our enslav'd posterity betray.

Are now reduc'd to beg an alms, and go

On holidays to see a puppet-show. *Dryd. Juv.*

—Alas, said I, man was made in vain! How is he *given away* to misery and mortality! *Addison.*

—Theodosius made a private vow never to inquire after Constantia, whom he looked upon as *given away* to his rival, upon the day on which their marriage was to have been solemnized. *Addison.*

—Whatsoever we employ in charitable uses, during our lives, is *given away* from ourselves: what we bequeath at our death, is given from others only, as our nearest relations. *Atterbury.*

24. *To GIVE back.* To return; to restore.—

Their vices perhaps *give back* all those advantages which their victories procured. *Atterbury.*

25. *To GIVE forth.* To publish; to tell.—Soon after it was *given forth*, and believed by many, that the king was dead. *Hayward.*

26. *To GIVE the hand.* To yield pre-eminence, as being subordinate or inferior.—

Lessons being free from some inconveniences, whereunto sermons are more subject, they may in this respect no less take than in others they must *give the hand*, which betokeneth pre-eminence. *Hooker.*

27. *To GIVE over.* To leave; to quit; to cease.—

Let novelty therefore in this *give over* endless contradictions, and let ancient customs prevail. *Hooker.*

—It may be done rather than that be *given over.* *Hooker.*

Never *give her o'er*;

For scorn at first makes after love the more.

Shak.

—If Desdemona will return me my jewels, I will *give over* my suit, and repent my unlawful solicitation. *Othello.*

—All the soldiers, from the highest to the lowest, had solemnly sworn to defend the city, and not to *give it over* unto the last man.

Knolles's Hist.—Those troops which were levied, have *given over* the prosecution of the war. *Clarendon.*

—But worst of all to *give her over*,

'Till she's as desperate to recover. *Hudibras.*

—A woman had a hen that laid every day an egg: she fancied that upon a larger allowance this hen might lay twice a day; but the hen grew fat, and

gave quite over laying. *L'Estrange.*

—Many have *given over* their pursuits after fame, either from the disappointments they have met, or from their experience of the little pleasure which attends it.

Spectator. 28. *To GIVE over.* To addict; to attach to.—

Zelmane, govern and direct me; for I am wholly *given over* unto thee. *Sidney.*

—When the Babylonians had *given themselves over* to all manner of vice, it was time for the Lord,

who had set up that empire, to pull it down. *Grew's Cosmol.*

—I used one thing ill, or *gave myself so much over* to it, as to neglect what I owed either to God or the world. *Temple.*

29. *To GIVE over.* To conclude lost.—

Since it is lawful to practise upon them that are forsaken and *given over*, I will adventure to prescribe to you. *Suckling.*

'Tis not amiss, e'er y' are *giv'n o'er*,

To try one desp'rate med'cine more;

And where your case can be no worse,

The desp'ratest's the wisest course. *Hudibras.*

—The abbess, finding that the physicians had *given her over*, told her that Theodosius was just

gone before her, and had sent her his benediction.

Spectator.—Her condition was now *rate*, all regular physicians, and her relations, having *given her over.* *Arbutnot.*

Yet this false comfort never *gives*

That, whilst he creeps, his vig'rou can soar.

Not one foretell's I shall recover;

But all agree to *give me over.*

30. *To GIVE over.* To abandon.—

The uniformity throughout all churches, in order of indifferent ceremonies, will be

and therefore best to *give it over.* *Hooker.*

—He, as one weary of the world, gave

and betook himself to a solitary life, as a monk. *Knolles.*

Sleep hath forsook, and *giv'n me*

To death's benumbing opium, as my

The cause for which we fought and

So boldly, shall we now *give o'er*?

31. *To GIVE out.* To proclaim; to putter.—

The father's *gave it out* for a whatsoever Christ is said in Scripture to

received, the same we ought to apply to the manhood of Christ. *Hooker.*

It is *given out*, that, sleeping in me

A serpent stung me. So the whole c mark

Is, by forged process of my death, Rankly abused. *Shak.*

One that *gives out* himself prince of

Son of Polixenes, with his princels.

Dryden's Æn.

His golden helm *gives away* with stony blows,
Batter'd and flat, and beaten to his brows. *Æn.*
37. The word *give* is used with great laxity, the
general idea is that of transmitting from one to a-
nother.

(2.) * *To GIVE.* v. n. 1. To rush ; to fall on ;
to give the assault. A phrase merely French, and
not worthy of adoption.—

Your orders come too late, the fight's begun ;
The enemy *gives on* with fury led. *Dryden.*
—Hannibal *gave upon* the Romans. *Hooke. Rom. H.*

2. To relent ; to grow moist ; to melt or soften ;
to thaw.—Some things are harder when they come
from the fire, and afterwards *give* again, and
grow soft ; as the crust of bread, biscuit, sweet-
meats, and salt. *Bacon's Nat. Hist.*—

Only a sweet and virtuous soul,
Like season'd timber, never *gives* ;
But though the whole world turn to coal,
Then chiefly lives. *Herbert.*

—Unless it is kept in a hot house, it will so *give*
again, that it will be better than raw malt. *Mor-*
timer.—Before you carry your large cocks in,
open them once, and spread them : hay is apt to
give in the cock. *Mort.* 3. To move. A Fr.
phrase —

Up and down he traverses his ground,
Then nimbly shifts a thrust, then lends a wound ;
Now back he *gives*, then rushes on amain.

Daniel's C. War.

4. *To GIVE in.* To go back ; to give way. Not
in use.—The charge was given with so well go-
verned fury, that the left corner of the Scots bat-
talion was enforced to *give in.* *Hayes.* 5. *To*
GIVE into. [A French phrase.] To adopt ; to em-
brace.—This is a geography particular to the me-
dalists : the poets, however, have sometimes *given*
into it, and furnish us with very good lights for
the explication of it. *Addison*.—This consideration
may induce a translator to *give into* those general
phrases, which have attained a veneration in our
language from being used in the Old Testament.
Pope.—The whole body of the people are either
stupidly negligent, or else *giving in* with all their
might to those very practices that are working
their destruction. *Swift.* 6. *To GIVE off.* To
cease ; to forbear.—The punishment would be
kept from being too much, if we *gave off* as soon
as we perceived that it reaches the mind. *Lee.*
7. *To GIVE over.* To cease ; to act no more.
—If they will speak to the purpose, they must
give over, and stand upon such particulars only
as they can shew we have either added or abro-
gated, otherwise than we ought, in the matter of
church polity. *Hooker*.—Neither hath Christ,
through union of both natures, incurred the
damage of either ; lest, by being born a man,
we should think he hath *given over* to be God, or
that because he continued God, therefore he can-
not be man also. *Hooker*.—

Give not o'er to ; to him again ; intreat him,
Kneel down before him, hang upon his gown ;
You are too cold. *Shak. Meas. for Meas.*
—The state of human actions is so variable, that to
try things oft, and never to *give over*, doth won-
ders.

ders. *Bacon's Nat. Hist.*—Demetrius king of Macedonia, had a petition offered him divers times by an old woman, and still answered he had no leisure; whereupon the woman said aloud, Why then *give over* to be king. *Bacon's Apoph.*—

So Satan, whom repulse upon repulse
Met ever, and to shameful silence brought,
Yet gives not *o'er*, though desperate of success.

Milton.

Shall we kindle all this flame

Only to put it out again?

And not we now *give o'er*,

And only end where we begun?

In vain th a mischief we have done,

If we can do no more. *Denham.*

—It would be well for all authors, if they knew when to *give over*, and to desist from any farther pursuits after fame. *Addis.*—He coined again, and was forced to *give over* for the same reason. *Swift.*

8. To Give out. To publish; to proclaim.—Simon bewitched the people of Samaria, *giving out* that himself was some great one. *Acts viii 9.*—Julius Cæsar laid asleep Pompey's preparations, by a tale that he cunningly *gave out* how Cæsar's own soldiers loved him not. *Bacon.*—Your ill-wishers will *give out* you are now going to quit your school. *Swift.* To Give out. To cease; to yield.—

We are the earth; and they,
Like moles within us, heave and cast about;
And 'till they foot and clutch their prey;
They never cool, much less *give out*. *Herbert.*
Madam, I always believ'd you so stout,
That for twenty denials you would not *give out*.

Swift.

• GIVER. *n. f.* [from *give*.] One that gives; donor; bestower; distributor; granter.—

Well we may afford
Our *givers* their own gifts. *Milt. Par. Lost.*
By thee how fairly is the *giver* now
Repaid? But gratitude in thee is lost
Long since. *Milton's Paradise Regain'd.*
I have not liv'd since first I heard the news;
The gift the guilty *giver* doth accuse. *Dryden.*
Both gifts destructive to the *givers* prove;
Alike both lovers fall by those they love. *Pope.*

• GIVET. *n. f.* Fetters or shackles for the feet.

GIVET, a town of France, in the dep. of Ardennes, and district of Rocroy, fortified by Vauban; 15 miles NE. of Rocroy, and 24 N. of Metziers.

GIVIRA, a lake and town of the Cisalpine republic, in the dep. of Verbano, 8 m. from Angera.

(1.) GIULA, a strong town of Upper Hungary, near Transylvania. It was taken by the Turks in 1565, and retaken by the Imperialists in 1695. It is seated on the Keres, 30 miles NW. of Arad, 52 NNW. of Temeswar, and 88 N. of Belgrade. Lon. 30. 40. E. Lat. 46. 40. N.

(2.) GIULA NOVA, a town of Naples, in Abruzzo Ultra, on the Adriatic, 12 miles ENE. of Teramo.

GIULEMO, a mountain of the Cisalpine republic, in the dep. of Benaco, and of the prov. of Verona. This mountain with that of Mantua, and the valley of Sabbia, contain 26 parishes, and 13,000 citizens; who carry on cloth manufactures, and iron forges and founderies. Cattle are also bred in great numbers.

GIULENEI, an island in the Gulf of Sydrac, 15 miles S. of Afracan. Lon. 65. 35. Lat. 44. 15. N.

But that which does them grieve
Their spiritual *gizzards* are too w.
Which puts the overheated sots
In fevers still.

—Satisfaction and restitution lie so upon the *gizzards* of our publican blood is not half so dear to them as their coffers. *L'Estrange.*

GIZZING BRIGGS, a formidable coast of Sutherlandshire, stretching point of the coast of Dornoch, almost to the S. side of the Frith; to call incessant noise. The sand banks fort are not, however, so closely connected vessels of about 300 tons burden may the direction of a pilot.

• GLABRITY. *n. f.* [from *glaber*, L. nels; baldness. *Dict.*

• GLACIAL. *adj.* [glacial, Fr. *glacy*; made of ice; frozen.

• To GLACIATE. *v. n.* [glacis, French.] To turn into ice.

GLACIATION. *n. f.* [from *glaciate*.] The act of ice being formed.—Ice is plain upon the surface of water, but round in hail, which is *glaciation*, and figured in its guttulous descent upon the air. *Brown's Vulgar Errours.*

GLACIERS, a name given to some very high ridges of ice among the ALPS. Mr Coxe says that these mountains, in general are composed of parallel chains, the highest of which are in the centre, and the others gradually descend as they recede from thence. The central ridges are covered with pointed rocks; all the declivities, that are not absolutely perpendicular under perpetual snow and ice. On the sides of this ridge are fertile and cultivated lands interspersed with numerous villages, and watered by numerous streams. The elevated parts of the central chain are covered with snow: the declivities, excepting those that are exposed to the sun, have all a covering of ice as well as the intermediate parts being filled with vast quantities of ice, terminating in the cultivated valleys. These are the *glaciers*, though on a smaller scale, than the great chains that are at a distance from the centre: In those which are most remote, no snow is observed, unless upon the most elevated summits; and the declivities, diminishing in height and ruggedness, are covered with verdure, until at last they terminate in small hills and plains. Thus the glaciers are divided into two sorts; the 1st occupying the valleys in the bosom of the Alps, called *glaciers*; the 2d covering the declivities and the tops of the mountains. These are called by Mr Coxe **UPPER and LOWER GLACIERS.**

GLACIERS, THE LOWER, are by far the most numerous; some of them extending several miles in length. They do not communicate with each other, as has been generally supposed, but being parallel to the central chain; running mostly in a transverse direction, and separated at the higher extremity by inaccessible mountains, and at the lower extend into the cultivated valleys. The thickness of the ice varies in different parts. In the glacier de Bois, which extends more than 15 miles in length, and upwards of 1000 feet in breadth, M. Saussure found it generally from 100 to 200 feet; but he was credibly informed that in some places it was not less than 600 feet, and in others more. These vast masses of ice usually rest upon a level plain; where, being pushed forward by their own weight, and but weakly supported by the rugged rocks beneath them, they are divided by large crevices, and have an appearance of walls, pyramids, &c. according to the position of the eye in viewing them. In those places, however, where they lie upon even ground, the declivity is nearly uniform, the crevices being small and narrow, and the glacier being crossed with ease on foot without any difficulty. The surface of the ice is rough and granulated, so that it is difficult to walk upon it, excepting such places where the ice is deep and soft. It is opaque, full of small stones, and resembles a mixture of snow and water.

A vast quantity of stones and earth are brought down from the mountains upon the glaciers, and are by them thrown off on each side according to the descent of the ice. The place on which these rest is more hard and elevated than the rest of the ice, and is very difficult to walk upon; the earth is likewise laid upon them in such regular heaps, that it appears to have been done by art. This collection of earth and stones is termed by the natives the *Moraine*. Mr Coxe, who visited the glacier des Bois, informs us, that the appearance of it at a distance was so tremendous, that it seemed impracticable to cross it. Numerous and broad chasms intersected it in every direction; but entering upon it, the company found that courage and activity were only required to accomplish the task. They had large nails in their shoes and spiked sticks; which on this occasion were found to be particularly serviceable. Having passed the moraine, and descended upon the glacier itself, they found the ice softened by a warm wind which rendered it less slippery than usual. Having walked across it for about a quarter of an hour, they came again to the moraine, along which they continued their journey for half an hour, and then entered upon the great body of the glacier. "Here (says Mr Coxe,) it was curious to observe the numerous little rills produced by the collection of drops occasioned by the thawing of the ice on the upper part of the glacier: these little rills hollow out small channels, and, torrent-like, precipitate themselves into the chasms with a violent noise, increasing the body of waters formed by the melting of the interior surface, and finding an outlet under the immense arch of ice in the valley of Chamouni, from which the Aaron rushes." As our traveller proceeded on his journey, he was surprised by the noise of a large fragment of rock which had detached itself from one of the highest needles, and bounded from one precipice to another with great rapidity; but before it reached the plain, it was almost reduced to dust. "Having proceeded about an hour (says he) we were astonished with a view more magnificent than imagination can conceive: hitherto the glaciers had scarcely answered my expectations, but now they far surpassed them. Nature had clad herself in all her terrors. Before us was a valley of ice 20 miles in extent, bounded by a circular glacier of pure unbroken snow, named *Taku*, which leads directly to the foot of Mount Blanc, and is surrounded by large conical rocks, terminating in sharp points like the towers of an ancient fortification; to the right rose a range of magnificent peaks, their intervals filled with glaciers; and far above the rest, the magnificent summit of Mount Blanc, his highest point obscured with clouds. He appeared of such immense magnitude, that, at his presence, the circumjacent mountains, however gigantic, seemed to shrink before him, and *hide their diminished heads*. In half an hour we arrived at the moraine, which forms a boundary of the valley, crossed it, and proceeded upon a body of ice about three quarters of a mile broad. Here the ice was more even and free from chasms than in the great valley. We then passed a 2d moraine, and beyond that another mass of ice to a 3d moraine: descending from thence we came upon the last ridge of ice, broader and considerably higher than the two former, and full of

and are by them thrown off on each side according to the descent of the ice. The place on which these rest is more hard and elevated than the rest of the ice, and is very difficult to walk upon; the earth is likewise laid upon them in such regular heaps, that it appears to have been done by art. This collection of earth and stones is termed by the natives the *Moraine*. Mr Coxe, who visited the glacier des Bois, informs us, that the appearance of it at a distance was so tremendous, that it seemed impracticable to cross it. Numerous and broad chasms intersected it in every direction; but entering upon it, the company found that courage and activity were only required to accomplish the task. They had large nails in their shoes and spiked sticks; which on this occasion were found to be particularly serviceable. Having passed the moraine, and descended upon the glacier itself, they found the ice softened by a warm wind which rendered it less slippery than usual. Having walked across it for about a quarter of an hour, they came again to the moraine, along which they continued their journey for half an hour, and then entered upon the great body of the glacier. "Here (says Mr Coxe,) it was curious to observe the numerous little rills produced by the collection of drops occasioned by the thawing of the ice on the upper part of the glacier: these little rills hollow out small channels, and, torrent-like, precipitate themselves into the chasms with a violent noise, increasing the body of waters formed by the melting of the interior surface, and finding an outlet under the immense arch of ice in the valley of Chamouni, from which the Aaron rushes." As our traveller proceeded on his journey, he was surprised by the noise of a large fragment of rock which had detached itself from one of the highest needles, and bounded from one precipice to another with great rapidity; but before it reached the plain, it was almost reduced to dust. "Having proceeded about an hour (says he) we were astonished with a view more magnificent than imagination can conceive: hitherto the glaciers had scarcely answered my expectations, but now they far surpassed them. Nature had clad herself in all her terrors. Before us was a valley of ice 20 miles in extent, bounded by a circular glacier of pure unbroken snow, named *Taku*, which leads directly to the foot of Mount Blanc, and is surrounded by large conical rocks, terminating in sharp points like the towers of an ancient fortification; to the right rose a range of magnificent peaks, their intervals filled with glaciers; and far above the rest, the magnificent summit of Mount Blanc, his highest point obscured with clouds. He appeared of such immense magnitude, that, at his presence, the circumjacent mountains, however gigantic, seemed to shrink before him, and *hide their diminished heads*. In half an hour we arrived at the moraine, which forms a boundary of the valley, crossed it, and proceeded upon a body of ice about three quarters of a mile broad. Here the ice was more even and free from chasms than in the great valley. We then passed a 2d moraine, and beyond that another mass of ice to a 3d moraine: descending from thence we came upon the last ridge of ice, broader and considerably higher than the two former, and full of

large chasms: it is separated from the rock only by a very narrow moraine. These moraines contain great quantities of crystal." They continued to ascend the valley of ice, the scene constantly increasing in magnificence and horror; and having walked about 4 miles on the ice, they arrived at last at the foot of the eminence named *Couvercle*, where they were obliged to quit the ice. The doing this was extremely dangerous, and at one place very tremendous. It was a bulging smooth rock, with a precipice of considerable depth terminated by a vast crevice in the ice, which seemed to stop all further progress: a small hollow in the middle, however, afforded room for one foot; and having fixed this, they sprung over to the other side, being helped and directed by the guides who went over first. Having gained the top of the *Couvercle*, they had a view of three of the glaciers, viz. that of *Talisfre* to the left, *L'Esbaud* in front, and *Takul* on the right; all uniting in that great one called the *Glacier de Boss*. The *Couvercle* itself is a most extraordinary rock, having the appearance of a large irregular building with many sides; the substance of which is granite. Having reached the top, they were surprised with a thunder storm, from whence they took shelter under an impending rock. The view was exceedingly magnificent; the glaciers appearing like a rugged expanse of frozen sea bounded by gigantic rocks, and terminated by Mount Blanc. A single rock appeared of a triangular figure covered with Alpine plants; and which, by reason of its contrast with the rugged and snowy mountains in the neighbourhood, has obtained the name of the *Gardien*.—During this, as well as other excursions among the Alps, Mr Coxie had occasion to observe that the colour of the sky was of a much deeper blue than in the lower regions.

II. GLACIERS, THE UPPER, may be subdivided into those which cover the summits, and those which extend along the sides of the Alps. Those on the very summit, however, though they have the appearance of ice, are not so in reality, but consist entirely of snow hardened by the extreme cold. M. Saussure found that which covered the top of Mount Blanc to be penetrable, though with difficulty, by a stick; but below this hard crust was a soft snow without coherence. The sides are covered with a mixture of ice and snow; by reason of the superior power of the summer sun to dissolve the snow, which afterwards congeals into hard ice.

(1.) GLACIERS, CONJECTURES RESPECTING THE FORMATION OF THE. Several conjectures have been made concerning the formation of these extraordinary bodies of ice. Mr Coxie agrees with M. Gruner in opinion, that they are produced by the continual dissolution of the snow in summer, and its congelation by the succeeding frosts. Hence, on the summits of the mountains where the sun has very little power, the glacier is soft, and contains no ice: as we descend the mountains the consistence becomes firmer, because there is a considerable mixture of snow-water; the congelation of which augments the hardness; and in the valleys, the glacier is hardest of all, because the portion of water is there much superior to that of the snow. Hence it seems plain, that the glaciers derive their

origin from the melting of the snow on parts of the mountains, and the congelation of water as it advances: and to this cause I add the quantity of snow which often falls into the valleys and congeals along with it.

(2.) GLACIERS, OPINIONS RESPECTING THE INCREASE, OR DIMINUTION OF THE. A question concerning the glaciers naturally arises, namely, Whether they are to be considered as in a state of increase or diminution? Mr Coxie is of opinion, that they occasionally increase or decrease; in proof of which he adduces the following observations. "The borders of the *Montanvert* are mostly skirted with trees; its base a vast arch of ice rises to near 1000 feet high; under which the river *Averon* flows with considerable force, and in a large body. As we approached the ice, we passed a wood of firs: those trees which stand at a distance from the arch are about 80 feet high, and are undoubtedly of a very great age. These and the glacier the trees are of a size as is evident from their texture and is Others, still smaller, have been overgrown and enveloped in the ice: there seems to be a regular gradation in the age of these firs from the largest which are standing to that which is prostrate."—Hence our author concludes that the glacier once extended as far as the small firs; but that upon its gradual advance a number of trees shot up on the spot occupied; since which time the ice has advanced, and overturned the last grown trees they had attained to any considerable size. This he thinks also confirmed by the fact: "Large stones of granite are found at a small distance from the extremities of the glacier. These stones have certainly fallen from the mountains upon the ice; have been carried on by its progress; and have tumbled into the dissolution or sinking of the ice which supported them. These stones, which we call *Moraine*, form a kind of border along the foot of the valley of ice, and have been carried forward by the glacier in its advance; they tend even to the place occupied by the pines." In opposition to those who maintain that there is a constant accumulation of ice in the Alpine regions, our author makes the following remarks: 1. Between the years 1785 the glacier of *Grindelvald* had advanced to such a degree, that the spot which it occupied in the former year, was now a plain; the place from that occupied by it in the year 1785 the *Murailles de Glace*, which, had been described as forming the border of *Bosson*, no longer existed; and you could not find the parts which were then the glacier of *Montanvert*. Still, however, he is urged, that these changes only take place in the valleys where the power of the sun is able; and that from thence we cannot form an adequate idea of what passes in the high regions, where in all probability more ice than can be dissolved. In support of this it is alleged, that the cold produced by the ice already formed ought to augment more; and that within the memory of

many places have been covered with were not so before. To these arguments, Mr Coxe replies, that the causes, with the ice in the upper regions, are more powerful than the cold which tends to augment these are, 1. Rain or snow; which softens the lower glaciers, thaw the ice, infiltrates on its surface, excavate channels, and in ways tend to diminish its quantity. Sublimation, which takes place even from the surface of the ice itself, acts still more powerfully; sublimation is not confined to any particular place.

The falling of the snow and ice; both of which comes gradually from the clouds, and descends from the mountains in great masses, produces AVALANCHES. When these descend into milder regions, though sometimes they resist the influence of the sun and winds, yet they generally dissolve. They are common in the upper glaciers, though when they descend upon the lower, while the descent of snow from the clouds, which takes place in the lower, contributes very little to the mass. 4. All the lower glaciers of ice rest on an inclined plane, and are undermined by torrents which are flowing from the upper glaciers, as well as on their own lowermost surface. Their foundation thus constantly diminishing, the lower glacier is carried imperceptibly forward into the fields, where an end is necessarily put to its progress by the heat of the sun. Hence is the reason of that strange phenomenon observed by Mr Coxe, that with one hand he dug up ripe corn, and with the other found the descent of the glacier is demonstrable by trees overturned by it, and the moraine preserved at the bottom of the lower glacier. The heat of the sun is an evident cause of the diminution of the glaciers. To this Mr Coxe adds another cause less generally known, viz. winds which blow by night as well as by day in the upper and lower glaciers. Mr Coxe says (says he) are during summer in those parts, that I never crossed without feeling in some particular positions similar to the air of a hot bath." 6. As the mean temperature of the earth at the surface, where it is not exposed to the piercing of the atmosphere, is found to have a temperature always above the freezing point. As the thickness of the superincumbent ice, in the present case abundantly sufficient to prevent the access of the atmosphere, it is at the lower surface of it must, by being in contact with the earth, continually decay. With the other argument drawn from the case of the ice in some places, Mr Coxe denies it; but insists, that there is no consequence of the whole, but that if it in some places, it diminishes in others; and in union in this respect was confirmed by frequent the mountains.

GLACIOUS. *adj.* [*glacio*, Latin.] Icy; refrigerant.—Although exhiled and placed in refrigeratories, it will crystallize and shoot into bodies. *Brown's Vulg. Err.*

(1.) * GLACIS. *n. f.* [French.] In fortification, a sloping bank. It is more especially taken for that which runneth from the parapet of the covered way to the level on the side of the field. *Harris.*

(2.) GLACIS, in building, an easy insensible slope or declivity. The descent of the glacis is less steep than that of the talus. In gardening, a descent sometimes begins in talus, and ends in glacis. The glacis of the corniche, is an easy imperceptible slope in the cymation, to promote the descent and draining off the rain water.

* GLAD. *adj.* [*glad*, Saxon; *glad*, Danish.] 1. Cheerful; gay; in a state of hilarity.—They blessed the king, and went into their tents joyful and glad of heart. *1 Kings* viii. 66.—

Glad we return'd up to the coasts of light.

Milton.

The wily adder blithe and glad. *Milton.*

Thither they

Hasted with glad precipitance. *Milton.*

2. Wearing a gay appearance; fertile; bright; showy.—The wilderness and the solitary place shall be glad for them, and the desert shall rejoice and blossom as the rose. *I/. xxxv.*—

Then first adorn'd

With their bright luminaries, that set and rose,
Glad Evening and glad Morn crown'd the fourth day. *Milton.*

3. Pleased; elevated with joy. It has generally *of*, sometimes *at* or *with* before the cause of gladness: perhaps *of* is most proper, when the cause of joy is something gained or possessed; and *at* or *with*, when it is some accident befallen himself or another.—I am glad to see your worship. *Shak. Hen. IV.*—He hath an uncle in Messina will be very much glad of it. *Shak. Much Ado.*—He that is glad at calamities shall not be unpunished. *Prov.*—

He glad

Of her attention, gain'd with serpent tongue,
His fraudulent temptation thus began. *Milton.*
—If he be my enemy, let him triumph; if he be my friend, he will be glad of my repentance. *Dryden's Fables.*—

The gaping wound gush'd out a crimson flood;

The Trojan, glad with sight of hostile blood,
His fauchion drew. *Dryden's Æn.*

Glad of a quarrel strait I clap the door. *Pope.*

4. Pleasing; exhilarating.—

Her conversation

More glad to me than to a miser money is. *Sid.*

5. Expressing gladness.—

Hark! a glad voice the lonely desert cheers:
Prepare the way, a God, a God appears!

Pope.

6. It is used in a familiar sense, approaching to ludicrousness.—I would be glad to learn from those who pronounce that the human soul always thinks, how they know it. *Locke.*

* To GLAD. *v. a.* [from the adjective.] To make glad; to cheer; to exhilarate.—

He saw rich Nectar-thaws release the rigour
Of th' icy North; from frost-bound Atlas hands
His adamantine fetters fall: green vigour
Gladding the Scythian rocks, and Lybian sands.

Grasshaw.

It glads me

To see so many virtues thus united,
To restore justice and dethrone oppression.

Orway.

Each drinks the juice that *glads* the heart of
man.

Pope.

If justice Philips' coſſive head
Some frigid rhymes diſburſes,

They ſhall like Perſian tales be read,

Swift.

And *glad* both babes and nurſes,
GLADBACH, or } a town of Germany, in the
GLADBECK, } ci devant duchy of Juliers,
now included in the French republic, and dept.
of the Roer, 16 miles N. of Juliers.

To GLADDEN. *v. a.* [from *glad*.] To cheer;
to delight; to make glad; to exhilarate.—

Oh, he was all made up of love and charms!
Delight of every eye! When he appear'd,
A ſecret pleaſure *gladden'd* all that ſaw him.

Addiſon's Cato.

—A kind of vital heat in the ſoul cheers and *glad-*
dens her, when ſhe does not attend to it. *Speſ.*

* GLADDER. *n. f.* [from *glad*.] One that
makes glad; one that gladdens; one that exhi-
larates.—

Thou *gladder* of the mount of Cytheron,

Have pity, goddeſs.

Dryden.

* GLADE. *n. f.* [from *gladan*, Sax. to be hot, or
to ſhine; whence the Daniſh *glod* and the obſo-
lete Engliſh *gleed*, a red hot coal.] A lawn or open-
ing in a wood. *Lucas.* It is taken for an avenue
through a wood, whether open or ſhaded, and
has therefore epithets of oppoſite meaning.—

So flam'd his eyes with rage and rancorous
ire;

But far within, as in a hollow *glade*,

Thoſe glazing lamps were ſet, that made a
dreadful ſhade.

Spenser.

Lo where they ſp'd, how in a gloomy *glade*,
The lion ſleeping lay in ſecret ſhade.

Hubb.

O might I here

In ſolitude live ſavage, in ſome *glade*,

Obſcur'd, where higheſt woods, impenetrable
To ſtar or ſun light, ſpread their umbrage
broad,

And brown as evening.

Milt. Par. Loſt.

When any, favour'd of high Jove,
Chances to paſs through this adventurous *glade*,
Swift as a ſparkle of a glancing ſtar
I ſhoot from heav'n to give him ſafe convoy.

Milton.

For noonday's heat are cloſer arbours made,
And for freſh evening air the op'net *glade*.

Dryden.

There, interſpers'd in lawns and opening
glades,

Thin trees ariſe that ſhun each other's ſhades.

Pope.

By the heroes armed ſhades,

Glitt'ring thro' the gloomy *glades*;

By the youths that dy'd for love,

Wand'ring in the myrtle grove,

Reſtore, reſtore Eurydice to life!

Oh! take the huſband, or reſtore the wife!

Pope.

She ſmil'd, array'd,

With all the charms of ſun ſhine, ſtream and

glade,

New dreſt and blooming as a bridal maid.

Harte.

GLADENBACH, a town of Germany, 3 miles W. of Marburg, a
Gießen.

* GLADEN. *n. f.* [from *gladius*, L.]

* GLADER. *n. f.* Swordgrains: a genus
plants that riſe with a broad blade like
maize.

* GLADFULNESS. *n. f.* [from *glad* &
Joy; gladneſs. Obſolete.—

And there him reſts in riotous ſlee
Of all his *gladfulneſs*, and kingly

(1.) * GLADIATOR. *n. f.* [Latin
Fr.] A ſwordplayer; a prizefighter.

(2.) GLADIATORS, in antiquity, who
fought, generally in the arms of
the entertainment of the people.

uſually ſlaves, and fought out of neceſſity
ſometimes freemen adopted the pro-
fou prize fighters, for a livelihood. I
borrowed this cruel diversion from
ſome ſuppoſe out of policy, the frequent
of gladiators tending to accuſtom them
deſpice dangers and death.

(3.) GLADIATOR'S COMBATS, OR
HISTORY OF. From the earlieſt times

we have any acquaintance in proſe
had been the cuſtom to ſacrifice cap-
ſoners of war, to the manes of the great
had died in the engagement: thus
the Iliad, lib. xxii. ſacrifices twelve
jans to the manes of Patroclus; and
lib. xi. ver. 81, Æneas ſends, captive
der, to be ſacrificed at the funeral of
las. In courſe of time they came
crifice ſlaves at the funerals of all per-
dition: this was even eſteemed a ne-
of the ceremony; but as it would have
barbarous to have maſſacred them
they were appointed to fight with each
and endeavour'd to ſave their own
ling their adverſary. This ſeemed ſo
human, becauſe there was a poſſibili-
ing death, by an exertion of ſkill in
This occaſioned the profeſſion of glad-
come an art: hence aroſe maſters of
men learned to fight and exerciſe it.

ters, whom the Latins called *Lanista*
young ſlaves to be trained up to this
whom they afterwards ſold to ſuch a
ſion to preſent the people with ſo hor-
Theſe exhibitions were at firſt perform-
ſepulchre of the deceaſed, or about
pile; but were afterwards removed to
and amphi theatres, and became ſpecta-
ments. The firſt ſhow of gladiators,
mus gladiatorum, was exhibited at Ro-
ing to Valerius Maximus, by M. and
upon the death of their father, A. U.

this occaſion there were probably only
of gladiators. In 537, the three ſons
lius Lepidus the augur, who had been

tained the people with the cruel pleasure of 22 gladiators fight in the forum. Scipio Africanus diverted his army at the siege with a show of gladiators, which was in honour of his father and uncle, upon the reduction of Spain. In process of time, the Romans became so fond of these entertainments, that not only the heir of an indigent rich citizen lately deceased, but all magistrates, presented the people with a show of gladiators, to acquire popularity. The prætors, consuls, and, above all, the censors, made their court to the people, by presenting them frequently with these fights; and the prætors were sometimes the exhibitors of these shows. Suetonius mentions the shows of gladiators, August. cap. 44. and Pliny, the shows of gladiators, Epist. lib. vii. As for the emperors, they gratified themselves with the populace, by presenting them with combats of gladiators on all occasions; and as these increased, the number of combatants increased likewise. Augustus, in his ædileship, diverted the people with 320 couple. Even Titus Vespasian presented a show of gladiators, wild beasts, and combats of sea-fights, which lasted 100 days. Trajan continued a solemnity of this kind for 123 days; during which time he brought out 1000 gladiators. Before this time, un-til the time of Augustus, the number of gladiators was so great, that when the conspiracy of Catiline was discovered, the senate ordered them to be dispersed in the garrisons and secured, lest they should be the disaffected party. See § 7.

GLADIATORS, LAWS RESPECTING. These combats became so common, and their consequence so dangerous, that the senate passed a law, that no person should be a candidate for any office, who had been a gladiator within two years before he was a candidate for any office. Julius Cæsar decreed, that only a certain number of men should be in Rome at a time; and the senate decreed, that only two shows of gladiators should be presented in a year, and never a couple of combatants in a show; and the senate provided by an order of senate, that no person should have the privilege of gratifying himself with such a solemnity, unless he was a senator or a prætor. They were also regulated by Nerva. Claudius restrained the number of gladiators on certain occasions; but he soon after annulled the decree, and private persons began to present shows at pleasure as usual. Some carried off the satisfaction so far as to have them at private feasts. And not slaves only, but free men would hire themselves to this infame profession. The master of the gladiators made them swear that they would fight to death; and if they failed, they were put to death either by the sword, clubs, whips, or the like. It was not for the wretches to complain when they were wounded, or to ask for death or seek to be killed when overcome; but it was usual for them to grant themselves life when they gave no quarter, but waited the fatal stroke with intrepidity. Augustus even decreed that death should always be granted them. From the time of Augustus, the inhuman sport at length

spread to people of rank and condition; so that Augustus was obliged to issue a public edict that none of the senatorial order should become gladiators; and soon after he laid the same restraint on the knights: nevertheless, Nero is said to have brought upwards of 400 senators and 600 Roman knights upon the arena; though Lipsius takes both these numbers to be falsified, and reduces them to 40 senators and 60 knights: yet Domitian, that other monster of cruelty, refined upon Nero, exhibiting combats of women in the night-time. Constantine the Great, is said to have first prohibited the combats of gladiators in the East. At least he forbade those who were condemned to death for their crimes to be employed; there being an order still extant to the *præfectus prætorii*, rather to send them to work in the mines, dated at Berytus, in Phœnicia, the 1st of October 325. Honorius forbade them at Rome on occasion of the death of Telemachus, who, coming out of the East into Rome at the time of one of these spectacles, went down into the arena, and used all his endeavours to prevent the gladiators from continuing the sport; upon which the spectators of that carnage, fired with anger, stoned him to death. The practice was not, however, totally abolished in the West, before Theodoric, king of the Ostrogoths, put a stop to it entirely, A. D. 500.

(5.) **GLADIATORS, REGULATIONS, AND TERMS USED AMONG THEM.** Some time before the day of combat, the person who presented the people with the shows gave them notice thereof by programmas or bills, containing the names of the gladiators, and the marks whereby they were to be distinguished: for each had his several badge; which was most commonly a peacock's feather, as appears from the scholiast of Juvenal on the 158th verse of the 3d satire, and Turnebus Advers. lib. ii. cap. 8. They also gave notice how long the shows would last, and how many couples of gladiators there were; and it appears, from the 52d verse of the 7th satire of the 2d book of Horace, that they sometimes made representations of these things in painting, as is practised among us by those who have any thing to show at fairs. The day being come, they began the entertainment by bringing two kinds of weapons; the first were flaves or wooden files, called *rudes*; and the second were effective weapons, as swords, poniards, &c. The first were called *arma latoria*, or *exercitoria*; the second *decretoria*, as being given by decree or sentence of the prætor, or of him at whose expence the spectacle was exhibited. They began to fence or skirmish with the first, which was to be the prelude to the battle; and from these, when well warmed, at the sound of the trumpets they advanced to the 2d with which they fought naked. Then they were said *vertere arma*. The terms of striking were *petere* & *repetere*; of avoiding a blow, *exire*; and when one of the combatants received a remarkable wound, his adversary or the people cried out, *Habet* or *Iloc habet*. The first part of the engagement was called *ventilare*, *præludere*; and the second, *dimicare ad certum*, or *versis armis pugnare*: and some authors think, with much probability, that it is to these two kinds of combat that St Paul alludes in the passage 1 Cor. ix. 26, 27. "I fight, not

as one that beateth the air; but I keep my body under, and bring it into subjection." If the vanquished surrendered his arms, it was not in the victor's power to grant him life. The people during the time of the republic, and the prince or people during the time of the empire, were alone empowered to grant it. The reward of the conqueror was a branch of palm tree, and a sum of money, probably collected among the spectators: sometimes they gave him his congé, or dismissed him by putting one of the wooden files or *rudes* in his hand; and sometimes they even gave him his freedom, putting the pilus on his head. The sign or indication, whereby, the spectators showed that they granted the favour, was *premere pollicem*, which M. Dacier takes to be a clenching of the fingers of both hands between one another, and so holding the two thumbs upright close together; and, when they would have the combat finished and the vanquished slain, *verterunt pollicem*, they bent back the thumb; which we learn from Juvenal, Sat. iii. ver. 36. The gladiators challenged or defied each other, by showing the little finger; and, by extending this, or some other, during the combat, they owned themselves vanquished, and begged mercy from the people: *Victi offensam digiti veniam a populo postulabant*, says the old scholiast on Persius.

(6.) GLADIATORS, VARIOUS KINDS OF. There were various kinds of gladiators, distinguished by their weapons, manner, and time of fighting, &c. as, The *andabata*, mentioned under ANDABATÆ: The *cateruarii*, who always fought in troops or companies, number against number; or, according to others, who fought promiscuously, without any certain order: The *dimache*, who fought armed with two poniards or swords, or with sword and dagger: The *essedarii*, who fought in cars: The *fiscales*, or *Cajurarii*, who belonged to the emperor's company; and who, being more robust and dexterous than the rest, were frequently called for; and therefore named also *pullatitii*. Several other kinds are mentioned in the ancient authors.

(7.) GLADIATORS WAR, (*bellum Gladiatorum*, or *Spartacum*), called also the *pirate war*, was a war which the Romans sustained about A. U. C. 680. Spartacus, Crinus, and Oenomaus, having escaped, with other gladiators to the number of 74, out of the place where they had been kept at Capua, gathered together a body of slaves, put themselves at their head, rendered themselves masters of all Campania, and gained several victories over the Roman prætors. At length they were defeated in 682, at the extremity of Italy; having, in vain, attempted to pass over into Sicily. This war proved very formidable to the Romans. Cassius was not able to finish it: Pompey the great was forced to be sent as general.

(8.) GLADIATOR, THE DYING, a most valuable monument of ancient sculpture, long preserved in the palace of Chigi, but carried to Paris with the Laocœon, &c. in 1796. This gladiator after having received the mortal stroke, appears particularly careful *ut procumbat longæ*, "that he might fall honourably." He is seated in a reclining posture on the ground, and seems to have just strength sufficient to support himself on his

right arm; and in his expiring moment not abandon himself to grief and dejection is solicitous to maintain that firmness of attitude, which the gladiators valued on preserving in this last scene of distress no tokens of fear by his countenance sheds one tear. *Quis mediocris gladiator quis vultum mutavit unquam? Quis nec verum etiam decubuit turpiter?* says that part of his Tusculan, where he is the astonishing firmness of those pericopears, notwithstanding his remaining have but a few moments to live. The artists knew how to animate marble, and almost every expression of life.

GLADIATURE, *n. f.* the act of fighting with swords. *A/b.*

GLADIOLUS, CORN-FLAG: A monogynia order, belonging to the triandria of plants; and in the natural method under the sixth order, *Eufutæ*. The corolla partite, and ringent; the stamina ascending upwards. There are 10 species, the most remarkable is,

GLADIOLUS COMMUNIS, the common corn-flag. It has a round, compressed, tubular flower; long sword-shaped leaves; an erect stem 2 or 3 feet high; the top garnished with pretty large flowers of a red or white colour, each 6 petals. They appear in May and are succeeded by plenty of seed. The plants are very hardy, and will thrive in any soil or situation. They are propagated from the roots.

GLADKA, a sort of Russian, in the mountains of Caucasus, on the Maiva, 36 m. W. of Tiflis.

* GLADLY. *adv.* [from *glad*.] With gayety; with merriment; with exultation.—

For his particular, I'll receive him
But not one follower. *Shak.*

—You are going to set us right; and to our advantage every body will *gladly* see you glory of. *Blount to Pope.*

GLADMORE, a town of Herts, 12 m. N. of St. Albans.

* GLADNESS. *n. f.* [from *glad*.] Joy; exultation.—

By such degrees the spreading gladness
In every heart, which fear had frozen.

The standing streets with so new a view,

That with less grief the perish'd the

(1.) GLADSMUIR, a parish of S. E. Lothian, erected in 1695, and containing between 5, and 6,000 acres of ground: 3000 are in tillage; above 500 sown in corn; about 1,600 in pasture, and above 100 in wood. The air is pure, dry and healthy; the soil clayey, shallow and barren. Wheat, oats, and pease, are the chief productions; cabbages and potatoes, are also raised. The population in 1792, stated by the rev. G. Milne, in his report to Sir J. Sinclair, was 240; and had decreased 35 since 1755. The number of horses was 240; of sheep 100, and of cattle 134. Mr GEORGE HENRIOT, for

the celebrated Dr WILLIAM ROBERTSON was born in this parish.

OSMUR, one of the three villages in the parish, (N^o 1.) each of which contained families in 1792. On the 21st July 1792, a storm burst upon the school, in which 100 scholars were assembled; the wind, which shattered the windows, and de-
stroyed the roof; whereby two boys were killed, and many of the others, much

SOME. *adj.* [from *glad.*] 1. Pleased; contented.—

the best angels to and fro descend,
the best heaven in *gladsome* company.

Fairy Queen.
gladsome ghost in circling troops attend,
and unwearied eyes behold their friend.

Dryden.
joy; having an appearance of gayety.
when they wak'd me with a sprightly lay;
when heav'n they sung and *gladsome* day.

Prior.
GLADSOME. *adv.* [from *gladsome.*] With joy and delight.

GLADNESS. *n. f.* [from *gladsome.*] Gladness; delight.

GLASS. *n. f.* [*glaz*, Saxon, amber; *glaz*, glass; *glaze*, Fr. *glace*, Lat.] The white of an egg.—Take the *glaze* of eggs, and as short as water. *Peucham on Draw-*
kind of halbert. *Ditt.*

GLAZE, (*y* 1. *def.* 1.) is used as a varnishing painting. For this purpose it is made of a glutinous consistence, and commonly consists of a little brandy or spirit of wine, to which is added a little more freely, and with a lump of white lead to prevent its cracking; and is spread over the picture or painting with a brush.

GLAZER. *v. a.* [*glazer*, French; from *glaze*.] To smear with the white of an egg. This is still used by the bookbinders.

GLAZIER, a SW. branch of Lake Miami, in the Western territory of the United States. It empties into St Mary's River.

GLAMFORD, a town in Norfolk, SW.

GLAMFORD BRIGGS, or GLANDFORD, a town of Lincolnshire on the Anglian, 5 miles N. of Lincoln, and 153 N. by London. It has a great trade in corn, coals, and skins. Lon. 0. 20. W. Lat. 40. 35 N.

GLAMMISS, a parish of Scotland in the county of Perth, 12 miles long and from 1 to 5 broad. It is level, lying in the middle of the valley of the Forth, on the N. side of Sidlaw hills; near which is rocky and mountainous. The air is healthy. The soil is good, well cultivated, and fertile. The population, in 1783, and in 1801, was 2040, and had increased to 2755. The number of horses was 1750, and of black cattle 1190.

There are 7 villages and some antiquities in the parish, and several quarries of excellent free stone

and slates. About 1000 acres of unarable ground are full of thriving plantations.

(2.) **GLAMMISS,** an ancient village in the above parish, (N^o 1.) 4 miles from Kirriemuir, containing about 500 souls in 1790. Near the manse there is an obelisk erected in memory of the murder of K. Malcolm II, in 1034, with several emblematical figures rudely carved on it, representing that bloody transaction.

(3.) **GLAMMISS, CASTLE OF,** a very ancient structure in the above parish, the seat of the Earl of Strathmore. It belonged originally to the Crown; but was given by K. Robert II, in 1372, to his favourite J. Lyon, who married his daughter. It has been since greatly enlarged.

(4.) **GLAMMISS, NEW TOWN OF,** a village in the above parish, near Old Glammiss, (N^o 2.) containing 140 inhabitants in 1790.

GLAMORGANSHIRE, a county of South Wales, said to have derived its name from a contraction of the Welsh words *Gwalld Morgan*, or "the country of Morgan," and supposed to have been thus called from a prince of this part of the country, said to have been killed 800 years before the birth of our Saviour. Others derive the name from the British word *Mor*, which signifies the sea; this being a maritime county. It is bounded on the S. and part of the W. by the Bristol channel; on the NW. by Caermarthenshire; on the N. by Brecknockshire; and on the E. by Monmouthshire. It is 48 miles long from E. to W. 27 broad from N. to S. and 116 in circumference. It is divided into 10 hundreds, in which are one city, 7 market towns, 118 parishes about 10,000 houses, and 58,000 inhabitants. It is in the diocese of Llandaff. This county, in the time of the Romans, was part of the district inhabited by the Silures, and had several Roman stations. Thus BOVERTON, a few miles S. of Cowbridge, is supposed to be the *BOVIVM* of Antoninus; NEATH to be his *Nidum*; and LOGHOR, W. of Swansea, to be his *Leucarum*. The principal rivers of this county are the Rhymny, the Taff, the Ogmore, the Avon, the Cleddau, and the Tawe. The air, in the S. part, towards the sea, is temperate; but the N. part, which is mountainous, is cold and piercing, full of thick woods, extremely barren, and thin of inhabitants. The mountains, however, feed herds of cattle, and send forth streams which add greatly to the fertility of the other parts of the county: they have likewise coal and lead ore. The S. part is so remarkably fertile, pleasant and populous, that it is generally styled the *Garden of Wales*; but it has no manufacture. This county was formerly full of castles, most of which are now decayed. It has many small harbours on the coast, for exporting coals in large quantities to England and Ireland; and provisions to England. It sends two members to parliament, one for the shire, and one for the borough of Cardiff, the capital.

GLAMOUR, or GLAMER, *n. f.* an old term of popular superstition in Scotland, denoting a kind of magical art believed to be raised by forcerers, and which charmed their spectators with visions of things which had no real existence, altered the appearance of those which really did exist, &c.—

The

The eastern nations have a similar superstition, as we may learn from the Arabian Nights Entertainments and other works of oriental fiction.

* GLANCE. *n. f.* [glantz, German, glitter.]

1. A sudden shoot of light or splendour.—

His offering soon propitious fire from heav'n
Consum'd with nimble glance, and grateful
steam :

The other's not ; for his was not sincere.

Milt. Par. Lest.

2. A stroke or dart of the beam of sight.—The aspects which procure love are not gazings, but sudden glances and dartings of the eye. *Bacon's Nat. Hist.*—There are of those sort of beauties which last but for a moment ; some particularly of a violent passion, some graceful action, a smile, a glance of an eye, a disdainful look, and a look of gravity. *Dryden's Duff.*—

Boldly she look'd, like one of high degree :

Yet never seem'd to cast a glance on me ;

At which I only joy'd, for, truth to say,

I felt an unknown awe, and some dismay. *Harte.*

3. A snatch of sight ; a quick view.—The ample mind takes a survey of several objects with one glance. *Watts.*

(1.) * To GLANCE. *v. a.* [from the noun.] To move nimbly ; to shoot obliquely.—

Glancing an eye of pity on his losses,

Enough to press a royal merchant down. *Shak.*

(2.) * To GLANCE. *v. n. i.* To shoot a sudden ray of splendour.—

He double blows about him fiercely laid,

That glancing fire out of the iron play'd,

As sparkles from the anvil use,

When heavy hammers on the wedge are sway'd.

Spenser.

When through the gloom the glancing lightnings fly,

Heavy the rattling thunders roll on high. *Rowe.*

2. To fly off in an oblique direction.—

He has a little gall'd me, I confess ;

But as the jest did glance away from me,

'Tis ten to one it maim'd you two outright.

Shakefp.

3. To strike in an oblique direction.—

Through Paris' shield the forceful weapon went,

His corslet pierces, and his garment rends,

And glancing downwards near his flank descends.

Pope.

4. To view with a quick cast of the eye ; to play the eye.—

O' th' sudden up they rise and dance,

Then sit again, and sigh and glance ;

Then dance again, and kiss.

Suckling.

Mighty dulness crown'd,

Shall take through Grub-street her triumphant round ;

And her Parnassus glancing o'er at once,

Behold a hundred sons, and each a dunce.

Pope's Dunciad.

5. To censure by oblique hints.—

How can'st thou thus, for shame, Titania,

Glance at my credit with Hippolita.

Knowing I know thy love to Thek us.

Shak.

—Some men glance and dart at others, by justifying themselves by negatives ; as to say, this I do

not. *Bacon.*—I have never glanced at the designed procession of his holiness and ants, notwithstanding it might have added ter to many ludicrous speculations. *As* had written verses, wherein he glanced at reverend doctor, famous for dulness. *J*

* GLANCINGLY. *adv.* [from *gl*] oblique broken manner ; transiently.—*Hawkins* hath done something in this brokenly and glancingly, intending the course of his own voyage. *Hakewill* *an*

(1.) * GLAND. *n. f.* [glans, Lat. French.]—All the glands of a human body are reduced to two sorts, viz. conglobate and merate. A conglobate gland is a little body, wrapt up in a fine skin, by which it is separated from all the other parts, only an artery and nerve to pass in, and give a vein and excretory canal to come out. Some of the glands in the brain, the testis and testes. A conglomerate gland is composed of many little conglobate glands, all tied up in the common tunica or brane. *Quincy.*—The abscessa begu'd the body of the glands. *Wise-man.*

The glands, which o'er the body Fine complicated clues of nervous tissue involv'd and twisted with the arteries. The rapid motion of the blood observed.

(2.) GLANDS. See ANATOMY, and

(1.) * GLANDERS. *n. f.* [from *gl*] horse, is the running of corrupt matter from the nose, which differs in colour according to the degree of malignity, being white, yellow or black. *Farrar's Dict.*—His horse is full of the glanders, and like to mose in the cl

(2.) GLANDERS. See FARRIERY, & GLANDEVES, a town of France, in the Lower Alps, formerly flourishing, almost deserted, on account of the ravages of the Var.

GLANDFORD BRIDGE. See BRIDGE and GLANFORD, N° 2.

* GLANDIFEROUS. *adj.* [glans, Lat.] Bearing mast ; bearing acorns, or acorns.—The beech is of two sorts, as is also amongst the glandiferous trees. *Mor*

GLANDORÉ, a town of Ireland, with an excellent harbour, 3 miles W. and 6 W. of Galley Head. Between it and Ross, the coast is high and bold, two small coves : viz. Mellicove on the one, Cowcove on the W. Near the harbour is a small town, called the Lepp. Lon. 8, 56. W. 22. N.

GLANDORP, Matthias, M. D. a physician, born in 1595, at Cologne, in which his father was a surgeon. After taking at Padua, and visiting the principal universities, he settled at Bremen in 1618, where he practised physic and surgery with success, made physician to the republic and to the bishop. He published at Bremen, 1. *Methodus in chirurgorum*, in 1619 ; 2. *Methodus in roychia*, in 1623 ; 3. *Tractatus de po-*

fonticuli et Setonium referatam, in which were republished, with his life pre-London, in 4to, 1729. He died young. **IDULÆ RENALES.** See **ANATOMY**, §

INDULE. *n. f.* [*glandula*, Lat. *glandule*, A small gland serving to the secretion of —Nature hath provided several *glandules* to this juice from the blood, and no less pair of channels to convey it into the which are called *ductus salivaris*. Ray.

tion.—Such constitutions must be sub-
annulous tumours, and ruptures of the
ks. *Arbutnot.*

GARIEFF BAY, a bay of Ireland, on the ie county of Cork.

GOWRA, a town of Ireland, in Cork.

ANMIRE, a river of Ireland, in Cork hich runs through a beautiful and fertile untry, somewhat hilly, and falls into the ork harbour.

ANMIRE, a town in Cork, seated on the r, (N° 1.) about 3 miles from Cork. autiful variety of extensive prospects.

MORE, a town of Ireland, in Kilkenn- es from Dublin.

ORGA, a town of Ireland, in Limeric. i. See **ANATOMY**, § 313, and 318.

HAMMAR, a town of Sweden, in the f Nericia, 7 miles NE. of Orebro.

ANTON, a town of Ireland, in Cork unster, 135 miles from Dublin.

ANTON, a village of England, SE. of

IL, Joseph, a learned and ingenious, l and credulous, writer in the 17th cen- at Plymouth in 1636, and bred at Ox- was a great admirer of Mr Baxter, and a commonwealth. After the restora- blished *The vanity of dogmatizing* ;

F. R. S. and, taking orders in 1662, ed to the vicarage of Frome-Selwood shire. In 1662, he published his *Lux* in 1665, his *Scyphs Scientifica* ; and in *philosophical considerations touching the ches and witchcraft*. In 1668, he pub- *ltra* ; or, *The progress and advance- vledge since the days of Aristotle*. He plished, *A seasonable recommendation of reason* ; and *Philosophia Pia*, or *A be religious temper and tendencies of the philosophy*. In 1678 he was made a of Worcester, and died in 1685.

NVILLE, Bartholomew, an English thor of the 14th century, commonly *olomæus Anglus*. He was a Francis- cended of the noble family of Suffolk, ed in the reign of Edward III. He
PART. II.

wrote a book on natural history, entitled *De Pro- prietatibus Rerum* : which was translated into Eng- lish by John de Trevisa, in 1398.

(2.) **GLANVILLE**, Ranulph, an English lawyer of the 12th century, who first collected the Eng- lish laws into one body.

GLANWORTH, and } two small towns of
GLANYFREHANE, } Ireland in Cork.

GLAPHOW, a town of England, in Yorksh.

* **GLARE.** *n. f.* [from the verb.] 1. Over- powering lustre ; splendour, such as dazzles the eye.—

The frame of burnish'd steel that cast a *glare*
From far, and seem'd to thaw the freezing air.

Dryden's Fables.

—I have grieved to see a person of quality gliding by me in her chair at two o'clock in the morning, and looking like a spectre amidst a *glare* of flam- beaux. *Guardian*.—

Here in a grotto, shelter'd close from air,
And screen'd in shades from day's detested *glare*,
She sighs for ever. *Pope.*

2. A fierce piercing look.—

About them round,

A lion now he stalks with fiery *glare*. *Milton.*

(1.) * **To GLARE.** *v. a.* [*glaren*, Dutch.] To shoot such splendour as the eye cannot bear.—

One spirit in them rul'd, and every eye
Glar'd lightning, and shot forth pernicious fire
Among th' accurst, that wither'd all their
strength. *Milton.*

(2.) * **To GLARE.** *v. n.* 1. To shine so as to dazzle the eyes.—After great light, if you come suddenly into the dark, or, contrariwise, out of the dark into a *glaring* light, the eye is dazzled for a time, and the sight confused. *Bacon*.—

His *glaring* eyes with anger's venom swell,
And like the brand of foul Alecto flame.

Fairfax.

—He is every where above conceits of epigram- matick wit, and gross hyperboles : he maintains majesty in the midst of plainness ; he shines, but *glares* not ; and is stately without ambition. *Dryden*.—

The court of Cacus stands reveal'd to light ;
The cavern *glares* with new admitted light.

Dryden's Æneid.

Alas, thy dazzled eye

Beholds this man in a false *glaring* light,
Which conquest and success have thrown upon
him. *Addison.*

2. To look with fierce piercing eyes.—

Thou hast no speculation in those eyes,
Which thou dost *glare* with. *Shak.*

Look, how pale he *glares* ! *Shak.*

Now friends no more, nor walking hand in
hand ;

But when they met they made a surly stand,
And *glar'd*, like angry lions, as they pass'd,
And with'd that ev'ry look might be their last.

Dryden's Fables.

3. To shine ostentatiously, or with too much la- boured lustre.—The most *glaring* and notorious passages are none of the finest, or most correct. *Felton on the Classics.*

* **GLAREOUS.** *adj.* [*glaireux*, Fr. *glareous*, Latin ; from *glaire*.] Consisting of viscous transpa- rent matter, like the white of an egg.

* GLA

• **GLARING**, *adj.* Applied to any thing notorious: as, a *glaring* crime.

(1.) **GLARIS**, or } one of the cantons of Switzerland, bounded on the E. by the country of the Grisons, and partly by that of Sargans; on the N. by Gaster, and lake Wahlenstadt; on the E. by the canton of Schwitz; and on the S. by part of the canton of Uri, and of the country of the Grisons. It is a mountainous country, almost entirely surrounded by the Alps.

(2.) **GLARIS**, or **GLARUS**, a city of the Helvetic republic, capital of the above canton, seated in a plain, at the foot of high craggy mountains. The streets are large, and the houses good. It has two churches, one in the middle of the town, and the other without, upon an eminence, in which there is a cavern, with grotesque figures formed by the water that drops therein. Even before the late revolution in 1798, (See **HELVETIC REPUBLIC**;) the government was so very democratic, that every youth of 16 years of age, had a vote in the General Assembly, which met annually on the first Sunday in May. The executive power was in a council of Regency, composed of 48 Protestants and 15 Catholics. The Calvinists and the Roman Catholics have divine service by turns in the same church. The former have increased greatly within these two centuries. It is seated on the Linth, 32 miles E. of Lucerne, and 32 S.E. of Zurich. Lon. 9. 11. E. Lat. 46. 38. N.

GLASCOTE, a town of Warwickshire, on the S. side of the Anker, opposite to Tamworth.

(1.) **GLASENDORF**, a town of Bohemia, in Konigingratz; 6 miles NW. of Trautenau.

(2.) **GLASENDORF**, a town of Silesia, in Neisse, 10½ miles SW. of Patshkau.

GLASER, Christoph, apothecary to Lewis XIV, was author of a celebrated treatise on Chemistry, which was translated into English and German. He died in 1679.

GLASFORD, a parish of Scotland, in Lanarkshire, 8 miles long, and a broad at an average, but the breadth is very unequal. The soil is partly strong clay, in other parts mossy, and in others light loam, and remarkably stony, but the stones add to its fertility. Husbandry is very little improved, though the E. part of the parish is inclosed. The population in 1791, stated by the rev. Hugh Mitchell, in his report to Sir J. Sinclair, was 788, and had increased 229 since 1755. That clergyman has since resigned his charge, from scruples of conscience, yet without joining any other sect; and has published his reasons in a pamphlet, bearing the singular title of *An Apology for Apostacy*. There are 3 villages in the parish, which carry on linen and cotton manufactures.

(1.) **GLASGOW**, a large and beautiful city of Scotland in Lanarkshire, on the N. bank of the Clyde; justly esteemed the ad in the kingdom. The name in the Gaelic language signifies a *gray smith*; whence it has been supposed that some spot in the most ancient part of the city was originally the residence of some blacksmith, who had become so eminent in his profession that the place went by his name. The most ancient part of the city stands on a rising ground. The rest of it is built chiefly upon a plain, bounded on the S. by

the Clyde, and on the N. by a gentle hill lying in a parallel direction with the river. The streets are all clean and well paved, several of them intersecting each other at right angles, and produce a very agreeable effect. The streets cross one another, and divide nearly into 4 equal parts; and the distance from the cross, the centre of intersection, is of great magnificence. The houses, of 4 or 5 floors in height, are built of brick, generally in an exceeding good taste, and them elegant. The manufacturing houses are full of people, for carrying on the means and encouragement which they give to population, and the wealth thence derived to individuals, as well as accruing to the crown, have all tended lately to increase the greatness of the city, and the elegance of its buildings. Glasgow lies 10 miles S.E. of Dunbarton, 44 miles S.W. of Edinburgh, and 60 S.W. of Perth. Lon. 55° 51' 32" N.

(2.) **GLASGOW, BRIDGE, QUAY**, &c. There are two bridges over the Clyde. The old Bridge, built about 400 years ago, by Robert I. but since repaired and partly rebuilt, consists of 10 arches; and connects the suburb of Glasgow on the opposite side of the river, with the city. The other is the New Bridge, which is built in a very elegant manner. It is 500 feet long, and 40 feet wide; with a commodious road for foot passengers, 5 feet broad on each side, raised above the level of the river, and paved with freestone. It has 7 arches, the faces of which are very fine, with a strong block cornice above. It was begun in 1668, and finished in 1772. On the banks of the river eastward, is the *Grassmarket*, appropriated to the use of the inhabitants, for conveniences for washing and drying linen, with agreeable and extensive walks for recreation. On the S. side of the town, westward of *Broomie law*, where the *Quay* is situated, within these few years, the river here at several miles distance, was so shallow, as to admit only of ships from Greenock, Port-Glasgow, and the islands; but of late it has been cleared and deepened so as to admit ships of considerable burthen.

(3.) **GLASGOW, CHURCHES** IN. The *Cathedral* or *High Church*, is a magnificent building, and is situated greatly to its advantage, on a higher than any part of the city. The tower is founded upon 4 large masonry pillars, 12 feet each in circumference. It is 15½ feet high within; and is surrounded by a balustrade in which rises an octangular spire terminates in a fine. The tower upon the west end is on the same level, but appears not to have been so, though it is covered over with lead. In the tower is a very large bell 21 feet 4 inches in diameter. The principal entry was from the west; it is 11 feet broad at the base, and 17 feet high. The west end of the choir is appropriated to a place of divine worship; and is divided into two parts by a stone partition, which is closed by another stone wall parting it into two naves. It is impossible to form an adequate idea of the awful solemnity of the place, occa-

business of the roof and the range of pillars by which the whole is supported. The nave of the church rises 4 steps higher than the choir; and on the W. side stood the organ loft, formerly ornamented with a variety of figures, but now defaced. The pillars are elegantly executed. The one in the centre is 19 feet high. At the end of the choir are flights of steps upon each side into passages which were formerly the principal entries to the burying vault immediately under the nave. It is now used as a parish church for the Barony; and is full of pillars, some of which are very massy, which support the arched roof; it is very uncomfortable for devotion. The space under the altar and vestry, now used as a place by the heritors, was formerly employed for keeping relics; and indeed, from the singular manner in which this place is finished, it evidently was not destined for common use. At the monument of St Kentigern, with himself in a recumbent posture. The whole length of the cathedral within the walls is 284 feet, its breadth 65; the height of the choir, from the floor to the canopy, 90 feet; that of the nave, 45; that of the middle tower, 220 feet. This church was begun by John Achais, (See § 7.) and continued by succeeding bishops, till it was finished in the manner in which it now stands, was a task for which the wealth of the see of Glasgow was not sufficient; so that they were obliged to have recourse to all the churches of Scotland for alms to it. This venerable edifice was in danger of falling a victim to popular fury in 1578; but owed its preservation to the spirit and good sense of the tradesmen, who, upon hearing the drum for collecting the workmen appointed to demolish it, flew to arms, and declared that no man who pulled down a single stone should be buried under it. Near the cathedral are the ruins of the bishop's palace or castle, enclosed with a high wall of hewn stone by James V.; and the great tower built by Abp. James in 1426. *St Andrew's Church* was begun in 1579, and finished in 1756. It is the finest specimen of modern architecture in the city. It is 100 feet long, 60 wide, and 170 high. Besides the cathedral, which contains 3 congregations, *St Andrew's church*, there are other 4 churches on the establishment. Their names are *St Peter and Outer High Churches*; the *North Church*, *St Enoch's*, the *College church*, *St John's*, *Horn*, *Tron* and *Wynd*. There are also a *French chapel*, a *Highland church*, several *separate meeting-houses*, and others for sectaries of various denominations.

GLASGOW, COLLEGE OF. The front of the building extends along the E. side of the high street and is upwards of 330 feet long. The gate of entrance is decorated with rustics, and over it is the king's arms. The building consists of several principal courts or squares. The first is 28 feet high and 44 broad. The W. side is elevated by one pillar, on which are placed pilasters supporting the Doric entablature, and ornamented with arches forming a piazza. The spire is on the E. side, is 135 feet high, and has a good clock. Under this is the gateway into the inner and largest court, which is 103 feet long

and 79 broad. Over the entry, in a niche, is a statue of Mr Zacharias Boyd, who was a benefactor to the university. (See Boyd.) On the E. side of the court is a narrow passage leading into a handsome terrace walk, gravelled, 132 feet long by 64 feet broad. On the S. side of the walk stands the library; a very neat edifice, well constructed, and containing a very valuable collection of books. Underneath are preserved in cases all the Roman inscriptions found on Graham's Dike, together with altars and other antiquities collected from different parts of Scotland.—Adjoining, there is an observatory, well furnished with astronomical instruments. The college also possesses, by bequest, the late Dr Hunter's famous anatomical preparations, library, and museum: And in the department of natural philosophy, it is furnished with an apparatus which is universally acknowledged to be the most extensive and useful in Britain, and which owes its perfection to the liberality and unremitting labour of Mr Anderson the late professor of that science.

(5.) **GLASGOW, CONSTITUTION AND GOVERNMENT OF.** In 1711, the constitution of the burgh, established in 1690, (See § 7.) underwent some alterations; and in 1748, another set was adopted, and confirmed by the convention of royal boroughs. By it the government of the city is vested in a provost and 3 bailies, a dean of guild, deacon convener, treasurer, master of works, 13 merchant and 12 trades counsellors. The provost and two of the bailies must be elected from the merchants, and the other bailie from the trades. The provost is styled *lord provost*. He is lord of the police, president of the community, and *ex officio* a justice of the peace for both the burgh and county. The bailie court is held every Friday. The trades consist of 14 incorporations.

(6.) **GLASGOW, GRAMMAR SCHOOL OF.** The grammar school is situated on the NW. side of the town, and was built in 1787. It is a very handsome building, containing a large hall, and six airy commodious teaching rooms, where above 300 scholars are taught.

(7.) **GLASGOW, HISTORY OF.** Of the origin of this city there are no authentic records. So early as A. D. 560, a bishopric is said to have been founded here by St KENTIGERN, the grandson of Loth king of the Picts; but in what state the town then was, is altogether uncertain. Most probably the priests and disciples who attended St Kentigern would contribute considerably towards its advancement. His immediate successors were Baldred and Conwal. The first established a religious house at Inchinnan; the second went into Lothian to preach to the Saxons; and both were ranked as saints in the Roman kalendar, Baldred on the 6th of March 608, and Conwal on the 18th of May 612. From this time we have no distinct accounts concerning the city or bishopric of Glasgow, till 1115, when David I. king of Scots attempted to recover the people from the gross barbarity into which they had fallen, and restored to the church those lands of which she had been robbed. From 1116 to the reformation, the records of the bishopric are tolerably complete. The most remarkable particulars they contain are the following. In 1136, John Achais, appointed Bp.

of Glasgow by David I. built and adorned a part of the cathedral, which he consecrated on the 9th of July. He also divided the diocese into the two archdeanries of Glasgow and Teviotdale. In 1174, Joceline, abbot of Melrose, was elected bishop, and made an addition to the cathedral. He also procured charters from K. William I. creating Glasgow into a royal borough, and appointing a fair to be held there annually for 8 days. In 1335, John Lindsay, bishop of Glasgow, was killed in an engagement at sea with the English, as he was returning home from Flanders. His successor, William Rae, built the stone bridge over the Clyde. In the time of Matthew Glendoning, who was elected bishop in 1387, the great spire of the church, which had been built of wood, was consumed by lightning. His successor, William Lauder, laid the foundation of the vestry of the cathedral, and built the great tower of stone as far as the first battlement. The great tower of the episcopal palace was founded about 1437, on which bishop Cameron expended a great deal of money. In 1447, William Turnbull, of the family of Bedrule in Roxburghshire, was chosen bishop. He obtained from K. James II. in 1450, a charter erecting the town and the patrimony of the bishops into a regality. He also procured a bull from pope Nicholas V. for erecting an university within the city, which contributed more than any thing that had been formerly done towards the enlargement of the town. The population increased exceedingly; the high street, from the convent of the Black friars, to where the cross is now placed, was soon filled up; the ancient road which led to the common being too distant from the new inhabitants, the Gallow-gate began to be built. Soon after, the collegiate church of St Mary (now the Tron church) being founded by the citizens, occasioned the Tron-gate street to be carried westward as far as the church. The rest of the city increased gradually towards the bridge, by the building of the Saltmarket. The borough roads, and the cattle that grazed on the commons, were now found insufficient to maintain the increased number of inhabitants; for which reason a greater degree of attention was paid to the fishing in the river. Many poor people subsisted by this occupation; they were incorporated into a society; and, that they might be at hand to prosecute their business, they built a considerable part of the street then called *Fishers gate*, now *bridge-gate*. Notwithstanding all this, Glasgow did not for a long time attain the rank among the other towns of Scotland which it now holds, though it was erected into an arch-bishopric in 1482. In 1556, it held only the 11th place among them, as appears by Q. Mary's taxation. In 1611, a very ample charter was granted by K. James VI; and in 1646, K. Charles I. granted another. During the civil wars, Glasgow suffered severely. To the national standing intestine discord, were added a pestilence and famine; and to complete its miseries, a fire broke out on the 12th June, 1649, which burnt a third part of the city, continuing for three weeks. The loss was estimated at 200,000 l. A charter given to Bp. Turnbull in 1649, had been deprived of the power of electing a mayor and magistrates, when

was thenceforth exercised by the bishop. After the reformation, however, this power cited by the citizens, the bishop, the common, and others. The idea that the bishop's borough, and not a royal free, gave occasion to this unsettled manner of governing the magistracy. But on the 4th of July 1560, it was declared free by a charter of Mary; and, in confirmation, it was in an act of parliament, June 14th, that they have power to elect their own magistrates and freely as Edinburgh or any other borough. (See § 5.) By the assailing of the boroughs in 1695, we find Glasgow reckoned the 1st city in Scotland in point of wealth, which it still continues to hold. But the present prosperity of Glasgow, may be ascribed to the union, by which the American trade was opened to the inhabitants. Their assiduous attention to that trade ever since has greatly contributed to raise the city to the pitch of affluence which it at present enjoys. The city has been greatly enlarged; and as the inhabitants sensible of the inconvenience that attended the want of a sufficiency of water in the river for their commerce, the magistrates purchased some lands on the south side of the City for that purpose; and so expeditious were they in their harbour, and rearing their town, that a bailie was appointed for the government of the city. GLASGOW; which is now a very considerable city and lies 21 miles higher than the mouth of the river than Glasgow. (See § VI.) In 1725, a great place, upon the extension of the malt land, wherein 20 persons were killed and 100 wounded; the magistrates of Glasgow were sent to Edinburgh, but acquitted. Bannockburn, who commanded the troops, was condemned for murder; but afterwards pardoned and promoted. This affair cost the city 9000 l. During the rebellion in 1745, the city of Glasgow raised two battalions of militia for the service of government. The city, however, had like to have been taken by the rebels, in their journey south, resolved to burn the city: which would probably have been done, had not Mr Cameron of Lochness, in that case, to withdraw his clan contribution, however, was laid on, amounting to about 14,000 l. of which they received 10,000 l. upon applying to parliament. About 1750, a considerable change of manners took place among the inhabitants of Glasgow. The former indolence and a frugality bordering upon parsimony, had been then gradually changed. But now, when an extensive commerce and increased manufactures had produced wealth, and of trade and improvement were adopted, people would formerly have been deemed madmen if they had undertaken; a new mode of introduced in living, dress, building, and an assembly room, theatre, &c. we In 1767, the inhabitants having proposed a small canal from the south of Fort St. George to the Clyde, for the convenience of their trade to the eastern side of the island, several gentlemen from Edinburgh, and throughout the kingdom, were sent to view the project, and reported that this canal should be executed.

per scale, than the one originally projected was accordingly obtained, and the cut in the manner described under the ANAL, § 9, and FORTH, § 4. In 1771, was obtained for making and maintaining the canal and waggon-way from the collieries of Old and New Monkland, of Glasgow. On the 12th March, 1782, a great part of the city was laid under water, the inhabitants were taken out of their houses, the Clyde having risen 20 feet above its bed, and 18 inches higher than ever it had been to do before.

GLASGOW, HOSPITALS AND CHARITABLE INSTITUTIONS IN. 1. The Town's Hospital is a building, consisting of two wings and a central part: the length 156 feet, the breadth of the wings 50 feet, and the depth of the wings 68 feet; and the building is an infirmary 127 feet long and 12 feet broad, the ascent to which is by a flight of steps. The town's hospital was opened for the reception of the poor on the 15th Nov. 1791, its revenue, in 1791, was 2400 l. 11 s. 5 d. from the general sessions, the town council, the merchants' houses, the interest of the hospital arising from donations; money received from manufactures, and from boarders; and an annual sum made upon the inhabitants. The number of people, maintained in this hospital, was 330; besides 115 children nursed, and 146 families supplied with meal and fuel. 2. *Muirhead's*, or *St Nicholas's* Hospital, was originally appointed to subsist 12 old men and a chaplain; but its revenues have been so diminished, so that no more of them now remains but an alms of 139 l. 2 s. 5 d. Scots, 128 l. annually divided among four old men, each of 2 l. 1 s. 4 d. Sterling each. 3. *Hutchinson's* Hospital was founded and endowed in 1639, by James Hutchinson of Lamb-hill, notary public, for the maintenance of 12 old men and 12 boys. The income is above 1500 l. which is distributed in alms from 3 l. to 20 l. to old people, and in alms about 50 children. 4. The *Merchant's* Hospital has a capital of above 17,000 l. and a revenue of above 1000 l. of which it distributes in alms and other charities about 800 l. yearly. 5. *James's* Hospital has a revenue of above 1000 l. when these hospitals existed before 1605.

Charity for the education of boys, was founded by George Wilson, who, in 1778, left a fund for that purpose. This fund is now concentrated, and gives education and clothing to 40 boys, each of whom continues 4 years, and are admitted annually. There are also several other institutions of private relief for relieving the indigent and instructing them, as *Euchanan's Society*, *Graham's Society*, *the Society of the Sons of the Highland Society*, &c. The last gives 40 boys apprentices to trades, and for the first 3 years gives them clothing and education.

GLASGOW, MANUFACTURES OF. Although the manufactures of plaids, ropes, soap, &c. have been carried on in Glasgow, before the union, Mr Gibson is of opinion that the com-

merce to America first suggested the idea of carrying them to any considerable extent. The first attempts with that view were made about 1725; but their increase was not considerable, till great encouragement was given by the legislature to the linen manufacture in Scotland. The first causes of the success of this manufacture were the act of parliament in 1748, whereby the wearing of French cambrics was prohibited under severe penalties; that of 1751, allowing weavers in flax or hemp to settle and exercise their trades any where in Scotland free, from all corporation dues; and the bounty of 1½ d. per yard on all linens exported at and under 18 d. per yard. Since that time the spirit of manufacture has rapidly increased among the inhabitants of Glasgow; and great variety of goods, and in very great quantities, have been manufactured. Cheeks, linens, and linen and cotton stuffs, are manufactured to great extent. Indies were first made in 1732; printed linens and cottons were begun to be manufactured in 1738; and handkerchiefs first printed in 1754. In 1757, carpets were begun to be made, and have been since carried on to a considerable extent. But the manufacture which has of late years been carried to the greatest extent, and by which immense and rapid fortunes have been made, is MUSLIN. The number of labourers employed in this single branch, is wonderful; while the consumption of cotton yarn in manufacturing muslins and calicoes, have occasioned the erection of extensive cotton mills, throughout the country. See COTTON, N° I, § viii, 1—4. The cotton manufactures, in 1791, employed, in Glasgow and its neighbourhood within 30 miles round, 15,000 looms, and 135,000 persons; who made goods amounting on an average to L. 1,500,000 sterl. per annum. *Statist. Acc.* V. 502. Besides these, numberless other articles are manufactured at Glasgow, of which our limits permit us not to give a detail; such as soap, sugar, iron-mongery, brass, jewellery, bottle and flint glass, pottery, hats, stockings, thread, gloves, shoes, saddles, &c. &c. Types for printing are made by Dr Wilson and Sons, equal, if not superior, in beauty to any in Britain.

(10.) **GLASGOW, MARKETS IN.** The markets in King's Street were erected in 1754, and are justly admired, as the completest of the kind in Britain. The herb market is neat and commodious; and the principal entry is decorated with columns. It is situated in the Candleriggs, and is laid out in the same manner with those in King's Street. Besides the weekly markets on Friday, there are 6 annual fairs held in Glasgow.

(11.) **GLASGOW, PARISHES IN.** Glasgow anciently formed but one parish; but as its population increased, it was afterwards divided into 7 parishes, and more lately into 8, which are named after the 8 churches. See § 3.

(12.) **GLASGOW, POPULATION OF.** At the union, the number of inhabitants was reckoned about 14,000. In 1743, Dr Webster calculated it at 18,365; but in his second report in 1755, it was stated at 23,546 souls, including those in the suburbs. In 1765, when a new division of the parish took place, it was estimated at 28,000. In 1785, an accurate survey was made, when the number was 36,139; besides 1000 in the suburbs.

But

But in 1797, the last and most accurate survey was made for Sir J. Sinclair's *Statistical Account of Scotland*; when the number of houses within the royalty was found to be 10,391, and that of the inhabitants 41,777; besides 20,168 souls in the suburbs and villages of Calton, Anderston, Grassington, Gorbals, Cowcaddins, Camlachie, &c. So that the total population of the city and suburbs in 1791, was 61,945; and the increase since 1755, 38,399.

(13.) GLASGOW, PRINTING IN. Printing of books was first begun here by George Anderson about 1638. But there was no good printing in Glasgow till 1735, when Robert Urie printed several books in a very elegant manner. The highest perfection, however, to which printing has yet been carried in this place, was by the late Robert and Andrew Foulis, (who began in 1740); as the many correct and splendid editions of books printed by them in different languages testify.

(14.) GLASGOW, PUBLIC HALLS IN. The *Town House*, or *Tolbooth*, is a magnificent and extremely elegant building. The front is adorned with a range of Ionic pilasters; and is elevated on strong rusticated pillars with arches, forming a piazza for merchants and others to shelter themselves from the weather when met upon business. The hall is 52 feet long, 27 wide, and 24 high. It is ornamented with whole length portraits of the kings of Scotland from K. James I. to George III. In 1781, the exchange under the piazza was greatly enlarged, by taking down the lower part of the town-hall and assembly room; and at the same time by a tonnage scheme entered into by the inhabitants, a most elegant coffee-room was added, with a suite of buildings adjoining, for the purposes of a tavern and hotel, assembly room, and offices for notaries, &c. 2. The *Guild-Hall*, or *Merchant's House*, is situated upon the S. side of Bridge-gate street; and is 82 feet long, and 31 wide. The great hall, which is the whole length and breadth of the building is so capacious, that it is better adapted for the reception of great and numerous assemblies than any other in the city. This house is adorned with a very elegant spire 200 feet high.

(15.) GLASGOW, REVENUE OF. The revenue amounts to 7,000 a-year. It arises from a duty upon all grain and meal brought into the city; from the rents of lands and houses belonging to the community; from an impost of two pennies Scots upon every Scots pint of ale or beer brewed, imported, or sold, within the city; from certain dues payable out of the markets; from the rents of the seats in churches; from the dues of cramage at the quay, weigh-house, &c. The tonnage on the river, the postage of the bridge, and statute work, being no part of the city's revenue, are kept distinct under the management of commissioners appointed by act of parliament.

(16.) GLASGOW, TRADE OF. The first branch of trade, in which the citizens engaged, is said to have been the curing and exportation of salmon, caught in the Clyde. This trade was promoted by one Mr William Elphinstone in 1430; but the first authentic document concerning Glasgow as a trading city is in 1546. Complaints having been made by Henry VIII. of England, that several English

ships had been taken and robbed by sailing to Scotland, an order of council was discharging such captures for the future among other places mentioned in this Glasgow. Between 1630 and 1660, a considerable land commerce was carried on by the inhabitants of Glasgow; and the exportation of salmon and herrings was greatly increased in 1660 and 1707. The citizens who distinguished themselves most during this period were Gibson and John Anderson. Gibson packed in one year 300 lasts of herrings, sent to St Martin's in France, on board a vessel called the *St Agate*, of 450 tons. His returns were brandy and salt. He who imported iron from Stockholm and Anderson is said to have been the first to import white wines. But the Union, Scotland, by allowing a free trade to America and the W. Indies, opened up a new source of commerce to the Glasgow traders; which they pursued with such ardour and success, that at present the shipping employed in it amounts to 60,000 tons. This commerce, however, with several interruptions from the war, of the English merchants (of whom to run it, a particular account is given in Sir J. Sinclair's *Statistical Account*, Vol. 498—500.) as well as from the American war, yet the spirit and industry of the Glasgow merchants proved so far superior to all other losses, that in 1790, the number of ships employed was 476, and their tonnage 460,000. In 1783, the same enterprising spirit gave birth to a society entitled the *Chamber of Commerce and Manufacturers*, which has since obtained a charter, and whose exertions have been of great benefit to the country.

(17.) GLASGOW, UNIVERSITY OF. The university owes its origin to bishop Turrill (q. v.) It was established in 1450; its members were all ecclesiastics; and its principal support derived from the church. In 1560, the Reformation brought the university to the verge of ruin. The magistrates, sensible of the loss to the community sustained by this desertion, endeavoured to restore it in 1572, by bestowing considerable funds, and prescribing regulations for its management. These proving insufficient, K. James VI. renewed, by a charter called the *New Charter*, 1577, and bestowed upon it the title of *University of Govan*. Since that period, it has been considerably enlarged by royal and the donations of private persons. They have also been increased from 4 to 12 at present the university consists of a rector, dean of faculty, principal, and six (six of them in the gift of the city) with bursars, &c. The archbishop of Glasgow was formerly chancellor of the university; at present, the chancellor is the rector, dean of faculty, principal, &c. The revenue arises from the tithes of Govan, from those of the parishes of Kilbride, granted by James VI. confirmed by Charles I. in 1630; from

Calder, Old and New Monkland, con-
 charter from Charles II. in 1670; from
 the archbishoprick; and from several do-
 nated by private persons. The uni-
 versally attended by above 500 students.
 ASGOW, a county of N. Carolina in
 District; bounded on the N. by Edg-
 . by Pitt, S. by Lenoir, and W. by
 counties. It contained 2,668 citizens,
 whites, in 1795.

GLASGOW, BARONY OF. See BARONY,

GLASGOW, CORBALS OF. See CORBALS.

GLASGOW, NEW PORT, a parish of Scot-
 tishfrewshire, erected in 1695, about one
 mile in extent. It is partly mountainous,
 the coast for 130 yards back it is nearly
 level, little higher than the water mark.

The soil is naturally barren, sandy, and shallow,
 cultivation has been rendered very fertile.
 The soil of the mountains is in tillage. The cli-
 mate is moist but healthy. The population in
 1755 did not exceed 400 souls; but in 1755, ac-
 cording to Dr Webster's calculation, it had arisen
 and in 1790, by the rev. Mr J. Forrest's
 Sir J. Sinclair it was no less than 4,036:
 there was an increase of 2,341 within 35

GLASGOW, PORT, or NEW PORT-GLAS-
 NEWARK, a town in the above parish,
 comprehending the ground sewed by the
 Acts of Glasgow for erecting a port to that
 No 1, § 7.) and the original village of
 now conjoined with it. These united
 in a burgh of barony, governed by two
 and 13 councillors. The revenue is about
 £100,000. The harbour and pier are excellent.
 Ships belonging to it, in 1791, were 91
 employed in the foreign trade, measuring
 11,345; and 34 in the coasting and fishing
 measuring 1487 tons. The total number
 entered at this port, in 1790, was 450,
 measuring 46,560 tons. The chief imports are
 sugar, rum, cotton, mahogany, log-
 woods, timber, iron, and hemp. Port
 is seated on the S. bank of the Clyde, 21
 miles by N. of Glasgow, and 26 N. of Ayr.

HUTTEN, or } a town of Hungary, fa-
 HUTTEN. }mous for its hot baths,
 or some gold mines, 7 miles from Schem-

LETTER, a district of Scotland, in Ross-
 shire parish of Kintail.

LOUGH, or GLASSLOUGH, a town of
 a Monaghan county, 5 miles NNE. of
 L.

GLASS, John, M. A. the founder of that
 DEPENDENTS, commonly distinguished
 by the name of GLASSITES, and in
 by that of SANDEMANIANS. (See INDE-
 P.) His father was minister of Aber-
 deen and he was born at his father's manse in
 1712: he was educated and obtained the degree
 at St Andrews; and was, when a very
 young man, ordained minister of Tealing, near
 Aberdeen. His doctrine and ministry were remark-
 ably distinguished; and even while
 with the establishment, his peculiar

ideas, of the purity of church communion and go-
 vernment, were observable. In 1727, he pub-
 lished a work, entitled "The Testimony of the
 King of Martyrs," in which his Independent Prin-
 ciples were fully developed. In that treatise he
 maintains the inconsistency of any connection be-
 tween civil establishments and the church of
 Christ, which is not of this world. This publica-
 tion, with other concurring circumstances, pro-
 duced a long controversy between Mr Glass and
 the Synod of Angus and Mearns. So far, howe-
 ver, from retracting or trimming in his principles,
 he still more openly avowed and maintained them,
 in a tract published the following year, entitled,
 "A Congregation subject to no Jurisdiction un-
 der Heaven." He was deposed in 1728, and im-
 mediately thereafter connected himself with a few
 poor people who adhered to him; and although
 his adherents have never been numerous, the doc-
 trines which he taught have been generally spread
 through Britain and many parts of America. He
 was subjected to great poverty for many years, in
 supporting a numerous family of 13 children;
 and died at Dundee, in November 1773, highly
 valued by his friends, and respected by all who
 knew him. He published many religious Tracts,
 which were collected and printed in 4 vols 8vo.
 and since reprinted in five volumes; the leading
 doctrines in these works, are, 1. The divinity of
 Christ, and the perfection of his righteousness to
 justify the ungodly: 2. Purity of Christian Com-
 munion: 3. Independence of all human authority
 in matters of conscience: 4. The strictest subjec-
 tion to civil government and magistracy in civil
 concerns: and 5. Unqualified obedience to the
 commands of Christ and his apostles.

(II.) GLASS, John, son of the preceding (No 1.)
 was born at Dundee, in 1725. He was bred a
 surgeon, but afterwards became captain of a mer-
 chant vessel belonging to London. In 1763, he
 embarked for Brazil, and took his wife and daugh-
 ter along with him. In 1765, he re-embarked for
 London, taking with him his family and all his
 property. But when the ship came within sight
 of Ireland, four of the seamen formed a conspira-
 cy and murdered Capt. Glass, his wife and daugh-
 ter, the mate, one sailor and two boys. The
 murderers, having loaded the boat with dollars,
 sunk the ship, landed at Ross, and proceeded
 to Dublin, where they were apprehended, tried,
 convicted and executed. Capt. Glass was a man
 vol. 4to, entitled *A History of the Canary Islands*.
 of talents and letters. He published a work in one

(III.) * GLASS. *adj.* Vitreous; made of glass.—

Get the glass eyes;

And, like a scurvy politician, seem

To see the things thou do'st not. *Shak. K. Lear*.
 Glass bottles are more fit for this second fining
 than those of wood. *Mort. Husb.*

(IV. I.) * GLASS. *n. f.* [*glaes*, Sax. *glas*, Dutch,
 as *Pezan* imagines from *glais*, British, green. In
 Erse it is called *klainn*, and this primarily signifies
 clean or clear, being so denominated from its
 transparency.] 1. An artificial substance made by
 fusing fixed salts and flint of sand together, with
 a vehement fire.—The word *glass* cometh from
 the Belgick and High Dutch, *glais*, from the
 verb *glansen*, which signifies amongst them to
 shine.

shine ; or perhaps from *glacies* in the Latin, which is ice, whose colour it resembles. *Peacbam.*—*Glass* is thought so compact and firm a body, that it is indestructible by art or nature, and is also of so close a texture, that the subtlest chymical spirits cannot pervade it. *Boyle.*—

Show'rs of grenadoes rain, by sudden burst
"Disploding murd'rous bowels, fragments of steel
And stones, and *glass* and nitrous grain aduft.

Philips.

2. A glass vessel of any kind.—

I'll see no more

And yet the eighth appears, who bears a *glass*
Which shews me many more. *Shak. Macbeth.*

3. A looking-glass ; a mirror.—

He was the mark and *glass*, copy and book,
That fashion'd t'other. *Shak. Henry IV.*

He spreads his subtle nets from sight,

With trinkling *glasse* to betray

The larks that in the morn'g light. *Dryd. Hor.*

4. An Hour GLASS. A glass used in measuring time by the flux of sand.—

Were my wife's liver

Infected as her life, she would not live

The running of one *glass*. *Shak. Wint. Tale.*

5. The destined time of man's life.—

No more his royal self did live, no more his
noble sonne,

The golden Meleager now, their *glasses* all were
run. *Chapman.*

6. A cup of glass used to drink in.—

To this last costly treaty,

That swallow'd so much treasure, and like a *glass*
Did break i' th' rinsing. *Shak. Henry VIII.*

When thy heart

Dilates with fervent joys, and eager soul

Prompts to pursue the sparkling *glass*, be sure

'Tis time to thun it. *Philips.*

7. The quantity of wine usually contained in a glass ; a draught.—While a man thinks one *glass* more will not make him drunk, that one *glass* hath disabled him from well discerning his present condition. *Taylor.*—The first *glass* may pais for health, the second for good humour, the third for our friends ; but the fourth is for our enemies. *Temple.* 8. A perspective glass.—

The moon whose orb

Through optick *glass* the Tuscan artist views.

Milton.

—Like those who survey the moon by *glasses*, I tell of a shining world above, but not relate the glories of the place. *Dryden.*

(2.) GLASS is derived by some from the Latin word GLASTUM, the name of a plant called by the Greeks *αετς*, by the Romans *vitrum* ; by the ancient Britons *guadam*, and by the English *wood*. We find frequent mention of this plant in ancient writers, particularly Cæsar, Vitruvius, Pliny, &c. who relate, that the ancient Britons painted or dyed their bodies with glastum, guadam, vitrum, &c. *i. e.* with the blue colour procured from this plant. And hence, the name *glass*, which has always somewhat of this bluishness in it.

(3.) GLASS, ART OF MAKING. See GLASS-MAKING.

(4.) GLASS, ASTONISHING PROPERTIES OF.

1. Glass is one of the most elastic bodies in nature. It the force with which glass balls strike each other

be reckoned 16, that wherewith it
virtue of their elasticity will be 1
When glass is suddenly cooled, it be
ingly brittle ; and this brittleness is
tended with very surprising phenom
balls made of annealed glass, with
them, will fly to pieces by the he
only, if the hole by which the inter
nal air communicate be stopped v
Lately, however, some vessels mad
nealed glass have been discovered, w
remarkable property of resisting ver
given from without, though they sh
by the shocks received from the fall
and minute bodies dropped into i
These glasses may be made of any
their bottoms must always be thick
sides. The thicker the bottom is,
the glasses break. One whose bot
fingers breadth in thickness flies w
ease at least as the thinnest glass. S
vessels have been tried with strokes o
ficient to drive a nail into wood to
and have held good without brea
have also resisted the shock of sever
dies, let fall into their cavities, from
2 or 3 feet ; as musket balls, piece
other metals, pyrites, jasper, wood
But this is not surprising, as other
same shape and size will do the sa
wonder is, that taking a shiver of flint
of a small pea, and letting it fall into
ly from the height of 3 inches, in a
conds the glass flies, and sometime
moment of the shock ; nay, a bit of f
than a grain, dropped into several g
sively, though it did not immediately
yet when set by, they all flew in lei
quarters of an hour. Some other bo
the same effect, as sapphire, diamon
hard tempered steel, marble bowls.
These experiments were made befor
Society, and the effects were the sa
the glasses were held in the hand, p
filled with water, or rested on a p
glasses also broke upon rubbing th
slightly with the finger, within h
after rubbing. But when made un
thin, they did not break. Hollow c
green bottle glass, 3 inches thick at b
instantly broken by a shiver of flint,
bout 2 grains, though they had resist
of a musket bullet from the height of
rious but unsatisfactory reasons have
for these phenomena, by Mr Euler.
The effects are evidently occasioned b
motion some subtle fluid with which
of the glass is filled ; and the motions
when once excited in a particular
glass are soon propagated through t
reatest part of it, and thus the cas
becomes at last too weak to resist th
can be little doubt that this fluid is th
TRICITY. It is known to exist in
great quantity ; and to be capable
glasses even when annealed with the
if put into too violent a motion. I
the cooling of glass hastily may make

onsistent with its cohesive power, to be broken by the least increase of motion in the fluid by friction or otherwise. This is the case when it is broken by rubbing together; but why it should also break by contact of flint and the other bodies added, has not yet been satisfactorily explained.

3. A most remarkable phenomenon is observed in glass tubes placed in certain positions. When they are laid before a fire in a horizontal position, having their extremities heated, they acquire a rotatory motion round their axis, and also a progressive motion towards the fire, even when their supports are detached from the fire, so that the tubes will move a variety of ways to the fire. When the progress of the tubes towards the fire is stopped, their rotation still continues. When placed in a nearly upright posture, in the right hand, the motion will be from left to right; if they lean to the left hand, their motion will be from W. to E.; and the nearer they are to the upright posture, the less will the motion be. If the tube is placed horizontal on a glass plane, the fragment, for instance, of a window glass, instead of moving towards the fire, it will move from it, and about the contrary direction to what it had done before it will recede from the fire, and move back when the place inclines towards the fire. These experiments are recorded in the

N^o 476. § 1. They succeeded best with tubes 20 or 22 inches long, which had a pretty strong pin fixed in cork for the purpose. The causes of these phenomena have not yet been explained.

4. Glass is less dilatable by heat than most substances, and solid glass sticks are less so than tubes. This was first discovered

in making experiments to reduce glass to a greater degree of exactness than has been found practicable; (See *Philos.* vii, p. 663.) and since his experiment, one of the tubes 18 inches long, heated with a solid glass rod of the same length as the former was found by a pyrometer to expand 4 times as much as the other, in heating to that of boiling oil. On account of the quality which glass has of expanding uniformly, M. de Luc recommends it to be used for standards; and he says, that its expansion is equable, and proportioned to the heat; a quality which is not to be found in any other substance yet known. *Philos.* 474.

5. Glass is more fit for the condensation of vapours than metallic substances. A glass filled with water, in summer, will not be wet on the outside, just as far as the inside reaches; and a person's breath on it, manifestly moistens it. Glass is moist with dew, when metals do not. § 7.

6. A drinking glass partly filled with water, and rubbed on the brim with a dry finger, produces musical notes, higher or lower according to the note or less full; and makes the like HARMONICA. 7. Glass is possessed of great electrical virtues. See ELECTRICITY.

8. GLASS BALLS are circular or otherwise shaped hollow vessels of glass, coloured within, so as to imitate the semipellucid gems. The method of doing it is this: Make a strong solution of silicic acid, in water, by boiling; pour a quantity of this while warm into the hollow of a white glass vessel; shake it thoroughly about, that all the sides may be wetted, and then pour off the rest of the moisture. Immediately after this, throw in red lead, shake it and turn it about, throw it into many places with a tube, and the moisture will make it stick and run in waves and pretty figures. Then throw in some blue enamel, and make it run in waves in the ball as the red lead; then do the same with verdegis; next with orpiment, then with red lake, all well ground; always casting in the colours in different places, and turning the glass, that the moisture within may run them into the waves. Then take fine plaster of Paris, and put a quantity of it into the ball; shake it also nimbly about; this will everywhere stick firmly to the glass, and give it a strong inner coat, keeping all the colours on very fairly and strongly. These are set on frames of carved wood, and much esteemed as ornaments in many places.

(6.) GLASS, COLOURING OF. See GLASS-MAKING, SECT. XIV, and PASTES.

(7.) GLASS, CUPPING. See SURGERY, Index.

(8.) GLASS, DIFFERENT KINDS OF. See GLASS-MAKING, SECT. VI and XI.

(9.) GLASS DROPS. See RUPERT'S DROPS.

(10.) GLASS, ENGRAVING ON. This art is quite modern, and owes its origin to the discovery of the fluoric acid. See CHEMISTRY, § 667. To perform it, the glass is covered with melted wax or mastic; and when this is hardened, the device or figure is engraved upon it by a needle or other sharp-pointed instrument. A mixture of the fluoric and sulphuric acids is then put upon the glass or glass plate, and the whole covered with an inverted China cup to prevent the evaporation of the fluoric acid. In two days the glass plate may be cleared of its coating when all the traces of the needle will be found engraved upon it.

(11.) GLASSES, DIFFERENT KINDS OF. Glasses are distinguished, with regard to their form and use, &c. into various kinds, as drinking glasses, optical glasses, looking glasses, burning glasses, &c.

i. GLASSES, BURNING. See BURNING, § 12—17.

ii. GLASSES, DRINKING, are simple vessels of common glass or crystal, usually made in form of an inverted cone. Each glass consists of 3 parts, viz. the calyx or bowl, the bottom, and the foot; which are all wrought or blown separately. Nothing can be more dexterous and expeditious than the manner wherein these parts are all blown; two of them opened, and all three joined together. An idea is only to be had of it, by seeing the operations performed. The glasses chiefly used in England are made of the ashes of fern; crystal glasses being less common. The exceeding brittleness of this commodity, notwithstanding the easy rate of each glass, renders the consumption thereof very considerable. For the method of gilding the edges of drinking glasses, see GLASS-MAKING, § IV, 2.

iii. GLASSES, LOOKING. See FOLIATING, LOOKING GLASS, and MIRROR.

IV. GLASSES, MUSICAL. See HARMONICA.

V. GLASSES, OPTICAL. See OPTICS, and TELESCOPE. The improvements hitherto made in telescopes by combining lenses made of different kinds of glass, though very great, are yet by no means adequate to the expectations that might reasonably be formed, if opticians could fall on any method of obtaining pieces of glass sufficiently large for pursuing the advantages of Mr Dollond's discovery. Unfortunately, however, though the Board of Longitude have offered a considerable reward for bringing this art to the requisite perfection, no attempt of any consequence has hitherto been made. Mr Keir is of opinion, that the accomplishment of this is by no means an easy task; as it requires not only a competent knowledge of the properties of glass itself for the purpose (the fault not being evident to common inspection), but a considerable degree of chemical knowledge to invent a composition by which these faults may be avoided, and a dexterity in the execution of the work, which can only be acquired by practice. He, however, thinks, that if the subject were more generally understood, and the difficulties more fully pointed out, for which purpose he makes the following remarks, the end might be more easily accomplished. 1. The rays of light passing through a glass lens or prism, or through any other medium of unequal thickness, are refracted; but not in an equal manner, the blue, violet, &c. being more refracted than the red. 2. Hence it happens, that the rays of light, when refracted by a common lens, do not all unite in one focus, but in reality form as many different foci as there are colours; and hence arise the prismatic colours, or irises, which appear towards the borders of the image formed by the common convex lenses, and which render the vision extremely indistinct. 3. The indistinctness of vision produced by this cause, which is sensible in telescopes of a small aperture, increases in so great a proportion, viz. as the cubes of the diameters, that it seemed impossible to increase the power of dioptric telescopes greatly, without extending them to a very inconvenient length, unless this confusion of colours could be corrected. 4. It was known that different transparent bodies possessed different degrees of refractive power; and until Mr Dollond discovered the contrary, it was supposed, that the refractions of the coloured rays were always in a determined ratio to one another. On this supposition it seemed impossible to correct the faults of refracting telescopes: for it was supposed, that if the dispersion of light produced by a convex lens were counteracted by another lens or medium of a concave form, the refraction would be totally destroyed; and this indeed would be the case, if the two mediums were made of the same matter; and from some experiments made by Sir Isaac Newton, this was supposed to be actually the case in all substances whatever, 5. From considering that the eyes of animals are formed of materials of different colours, it occurred first to Mr David Gregory, the celebrated professor of astronomy at Oxford, and then to Mr Euler, that, by a combination of mediums which had different refractive powers, it might be possible to remedy the imperfections of dioptric tele-

scopes. It does not, however, appear of these gentlemen understood the manner on which these phenomena depend, executed his idea by forming a compound lens from two glass lenses with water; but his attempt was not attended to. Mr Dollond, however, was led to the improvements adduced by Mr Klingenstern, one of Sir Isaac Newton's experimenters, had induced even that great philosopher to suppose, that the improvement executed by Mr Dollond was impossible. A pertinent was made by Sir Isaac Newton, placing a glass prism within a prism made of water, in such a manner that the light, which were refracted by the glass, should pass through and be refracted by the water prism. In the refraction of the light was equal. But when Mr Dollond repeated the experiment, he found, that, contrary to his own expectation, when the angles of the two prisms were proportioned that they counteracted each other's refraction, then colours appeared; that is, when they were so proportioned that the dispersion of the coloured rays was equalled, the mean refraction still subsisted. This evidently proved, that the mean refractive powers of glass and water were not proportional to one another. 6. To accomplish the proposed improvement, Mr Dollond used several kinds of glass. Crown glass possesses the smallest dispersive power to its refraction; while flint glass possesses the greatest dispersive power in proportion to its refraction, which was also very great. By joining these two exactly together, he was enabled to wedge of white flint glass whose angle was 15 degrees, and another of crown glass whose angle was 29 degrees, refracted very nearly the same. He found also, that, when the wedges were in such angles, the refraction produced by flint glass was to that produced by crown glass nearly as 2 to 3; the refracted light being free from colour. On measuring the refracting powers of these two glasses, he found that in flint glass, the sine of incidence to the sine of mean refraction as 1 to 1.5; that in crown glass, the sine of incidence to the sine of mean refraction as 1 to 1.2. The method of determining the different refractive powers of glass will be found under OPTICS. We shall only observe, that two kinds of glass necessary for the construction of achromatic telescopes; one of which shall possess the greatest, and the other the least, dispersive power to their mean refracting powers, as can be seen from the above. The difference of glasses in this respect depends on the quality of the ingredients employed in their composition. Crown glass, which is made by melting by means of the sides of a crucible, or kelp, both which fluxes a mixture of vegetable earth, alkali, and is found to give the smallest dispersive power to its refraction, while plate glass, which consists of sand and of fixed vegetable alkali, with little or no earth, gives a greater dispersive power to its refraction than flint glass, and

ed by means of minium and fixed alkalis, therefore, that the dispersion of greatest when minium, or probably oxalces, are made use of; and that al- greater power of dispersion than ve- other earths. Mr Zacher of Peter- ever, informs us, that he has made a, much superior in this respect to flint does not as yet appear whether it be optical purposes than that commonly seems no difficulty in augmenting the power, as that is found to depend on the minium or other flux; but thus we un- increase also the capital fault to which all compositions of that kind are mely, the being subject to veins or running through it. By these, even all as to be imperceptible to the naked s which fall on them are diverted from r direction, and the images thereby infused. This is owing to the great- of the veins, as appears by their i- received on white paper, when the between the paper and the sun, or t a proper distance. The rays of then made to converge by the supe- of the veins, their images appear as bordered with obscure edges on the it glass is so much subject to this kind ion, that it is with difficulty the opti- ck out pieces of the size commonly u- arge quantity of the glass. It is far- gretted, that the minium which pro- vatest dispersive power, is likewise the ce which renders flint glass much more e imperfect than any other. The at the sandy and earthy matters mix fusion; and having not only a consi- ce of affinity towards each other, but ot much different from each other, apt to separate. On the other hand, n heavy substance as minium is added by substances, though it has a pretty ily to unite with them, it has none with ali, which is another ingredient in this e some parts of the glass will contain e matter than the rest; particularly : bottom of the pot, which is to full s as to be applied only to the making little value. The veins in this case y the descent of the minium to the ch in its passage forms threads or veins other parts of the glass along with correction of this fault appears there- ry difficult. M. Macquer informs us, n vain tried to remove it by very long fierce fire; which indeed others have erience not to correct, but to aug- . Mr Keir is of opinion that some tion must be discovered, which, along out refractive power, should possess formity of texture; but he is likewise hat scarce any alteration in this re- e made without injuring the colour For optical purposes, however, he ak that an alteration in the colour of its would be very detrimental. "I l (says he), that glasses sensibly tin-

ged with colour, might transmit as much or more light than the best flint glass. For the colourless appearance of flint glass is an optical deception. The minium gives it a considerable tinge of yellow, and the alkali inclines it to a bluish cast, be- sides the colour arising from a greater or less im- purity of the materials; so that the glass would actually be very sensibly coloured, unless by the addition of manganese, which is known to give a purplish red. Thus the other tinges are counter- acted, but not effaced or destroyed as has been frequently imagined. By the mixture of the three principal colours, red, yellow, and blue, more or less exactly counterpoised, a certain dark shade is introduced, in which, as not any one of the co- lours predominates, no coloured tinge appears, but the effect is merely a diminution of the trans- parency of the glass, which, however, is too small for ordinary observation." Mr Kier is even of opinion, that a certain tinge of yellow would in many cases be of service, because it would ex- clude some of the blue rays, which being most re- frangible are most injurious to the distinctness of vision. Very great difficulties must arise in at- tempting improvements of this kind; as the ex- periments must all be tried on a very large scale. This is not only attended with a very heavy ex- pence in it- self, on account of the quantity of ma- terials employed, but from the heavy duty of ex- cise which is rigorously exacted whether the glass be manufactured into saleable articles or not. It is observed in the manufacture of every kind of glass, that the glass in the middle of the area or transverse section of a pot is much purer and freer from veins and other imperfections than the part which is near the sides, and that the glass at the bottom is the worst of all. Consequently it is chiefly in large pots, such as are used in manufac- tures, that there is a probability of success. Very fine and beautiful glasses called PASTES and arti- ficial gems, may be made in smaller pots or cruci- bles; but this glass is suffered to cool and subside in the vessel, by which means the contiguous parts are more uniform in their texture than can be expec- ted in a piece of glass taken out of the pot while hot in the common way, by making it adhere and twist round an iron rod or pipe. But although the me- thod of allowing the glass to cool in the pots is very advantageous for the purposes of the jeweller, it is by no means applicable to those of the opti- cian. Glass cooled in that gradual manner, suf- fers some degree of crystallization or peculiar ar- rangement of its parts; the consequence of which is, that the rays of light undergo certain refractions independent on the form of the glass, which great- ly affect the distinctness of vision in TELESCOPES.

(21.) GLASS OF LEAD, a glass made with the addition of a large quantity of lead, of great use in the art of making counterfeit gems. The method of making it is this: Put a large quantity of lead into a potter's kiln, and keep it in a state of fusion with a moderate fire, till it is calcined to a grey loose powder; then spread it in the kiln, and give it a greater heat, continually stirring it to keep it from running into lumps; continue this several hours, till the powder become of a fair yellow; then take it out, and sift it fine; this is called *calcined lead*. Take of this calcined lead 15 pounds, and crystalline or other frit 12 pounds; mix these as well as possible; put them in a pot, and set them in the furnace for ten hours; then cast the whole, which will be now perfectly melted, into water; separate the loose lead from it, and return the metal into the pot. After standing in fusion 12 hours more, it will be fit to work. It is very tender and brittle, and must be worked with great care, taking it slowly out of the pot, and continually wetting the marble it is wrought upon. White lead, minium, litharge, and all the other preparations and calces of lead, are easily fused by a moderate fire, and formed into a transparent glass of a deep yellow colour. But this glass is so penetrating and powerful a flux, that it is necessary to give it a greater consistence, to render it fit for use. With this view, two parts of calx of lead, e. g. minium, and one part of sand or powdered flints, may be put into a crucible of refractory clay, and baked into a compact body. Let this crucible, well closed with a luted lid, be placed in a melting furnace, and gradually heated for an hour or an hour and a half; and afterwards let the heat be increased so as to obtain a complete fusion, and continued in that state for the same time; let the crucible remain to cool in the furnace; and when it is broken, a very transparent yellow-coloured glass will be found in it. Some add nitre and common salt to the above mixture, because these salts promote the fusion and the more equal distribution of the sand. This glass of lead has a considerable specific gravity, and its loosest part is always the heaviest. It is an important flux in the assays of ores to facilitate their scorifications. It is capable of all the colours of the gems in very great perfection. The methods of giving them are these: for green, take pulverine frit 20 lb. lead calcined 16 lb. sift both the powders very fine; then melt them into a glass, separating the unmixed lead, by plunging the mass in water; after this, return it into the pot, and add brass thrice calcined 6 oz. and one penny-weight of crocus martis made with vinegar; put this in at six different times, always carefully mixing it together; let it finally settle an hour, then mix it together, and take a proof of it; when the colour is right, let it stand 8 hours, and then work it. If, instead of the calcined brass, the same quantity of the caput mortuum of the vitriolum veneris be used, the green is still finer.

(22.) GLASS, OPERA. See DIOPTRICS, Index.

(23. 1.) GLASS, PAINTING IN, ANCIENT METHODS AND HISTORY OF. The ancient manner of painting on glass was very simple; it consisted

in the mere arrangements of pieces of different colours in some sort of symmetry, situated what is now called *Mosaic work*. SAIC. In process of time they came to more regular designs, and also to represent heightened with all their shades: yet proceeded no farther than the contours of the figures in black with water colours, and batched in series after the same manner on glasses of colour of the object they designed to paint. For carnation, they used glass of a bright red, and upon this they drew the purple, pink, &c. of the face, &c. with black. At length, for this sort of painting improving, and the art being found applicable to the painting of churches, basilicas, &c. they found means of incorporating the colours in the glass itself, by heating them in a fire to a proper degree, having first laid on the colours. A French artist at Marseilles is said to have given the first idea of this improvement, upon going to Rome, Julius II.; but Albert Durer and Lucas were the first that carried it to perfection. This art, however, has met with much opposition, and sometimes been almost totally suppressed, which Mr Walpole gives the following account in his *Anecdotes of Painting in England*: The first interruption given to it was by the Reformation, which banished the art out of churches; it was in some measure kept up in the castles of the nobility and gentry in the windows of their seats. Towards the end of Queen Elizabeth's reign it was omitted even there; yet the art was not entirely dead. The chapel of St. Mary at Warwick was ornamented anew by the Earl of Leicester, and his countess, a Frenchman of the glass painter's name yet remains the date 1574: and in some of the chapels the art again appears, in 1622, by the hand of no contemptible master. I could fill this gap of 48 years by many dates of glass; but nobody ever supposed that the art was lost so early as the reign of James I. it has not perished since will be evident from the following series, reaching to the present times. The portraits in the windows of the library at Soles, Oxford. In the chapel at Queen's College, there are 12 windows, dated 1518. Phipps on the painted glass in the chapel at Warwick, 1574. The windows at Wadham, the drawing pretty good, and the colouring Bernard Van Linge, 1622. In the church of St. Mary's, a window, with the name 1623. In the church of St. Leonard, 16 windows by Baptista Sutton, 16 windows in the chapel at University College, 1687. At Christ church, Oxford, aged 84, 1700. Window in Merton College, William Price, 1700. Windows at Queen's College, and Merton, by William Price, now living, whose colours are fine, and whose taste in ornament is good, and whose taste in ornament is far superior to any of his predecessors, and only surpassed by his own industry. Price was the only painter in the many years in England. Afterwards a plumber at Reading, did some things

the late Henry earl of Pembroke; but the colours soon vanished. At last he found a beautiful and durable red; but he died in or two, and the secret with him. A Birmingham began the same art in 1756 or 1757, and fitted up a window for Lord Lyttelton, church of Hagley; but soon broke. A little after him, one Peckitt at York began the same art, and has made good proficiency. A few years after that art collected some dispersed panes in ancient buildings, particularly the late Lord North, who erected a Gothic temple at Stowe, and filled it with arms of the old nobility. &c.

In the year 1753, one Asciotti, an Italian, who had married a Flemish woman, brought a quantity of painted glass from Flanders, and sold it for 10 guineas to Mr Bateman of Old Windmill-street, who sent Asciotti again to Flanders, and brought me 450 pieces, for which, including the expence of his journey, I paid him 36 guineas. His wife made more journeys for the same purpose; and sold her cargoes to one Paterfon, a glazier in St Martin's lane, who immediately raised the price to 1, 2, or 5 guineas for a piece, and fitted up entire windows with them, and with mosaics of plain glass of different colours. In 1761, Paterfon an auctioneer at Esplanade in the Strand, exhibited the two first pieces of painted glass, imported in like manner from Flanders. All this manufacture consisted of mosaics of scripture histories, stained in black and white, or in small figures of black and white; and flowers in colours, and Flemish coats of arms.

The colours used in painting glass are different from those used in painting either in oil or oil colours. For *black*, take scales of iron ore; scales of copper, 1 oz.; jet, $\frac{1}{2}$ oz.; grind them to powder and mix them. For *blue*, take powder of blue, 1 lb.; sal nitre, $\frac{1}{2}$ lb.; mix and grind them well together. For *carnation*, take red chalk, 8 oz.; iron scales and scales of silver, of each, 2 oz.; gum arabic, 1 lb.; dissolve in water; grind all together for an hour very stiff; then put it in a glass and stir it well, and let it stand to settle 14 days.

For *green*, take red lead 1 lb.; scales of copper, and flint, 5 lb.; divide them into 3 parts; add to them as much sal nitre; put them in a crucible, and melt them with a strong fire; when it is cold, powder it, and grind it on a mill.

For *gold colour*, take silver, 1 oz.; copper, $\frac{1}{2}$ oz.; melt them in a crucible; then grind the mass to powder, and grind it on a mill; add to it yellow ochre, or brick-dust ground again, 15 oz.; and grind them well together with water.

For *purple*, take minium, 1 lb.; brown stone, 1 lb.; white flint, 5 lb.; divide into 3 parts, and add to them as much sal nitre; calcine, melt, and grind.

For *red*, take jet, 4 oz.; litharge of silver, 2 lb.; red chalk, 1 oz.; powder them fine, and mix.

For *white*, take jet, two parts; white flint, one part; grind on a glass very fine, one part; mix.

For *yellow*, take Spanish brown, ten parts; leaf silver, one part; antimony, half a part; put all into a crucible, and calcine them.

In the windows of ancient churches, &c. are to be seen the most beautiful and vivid

colours imaginable, which far exceed any of those used by the moderns, not so much because the secret of making those colours was entirely lost, as that the moderns will not go to the charge of them, nor be at the necessary pains, as this sort of painting is not now so much esteemed as formerly. Those beautiful works which were made in the glass houses were of two kinds. In some, the colour was diffused through the whole substance of the glass. In others, which were the more common, the colour was only on one side, scarce penetrating within the substance above $\frac{1}{4}$ of a line; though this was more or less according to the nature of the colour, the yellow being always found to enter the deepest. These last, though not so strong and beautiful as the former, were of more advantage to the workmen, as on the same glass, though already coloured, they could show other kinds of colours where there was occasion to embroider draperies, enrich them with foliages, or represent other ornaments of gold, silver, &c. For this purpose they made use of emery, grinding or wearing down the surface of the glass till they got through the colour to the clear glass. This done, they applied the proper colours on the other side of the glass. By these means, the new colours were hindered from running and mixing with the former, when they exposed the glasses to the fire. When the ornaments were to appear white, the glass was only bared of its colour with emery, without tinging the place with any colour at all; and this was the manner by which they wrought their lights and heightenings on all kinds of colour.

(ii.) GLASS, PAINTING IN, MODERN METHOD OF. To paint glass, in the modern way, first design, and even colour, the whole subject on paper. Then choose such pieces of glass as are clear, even, and smooth, and proper to receive the several parts; and proceed to distribute the design itself, or papers it is drawn on, into pieces suitable to those of the glass; always taking care that the glasses may join in the contours of the figures and the folds of the draperies; that the carnations, and other finer parts, may not be impaired by the lead with which the pieces are to be joined together. The distribution being made, mark all the glasses as well as papers, that they may be known again; which done, applying every part of the design upon the glass intended for it, copy or transfer the design upon this glass with the black colour diluted in gum water, by tracing and following all the lines and strokes as they appear through the glass with the point of a pencil. When these strokes are well dried, which they will be in about two days, the work being only in black and white, give a slight wash over with urine, gum arabic, and a little black; and repeat it several times, according as the shades are to be heightened; with this precaution, never to apply a new wash till the former is sufficiently dried. The lights and risings are then given by rubbing off the colour in the respective places with a wooden point, or the handle of the pencil. As to the other colours above-mentioned, they are used with gum-water, much as in painting in miniature; taking care to apply them lightly, to prevent effacing the outlines of the design; or even, for the greater

greater security, to apply them on the other side; especially yellow, which is very pernicious to the other colours, by blending therewith. And here too, as in pieces of black and white, particular regard must always be had not to lay colour on colour, or lay on a new lay, till the former are well dried. The yellow is the only colour that penetrates through the glass, and incorporates therewith by the fire; the rest, particularly the blue, (which is very difficult to use,) remaining on the surface, or at least entering very little. When the painting of all the pieces is finished, they are carried to the furnace or oven to anneal or bake the colours. The furnace here used is small, built of brick, from 18 to 30 inches square. At six inches from the bottom is an aperture to put in the fuel and maintain the fire. Over this aperture is a grate made of 3 square bars of iron, which traverse the furnace, and divide it. Two inches above this partition is another little aperture, through which they take out pieces to examine how the coction goes forward. On the grate is placed a square earthen pan, 6 or 7 inches deep, and 3 or 6 inches less every way than the perimeter of the furnace. On the one side hereof is a little aperture, for making trials, placed directly opposite to that of the furnaces destined for the same end. In this pan are the pieces of glass to be placed in the following manner: First, the bottom of the pan is covered with 3 strata or layers of quicklime pulverised; those strata being separated by two others of old broken glass, to secure the painted glass from the too intense heat of the fire. The glasses are then laid horizontally on the last or uppermost layer of lime. The first row of glass is covered over with a layer of the same powder an inch deep; over this is laid another range of glasses, and thus alternately till the pan is quite full; taking care that the whole heap always end with a layer of the lime powder. The pan being thus prepared, cover up the furnace with tiles, on a square table of earthen ware, closely luted all round; leaving 3 little apertures, one at each corner, and another in the middle, to serve as chimneys. The fire for the first two hours must be very moderate, and must be increased in proportion as the coction advances, for 10 or 12 hours; in which time it is usually completed. At last the fire, which at first was charcoal, is to be of dry wood, so that the flame covers the whole pan, and even issues out at the chimneys. During the last hours, make essays, from time to time, by taking out pieces laid for the purpose through the little aperture of the furnace and pan, to see whether the yellow be perfect, and the other colours in good order. When the annealing is thought sufficient, extinguish the fire, as quickly as possible; otherwise it would soon burn the colours, and break the glasses.

(24.) GLASS, PAINTING ON, BY MEANS OF PRINTS. See BACK PAINTING.

(25.) GLASS PORCELAIN, the name given by many to a modern invention of imitating china ware with glass. The method given by M. Reaumur, who was the first that carried the attempt to any degree of perfection, is shortly this: The glass vessels to be converted into porcelain are to be put into a large earthen vessel, such as the com-

mon fine earthen dishes are baked in, sufficiently large crucibles; the vessels are to be with a mixture of fine white sand, and gypsum burnt into what is called plaster, and all the interstices are to be filled up with the same powder, so that the glass vessels where touch either one another, or the vessel they are baked in. The vessels are then covered down and luted, and the rest of the work; for this is only to be to a common potter's furnace, and when stood there the usual time of the baking of vessels, it is to be taken out, and the contents will be found no longer glass, but converted into a white opaque substance, which is a great porcelain, and has almost the proof that of China. The powder which has been used will do again as well as fresh, and that for number of times: nay, it seems even the cause of this transformation, says Macquer, is probably that the vitriolic acid of the gypsum is basis of calcareous earth, and unites with an alkaline salt and saline earth of the glass, which it forms a kind of selenite, or from the calcareous selenite, by the intermixture of which matter the glass acquires the quality of porcelain.

(V. i.) GLASS, (from *glass*, Gael. *gla*, geography, a parish of Scotland, in the shire of Aberdeen and Banff, so called from the glass of its hills. It is about 8 miles long from N. to S.W. and 6 broad. The Doon runs through it. The soil is a deep loam. The usual crops are oats, barley, and pease; along the bank of the river they are pretty early, but the climate is cold, the rest are late. Turnips, potatoes, clover, are also cultivated by some. In 1781 farmers had not a peck of meal from a dried corn; but the king's bounty of 500000 served the inhabitants from starving. The bar, in 1791, stated by the rev. J. Cooper report to Sir J. Sinclair, was 970; which below that of Dr Webster, in 1785. The bar is bad, and in some places swampy.

(ii.) GLASS, a river of Scotland, in Inver-shire, which, after receiving the Camich fr. NW. unites with the Farrar, and falls into Beaulj. See BEAULJ, N° 2.

(iii.) GLASS, LOCH, a beautiful navigable of Scotland, in Ross-shire, 5 miles long, 2 and 6 from the sea; remarkable for never freezing unless the frost be uncommonly severe. It is a fine trout.

(iv.) GLASS, STRATH, a district of Inver-shire, lying on both sides of the river Glass. * To GLASS, v. a. 1. To see as in a glass or mirror. Not is

Metthink I am partaker of thy passion
And in thy case do glass mine own debility

in glass.—

ought all his senses were lockt in his eye,
Is in crystal for some prince to buy ;
And ring their own worth, from whence
They were glass'd,

Went out to buy them, along as you past.

Shakesp.

er with glass; to glaze.—I have obser-
v'd grains of silver to lie hid in the small ca-
vities glass'd over by a vitrifying heat, in
wherein silver has been long kept in fu-

ARY, [from *glafra*, Gael. a grayish
parish of Scotland, in Argyllshire. 22 m.
12 broad. Its form is nearly a parallel,
usually from each side, and forming an
tract of moor-land. The river Ad rises
at extremity, and runs through it. It has
fishery. The salmon are sold on the spot
for 1 lb. The soil consists of loam, clay, and
it produces tolerable crops of oats, bar-
ley, &c.; but it is best adapted for green
crops. The others are often injured by munda-
ne Ad, the climate being rainy. The
population, in 1793, stated by the rev. Dugald
Dalrymple in his report to Sir J. Sinclair, was
had decreased 183, since 1755. There
are 3,200 black cattle, and 1200
sheep. The parish has been partly improved by
plantations of trees.

CARRICK POINT, a cape on the E.
of Ireland, in Wexford. Lon. 6. 12. W.
N.

CASE, *n. f.* [from *glass* and *case*.] a kind
of press, with a glass lid or door, and pro-
vided with nails, shelves, &c. in the inside;
it is placed horizontally upon a table, counter,
or fixed perpendicularly against a
wall. The shops of jewellers, hardware-men,
toy-men, and other dealers in showy
goods display their goods to the best advan-
tage. The name is also applied to those windows
or cases that are fitted up with shelves, &c.
in glass frames on the inside, for exhibiting
the wares they contain to passengers.

CHENBURY, a small town in Kent.

CLIFTON, [Sax. *i. e.* the bare hill.] a pa-
rish, in Wigtonshire, 7½ miles long
N. and from 1½ to 2 miles 7 furlongs
wide. The surface is hilly and rugged: the soil

either loam, gravel, peat earth, or clay. The
weather is variable but mild. Agriculture is great-
ly improved; particularly on the estates of R. Haw-
thorn-Stewart, Esq. of Physgill, and Mr Stewart
of Castle Stewart. "The highly cultivated con-
dition of the estate of Glasserton," says the rev.
Dr Davidson, "is undeniably a fine monument of
the taste, judgment and ardent public spirit of its
late proprietor," Adm. Keith Stewart. The po-
pulation, in 1795, stated by the Dr in his report
to Sir J. Sinclair, was 900 souls, and the increase
91, since 1755. The rearing of black cattle of
the Galloway race is the principal object of the
farmers. Full grown and well fed oxen, of four
years old, sell at from 9 l. to 11 l. old cows at 8 l.
or 10 l. and bullocks of 3 years old, at 7 l. or 8 l.
Sheep, horses, and swine, are also reared in great
numbers. Some sheep have been sold at a guinea
a head. The numbers of none of these cattle are
specified.

GLASSFORD. See GLASFORD.

(1.) * GLASSFURNACE. *n. f.* [*glass* and *furnace*.]
A furnace in which glass is made by liquefaction.
—If our dreamer pleases to try whether the glow-
ing heat of a *glass-furnace* be barely a wandering
imagination in a drowsy-man's fancy, by putting
his hand into it, he may perhaps be awakened in-
to a certainty that it is something more than bare
imagination. *Locke*.

(2.) GLASS FURNACE. See GLASS-MAKING, § V.

* GLASSGAZING. *adj.* [*glass* and *gazing*.] Fi-
nical; often contemplating himself in a mirror.—
A whorson, *glassgazing*, finical rogue. *Shak.*

* GLASSGRINDER. *n. f.* [*glass* and *grinder*.]
One whose trade is to polish and grind glass.—
The *glassgrinders* complain of the trouble they
meet with. *Boyle*.

GLASSGRINDING, *n. f.* the art of grinding glass.
See GLASS-MAKING, § 8. XIII.

* GLASSHOUSE. *n. f.* [*glass* and *house*.] A house
where glass is manufactured.—I remember to have
met with an old Roman Mosaic, composed of lit-
tle pieces of clay half vitrified, and prepared at
the *glasshouses*. *Addison on Italy*.

GLASSHUTTEN, a town of Saxony, 3 miles
from Dresden, near a silver mine.

PENDENTS.

GLASSLOUGH. See GLASLOUGH.

GLASS-MAKER, *n. f.* one who makes glass.

G L A S S - M A K I N G.

DEFINITION and HISTORY of GLASS- MAKING.

GLASS-MAKING, *n. f.* the art of making
or the manufacture of that commo-
dity from its original materials, into any form.
In this article we shall give a brief description,
of the materials and art of glass-making,
and the several branches connected with it;
of the time, place, and manner of making
it; of the art of glass-making was first
discovered altogether uncertain. Some suppose
it was invented before the flood; and NERI traces
it at least to the time of Job. But these

are mere conjectures; for the word *Zechuchib*,
translated *crystal*, (Job xxviii. 17.) admits of vari-
ous significations, and from the context evidently
means some precious stone.

The EGYPTIANS boast, that this art was taught
them by Hermes. Aristophanes, Aristotle, Alex-
ander Aphrodisæus, Lucretius, and St John the di-
vine, put it out of all doubt that glass was used in
their days. Pliny relates, that it was first disco-
vered accidentally in Syria, at the mouth of the
river Belus, by certain merchants driven thither
by a storm at sea; who being obliged to continue
there, and dress their victuals by making a fire on
the ground, where there was great plenty of the
herb

herb kali; that plant, burning to ashes, its salts mixed and incorporated with the sand, or stones fit for vitrification, and thus produced glass; and that, this accident being known, the people of Sidon in that neighbourhood essayed the work, and brought glass into use; since which time the art has been continually improving.

Be this as it may, the first glass-houses mentioned in history were erected in TYRE, where the only staple of the manufacture was for many ages. The sand which lay on the shore for about half a mile round the mouth of the Belus was peculiarly adapted to the making of glass; and the wide range of the Tyrian commerce gave an ample vent for the productions of the furnace.

The first time we hear of glass made among the ROMANS was in the reign of Tiberius, when Pliny relates that an artist had his house demolished for making glass malleable, or rather flexible; though Petronius Arbiter and others assure us, that the emperor ordered the artist to be beheaded for his invention. It is certain that a plate of glass was found at Herculaneum, which was destroyed, A. D. 80; and that glass vessels were made at Rome under Nero. The earliest mention made of glass windows is by Lactantius in the 3d century.

Before the conquest of BRITAIN by the Romans, glass-houses had been erected in this island, as well as in Gaul, Spain, and Italy. Hence, in many parts of the country are to be found annulets of glass, having a narrow perforation and thick rim, denominated by the remaining Britons *gleinen naid-reedb*, or *glass adders*, and which were probably in former times used as amulets by the druids. See ANGUINUM OVUM. It can scarcely be doubted, that the Britons were sufficiently well versed in the manufacture of glass, to form out of it many more useful instruments than glass beads. History indeed assures us, that they did manufacture a considerable quantity of glass vessels. These, like their annulets, were most probably green, blue, yellow, or black, and many of them curiously streaked with other colours. The process in the manufacture would be nearly the same with that of the Gauls or Spaniards. The sand of their shores being reduced to a sufficient degree of fineness by art, was mixed with a fourth of its weight of their native chalk the same with our kelp, and both were melted together. The metal was then poured into a mould, where it was left to harden into a mass, and afterwards replaced in the furnace, where it became transparent in the boiling; and when it was sufficiently blown, or modelled in the belly, into any shape as they wanted.

According to Bede, glass was used in making plate for mirrors, which were first introduced into England in 675, by the first Saxon king, who were employed in glassing the windows of the church of Winchester. In the reign of King Alfred, glass was first brought over by William, Duke of Normandy, about the year 1066. The first glass-makers of this kingdom, who were known to have been introduced into England, and glass windows first introduced into the country, before 1120. They first came from France, and from whence they came to England. Venice, for many years, excelled all other parts in the making of its glasses, and in the 14th century, the Venetians were the only people that had the art of making crystal looking-glasses.

tians were the only people that had the art of making crystal looking-glasses.

The glass manufacture was first begun in England in 1557: the finer sort was made by Friars, in London; the fine flint glass, prior to that of Venice, was first made by the House, in the Strand, London. This manufacture appears to have been much improved when it was carried on with pit coal wood; and a monopoly was granted to Mansell, who was allowed to import Venetian flint glasses for drinking, the art which was not brought to perfection till the reign of William III.

The first glass plates, for looking-coach windows, were made in 1673, and by the encouragement of the duke of Devonshire; who, in 1670, introduced the use of fine glass into England, by Venice with amazing success. So that within a short time, the French and English have not only equalled but even excelled the Venetians, and are no longer supplied from abroad. This made a considerable improvement in glass, by the invention of a method to make large plates, till then unknown, and perfected yet by any but themselves and the French. This branch was established in Lancashire and is now very flourishing.

SECT. II. Of the THEORY of VITRIFICATION.

WITH regard to the theory of VITRIFICATION we are almost totally in the dark. It seems to be that state in which solid matter, by the vehement action of fire, is dissolved and carried off in vapour. In nature there is a plentiful evaporation; solid substance is carried off in vapour by the heat of a burning speculum, as always previously takes place. The difference, then, between the state of fusion and that of a solid body, appears to be, that in the first the fire acts upon the parts of the matter in such a manner as only to disjoin them, and render them fluid; but in vitrification it acts upon the particles, but combines with them, and takes them into a third substance; while in the first as much fire as it can contain, can receive their change from that element, except what is carried off in vapour.

But though we are unable to effect a change upon solid bodies without a very violent action, yet in the natural process of fusion and crystallization, nature performs a greater change than we can make with fire. There are called *pyromorphosis*; but they discover the essential properties of the matter of glass. The process of vitrification of glass is the same as the process of fusion, except that the heat is continued longer, and the matter is carried off in vapour. The process of vitrification is the same as the process of fusion, except that the heat is continued longer, and the matter is carried off in vapour. The process of vitrification is the same as the process of fusion, except that the heat is continued longer, and the matter is carried off in vapour.

It is a common objection to this theory, that glass is not capable of being melted.

porcelain by a long-continued cementation of certain materials. This change happens in those kinds of glass which are made of alkali and sand; and Dr Lewis has shown that it is produced by the dissipation of the principle, which is the least fixed of the two. Therefore, we may consider it as a substance in which the fire has no other effect, than either to consume or dissipate it in vapour.

. *Of the MATERIALS for MAKING GLASS.*

Materials, whereof glass is made, are salt and stones. I. The salt is procured from ashes brought from the Levant, called *or rochetta*. They are the ashes of a plant named *KALI*, (see *SALSOLA*, N° 1 & 3.) In summer, dried in the sun, and burnt either on the ground, or on iron grates; falling into a pit, grow into a hard mass, fit for use. It may also be procured from kelp, or the ashes of the *fucus vesiculosus*. See *FUCUS*, N° 12; and *KELP*.

Next the salt, these ashes are powdered and then put into boiling water, and there kept till most of the water be consumed; the whole is stirred up from time to time, that the ashes may incorporate with the fluid, and all its salts be dissolved: then the vessel is filled up with new water, and boiled over again, till one half be consumed: what remains is a sort of ley, strongly impregnated with salt. This ley, boiled over again in coppers, thickens in about 24 hours, and is then salt; which is to be luted out, as is done with earthen pans, and thence into vessels to drain and dry. This done, it is ready to be used, and thus put into a sort of oven, called *an*, to dry.

There are also other plants which yield a salt fit for use, such as the common thistle, bramble, hawthorn, wood, woad, tobacco, fern, and the numerous tribe, as pease, beans, &c. These form a leading flux in the manufacture of glass, and mostly supply the place of the Levant barillas of Spain, and other kinds. For the most part, for making both glass and for the purpose of *ASH*. There are other fluxes used for the making of glass, and for various purposes, such as lead, nitre, sea salt, borax, arsenic, and wood ashes, containing the various salts as produced by incineration. In regard to these several fluxes, we may observe in general, that the more calx of lead, or siliceous earth, that enters into the composition of glass, so much the more fusible, soft, and dense this glass is, and reciprocally. As given to glass, by calxes of lead, are called *yellow*: on the other hand, glasses that are free from saline fluxes partake of the properties of siliceous glasses, they are less heavy, less dense, harder, more brilliant, and more brittle than the glasses containing both saline and siliceous fluxes also partake of the properties of siliceous substances. Glasses too saline are easily altered by the action of air and especially those in which alkalis prevail; they are also liable to be injured by acids. Glasses that contain too much borax and arsenic, when first they appear very beautiful, quickly

PART II.

turnish and become opaque when exposed to air. By attending to these properties of different fluxes, the artist may adjust the proportions of these to sand, or powdered flints, for the various kinds of glass.

II. The sand or stone, called by the artists *TARSO*, is the second ingredient in glass, and that which gives it the body and firmness. These stones, Agricola observes, must be such as will fuse; and of these such as are white and transparent are best; so that crystal has the precedence of all others. At Venice they chiefly use a sort of pebble, found in the *Telino*, resembling white marble, and called *cuogolo*. Indeed Ant. Neri assures us, that all stones, which will strike fire with steel, are fit to vitrify; but Dr Morret shows, that there are some exceptions from this rule. Flints are admirable; and when calcined, powdered, and seared, make a pure white crystalline metal: but the expence of preparing them makes the masters of our glass-houses sparing of their use. Where proper stones cannot be so conveniently had, sand is used. The best for this purpose is that which is white, small, and shining; examined by the microscope, it appears to be small fragments of rock crystal. For green glass, that which is of a soft texture, and more gritty; it is to be well washed, which is all the preparation it needs. Our glass-houses are furnished with white sand, for their crystal glasses, from *Lyn* in *Norfolk* and *Maidstone* in *Kent*, and with the coarser, for green glass, from *Woolwich*.

III. Some mention a 3d ingredient in glass, viz. manganese; (see *MANGANESE*;) but the proportion of it to the rest is very inconsiderable; nor is it used in all glass. It purges off the natural greenish colour, and gives it some other tincture required. For this purpose it should be chosen of a deep colour, and free from specks of a metalline appearance, or a lighter cast. It requires to be well calcined in a hot furnace, and then to undergo a thorough levigation. The effect of manganese in destroying the colours of glass, (and hence called the *soap of glass*;) is thus accounted for by M. Montamy, in his *Traité des Couleurs pour la Peinture en Email*. It destroys the green, olive, and blue colours of glass, by adding to them a purple tinge, and by the mixture producing a blackish brown colour; and as blackness is caused merely by an absorption of the rays of light, the blackish tinge given to the glass by the mixture of colours, prevents the reflection of so many rays, and thus renders the glass less coloured than before. But the black produced by this substance suggests an obvious reason for using it very sparingly in these compositions of glass which are required to be very transparent. Nitre or saltpetre is also used with the same intention; as it serves to free glass prepared with lead as a flux from its yellow-coloured tinge; and in saline glasses, nitre is requisite in a smaller proportion to render them sufficiently transparent, as in the case of looking glass and other kinds of plates.

SECT. IV. *Of the FURNACES used in GLASS-MAKING.*

In this manufacture there are three sorts of furnaces: the 1st, called *calcar*, is for the first; the 2d, for working the glass; the 3d, for annealing it, is called the *leer*. See *Plat.* CLXVII.

O O O

L. THE

I. The CALCAR is an oven 10 feet long, 7 feet broad, and 2 deep: the fuel, which in Britain is sea coal, is put into a trench on one side of the furnace; and the flame, reverberating from the roof upon the frit, calcines it. See CALCAR, N^o 3.

II. The GLASS FURNACE, or WORKING FURNACE, is round, of 3 yard's diameter, and 2 high; or in that proportion. It is divided into 3 parts, each of which is vaulted. The lower part is properly called the *crown*, and is made in that form. Its use is to keep a brisk fire, which is never put out. The mouth is called the *bocca*. There are several holes in the arch of this crown, through which the flame passes into the 2d partition, and reverberates into the pots filled with the materials. Round the inside there are 3 or more pots placed, and piling pots on them. The number of pots is always double that of the boccas or mouths, or of the number of workmen, that each may have one pot refined to work out of, and another for metal to refine in, while he works out of the other. Through the working holes the metal is taken out of the pots, and the pots are put into the furnace; and these holes are stopped with moveable covers made of lute and brick, to screen the workmen's eyes from the scorching flames. On each side of the bocca or mouth is a *boccarella* or little hole, out of which coloured glass or finer metal is taken from the piling pot.

III. Above this oven there is the 3d oven, called the *LEER*, about 5 or 6 yards long, and 4 feet wide, where the vessels of glass are annealed or cooled. This part consists of a tower, besides the leer, into which the flame ascends from the furnace. The tower has two mouths, through which the glasses are put in with a fork, and set on the floor or bottom; but they are drawn out on iron pans, called *friches*, through the leer, to cool by degrees; so that they are quite cold by the time they reach the mouth of the leer, which enters the *farafel* or room where the glasses are to be stowed.

IV. The FURNACE for the GREEN GLASS is square; and at each angle it has an arch for annealing or cooling glasses. The metal is wrought on two opposite sides, and on the other two they have their *chours*, into which are made linnet holes for the fire to come from the furnace to bake the frit, and to discharge the smoke. Fires are made in the arches to anneal the work, so that the whole process is done in one furnace.

These furnaces must not be of brick, but of hard sandy stones. In France, they build the outside of brick; and the inner, to bear the fire, is made of a sort of fullers earth, or tobacco pipe clay, of which they also make the melting pots. In Britain the pots are made of Sturbridge clay. Mr Blancourt observes, that the worst and roughest work in this art is the changing the pots when they are worn out or cracked. In this case, the great working hole must be uncovered; the faulty pot must be taken out with iron hooks and forks, and a new one must be speedily put in its place, through the flames, by the hands only. For this work, the man guards himself with a garment made of skins, in the shape of a pantaloon, that covers him all but his eyes, and is made as wet as possible: the eyes are defended with a proper sort of glass.

SECT. V. Of the INSTRUMENTS used in GLASS MAKING.

THE instruments used in glass making blowing pipe, made of iron, about 2 with a wooden handle. 2. An iron 3 up the glass after it is blown, and to former. 3. Scissors to cut the glass off from the first hollow iron. 4. 5 and shape great glasses, &c. 6. A 7 with the end of the handle cased will take the metal out of the refining pot into the workmen's pots. 8. A small cased in the same manner, to skin 1 salt that swims at top. 7. Shovels, one to take up the great glasses; another shovel, to feed the furnace with coals. ed iron fork, to stir the matter in the iron rake for the same purpose, and to 10. An iron fork, to change or pull 6 of the furnace. 11. And lastly the

GLASS POTS, or vessels in which melted. Those for the white glass work of a tobacco pipe clay, brought from Wight, which is first well washed, th and afterwards ground to a fine powder which being mixt with water, is the the bare feet till it is of a proper mould with the hands into the proper vessels. When these are thus made, afterwards annealed over the furnace, the green glass work are made of 5 and another sort of clay from Stafford make these six large as to hold 3 or 4 C.

They have also a small sort called which they set upon the larger, and a finer and more nice metal fit for the.

The clay that is used for this purpose of the purest and most refractory is cleansed from all sandy, ferruginous, matters; and to this it will be ground crucibles, white sand, calcine levigated, or a certain proportion of baked, and pounded not very finely. tity of baked clay that ought to be the crude clay, to prevent the pots from when dried, or exposed to a great heat terminated, but depends on the quality clay, which is more or less fat. M. a memoir on this subject, proposes the method of ascertaining it: The bar clay, being mixed in different proportions be formed into cakes, one inch thick inches long and wide. Let these be dried, and exposed to a violent heat, come as hard and as much contracted and in this state be examined; and says, which has suffered a diminution equal only to an 18th part, is made proportions. He observes, in general clays require that the proportion should be to the fresh as 4 to 5.

SECT. VI. Of the DIFFERENT KINDS

THE manufactured glass now is divided into 3 general kinds; 1. white glass, 2. coloured glass, and 3. common bottle glass.

First kind there is a great variety; as the German crystal glass, which are the same uses: the glass for plates, for looking glasses; the glass for windows and lights; and the glass for phials and small vessels. And these again differ in the substances as fluxes in forming them, as well as in the coarseness or fineness of such as are used for them. The flint and crystal, mirror and best glass, not only require such purity in the materials, but may render it practicable to free the glass from all colour; but, for the same reason, the white Lynn sand, calcined flints, pebbles, should be used. The others do not require the same nicety in the choice of materials; though the second kind of window glass, and the best kind of phial, will not be so perfect, if either too brown sand, or impurities be suffered to enter into their composition. Coloured glass there is also a great variety differing in their colour or other properties according to the occasions for which they are

after which take out the matter; which being now sufficiently calcined, is called FRIT, or BOLLITO. See these articles. From the calcar put the frit in a dry place, and cover it up from the dust for 3 or 4 months.

To make the white glass or crystal, take of the crystal frit, set it in pots in the furnace, adding to it a due quantity of manganese: when the two are fused, cast the fluid into fair water, to clear it of the salt called *sandixer*; which would otherwise make the crystal obscure and cloudy. This lotion must be repeated again and again, as often as needful till the crystal be fully purged; or the scum may be taken off by proper ladles. Then set it to boil 4, 5 or 6 days; which done, see whether it have manganese enough; and if it be yet greenish, add more by little and little at a time, taking care not to overdose it, because the manganese inclines it to a blackish hue. Then let the metal clarify, till it becomes of a clear and shining colour; which done, it is fit to be blown or formed into vessels.

These differences depend on the preparation and management of the artists by whom manufactured. See SECT. XIV.

It is also distinguished into 3 principal kinds, according to the manner of working it; viz. 1. *Round* that of our bottles, vessels, phials, drink-glasses, &c. See SECT. X. 2. *Table or window* which there are divers kinds: as crown glass, &c. See SECT. XI. and 3. *Flint*, or *mirror glass*. See SECT. XII.

II. Of the COMPOSITIONS for making BOTTLE and PHIAL GLASS.

THE common BOTTLE or GREEN GLASS is made of sand of any kind, fluxed by the ashes of wood, or of any parts of vegetables; to which may be added the *scoriae* or clinkers of iron. When the softest sand is used, 200 lb. of sand will suffice for 100 lb. of sand, which has been ground and mixed together. The composition with the clinkers consists of 170 lb. of sand, 100 lb. of sand, and 50 of clinkers, to be ground and mixed together. If the clinkers cannot be ground, they must be broken into small pieces, and mixed with the other without grinding.

AL GLASS is a kind betwixt the flint and the bottle glass. The best kind may be made with 120 lb. of white sand, 50 lb. of unburnt pearl-ashes, 10 lb. of common salt, 5 lb. of nitre, and 5 oz. of magnesia. The composition for green or common phial glass consists of the cheapest white sand, 80 lb. of wood-burnt and sifted, 20 lb. of pearl-ashes, 10 lb. of common salt, and 1 lb. of arsenic.

II. Of the COMPOSITIONS for making WHITE GLASS and CRYSTAL.

TO make the whitest tarso, pounded small, and fine as flour, 200 lb. of the salt of polyphosphate, 1 lb. mix them, and put them into the furnace heating it. For an hour keep a moderate fire, and keep stirring the materials with a rod, that they may incorporate and calcine; then increase the fire for 5 hours;

FLINT GLASS, as it is called by us, is of the same general kind with that which in other places is called CRYSTAL glass. It has this name from being originally made with calcined flints, before the use of the white sand was understood; and retains the name, though no flints are now used in the composition of it. This flint glass differs from the other, in having lead for its flux, and white sand for its body; whereas the fluxes used for the crystal glass are salts or arsenic, and the body consists of calcined flints or white river pebbles, tarso, or such stones. To the white sand and lead a proper proportion of nitre is added, and a small quantity of magnesia, or manganese. In some works they use a proportional quantity of arsenic to aid the fluxing ingredients.

The most perfect kind of flint glass may be made, by fusing with a very strong fire 120 lb. of the white sand, 50 lb. of red lead, 40 lb. of the best pearl-ashes, 20 lb. of nitre, and 5 oz. of magnesia. Another composition of flint glass, which is said to come nearer to the kind now made, is the following: 120 lb. of sand, 54 lb. of the best pearl-ashes, 36 lb. of red-lead, 12 lb. of nitre, and 6 oz. of magnesia. To either of these a pound or two of arsenic may be added, to increase the flux of the composition.

A cheaper composition may be made with 120 lb. of white sand, 35 lb. of the best pearl-ashes, 40 lb. of red-lead, 13 lb. of nitre, 6 lb. of arsenic, and 4 oz. of magnesia; or instead of the arsenic may be substituted 15 lb. of common salt; but this will be more brittle. The cheapest composition for the worst kind of flint glass consists of 120 lb. of white sand, 30 lb. of red-lead, 20 lb. of the best pearl-ashes, 10 lb. of nitre, 15 lb. of common salt, and 6 lb. of arsenic. The best German crystal is made of 120 lb. of calcined flints or white sand, 70 lb. of the best pearl-ashes, 10 lb. of salt-petre, 1 lb. of arsenic, and 5 oz. of magnesia. And a cheaper composition is formed of 120 lb. of calcined flints or white sand, 46 lb. of pearl-ashes, 7 lb. of nitre, 6 lb. of arsenic, and 5 oz. of magnesia.

A glass much harder than any prepared in the

common way, may be made by means of borax, thus: Take 4 oz. of borax, and 1 of fine sand; reduce both to a subtil powder, and melt them together in a large close crucible set in a wind furnace, keeping up a strong fire for half an hour; then take out the crucible, and when cold break it, and there will be found at the bottom a pure hard glass, capable of cutting common glass like a diamond. This experiment, duly varied, says Dr Shaw, may lead to several useful improvements in making glass enamels, and lachryous gems; and shows an expeditious method of making glass, without any fixed alkali, which has been generally thought an essential ingredient in glass, and perhaps calcined crystal, or other substances, added to this salt instead of sand, might make a glass approaching to the nature of a diamond.

SECT. IX. Of the COMPOSITIONS for making PLATE or MIRROR GLASS.

THE materials of which this glass is made are much the same as those of other works of glass, viz. an alkaline salt and sand. The salt, however, should not be that extracted from the ashes of the Syrian kali, but that from *Sarcocolla*, growing about Alicante in Spain. It is very rare that we have the *barilla* pure; the Spaniards in burning the herb mix another herb with it, which alters its quality; or add sand to it to increase the weight, which is easily discovered, if the addition be only made after the boiling of the ashes, but next to impossible if made in the boiling. From this adulteration threads and other defects in plate glass arise.

To prepare the salt, clean it well of all foreign matters; pound or grind it with a kind of mill, and finally sift it pretty fine. Pearl ashes properly purified, will furnish the alkaline salt requisite for this purpose; but it will be necessary to add borax or common salt, to facilitate the fusion, and prevent the glass from stiffening in that degree of heat in which it is to be wrought into plates.

To purify the pearl-ashes, dissolve them in four times their weight of boiling water, in a pot of cast iron, kept clean from rust. Let the solution be removed into a clean tub, and remain there 24 hours or longer. Having decanted the clear part of the fluid from the sediment, put it again in the iron pot, and evaporate the water till the salts are left perfectly dry. Preserve them in stone jars, well secured from air and moisture. Pearl-ashes may also be purified in the highest degree, to as to be proper for the manufacture of the most transparent glass, by pulverizing 3 lb. of the best kind with 6 oz. of saltpetre in a glass or marble mortar, till they are well mixed; and then putting part of the mixture into a large crucible, and exposing it in a furnace to a strong heat. When this is red-hot, throw in the rest gradually; and when the whole is red hot, pour it out on a mounted stone or marble, and put it into an earthen or clean iron pot, with 20 pints of water; heat it over the fire till the salts be entirely melted; let it then stand to cool, and filter it through paper in a pewter cullender. When filtered, put the fluid again into the pot, and evaporate the salt to crystals, which will then be as white as snow.

As to the sand, sift and wash it till the water

come off very clear; and when it is mixed with the salt, passing the mixture another sieve. This done, lay them in a heating furnace for about two hours; till the matter becomes very light and in this state they are called *sari*, and are put in a dry clean place, for at least a year, to give time to incorporate. When they employ they lay it for some hours in the furnace to fume the fragments of old and old mud taking care first to calcine them by heated hot in the furnace, and thus casting in cold water. To the mixture must be added manganese, to promote the fusion and clarification.

The best composition for looking glass consists of 60 lb. of white sand cleansed, purified pearl ashes, 25 lb. of salt, etc., of borax. If a yellow tinge should arise, a small proportion of magnesia, mixed with an equal quantity of arsenic, should be added. An ounce of the magnesia may be first tried; this proves sufficient, the quantity should be increased. A cheaper composition consists of white sand, 20 lb. of pearl ashes, 10 lb. of common salt, 7 lb. of nitre, 2 lb. of arsenic, of borax.

The matter of which the glass is made, and the famous manufacture of St. Gobain is a composition of sand and of a white sand, or finely cleaned of all heterogeneousness, afterwards washed several times, so as to be pulverized in a mill, consisting of pistons, which are moved by horse; this is done, the sand is sifted throughly and dried. The matter thus far prepared is fit for plate glass, to be formed either by rolling or by casting. See Sect. XII.

SECT. X. METHOD of WORKING or FORMING ROUND GLASS.

THE working furnace has six boccar-tures: at one of these, called the *great* furnace is heated, and the pots or trit set in the furnace; two other smaller boccardures, serve to take or take out the metal, at the end of an iron, to work it. At the other holes they put in pots of ingredients, to be prepared, and at last into the lading pot. There are 6 pots in the furnace, all made of tobacco pipe clay, and sustain not only the heat of the fire, but effect of the pulverine, which penetrates anything else. There are only two of these for working; the rest serve to prepare it for them.

The fire is made and kept up with wood, cast in without intermission at six. When the matter in the pots is sufficiently fused, the workman proceeds to blow or blow. For this purpose he dips his blowing pipe into the melting pot; and by turning it about, it sticks to the iron more than he thinks he repeats 4 times, at each time the end of his instrument, with the hot metal on a piece of plate iron; over which is water which helps to cool, and so to cool and to dispose that matter, to find the

is to be next taken out of the melting after he has dipt a 4th time, and per- e is metal enough on the pipe, he outh immediately to the other end lows gently through the iron tube till inghens like a bladder about a foot. lis it on a marble stone a little while to i blows a second time, by which he the shape of a globe of about 13 or 20 eter. Every time he blows into the oves it quickly to his cheek; other- and be in danger, by often blowing, of flame into his mouth; and this globe tered by returning it to the fire; and any form by stamp irons, which are y.

e glass is thus blown, it is cut off at neck; which is the narrow part that iron. The method is this: the pipe an iron bar, close by the collet; then old water being laid on the collet, it bout a quarter of an inch, which, with e or cut of the shears, will immediate- the collet. The operator then dips l into the melting pot, by which he ouch metal as serves to attract the glass , to which he fixes this rod at the bot- work, opposite to the opening made ring of the collet.

When the glass is carried to the great uth of the oven, to be heated and when means it is again put into such that, by the help of an iron instru- he pierced, opened, and widened, king. But the vessel is not finished ned to the great bocca; where being thoroughly, and turned quickly about at motion, it will open to any size, by heat and motion. If any superfluous e cut off with the shears; for tool, it remains in a soft flexible state, e taken from the bocca, and carried bench, covered with brands, or coals eeping it turning; as that motion setting, and preserves an evenness in e glass, where, as it cools, it con es eay; being first cleared from the i- flight stroke by the workman.

et, whole body is already made, re- , or a handle, or any other member , he makes them separately; and ik the help of hot metal, which he the pots with his iron rod; but the ought to its true hardness till it has r. See SECT. IV.

METHOD of WORKING or BLOWING WINDOW or TABLE GLASS.

od above described, in SECT. X, of id glass, is in every particular appl- working of window or table glass, ng iron has been dipt the 4th time. ead of rounding it, the workman manages the metal upon the iron extends 2 or 3 feet in the form of a his cylinder is put again to the fire, econd time; and this is repeated till

it is extended to the dimensions required, the side to which the pipe is fixed diminishing gradually till it ends in a pyramidal form; so that, to bring both ends nearly to the same diameter, while the glass is thus flexible, he adds a little hot metal to the end opposite the pipe, and draws it out with a pair of iron pincers, and immediately cuts off the same end with the help of a little cold water, as before.

The cylinder being now open at one end, is carried back to the bocca; and there, by the help of cold water, it is cut about 8 or ten inches from the iron pipe or rod; and the whole length at another place, by which also it is cut off from the iron rod. Then it is heated gradually on an earthen table, by which it opens in length; while the workman, with an iron tool, alternately lowers and raises the two halves of the cylinder; which at last will open like a sheet of paper, and fall in- to the same flat form in which it serves for use; in which it is preserved by heating it over again, cooling it on a table of copper, and hardening it 24 hours in the annealing furnace, to which it is carried upon forks. In this furnace 100 tables of glass may lie at a time, without injury to each o- ther, by separating them into tents, with an iron flaver between, which diminishes the weight by dividing it, and keeps the tables flat and even.

There are various sorts of window or table glass made in different places for the use of buildings. Those most known among us are enumerated by the author of the *Baillier's Dictionary*, as follows:

1. OF CROWN GLASS says Neri, there are two kinds distinguished by the places where they are wrought; viz. Katchiff crown glass, which is the best and clearest, and was first made at the Bear- garden, on the Bankside, Southwark, but since at Katchiff; or this there are 24 tables to the case, the table being of a circular form about 3 feet 6 inches in diameter. The other kind, or Lambeth crown glass, is of a darker colour, and more inclining to green. The best window or crown glass is made of white sand 60 lb. of purified pearl ashes 30 lb. of salt petre 15 lb. of borax 1 lb. and of arsenic $\frac{1}{2}$ lb. If the glass should prove yellow, magnesia must be added. A cheaper composition for win- dow glass consists of 60 lb. of white sand, 25 lb. of unpurified pearl ashes, 10 lb. of common salt, 5 lb. of nitre, 2 lb. of arsenic, and $1\frac{1}{2}$ oz. of mag- nesia. The common or green window glass is composed of 60 lb. of white sand, 30 lb. of unpurified pearl ashes, 10 lb. of common salt, 2 lb. of arsenic, and 2 oz. of magnesia. But a cheaper composition for this purpose consists of 120 lb. of the cheapest white sand, 30 lb. of unpurified pearl ashes, 60 lb. of wood ashes, well burnt and sifted, 20 lb. of common salt, and 5 lb. of arsenic.

2. FRENCH GLASS, or NORMANDY GLASS, called formerly *Lorraine glass*, is made wholly in the 9 glass works; whereof 5 are in the forest of Ly- ons, and 4 in the ci-devant county of Eu; the last at Beaumont near Rouen. It is thinner than our crown glass; and when laid on a piece of white paper, appears of a dirtyish green colour. There are but 25 tables of this to the case.

3. GERMAN GLASS is of two kinds, the *white* and the *green*: the first is of a whitish colour, but is

is subject to those small curved streaks observed in the Newcastle glass, though free from its blemishes. The green, besides its colour, is liable to the same streaks as the white; but both are straighter and less warped than Newcastle glass.

4. **DUTCH GLASS** is not much unlike Newcastle glass either in colour or price. It is frequently much warped like that, and the tables are but small.

5. **NEWCASTLE GLASS** is that most used in England. It is of an ash colour, and much subject to specks, streaks, and other blemishes; and besides is frequently warped. Leybourn says, there are 45 tables to the case, each containing 5 superficial feet: some say there are but 35 tables, and 6 feet in each table.

SECT. XII. METHODS of BLOWING and CASTING PLATE or MIRROR GLASS.

THE largest mirror glasses at St Gobin are run; the middle sized and small ones are blown.

I. **BLOWING THE PLATES.** (See *Plate CLXVII*, *Fig. 1.*) The workhouses, furnaces, &c. used in making the small kind of plate glass, are the same with those used for the large kind, except that they are smaller, and that the carquailles are disposed in a large covered gallery, over against the furnace.

After the materials are vitrified by the heat of the fire, and the glass is sufficiently refined, the workman dips in his blowing iron, six feet long, and two inches in diameter, narrowed at the end which is put in the mouth, and widened at the other, that the matter may adhere to it. He thus takes up a small ball of matter, which sticks to the end of the tube by constantly turning it. He then blows into the tube, to swell the ball; and carrying it over a bucket of water, which is placed on a support at the height of about 4 feet, he sprinkles the end of the tube to which the matter adheres, with water, still turning it, that by this cooling the matter may coalesce with the tube, and be fit for sustaining a greater weight. He dips the tube again into the same pot, and proceeds as before; and dipping it in the pot a 3d time, he takes it out, loaded with matter, in the shape of a pear, about ten inches in diameter, and a foot long, and cools it at the bucket; at the same time blowing into the tube, and with the assistance of a labourer, giving it a balancing motion, he causes the matter to lengthen; which, by repeating this operation several times, assumes the form of a cylinder, terminating like a ball at the bottom, and in a point at the top.

The assistant is then placed on a stool $3\frac{1}{2}$ feet high: on this stool there are two upright pieces of timber, with a cross beam of the same, for supporting the glass and tube, which are kept in an oblique position by the assistant, that the master workman may, with a puncheon set in a wooden handle, and with a mallet, make a hole in the mass. This hole is drilled at the centre of the ball that terminates the cylinder, and is about an inch in diameter. When the glass is pierced, the defects of it are perceived; if it is tolerably perfect, the workman lays the tube horizontally on a little iron tressel, placed on the support of the aperture of the furnace. Having exposed it to the heat for

about half a quarter of an hour, he takes and with a pair of long and broad shears, ly sharp at the end, widens the glass, by driving the shears into the hole made with the puncheon while the assistant, mounted on a stool, turns it round, till at last the opening is as to make a perfect cylinder at bottom. When this is done, the workman lays his glass tressels at the mouth of the furnace to hold it, then gives it to his assistant on the stool, who with large shears cuts the mass of matter up to the height.

There is at the mouth of the furnace a tool, called **PONTIL**, which is now he used, it may unite and coalesce with the glass, and perform the office which the tube did when it was separated from the glass. This piece of iron six feet long, and in the shape of a cane or tube, having at the end of it a bar, a foot long, laid equally upon the glass, and making with it a T. This little bar, the matter of the glass, about four inches thick, is pressed into the glass. This red-hot pontil is presented to the glass, which coalesces immediately round the pontil, so as to support the following operation. When the glass is thus united to the pontil, they separate the tube from the glass, a few blows with a chisel upon the tube which has been cooled; so the tube breaks directly, and makes this separation, the tube being discharged of the glass next to the pontil. They next present to the pontil of the glass, laying it on the support, heat, and redden the end of that glass. The workman may open it with his shears, already opened one end of it, to make it a cylinder; the assistant holding it on his fore. For the last time, they put the glass on the tressel, that the glass may become flat, and the workman cuts it quite open with shears, right over-against the fore-men. Thus he does as before, taking care that the cut is in the same line.

In the mean time, the man who holds the carquaille comes to receive the glass: he holds a shovel, $2\frac{1}{2}$ feet long without the handle, wide, with a small border of an inch thick on the right and left, and towards the handle. Upon this the glass is laid, a little with a small stick a foot and a half long, that the cut of the glass is turned up. They then separate the glass from the pontil, a few gentle blows between the two workmen. The glass is then removed to the hot carquaille, where it becomes red-hot; the workman, with an iron tool, widens the end in form of a cylinder, 4 inches long, and 2 inches wide, and very flat, and not half an inch thick. He lifts up the cut part of the glass, to give it the form of a flattened cylinder, smooth, by turning it down upon the carquaille. The tool being now turned, the cylinder, performs this operation, pushed hard against all the parts. When the glass is thus made quite flat, it is pushed to the bottom of the carquaille, and the furnace with a small iron rake

with a little iron hook. When the carquaisse it is stopped and cemented as in the case of glasses, and the glass remains there for a bit to be annealed; after which time it is out to be polished. A workman can make six glasses in an hour, and he works and rests hours alternately.

It was the method formerly used for blowing large glasses, looking-glasses, &c.; but the work by this method, could never exceed 50 inches in length, and a proportional breadth, because the larger were always found to warp, and prevented them from reflecting the objects truly, and they wanted substance to bear the pressure of grinding. These imperfections have been remedied by the following invention of the Sieur Jean Thevart, in France, about 1688.

CASTING or RUNNING of LARGE MIRROR PLATES. The furnace is of a very large dimension, environed with several ovens, or annealing furnaces, called *carquaises*, besides others for firing of frit and calcining old pieces of glass.

The furnace, before it is fit to run glass, costs much. It seldom lasts above 3 years, and even in time it must be refitted every six months. It takes six months to rebuild it, and 3 months to re-

The melting pots are as big as large hog-furnaces, and contain about 2000 weight of metal. If one of them bursts in the furnace, the loss of matter and time amounts to 250l. When the metal is red-hot, the materials (see SECT. IX.) are put in at three different times, as this helps fusion; and in 24 hours they are vitrified, re-settled, and fit for casting.

Plate CLXVII, fig. 2, A represents the bottom-mouth of the furnace; B the cistern that receives the liquid glass it receives out of the melting pots in the furnace to the casting table. These cisterns are filled in the furnace, and remain there six hours after they are filled; and then are rolled out by a large iron chain, guided by a pulley, placed upon a carriage with four wheels, (see C,) by two men. This carriage has no other piece; so that when it has brought the cistern to the casting table, D, they slip off the bottom of the cistern, and out rushes a torrent of molten matter upon the table: this matter is confined to certain dimensions by the iron rulers EE, which are moveable, and retain it, and determine the width of the glass; while a man, with the roller, resting on the edge of the iron rulers, regulates it as it cools to an equal thickness, which is done in the space of a minute. This table is supported on a wooden frame, with trussles for the convenience of moving to the annealing furnace; which, strewed with sand, the new plate is rolled, where it will harden in about 10 days.

What is most surprising throughout the whole of this operation, is the quickness and address required with such massy cisterns, filled with a flaming metal, are taken out of the furnace, conveyed to the casting table, and poured therein, the glass spread, &c. The whole is inconceivable to such as have not been eye-witnesses of that surprising manufacture. As soon as the cisterns are emptied, they carry them back to the furnace and take fresh ones, which are empty as before. This they continue to do as long as there are any full cisterns; laying as

many plates in each carquaisse as it will hold, and stopping them up with doors of baked earth, and every chink with cement, as soon as they are full, to let them anneal, and cool again, which requires about 14 days.

The first running being dispatched, they prepare another, by filling the cisterns anew from the matter in the pots; and after the 2d, a 3d, and even a 4th time, till the melting pots are quite empty. The cisterns at each running should remain at least six hours in the furnace to whiten; and when the first annealing furnace is full, the casting table is to be carried to another. The carquaises, or annealing furnaces, must first have been heated to the degree proper for them. The oven-full, or the quantity of matter commonly prepared, supplies the running of 18 glasses, which is performed in 18 hours, being an hour for each glass. The workmen work six hours, and are then relieved by others. When the pots are emptied, they take them out, as well as the cisterns, to scrape off what glass remains, which otherwise would grow green by continuance of fire, and spoil the glasses. They are not filled again in less than 36 hours; so that they put the matter into the furnace, and begin to run it every 54 hours.

The manner of heating the large furnaces is very singular; the two tilters, or persons employed for that purpose, in their shirts, run swiftly round the furnace without making the least stop: as they run along, they take two billets, or pieces of wood, which are cut for the purpose; these they throw into the first tiltart; and continuing their course, do the same for the second. This they hold without interruption for six hours successively; after which they are relieved by others, &c. It is surprising that two such small pieces of wood, and which are consumed in an instant, should keep the furnace to the proper degree of heat; which is such, that a large bar of iron, laid at one of the mouths of the furnace becomes red-hot in less than half a minute. The glass, when taken out of the melting furnace, needs nothing farther but to be ground, polished, and foliated. See SECT. XIII.

SECT. XIII. *Of the GRINDING and POLISHING of PLATE or MIRROR GLASS.*

GLASS is made transparent by fire; but it receives its lustre by the skill and labour of the grinder and polisher; the former of whom takes it rough out of the hands of the maker.

I. To grind plate glass, they lay it horizontally upon a flat stone table made of a very fine-grained free stone; and for its greater security they platter it down with lime or slucco; else the force of the workmen, or the motion of the wheel with which they grind it, would move it about.

This stone table is supported by a strong frame A, *Plate CLXVII, fig. 3,* made of wood, with a ledge quite round its edges, rising about 2 inches higher than the glass. Upon this glass to be ground is laid another rough glass not above half so big, and so loose as to slide upon it; but cemented to a wooden plank, to guard it from the injury it must otherwise receive from the scraping of the wheel to which this plank is fastened, and from the weights laid upon it to promote the grinding or triture

ture of the glasses. The whole is covered with a wheel, B, made of hard light wood, about six inches in diameter, by pulling of which backwards and forwards alternately, and sometimes turning it round, the workmen, who always stand opposite to each other, produce a constant attrition between the two glasses, and bring them to what degree of smoothness they please, by first pouring in water and coarse sand; after that, a finer sort of sand, as the work advances, till at last they pour in the powder of flint. As the upper or incumbent glass polishes and grows smoother, it is taken away, and another from time to time put in its place. This engine is called a *mill* by the artists, and is used only for the largest glasses; for in the grinding of the lesser glasses, they work without a wheel, and have only 4 wooden handles fastened to the 4 corners of the stove that holds the upper plank, by which they work it about.

II. When the grinder, (who finds it very difficult to bring the glass to an exact plainness,) has done his utmost, it is turned over to the polisher; who with the fine powder of tripoli stone, or emery, brings it to a perfect evenness and lustre. The instrument used in this branch is a board, *c c*, furnished with a felt, and a small roller, which the workman moves by means of a double handle at both ends. The artist, in working this roller, is assisted with a wooden hoop or spring to the end of which it is fixed: for the spring, by constantly bringing the roller back to the same point, facilitates the action of the workman's arm. Mr Burroughs invented a curious machine for grinding and polishing glass, of which we have already inserted a description. See BURROUGHS'S MACHINE, and Plate XLIV, fig. 8, 9, and 10.

SECT. XIV. Of the COLOURING of GLASS.

EVERY glass pot when new, and first used, leaves a foulness in the glass from its own earthy parts; so that a coloured glass made in a new pot can never be bright or perfectly fine. For this reason, the larger of these, when new, may be glazed with white glass; but the 2d time of using, the pots lose this foulness. To glaze the pots, reduce the glass to powder, and moisten the mass with water; while it is yet moist, put in some of the powdered glass, and shake it about, till the whole inner surface of the pot be covered by as much as will adhere to it, in consequence of the moisture. Throw out the redundant part of the powdered glass; and the pot being dry, set it in a furnace sufficiently hot to vitrify the glass adhering to it, and let it continue there some time; after which, care must be taken to let it cool gradually.

Pots which have served for one colour must not be used for another; as the remainder of the old matter would spoil the colour of the new. The colours must be very carefully calced to a proper degree; for if they be calcined either too much or too little, they never will work; the proper proportion, as to quantity, must also be carefully regarded, and the furnaces must be fed with dry hard wood. All the processes succeed best when the colour is added gradually; that is, a part of it in the frit, and the rest in the melted metal.

A hard glass, proper for receiving colours, may be prepared by pulverising 12 lb. of the best sand,

cleaned by washing in a glass or fine sieve, mixing 7 lb. of pearl-ashes or any salt, purified with nitre, 1 lb. of saltpetre of borax, and pounding them together less hard may be prepared of 12 lb. of cleaned, 7 lb. of pearl-ashes purified, 1 lb. of nitre, 1 lb. of borax, arsenic prepared as before.

1. AMETHYST COLOUR. See ART and § 16, below

2. BALASS COLOUR. Put into a pot thrice washed in water; tinge this with prepared into a clear purple; to this *entroum*, sifted fine, in small quantities several times: this will make the glass 1 lb. and a little reddish, but not black; waya dissipates the manganese. The 1 add manganese, give no more of the 1 unless the colour be too full. Thus, be exactly of the colour of the balass.

3. BLACK. The glass makers for 1 black, take old broken glass of different grind it to powder, and add to it, parcels, a sufficient quantity of the 1 parts zaffer and one part manganese; purified, they work it into vessels, beads are coloured with manganese.

4. BLACK VELVET COLOUR. To get and fine colour to glass, take of 1 pulverine frit, each 20 lb. of calx of 1 4 lb.; set all together in a pot in the 1 heated; when the glass is formed and steel well calcined and powdered, 1 iron, of each an equal quantity; pour them well; then put 6 oz. of this pot above described metal while in fusion whole thoroughly together, and let it strongly together; then let it stand 1 hours to purity, and after this work be a most elegant velvet black. A very velvet colour is also produced thus: T of rochetta frit; add 2 lb. of tartar, a manganese, both in fine powder; mix and put them to the metal while in fusion several times, in several parcels; let it 1 sion after this for four days, and then a glass perfectly black may also be formed, to 10 lb. of either of the compositions for above described, one ounce of zaffer, 1 manganese, and an equal quantity of iron calcined.

5. BLUE. A full blue may be made 6 drs. of zaffer and 2 drs. of manganese 1 either of the compositions for hard glass above. For a very cool or pure blue 1 ounce of calcined copper may be used 1 the manganese, and the proportion of z 1 nished by one half. Glass resembling 1 may be made with ten pounds of 1 compositions for hard glass, three drs 1 scruple of zaffer, and one dram of the 1 or precipitation of gold by tin; or least 1 latter ingredient, two drams and two 1 manganese. Or a sapphire coloured gl 1 made by mixing with any quantity of 1 glass one eighth of its weight of smalt. 1 blue glass is also produced from 1 regulus of cobalt.

into the vessel. Then set this also aside.—In ano-
 ther vessel, dissolve 2 oz. of sal ammoniac in 1 lb.
 of aquafortis, and put to it verdigrise 1 oz. red
 lead, crude antimony, and the caput mortuum of
 vitriol, of each half an ounce; put these well pow-
 dered leisurely into the vessel, and set this also a-
 side.—in another vessel, dissolve 2 oz. of sal am-
 moniac in 1 lb. of aquafortis, and add orpiment,
 white arsenic, painters lake, of each half an ounce.
 Keep the above 9 vessels in a moderate heat for 15
 days, shaking them well at times. After this pour
 all the matters from these vessels into one large
 vessel, well luted at its bottom; let this stand six
 days, shaking it at times; and then set it in a very
 gentle heat, and evaporate all the liquor, and
 there will remain a powder of a purplish green.
 When this is to be wrought, put into a pot very
 clear metal, made of broken crystalline and white
 glass that has been used; for with the virgin frit,
 or such as has never been wrought, the chalcidony
 can never be made, as the colours do not stick to
 it, but are consumed by the frit. To every pot
 of 20 lb. of this metal put 2 or 3 oz. of this pow-
 der at three several times; incorporate the pow-
 der well with the glass; and let it remain an hour
 between each time of putting in the powders. Af-
 ter all are in, let it stand 24 hours; then let the
 glass be well heated, and take an assay of it, which
 will be found of a yellowish blue; return this many
 times into the furnace; when it begins to grow
 cold, it will show many waves of different colours
 very beautifully. Then take tartar 8 oz. foot of
 the chuncy 2 oz. crocus martis made with brim-
 stone, half an ounce; let these be well powdered
 and mixed, and put them by degrees into the glass
 at six times, waiting a little while between each
 putting in. When the whole is put in, let the
 glass not be settled for 24 hours; then make a
 little plate body of it; which put in the furnace
 many times, and see if the glass be enough, and
 whether it have on the outside veins of blue, green,
 red, yellow, and other colours, and have beside
 these veins, waves like those of the chalcidonyes,
 jaspers, and oriental agates, and if the body kept
 within looks as red as fire. When it answers
 thus, it is perfect, and may be worked into toys
 and vessel, which will always be beautifully varie-
 gated: these must be well annealed, which adds
 much to the beauty of their veins. Pieces of this
 polished by the lapidary appear like natural stones,
 and are very beautiful. If in the working the
 matter grow transparent, the work must be stop-
 ped, and more tartar, iron, and crocus martis
 must be put to it, which will give it a necessary
 body and opacity, without which it does
 not show the colours well.

8. **CARYOPHILIC CORNELIUM GLASS** may be made
 of 1 lb. of either of the compositions for hard glass
 described above, and six drams of calcined iron.

9. **CORNELIUM GLASS.** The red cornelian colour
 may be formed by adding 1 lb. of glass of anti-
 mony, 2 oz. of the calcined vitriol called *fiavet*
color, and one dram of gang melle or magnesia,
 to 2 lb. of either of the compositions for hard
 glass. The glass of antimony and magnesia are
 first mixed with the other glass, and then pow-
 dered and ground with the scarlet colour: the whole
 mixture is afterwards fused with a gentle heat and

all the ingredients are incorporated. A glass resembling the **WHITE** cornelian may be made of 2 lb. of either of the compositions for hard glass, 2 drams of yellow ochre well washed, and 1 oz. of calcined bones: grind them together, and fuse them with a gentle heat.

10. **EMERALD.** See § 13.

11. **GARNET.** To give this colour to glass, take equal quantities of crystal and rochetta frit, and, to every hundred weight of this mixture, add 1 lb. of manganese and 1 oz. of prepared zaffer: powder these separately; then mix and add by degrees to the frit while in the furnace. Great care is to be taken to mix the manganese and zaffer very perfectly; and when the matter has stood 24 hours in fusion, it may be worked. Glass of this kind may be made by adding 1 lb. of glass of antimony, one dram of manganese, and the same quantity of the precipitate of gold by tin, to 2 lb. of either of the compositions for hard glass; or the precipitate of gold may be omitted, if the quantities of the glass of antimony and manganese be doubled.

12. **GOLD COLOUR.** Take 10 lb. of either of the compositions for hard glass, omitting the saltpetre; and for every pound add 1 oz. of calcined borax; or, if this quantity does not render the glass sufficiently fusible, 2 oz.; 10 oz. of red tartar of the deepest colour; 2 oz. of magnesia; and two drams of charcoal of fallow, or any other soft kind. Precipitates of silver baked on glass will stain it yellow, and likewise give a yellow colour on being mixed and melted with 40 or 50 times their weight of vitreous compositions; the precipitate from aquafortis by fixed alkali seems to answer best. Yellow glasses may also be obtained with certain preparations of iron, particularly with Prussian blue. But Dr Lewis observes, that the colour does not constantly succeed, nor approach to the high colour of gold, with silver or with iron. The nearest imitations of gold which he was able to produce were effected with antimony and lead. Equal parts of the glass of antimony, of pure calcined and powdered, and of minium, formed a glass of a high yellow. With two parts of glass of antimony, 2 of minium, and 3 of powdered Put, the colour approached still more to that of gold. The best composition exhibited a multitude of small sparkling interspersed throughout the whole substance, which gave it a beautiful appearance in the mass, but were really imperfect, owing to the air bubbles. Nor did red tartar and lead colour, one part of red tartar and one part of magnesia, to be mixed with 100 parts of glass. But Kemmel says, that six parts of tartar are very sufficient, unless the tartar be of a dark colour, almost blackish; and that he found it convenient to add to the tartar about 1/2 of its volume of powdered charcoal. He adds, that the glass will keep very much in melting, and that it must be kept unblown, and worked as it stands in the furnace. Mr Samuel More, in repeating and varying the experiments to render the gold colour permanent, found that the manganese is not necessary, and that the tartar is useful only in the case of a very dark tartar, when it is put in at the last. He says, the fusible part of the tartar is the best, and experiments to be the dis-

rect-tinging substance. Mr Pott of common coals give a yellow colour to different coaly matters differ in their effects; that caput mortuum of foot and answer better than common charcoal. The sparkling coal, which remains in after the rectification of the thick animal oils, is one of the most active preparations. This preparation, he says, and then burnt again a little in a close vessel, is excellent for tinging glass, and gives yellowish, or blackish colours, according to the quantity; but the frit must not be very hard for in this case the strong fire will de-colouring substance before the glass melts. The following compositions to be used viz. sand two parts, alkali 3 parts; or alkali 2 or 3, calcined borax one; saltpetre is hardly used at all, or very little for yellow glasses, as it too much weakens the colouring substance, yet here for the certain proportion of it, easily determined is very necessary; for without it the colouring matter is apt to make the glass and even of an opaque pitchy blackish not certainly appear, that there is any verity in the effects of different colouring matter being probably owing to the different quantities of the inflammable matter which it contains; so that a little more may be needed than of another for producing the same degree of colour in the glass. Gold-colour may be diffused through the substance by mixing the yellow talcs with powders bringing the mixture into fusion.

13. **GREEN, or EMERALD COLOUR.** Parted to glass by adding 3 oz. of precipitated from aquafortis, and two drams of tated iron, to 9 lb. of either of the compositions for hard glass. The finest method of giving a beautiful colour to glass is this: Dissolve crystalline metal, that has been purified, through water, and the same quantity of the common white metal or powder of common pulverine frit, and 3 lb. of red lead well with the frit, and put into a pot in a furnace. In a few hours the mass will be well purified; then cast into water, and separate and take off the metal into the pot. Then find a day longer in fusion; then pour off the residuum of the vitriol of iron, and a very little crocus martis; there will be a most lively and elegant green, less than that of the oriental emerald. There are several ways of giving a green to glass, but all inferior to this: To make a **SEA GREEN** crystalline glass only must be used, and gentle heat must be added at first to the crystal frit must be melted thus: Take 10 lb. of salt, which swims like oil on its top, taken off with an iron ladle very exactly to a pot of 20 lb. of this metal, or 1 lb. of calcined lark, and 1 part of the powdered zaffer; this powder must be added and put into the glass at three times: first the metal well at first, and then gradually mixed in the pot. After it has been

become as red as blood; and conti-
one or other of the ingredients till the
ite perfect.

. To give the true fine red of the ruby,
ansparence, to glass: Calcine in earth-
ld dissolved in aqua regia; the men-
g evaporated by distillation, more
dded, and the abstraction repeated 3
till it becomes a red powder. This
quires many days in a hot furnace.
powder is of a proper colour, take it
then it is to be used, melt the finest
and purify it by often casting it into
then add, by small quantities, enough
owder to give it the true colour of a
an elegant and perfect transparence.
of tinging glass and enamels by prepa-
ld was first attempted about the be-
e 17th century. Libavius, in one of
tled *Alchymia*, printed in 1606, con-
the colour of the ruby proceeds from
at gold dissolved and brought to red-
: made to communicate a like colour
gems and glass. On this principle
Art of Glass, dated in 1611, gave the
: cited. Glauber, in 1648, publi-
l of producing a red colour by gold,
which is of the vitreous kind, though
glass. For this purpose he ground
it or sand with 4 times its weight of
salt: this mixture melts in a mode-
fire, and when cold looks like glass,

but exposed to the air run to a liquid state. On
adding this liquor to solution of gold in aqua-regia,
the gold and flint precipitate together in form of
a yellow powder, which by calcination becomes
purple. By mixing this powder with 3 or 4 times
its weight of the alkaline solution of flint, drying
the mixture, and melting it in a strong fire for an
hour, a mass is obtained of a transparent ruby
colour, and of a vitreous appearance; which ne-
vertheless is soluble in water, or by the moisture
of the air, on account of the redundancy of the
salt. Mr BOYLE, in a work published in 1680,
mentions an experiment in which a like colour
was introduced into glass without fusion; for ha-
ving kept a mixture of gold and mercury in diges-
tion for some months, the fire was at last im-
moderately increased, so that the glass burst with a
violent explosion; and the lower part of the glass
was found tinged throughout of a transparent red
colour, hardly to be equalled by that of rubies.
About the same time Cassius is said to have dis-
covered the precipitation of gold by tin, and that
glass might be tinged of a ruby colour by melting
it with this precipitate; though Dr Lewis doubts
if he was the discoverer of either. He describes
the preparation of the precipitate and its use; but
gives no account of the manner of employing it,
only he says that one dram of gold duly prepared
will tinge 10 lb. of glass. This process was soon
after brought to perfection by KUNCKEL; who
says, that one part of the precipitate is sufficient
to give a ruby colour to 1280 parts of glass, and
a sensible redness to upwards of 1900 parts; but
that the success is by no means constant. Kun-
kel also mentions a purple gold powder, resembling
that of Neri, which he obtained by inspissating
solution of gold to dryness; abstracting from it
fresh aqua-regia 3 or 4 times, till the matter ap-
pears like oil; then precipitating with strong alka-
line ley, and washing the precipitate with water.
By dissolving this powder in spirit of salt, and
precipitating again, it becomes extremely fair;
and in this state he directs it to be mixed with 2
due proportion of Venice glass. ORSCHAL, in a
treatise intitled *Sol sine Vessa*, gives the following
process for producing a very fine ruby. He di-
rects the purple precipitate made by tin to be
ground with six times its quantity of Venice glass
into a very fine powder, and this compound to
be very carefully mingled with the frit or vitreous
composition to be tinged. His frit consists of
equal parts of borax, nitre, and fixed alkaline salt,
and 4 times as much calcined flint as of each of
the salts; but he gives no directions as to the pro-
portion of the gold precipitate or mode of fusion.
Hellet describes a preparation, which, mixed with
Venice glass, gives a beautiful purple enamel.
This preparation consists of equal parts of solution
of gold and of solution of zinc in aqua-regia mixed
together, with the addition of a volatile salt prepar-
ed from sal ammoniac by quicklime, in sufficient
quantity to precipitate the 2 metals. The precipi-
tate is then gradually heated till it acquires a violet
colour. However, though a purple or red colour,
approaching to that of ruby, may, by these me-
thods, be baked on glass or enamels, and intro-
duced into the mass by fusion, the way of equally
diffusing such a colour through a quantity of fluid

glass is still, says Dr Lewis, a secret. The following process for making the ruby glass was communicated to Dr Lewis by an artist, who ascribed it to K mekel. The gold is dissolved in a mixture of one part of spirit of salt and 3 of aquafortis, and the tin in a mixture of one part of the former with two of the latter. The solution of gold being properly diluted with water, the solution of tin is added, and the mixture left to stand till the purple matter has settled to the bottom. The colourless liquor is then poured off, and the purple sediment, while moist and not very thick, is thoroughly mixed with powdered flint or sand. This mixture is well ground with powdered nitre, tartar, borax, and arsenic, and the compound melted with a suitable fire. The proportions of the ingredients are 2560 parts of sand, 284 of nitre, 140 of tartar, 140 of borax, 28 of arsenic, 5 of tin, and 5 of gold.

19. SEA GREEN. See § 13, and GLASS, § 21.

20. TOPAZ. Glass resembling this stone may be made by pulverizing 10 lb. of either of the compositions for hard glass with an equal quantity of the gold-coloured glass, and fusing them together. Or take crystal frit 15 lb. calceinal lead 12 lb. mix them well together, by sitting the pow-

ders through a fine sieve; then set the mixture not too hot, and separate the unmixed lead, by casting the whole; repeat this twice, then add half gold, and let them incorporate and purify will be at the true and exact colour of tal topazes.

21. WHITE CRACK and SEMI-TRANSPARENT glass may be made of 10 lb. of either composition for hard glass and 1 lb. of horn, ivory, or bone; or an opake may be given to glass by adding one very white arsenic to ten pounds of glass. Let them be well powdered and mixing them together, and then fused with a moderate heat till they are thoroughly mixed. A glass of this kind is made in large quantities at a manufacture near London; and is used for different kinds of vessels, but as it is not for enamel in dial plates and brass boxes, not require finishing with much fire, but comes very white and subtile with a moderate heat.

22. YELLOW. See § 12.

For farther particulars respecting GLASS, and other counterfeit GLASS, see article PASTES.

G L A

* GLASSMAN. *n. f.* [*glass* and *man*] One who sells glass.—The profit of glassmen consists only in a small present made by the *glassman*. *Swiss.*

* GLASSMETAL. *n. f.* [*glass* and *metal*] Glass infusion. — Let proof be made of the incorporating of copper or brass with *glassmetal*. *Bacon's Phys.*

GLASSNEVIN, a pleasant village of Ireland, seated on a rising ground, 2 miles from Dublin.

GLASS POT. See GLASS-MAKING, SECT. V.

GLASTENBURG, a town of Connecticut, 17 miles NNW. of Wyndham.

* GLASSWORK. *n. f.* [*glass* and *work*] Manufacture of glass.—The crystalline Venice glass is a mixture, in equal proportions, of stones brought from Pavia, and the ashes of a weed called kali, gathered in a desert between Alexandria and Rosetta; by the Egyptians used first for fuel, and then they crushed the ashes into lumps like a stone, and sell them to the Venetians for their *glassworks*. *Bacon's Nat. Hist.*

(1.) * GLASSWORT. *n. f.* [*saucomnia*, or saltwort]—It hath an apetalous flower, wanting the empalement; for the stamina, or chives, and the embryos, grow on the extreme part of the leaves; these embryos afterwards become pods or bladders, which, for the most part, contain one seed. The inhabitants near the sea-coast cut the plants up toward the latter end of summer; and, having dried them in the sun, they burn them for their ashes, which are used in making of glass and soap. These herbs are by the country people called kelp. From the ashes of these plants is extracted the salt called *sals kali*, or *sals kali*, by the chymists. *Bill.*—For the true glass we use the purest of the finest sand, and the ashes of kali or *glasswort*; and for the coarser or green sort, the ashes of brake or other plants. *Bacon's Vulg. Err.*

(1.) GLASTONBURY, a town of Somersetshire, anciently called *Avalonia*. It is noted for a famous magnificent ruins of which still remains the church, called *the Abbey's church*, entire, and is of a very unusual construction, and was the gift of the king of the West Saxons, erected a church 703, which he and his successors came that the abbey had the title of *lord*, or the barons in parliament; and not for prince durst set foot on the ilk

the abbey stands, without his leave. The revenue was about 40,000*l.* a-year, besides stocked with deer. In 853, it was ruined by Danes, but rebuilt by K. Edmund I. In 12th town and abbey were burnt, and in 1257 destroyed by an earthquake. Richard Wisliff, last abbot, who had 100 monks and 400 *cells*, was hanged on Torhill, in his pontificals, for refusing to take the oath of fealty to Henry VIII. Edgar and many other kings were buried here; as well as Arthur, British king. See ARTHUR, N^o 1, § 3. The abbey has part of a pillar, a door, or a window in its fabric; of which there still remain the choir, the middle tower and chapels. The ruins of the abbey are overgrown with ivy, and renders its aspect both melancholy and venerable. Here are two parish churches. This town, under its abbots, was a parliamentary borough, but it lost that and its privilege of a corporate latter of which, however, was restored in 1791, when it granted it a new charter for a new borough. The only manufacture is cloth, but the chief support of the place is the strangers to see the ruins of the abbey. George Inn here was formerly called the *Abbey Inn*; because it was a receptacle for the pilgrims who visited the abbey. At a little distance from the church and facing the monk's church, are remarkable pyramids, with inscriptions in letters unintelligible, and an image in bishop's robes. Clattonbury is 3 miles SSW. of Wells, W. of London. Lon. 2. 40. W. Lat. 51.

GLASTONBURY, a town of Connecticut, Oxford county, on the E. side of the Connecticut river.

GLASTONBURY, a township of Vermont, Franklin county.

GLASTONBURY THORN. *n. f.* A species of thorn produces some flowers in Winter, and flowers again in Spring. *Miller.*

GLASTONBURY THORN. See CRATÆGUS,

GLASS. See GLASS, N^o IV, § 2.

GLATT, a river of Suabia, which runs into the Danube, 2 miles N. of Sultz.

GLATZ, a county of Bohemia, or according to Mr Cruttwell, of Silesia, on the border of Bohemia, surrounded by mountains. It is bounded to the K. of Prussia by the Q. of Hungary. It is about 45 miles in length, and 15 in breadth. It has mines of coal, silver, iron; stone and marble quarries, plenty of good fine springs of mineral water. Jaspazes, &c. are found in it.

GLATZ, the capital of the above county, is seated on the Neisse, and has strong fortifications, with a castle built upon a mountain 25 miles W. of Neisse, and 88 E. of it. Lon. 16. 50. E. Lat. 50. 25. N.

GLATZ, KOEHL, a mountain of Austria, S. of Steyr.

GLAUBER, John Rodolphus, a celebrated chemist, who flourished about 1646. He wrote a great number of treatises on chemistry, which have been translated into French.

All his works have been collected into one volume, intitled, *Glauberus concentratus*, which has been translated into English, and was printed at London in folio, in 1689.

(2—4.) GLAUBER, John, John-Gottlieb, and Diana, two brothers and a sister, all celebrated Dutch painters, born at Utrecht in 1646, 56, and 50. The brothers excelled in landscapes; the sister in portraits and history. John died in 1726; John-Gottlieb in 1703.

(5.) GLAUBER'S SALTS. See CHEMISTRY, *Ind.* GLAUCE. See CREON, N^o 1. and CREUSA, N^o 2.

GLAUCHA, or } a town of Upper Saxony, in
GLAUCHAU, } Schonburg, on the Mulda, containing 600 houses, 6 miles N. of Zuickaw, and 45 W. of Dresden.

GLAUCHE, a town of Lower Saxony, in Magdeburgh, adjoining to the Halle, but governed by its own magistrates. It has 4 schools, and 120 teachers.

(1.) * GLAUCOMA. *n. f.* [*γλαυκωμα*; *gl income*, French.] A fault in the eye, which changes the crystalline humour into a greyish colour, without detriment of light, and therein differs from what is commonly understood by suffusion. *Quincy.*—The *glaucoma* is no other disease than the cataract. *Sharp.*

(2.) GLAUCOMA, [from *γλαυκος*, sea-green, or sky colour,] is a disease in the eyes, wherein the crystalline humour is turned of a *bluish* or *greenish* colour, and its transparency hereby diminished. To those in whom this disorder is forming, all objects appear as through a cloud or mist; when entirely formed, the visual rays are all intercepted and nothing is seen at all. It is incurable, when inveterate, and in aged persons; and is always very difficult of cure, externals proving of little service. The internals best suited to it, are those used in the gutta serena. See *Jul. Cesar Claudinus*, Consul. 94. The glaucoma is usually distinguished from the cataract or suffusion, in this, that in the cataract the whiteness appears in the pupil, very near the cornea; but it shows deeper in the glaucoma. Some late French authors, however, maintain the cataract and glaucoma to be the same disease. According to them, the cataract is not a film, or pellicle, formed before the pupil, as had always been imagined; but an inspissation or induration of the humour itself, whereby its transparency is prevented; which brings the cataract to the glaucoma. According to Mr Sharp, the glaucoma of the ancient Greeks is the present cataract; but M. St Yves says, it is a cataract accompanied with a gutta serena. See SURGERY.

GLAUCUS, in ancient mythology, a deity of the sea, who, before his deification, was a fisherman of Anthedon. Having one day taken a considerable number of fishes, which he laid upon the bank, he perceived that as soon as they touched an herb that grew on the shore, they received new strength, and leaped again into the sea; upon which he was tempted to taste of the herb himself, and instantly leaped into the sea after them, where he was metamorphosed into a Triton, and became one of the sea gods.

* GLAIVE. *n. f.* [*glaiue*, French; *glais*, a hook, Welsh.] A broad sword; a falchion.—

Two hundred Greeks came next in fight well try'd,

Not surely arm'd in steel or iron strong,
But each a *glawe* hath pendant by his side. *Fairf.*

When zeal, with aged clubs and *glaves*,
Gave chase to rockets and white staves. *Hud.*

* To GLAVER. *v. n.* [*glawe*, Welsh, flattery; *glisan*, Saxon, to flatter. It is still retained in Scotland.] To flatter; to wheedle. A low word.—Kingdoms have their distempers, intermissions, and paroxysms, as well as natural bodies; and a *glavering* council is as dangerous as a wheedling priest or a flattering physician. *L'Etrange*.

GLAUX, in botany, a genus of the monogynia order, belonging to the pentandria class of plants; and in the natural method ranking under the 17th order, *Calycanthaceae*. The calyx is monophyllous; there is no corolla: the capsule is unilocular, quinquevalved, and pentaspermous.

GLAYSLEY, a small town in Shropshire.

* To GLAZE. *v. a.* [*To glaz*, only accidentally varied.] 1. To furnish with windows of glass.—Let there be two delicate cabinets daintily paved, richly hanged, and *glazed* with crystalline glass. *Bacon's Essays*. 2. To cover with glass, as potters do their earthen ware; [from the French *glasse*, *argilla*.] 3. To overlay with something shining and pellucid.—

Sorrow's eye, *glaz'd* with brining tears,
Divides one thing entire to many objects.

Shak. Rich. II.

—The reason of one man operates on that of another in all true oratory; wherein though with other ornaments he may *glaze* and brandish the weapons, yet it is found reason that carries the stroke home. *Grew's Cosm. Sac.*—White, with other strong colours, with which we paint that which we intend to *glaze*, are the life, the spirit, and the lustre of it. *Dryden's Duff*.

GLAZERT, a small river of Scotland, in Stirlingshire, formed by the union of 3 rivulets below the church of Campsie. After running with a great rapidity 4 miles, it falls into the Kelvin, opposite Kirkintilloch.

* GLAZIER. *n. f.* [corrupted from *glazier*, or *glazier*, of *glaz*.] One whose trade is to make glass windows. Other manufactures of glass are otherwise named.—Into rabbits the several panes of glasswork are set, and fastened by the *glazier*. *Moran*.—

The dext'rous *glazier* strong returns the bound,

And gingham sashes on the penthouse found.

Gay's Trivia.

And then, without the aid of neighbour's art,
Perform'd the carpenter's and *glazier's* part.

Harte.

(I.) GLAZING, *n. f.* the crusting over earthen ware by a vitreous substance, the basis of which is lead. See GLASS, N° IV, § 21.

(II.) GLAZING, ANCIENT METHOD OF. The Romans had a method of glazing their earthen vessels, which in many respects appears to have been superior to ours. The common brown glazing easily scales off, cracks, and in a short time becomes disagreeable to the eye. Besides, it is very easily destroyed by acids; nor can vessels glazed in this manner be even employed to hold wa-

ter, without part of it oozing through. Lead is also destructive to the human body, if acids are unwarily put into vessels of lead, the liquors will receive a very impregnation from the metal. The *glazing*, which is yet to be seen upon many in several places, appears to have been some kind of varnish; and Pliny gives that it was made of bitumen. He tells that it never lost its beauty, and that at length customary to glaze statues in this manner, this varnish sunk deep into the surface of the ware, it was not subject to those cracks which disfigure our vessels; and as it is able to be corroded by acids, it could not be subject to any of the accidents which may attend the use of vessels glazed with lead.

(III.) GLAZING, MODERN METHOD. The workers of common earthen ware, however not at the trouble of thus previously pure glass of lead. Their usual composition for glazing their ware is formed of white sand 20 lb. of red lead 20 lb. of pearl-ashes 20 lb. of common salt 12 lb. Powder the sand by itself, then add it to the other ingredients, mix them together: after which calcine them some time with a moderate heat, and when it is cold, pound it to powder. When used, temper it with water. The proportion of these ingredients may be occasionally varied, after being turned on the wheel, in the open air, is covered over with the composition by a brush; and when set to dry, the violent heat soon reduces it to a glass, covering the whole internal and surface of the vessel. Lead, however, is excluded from the composition of some, and other fluxes substituted in its stead. A different glazing may be prepared without lessening 40 lb. of white sand, 25 lb. of pearl-ashes, and 25 lb. of common salt; and procured before: and a more perfect transparent glazing may be made of sand 40 lb. of wood-ashes 50 lb. of pearl-ashes 20 lb. of common salt 12 lb. The following recipe is mostly from Kunkel, who says, they are glazings used at Delft, and the other Dutch factories.

1. GLAZING, BLACK. Take 8 parts lead, iron filings 3, copper ashes 3, a two measures. This when melted will be brown black; and if wanted blacker, add saffron to it.

2. GLAZING, BLUE. Take lead-ash 1 lb. clear sand or powdered flints, 1 lb. common salt 2 lb. white calcined tartar 1 lb. or other glass 1 lb. saffron 1 lb.; mix all and melt them several times, quenching in cold water. To have it fine, put the mixture into a glass-furnace for two days. Another blue glazing may be formed of 1 lb. of tartar, 1 lb. of red-lead, 1 lb. of powdered flints, fused or melted above. Or take 2 lb. of calcined lead, add 5 lb. of common salt, 5 lb. of powder of saffron, tartar, and Venetian glass 1 lb. Calcine and fuse the mixture as before, take of red lead one part, of sand 3 part

1. For a *violet blue* glazing, take 4 oz. 2 oz. of red lead, 5. oz. of powdered 1 half a dram of manganese.

GLAZING, BROWN. Take red lead and each 14 parts, and of manganese two d; or, of red lead 12 parts, and manganese part fused. A brown glazing, to be laid e ground, may be made of manganese, and of red lead and white glass, of each twice fused.

GLAZING, FLESH-COLOURED. Take 12 lead ashes, and one of white glass.

GLAZING, GOLD-COLOURED. Take of litharge, of sand or calcined flint one part; mix these very well together, then run a yellow glass with a strong fire. Pound, and grind it into a subtile powder, disten with a well saturated solution of alkali into a paste, which put into a crucible cover it with a cover. Give at first a degree of fire; then increase it, and continue you have a glass, which will be green. is glass again, and grind it to a fine powder. Then this powder with beer, so that it applied by a hair pencil upon the vessels ware. These vessels when covered with glazing must be first well heated, then put to ruffle; and, as soon as the glass runs, by holding them over burning vegetation take out the vessels. *Phil. Trans.* N°

Kunckel gives several preparations for coloured yellow glazing. This may be done by fusing a mixture of 3 parts of red antimony, and one of saffron of Mars; melting the powdered mass, and repeating the operation 4 times, or by fusing 4 or 5 composition of red lead and antimony of ounce, and of scales of iron half an ounce; mixing and fusing together 8 parts of red 6 parts of flints, one part of yellow ochre, of antimony, and one part of glass. A gold-coloured glazing may be obtained by fusing red lead and white flints, of 12 parts, and of filings of iron one part.

GLAZING, GREEN. Take 8 parts of litharge d, 8 of Venice glass, 4 of brass dust or copper; or 10 parts of litharge, 12 of pebble, and one of *as usum* or copper. A fine green glazing may be produced by hemian granite, filings of copper, red Venetian glass, in equal proportions; or white glass, red lead, and filings of copper part each; powdering the mass, and adding part of Bohemian granite to two parts of glass. A fine green may also be obtained, by grinding together any of the yellow with equal quantities of the blue glazings; the shades and tints of green will be had by the proportions of the one to the other, the choice of the kind of yellow and blue. GREEN, take 5 lb. of lead ashes, 1 lb. of 3 lb. of flint, $\frac{3}{4}$ lb. of salt, $\frac{1}{2}$ lb. of tartar 1 lb. of copper dust.

GLAZING, IRON-COLOURED. Take 15 parts of lead or red lead, 14 of white sand or flints, calcined copper. Calcine and fuse this

GLAZING, LIVER-COLOURED. Take 12

parts of litharge, 8 of salt, 6 of flint, and one of manganese.

9. GLAZING, PURPLE BROWN. Take lead ashes 15 parts, clean sand or powdered flints 18 parts, manganese one part, and white glass 15; to which some add one of saffer.

10. GLAZING, RED. Take antimony 3 lb. litharge or red lead 3, and rust of iron one; grind them to a fine powder. Or, take 2 lb. of antimony, 3 of red lead, and one of calcined saffron of Mars; and proceed as before.

11. GLAZING, SEA GREEN. See § 6.

12. GLAZING, WHITE. For common ware, take 40 lb. of clear sand, 75 lb. of litharge or lead ashes, 26 of pot-ashes, and 10 of salt: Melt these three times into a cake, quenching it each time in clear cold water. Or, take 50 lb. of clean sand, 70 of lead ashes, 30 of wood ashes, and 12 of salt. For a *fine white*: Take 2 lb. of lead and one of tin; calcine them to ashes: of this take two parts, calcined flint, white sand, or broken white glass, one part, and salt one part; mix them well together and melt them into a cake for use. The trouble of calcining the tin and lead may be prevented by procuring them in a proper state. A *very fine white* glazing may be obtained by calcining two parts of lead and one part of tin; and taking one part of this mass, and of flints and common salt of each one part, and fusing the mixture. A white glazing may be also prepared by mixing 100 lb. of masticot, 60 of red lead, 20 of calcined tin or putty, and 10 of common salt; calcining and powdering the mixture several times.

13. GLAZING, YELLOW. Take red lead 3 lb. calcined antimony and tin of each 2 lb.; or, according to some, equal quantities of the three ingredients. These must be melted into a cake, then ground fine; and this operation repeated several times. Or, take 15 parts of lead ore, 5 of litharge of silver, and 15 of sand. A *fine yellow* glazing may be procured by mixing 5 parts of red lead, 2 of powdered brick, 1 of sand, 1 of white glazing, and 2 of antimony; calcining the mixture and then fusing it. Or, take 4 parts of white glass, one of antimony, 3 of red lead, and one of iron scales, and fuse the mixture; or fuse 16 parts of flint, one of iron filings, and 24 of litharge. A *light yellow* glazing may be produced with 10 parts of red lead, 3 of antimony, 3 of glass, and 2 of calcined tin. (See § 5.) A *citron yellow* is made of 6 parts of red lead, 7 of fine red brick dust, and two of antimony. This mixture must be calcined day and night for four days, in the ash hole of a glass-house furnace, and at last fused.

(IV.) GLAZING OF DELFT WARE, PORCELAIN, STONE WARE, &c. See DELFT, N° 3. PORCELAIN, and POTTERY.

GLAZOV, a town of Russia, in Viatka, on the Tchevtz, 56 miles ESE. of Viatka.

GLEAD, or GLADE. See GLEDE.

* GLEAM. *n. s.* [*gelima*, Saxon.] Sudden shoot of light; lustre; brightness.—

Then was the fair Dodonian tree far seen
Upon seven hills to spread his gladsome gleam;
And conquerors bedecked with his green,
Along the banks of the Ausonian stream. *Spens.*

At

At last a gleam
Of dawning light turn'd thitherward in haste
His travell'd steps. *Milton's Par. Lost.*

As I bent down to look just opposite,
A shape within the wat'ry gleam appear'd,
Bending to look on me. *Milton's Par. Lost.*
Mine is a gleam of bliss, too hot to last;
Wat'ry it shines, and will be soon o'ercast.

Dryd. Aurengzebe.

We ken them from afar; the setting sun
Plays on their shining arms and burnish'd hel-
mets,

And covers all the field with gleams of fire.

Addison's Cato.

In the clear azure gleam the flocks are seen,
And floating forests paint the waves with green.

Pope.

Nought was seen, and nought was heard,

But dreadful gleams,

Fires that glow.

Pope's St Cecilia.

(1.) * To GLEAM. *v. n.* [from the noun.] 1. To
shine with sudden conflagration—

Observant of approaching day,

The meek-eyed morn appears, mother of dews,
At first faint gleaming in the dappled East.

Thomson's Summer.

2. To shine.—

On each hand the gushing waters play,
And down the rough cascade white dashing fall,
Or gleam in lengthen'd vistas through the trees.

Thomson.

(2.) * To GLEAM. Among falconers a hawk is
said to gleam, when she casts or throws up filth
from the gorge.

* GLEAMY. *adj.* [from *gleam*.] Flushing; dart-
ing sudden conflagrations of light.—

In brazen arms, that cast a gleamy ray,
Swift through the town the warrior bends his
way. *Pope.*

* GLEAN. *v. f.* [from the verb.] Collection
made laboriously by slow degrees.—

Plains, meads, and orchards all the day he
plies;

The gleams of yellow theme descend his thighs:
He spoils the saffron. *Dryden's Virgil.*

* To GLEAN. *v. a.* [*gleaner*, French, as *Skin-
ner* thinks, from *granum*, Lat.] 1. To gather
what the gatherers of the harvest leave behind.
—She came and gleaned in the field after the reap-
ers. *Ruth. ii.*

He reap'd the field, and they but only glean'd.
Dryden.

—The precept of not gathering their land glean,
but that something should be left to the poor to
glean, was a secondary offering to God himself.
—*Nelson.*

She went, by hard necessity compell'd,
To glean Palemon's fields. *Thomson's Autumn.*

2. To gather any thing totally scattered.—

Gather

So much as from occasions you may glean,
If aught, to us unknown, afflicts, in thus.

Shakl. Hamlet.

That you will
Of gleanings all the lord's wealth receive,
Into your own hands, cardinal, by exaction.

Shakl. H. VIII.

—They gleaned of them in the highways,
sand men. *Judges xx. 45.*

But Argive chiefs, and Agamemnon
When his resplendent arms flash'd th'
shady plain,

Fled from his well-known face with
As when his thund'ring sword and
Drove headlong to their ships, and
routed rear. *Dryden.*

—In the knowledge of bodies we must
to glean what we can from particular
since we cannot, from a discovery of
essences, grasp at a time whole
bundles comprehend the nature and
whole species together. *Locke.*

* GLEANER. *n. f.* [from *glean*.]
who gathers after the reapers.—

For still the world prevail'd, and
laugh,

Which scarce the firm philosopher
Should his heart own a gleaner in the

2. One who gathers any thing slowly
ously.—An ordinary coffee-house glean-
city is an arrant statesman. *Locke.*

(1.) * GLEANING. *n. f.* [from *glean*.]
act of gleanings, or thing gleaned.—
as the shaking of an olive tree, and as
of grapes when the vintage is done. *Job.*
—The orphan and widow are near
same common family, and have a right
ported out of the incomes of it, as the
had to gather the gleanings of the rich
vest. *Atterbury.*

(2.) GLEANING. By the custom
countries, particularly those of *Madu-
tampes*, in France, before the revolution,
and others were forbid, either by the
servants, to put any cattle into the field
vent gleanings in any manner whatever
hours after carrying off the corn, and
of confiscation.

(1.) * GLEBE. *n. f.* [*gleba*, Latin.]
soil; ground.—

Thus, like the happy plots, delight
bowers;

The grassy garlands loves, and oft at
flowers

Of rank and mellow glebe.
Fertile of corn the glebe, of oil and
With herds the pastures throng'd, with
hills.

Mark well the flow'ring almonds in
If od'rous blossoms the bearing branch
The glebe will answer to the sylvan re
Great heats will follow, and large crop

Sleeping vegetables lie,
'Till the glad summons of a genial ra
Unbinds the glebe, and calls them out

2. The land possessed as a part of the
an ecclesiastical benefice.—The ordin-
or revenue of a parsonage is of three
one in land, commonly called the *glebe*
in tythe, which is a set part of our goo-
ed to God; the third, in other offerin

God and his church by the people.

—A trespass done on a parson's *glebe* is a freehold, cannot be tried in a court. *Ayliffe's Parergon*.—

Many parishes have not an inch of *glebe*. *Swift*.

—*GLEBE*, among miners, signifies a piece of which is contained some mineral ore.

BOUS. *adj.* [from *glebe*.] Turfy. *Dist.*

OW, a town of Courland, 18 miles S. E.

EBY. *adj.* [from *glebe*.] Turfy; perhaps signifying passage fat or fruitful, if it has no meaning.—

icious flatt'ry! thy malignant seeds

in hour and by a fatal hand

diffus'd o'er virtue's *glebe* land,

rising pride amidst the corn appear,

tooke the hopes and harvest of the year.

Prior.

HOMA, *GROUND IVY*; a genus of the *ermia* order, belonging to the *didynamia* plants; and in the natural method ranking under the 44th order, *Verticillatæ*. Each pair of *stamens* come together in the form of a *calyx* is quinquefid. There are 3 species, the most remarkable of which is the

HOMA HEDERACEA, the common ground ivy; virtues were formerly attributed to it, which it is now found not to be possessive of, however, it has. The leaves are like the *vat* with ale to clarify it and give it a clear. Ale thus prepared is often drank as a *stomachic*. The expressed juice mixed with wine, and applied morning and evening, cures the white specks upon horses' eyes. The ivy grows near it do not flourish. It is very hurtful to horses if they eat much of it. If it is eaten, horses are not fond of it; cows, and swine, refuse it.

GLEDE. *n. f.* [*glidaglide*, Saxon.] A hawk.—Ye shall not eat the *glede*, the eagle, the vulture. *Deut.*

GLEDE, *GLEAD*, or *KITE*. See *FALCO*,

ACACIA, *TRIPLE-THORNED ACACIA*, or *LOCUST*; a genus of the *diœcia* order, belonging to the *polygamia* class of plants; and in the natural method ranking under the 33d order, *Lo-*. In this genus, says Mr Lee, "the *hermaphrodites* and *males* are on the same plant, and the *females* on a different one." The *hermaphrodite* is quadrifid; the corolla tetrapetalous; the *stamens* six, one pistil and legumen. The *male* is triphyllous; the corolla tripetalous, the *stamens* five. The female calyx is pentapetalous; the corolla pentapetalous; one pistil and legumen. There are two species, viz.

ACACIA INERMIS, so named because the *stems* are unarmed, or without thorns. It is a native of America, and in this country requires to be kept in a stove.

ACACIA TRIACANTHOS, a native of Virginia. It is of an upright growth, the trunk is guarded by thorns 3 or 4 inches in a remarkable manner. These thorns have a coming out of their sides at nearly right angles. Their colour is red. The branches are of a white colour; but are likewise green. *PART. II.*

armed with red thorns, that are proportionally smaller: they are of several directions, and at the ends of the branches often stand single. The young shoots of the preceding summer are perfectly smooth, of a reddish green, and retain their leaves often until the middle of November. Although there is a peculiar oddity in the nature and position of the spines, yet the leaves constitute the greatest beauty of these trees: they are doubly pinnated, and of a delightful shining green. The pinnated leaves, that form the duplication, do not always stand opposite by pairs on the middle rib; the pinnæ of which they are composed are small and numerous; no fewer than 10 or 11 pair belong to each of them; and as 4 or 5 pair of small leaves are arranged along the middle rib, the whole compound leaf consists often of more than 200 pinnæ of this fine green colour. They sit close, and spread open in fine weather; though during bad weather they droop, and their upper surfaces nearly join, as if in a sleeping state. The flowers are produced from the sides of the young branches in July. They are a greenish catkin, and make little show; though many are succeeded by pods, that have a wonderful effect; for these are exceedingly large, more than a foot, sometimes a foot and a half in length, two inches in breadth, and of a nut-brown colour when ripe. There is a variety of this species, with fewer thorns, smaller leaves, and oval pods. It has nearly the resemblance of the other; though the thorns are not so frequent, and the pods smaller, each containing only one seed. These trees are easily propagated, by seeds received from America in spring, which keep well in the pods, and are for the most part good. They generally arrive in February; and, as soon as possible after, they should be sown in a well sheltered warm border of light sandy earth. If no border is to be found that is naturally so, it may be improved by applying drift sand, and making it fine. The seeds should be sown about half an inch deep: and they will for the most part come up the first spring. If the summer should prove dry, they must be constantly watered; and if shade could be afforded them in the heat of the day, they would make stronger plants by autumn. Attention to this is peculiarly requisite; for as the end of the branches are often killed, if the young plant has not made some progress, it will be liable to be wholly destroyed by the winter's frost, without protection: And this renders the sowing the seeds in a warm border, under a hedge, in a well sheltered place, necessary; for there these shrubs will endure our winters, even when seedlings, and will require no farther trouble; nay, though the tops should be nipped, they will shoot out again lower, and will soon overcome it. They should remain two years in the seed-bed before they are planted out in the nursery. The spring is the best time for the work. Their distances should be one foot by two; the rows should be dug between every winter; and, being weeded in summer, they may continue with no other particular care, until they are set out to remain. These trees are late in spring before they exhibit their leaves, but keep shooting long in autumn.

* **GLEE**. *n. f.* [*gligge*, Saxon.] Joy; merriment; gayety. It anciently signified musick played at feasts. It is not now used, except in ludicrous writing, or with some mixture of irony and contempt—

She coucheth home, and by her takes the knight,

Whom all the people follow with great *glee*.

—Many wayfairs make themselves *glee*, by vexing the inebriants; who again forebode not to baigne them with perfume. *Carraw's Survey*.—

Is Blonzhinda dead? Farewel my *glee*!

No happiness is now reserv'd for me.

The poor man then was rich, and liv'd with *glee*;

Each barley-head untaxt, and day light free.

* **GLEED**. *n. f.* [from *glowan*, Saxon, to glow.] A hot glowing coal. A provincial and obsolete word.

* **GLEFFUL**. *adj.* [*gles* and *full*.] Gay; merry; cheerful. Not used.—

My lovely Aaron, wherefore look'st thou sad,
When every thing doth make a *gleeful* boast?

* **GLEEK**. *n. f.* [*gligge*, Saxon.] Musick; or musician.—What will you give us?—No money, but the *gleek*: I will give you the minstrel.

* **To GLEEK**. *v. a.* [*ghymon*, in Saxon, is a mimick or a droll.] 1. To sneer; to gibe; to droll upon.—

I can *gleek* upon occasion.
—I have seen you *gleeking* or galling at this gentleman twice or thrice.
2. In Scotland it is still retained, and signifies to fool or spend time idly, with something of mimicry or drollery.

* **To GLEEN**. *v. n.* To shine with heat or polish. I know not the original notion of this word: it may be of the same race with *glow* or with *gleam*. I have not remarked it in any other place.—

Those who labour
The sweaty forge, who edge the crooked scythe,
Bend stubborn steel, and harden *gleening* armour,

Acknowledge Vulcan's aid.
(1.) * **GLEET**. *n. f.* [It is written by *Skinner* *glis*, and derived from *glidan*, Saxon, to run softly.] A sanious ooze; a thin ichor running from a sore.—A hard dry eschar, without either matter or *gleet*. *Wifeman's Surgery*.

(2.) **GLEET** is chiefly used for the flux of a thin limpid humour from the urethra. See *Medicine, Index*.

* **To GLEET**. *v. n.* [from the noun.] 1. To drip or ooze with a thin sanious liquor.—His thumb being inflamed and swelled, I made an incision into it to the bone; this not only bled, but *gleeted* a few drops. *Wifeman*. 2. To run slowly.—Vapours raised by the sun make clouds, which are carried up and down the atmosphere, 'till they hit against the mountainous places of the globe, and by this concussion are condensed, and so *gleet* down the caverns of these mountains, whose inner parts, being hollow, afford them a basin. *Cheyne's Phil. Princ.*

* **GLEETY**. *adj.* [from *gleet*.] Ichory; thin-

ly sanious.—If the flesh lose it's red, the matter change to be thin and *gley*, suspect it corrupting. *Wifeman*.

GLEIBERG, or **OLITZBURG**, a town many, in Nassau Weisburg; 2 miles N. and 8 NW. of Weizlar.

GLEICHENBERG, a town of Styria; 10 miles N. of Rackitburg.

GLEICHENSTEIN, a town and many, in the circle of the Lower Rhinotory of Eichteld.

GLEINCK, a town of Austria; 7 m.

GLEINSTOTTEN, a town of Silesia, SE. of Vroslberg.

GLEISS, a town of Switzerland, 16 miles E. of Sion.

GLEIWITZ, or **GLIWICK**, a town in Oppeln, 36 miles SE. of Oppeln.

GLEMFORD, a village in Suffolk, Clare and Lenham.

GLEMS, a river of Germany, which the Enz, 2 miles N. of Mark-Grobingen.

(1.) **GLEN**, John, a celebrated print-graver in wood, born at Liege, about, published a copious work on ancient dresses, ceremonies, &c. illustrated figures.

(2.) * **GLEN**. *n. f.* [*gleann*, Erse.] A dale; a depression between two hills.—
From me his madding mind is
And woos the widow's daughter of

(3.) **GLEN**. See *DUN*, § 2.

(4.) **GLEN**, in geography, a river of Cumberland, running into the Till.

(5.) **GLEN**, a lake of Ireland, in 10 miles WNW. of Londonderry.

(6.) **GLEN** makes part of the names number of places in Scotland and Ireland some in England, which, according to the meaning of the word, (see § 2) either, or are seated in or near them; as following examples:

GLEN ALMOND, a beautiful valley of in Perthshire, about 8 miles N. of Crieff, able for its picturesque scenery.

GLEN-ALOT, a valley of Scotland, in landshire, 14 miles N. of Dornoch.

GLENARM, a town of Ireland, in A Glenarm Bay, 105 miles from Dublin.

GLEN-ARTNEY, a vale of Scotland, shire, 4 miles NE. of Callender.

GLENNEG, a valley of Scotland, in shire, in the parish of **GLENNEG**, in w are several ancient castles, exhibiting mens of ancient Scots architecture. See *STRUCTURE, Index*.

GLENBARVIE, a parish of Scotland, dineshire, 6½ miles long from N. to S. an lying along the *Bervie* for 2 miles, and 13,965 acres. The soil in the high part is cold but healthy. The crops bear, pease, potatoes, clover, rye-grass nips. Husbandry is much improved, the exertions of Mr Barclay of Urie. I senity of the late Lord Monboddo, th

and the tenants thriving. The leases are stated for "a life, 19 years, and a life, the possessor, during the 19 years, naming the life with which the lease ends." The population, in 1792, as given by the rev. Alex. Thom, in his report to Sir J. Sinclair, was 1307, and had increased 349, since 1755. There were then 53 ploughs, 161 horses; a considerable number of black cattle, but few sheep in the parish.

BUCKET, a parish of Scotland, in Aberdeenshire, 30 miles from Aberdeen. It is 4 miles long and from $\frac{1}{2}$ to one mile broad, encircled by a high wall, and seated on the rivulet *Bucket*, which runs into the Don. The soil is a light loam; the climate mild, and in summer warm, which makes the harvest pretty early. The crops are oats and grass. Grasses are beginning to be sown. The population, in 1795, stated by the rev. William Thomson, in his report to Sir J. Sinclair, was 449, and increased 19 since 1755.

CAIRN, a parish in Dumfriesshire, 16 miles from E. to W. lying along the rivers Craigie, Dalquhat, and Castlefairn, on the W. side of both sides of the *Cairn*, the name of these rivers when united. It is 15 miles from Dumfries. The soil is light, warm, and fertile in grain and grass. The climate is healthy. The population, in 1795, stated by the rev. Walter Grierison, in his report to Sir J. Sinclair, was 1700, and had decreased 94 since 1755. The number of sheep, on 1795, was above 9000; of horses 135, and of cattle 2,475. There were 27 proprietors, and 10, in the parish, which was divided into 90 townships.

CARREL, a valley of Scotland, in Sutherlandshire, 12 miles N. of Dornoch.

CHEARNISH. See DUTHIL, N° 1.

CO, or } a valley of Scotland, in Argyllshire, } near Loch Etive; memorable for being the scene of the most cruel and bloody massacre, that ever disgraced the annals of Britain. See ENGLAND, § 67. The rev. John M'Nicol, minister of Lismore and Appin, parish in which it happened, says, "It were to be wished that a veil could be thrown over this dark page of our history, as it was the most barbarous action in modern times, sanctioned by any authority from government." See *Sir J. Sinclair's Stat. Acc.* Vol. I, 498.

COWEN, a river of England, in Cumberland, running into the Ullswater.

CROSS, a parish of Scotland, in Mid-Lothian, 7 miles W. of Edinburgh, erected in 1616. It is about 3 miles square in extent; and as it lies on Pentland hills, is well adapted for pasturing. Accordingly, about 1200 sheep, 100 horses, and 150 black cattle, are pastured in it. The population, in 1792, stated by the rev. W. Torrance, in his report to Sir J. Sinclair, was 385 souls, and had decreased 172 since 1755. There is a distillery, a bleachfield, and 3 mills in the parish; manufactures are a grievance. The chief crops are oats and grass. Limestone, coals, sand-stone, and heavy spar, abound; and squirrels are numerous in the woods. See SCIURUS, § 1. There are some vestiges of ancient camps; a stone with a rude inscription is erected in memory of the battle of Pentland hills in 1666.

The late celebrated W. TYTLER, Esq. of Woodhouselee, and J. PHILIP, Esq. of Greenlaw, were natives of this parish.

GLEN-CROY, a romantic valley of Scotland, in Argyllshire, between two very high ridges of mountains, on the NE. side of Loch Long.

GLENDALAGH, an ancient and once celebrated town of Ireland, 5 miles NW. of Rothdrum, in Wicklow; called also, the *Sacred Character*. Glendalagh signifies "the valley of the two lakes." In this valley, surrounded by high and almost inaccessible mountains, ST KEVIN, about the middle of the 6th century, founded a monastery, which in a short time from the sanctity of its founder was much resorted to, and at length became a bishopric and a religious city. During the middle ages Glendalagh, called by Hoveden *Episcopatus Bislagenensis*, was held in great esteem, and received several valuable donations and privileges; its episcopal jurisdiction extending to the walls of Dublin. About the middle of the 12th century, it became, instead of a holy city, a den of thieves; wherefore Cardinal Papiro, in 1214, united it to the see of Dublin, which union was confirmed by King John. The O'Tools, chiefs of Firthuathal, however, by the assistance of the Pope, continued long after to elect bishops and abbots to Glendalagh, though they had neither revenues nor authority, beyond the district of Tuathal, which was the western part of the county; in consequence of which the city had become nearly a desert, in 1497, when Dennis White, the last titular bishop, surrendered his right. From the ruins still remaining, this city appears to have been a place of consequence, and to have contained 7 churches and religious houses; built in an elegant style, in imitation of the Greek architecture; the walls of the cathedral are yet standing. South of them stands a small church roofed with stone, nearly entire; and in several parts of the valley are a number of stone crosses, some of which are curiously carved, but without inscriptions. In the NW. corner of the cemetery, stands a round tower, 95 feet high, and 15 in diameter; and in the cemetery of a small church, called the *Rhesart church*, are some tombs of the O'Tools. In a perpendicular projecting rock on the S. side of the great lake, 30 yards above the surface of the water, is the celebrated bed of St Kevin, hewn out of the rock, exceedingly difficult of access and terrible in prospect. Among the ruins have been discovered a number of stones curiously carved, and containing inscriptions in Latin, Greek, and Irish. As this city was in a valley, surrounded on all sides, except the E. by inaccessible mountains, the artificial roads leading thereto are curious: the principal is that leading into the county of Kildare through Glendason. This road for near two miles is yet perfect, composed of stones placed on their edges, making a firm and durable pavement, about 10 feet broad. At a small distance from St Kevin's bed, on the same side of the mountain, are to be seen the ruins of a small stone building, called *Saint Kevin's cell*.

GLENDAL, a town of England, in Northumberland, seated on the Glen.

GLEN-DERBY, a valley of Scotland, in Perthshire, 10 miles N. of Dunkeld.

GLENDON, a town of England, in Northamptonshire, near Rothwell.

GLENDONAN, a parish of Perthshire, in the middle of the Ochil hills, so named from the DOVAN, which runs through it; 6 miles long from SW. to NE. and $4\frac{1}{2}$ broad. The surface, though hilly, is green and smooth; the soil light and dry. About 200 acres are generally under oats, barley, flax, and potatoes; the rest is appropriated to pasture, for which it is best adapted; feeding about 2000 sheep, 50 horses, and 220 cows. The population in 1792, stated by the rev. J. Brown, in his report to Sir J. Sinclair, was 240, and had increased 20 since 1755.

GLENEGAD HEAD, a cape of Ireland, in Donegal. Lon. 7. 4. W. Lat. 55. 20. N.

GLENELCHAIG, a district of Scotland, in Ross-shire, in Kintail.

(1.) **GLENELG**, [from *glen*, Gael. a valley, and *feilg*, hunting.] a parish of Scotland, in Inverness-shire, about 20 miles square. It is divided into 3 districts, called *Glenelg*, *Knosdort*, and *N. Merror*. In the two former the soil is good, being partly deep black loam, partly light, and partly sandy gravel. The last is mountainous, rocky, and adapted for feeding cattle. The climate is moist, but healthy. Oats, barley, and potatoes are the chief crops, but in the best seasons, the produce does not maintain three 4ths of the inhabitants. Grazing of sheep and black cattle therefore prevails; and about 1500 stones of wool are sold annually. The population, in 1795, stated by the rev. Colin M'iver, in his report to Sir J. Sinclair, was 2746; and had increased 930 since 1755; notwithstanding 1124 had emigrated at different periods. Of these, 1310 were papists. The roads are bad.

(2.) **GLENELG**, a district in the above parish, in which there are several ancient forts. See **ARCHITECTURE**, § 54, 55.

GLENELY, a river of Ireland, in Antrim, which runs into the sea, 3 miles S. of Geron Point.

GLENISK, a district of Scotland, in Forfarshire, watered by the North Esk.

GLEN-FICHAN, a vale in the W. of Argyle.

GLEN-FIDDICH, a valley in Banffshire, 12 miles E. of Inveravon, watered by the Fiddich.

GLENTFIELD, a village NW. of Leicester.

GLEN FINE, a vale in Argyle, N. of Loch Fine.

GLEN-FINGLASS, a valley in Perthshire.

GLENGAIRN, [from *glean*, Gael. *i. e.* a valley, and *garli-ambain*, the rough water,] a parish of Scotland in Aberdeenshire, united with those of Glenmuick and Tulloch. It lies on both sides of the Gairn, and part of it on the Dee. It extends 6 miles NW. of Tulloch. It has an ancient castle. See **GLENMUICK**.

GLENGAPE, a lake in Kirkcudbrightshire, abounding with large yellow trout.

GLENGARRIFF, a harbour of Ireland, in Cork, on the NE. part of Bantry Bay.

GLEN GARRY, a valley of Scotland, in Inverness-shire, N. of Loch Garry.

GLENGONAR, a valley of Scotland, in the parish of Creeton, Dumfriesshire, in which a gold has been found. The rev. J. Macnoshie, says "Q. Elizabeth sent down a German to gather gold dust in the waters of Elyan and Glengonary,

both which have their sources in the hills the lead is found. This man wrote an account of his discoveries and labours, the MS. of which is in the Advocates' library. The place where he found the gold took its name from the event, called the *Gold Scour*. There are verses repeated in the parish, importing that he made great fortune. Be that as it will, the business resumed by order of the late E. of Hopetoun discontinued, as being less profitable than common labour. Gold dust is still found on the top rocks; but the searching for it is rather an amusement, than of serious occupation. The particles seldom exceed in size the point of Sir J. Sinclair's Stat. Acc. vol. iv, 515.

GLEN-GRUDY, a valley of Scotland, in Perthshire, N. of Loch Farnith.

GLENHAM, GREAT, } 2 towns of England
GLENHAM, LITTLE, } Framlingham, S.

GLENHOLM, a parish of Scotland, in Perthshire, seated on Holm's water, and partly Tweed; 12 miles SW. of Peebles, and 10 miles from Edinburgh. It is about 5 miles long from N. to S. The surface being hilly, the greater part laid out in pasture; the soil of the arable is loose and sharp; and produces strong grain, grass, turnips, and potatoes. The climate is damp. The population in 1791, stated by the rev. Bernard Haldan, in his report to Sir J. Sinclair, was 300 souls, and had decreased 92 in 1755. The number of sheep was 5,000; of horses 150. There are relics of Picts in the parish, and thirlages are not killed.

GLENICZA, a river of Poland, which runs into the Odra, near Koster in Pomerania.

GLEN-INS, a town of Ireland, in Down.

(1.) **GLENISLA**, a valley of Scotland, in Perthshire, three districts of Perthshire; so named from the Isla, which runs through it.

(2.) **GLENISLA**, a parish in the above district, 18 miles long, but a wide area above 2 miles wide. The soil is mostly light and stony, but in parts a deep strong loam, producing a great quantity of bear, oats, turnips, and potatoes. The climate is very pure, and longevity common. The population in 1791, stated by the rev. J. Dunlop, in his report to Sir J. Sinclair, was 1118 souls, and had decreased 145 since 1755. The number of cattle was 1696; great numbers of the latter are reared. The ruins of two old castles, one belonging to the Airy family, and demolished in 1745, are still to be seen.

GLENKENS, [Gael. *i. e.* the vale on a hill,] a district of Scotland in Kirkcudbrightshire, comprehending the parishes of Dalry, Kilmarnock, and Balmacellan.

GLEN-KINGLASS, a valley of Scotland, in Perthshire.

GLEN-LEDNOCK, a valley of Scotland, in Perthshire, 10 miles NW. of Crieff.

GLEN-LOCHRY, a valley of Scotland, in Perthshire, NE. of Glenelg.

GLEN LUGG, [Gael. *i. e.* the vale on a hill,] a district, and anciently a parish, in Wigtownshire, divided, in 1745, into two parishes, named *Old* and *New Lugg*. See **LUGG**.

GLEN-LYON, a valley in Perthshire.

RE, [Gael. *i. e.* the great valley.] district of Murrayshire, in the barony abounding with wood. In 1786, on sold his fir woods of Glenmore Company for 10,000*l.* This fir is stately, and reckoned equal to New Vessels from 200 to 500 tons have, with masts 60 feet long. There is in it, one of them an oval basin, 2 acres. The other abounds with a perfect fat green trout.

RE, a valley in Perthshire, 12 miles N. of Atholl.

STON, a valley of Inverness-shire, Fort Augustus.

WICK, [Gael. *glean muc*, *i. e.* the great valley.] a parish of Scotland, in Aberdeenshire, 15 miles long, lying entirely N. of the Dee, about 40 miles W. of Aberdeen. It is united with those of **TULLOCH** and **WICK**, and each of the 3 has a church, parished alternately. These united parishes form an irregular figure, about 18 miles long, intersected by the Dee. The country is mountainous and healthy; the soil, in some places deep and fertile, in others shallow, producing good grain, &c. The air is pure, dry, and salubrious. A man died in 1792, aged 102; and a woman born in Glenmuick in 1598, died in 1808, not less than 124. Husbandry is here improved. The crops are bear, barley, potatoes, and flax. The population, in 1792, stated by the rev. J. Sinclair, was 15,363; of horses 716, and of sheep 1563.

WICK, a valley in Ross-shire.

WICK, the name of two cavities, or ponds, in the inferior part of the first neck.

WICK, or **WICK**, a parish of Scotland, in Aberdeenshire, bordering on Perthshire with that of **INISHAIL** in 1618; divided in 1650, and re-united, soon after the death of both is 24 miles; the breadth of each extend for 8 miles on each side of the Dee. The surface is mostly level. The soil on the low grounds, is a light earth and sand, or rich loam; producing barley, turnips, and various kinds of potatoes. The latter are cultivated with care and form the chief food of the natives in the winter of the year. The population, in 1792, stated by the rev. Dr Joseph McIntyre, in his report to Sir J. Sinclair, was 1569, and had increased since 1755. The number of sheep was 15,363; of black cattle are exported, (but the Dr does not state the number;) as well as wool, linen, tartans, &c. The imports are mercury, and 1000 bolls of meal. The roads, and inns, are good. There is a lead mine was wrought for many years; and a quantity of **ASBESTOS**, and beautiful **JASPER**, found in the mountains.

WICK, a vale in the above parish, 12 miles long and half a mile broad, seated

on the **URCHAY**, which winds through it, and divides it into two equal parts.

(3.) **GLENORCHY**, a village in the above valley, 15 miles NE. of Inveraray, and SE. of Bunaw.

(4.) **GLENORCHY**, Lady. See **MAXWELL**.

GLENPRASSIN, a district of Forfarshire.

GLEN-QUEICH, a valley in Perthshire, 10 miles N. of Crieff.

GLEN-RINNES, a valley in Banffshire, 7 miles NE. of Inveravon.

(1.) **GLENSHEE**, a valley in Perthshire, 15 miles E. of Blair in Atholl.

(2.) **GLENSHEE**, **SPITAL OF**, a noted pass into the Grampian mountains, a little S. of the point where the counties of Perth, Angus, and Aberdeen meet. In 1718, a small body of Highlanders, with 500 Spaniards, took possession of it; but on the approach of the king's troops, after retiring to the pass at Strachell, and from one height to another, the Highlanders dispersed, and next day the Spaniards surrendered. *Brookes's Gazetteer*.

(1.) **GLENSHEIL**, [Gael. *glean shelig*, *i. e.* the valley of hunting.] a parish of Scotland, in Ross-shire, 24 miles long, from NW. to SE. and from 2 to 6 broad. The climate is rainy. The surface is partly mountainous, partly level; the soil on the former is thin, stony and barren; on the latter gravel and light earth. Oats, bear, and potatoes are the only crops. The population, in 1792, stated by the rev. J. M'Rae, in his report to Sir J. Sinclair, was 721, and had increased 212 since 1755. The staple of this parish is black cattle, which are not large, but hardy, and uncommonly elegant. They sell at from 3*l.* to 5*l.* Horses, sheep, and goats are also reared, but the numbers are not mentioned by Mr M'Rae.

(2.) **GLENSHEIL**, a district in the above parish, consisting of two narrow valleys, 2 miles distant from each other, and from 3 to 5 miles long, "surrounded on each side by almost perpendicular mountains of a prodigious height." In a narrow pass in these heights, (says Mr M'Rae,) was fought in 1719, the battle of Glensheil, between some English troops and 300, or 400 Spaniards, joined by some Highlanders under the earl of Seaforth, who was dangerously wounded, and soon after his followers gave way, and the Spaniards surrendered; though the English lost their commander." This seems to be the same battle, stated by Dr Brookes to have happened at Glenshee, in Perthshire, in 1718. See **GLENSHEE**, § 2. In 1786, the proprietor, Mr M'Kenzie of Seaforth, was offered *triple rent* for this district by sheep farmers, but he nobly refused it, saying he would *never prefer sheep to men*; and let the lands to his old tenants, on a very moderate augmentation.

(1.) **GLENTANAR**, a mountainous parish of Scotland, in Aberdeenshire, 30 miles SW. of Aberdeen, and 30 NW. of Brechin. It is seated on the rivulet *Tanar*, S. of the Dee, and is united to the parish of *Aboyne*. The extent of both parishes is 9 miles in length from E. to SW. and 3 in breadth. The soil is sandy, and fertile in rainy seasons. The new husbandry has been introduced, and the E. of Aboyne's own farm of 400 acres is in high cultivation. Oats, barley, turnips, and potatoes, are the chief produce. The population of Aboyne and Glentanar, in 1796, was 1050, and had decreased

645 since 1755. The highest mountain in Glentanar, called *Sir Mount*, is 2,500 feet above the sea level, and affords an extensive prospect of Aberdeen, Montrose, and Arbroath. The Dee runs between the two parishes.

(1.) **GLENTANAR, FOREST** OR, a large forest of natural wood, in Aberdeenshire, near the above parish, (and perhaps partly in it,) 10 miles long and 6 broad, abounding with excellent Scots fir.

GLENTHAM, a village in Lincolnshire, W. of Market Rasen.

GLENTIS, a village of Ireland, in Down county, on the *Amrafa*. One of the chief fairs for black cattle in Ireland, is held at it.

GLINTRATHEN, or **LINTRATHEN**, a parish of Scotland, in Forfarshire. See **LINTRATHEN**.

GLEN-URQUHART, a vale in Inverness-shire.

GLEN-YALDER, a valley in Aberdeenshire, between Loch-Garr and the Dee.

GLEVUM. See **GLOUCESTER**, N° 2.

* **GLEW**. *n. f.* [*gluten*, Lat.] A viscous cement made by dissolving the skins of animals in boiling water, and drying the gelly. See **GLUE**.

(1.) * **GLIB**. *adj.* (from *ad. & Skm.*) 1. Smooth; slippery; so formed to be easily moved.—Liquid bodies have nothing to sustain their parts, nor any thing to cement them: the parts being *glib* and continually in motion, fall off from one another, which way soever gravity inclines them. *Burnet's Theory*.—Habakkuk brought him a smooth strong rope, compactly twisted together, with a noose that slipped as *glib* as a birdcatcher's gin. *Arbutnot*. 2. Smooth; voluble.—

I want that *glib* and oily art

To speak and purpose not, since what I well intend,

I'll do't before I speak.

Shak. R. Lear.

—There was never so much *glib* nonsense put together in well sounding English. *Locke*.—

Now Curl his shop from rubbish drains;

Three genuine tomes of Swift's remains:

And then to make them pass the *glibber*,

Revis'd by Tibbald, More and Cibber. *Swift*.

Be sure he's a fine spoken man;

Do but hear on the clergy how *glib* his tongue ran.

Swift.

(2.) * **GLIB**. *n. f.*—The Irish have from the Scythians mantles and long *glibs*; which is a thick curled bush of hair hanging down over their eyes, and monstrously disguised them. *Spens. on Irel.*

* To **GLIB**. *v. a.* (from the adjective.) To castrate.—

I'll geld them all: fourteen they shall not see,

To bring false generations; they are coheirs,

And I had rather *glib* myself than they

Should not produce fair issue. *Shak. Wint. Tale*.

* **GLIBLY**. *adv.* (from *glib*.) Smoothly; volubly.—Many who would startle at an oath, whose stomachs as well as conscience recoil at an obscenity, do yet slide *glibly* into a detraction. *Gov. of the Tongue*.

* **GLIBNESS**. *n. f.* (from *glib*.) Smoothness; slipperiness.—

A polish'd ice-like *glibness* doth enfold

The rock.

Chapman's Odyssey.

—The tongue is the most ready for motion of any member, needs not so much as the flexure of a

joint, and by access of humours and *nefs* too, the more to facilitate its use of the Tongue.

GLICAS, or **GLYCAS**, Michael, a Syrian, who lived in Sicily, about the 15th century, and wrote annals of what the creation to the death of Alexius, in 1118. Leunclavius added to it a *giz* carries it down to the taking of *Cy* Glidas was also the author of several curious letters.

* **GLIDE**. *v. f.* (from the verb.) or manner of passing smoothly.—

About his neck

A green and gilded snake had wrapt
Who, with her head nimble in
proach'd

The opening of his mouth; but for
Seeing Orlando, it unlinked itself,
Add with indented *glides* did slip
Into a bush. *Shak.*

* To **GLIDE**. *v. n.* [*glidan*, Sax. Dutch.] 1. To flow gently and silently. By East, among the dusty vallies
The silver streams of Jordan's cry

Broke by the jotting land on each
In double streams the briny waters.

Just before the confines of the west
The *gliding* Lethe leads her silent

Where stray the muses, in what lot
In those fair fields where sacred
Or else where Cam his winding vale

2. To pass on without change of step.

Ye *gliding* ghosts, permit me to r
The mystick wonders of your silent

3. To move swiftly and smoothly along

If one of mean affairs

May plod it in a week, why may a
Glide thither in a day?

Shoals of fish, with fins and spines

Glide under the green wave,

He trembl'd every limb, and felt

As if cold steel had *glided* through b

—All things are beheld as in a hasty motion
the objects only *glide* before the eye,
pear. *Dryden*.

* **GLIDER**. *n. f.* (from *glide*.) One

The glance into my heart did *glib*

Hey ho the *glider*;

Therewith my soul was sharply g

Such wounds soon waxen wider.

* **GLIKE**. *n. f.* [*glig*, Saxon. So
A sneer; a scoff; a flout. Not now
Where's the bastard's braves, and t
glikes? *Shakesp.*

GLIKEON, a town of European

L.—

s the lightning *glimpse* they ran? *Milt*.
rightless youth was wing'd with vain
es;

ood, long misled by wand'ring fires,
false lights; and when their *glimpse*
gone,
struck out new spangles of her own.
Dryden.

3. Transitory lustre.—

There no dear *glimpse* of the sun's lovely face
Strikes thro' the solid darkness of the place.

Cowley.

If I, celestial fire, in aught
Have serv'd thy will, or gratified thy thought,
One *glimpse* of glory to my issue give;
Grac'd for the little time he has to live. *Dryd*.

4. Short fleeting enjoyment.—

If, while this weary'd flesh draws fleeting
breath,
Not satisfy'd with life, afraid of death,
If hap'ly be thy will that I should know
Glimpse of delight, or pause from anxious woe;
From now, from instant now, great fire, dispel
The clouds that press my soul. *Prior*.

5. A short transitory view.—

O friends! I hear the tread of nimble feet
Hasting this way, and now by *glimpse* discern
Ithuriel, and Zephon, thro' the shade. *Milton*.
—Some God punisheth exemplarily in this world,
that we might have a taste or *glimpse* of his pre-
sent justice. *Hakevill*.—A man used to such sort
of reflections, sees as much at one *glimpse* as would
require a long discourse to lay before another, and
make out in one entire and gradual deduction.
Locke.—

What should I do! while here I was en-
chain'd,

No *glimpse* of godlike liberty remain'd. *Dryden*.
6. The exhibition of a faint resemblance.—No
man hath a virtue that he has not a *glimpse* of.
Shakespeare.

GLIMS-HOLM, one of the ORKNEY islands,
a mile and a half S. of Pomona.

GLINA, a river of Croatia, which rises near
Creutz, and runs into the Lonia.

GLIN-LOUGH, a lake of Ireland, in the coun-
ty of Leitrim, 7 miles NNE. of Sligo.

GLINNINO, a town of Russia, in Novogorod.

(1.) GLINSK, a town of Ireland, in Galway.

(2.) GLINSK, a town of Russia, in Tchernigof.

GLINTZENDORF, a town of Austria.

GLINVILLE, a town of Ireland, in Cork.

GLINUS, in botany, a genus of the penta-
gynia order, belonging to the decandria class of
plants; and in the natural method ranking under
the 22d class *Caryophyllei*. The calyx is penta-
phyllous; there is no corolla; the nectarium is
composed of bifid bristles; the capsule is quin-
queangular, quinquelocular, quinquevalved, and
polypermous.

GLIRES, the name of Linnæus's 4th order of
mamulia. See ZOOLOGY.

GLISSON, Francis, a learned English physi-
cian of the 17th century, who was educated at
Cambridge, and was made regius professor of the
university. In 1634, he was admitted a fellow of
the college of physicians in London. During the
civil wars, he practised physic at Colchester, and
afterwards settled in London. He greatly im-
proved physic by his anatomical dissections, and
made several new discoveries of singular use to-
wards establishing a rational practice. He wrote,

1. *De rachitide*, &c. 2. *De lymphæductis nuper re-
pertis*; with the *Anatomica prolegomena*, & *Anato-
mia hepatis*. 3. *De naturæ substantia energetica*;
*seu de viâ vitæ naturæ, ejusque tribus primis facul-
tatibus*

satibus, &c. quarto. 4. Trāstus de ventriculo & intestinis, &c. He discovered the capsula communis, or vagina portæ.

GLIST. See GLIMMER and MICA.

* To GLISTEN. *v. n.* [*glistan*, German.] To shine; to sparkle with light.—

The bleating kind

Eye the bleak heaven, and next the glistering earth,

With looks of dumb despair. *Thomf. Winter.*

—The ladies eyes glistered with pleasure. *Richardson's Pamela.*

* GLISTER. *n. s.* [Properly written *clyster*, from *κλυστήρ*.] See CLYSTER. It is written wrong even by *Brown*.—

Now enters Bush with new state air,

His lordship's premier minister;

And who, in all profound affairs,

Is held as needful as his glister. *Swift.*

—Choler is the natural glister, or one excretion whereby nature excludeth another; which descending daily into the bowels, extimulates those parts, and excites them unto expulsion. *Brown's Puig. Br.*

* To GLISTER. *v. n.* [*glistan*, German; *glisteren*, Dutch.] To shine; to be bright.—The wars flame most in Summer, and the helmets glister brightest in the fairest sunshine. *Spens. on Irel.*—

'Tis better to be lowly born.

And range with humble liveries content,
Than to be perk'd up in a glistering grief,
And wear a golden sorrow. *Shak. Hen. VIII.*

The golden sun

Gallops the zodiack in his glistering coach.

Shakespeare.

All that glisters is not gold. *Shak. M. of Ven.*

You were more the eye and talk

Of the court to-day, than all

Else that glister'd in Whitehall. *Ben. Jon.*

—When the sun shone upon the shields of gold and brass, the mountains glistered therewith, and shined like lamps of fire. *1. Mac. vi. 39.*—It consisted not of rubies, yet the small pieces of it were of pleasant reddish colour, and glistered prettily. *Boyle.*

GLITNESS, one of the SHETLAND islands on the E. coast, 11 miles N. of Lerwick.

* GLITTER. *n. s.* [from the verb.] Lustre; bright show; splendour.—

Clad

With what permissive glory since his fall

Was left him, or false glitter. *Milt. Par. Lost.*

—Flourish not too much upon the glitter of fortune, for fear there should be too much alloy in it. *Collier.*—Take away this measure from our dress and habits, and all is turned into such paint and glitter, and ridiculous ornaments, as are a real shame to the wearer. *Law.*

* To GLITTER. *v. n.* [*glitman*, Sax.] 1. To

shine; to exhibit lustre; to gleam; are more resplendent than the like; and so is the glittering of a blade.

Rem.—

Before the battle joins, fro
The field yet glitters with the poi

Scarce had'st thou time t' unsh
qu'ring blade;

It did but glitter, and the rebels |

4. To be specious; to be striking; hand set the most glittering temptations and on the other the dismal effects of Piety.

In glit'ring scenes, o'er her own
In crowds collected; and in con

GLOBBA, in botany, a genus of nia order, belonging to the mona plants. The corolla is equal and t lyx trisid above; the capsule trilocu ny seeds.

(1. 1.) * GLOBE. *n. s.* [*globe*, Fr Latin.] 1. A sphere; a ball; a body of which every part of their same distance from the centre. 2. ous ball.—

The youth, whose fortune the
bey'd,

Finding his enemy betray'd,

Wept at his fall.

—Where God declares his intention minion, he meant that he would n of creatures that should have domi other species of this terrestrial glo A sphere in which the various regions are geographically depicted, or in w

† Dr JOHNSON is in a great mistake here. No such "participial termination" as *AND* is used in any part of Scotland that we know of. It is merely an erroneous orthography of some of our old Scots Poets, from Chaucer and other ancient English bards. The *G*, in the participial termination *ING*, is seldom pronounced in the common Scots dialect; but as little, as less, are the *A* and *D* of the obsolete termination *AND*. *GLITTERAND* and *Glittering* are, and *Glitterin*.

† In Scotland we have no such verb as *To GLOAR*. Dr JOHNSON has perhaps heard *gloan*, but he mistakes both the sound and the spelling, when he writes it *gloarand*.

LOBE, in geometry. See SPHERE.

LOBE, in geography, and astronomy, (§
3.) is particularly used for an artificial
metal, plaster, paper, or other matter;
e convex surface is drawn a map, or re-
ion either of the earth or heavens, with
al circles conceived thereon. See GEO-
., SECT. X—XV. Globes are of two
terrestrial and *celestial*; each of very con-
nse, the one in astronomy, and the other
phy, for performing many of the opera-
ese sciences, in an easy obvious manner,
be conceived without any knowledge of
ematical grounds of those arts. The
ital parts, common to both globes, are
representing that of the world; and a
hell, or cover, which makes the body
be, on the external surface of which the
ation is drawn. See AXIS, POLE, &c.
bes most commonly used are made of
id paper. See § 4.

LOBES, CONSTRUCTION OF. A wooden
ovided, somewhat less than the intended
of the globe; and into the extremes
two iron wires are driven for poles: this
be the beam, or basis of the whole struc-
a the axis are applied two spherical or
mispherical caps, formed on a kind of
mould or block. These caps consist of
d, or paper, laid one lay after another, on
d, to the thickness of a crown-piece; af-
, having stood to dry and embody, ma-
cision along the middle, the two caps
ed are slipped off the mould. They are
ied on the poles of the axis, as before
on those of the mould; and to fix them,
lges are sewed together with pack-thread,
rudiments of the globe thus laid, it
engthened and made smooth and regu-
rder to this, the two poles are hipped
iline semicircle of the size intended;
d or plaster, made of whitening, water,
heated, melted, and incorporated toge-
lauded all over the paper surface. In
n as the plaster is applied, the ball is
nd in the semicircle, the edge whereof
whatever is superfluous and beyond the
ision, leaving the rest adhering in places
ort of it. After such application of the
ie ball stands to dry; which done, it is
in the semicircle, and fresh matter ap-
s they continue alternately to apply the
PART II.

composition, and dry it. till the ball every where
accurately touches the semicircle, in which state
it is perfectly smooth, regular, and firm. The
ball thus finished, it remains to paste the map
or description thereon: in order to this, the map
is projected in several gores, or gussets, all of
whi h join accurately on the spherical surface, and
cover the whole ball. To direct the application
of these gores, lines are drawn by a semicircle on
the surface of the ball, dividing it into a number
of equal parts corresponding to those of the gores,
and subdividing those again answerably to the
lines and divisions of the gores. There remains
only to colour and illuminate the globe; and to
varnish it, the better to resist dust, moisture, &c.
The globe itself thus finished, is hung in a brass
meridian, with an hour circle, and a quadrant of
altitude; and thus fitted into a wooden horizon.

(5.) GLOBES, METHOD OF DESCRIBING THE
GORES, OR GUSSETS, FOR THE. In Chambers's
Dictionary, the following method is directed. (See
Plate CLXVIII.) "1. From the given diameter
of the globe, find a right line AB, *fig. 1.* equal to
the circumference of a great circle, and divide it
into 12 equal parts. 2. Through the several
points of division, 1, 2, 3, 4, &c. with the interval
of ten of them, describe arches mutually intersect-
ing each other in D and E; these figures or pieces
duly pasted and joined together will make the
whole surface of the globe. 3. Divide each part
of the right line AB into 30 equal parts, so that the
whole line AB, representing the periphery of the
equator, may be divided into 360 degrees. 4.
From the poles D and E, *fig. 2.* with the interval
of $23\frac{1}{2}^{\circ}$ 5. describe arches *a b*; these will be
twelfth parts of the polar circles. 5. After the like
manner, from the same poles D and E, with the
interval of $66\frac{1}{2}^{\circ}$ deg. reckoned from the equator,
describe arches *c d*; these will be 12th parts of
the tropics. 6. Through the degree of the equa-
tor *e*, corresponding to the right ascension of any
given star, and the poles D and E, draw an arch
of a circle; and taking in the compasses the com-
plement of the declination from the pole D, de-
scribe an arch intersecting it in *i*: this point *i* will
be the place of that star. 7. All the stars of a
constellation being thus laid down, the figure of
the constellation is to be drawn according to Bayer,
Hevelius, or Flamsteed. 8. Lastly, after the same
manner are the declinations and right ascensions
of each degree of the ecliptic *d g* to be determin-
ed. 9. The surface of the globe thus projected
on a plane is to be engraven on copper, to save
the trouble of doing this over again for each globe.
10. A ball, in the mean time, is to be prepared
of paper, plaster, &c. as before directed, and of
the intended diameter of the globe; on this, by
means of a semicircle and style, is the equator to
be drawn; and through every 30th degree a me-
ridian. The ball thus divided into twelve parts,
corresponding to the segments before projected,
the latter are to be cut from the printed paper,
and pasted on the ball. 11. Nothing now remains
but to hang the globe as before in a brazen meri-
dian and wooden horizon; to which may be ad-
ded a quadrant of altitude made of brass, and divid-
ed in the same manner as the ecliptic and equator.

If the declinations and right ascensions of the stars be not given, but the longitudes and latitudes in lieu thereof, the surface of the globe is to be projected after the same manner as before; except that, in this case, *D* and *E*, *fig. 2.* are the poles of the ecliptic, and *f b* the ecliptic itself; and that the parallel circles and tropics, with the equator *g d*, and parallels thereof, are to be determined from their declinations. *M. De La Lande*, in his *Astronomie*, 1771, *Tome 3. p. 736*, relates the following methods: "To construct celestial and terrestrial globes, gores must be engraved, which are a kind of projection, or inclosure of the globe (*fig. 3.*) similar to what is now to be explained. The length *PC* of the axis of this curve is equal to a quarter of the circumference of the globe; the intervals of the parallels on the axis *PC* are all equal, the radii of the circles *KDI* which represent the parallels are equal to the cotangents of the latitudes, and the arches of each, as *DI*, are nearly equal to the number of the degrees of the breadth of the gore (which is usually 30°) multiplied by the sine of the latitude: thus, there will be found an intricacy in tracing them; but the difficulty proceeds from the variation found in the trial of the gores when pasting them on the globe, and of the quantity that must be taken from the paper, less on the sides than in the middle; (because the sides are longer) to apply it exactly to the place that it should cover. The method used among workmen to delineate the gores, and which is described by *Mr Bion* (*Usage des Globes*, *tom. 3.*) and by *Mr Robert de Vaugondy* in vol. 7th of the *Encyclopedie*, is little geometrical, but yet is sufficient in practice. Draw on the paper a line *AC*, equal to the chord of 35° , to make the half breadth of the gore; and a perpendicular *PC*, equal to 3 times the chord of 30° , to make the half length: for these papers, the dimensions of which will be equal to the chords, become equal to the arcs themselves when they are pasted on the globe. Divide the height *CP* into 9 parts, if the parallels are to be drawn in every 10° ; divide also the quadrant *BE* into 9 equal parts through each division point of the quadrant as *G*; and through the corresponding point *D* of the right line *CP* draw the perpendiculars *HGF* and *DF*, the meeting of which in *F* gives one of the points of the curve *BEP*, which will terminate the circumference of the gore. When a sufficient number of points are thus found, trace the outline *PIB* with a curved rule. By this construction are given the gore breadths, which are on the globe, in the ratio of the cosines of the latitudes; supposing these breadths taken perpendicular to *CD*, which is not very exact, but it is impossible to prescribe a rigid operation sufficient to make a plane which shall cover a curved surface, and that on a right line *AB* shall make lines *PA*, *PC*, *PB*, equal among themselves, as they ought to be on the globe. To describe the circle *KDI* which is at 30° from the equator: there must be taken above *D* a point which shall be distant from it the value of the tangent of 60° , taken out either from the tables, or on a circle equal to the circumference of the globe to be traced; this point will serve as a centre for the parallel *DI*, which should pass through the point *D*, for it is supposed equal

to that of a cone circumscribing the globe which would touch it at the point *D*. The gores may be traced to every 10 degrees, dividing each parallel, as *KI*, into three equal parts *L* and *M*, and drawing from each through all these division points, curves represent the intermediate meridians between *BR* and *ST*, (*fig. 4.*) The *AQ* may be described by means of the declination from different points of the equator may be found in a table; for 10° , it is 12.81 , $10^\circ 30' = BQ$; for 30° , 11.29 ; &c. It is observed in general, that the paper charts are printed, such as the *Columbian* itself, a part of a line in six inches square, when it is dried after printing; this difference must therefore be corrected in the of the gores: if notwithstanding that, are found too short, it must be remedied by king from the surface of the ball a little square with which it is covered; thereby making the dimensions suitable to the gore as it is. But what is singular is, that in drawing moistened with the paste to apply it on the axis *GH* lengthens, and the side *AI* in such a manner, that neither the length side *ACK* nor that of the axis *GEH* are exactly equal to the quarter of the circumference of the globe, when compared to on the copper, or to the numbered side *fig. 4.* *Mr Bonne* having made several experiments on the dimensions that gores take, they have been parted ready to apply to the globe particularly with the paper named *jesus*, the use of for a globe of one foot in diameter that it was necessary to give to the paper copper, the dimensions shown in *fig. 4.* finding that the radius of the globe corresponds, the half breadth of the gore $\frac{1}{2} \times 12.81$, the distance *AC* for the parallel of 10° taken on the right line *LM* is 12.81 , the deviation from the parallel of 10° to the middle of the gore *ED* is 4, the line *AE* the radius of the parallel of 10° or *CEF* is 4083, and so of the others as the figure. The small circular cap welded under *H*, has its radius 253 inches which it would have if the sine of 30 was the radius of it.

(6.) GLOBES, USES OF THE. See PHYSY, and ASTRONOMY, with the Plates.

(II, i.) * GLOBE AMARANTH, or flower. *n. f.* [*amarantoides.*] A flower.

(ii.) GLOBE AMARANTH. See GLOBE ANIMALCULE. See GLOBE, § 10.

(IV, i.) * GLOBE DAISY. *n. f.* A kind of flower.

(ii.) GLOBE DAISY. See SPHERULE.

(V, i.) * GLOBE FISH. *n. f.* A kind of fish.

(ii.) GLOBE FISH. See OBSTRACULUM.

(VI.) GLOBE FLOWER. See SPHERULE.

(VII, i.) * GLOBE RANUNCULUS. [*ranunculus.*] A plant. *Miller*.

(ii.) GLOBE RANUNCULUS. See SPHERULE.

(VIII, i.) * GLOBE THISTLE. *n. f.* [*biculatus.*] A plant. *Miller*.

35 THISTLE. See **ECHINOPS.**

GLOBE. *adj.* [*globosus*, Latin.] Spheri-

Regions, to which
omission, Adam, is no more
at this garden is to all the earth,
the sea; from one entire globe
into longitude. *Milt. Par. Lest.*

then form'd the moon
and ev'ry magnitude of stars. *Milt.*

GLOBOSITY. *n. f.* [from *globosus*.] Sphericity;
—Why the same eclipse of the sun,
seen to them that live more easterly,
is elevated six degrees above the ho-
rizon, and so lower and lower
ably, 'till at last it appear not at all:
it can be given, but the *globosity* of the
of the Creation.

GLOBOSUS. *adj.* [*globosus*, Lat.] When the
intended to be on the last syllable, the
should be written *globose*, when on the first
have transferred hither a passage of
which this rule has been neglected.]
round.—

over all the plain, and wider far
this *globose* earth in plain outspread;
the courts of God! *Milton.*

brazen instruments of death discharge
flames, and turbid streaming clouds;
globous irons fly, or dreadful hiss,
the air. *Philips.*

GLOBULAR. *adj.* [*globulus*, Lat.] Having
of a small sphere; round; spherical.—
of the atoms of all visible fluids seem-
globular, there being no other figure so
to the making of fluidity. *Grew's Cos-*

GLOBULARIA. *n. f.* [Latin; *globulaire*,
A sticulous flower. *Miller.*

GLOBULARIA, GLOBULAR BLUE DAISY;
the monogynia order, belonging to the
class of plants: and in the natural me-
thod under the 48th order, *Aggregata.*
The calyx is imbricated; the proper one
inferior; the upper lip of the florets
the under one tripartite; the receptacle
is. There are several species; but only
commonly to be met with in our gardens,

GLOBULARIA VULGARIS, or common blue
has broad thick radical leaves three-
lobed at the ends, upright stalks from about 6
to 12 inches high, garnished with spear-shap-
ed leaves, and the top crowned by a globular
head of blue flowers composed of many florets
open. It flowers in June, and makes a
scarance: but thrives best in a moist shady
place. It is propagated by parting the roots
in winter.

GLOBULE. *n. f.* [*globule*, French; *glo-*
bule, Latin.] Such a small particle of matter as is
of a spherical figure; as the red par-
ticles of blood, which swim in a transparent
medium and are easily discovered by the microscope.
They attract one another when they come
within a due distance, and unite like the spheres

of quicksilver. *Quincy.*—The hailstones have o-
paque globules of snow in their centre, to inter-
cept the light within the hail. *Newton's Opticks.*
—Blood consists of red globules, twinning in a
thin liquor called serum: the red globules are e-
lastic, and will break; the vessels which admit
the smaller globules, cannot admit the greater with-
out a disease. *Arbuthnot on Ailments.*

(1.) GLOBULES. See BLOOD, § 6, 7.

* **GLOBULOUS.** *adj.* [from *globulus*.] In form
of a small sphere; round.—The white ends of such
globulous particles proceed from the air included
in the froth. *Boyle.*

(1.) GLOCESTER. See GLOUCESTER.

(2.) GLOCESTER, a village of Northumberland,
on the coast, near Ansell.

GLOCHIDION, in botany: A genus of the
syngenezia order, belonging to the monœcia class
of plants. There is no calyx; the corolla consists
of six egg shaped concave petals; the stamens are
three very small inconspicuous filaments; the an-
thers cylindric and erect; the female flowers have
no calyx; the corolla is parted into six; the peri-
carpium is a depressed roundish capsule with six
cells; the seeds are roundish and solitary.

GLOGAU, or } a duchy or principality of
(1.) GLOGAW, } Silesia, seated on both sides
of the Oder, on the borders of Poland. It is di-
vided into six circles, and produces plenty of
corn, wine, fruits, wood, and iron; and feeds nu-
merous flocks of sheep. Various woollen manu-
factures are carried on in it.

(2.) GLOGAW, GREAT, a strong town of Sile-
sia, the capital of the above duchy, N° 1. It is
not very large, but is well fortified on the side of
Poland. It has a handsome castle, with a tower,
in which several counsellors were condemned by
Duke John, in 1498, to perish with hunger. Be-
sides the Papists, there is a great number of Pro-
testants and Jews. It was taken by assault by Fre-
derick II. king of Prussia, in 1741, and the garri-
son made prisoners. After the peace in 1742, that
king settled the supreme court of justice here, it
being next to Breslaw, the most populous place
in Silesia. It is seated on the Oder, 30 miles N.
W. of Breslaw; 50 SSW. of Posen, and 113 N.
by E. of Prague. Lon. 16. 31. E. Lat. 51. 39. N.

(3.) GLOGAW, LITTLE, or } a town of Silesia,
(3.) GLOGAW, UPPER, } in the duchy of
Oppelen, belonging to Prussia. It is two miles SE.
of Great Glogaw, and 45 NW. of Breslaw. Lon.
16. 15. E. Lat. 51. 38. N.

GLOGNITZ, a town of Austria, 18 miles S.
of Vienna.

GLOGOVNITZA, a town of Croatia, 4 miles
NNE. of Creutz.

* **TO GLOMERATE.** *v. a.* [*glomerare*, Latin.]
To gather into a ball or sphere. A filamentous
substance gathered into a ball is said to be *glome-*
rated, but discontinuous particles are *conglobated*.

* **GLOMERATION.** *n. f.* [*glomeration*, Lat.]
1. The act of forming into a ball or sphere. 2. A
body formed into a ball.—The rainbow consisteth
of a *glomeration* of small drops, which cannot fall
but from the air that is very low. *Baron.*

* **GLOMEROUS.** *adj.* [*glomerosus*, Latin.]
Gathered into a ball or sphere, as a ball of thread.

GLOMMACH, a cataract of Scotland, in Ross-

shire, on the heights of Glenelchaig. "The fall of water, (says the rev. Roderick Morison) is very considerable, and rendered awful by the surrounding hills and woods. The light at this place seldom exceeds twilight." *Sir J. Sinclair's Stat. Acc. VI. p. 253.*

GLOMME, a river of Norway, in Aggerhuys, which runs into the North Sea at Fredericksfadt. About 20,000 trees are annually floated down this river; but, being full of cataracts, it is not navigable.

* **GLOOM**, *n. f.* [*glomang*, Saxon, twilight.] 1. Imperfect darkness; dimness; obscurity; defect of light.—

Glowing embers through the room,
Teach light to counterfeit a gloom. *Milton.*

This the seat,
That we must change for heav'n? This mournful gloom,

For that celestial light? *Milton's Par. Lost.*

The still night, not now, as ere men fell,
Wholesome, and cool, and mild; but with black air

Accompany'd; with damps, and dreadful gloom. *Milton.*

Now warm in love, now with'ring in thy bloom,

Lost in a convent's solitary gloom. *Pope.*

2. Cloudiness of aspect; heaviness of mind; sultriness.

* To **GLOOM**, *v. n.* [from the noun.] 1. To shine obscurely, as the twilight. This sense is not now in use.—

His glist'ring armour made
A little glooming light much like a shade. *Spenser.*

Scarcely had Pegasus in the glooming East
Yet harnessed his fiery-footed team. *Spenser.*

2. To be cloudy; to be dark. 3. To be melancholy; to be sullen.

* **GLOOMILY**, *adv.* [from *gloomy*.] 1. Obscurely; dimly; without perfect light; dispassionally. 2. Sullenly; with cloudy aspect; with dark intentions; not cheerfully.—

See, he comes: how gloomily he looks! *Dryden.*

Gloomily retir'd the spider lives. *Thomson.*

* **GLOOMINESS**, *n. f.* [from *gloom*.] 1. Want of light; obscurity; imperfect light; dimness. 2. Want of cheerfulness; cloudiness of look; heaviness of mind; melancholy.—Neglect spread gloominess upon their humour, and makes them grow sullen and unconvertible. *Collier of the Spiteen.*—The gloominess, in which sometimes the minds of the best men are involved, very often stands in need of such little incitements to mirth and laughter as are apt to disperse melancholy. *Addison.*

* **GLOOMY**, *adj.* [from *gloom*.] 1. Obscure; imperfectly illuminated; almost dark; dismal for want of light.—

These were from without

The growing miseries which Adam saw
Already in part, through hid in gloomiest shade,
To sorrow abandon'd. *Milton's Par. Lost.*

Deep in a cavern dwells the drowsy god,
While gloomy morn'g nor the rising sun,
Nor setting visits, nor the lightsome noon.

Dryden's Fables.

—The surface of the earth is clearer or just as the sun is bright or more overcast. *Letters.* 2. Dark of complexion.—

That fair field

Of Eona, where Proserpine gathering
Herself a fairer flow'r, by gloomy Dis
Was gather'd. *Milton's.*

3. Sullen; melancholy; cloudy of look or heart.

GLORIA PATRI. See **DOXOLOGY**.

* **GLORIED**, *adj.* [from *glory*.] 1. Honourable; decorated with glory; dignified with honours. Not in use.—

Old respect

As I suppose, toward your once glori-
My son, now captive, hither hath led
Your younger feet, while mine cast

age

Came lagging after. *Milton's.*

* **GLORIFICATION**, *n. f.* [from *glory*.] The act of giving glory; glorifying your eyes, enter upon the day with-
ving for the preservation of you the last
the glorification of God for the works of
Taylor.

* To **GLORIFY**, *v. a.* [*glorifier*, *Fr.* Lat.] 1. To procure honour or praise.

Two lucid silver currents, when the
Do glorify the banks that bound them
Justice is their virtue; that all
Makes them at sure, and glorifies the

2. To pay honour or praise in worship; glorified when such his excellency, above
is with due admiration acknowledged.

This form and manner of glorifying; God
at that time first begun; but received to
and alledged at that time as an argu-
ment of truth. *Hooker.*

Good fellow, tell us here the circle

That we for thee may glorify the Lord

—All nations shall glorify thy name. *Pf.*

—Our bodies with which the apostle calls
us to glorify God, as well as with our
of Man.—This is the perfection of every
attain its true and proper end; and the
these gifts and endowments, which God
gives us, is to glorify the giver. *Tillotson.*
praise; to honour; to extol.—Who else
find to be most licentious of life, deeper
parts of disobedience and rebellious
him they set up and glorify. *Spenser on*

No chymist yet the elixir got,

But glorifies his pregnant pot,

If by the way to him befall,

Some odoriferous thing, or medicinal

4. To exalt to glory in heaven; to raise
trial beatitude.—If God be glorified in I
shall also glorify him in himself, and shall
way glorify him. *John, xii. 32.*—Whom
fied them he also glorified. *Rom. viii.*
members of the church remaining, being
sanctified, shall be eternally glorified;
the whole church be truly and perfectly
Pearson.—The soul, being immortal, at
time or other, resume its body again in
manner. *Augustine.*

GLORIOSA, SUPERSUBLIT: A *geog.*

a order, belonging to the hexandria clata and in the natural method ranking unith order, *Sarmentaceæ*. The corolla isous, undulated, and reflected; the style There is but one species, a native of

It has a thick, fleshy, tuberous root, orth from its centre declinated round wing 8 or 10 feet long, and garnished long narrow leaves running out into a minated by a long tendril. From the t of the stalks proceed large flame-coloping flowers, consisting of six widely reflected petals. It flowers in June and l is of admirable beauty, whence its his plant requires the protection of a in this country. The flower-stalks shoot larch or April; which, being long and nust have tall sticks for their support. s are propagated by offsets, which are in tolerable plenty, and may be separane after the stalks decay, or in spring r ones arise.

GLORIOUS. *adj.* [*gloriosus*, Lat. *gloriosus*, fastful; proud; haughty; ostentatious.

followers, who make themselves as of the commendation of those they solbusiness for want of secrecy. *Bacon*.— are *glorious* must needs be factious; for stands upon comparisons. *Bacon*. 2. ustrious; excellent.—It is frequently uological writers, to express the brightomphant sanctity rewarded in heaven.— know that thou art Lord, the only God, is over the whole world. *Dan.* iii. 22.— us in respect of the brightness and splencelestial body, still made more *glorious* ick by the authority which his Father itted to him of universal Judge. *Nel-*

tial justice holds her equal scales, nger virtue does the weight incline; r thee thy *glorious* foe prevails, defends the cause that once was thine.

Prior.

remember we are Cato's friends, like men who claim that *glorious* title.

Addison's Cato.

t stand amongst the first servants of he *glorious* amongst those that have good fight. *Law*—If there be nothing as doing good, if there is nothing that o like to God, then nothing can be so he use of our money, as to use it all f love and goodness. *Law*.

GLORIOUSLY. *adv.* [from *glorious*.] No lidly; illustriously.—They inspire with ial flames which shine so *gloriously* in . *Dryden's Duf*.—

wits sometimes may *gloriously* offend, to faults true criticks dare not mind.

Pope.

GLORY. *n. s.* [*gloire*, Fr. *gloria*, Lat.]

old poets it was used sometimes as one ore.] 1. Praise paid in adoration.—*Glo-* n the highest. *Luke* ii. 12. 2. The feven prepared for those that please God. ult guide me with thy counsel, and af-

terwards receive me into thy *glory*. *Psalms* lxxiii. 24.—

Then enter into *glory* and resume

His seat at God's right hand, exalted high

Above all names in heav'n.

Milton.

—It is hardly possible for you to beseech and in-treat God to make any one happy in the highest enjoyments of his *glory* to all eternity, and yet be troubled to see him enjoy the much smaller gifts of God, in this short and low state of human life. *Law*. 3. Honour; praise; fame; renown; ce-lebrity.—

Think it no *glory* to swell in tyranny. *Sidney.*

Glory is like a circle in the water,

Which never ceaseth to enlarge itself,

'Till by broad spreading it disperse to nought.

Shak.

And with that word and warning soon was

light,

Each soldier longing for near coming *glory*.

Fairfax.

Israel's bright sceptre far less *glory* brings,

There have been fewer friends on earth than kings.

Cowley.

—Can we imagine that neither the ambition of princes or interest, or gain, in private persons, or curiosity and the desire of knowledge, or the *glo-* ry of discoveries, could ever move them in that endless time to try their fortunes upon the sea. *Burnet*.—

Your sex's *glory* 'tis to shine unknown,

Of all applause, be fondest of your own. *Young.*

4. Splendour; magnificence.—Solomon, in all his *glory*, was not arrayed like one of these. *Mat.* vi. 29.—

Treated so ill, chas'd from your throne,

Returning, you adorn the town;

And with a brave revenge do shew

Their *glory* went and came with you. *Waller.*

—Aristotle says, that should a man under ground converie with works of art, and be afterwards brought up into the open day, and see the several *glories* of the heaven and earth, he would pro-nounce them the works of God. *Speculator*. 5. Lustre; brightness.—

Now sleeping flocks on their soft fleeces lie;

The moon, serene in *glory*, mounts the sky.

Pope's Winter.

From op'ning skies may streaming *glories* shine,

And saints embrace thee with a love like mine.

Pope.

6. A circle of rays which surrounds the heads of saints in pictures.—It is not a converting but a crowning grace; such an one as irradiates, and puts a circle of *glory* about the head of him upon whom it descends. *South*.—A smile plays with a surprising agreeableness in the eye, breaks out with the brightest distinction, and sits like a *glory* upon the countenance. *Collier*. 7. Pride; boastfulness; arrogance.—By the vain *glory* of men they entered into the world, and therefore shall they come shortly to an end. *Wisd.* xiv. 14.—

On death-beds some in conscious *glory* lie,

Since of the doctor in the mode they die.

Young.

8. Generous pride.—The success of those wars was too notable to be unknown to your ears, to which

which all worthy fame hath *glory* to come unto.

Sidney.

(2.) **GLORY.** See § 1. *Def.* 3. The desire of fame and reputation appears to be one of the principal springs of action in human society. *Glory*, therefore, is not to be contemned, as some of the ancient philosophers affected to teach; but we should regulate our pursuit after it by the dictates of reason; and if the public approbation will not follow us in that course, we must leave her behind. False ideas of glory have deluged the world with blood in all ages. If the actions of the hero, from the prejudices of mankind, conduct soonest to glory and with the greatest splendor, it is because the service he has done seems to be for *all*; and because we think, without reflecting, that he has saved our habitations, our wealth, our children, and every thing that is dear to us. If the man of science, who in his study has discovered and calculated the motions of the heavenly bodies, who in his alembics has unveiled some of the secrets of nature, or who has exhibited to mankind a new art, rises to fame with less noise; it is because the utility which he procures is more widely diffused, though it is often of less service to the present than to succeeding generations. The consequences, therefore, of these two advantages, are as opposite as the causes are different; and while the benefits procured by the warrior appear to have no more influence, and while his glory becomes obscure, that of a celebrated writer or inventor still increases, and is more and more enlarged. His works bring back his name to that age which uses them, and thus still add to his celebrity and fame. This posthumous fame indeed has been decry'd by some writers. The author of the *Religion of Nature delineated* has treated it as highly irrational and absurd. "In reality (says he) the man is not known ever the more to posterity, because his name is transmitted to them: He doth not live, because his name does. When it is said, Julius Cæsar subdued Gaul, conquered Pompey, &c. it is the same thing as to say, the conqueror of Pompey was Julius Cæsar; i. e. Cæsar and the conqueror of Pompey is the same thing; Cæsar is as much known by one designation as by the other. The amount then is only this, that the conqueror of Pompey conquered Pompey; or somebody conquered Pompey; or rather, since Pompey is as little known now as Cæsar, somebody conquered somebody. Such a puerbness is this boasted immortality! and such is the thing called *glory* among us! To the discerning, this fame is mere air!" But surely it were to consider too curiously (as Horatio says to Hamlet) to consider thus. To be convinced of the great advantage of cherishing this high regard to posterity, this noble desire of an after life in the breath of others, one need only look back upon the history of the ancient Greeks and Romans. For what other principle was it which produced that exalted strain of virtue in those days, that may well serve, in many respects, as a model to these? Was it not the *consentans laus bonorum*, the *incorrupta vox bene judicantium* (as Tully calls it), "the concurrent approbation of the good, the uncorrupted applause of the wise," that animated their most generous pursuits? In short, can it be reasonable to extinguish a passion which

our Creator has universally lighted up man's breast. Revelation is so far from eradicating the seed, which the Deity has planted in our nature, that it rather cherishes and forward its growth. To *quit honour*, and to be *lost in every branch*, are in the number of those merits which the Jewish dispensation required, and the person from whom Author of the Christian system receives is herself represented as rejoicing that *missions should call her blessed*.

* To **GLORY** *v. n.* (*glorior*, Lat.) to be proud of.—With like judgment when he had happened to do a thing he had performed some notable mischief.—They were wont, in the pride of their proceedings, to *glory*, that whereas Luther blow away the roof, and Zuinglius the walls of popish superstition, the last work of all remained, which was to very ground and foundation of popery. Let them look they *glory* not.

Nor build their evils on the graves of
For then my guiltless blood must
them.

—Your *glorifying* is not good. 1 Cor.
Thou hast seen mount A
While storms and tempests thunders
And oceans break their billows at
It stands unmoved, and *glories* in it

—This title of Freeholder is what I
and what most effectually calls to the
happiness of that government under
Addison.—If others may *glory* in the
may not we, whose parents were call
attend on him at his altar? *Atturb*
out of the reach of misfortune; no
should *glory* in his prosperity. *Clary*

ellish with superficial lustre.—

But thou, who lately of the common strain
Wert one of us, if still thou dost retain
The same ill habits, the same follies too,
Gloss'd over only with a saint-like shew,
Then I resume the freedom which I gave,
Still thou art bound to vice, and still a slave.

Dryden's Persf.

(2.) * To GLOSS. *v. n.* 1. To comment.—

Thou detain'st *Briseis* in thy hands,
By priestly *glossing* on the gods commands. *Dryd.*

2. To make lly remarks.—

Her equals first observ'd her growing zeal,
And laughing *gloss'd*, that *Abra* serv'd so well.

Prior.

* GLOSSARY. *n. f.* [*glossarium*, Lat. *glossaire*,
Fr.] A dictionary of obscure or antiquated words.
—According to Varro, when *delubrum* was ap-
plied to a place, it signified such a one, *in quo dei*
simulacrum dedicatum est; and also in the old *glos-*
surics. *Stillingfleet*.—I could add another word to
the *glossary*. *Baker*.

* GLOSSATOR. *n. f.* [*glossateur*, Fr. from
gloss.] A writer of glosses; a commentator.—The
reason, why the assertion of a single judge does not
prove the existence of judicial acts, is because his
office is to pronounce judgment, and not to be-
come an evidence: but why may not the same be
said of two judges? Therefore, in this respect,
the *glossator's* opinion must be false. *Ayliffe*.

* GLOSSER. *n. f.* [*glossarius*, Lat.] 1. A scho-
liast; a commentator. 2. A polisher.

* GLOSSINESS. *n. f.* [from *glossy*.] Smooth
polish; superficial lustre.—Their surfaces had a
smoothness and *glossiness* much surpassing whate-
ver I had observed in marine or common salt. *Boyle*.

GLOSSOCOMMON, in mechanics, a name
given by Mr Heron to a machine composed of va-
rious dented wheels with pinions, for raising great
weights.

* GLOSSOGRAPHER. *n. f.* [*γλωσσα* and *γραφω*] A
scholiast; a commentator.

* GLOSSOGRAPHY. *n. f.* [*γλωσσα* and *γραφω*.] The
writing of commentaries.

GLOSSOPETRA, or GLOTTOPETRA, [from
γλωσσα, a tongue, and *πετρα*, a stone.] in natural
history, a kind of extraneous fossil, somewhat in
form of a serpent's tongue; frequently found in
the island of Malta and divers other parts. See
Plate CLXVII, fig. 4. The vulgar notion is, that
they are the tongues of serpents petrified. Hence
their extraordinary virtue in curing the bites of
serpents. The general opinion of naturalists is,
that they are the teeth of fishes, left at land by
the waters of the deluge, and since petrified. The
several sizes of the teeth of the same species, and
those of the several different species of sharks, af-
ford a vast variety of these fossil substances. Their
usual colours are black, bluish, whitish, yellowish,
or brown; and in shape they usually approach to
a triangular figure. Some are simple, others tri-
cuspidate, having a small point on each side of the
large one: many of them are quite straight; but
they are frequently found crooked, and bent in all
directions; many of them are serrated on their
edges, and others plain; some are undulated on
their edges, and slightly serrated on these undu-
lations. They differ also in size as much as in fi-
gure; the larger being 4 or 5 inches long, and the

(10, 11.) GLOUCESTER ISLANDS, two isles in the South Sea, lying the one in Lon. 146. 0. W. and Lat. 20. 38. S.; the other in Lon. 146. 15. W. and Lat. 20. 34. S.

(1.) * GLOVE. *n. s.* [*glofe*, Saxon, from *the glove*, Danish, to divide.] Cover of the hands.—

They flew about like chaff i' th' wind;
For haste some left their masks behind,
Some could not stay their *gloves* to find *Dryden*.
White *gloves* were on his hands, and on his head

A wreath of laurel *Dryden*.

(2.) GLOVES, in commerce, are distinguished into leathern, silk, thread, cotton, worked, &c. Leathern gloves are made of chamois, kid, lamb, doe, elk, buff, &c. Gloves now pay a duty to the king, which increases according to their value.

(3.) GLOVE, THROWING THE, was a practice or ceremony very usual among our ancestors, being the challenge whereby another was defied to single combat. See BATTLE, § 3. It is still retained at the coronation of our kings; when the king's champion casts his glove in Westminster-hall. See CHAMPION, § 1-3. Favyn supposes the custom to have arisen from the eastern nations, who in all their sales of lands, goods, &c. used to give the purchaser their glove by way of investiture. To this effect he quotes Ruth iv. 7. where the Chaldee paraphrase calls *glove* what the common version renders *flow*. He adds, that the Rabbins interpret by *glove* that passage in the cviiith Psalm, "Over *Edom* will I cast out my *flow*."— He also says, that the custom of blessing *gloves* in the coronation of the kings of France, was a relic of the eastern practice of giving possession with the *glove*, l. xvi. p. 1017, &c. Anciently the judges were prohibited to wear gloves on the bench. And at present in the stables of some princes, it is not safe to go in without pulling off the gloves.

* To GLOVE. *v. a.* [from the noun.] To cover as with a glove.—

My limbs,
Weaken'd with grief, being now enrag'd with
grief,

Are thrice themselves: hence therefore, thou
nice crutch;

A scaly gauntlet now, with joints of steel,
Must glove this hand. *Shak. Henry IV.*

The next he preys on is her palm,
That alms'ner of transpiring balm;
So lost, 'tis air but once remov'd;

Tender as 'twere a jelly glaz'd. *Clenweland.*

(1.) * GLOVER. *n. f.* [from *glove*] One
whose trade is to make or sell gloves.—Does he
not wear a great round beard like a *glover's* par-
ing knife? *Shak. Merry Wives.*

(2.) GLOVER, Richard, the author of *Leonidas*
and several other esteemed works, was the son of
Richard Glover a Hamburgh merchant in London,
and was born in St Martin's lane in 1712. He
very early showed a strong propensity to poetry;
and while at school, he wrote, amongst other
pieces, a poem to the memory of Sir Isaac New-
ton, prefixed to the view of that incomparable
author's philosophy, published in 4to. in 1728, by
Dr Pemberton. But though possessed of talents
calculated to excel in literature, he devoted his
attention to commerce, and commenced a Ham-
burgh merchant. He still, however, cultivated the
belles lettres, and associated with persons em-
inent in science. One of his earliest friends was Mat-
thew Green, the author of some admirable poems,
which in 1737, after his death, were collected
and published by Mr Glover. In 1737, Mr Glo-
ver married Miss Nunn, with whom he received
a handsome fortune; and published *Leonidas, a*
poem, in 4to, which soon passed through 3 editions.
It was inscribed to Lord Cobham; and on its first
appearance was received with great approbation.
Lord Lyttelton, in his *Common Sense*, and in a
poem addressed to the author, praised it in the
warmest terms; and Dr Pemberton published,
Observations on Poetry, especially epic, occasioned
by the late poem upon *Leonidas*, 1738, 12mo,
merely to point out its beauties. In 1739, Mr
Glover published *London or the Progress of Com-
merce*, 4to; and a ballad intitled, *Hofier's Ghost*.
Both these pieces seem to have been written with
a view to incite the public to resent the misbeha-
viour of the Spaniards; and the latter had a very
considerable effect. The political dissensions at
this period raged with great violence especially in
the metropolis; and at different meetings of the
livery, Mr Glover was called to the chair, and
acquitted himself in a very able manner, his con-
duct being patriotic and his speeches masterly.
His talents for public speaking, his knowledge of
political affairs, and his information concerning
trade and commerce, soon afterwards pointed
him out to the merchants of London as a proper
person to conduct their application to parliament
on the neglect of their trade. He accepted the
office; and in summing up the evidence gave
striking proofs of his oratorical powers. This
speech was pronounced Jan. 27, 1742. In 1744,
the Duchess of Marlborough died, and by her will
left to Mr Glover and Mr Mallet 500*l.* each, to
write the History of the Duke of Marlborough's
Life. This bequest, however, never took place.

It is supposed that Mr Glover very ear-
ly had his share of it; and Mallet, though
long as he lived, never made any pro-
fit. About this period Mr Glover withdrew
from public notice. He had been
with the attention of Frederic Prince
who once presented him with a copy
of the Classics, elegantly bound; and,
sitting himself on account of the
in his circumstances, sent him 500*l.*
Mr Glover produced at Drury-lane
Medea; which was acted 9 nights.
Mr Mossop, Mrs Cibber, and
ard, were among the performers;
berion wrote a pamphlet to recom-
mend it, 1761, Mr Glover published *Medea*,
written on the Greek model; but it

fides an epic poem of considerable len-
some tragedies and comedies in MS
Nov. 25th, 1785; leaving a most esti-
mable man, a citizen, and an author.

(3.) GLOVER, a township of Ver-
mont county, N.E. of Craftsborough.

* To GLOUT. *v. n.* [A low word
find no etymology.] To pout; to
It is still used in Scotland.—

She lurks in midst of all her den,
From out a ghastly whirlpool all he
Where, *gloating* round her rock,
falls.

ring with sullen spight, the fury shook
 stted locks, and blasted with each look.

Garth.

SW. n. f. [from the verb.] 1. Shining
 Vehemence of passion. 3. Brightness
 of colour.—

he pale complexion of true love,
 e red glow of scorn and proud disdain.

Shak.

iving glow his bloomy beds display,
 g in bright diversities of day.

Pope.

suppose that the great pile might hap-
 pended with the ornamental, that the
 rave, and majestic dignity of Raffaele
 te with the glow and virtue of a Paulo,
 et, are totally mistaken. *Reynolds.*

* GLOW. *v. a.* [*glewan*, Saxon; *gloy-*
 1] To make hot so as to shine. Not

On each side her

pretty dimpled boys, like smiling Cupids,
 ivers colour'd fans, whose wind did seem
 w the delicate cheeks which they did
 ul.

Shak.

To GLOW. *v. n.* 1. To be heated so as
 without flame.—

ithence silence lesseneth not my fire,
 d it flames, and hidden it does glow,
 reveal what ye so much desire.

Spenser.

His goodly eyes,
 'er the files and musters of the war
 low'd like plated Mars, now bend, now
 n

ffice upon a tawny front.

Shak.

nd, wife to the emperor Henry II. to
 innocency, did take seven glowing irons,
 another, in her bare hands, and had
 o harm.

all parts like, but all alike inform'd
 adiant light, as glowing iron with fire.

Milton.

m with vehement heat.—

would you find it easy to compose
 ettled steeds, when from their nostrils
 ws
 rching fire that in their entrails glows.

Addis. Ovid.

op'ning heav'nstheir happy regions show,

of woe,

Pope.

l heat of body.—

Did not his temples glow

ame sultry winds and scorching heats?

Addis. Cato.

cord slides swiftly through his glowing
 ids.

Gay.

ibit a strong bright colour.—

With smile that glow'd.

l rosy red, love's proper hue.

Milton.

in a gown that glows with Tyrian rays.

Dryden.

A malicious joy,
 red and fiery beams cast through your
 ge

ing pleasure.

Dryd. and Lee's Oed.

the mingled strength of shade and light,

A new creation rises to my sight;

Such heav'nly figures from his pencil flow,

So warm with life his blended colours glow,

Amidst the soft variety I'm lost.

Addison.

Like th' ethereal glow'd the green expanse.

Savage.

Fair ideas flow,

Strike in the sketch, or in the picture glow.

Pope.

Not the fair fruit that on yon branches glows.

With that ripe red th' autumnal sun bestows,

Can move the god.

Pope.

Each pleasing Blount shall endless smiles be-

flow,

And fair Belinda's blush for ever glow.

Pope.

Here clearer stars glow round the frozen pole

Pope.

5. To feel passion of mind, or activity of fancy.—

You strive in vain

To hide your thoughts from him, who knew
 too well

The inward glowings of a heart in love.

Cato.

Forc'd compliments and formal bows

Will shew thee just above neglect;

The fire with which thy lover glows,

Will settle into cold respect.

Prior.

Did Shadrach's zeal my glowing breast inspire

To weary tortures, and rejoice in fire.

Prior.

Let the gay conscience of a life well spent

Calm ev'ry thought, inspire ev'ry grace,

Glow in thy heart, and smile upon thy face.

Pope.

With furies surrounded,

Despairing, confounded.

He trembles, he glows,

Amidst Rhodope's snows.

Pope.

So perish all, whose breasts ne'er learn'd to
 glow

For others good, or melt at others woe.

Pope.

To praise is always hard,

When real virtue fires the glowing bard.

Lewis.

6. To rage or burn as a passion.—

A fire which every windy passion blows;

With pride it mounts, and with revenge it glows.

Dryden.

When crept into aged veins,

Love slowly burns, and long remains;

It glows, and with a sullen heat,

Like fire in logs, it warms us long.

Shadwell.

(1.) * GLOWWORM. *v. f.* [*glow* and *worm*.] A

small creeping insect with a luminous tail.—

The honey bags steal from the humble bees,

And for night-tapers crop their waxen thighs,

And light them at the fiery glowworm's eyes.

Shak.

The glowworm shews the matten to be near,

And 'gins to pale his ineffectual fire.

Shak.

—A great light drowneth a smaller that it cannot
 be seen; as the sun that of a glowworm.

Bacon's

Nat. Hist.—

The man, who first upon the ground

A glowworm spy'd, supposing he had found

A moving diamond, a breathing stone;

For life it had, and like those jewels shone:

He held it dear, 'till by the springing day

Informed, he threw the worthless worm away.

Waller.

(2.) GLOWWORM, in zoology. See LAMPYRIS.

* GLOZE. *n. f.* [from the verb.] 1. Flattery;
 insinuation.—

Now to play dealing; lay these gloves by.

Shak.

3. Specious show; gloss. Not used.—

Precious couches full oft are shaken with a fever,

If then a bodily evil in a bodily *gloss* be not hidden,

Shall such morning dews be an ease to the heat of a love's fire?

Sidney.

To *GLOZE*. *v. n.* [*glezen*, Saxon.] 1. To flatter; to wheedle; to insinuate; to fawn.—

Man will hearken to his *glozing* lies,

And easily transgress.

Milt. Par. Lost

So *gloz'd* the tempter, and his progeny: 'd:
Into the heart of Eve his words made way.

Milton.

—A false *glozing* parasite would call his foothar-dine's valour, and then he may go on boldly, because blindly, and by mistaking himself for a lion, come to perish like an ass. *Sonnet.*

Now for a *glozing* speech.

Fair protestations, specious marks of friendship.

Philips.

2. To comment. This should be *gloss*.—

Which Salique land the French unjustly *gloze*
To be the realm of France. *Shak. Henry V.*

• *GLOZEN*. *n. f.* [from *gloze*.] A flatterer.

• *GLUBOKAIA*, a to *n. f.* Russian in Kullivan.

• *GLUCINA*, [from *glucina*, to sweeten,] a peculiar earth discovered by Vauquelin in the beryl and emerald, so named from its characteristie property of forming salts of a saccharine taste. Its general properties are these: 1. It is white; 2. insipid; 3. adhesive to the tongue; 4. insoluble in water, and 5. in ammoniac; but, 6. soluble in the fixed alkalis, 7. in the carbonate of ammoniac; and, 8. in almost all the acids, except the carbonic and phosphoric, and forming salts of a saccharine taste; 9. infusible; but, 10. fusible with borax into a transparent glass; 11. It absorbs $\frac{1}{2}$ of its carbonic acid; 12. decomposes the aluminous salts; and, 13. is not precipitable by well saturated hydro sulphurets. Its specific characters, which are not found united in any of the other known earths, are these: 1. Its salts are saccharine, and slightly astringent; 2. It is soluble in the carbonate of ammoniac; 3. It is very soluble in the sulphuric acid by excess; 4. It decomposes the aluminous salts; 5. It is completely precipitated from its solutions by ammoniac; and, 6. Its affinity for the acids is intermediate between magnesia and alumina. 100 parts of beryl contain 16 of glucina. M. Vauquelin justly remarks, that, "in the sciences, a body, a principle, or a property, formerly unknown, though it may often have been used, or even held in the hands, and referred to other simple species, may, when once discovered, be afterwards found in a great variety of situations, and be applied to many useful purposes. Chemistry affords many recent examples of this truth."

• *GLUCKOV*, a town of Russia, in Novgorod.

• *GLUCKSBURG*, a town and fort of Denmark, in *Sh. w. k.*; 9 miles E. of Flensburg.

• *GLUCKSTADT*, a considerable town of Germany, in the duchy of Holstein, with a strong castle, 5 $\frac{1}{2}$ m. to Denmark; seated on the Elbe, near its mouth; 28 miles NW. of Hamburg. *Lon.* 9. 15 E. *Lat.* 53. 54 N.

(1.) * *GLUE*. *n. f.* [*glu*, Fr. *gluten*, Lat. *Welsh.*] A viscous body commonly made

ing the skins of animals to a jelly; any tenacious matter by which bodies are held together; a cement — Water, and all fluids, receive dry and more terrestrial bodies, on the one hand, and more fluid bodies, on the other; so that, as well said by one of the ancients of earth, every substance, one is a *glue* to another. *Nat. Hist.*—The driest and most transparent is the best. *Mason.*—

To build the earth did chance matter

And through the parts cementing glue.

—The flowers of grains, mixed with water, make a sort of *glue*. *Arbuthnot on Almonds.*

(2.) *GLUE* is differently denominated according to its preparation and the various uses it is intended for; as *common glue*, *glove glue*, and *gum glue*. But the two last are more properly *size*. The common or strong glue is made by carpenters, joiners, cabinet makers, &c. is made of skins of animals, as oxen, cows, sheep, &c. Whole skins are rarely used for this purpose, but only the shavings, parings, or the feet (sinews), &c. The whole skin, however, is undoubtedly the best, as that made of sinews is the very worst.

(3.) *GLUE*, METHOD OF MAKING.—To make glue of parings, they first steep them in water; then, washing them well out, they pass, while hot, through a sieve, to separate the impurities; and then let it stand some time to purify it further; when all the filth has subsided to the bottom of the vessel, they melt it a second time. They next pour it into flat moulds, whence it is taken out pretty solid, and cut into square pieces or cakes; afterwards dry it in the wind, in a sort of net; and at last string it to finish its dryness. The glue made of sinews, feet, &c. is made in the same manner; only with this difference, they bone and scour the sinews, &c. and do not steep. Of this commodity there is a considerable exportation from England; the English is universally allowed to be the best. It is so, not only from the excellency of the materials, but from the skill of the manufacturers. This is the Flanders glue. In Denmark it is made by the tanners from fragment skins dried with much care. In France it is a separate trade; and the glue makers pick materials as they can, from the several skins, and boiling these with cow heels, &c. glue; which as they purchase every thing to render it dear, as well as of an inferior quality. The duty on exportation is 100, and on importation 3s. 10d. on every cwt. The best glue is made from the skins of the ox, and is the best if a bull's head is used. Glue is considerably improved in quality by keeping it in water for some time, and then drying it; or by laying a piece of it to steep 3 or 4 days in water, and then drying it; or by boiling it well considerably without melting, and then drying it; or by boiling it well considerably without melting, and then drying it.

will hold against fire or water, it is made thus: Mix a handful of quick-oz. of linseed oil; boil them to a good hen spread it on tin plates in the shade, become exceeding hard, but may be red over a fire as glue, and will effect is to admiration. Neumann observes, dissolved in a solution of lapis calaminatus of nitre, and afterwards inspissated, extremely slippery tenacious mass, which is use for entangling flies, caterpillars, insects, if it were not too expensive.

E, METHOD OF PREPARING AND USING A QUART OF WATER ON THE FIRE; then put lb. of good glue, and boil them gently till the glue be entirely dissolved and of stence. When glue is to be used, it is made thoroughly hot; after which, with a pen or brush, besmear the faces of the joints as possible; then clapping them together, lengthwise one upon another, 2 or 3 together, till they are close; and let them stand till they are dry and firm. Mr Boyle gives the receipt for preparing a fine strong glue as follows: Steep the isinglass for 24 hours in brandy. When the menstruum has become soft, and the isinglass is dissolved, they must be mixed together, and kept stirring till they are well mixed, and till a drop thereof, suffers to turn into a strong jelly. Then strain the mixture through a clean linen cloth into a bottle, and be kept close stopped. A gentle heat will dissolve this glue into a transparent and colourless fluid, but very strong; so that wood glued together with it will break rather than in the place where they are joined.

GLUE v. a. [from the noun.] 1. To join with cement.—

I fear thy overthrow
Of my body's parting with my soul:
And fear *glu'd* many friends to thee.

Shak. Henry VI. teacheth a fool is as one that *glues* a together. *Ecclus. xxii. 7.*—The custom of the Holy Virgin is so much in vogue among the Italians, that one often sees in their churches a canvas over the head of the figure. *Ben Jonson's Discov.*—Most wounds, if kept clean, will heal the air, the flesh will *glue* together with a restorative balm. *Derham.* 2. To hold together parts of all homogeneous hard bodies, by touch one another, stick together very; and for explaining how this may be, he invented hooked atoms, which is begging the question; and others tell us their bodies are together by rest; that is, by an occult attraction rather by nothing. *Newton's Opticks.* 3. To unite; to inviscate.—Those wasps and flies are sensual men plunged in their pleasures; and when they are once *glued* to it is a very hard matter to work them. *L'Estrange.*—Intemperance, sensuality, and lusts, do debase men's minds and clog their senses; sink us down into sense, and *glue* us to low and inferior things. *Tillotson.*—The curbed groan that else had come;

And pausing, view'd the present in the tomb:
Then to the heart ador'd devoutly *glu'd*
Her lips, and, raising it, her speech renew'd.

Dryden.

I hear thee, view thee, gaze o'er all thy charms,
And round thy phantom *glue* my clasping arms.

Pope.

* **GLUEBOILER.** *n. f.* [*glue* and *boil.*] One whose trade is to make glue.

* **GLUER.** *n. f.* [from *glue.*] One who cements with glue.

* **GLUM** *adj.* [A low cant word formed by corrupting *gloom.*] Sullen; stubbornly grave.—Some, when they hear a story, look *glum*, and cry, Well, what then? *Guardian.*

GLUMA, } *n. f.* in botany, a species of calyx,
GLUME, } consisting of 2 or 3 membranous valves, which are often pellucid at the edges. See *BOTANY, Index.*

GLUMMEN, a town of Prussia, in the prov. of Nantangen, 24 miles S. of Königsberg.

GLURENTZ, or } a town of Germany, in the
GLURNZ, } Tyrol, on the Adige, 3 miles W. of Tyrol, and 36 W. of Brixen. It was built in 1361, and surrounded with walls in 1530. It was taken by the French, under gen. Desfleurs, on the 25th March 1799; but during the battle with the Austrians near it, in which the latter lost 5700 men, and 28 pieces of cannon, this town was accidentally set on fire, and totally burnt down on the 26th.

GLUSBURN, a town S. of Skipton, Yorksh.

(1.) * **GLUT.** *n. f.* [from the verb.] 1. That which is gorged or swallowed.—

Disgorged soul

Their devilish *glut*, chain'd thunderbolts, and hail
Of iron globes. *Milton's Paradise Lost.*

2. Plenty even to loathing and satiety.—

So death

Shall be deceiv'd his *glut*; and with us two

Be forc'd to satisfy his ravenous maw. *Milt.*

—Let him but set the one in balance against the other, and he shall find himself miserable, even in the very *glut* of his delights. *L'Estrange.*—A *glut* of study and retirement in the first part of my life, cast me into this; and this will throw me again into study and retirement. *Pope to Swift.* 3. More than enough; overmuch.—If you pour a *glut* of water upon a bottle, it receives little of it. *Ben Jonson's Discov.* 4. Any thing that fills up a passage.—The water some suppose to pass from the bottom of the sea to the heads of springs, through certain subterranean conduits or channels, until they were by some *glut*, stop, or other means, arrested in their passage. *Woodward.*

(1.) **GLUT,** among falconers, the slimy substance that lies in a hawk's paunch.

* **To GLUT.** *v. n.* [*engloutir*, French; *glutio*, Lat. to swallow; *γλῦζω.*] 1. To swallow; to devour.—

'Till cram'd and gorg'd, nigh burst

With suck'd and *glutted* offal. *Milt. Par. Lost.*

2. To cloy; to fill beyond sufficiency; to sate; to disgust.—The ambassador, making his oration, did so magnify the king and queen, as was enough to *glut* the hearers. *Bacon.*—

Love breaks friendship, whose delights

Feed, but not *glut* our appetites.

Denham.

What

What way remove
His settled hate, and reconcile his love,
That he may look propitious on our toils,
And hungry graves no more be *glutted* with our
spoils. *Dryden.*

No more, my friend ;
Here let our *glutted* execution end. *Dryd. Æn.*
I found

The fickle ear soon *glutted* with the sound,
Condemn'd eternal changes to pursue,
'Tir'd with the last, and eager of the new. *Prior.*
3. To feast or delight even to satiety.—
With death's carcass *glut* the grave. *Milt.*
His faithful heart, a bloody sacrifice,
Torn from his breast, to *glut* the tyrant's eyes.
Dryden.

A sylvan scene, which, rising by degrees,
Leads up the eye below, nor *gluts* the sight
With one full prospect ; but invites by many,
To view at last the whole. *Dryden.*

4. To overfill ; to load.—He attributes the ill suc-
cess of either party to their *glutting* the market,
and retailing too much of a bad commodity at
once. *Arbutnot's Polite Lying.* 5. To saturate.
—The menstruum, being already *glutted*, could
not act powerfully enough to dissolve it. *Boyle.*

GLUTA, in botany ; a genus of the pentandria
order, belonging to the gynandria class of plants.
'The calyx is campanulated and deciduous ; there
are 5 petals glued below to the column of the
germ ; and the filaments inserted on the top of
the column, on which also the germen sits.

GLUTÆUS. See ANATOMY, § 215.

GLUTEN. See BREAD, § 12, and CHEMIS-
TRY, *Index.*

* GLUTINOUS. *adj.* [*glutineux*, French ;
from *gluten*, Latin.] Gluy ; viscous ; tenacious.
—The cause of all vivification is a gentle and pro-
portionable heat, working upon a *glutinous* and
yielding substance ; for the heat doth bring forth
spirit in that substance, and the substance being
glutinous, produceth two effects : the one that the
spirit is detained, and cannot break forth ; the o-
ther, that the matter, being gentle and yielding, is
driven forwards by the motion of the spirits, after
some swelling, into shape and members. *Bacon.*—
Next this marble venomb'd seat,

Smear'd with gums of *glutinous* heat. *Milton.*
—Nourishment too viscid and *glutinous* to be sub-
dued by the vital force. *Arbutn. on Alim.*

* GLUTINOUSNESS. *n. f.* [from *glutinous*.]
Viscosity ; tenacity.—There is a resistance in fluids,
which may arise from their elasticity, *glutinousness*,
and the friction of their parts. *Cheyne.*

(1) * GLUTTON. *n. f.* [*glouton*, Fr. ; from
glutire, Latin, to swallow.] 1. One who indulges
his self too much in eating.—The Chinese eat
horseflesh at this day, and some *gluttons* have used
to have cats *broiled*. *Bacon's Nat. Hist.*—

Thro' Mæch's gullet the runs down
While the virt' *glutton* dines alone ;
And, void of delicity and thought,
She follows Beld's endless draught. *Prior.*
—If a *glutton* was to say in excuse of his gluttony,
that he only eats such things as it is lawful to eat,
he would make as good an excuse for himself as
the greedy, covetous, ambitious tradesman, that

should say, he only deals in lawful busi-

2. One eager of any thing to excess.—
The rest bring home in state the b
To that last scene of bliss, and leave t
All those free joys insatiably to prov
With which rich beauty feasts the g

Gluttons in murder, wanton to del
Their fatal arts so impiously employ

(2.) GLUTTON, in zoology, the Er
of a species of quadrupeds, ranked i
under the genus *MUSTELA*, or *Weas*
Dr Gmelin, and Mr Kerr, under that
or *Bear*. There are 2 varieties, viz.
and reddish brown. See *URSUS*, N°

* To GLUTTONISE. *v. n.* [fro
To play the glutton ; to be luxurious.

* GLUTTONOUS. *adj.* [from *g*
ven to excessive feeding ; delighted
with food.—

When they would smile and sav
debts,

And take down th' interest in thei
maws.

—The exceeding luxuriousness of thi
age, wherein we press nature with c
burdens, and finding her strength de
take the work out of her hands, an
to the artificial help of strong waters.

Well observe

The rule of not too much, by temper
In what thou eat'st and drink'st ; &
thence

Due nourishment, no *glutinous* defi

* GLUTTONOUSLY. *adv.* [from
With the voracity of a glutton.

(1.) * GLUTTONY. *n. f.* [*glutton*
from *glutton*.] Excess of eating ; lux
table.—*Gluttony*, a vice in a great fortu
in a small. *Holyday*—

Their sumptuous *gluttonies* and gorg
On citron tables or Atlantick stone.

Well may they fear some miserab
Whom *gluttony* and want at once a

—The inhabitants of cold moist count
nerally more fat than those of warm
but the most common cause is too gr
tity of food, and too small a quantity
in plain English *gluttony* and laziness.

(2.) GLUTTONY, INSTANCES OF F
NARY. There is a morbid sort of *glutt*
fames canina, i. e. *dog-like appetite*, w
times occurs, and renders the person ic
an object of pity and of cure as in ether d.
BULIMY.) But habitual gluttons may b
among the monsters of nature, and e
able for endeavouring to bring a fami
places where they live. K. James I. w
was presented to him who could eat av
at one meal, asked "What could h
than another man ? and being answerd
not do so much," said "Hang him t
is unfit a man should live that eats as
men, and cannot do so much as one."
peror Clodius Albinus devoured more
thel of apples at once. He eat 300 figs t

raches, 10 melons, 20 lb. of grapes, 100 apples, and 400 oysters. Hardi-Canute, the Danish king in England, was so fond of food, that a historian calls him *Bocca di vino's-mouth*." His tables were sometimes 2-day with the most costly viands the air, sea, or land, could furnish; and he lived he died; for, revelling at a Lambeth, he fell down dead. One day, at the reign of Aurelianus, at one meal, he ate a boar, one hundred loaves of bread, and a pig; and drank above three gallons of wine. Fuller says, that one Nicholas Harrison in Kent, eat a whole sheep at law; at another 30 dozen of pigeons. William Sidley's, he eat as much victuals as sufficed 30 men. At Lord Wotton's dinner at one dinner 84 rabbits; which, at a man, would have served 168 men. His breakfast 18 yards of black pudding. He ate a whole hog at one sitting; and afterwards 3 pecks of damofins. One Mallet, at law, in the reign of Charles I. eat at a dinner provided in Westminster for his practice not being sufficient to support a better meat, he fed generally on oysters, hearts, &c. He lived to near 60 years, but during the 7 last years of his life moderately as other men.

GLU, a town near Penryn, Cornwall.
GLY, *adj.* [from *gluc*.] Viscous; tenacious.—It is called balsamick mixture, is a *gluy* spumous matter. *Harvey*.—*gluy* was some new foundations lay in combs. *Dryden's Ann. Mirab.*—*gluy* is the composition of the vapour, let it have one quality of being very *gluy* or viscous; it will mechanically solve all the phænomena of the grotto. *Addison*.

GLU. See GLICAS.

GLUCINE, KNOBBED-ROOTED LIQUORICE—genus of the decandria order, belonging to the diadelphia class of plants; and in the natural method ranking under the 32d order, *Papilionaceæ*.

The calyx is bilabiate; the carina is a small lobe turning back the vexillum with its

GLUCINE ABRUS is a native of Egypt and

The stalks and roots are very sweet. Herman affirms, that the juice obtained from them by decoction is little inferior to that of licorice whence its name of *wild liquorice* in America where it is native.

GLUCINE FRUTECENS, the Carolina kidney-

It has shrubby climbing stalks, twining support, 15 or 20 feet high, adorned with large pinnate leaves of 3 pair of foliicles terminated by a single large flower, and from the axillas clusters of large purple flowers, succeeded by long pods of the climbing kidney-bean. It flowers in July, but the seeds do not ripen in any country. It is cultivated in our gardens howsoever easily propagated, either by seeds imported from America, or by layers.

GLYCIRRHIZA, LIQUORICE, a genus of the order, belonging to the diadelphia class and in the natural method ranking under the 32d order, *Papilionaceæ*. The calyx is

bilabiate; the upper lip tripartite, and the under one entire; the legumen ovate and compressed. There are two species.

1. **GLYCIRRHIZA ECHINATA**, the prickly-podded liquorice, resembling the common sort, only the pods are prickly: and

2. **GLYCIRRHIZA GLABRA**, the common liquorice, with long, thick, creeping roots, striking several feet deep into the ground; upright, firm, annual herbaceous stalks, 3 or 4 feet high, garnished with winged leaves of four or five pair of oval lobes, terminated by an odd one; and from the axillas erect spikes of pale blue flowers in July, succeeded by short smooth pods. The root is the useful part, which is replete with a sweet, balsamic, pectoral juice, much used in all compositions for coughs and disorders of the stomach. Both these species are very hardy perennials; but this last is the sort commonly cultivated for use, its roots being fuller of juice and sweeter than the other. The roots are perennial: but the stalks rise in spring and decay in autumn. They are propagated by cuttings of the small roots issuing from the sides of the main ones near the earth, divided into lengths of 6 or 8 inches, each having one or more good buds. The proper season for procuring the sets for planting is in open weather from October to March; but from the middle of February till the middle of March is rather the best season for planting. An open situation is to be preferred. The soil ought to be a light loose temperature, and 3 or 4 feet deep: for the roots of liquorice will arrive at that depth and more, and the longer the roots the more valuable they are. The ground should be trenched 3 spades deep; then proceed to plant the sets, by line and dibble, a foot distant in each row; putting them perpendicular into the ground, with the tops about an inch under the surface; let the rows be a foot or a foot and a half asunder. The London gardeners sow a crop of onions on the same ground the first year; which might be done without detriment to the liquorice or the onions; as the liquorice does not rise above 10 or 12 inches the first summer; keep the ground clean from weeds by hoeing. If there be a crop of onions, use the small hoe, cutting out the onions to 4 or 5 inches distant, clearing away such as grow immediately close to the liquorice plants; and when the onions are gathered, give the ground a thorough hoeing with a large hoe, to loosen the surface and destroy all weeds; and in autumn cut down the decayed stalks of the liquorice, and nothing more is necessary to be done till February or March, when it is proper to give a slight digging between the rows. During spring and summer, keep down all weeds by broad hoeing; and in autumn, when the stalks are in a decaying state, cut them down to the surface of the earth. In 3 years after planting, the roots of the liquorice will be fit to take up. The proper season for this is, from the beginning of November till February; for they should neither be taken up before the stalks are fully decayed, nor deferred till late in spring, otherwise the roots will be apt to shrivel and diminish in weight. In taking them up, the small side roots are trimmed off, the best divided into lengths for fresh sets; and the main roots tied in bundles

for sale. Sell them as soon as possible after they are taken up, before they lose much of their weight. They are sold to the druggists from about 20s. to 40s. per cwt.; and an acre of ground has produced 3000 and upwards, which have been sold for above 60l.; but the price is commonly in proportion to the goodness of the roots. This plant is cultivated in most countries of Europe for the sake of its root. British liquorice is preferable to foreign; this last being generally mouldy, which this root is very apt to become, unless kept in a dry place. The powder of liquorice usually sold is often mingled with flour, and probably too often with substances not quite so wholesome; the best sort is of a brownish yellow colour (the fine pale yellow being generally sophisticated), and of a very rich sweet taste, much more agreeable than that of the fresh root. Liquorice is almost the only sweet that quenches thirst; whence it was called by the Greeks *αλυσ*. See *ANUSON*. Galen says, that it was employed in this intention in hydropic cases, to prevent the necessity of drinking. Mr Fuller, in his *Medicina Gymnastica*, recommends it as a very useful pectoral; and says it softens acrimonious humours, and is gently detergent; which is confirmed by experience. An extract is directed to be made from it in the shops. It is chiefly brought from abroad, though the foreign extract is not equal to such as is made with proper care in Britain.

GLYFORD, a town SE. of Bodmin, Cornwall.

(1.) * GLYN, *n. s.* [Irish; *gleann*, *glyn*, plur. *Erle*; *glenn*, Scottish.] A hollow between two mountains.—Though he could not beat out the Irish, yet he did shut them up within those narrow corners and *glyns* under the mountain's foot. *Spenser's Ireland*.

(2.) GLYN, a town of Ireland, in Limerick.

(3.) GLYN OF AGALLOW, a town in Cork.

(4.) GLYN OF THE DOWNS, a narrow romantic valley in Ireland, in Wicklow, 13 miles from Dublin; not much wider than the breadth of the road which leads through it, along the banks of a gurgling rivulet. The sides of the valley are steep and rocky, but ornamented with various trees.

GLYNN, a county of Georgia, in the Lower District, bounded on the W. and N. by the Alamaha and Liberty county; E. by the Ocean, and S. by Camden county. Brunswick is the capital.

GLYPH, *n. s.* in sculpture and architecture, any canal or cavity used as an ornament.

(1.) GMELIN, John George, brother to Dr Gmelin, physician at Tubingen, and uncle to the celebrated Dr S. G. Gmelin, (Nº 2.) was author of the *Flora Siberica*, and of *Travels in Siberia*, an interesting work in 2 vols. We have met with no memoir of this author.

(2.) GMELIN, Samuel Gottlieb, LL. D. professor at Tubingen, and member of the Imperial Academy of Sciences at St Petersburg, was born at Tubingen in 1745. He was celebrated for his knowledge in natural history, as well as for his travels, which he commenced in June 1768. Having traversed the provinces of Moscow, Veronetz, New Russia, Azof, Casan, and Astracan, he visited, in 1770 and 1771, the harbours of the Caspi-

an, and examined with attention the Persian provinces which border on it, of which he has given a circumstantial account in the 3 first vols of his *Travels*. Among his observations, he attempted to pass into the western provinces of Persia, which are infested with numerous banditti; and quitted, in 1772, Einzillee, a small trading place in Georgia, on the southern shore of the Caspian; on account of many difficulties and dangers, until Dec. 1, 1773, reach Sallaz, at the mouth of the Koor. Thence he proceeded to Baku and Kuba, in Shirvan, where he received a friendly reception from Ali Feth Khan, the sovereign of that district. After he had been by 20 Uralian Cossacks, and when he had made a days journey from the Russian frontier, and his companions were, on the 5th of March, arrested by the order of Usmei Khan, a Tartar prince, through whose territories he was obliged to pass. Usmei urged as a reason for this arrest, that 30 years ago several of his subjects had escaped from his dominions, and had sought an asylum in the Russian territories; and that Gmelin should not be released until they were restored. The professor was removed from prison to prison; and at length, wearied by continued persecutions, he expired, in 1774, at Achmet-Kent, a village of Mount Caucasus. His death was occasioned partly by the loss of several papers and collections, and partly by disorders contracted from the fatigue of his long journey. Some of his papers had been taken to Kassar during his imprisonment, and were, with great difficulty, rescued from the hands of the barbarian who had detained them. The arrangement of these papers, which form the 4th volume of his travels, was confided to the care of Guindensack, and his death was completed by Dr Pallas.

GMELINA, in botany; a genus of the spermia order, belonging to the didyma of plants; and in the natural method under the 40th order, *Parfonate*. The calyx is quadridentate; the corolla campanulate bell shaped; there are two bipartite and simple anthers; the fruit is a plum, with a large kernel.

GNA, or AGNO, a river of Italy, in Austria, which rises in the Vicentine March, runs through the ci-devant Venetian diocese of Cologna, dividing it into nearly two equal parts, and after joining the Baciaglione, falls into the Adriatic.

GNAA, a town of Germany, in Spuria, SE. of Graz, and 20 S. of Vienna.

GNADENHUEITEN, a town of the State of the North Western Territory, in the United States, is situated on the River by Moravians. It is situated on the River 10 miles from Lake St Clair, and 22 NW. of it.

(1.) GNAPHALIMUM, *composit.* LOCKS, ETERNAL OR EVERLASTING. A genus of the polygama superflua belonging to the syncnema class of plants in the natural method ranking under the order, *Compositae*. The receptacle is naked, pappus feathered; the calyx imbricated, marginal scales roundish, parched, and c-

: 42 species; the most remarkable of

GNAPHALUM ARBOREUM, or tree gnaphalium, a woody stem, branching 4 or 5 feet high, with sessile leaves, with revolute borders, their upper side, and roundish bunches of small flowers.

GNAPHALUM MARGARITACEUM, the pearly flower, has creeping, very spread-crowned with broad, spear-shaped, very leaves; herbaceous thick, woolly root and an half high, branching out-furnished with long, acute-pointed white, rays, and terminated by a corymbose cluster of flowers, which appear in June and are very ornamental.

GNAPHALUM ODORATISSIMUM, the sweet-scented flower, hath shrubby winged stalks, irregularly a yard high, with corymbs of bright yellow flowers, changing yellow.

GNAPHALUM ORIENTALE, the oriental gold-rod, 3 varieties, with yellow, gold-colour-white silvery flowers. They have shrub-rising 2 or 3 feet high.

GNAPHALUM PLANTAGINIFOLIUM, has fleshy radical leaves, decumbent running herbaceous simple stalks, rising 6 or 8 inches, terminated by a corymbus of white flowers, July, &c.

GNAPHALUM STECHAS, has a shrubby stalk, to slender branches 3 feet long, terminated by corymbose clusters of yellow flowers, appearing in May and June.

GNAPHALUM, CULTURE OF THE DIFFERENT SPECIES OF. The 2d, 5th, and 6th sorts will thrive in any soil or situation. The 1st and 5th increase exceedingly by their slips, the 6th is easily propagated by slips. The 1st and 4th species are somewhat tender; they should be kept in pots, to be sheltered in a green-house or garden frame in winter. They may be planted in the full ground, in a warm situation, especially the ORIENTAL varieties, and likewise the ODORATISSIMUM; for these two species will struggle through an ordinary winter, and make a verdure during summer. All these are propagated by slips or cuttings of their shoots. The roots of all these species will retain their vigour, if carefully gathered in a dry place after they are blown.

GNAR. v. n. [*gnarran*, Saxon; *knorren*, Dutch.] To growl; to snarl.—

He 'gan to rear his bristles strong,
And gnar, until day's enemy
Should appease.

Spenser.
Is the shepherd beaten from thy side,
Whose lives are gnarling who shall gnaw thee

Shakespeare.
Gnawing sorrow hath less power to bite
Than that which mocks at it, and sets it light. Shak.
The warring porter durst not whine for doubt;
Nor the furies while their sovereign spoke.

Fairfax.
GNARLED. adj. [*gnar*, *nar*, or *kurr*, is in
PART II.

Staffordshire a hard knot of wood which boys drive with sticks.] Knotty.—

Merciful heav'n!

Thou rather with thy sharp and sulph'rous bolt
Split'st the unwedgeable and gnarled oak,
Than the soft myrtle. Shak. *Meas. for Meas.*

GNARMACK, a town of England in Cornwall, NW. of Truro.

(1.) * **TO GNASH. v. a.** [*knaschen*, Dutch.] To strike together; to clash.—

The seer, who could not yet his wrath assuage,
Row'd his green eyes, that sparkl'd with his rage,
And gnash'd his teeth. Dryden's *Virgil*.

(2.) * **TO GNASH. v. n.** 1. To grind or collide the teeth.—He shall gnash with his teeth, and melt away. *Psf. cxii. 10.*—There shall be weeping and gnashing of teeth. *Matth. viii. 2.* To rage even to collision of the teeth; to fume; to growl.—

His great iron teeth he still did grind,
And grimly gnash, threat'ning revenge in vain.

Spenser.

—They gnashed upon me with their teeth. *Psaln xxxv. 16.*—

They him laid

Gnashing for anguish, and despite and shame,
To find himself not matchless. Milton.

With boiling rage Atides burn'd,
And foam betwixt his gnashing grinders churn'd.

Dryden.

(1.) * **GNAT. n. f.** [*gnat*, Sax.] 1. A small winged stinging insect.—

Her whip of cricket's bone, the lash of film;
Her waggoner, a small grey-coated gnat. Shak.
2. Any thing proverbially small.—Ye blind guides, which strain at a gnat and swallow a camel. *Mat. xxiii. 24.*

(2.) **GNAT**, in zoology. See **CULEX**.

(1.) * **GNATFLOWER. n. f.** [*gnat* and *flower*.] A flower otherwise called the bee-flower.

(2.) **GNAT FLOWER**. See **OPHRYS**, N° 2.

* **GNATSNAPPER. n. f.** [*gnat* and *snapper*.] A bird so called, because he lives by catching gnats.—They deny that any bird is to be eaten whole, but only the gnat-snapper. *Hake-will on Providence*.

(1.) * **TO GNAW. v. a.** [*gnagan*, Sax. *knaghen*, Dutch.] 1. To eat by degrees; to devour by slow corrosion.—

A knowing fellow that would gnaw a man
Like to a vermine, with his hellish braine,
And many an honest soul, even quick had slain.

Chapman.

To you such scabb'd harsh fruit is giv'n, as
raw

Young soldiers at their exercisings gnaw. Dryd.
2. To bite in agony or rage.—

Alas, why gnaw you so your nether lip?
Some bloody passion shakes your very frame.

Shakespeare. *Othello*.

—They gnawed their tongues for pain. *Rev. xvi. 10.*—

He comely fell, and dying gnaw'd the ground.
Dryden.

3. To wear away by biting.—

Gnawing with my teeth my bonds asunder,
I gain'd my freedom. Shak. *Comedy of Err.*

Like rotten fruit I fall, worn like a cloth,
Gnaw'd into rags by the devouring moth. Sandys.

St Christian. This point he labours out of his *Stromata*, where he shows, that the Gnostic, or learned person, has religion. He affirms, that were it possible, knowledge of God to be separated from salvation, the Gnostic would make choice the knowledge; and that if he promise him impunity in doing of any thing once spoken against, or offer him those terms, he would never alter a sentence. In this sense the father uses opposition to the heretics of the same rank, that the true Gnostic is grown out of the holy scripture; and that he orthodox doctrine of the apostles and their successors; whereas the false Gnostic abandons apostolical traditions, as imagining that he knows more than the apostles.

The Gnostics was sometimes also more particular for the successors of the Nicolaitans, in the 2d century, upon their names of the first authors. Such were thoroughly acquainted with all their verities, and visions, may consult *St Irenaeus*, *Clement Alexandrinus*, *Origen*, *Justinus*; particularly the first of these relates their sentiments at large, and in detail. Indeed, he dwells more on the particulars than any other sect of Gnostics; but he lays down general principles whereon all their systems were founded, and the method he follows in explaining scripture. He accuses the Gnostics of reducing into religion certain vain and idle notions, i. e. a kind of divine prophecies, which had no other foundation than their own wild imagination. He confessed, that these æons or emanations were expressly delivered in the sacred scriptures; and insisted, that Jesus Christ had intimated in his parables to such as could understand.

They built their theology not only on the gospels and the epistles of St Paul, but also on the writings of Moses and the prophets. These last were particularly serviceable to them, on account of the prophecies and allusions with which they abounded, which are capable of different interpretations, though their doctrine, concerning the creation of the world by one or more inferior beings of imperfect nature, led them to deny the authority of the books of the Old Testament, which contradicted this idle fiction, and with an abhorrence of Moses and the Law, they sought to overthrow the authority of the Old Testament; alleging, that he was actuated by a malignant author of this world, who coveted glory and authority, and not the good of men. Their persuasion that matter was the centre and source of all evil, and that the body was a great curse, led them to treat the body with contempt, to despise marriage, and reject the doctrine of the resurrection of the body and its re-union with the soul and spirit. Their notion, that matter was a curse in nature, and occasioned all calamities, wars, and desolations, led them to apply themselves to the study of magic, in order to weaken the powers or suspend the operations of their malignant agents. They considered Jesus Christ as the Son of God, who came into the world for the rescue and happiness of miserable

mortals, oppressed by matter and evil beings; but they rejected our Lord's humanity, on the principle that every thing corporeal is essentially and intrinsically evil; and therefore they denied the reality of his sufferings. They set a great value on the beginning of the gospel of St John, where they fancied they saw a great deal of their æons or emanations under the term, *the Word, the Life, the Light, &c.* They divided all nature into three kinds of beings, viz. *hylic*, or material; *psychic*, or animal; and *pneumatic*, or spiritual. On the like principle they also distinguished three sorts of men; *material*, *animal*, and *spiritual*. The first, who were material, and incapable of knowledge, inevitably perished, both soul and body; the third, such as the Gnostics themselves pretended to be, were all certainly saved; the psychic, or animal, who were the middle between the other two, were capable either of being saved or damned, according to their good or evil actions. With regard to their moral doctrines and conduct, they were much divided. The greatest part of this sect adopted very austere rules of life, recommended rigorous abstinence, and prescribed severe bodily mortifications, with a view of purifying and exalting the mind. However, some maintained, that there was no moral difference in human actions; and thus, confounding right with wrong, they gave a loose rein to all the passions, and asserted the innocence of following blindly all their motions, and of living by their tumultuous dictates. They supported their opinions and practice by various authorities: some referred to fictitious and apocryphal writings of Adam, Abraham, Zoroaster, Christ, and his apostles; others boasted, that they had deduced their sentiments from a secret doctrine of Christ, concealed from the vulgar; others affirmed, that they arrived at superior degrees of wisdom by an innate vigour of mind; and others asserted, that they were instructed in these mysterious parts of theological science by Theudas, a disciple of St Paul, and by Matthias, one of the friends of our Lord. The tenets of the ancient Gnostics were revived in Spain, in the 4th century, by a sect called the *PRISCILLIANISTS*. At length the name *Gnostic*, which originally was glorious, became infamous, by the idle opinions and dissolute lives of the persons who bore it.

GNOU, or } in zoology. See CAPRA, N° IX.
GNU, }

(1.) * To GO. v. n. pret. *I went; I have gone.* [gan, Saxon. This was probably changed to *gone*, or *gang*, then contracted to *go*. *Went* is the preterite of the old verb *wend*.] 1. To walk; to move step by step.—

You know that love

Will creep in service where it cannot go. *Shak.*
—After some months those muscles become callous; and, having yielded to the extension, the patient makes shift to go upon it, though lamely. *Wifeman.* 2. To move; not stand still.—Rise, let us be going. *Matt.* xxvi. 46. 3. To walk solemnly.—If there be cause for the church to go forth in solemn procession, his whole family have such business come upon them that no one can be spared. *Hooker.* 4. To walk leisurely, not run.—

And must I go to him?

—Thou must run to him; for thou hast staid so long, that *going* will scarce serve the turn. *Shak.*
5. To march or walk a-foot.—I will only go through on my feet. *Num. xx. 19.* 6. To travel; to journey.—

From them I go,

This uncouth errand sole.

Milton.

7. To proceed; to make a progress.—

Thus others we with defamation wound,

While they stab us; and so the jell goes round.

Dryden.

8. To remove from place to place.—

I am in blood

Stept in so far, that, should I wade no more,

Returning were as tedious as go o'er. *Shak.*

9. To depart from a place; to move from a place; the opposite of *to come*.—

I hope it be not *gone*, to tell my lord

That I kiss aught but him. *Shak. Cymbel.*

At once, good-night:

Stand not upon the order of your *going*,

But go at once.

Shak. Marbeth.

—And when she had so said she went her way.

Yo. xi. 18.—I will let you go, that ye may sacrifice, only you shall not go very far away. *Ex. viii.*

18.—Colchester oysters are put into pits, where the sea goeth and cometh. *Bacon's Nat. Hist.*—

A young tall squire

Did from the camp at first before him go. *Cowley.*

Then I concur to let him go for Greece,

And with our Egypt fairly rid of him. *Dryden.*

Go first the master of thy herds to find,

True to his charge, a loyal swain and kind.

Pope's Odyssey.

10. To move or pass in any manner, or to any end.—

Though the vicar be bad, or the parson be evil,

Go not for thy tything thyself to the devil. *Tass. r.*

—She may go to bed when she list; all is as she will. *Shak.*—

You did wish that I would make her turn;

Sir, she can turn and turn, and yet go on. *Shak.*

—I am glad to see your lordship abroad: I heard say your lordship was sick: I hope your lordship goes abroad by advice. *Shak. Henry IV.*—The

mourners go about the streets. *Ezek. xii. 5.*—The

sun shall go down over the prophets, and the

day shall be dark over them. *Mat. iii. 6.*—Put e-

very man his sword by his side, and go in and

out from gate to gate throughout the camp.

Ex. xxxii. 27.—

The sun, which once did shine alone,

Hung down his head, and wish'd for night,

When he beheld twelve suns for one

Going about the world, and giving light. *Herbert.*

His seen, the rest at awful distance stood,

As if they had been there as servants set,

To stay, or to go on, as he thought good,

And not pursue, but wait on his retreat. *Dryd.*

—Turn not children going, till you have given

them all the satisfaction they are capable of. *Locke.*

—History only acquaints us that his fleet went up

the Elbe, he having carried his arms as far as that

river *Arbut.*—The last advice I give you relates

to your behaviour when you are going to be hang-

ed, which, either for robbing your master, for

housebreaking, or going upon the highway,

very probably be your lot. *Swift.*—

come for gold will go off with pewee

rather than return empty. *Swift.*

—Thou art in company with others.—Thou art

adorned with thy tabrets, and shalt

dances of them that make merry. *Job.*

Away, and with thee go the way

That seek't my friendship, and the way

—He goeth in company with the wicked

man, and walketh with wicked men.

8.—Whatever remains in story of

kingdom of old, is so obscure, I wish

that it may go along with those of

islands. *Temple.* 12. To proceed in

life good or bad.—And the Levites

away far from me, when Israel came

to me, I went astray away from me after they

shall even bear their iniquity. *Ezek.*

To proceed in mental operations.—

I was too far engaged myself for the

liking it, truly I should have kept

I had once again gone over it. *Dryd.*

have gone through the speculative

of the Divine Providence. *Hale's Orig.*

I hope, by going over all these

may receive some tolerable satisfaction

great subject. *South.*—If we go over

Christianity, we shall find that, in

particulars, they enjoin the same things

have made our duty more clear and

son.—In their primary qualities we

very little way. *Locke.*—I go over

this argument again, and enlarge a

on them. *Locke.*—They are not able

time to reckon, or regularly go over

rate series of numbers. *Locke.* 14.

road.—I will go along by the highway

ther turn to the right hand, nor to the

in. 27.—Who shall bemoan thee? Or

aside to ask how thou doest? *Jer. x.*

His horses go about

Almost a mile. *S.*

—I have endeavoured to escape into

freedom of a private scene, where a

his own way and his own pace. *Ten*

march in a hostile or warlike manner

You were advis'd his flesh was

Of wounds and scars, and the

spirit

Would list where most trade of d

Yet did you say go forth. *S.*

—We be not able to go up again

for they are stronger than we. *Act.*

Let us go down after the Philistines

spoil them until the morning light

36.—Thou art not able to go against

fight with him. *1 Sam. xvii. 33.*—

of Jacob shall be among the Gentiles

among the beasts of the forest; w

through, both treadeth down and tear

and none can deliver. *Mic. v. 8.* 1

state or opinion for better or worse

hearken to the king's words to go from

1 *Mac. ii. 22.*—The regard of the

in so great a danger, made all those

which went to wreck, to be light

parison of their lives and liberty. *Knolles*.
look upon men and matters with an evil
I are best pleased when things go back-
hich is the worst property of a servant of
or state. *Bacon*.—

goes to ruin, they themselves contrive
b the honey, and subvert the hive. *Dryd*.
d men, by their providence and good
ry, accommodating their expences to their
keep themselves from going backwards
world. *Locke*.—Cato, we all go into your
Addison. 17. To apply one's self.—See-
elf confronted by so many, like a resolute
ne went not to denial, but to justify his
lehood. *Sidney*.—Because this atheist goes
cally to work, he will not offer to affirm
the parts of the embryo could, accord-
explication, be formed at a time. *Bentley*.
have recourse to.—Dare any of you, hav-
tter against another, go to law before the
nd not before the saints? *1 Cor.* 19. To
t to do.—So extraordinary an example,
generate an age, deserves for the rarity,
was going to say, for the incredibility of it,
lation of all that knew him, and consider-
orth. *Locke*. 20. To shift; to pass life not
ell.—Every goldsmith, eager to engross to
as much as he could, was content to pay
r-it, rather than go without. *Locke*.—
they must have; but if they speak for this
that colour, they should be sure to go
it. *Locke*. 21. To decline; to tend to-
death or ruin. This sense is only in the
les going and gone.—

is far gone, and, truly, in my youth,
er'd much extremity for love,
near this. *Shak. Hamlet*.

be in party or design.—
ey with the vanquish'd prince and party go,
leave their temples empty to the foe. *Dryd*.
escape.—Timotheus himself fell into the
f Dositheus and Sosipater, whom he be-
with much craft to let him go with his life.
xii. 24. 24. To tend to any act.—
ere be some women, Silvius, had they
mark'd him

rcels as I did, would have gone near
all in love with him. *Shak. As you like it*.

be uttered.—His disciples personally ap-
among them, and ascertained the report
ad gone abroad concerning a life so full of
s. *Addison*. 26. To be talked of; to be
—It has the greatest town in the island
s under the name of Ano-Caprea, and is
al places covered with a very fruitful soil.
1. 27. To pass; to be received.—Because
r of my acquaintance set forth her praises
e, I will only repeat them, and spare my
ngue, since she goes for a woman. *Sidney*.
the man went among men for an old man
lays of Saul. *1 Sam.* xvii. 12.—A kind ima-
n makes a bold man have vigour and en-
e in his air and motion: it stamps value u-
s face, and tells the people he is to go for
h. *Collier*.—Clipping should be finally stop-
d the money which remains should go ac-
s to its true value. *Locke*. 28. To move

by mechanism.—This pope is decrepid, and the
bell goeth for him. *Bacon*.

Clocks will go as they are set; but man,
Irregular man's never constant, never certain.

Otway.

'Tis with our judgments as our watches, none
Go just alike, yet each believes his own. *Pope*.
29. To be in motion from whatever cause.—

The weyward sisters, hand in hand,
Posters of the sea and land,
Thus do go about, about. *Shak. Macbeth*.
—Cleft and washed money goes about, when the
entire and weighty lies hoarded up. *Waller*. 30.
To move in any direction.—Doctor, he is a curer
of souls, and you a curer of bodies: if you should
fight, you go against the hair of your professions.
Shak Merry Wives.—Shall the shadow go forward
ten degrees, or go back ten degrees? *2 Kings* xx.
9. 31. To flow; to pass; to have a course.—

The god I am, whose yellow water flows
Around these fields, and fattens as it goes,
Tyber my name. *Dryden's Æn*.

32. To have any tendency.—

Athenians, know
Against right reason all your counsels go;
This is not fair, nor profitable that,
Nor t'other question proper for debate. *Perf*.
33. To be in a state of compact or partnership.—
As a lion was bestriding an ox that he had newly
plucked down, a robber passing by cried out to
him, half shares: you should go your snip, says the
lion, if you were not so forward to be your own
carver. *L'Estrange*.—There was a hunting match
agreed upon betwixt a lion, an ass, and a fox,
and they were to go equal shares in the booty.
L'Estr. 34. To be regulated by any method: to
proceed upon principles—Where the multitude
beareth sway, laws that shall tend to the preser-
vation of that state must make common smaller
offices to go by lot, for fear of strife and divisions
likely to arise. *Hooker*.—We are to go by another
measure. *Spratt*.—The principles I there went on,
I see no reason to alter. *Locke*.—The reasons that
they went upon were very specious and probable.
Bentley. 35. To be pregnant.—

Great bellied women,
That had not half a week to go. *Shak. H. VIII*.
The fruit she goes with,

I pray that it good time and life may find. *Shak*.
—Of living creatures some are a longer time in
the womb, and some shorter: women go com-
monly nine months, the cow and the ewe about
six months. *Bacon*.—Some do go with their young
the sixth part of a year, or two over or under, that
is, about six or nine weeks: and the whelps of
these see not till twelve days. *Brown*.—

And now with second hopes she goes,
And calls Lucina to her throws. *Milton*.
36. To pass; not to remain.—She began to afflict
him, and his strength went from him. *Judg.* xvi.
19. When our merchants have brought them, if
our commodities will not be enough, our money
must go to pay for them. *Locke*. 37. To pass, or
be loosed; not to be retained.—

Then he lets me go,
And, with his head over his shoulder turn'd,
He seem'd to find his way without his eyes. *Shak*.
Let

Let go the hand of that arch heretick.

Shak. K. John.

38. To be expended.—Scholars are close and frugal of their words, and not willing to let any go for ornament, if they will not serve for use. *Felton.*
39. To be in order of time or place.—We must enquire farther what is the connexion of that sentence with those that go before it, and those which follow it. *Watts's Log.* 40. To reach or be extended to any degree.—Can another man perceive that I am conscious of any thing, when I perceive it not my self? No man's knowledge here can go beyond his experience. *Locke.* 41. To extend to consequences.—It is not one matter that either directs or takes notice of these: it goes a great way barely to permit them. *L'Estrange.* 42. To reach by effects.—Considering the cheapness, so much money might go farther than a sum ten times greater could do now. *Wilkins.* 43. To extend in meaning.—His voracious expressions go no farther than virtue may allow. *Dryden's Ovid.* 44. To spread; to be dispersed; to reach.

Whose flesh, torn off by lumps, the ravenous
foe

In morsels cut, to make it farther go. *Tate's Juu.*

45. To have influence; to be of weight; to be of value.—I had another reason to decline it, that ever uses to go far with me upon all new inventions or experiments; which is, that the best trial of them is by time, and observing whether they live or no. *Temple.*—'Tis a rule that goes a great way in the government of a sober man's life, not to put any thing to hazard that may be secured by industry, consideration, or circumspection. *L'Estr.*—Whatever appears against their prevailing vice goes for nothing, but is either not applied, or passing for libel and slander. *Swift.* 46. To be rated one with another; to be considered with regard to greater or less worth.—I think, as the world goes, he was a good sort of man enough. *Arbuth.* 47. To contribute; to conduce; to concur; to be an ingredient.—The medicines which go to the ointments are so strong, that, if they were used inwards, they would kill those that use them. *Bacon's Nat. Hist.*—More parts of the greater wheels go to the making one part of their lines. *Gloucester's Scylla.*—There goes a great many qualifications to the completing this relation: there is no small share of honour and conscience and sufficiency required. *Coluer.*—I give the sex their revenge, by laying together the many vicious characters that prevail in the male world, and shewing the different ingredients that go to the making up of such different humours and constitutions. *Addison.*—Something better and greater than high birth and quality must go toward acquiring those demonstratious of publick esteem and love. *Swift to Pope.* 48. To fall out, or terminate; to succeed.—

Your strong passion much more than your
right,

Or else it must go wrong with you and me.

Shak.

How'er the business goes, you have made fault
I th' boldness of your speech. *Shak.*

—I will send to thy father, and they shall declare unto him how things go with thee. *Job. x. 8.*—In many armies, if the matter should be tried by duel

between two champions, the victory falls
the one side; and yet, if it be tried by the
it would go on the other side. *Bacon.*—It is
the constant observation of all, that if a
had a cause depending in the court, it was
one but it went against him. *South.*—At
of the prince's law, the father, calling
ing how things would go, went over, the
others, to the prince. *Saunders.*—Whether it
goes for me or against me, you must pay
reward. *Watts's Logic.* 49. To be in
This sense is impersonal.—It shall go in
that is left in his tabernacle. *Job. xx.*—
his name Beriah, because it went evil
house. *1 Corin. vi. 23.* 50. To proceed,
or consequence.—

How goes the night, boy?

—The moon is down: I have not
clock;

And she goes down at twelve.

I had hope,

When violence was ceased, and war
All would have then have gone well.

—Duration in itself is to be considered as,
in one constant, equal, uniform course.
51. To Go about To attempt; to endeavour
to set one's self to any business—

O dear father,

It is thy business that I go about.

I told him, but so found, as well I do
He could not lose himself, but went about
His father's business.

—Which answer exceedingly united the
minds to them, who concurred only with
as they saw them like to prevail in what
went about. *Clarendon.*—Some men, from
persuasion that they cannot reform their
root out their old vicious habits, never set
as attempt, endeavour, or go about it.
—Either my book is plainly enough writ
be rightly understood by those who peruse
attention and indifference, or else I have
mine so obscurely that it is in vain to go
mend it. *Locke.*—They never go about, a
mer times, to hide or palliate their vices;
pose them freely to view. *South.* 52. To Go
To err; to deviate from the right.—If an
wife go aside, and commit a trespass again
Numb. v. 32. 53. To Go between. To inter
to moderate between two.—I did go between
as I said; but more than that, he loved her
indeed, he was mad for her. *Shak.* 54.

by. To pass away unnoticed.—
Do not you come my tardiness to chide
That laps'd in time and passion, lets go
Th' important acting of your dread covet

So much the more our carver's excel
Which lets go by some sixteen years, and
her

As she liv'd now.

What's that to us? The time goes by;

55. To Go by. To find or get in the course
In argument with men a woman ever
Goes by the worse, whatever be her cause

—He's sure to go by the worst that conter

try : that is too mighty for him. *L'Ess.*
 57. To observe as a rule.—'Tis not
 posed, that by searching one can possi-
 ge of the size and form of a stone ; and
 e frequency of the fits, and violence of
 oms, are a better rule to go by. *Sharr.*
 o down. To be swallowed ; to be re-
 ot rejected.—Nothing so ridiculous, no-
 rpossible, but it goes down whole with
 tth and earnest. *L'Ess.*—Folly will not
 down in its own natural form with dis-
 idges. *Dryden.*—If he be hungry, bread
 own. *Locke.*—Ministers are so wise to
 r proceedings to be accounted for by
 at a distance, who often mould them in-
 ems that do not only go down very well
 ouse, but are supplies for pamphlets in
 it age. *Swift.* 58. To Go in and out.
 : business of life.—The Lord shall pre-
 going out and thy coming in. *Pf.* 59.
 and out. To be at liberty.—He shall
 out, and find pasture. *John.* x. 9. 60.
 f. To die ; to go out of life : to de-

mid the friends we miss were safe arrived :
 rust go off ; and yet, by these I see,
 t a day as this is cheaply bought. *Shak.*
 manner he went off, not like a man that
 out of life, but one that returned to his
 tier. 61. To Go off. To depart from

eaders having charge from you to stand,
 it go off until they hear you speak. *Shak.*
 o on. To make attack.—

Bold Cethegus,

valour I have turn'd into his poison,
 ais'd so to daring, as he would
 pon the Gods.

Ben Jonson.
 62. To proceed.—He found it a great
 ep that peace, but was fain to go on in his
 nez.—He that desires only that the work
 id religion shall go on, is pleased with it,
 s the instrument. *Taylor.*—I have esca-
 threats of ill fits by these motions : if
 , the only poltice I have dealt with is
 the belly of a fat sheep. *Temple.*—To
 the soul as going on from strength to
 to consider that she is to shine for ever
 accessions of glory, and brighten to all
Addison.—Go on in the glorious course
 undertaken. *Addison.*—Copious bleeding
 t effectual remedy in the beginning of
 ; but when the expectoration goes on
 y, not so proper, because it sometimes
 it. *Arbutnot.*—I have already hand-
 abuses during the late management,
 venient time shall go on with the rest.
 Then we had found that design imprac-
 e should not have gone on in so expen-
 nagement of it. *Swift.*—Many clergy-
 in so diminutive a manner, with such
 slots and interlineations, that they are
 : to go on without perpetual hesitations,
 dinary expletives. *Swift.*—I wish you
 go on with that noble work. *Berkley.*
 o over. To revolt ; to betake himself
 party.—In the change of religion, men
 r understandings don't so much confi-

dier the principles as the practice of those to whom
 they go over. *Addison.*—Power, which, accord-
 ing to the old maxim, was used to follow, is now
 gone over to money. *Swift.* 65. To Go out. To
 go upon any expedition.—You need not have
 pricked me : there are other men fitter to go out
 than I. *Shak.* 66. To Go out. To be extinguished.

Think'st thou the fiery fever will go out,

With titles blown from adulation ? *Shak.*

—Spirit of wine burned till it go out of itself, will
 burn no more. *Bacon.*—The care of a state, or an
 army, ought to be as constant as the chymist's fire,
 to make any great production ; and if it goes out
 for an hour, perhaps the whole operation fails.
Temple.—

The morning, as mistaken, turns about ;

And all her early fires again goes out. *Dryden.*

—Let the acquaintance be decently buried, and
 the flame rather go out than be smothered. *Collier*
of Friendship.—

My blood runs cold, my heart forgets to
 heave,

And life itself goes out at thy displeasure.

Addison's Cat.

And at her felt approach and secret might,

Art after art goes out, and all is night. *Pope.*

67. To Go through. To perform thoroughly ; to
 execute.—Finding Pyrocles every way able to go
 through with that kind of life, he was desirous for
 his sake as for his own to enter into it. *Sidney.*—

If you can as well go through with the statute laws
 of that land, I will think you have not lost all your
 time there. *Spenser.*—Kings ought not to suffer

their council to go through with the resolution and
 direction, as if it depended on them, but take the
 matter back into their own hands. *Bacon.*—He

much feared the earl of Arim had not the linets
 of mind enough to go through with such an under-
 taking. *Ciarendon.*—The amazing difficulty and

greatness of his account will rather terrify than in-
 form him, and keep him from setting heartily a-
 bout such a task, as he despairs to go through with

it. *South.*—The powers in Germany are borrow-
 ing money, in order to go through their part of
 the expence. *Addison.* 68. To Go through. To

suffer ; to undergo.—I tell thee that it is absolute-
 ly necessary for the common good that thou
 shouldst go through this operation. *Arbutnot.*—

69. To Go upon. To take as a principle.—This
 supposition I have gone upon through those papers.
Addison. 70. The senses of this word are very

indistinct : its general notion is motion or progre-
 sion. It commonly expresses passage from a place,
 in opposition to come. This is often observed

even in figurative expressions. We say, the words
 that go before and that come after : to day goes
 away and to-morrow comes.

(2.) To Go. This verb is one of the many Eng-
 lish words which are often used without meaning,

in the bombastic dialect of modern affectation.
 That eminent and judicious critic, the late prof.

J. Hay Beattie has justly ridiculed the fashionable
 phrases,—To go to jay, To go to prove, To go into

a variety of matter, &c. in his humorous dialogue
 in the shades between Dean Swift, a London

bookseller and Mercury, which we have repeat-
 edly quoted. See BEATTIE, § 2 ; BLUSH, § 2 ;

To FEEL, § 3, &c. "Indeed," (says Mercury

to

to Swift) "the words, *line, meet, marked, feel, go*, and some others, may be used on all occasions, whether they have *meaning* or not.—His arguments *went to prove*, &c. Accounts from Spain *go to say*, that, &c. This because more verbose, is thought more elegant than—Accounts from Spain *say*—His arguments proved, &c."

(3.) * *Go to. interj.* Come, come, take the right course. A scornful exhortation.—

Go to, then, O thou far renowned son
Of great Apollo; shew thy famous might
In medicine.

Spenser.

Go to, go to, thou art a foolish fellow;

Let me be clear of thee.

Shak.

My favour is not bought with words like these:

Go to; you'll teach your tongue another tale.

Roscoe.

(1.) GOA, an island of the Indian Ocean near the W. and Malabar coast of Indostan, separated from the continent by the Mandova. It is 22 m. long and 6 broad, according to Dr Brookes; but Mr Cruttwell makes it only 24 in circumference. The soil is fertile, and produces excellent fruits, corn, &c. The climate is moderate from Oct. to March; in April and May very sultry, and from June, to Sept. almost constant rain.

(2.) GOA, a strong city of Asia, the capital of the above island. It was taken by the Portuguese in 1508, and is the chief town of all their settlements on this side the Cape of Good Hope. It is built on the N. side of the island, having the convenience of a fine river, capable of receiving ships of the greatest burden, where they lie within a mile of the town. Its banks are beautified with churches, castles, and gentlemen's houses. The air being unwholesome, it is not so well inhabited as formerly. The viceroy's palace is a noble building; and stands at a small distance from the river, over one of the gates of the city, which leads to a spacious street, terminated by a beautiful church. This city contains a great number of handsome churches, convents, and cloisters, with a stately hospital; all well endowed, and kept in good repair. The market-place takes up an acre of ground; and in the shops may be had the produce of Europe, China, Bengal, and other countries. Every church has a set of bells, some of which are continually ringing. There are many Indian converts; but they generally retain some of their old customs; particularly they cannot be brought to eat beef. The clergy are numerous and illiterate; the churches are finely embellished, and have great numbers of images. In one of these churches, is a magnificent chapel of St Francis Xavier, whose tomb it contains: the tomb is of fine black marble from Lisbon; on the 4 sides of it the principal actions of his life are elegantly carved in basso relievo; the figures are admirably executed: It's form is pyramidical, and terminates with a coronet of mother-of-pearl. Within this chapel are excellent paintings by Italian masters; the subjects chiefly from Scripture. The tomb and chapel, must have cost an immense sum, the Portuguese justly esteem them the greatest rarities in the place. The houses are large and showy, but poorly furnished. Greens, fruits, roots, with a little bread, rice, and fish, are the principal diet of the natives, though they have hogs and fowls in plenty. The

river's mouth is defended by several fortifications, with large cannon on both sides the residence of a captain general, and commander of all the Portuguese forces in India. They have two regiments of European infantry, 3 legions of sepoy, 3 troops of horse, and a militia; in all, about 5000. Goa is at present in little estimation with the European powers; indeed the bigotry of the natives and their superstitious attachment to the idol so general, that the country formerly inhabited by a few thinly inhabitants, the chief part of whose inhabitants have been civilized: for they will not suffer any European to live within the precincts of the city, and these few are unable to carry on any dry or manufactures of the country.

Portugal is obliged to send annually 200,000 rials of money, to defray the expences of the army which is generally swallowed up by the soldiers. There was formerly an idol in Goa, but it is now abolished: the idol remains, and its black outside is a fit emblem of the cruel and bloody transactions that go on within its walls. Provisions are to be had in great plenty and perfection. The chief trade of Goa is in Arrack. Lon. 73. 46. E. Lat. 15. 28. N.

(3.) GOA, a town in the island of Ceylon, on the S. coast. Lon. 120. 30. E. Lat. 6. 30. N.

* GOAD, *n. s.* [*gad*, Saxon.] A sharp instrument with which oxen are driven forward. Oft in his harden'd hand a goad he

* *To GOAD. v. a.* [from the noun.] To drive with the goad. 1. To incite or urge forward; to instigate; to drive forward.

To sin in loving virtue.

Goaded with most sharp occasions
Which lay nice manners by, I put
The use of your own virtues.

Of all that breathes the various p
Stung with delight, is *goaded* on by

(1.) GOADBY, Robert, an eminent English writer, who was born at Sherborne in Dorsetshire, where he compiled an *Illustration of the Holy Scriptures* in 3 vols fol. and a work entitled, *The Christian's Instructor*, the life of Bonaventura, &c. and established a new paper in the western counties, entitled the *Sherborne Post*, which has a great circulation. He d. 12th, 1778.

(2, 3.) GOADBY, 2 villages in Leicestershire.

(1.) * GOAL, *n. s.* [*gaule*, French.] A pole, set up to mark the bounds of a race, or a landmark set up to bound a race, or a marked out to which racers run.—

As at the Olympian games, or Py
Part curb their fiery steeds, or spur
With rapid wheels.

And the slope sun his upward be
Shoots against the dusky pole,
Pacing toward the other goal.

2. The starting post.—

Hast thou beheld, when from the
Start,

ithful charioteers with heaving heart
the race? *Dryden.*

al purpose; the end to which a design
or poet has always the *goal* in his eye,
sets him in his race: some beautiful de-
he first establishes, and then contrives
, which will naturally conduct him to
Dryden.—

individual seeks a several *goal*;
iv'n's great view is one, and that the
ole. *Pope.*

in, who here seems principal alone,
acts second to some sphere unknown;
s some wheel, or verges to some *goal*;
: a part we see, and not a whole. *Pope.*

* GOB. *n. f.* [*gobe*, French.] A small quanti-
ty. A low word.—Do'st think I have so little wit
as to part with such a *gob* of money? *L'Estrange.*

GOBAN, a town of Persia, in Chusistan.

* GOBBET. *n. f.* [*gobe*, Fr.] a mouthful; as
much as can be swallowed at once.—

Therewith she spew'd, out of her filthy maw,
A flood of poison, horrible and black,

Full of great lumps of flesh and *gobbets* raw. *Spens.*

By devilish policy art thou grown great,

And like ambitious Sylla, overgorg'd

With *gobbets* of thy mother's bleeding heart.

Shakspeare's Henry VI.

—The cooks, slicing it into little *gobbets*, prick it
on a prong of iron, and hang it in a furnace. *Sar-
dys's Travels.*—

The giant gorg'd with flesh, and wine, and
blood,

Lay stretch'd at length, and snoring in his den,
Belching raw *gobbets* from his maw, o'ercharg'd

U u u

With

With purple wine and cruddled gore confus'd.

Addison.

* To GOBBET. *v. a.* [from the noun] To swallow at a mouthful. A low word.—Down comes a kite powdering upon them, and gobbets up both together. *L'Estrange.*

(1.) GOBBI, a province of Loango, in Africa, between CAMMA, and Cape Lopez Gonzalvo.

(2.) GOBBI, the capital of the above prov. lies about a day's journey from the sea. Their rivers abound with a variety of fish; but are infested with sea horses, which do great mischief both by land and water. The principal commerce with the natives is in logwood, elephants teeth, and tails, the hair of which is highly valued.

* To GOBBLE. *v. a.* [gobber, to swallow, old Fr.] To swallow hastily with tumult and noise.—The sheep were so kren upon the acorns, that they gobbled up now and then a piece of the coat along with them. *L'Estrange.*

Of last year's corn in barn great store;

Fat turkeys gobbling at the door. *Prior.*

The time too precious now to waste,

And supper gobbled up in haste,

Again affix'd to cards they ran. *Swift.*

* GOBBLER. *n. s.* [from gobble.] One that devours in haste; a gormand; a greedy eater.

GOBBO CORTONESE. Peter Paul, a celebrated painter of fruit and landscapes, born at Cortona in 1520. He learned the principles of design from his father; was afterwards the disciple of Crescenzio at Rome, and perfected himself in his profession, by copying after nature, with judgment and accuracy. By his skill in the chiaro-scuro he gave an exact and expressive roundness to his fruits, &c. But he chiefly excelled in colouring. He died in 1640.

GOBCEIN, a town of Germany, in the Palatinate of the Rhine, 18 miles SE. of Philipshurg. Lon. 8. 16. E. Lat. 49. 6. N.

(1.) GOBELIN, Giles, a famous French dyer, in the reign of Francis I. who discovered a method of dying a beautiful scarlet, and his name has been given ever since to the finest French scarlets.

(2.) GOBELIN, a small river of France, in the department of Paris.

(3.) GOBELIN, *n. s.* in commerce, a fine kind of French tapestry, first manufactured at Paris, in 1666.

* GO-BETWEEN. *n. s.* [go and between.] One that transacts business by running between two parties. Commonly in an ill sense.—Even as you came in to me, her assistant, or go between, parted from me: I say I shall be with her between ten and eleven. *Shak. Merry Wives of Windsor.*

GOBIER, Charles, a French author, born at St Malo, in 1644. He was a Jesuit, and being secretary to the missions of that society, wrote *Lettres curieuses et edifiantes*, containing the natural history, geography and policy, of the countries explored by the Jesuits; and *Histoire des Isles Mariannes*. He died at Paris in 1708.

GOBIN, ST, a town and castle of France, in the dep. of Aisne, and late prov. of Picardy, near Fere. It has a manufactory of fine plate glass. Lon. 3. 23. E. Lat. 49. 29. N.

GOBIUS, in ichthyology, a genus of fishes belonging to the order of thoracici. They have two

holes between the eyes, 4 rays in the of the gills, and the belly fins are unival form. There are 8 species, distinguished by the number of rays in their (1.) * GOBLET. *n. s.* [goblet, Fr.] or cup, that holds a large draught.—

My figur'd goblets for a dish of wine

We love not loaded boards, a

hose end is destruction, whose *god* is
Phil. iii.—

I am not Licio,
at scorns to live in this disguise,
one as leaves a gentleman,
s a *god* of such a cullion. *Shak.*

§ 1. *def.* 1. See CHRISTIANITY,
ICS, MORAL PHILOSOPHY, and THE-

§ 1. *def.* 2.) is also used in speaking of
ies of the heathens, many of whom

were only creatures to which divine honours and
worship were superstitiously paid. The Greeks
and Latins did not mean by the name *God*, an all-
perfect being, whereof eternity, infinity, omnipre-
sence, &c. were essential attributes: with them,
the word only implied an excellent and superior
nature; and accordingly they give the appellation
gods to all beings of a rank or class higher and
more perfect than that of men; and especially to
those who were interior agents in the divine admi-
nistration, all subject to the one Supreme. Thus
men themselves, according to their system, might
become gods after death; inasmuch as their souls
might attain to a degree of excellence superior to
what they were capable of in life. See MYTHO-
LOGY.

* *To God.* v. a. [from the noun.] To deify; to
exalt to divine honours.—

This last old man,
Lov'd me above the measure of a father;
Nay, *godded* me, indeed. *Shak. Coriolanus.*

GODAH, a town of Asia, in Indostan.

(1.) GODALMIN, or } a parish of England, in
(1.) GODALMING, } Surry which is divided
into 9 tythings. It is agreeably diversified with
hills and valleys. The Wye runs through it, sup-
plies it with fish, and drives 4 corn and 2 paper
mills. A bridge was built over it in 1785. This
parish abounds with a peculiar kind of peats, that
are reckoned better than pit coals.

(2.) GODALMING, a town in the above parish,
(N^o 1.) on the Wye, where it divides into several
streams. It is a corporation, and by its charter
the chief magistrate is a warden chosen yearly,
with 8 assistants. It carries on manufactures of
kerseys and stockings; and is famous for liquorice.
It has a market on Wed. and fairs Feb. 13, Sept.
28, and Nov. 28. In 1739, the small-pox carried
off above 500 persons in three months, which was
more than a 3d of the inhabitants. It lies 4 miles
SW. of Guildford and 35 of London. Lon. 0. 34.
W. Lat. 51. 13. N.

GODANNA, a town of Persia, in the prov. of
Irak, 105 miles E. of Ispahan.

GODAVERY, GODURY, or GONDA, a river
of Indostan, which rises about 70 miles NE. of
Bombay, and whose waters, at least in the upper
part of its course, are esteemed *sacred* by the Hin-
doo; who believe that ablutions performed in
them have a greater religious efficacy than those
performed in any other river. After crossing Dow-
latabad and Golconda, from W. to E. it runs SE.
and receives the Bain Gonga; about 90 miles from
the sea, it divides into two large branches at Raja-
mundry; and these subdividing into inferior bran-
ches, its waters fall into the Bay of Bengal by
various mouths; which form harbours at Bandar-
malanka, Coringa, Ingeram, Narlapour, Yalam,
&c. between Lon. 81. 40. and 82. 50. E. and be-
tween Lat. 16. 20. and 16. 50. N.

* GODCHILD. n. s. [*god* and *child*.] A term of
spiritual relation; one for whom one became spon-
sor at baptism, and promised to see educated as a
Christian.

GODDARD, Jonathan, M. D. an eminent phy-
sician and chemist, and one of the first promoters
of the Royal Society. He was born about 1617;
educated and graduated at Oxford; was elected a

fellow of the college of physicians in 1646, and appointed reader of the anatomical lecture in 1647. Oliver Cromwell appointed him first physician to the army, a member of the council of state, and warden of Merton college. But he lost this office on the restoration. He was elected professor of physic in Gresham college, in 1655. He prepared all his own medicines; and in 1668, published a treatise, recommending that practice to all physicians. He was the inventor of the *Gutta Anglicana*. He died of an apoplectic fit in 1674. Bishop Seth Ward says, he was the first Englishman who made a telescope.

* **GODDAUGHTER**. *n. f.* [*god* and *daughter*.] A girl for whom one became sponsor in baptism. A term of spiritual relation.

(1.) * **GODDESS**. *n. f.* [*from god*.] A female divinity.—

Hear, nature, hear; dear *godde*s, hear a father!
Shakespeare.

A woman I forswore; but I will prove,
Thou being a *godde*s, I forswore not thee:
My vow was earthly, thou a heav'nly love. *Shak.*

I long have waited in the temple nigh,
Built to the gracious *godde*s's Clemency;
But rescue thou the pow'r. *Dryden's Fob.*

From his seat the *godde*s born arose,
And thus undaunted spoke. *Dryden's Fob.*
—When the daughter of Jupiter presented herself
among a crowd of *godde*s's, she was distinguished
by her graceful stature and superior beauty. *Addis.*

Modesty with-held the *godde*s's train. *Pope.*
(2.) **GODDESSES**. The ancients had almost as
many *godde*s's as gods: such were Juno, Minerva,
Diana, &c. The virtues, graces, and principal
advantages of life; truth, justice, piety, liberty,
fortune, victory, &c. were all represented as
*godde*s's; which was paying no small compliment
to the sex. But to balance this, the Furies,
Harpies, &c. were also represented as *godde*s's.

* **GODDESS-LIKE**. *adj.* [*godde*s and *like*.] Resembling a *godde*s.

Then female voices from the shore I heard;
A maid amidst them *godde*s-like appear'd. *Pope.*
GODDINGTON, two small towns of England, in Kent and Oxfordshire.

GODEAU, Anthony, bishop of Grasse and Vence, in France, was born at Dreux, in 1605. He was a very voluminous writer. His principal works are, 1. *An ecclesiastical history*, in 3 vols. fol. containing the first 8 centuries, as he never finished more. 2. *Translation of the Psalms into French verse*; which was so well approved, that even those of the reformed religion preferred it to that of Marot. He died in 1671.

GODERVILLE, a town of France, in the dep. of the Lower Seine, 9 miles NE. of Montivilliers, and 15 NW. of Gaudebec.

(1.) * **GODFATHER**. *n. f.* [*god* and *father*.] The sponsor at the font.—He had a son by her, and the king did him the honour to stand *godfather* to his child. *Bacon's Henry VII.*—Confirmation, a profitable usage of the church, transferred from the apostles, consists in the child's undertaking in his own name the baptismal vow; and, that he may more solemnly enter this obligation, bringing some

godfather with him, not now, as in bapt. procurator. *Hammond.*

(2.) **GODFATHERS** and **GODMOTHERS**: sons who, at the baptism of infants, a their future conduct, and solemnly promise they will renounce the devil and all his works, follow a life of piety and virtue; and themselves under an indispensable obligation to instruct them, and watch over their conduct. This custom is of great antiquity in the Christian church, and was probably instituted to prevent being brought up in idolatry, in case the child died before they arrived at the years of discretion. The number of *godfathers* and *godmothers* formerly great, but is reduced to 2, in the church of Rome; and 3, in the church of England.

(1.) **GODFREY** of Bouillon, or Boulogne, of Lorraine, a most celebrated crusader, and general. He was chosen general of the Christians who undertook the recovery of the Holy Land, and led them to prepare for the war. He took Jerusalem from the Turks in 1099; and was made king of Jerusalem. His piety would not permit him to wear gold in the city where his Saviour was crowned with thorns. The sultan of Egypt afterwards sent a terrible army against him; which he defeated, with the slaughter of about 100,000 of the enemy. He died in 1106.

(2.) **GODFREY**. See **GODMOTHER**.
GODHEAD, or **GOOD HOPE**, a sea in W. Greenland. Lon. 50. 10. W. Lat. 70. 10. N.

* **GODHEAD**. *n. f.* [*from god*.] A deity; divinity; divine nature. It is used of idols and of the true God.—

Be content;

Your low-laid son our *godhead* will adore
At the holy mount

Of heav'n's high-seated top, th'imperial
Of *godhead*, fix'd for ever firm and fast
The filial pow'r arriv'd. *Milton's*

So may thy *godhead* be content,
So the returning year be bl. st.

2. A deity in person; a god or *godhead*: your *godheads* to borrow of men, men like the gods. *Shakespeare's Timon.*—

Adoring first the *genius* of the place
The nymphs and native *godheads* yet
Dry.

GODIVA, a lady of the 11th century, celebrated for an uncommon act of generosity and spirit, to the people of Coventry. See **C** N° 1.

* **GODLESS**. *adj.* [*from god*.] Without duty to God; atheistical; wicked; impious.—Of these two sorts of men, but the one has utterly no knowledge of the other studies how to persuade thee there is no such thing to be known. *Ham.*

That *godless* crew

Rebellious.

For faults not his, for guilt and crime
Of *godless* men, and of rebellious sin
Ham his ungrateful country lent,
Their best Camillus, into banishment

* **GODLIKE**. *adj.* [*god* and *like*.] Resembling a divinity; supremely excellent.

Adam his illustrious guest besought,
us the *godlike* angels answer'd mild. *Milt.*
ng and much revolving in his breast,
est the mighty work he might begin
iour to mankind, and which way first

his *godlike* office now mature. *Milton.*
rince shall be so wise and *godlike*, as, by
1 laws of liberty, to secure protection
ragement to the honest industry of man-
ke.

GODLING. *n. f.* [from *god.*] A little divini-
mutive god.—

puny *godlings* of inferior race,
bumble statues are content with brass.

Dryden's Juv.

GODLINESS. *n. f.* [from *godly.*] 1. Piety to
General observation of all the duties
l by religion.—Virtue and *godliness* of life
ed at the hands of the minister of God.

GODLY. *adj.* [from *god.*] 1. Pious towards
rant that we may hereafter live a *godly*,
, and sober life. *Com. Prayer.* 2. Good;
; religious.—Help, Lord, for the *godly*
th, for the faithful fail among the chil-
en. *Pf. xii.* 1.—The same church is real-
this world, in relation to all *godly* per-
ained in it, by a real infused sanctity.

GODLY. *adv.* Piously; righteously. By
should be *godlily*, but the repetition of
le is too harsh.—The apostle St Paul
that every one that will live *godly* in
us must suffer persecution. *Hooker.*

GODLYHEAD. *n. f.* [from *godly.*] Goodness;
ness. An old word.—

his, and many more such outrage,
your *godlyhead* to assuage
ricorous rigour of his might. *Spenser.*

GODMAN. *n. f.* an epithet applied to our Savi-
the divine and human natures being u-
is person.

GODMANCHESTER, a borough of Hunt-
re, 16 miles from Cambridge, and 57
don. It has a bridge over the Ouse,
to Huntingdon; was formerly a Ro-

by the name of *Durosponte*, where
man coins have been often dug up;
ding to old writers, in the time of the
was the see of a bishop, and had a castle
ne Gorman a Danish king, from which

was called GORMANCHESTER. It is
a fertile soil, abounding with corn. It is
no town in England kept more ploughs
than this has done. The inhabitants for-
rived their kings with nine score ploughs
, finely adorned with trappings, &c.
made it a corporation, under 2 bailiffs
tendants. Here is a school, called the
nmar School of queen Elizabeth. On
de of the town is an ancient seat of the
ndwich. Near this place, in the Lon-
between Huntingdon and Caxton, is a
known to travellers by the name of *Beg-*

GODMANHAM, a town in Yorkshire.

GODMANSTON, a town in Dorsetshire.

GODMOTHER. *n. f.* [*god* and *mother.*] A

woman who has undertaken sponson in baptism.
A term of spiritual relation.

(2.) **GODMOTHERS.** See **GODFATHER**, § 2.

(1.) **GODOLPHIN**, John, an eminent English
civilian, born in the island of Sicily, in 1617, and
educated at Oxford. In 1642-3, he was created
LL. D. in 1653, he was appointed one of the
judges of the admiralty; and at the Restoration,
he was made one of the king's advocates. He was
esteemed as great a master of divinity as of law;
and published, 1. The holy limbeck. 2. The holy
arbour. 3. A view of the admiral's jurisdiction.
4. The orphan's legacy. 5. *Repertorium canonicum*,
&c. He died in 1678.

(2.) **GODOLPHIN**, in geography, a hill of Eng-
land, in Cornwall, E. of Mount's Bay, and 4 miles
from Market-Jew; famous for its tin mines.

(1.) **GODRA**, a circar of Indostan, in Guzerat.

(2.) **GODRA**, the capital of the above circar, 55
miles E. of Amedabad. Lon. 73. 40. E. Lat. 22.
50. N.

GODSHILL, a hill in the Isle of Wight.

* **GODSHIP.** *n. f.* [from *god.*] The rank or cha-
racter of a god; deity; divinity.—

Discourfing largely on this theme,

O'er hills and dales their *godships* came. *Prior.*

GOD'S MERCY, ISLANDS OF, four isles at the
NW. extremity of Hudson's Straits. Lon. 73. 0.
W. Lat. 63. 45. N.

* **GODSON.** *n. f.* [*god* and *son.*] One for whom
one has been sponsor at the font.—

What, did my father's *godson* seek your life?

He whom my father named? your Edgar? *Shak.*

GODSTONE, a village in Surry.

GODSTOW, a place NW. of Oxford, in an
island formed by the Isis, after it is joined by the
Evenlode. It is famous for fish, but more so for
the ruins of that nunnery, which Rosamond quit-
ted for the embraces of Henry II. The natives
show a great hole in the earth, where, they say,
is a subterraneous passage, under the river to
Woodstock, by which she used to pass and repass.
Little more now remains than ragged walls, scat-
tered over a considerable extent of ground. An
arched gateway, and another venerable ruin, part
of the tower of the conventual church, are still
standing. Near the altar in this church Rosamond
was buried, but the body was afterwards remo-
ved by order of a bishop of Lincoln. The only
entire part is small, formerly a private chapel.
Not many years ago, a stone coffin, said to have
been Rosamond's, was to be seen here. The cha-
pel now serves for a stable.

GODURY. See **GODAVERY**.

* **GODWARD.** *adj.* To *Godward* is toward God.
So we read, *Hæc Arethusa tenus, for bælenus Are-*
thusa.—And such trust have we through Christ to
Godward. 2 *Cor.*

GODWICK, a village in Norfolk.

(1.) **GODWIN**, earl of Kent. See **ENGLAND**,
§ 18.

(2.) **GODWIN**, Francis, successively bishop of
Landaff and Hereford, was born in 1567. He was
the son of Dr Thomas Godwin, bishop of Bath
and Wells; and was a good mathematician, an
excellent philosopher, a pure Latinist, and an ac-
curate historian. He understood the true theory
of the moon's motion a century before it was ge-
nerally

generally known. He first started those hints afterwards pursued by Bp. Wilkins, in his *Secret and Swift messenger*, and published *A catalogue of the lives of English bishops*. He has been accused of flattery, in disposing of preferments, to provide for his children. He died in 1648.

(3.) GODWIN, Mrs. See WOLLSTONECRAFT.

(4.) GODWIN, Thomas. See GODWYN, N° 2.

(5.) GODWIN SANDS. See GOODWIN, N° 3.

(1.) * GODWIT. *n. f.* [*god*, and *wita*, an animal.] A bird of particular delicacy.—

Not ortolan nor godwits crown his board.

Cowley.

(2.) GODWIT. See SCOLOPAX.

(1.) GODWYN, E. of Kent. See ENGLAND, § 17.

(2.) GODWYN, Thomas, a learned English author born in 1517, master of the free-school at Abington in Berkshire; where he educated many youths, who became eminent in church and state. He was a man of great learning: He wrote *Historia Romana antiquiora*, *Synopsis antiquitatum Hebraicarum*, *Moses & Aaron*, *Florilegium Pharaicon*, &c. He died in 1642.

* GODVELD. } *adv.* [corrupted from *God*

* GODVELD. } *shield* or *protecl.*] A term of thanks. Now not used.—

Herein I teach you,

How you should bid *godveld* us for your pains,
And thank us for your trouble. *Shak. Macbeth.*

* GOEL. *adj.* [*golen*, Saxon.] Yellow. An old word.—

In March at the furthest, dry season or wet,
Hop roots so well chosen let skilful go set;

The *goeler* and younger, the better I love;
Well gutted and pared, the better they prove.

Tupper.

GOELANS, a promontory of N. America on the N. side of Lake Ontario, 33 miles SW. of Fort Frontinac.

GOELL, a town in Holstein, near Oldenburg.

GOELWARA, a circar of Indostan in Guzerat, on the W. coast of the Gulf of Cambaya.

* GOER, *n. f.* [from *go*.] 1. One that goes; a runner.—

I would they were in Africk both together,
Myself by with a needle, that I might prick
The *goer* back. *Shak. Cymbeline.*

Such a man

Might be a copy to these younger times;
Which follow'd well, would now demonstrate
them

But *goers* backward. *Shak. All's well.*

—Nothing could hurt either of us so much as the intervening officious impertinence of those *goers* between us, who in England pretend to intimacies with you, and in Ireland to intimacies with me. *Pope to Swift.* 2. A walker; one that has a gait or manner of walking good or bad.—The earl was so far from being a good dancer, that he was no graceful *goer*. *Wotton.* 3. The foot. Obsolete,

A double mantle, cast

A'thwart his shoulders, his faire *goers* grac'ft
With fitted shoes. *Chapman.*

GOEREE, William, a learned bookseller of Amsterdam, born at Middleburg, in 1635. He was a man of taste, and wrote, 1. A General Introduction to the Art of Painting: 2. A Treas-

ure on the principles of Architecture, Jewish Antiquities; printed at Utrecht, in 2 vols. folio. He died at Amsterdam.

(1.) GOES, or TER-GOES, a town of the vian republic, in the dept. of the Meuse, devant prov. of Zealand; seated on the N. of the isle of S. Beveland, of which it is a tal, on an arm of the Scheldt, from whence a canal. It was nearly destroyed by action of the sea, in 1548: In 1564, great it was burnt: The Dutch took it in 16 Prince Maurice fortified it; so that it has gates and 4 bastions. In 1618, the town was burnt, but was rebuilt in an elegant Its chief trade is in grain and salt. It is E. of Flushing, and 20 of Middleburg. 50. E. Lat. 51. 30. N.

(2.) GOSA, a town of Portugal, in the of Beira, 9 miles E. of Coimbra.

GOESIUS, William, a learned Dutch born at Leyden, and son-in-law of Damianus. Among other critical works, he has notations on Petronius Arbiter; which, joined to Burman's edition of that work, died in 1618.

GOEZ, Damianus, a Portuguese of great repute, born at Alanguar, of a noble family, and educated at the court of K. He travelled through the chief countries of and became acquainted with Erasmus, Olaus Magnus, Cardinals Bembo and Conrad Glöcenius, Peter Nannius, &c. literati. He married and spent several years at Louvain; and not only wrote the history of the siege in 1542, but bravely put himself at the head of the soldiers, and contributed much to the defence. After this K. John III. recalled Portugal, in order to write the history of the kingdom; but the favours with which the march loaded him, procured him so many enemies that he was first falsely accused and confined at Lisbon; and afterwards found murder in his own house. He wrote, 1. *Fides, Religio, que Ethiopeum*: 20. *De Imperio et rebus orum*: 3. *Hispania*: 4. *Urbis Olisipontis*: 5. *Chronica do Rey Dom Emanuel*: 6. *do Principe Dom Joan*: and others which have been often printed, and are esteemed.

GOFF, Thomas, B. D. an English born at Essex, in 1592. He was educated at Westminster, studied at Oxford; took or obtained the living of E. Claudon, Surrey but marrying a *Xanthippe*, her tongue at shortened his days, and he died in 1617 wrote 5 tragedies, published after his death several sermons, besides two Latin funerals printed in 1622 and 1627.

GOFFSTOWN, a town of New Hampshire in Hillsborough county, on the W. side of Merrimack, 60 miles W. of Portsmouth.

GOG and MAGOG, two names joined together in scripture. (Ezek. xxxviii. xxxix. 1, 2, &c. Rev. xx. 8.) *Mog* Magog the son of Japhet, but *Sayanothim* (Gen. x. 2. 1. Chr. i. 5.) *Gog* was prince of the country or people. The general ancients made *Magog* the father of the

and several interpreters discovered
 steps of their name in the provinces of
 ary. Others supposed that the Per-
 sian descendants of Magog. Some have
 hat the Goths were descended from
 Magog; and that the wars described by
 and undertaken by Gog against the
 those which the Goths carried on a-
 Roman empire, in the 5th century.
 s placed Gog in the neighbourhood of
 He derives the name of this celebra-
 tion from the Hebrew *Gogebasan*, "the
 Gog." He maintains that Prometheus,
 chained to Caucasus by Jupiter, is Gog,
 er. There is a province in Iberia call-
 ed Gogarene. Most commentators think,
 and Magog, mentioned in Ezekiel and
 Apoc. 19. 17. are to be taken in an allegorical
 such princes as were enemies to the
 saints. Thus many by Gog in Eze-
 kiel and Antiochus Epiphanes, the perse-
 cutors of the Jews who were firm to their religi-
 on, the person of the same name in the Revela-
 tion of the church and faithful. Some
 have endeavoured to prove that Gog, spoken of
 means Cambyses king of Persia. Others
 of plausibility think that Gog and Magog
 relations denote all the enemies of the
 world should be persecutors of it to the
 consummation of ages. From the present state
 of opinion, and the rapid progress of infi-
 delity in the civilized parts of Europe and Ame-
 rica, it is not improbable, that Gog and Ma-
 gog are the two last powerful opponents of
 Christianity, DEISM and ATHEISM.

GOG, a town of Sweden, in E. Gothland,
 NW. of Linköping.

GOG, Antony Herman, a German physi-
 cian, author of *Aristoxeni Harmonicorum Elemen-
 ta*, published at Venice in 1592.

GOGGLE. *v. n.* To look askint.—

He'd all over with disgrace,
 When by her in such a place,
 He made him hang his head, and scowl,
 Like and goggle like an owl. *Hudibras*.
 Lights, nor groans, nor goggling eyes did
 it. *Dryden*.

GOGGLE-EYED. *adj.* [*see* *egen*, Sax.]
 d; not looking straight.—They are de-
 moniacal, or lame; and very unseemly
 upon, except to men that be goggle-eyed
 . *Ascham*.

GOGGLES, in surgery, instruments used for
 curing, or that distortion of the eyes
 called strabismus, or this disorder. They are short
 tubes, composed of ivory stained black,
 with a plate of the same ivory fixed in the
 their anterior extremities. Through the
 each of these plates is a small circular
 hole the size of the pupil of the eye, for
 the passage of the rays of light. These gog-
 gles are continually worn in the day time,
 till the muscles of the eye are brought to act re-
 gularly and uniformly, so as to direct the pupil
 straight forwards; and by these means the cure
 is sooner or later effected.

GOG, an island of Russia, in the Gulf

of Finland, 80 miles W. of Petersburg. Lon. 44-
 48. E. of Ferro. Lat. 60. 10. N.

GOGLIONIS, a town of Naples, in the prov.
 of Capitanata $7\frac{1}{2}$ miles S. of Termoli.

GOGMAGOG HILLS, hills three miles from
 Cambridge, remarkable for the intrenchments and
 other works cast up there: which some suppose
 were a Roman camp; and others a work of the
 Danes.

GOGNO, a river of the Piedmontese republic,
 which runs into the Po, near St Nogaro.

GOGO, a town of Indostan, in Guzerat, near
 the Gulf of Cambaya, 64 miles NW. of Surat,
 and 84 SSW. of Amedabad. Lon. 71 53. E. Lat.
 21. 45. N.

GOGOLEV, a town of Russia, in the province
 of Kiev, 20 miles E. of Kiev.

GOGRA, or Soorjew, a large river of Asia,
 which rises in Thibet, from Lake Lanke-Dhe, in
 Lat. 33. 17. N. and forcing its way through Mount
 Himmaleh, runs SE. and joins the Ganges above
 Chuprah in Bahar.

GOGUET, Antony-Yves, a French writer,
 author of a celebrated work, intitled, *L'Origine
 des Loix, des Arts, des Sciences, & de leur Progres
 chez les anciens Peuples*, 1758, 3 vols. 4to: which
 has been since translated into English. His father
 was an advocate, and he was born at Paris in 1716.
 The reputation he gained by it was great: but he
 enjoyed it a short time, dying in the same year of
 the small pox; which he always dreaded. Con-
 rad Fugere, to whom he left his library and his
 MSS. was so deeply affected with his death, that
 he died himself about 3 days after him.

(1.) GOHUD, a circar of Indostan, in Agra,
 subject to a rajah, who is tributary to the Poonah
 Mahrattas

(2.) GOHUD, the capital of the above circar;
 35 miles SSE. of Agra. Lon. 78. 44. E. Lat. 26.
 24. N.

GOJAM, a province of Abyssinia, remarkable
 for having in it the sources of the Nile. It is
 bounded on the N. by the high mountains of A-
 mid-Amid; on the S. by the Nile, on the W. by
 the GULT, on the E. by the Temci, and on the
 NE. by the kingdom of Damot. It is about 75
 miles long from N. to S. and 42 broad from E.
 to W. It is very populous, but the men are ac-
 counted the worst soldiers in Abyssinia. It has
 great numbers of very beautiful cattle.

GOIGN, the S. extremity of Argyllshire.

GOIN, a town of France, in the department
 of Meuse, and late province of Lorraine: 9 miles
 S. of Metz.

* GOING. *n. s.* [from *go*.] 1. The act of walk-
 ing.—

When nobles are their taylor's tutors,

No hereticks burnt, but wenches suitors,

Then comes the time, when lives to see't,

That going shall be us'd with feet. *Shak.*

2. Pregnancy.—The time of death has a far great-
 er latitude than that of our birth; most women
 coming, according to their reckoning, within the
 compass of a fortnight; that is, the twentieth part
 of their going. *Grew's Cosm. Sac.* 3. Departure.

Thy going is not lonely; with thee goes

Thy husband; him to follow thou art bound.

Milton.
 GOYX,

GOIT, a river of England, in Cheshire, which runs into the Mersey, 3 miles E. of Stoford.

GOITO, a town of the Cisalpine republic, in the department of Mincio, and late duchy of Mantua; between the lakes of Mantua and Garda; 9 miles NNW. of Mantua. It was taken by the allies in 1701, and by the Prince of Hesse in 1706. Lon. 10. 40. E. Lat. 45. 16. N.

GOKEWELL, a town of Lincolnshire NW. of Brig.

GOLA. *n. f.* The same with **CYMATIUM**.—In a cornice the *gola*, or cymatium of the corona, the coping, the modillions or dentelli, make a noble show. *Spectator*.

GOLAN, a town of Poland, in the palatinate of Posnania; 10 miles NE. of Posen.

GOLBORN, 2 English villages; 1. in Cheshire, SW. of Tattenhall; 2. in Lancashire, near Derby.

(1.) **GOLCONDA**, a province of Indostan, in the Deccan; bounded on the N. by Berar, on the E. by the gulf of Bengal; on the S. by Mysore and the Carnatic, and on the W. by Dowlatabad and Vishapour. It was anciently called **TELLINGANA**, or *Tilling*, and was an independent kingdom; its monarch had an army of half a million of men; but in 1687 it was conquered by Aurengzebe. It abounds in corn, rice, and cattle; but it is most remarkable for its diamond mines, which are the most considerable in the world; 6000 men being usually employed in them. The diamonds are generally purchased of the black merchants, who buy parcels of ground to search for these precious stones in. They sometimes fail of meeting with any, but in others they find immense riches. It has also mines of salt, fine iron for sword blades, and manufactures of calicoes and chintzes. It is subject to the Great Mogul, and governed by the *Nizam* of the Deccan. It is very fertile, and abounds with vines, fruits, rice, &c. Its winter begins in June, with furious storms of wind, thunder and rain. **HYDRABAD** is the capital.

(2.) **GOLCONDA**, a fortress and town of the above kingdom, (N° 1.) which form one of the largest cities in the East Indies; being about 6 miles in circumference; and formerly the residence of the kings. It is now much frequented by European merchants. It is seated round the side and foot of a mountain, which has the form of a sugar loaf. The palace is very large and has a fine view of Hydrabad. The fort has 5 towers, and stone walls 3 feet thick, mounted with cannon. It is 5 miles WNW. of Hydrabad. Lon. 70. 10. E. Lat. 16. 30. N.

(I. 1.) * **GOLD**. *n. f.* [*gold*, Sax. *golud*, riches, Welsh. It is called *gold* in our English tongue, either of *geol*, as *Stahger* says, which is in Dutch to shine; or of another Dutch word, which is *gelten*, and signifies in Latin *valere*, in English to be of price or value: hence cometh their ordinary word *gold*, for *mon y. Peacham on Drawing*] 1. Gold is the heaviest, the most dense, the most simple, the most ductile, and most fixed of all bodies, not to be injured either by air or fire, and seeming incorruptible. It is soluble by means of sea-salt; but is injured by no other salt. Gold is frequently found native, and very rarely in a state of ore. Pure Gold is so fixed, that Boerhaave informs us of an ounce of it set in the eye of a glass turned

for two months, without losing a *Hill on Fossils*.—Gold hath these nature of weight, closeness of parts, fixations or softness, immunity from rust, and or tincture of yellow. *Bacon's Nature*

Ah! Buckingham, now do I ply
To try if thou be current gold indeed
—We readily say this is gold, and that
let, only by the different figures and
presented to the eye by the pencil. *L*

The gold fraught vessel, which is
beat,

He sees now vainly make to his ret
2. Money.—

For me the gold of France did not
Although I did admit it as a motive
The sooner to effect what I intended
Thou that so stoutly hadst resisted
Give me thy gold, if thou hast any
For I have bought it with an hundred

3. It is used for any thing pleasing
So among the ancients *χρυσον* *εσπερον*;
Animamque moremque aureos eduxit
The king's a bawcock, a heart of
A lad of life, an imp of fame. *Sh*

(2.) **GOLD**, *adj.* golden; made of;
(3.) **GOLD**, the most valuable of all
is of a bright yellow colour when pure
comes more or less white or high-colour
portion as it is alloyed with silver or
is the heaviest of all known bodies,
excepted, its specific gravity being 19
tilled water at 19.640 to 1000. See *G*

Index. It melts in a low white heat
according to Mr Wedgwood's calcu
degrees of Fahrenheit's, or 32 of his
mometer for its fusion; a heat greatly
that which melts silver or copper; th
quiring only 4717, and the latter 458
heit. Other metallurgists, however,
copper requires for its fusion a greater
heat than either gold or silver; and
firmed by the experience of those who
these metals.

Glass is tinged by them of a beaut
which we have an account in Neri's
making, though Dr Lewis says he never
ceed, in making it diffuse itself equally
the substance of the glass. See *GLASS*.

(6.) **GOLD, DUCTILITY AND EXT**
OF. Gold, is the most ductile, as
most malleable, of all metals. Accord
stedt, one grain of it may be stretched
cover 98 Swedish ells, equal to 63.66 f
of silver wire; but Wallerius asserts,
of gold may be stretched in such a m
cover 400 ells of wire. At any rate, it
is prodigious; for according to the
calculations, the millionth part of it
may be made visible to the naked eye

ity inferior to its ductility. Boyle, quoted in his *Treatise of Colours*, says, that an half of gold may be beaten into a leaf of one inch square, which, if intersected by lines drawn at right angles to each other, distant only the 100th part of an inch from each other, will produce 25 millions of little squares, each very easily discernible by the naked eye. Mr Magellan tells us, that its surface may be beaten by the hammer 159,092 times. "I have," (says he) "by an intelligent gold-beater, that the finest gold leaf is that of new skins, and must have an alloy of 3 parts of copper to the ounce of pure gold, or would be too soft to pass over the irregularities of the skins. He affirms that 80 books, or leaves of gold, each measuring 3.3 square inches, each leaf containing 10.89 square inches less than 384 grains. Each book, therefore 15 leaves, = 272.23 inches, weighs less than 56.718 square inches." From this calculation it appears, that the thickness of a leaf of gold is less than one 282,020th of an inch; 16 oz. of gold would be sufficient to cover a wire equal in length to the whole circumference of the globe. Gold is more elastic than lead or tin, but less so than iron, or steel. It grows hard by hammering, but loses its ductility on being heated. Nature reserves the ductility of gold more than a leaf of brass or tin. The former will render a leaf of standard gold brittle by only touching it with the finger, and a very small quantity of heat with it will destroy its ductility and render it brittle. Dr Lewis says, that even the variations which arise from tin in the fire, make gold so brittle that it flies in pieces under the hammer. This opinion, however, was controverted by Alchorne, Esq; of the Royal Mint; who, by a series of experiments, which he made, and published in the *Philos. Trans.* for 1784, concluded, that though tin, like other inferior metals, renders gold, in proportion to the quantity added to it, yet there does not appear in it anything specifically inimical to that precious metal, and "that, when brittleness has been occasioned by the addition of tin to gold, the former may be again adulterated with arsenic. M. Tillet, from a new set of experiments, recorded in the *Memoirs of the Academy of Sciences at Paris*, 1790, has drawn a conclusion much more favourable to the experience of all former metallurgists, that, though "gold, when perfectly pure, has a small portion of the finest tin, may, by a proper management, be extended to a certain degree by the hammer, and still better by rollers; as it cannot be annealed without danger, it is by this defect deprived of the advantage of recovering its original softness, and is been strongly hammer-hardened."

GOLD, ELECTRICAL EXPERIMENTS WITH. See ELECTRICITY, Index.

GOLD, EXPERIMENTS RESPECTING THE COLOUR OF. Gold leaf exhibits a fine green colour, when interpolated between the eye and the sun or any other luminous body. If exposed for some time to a strong heat, it becomes

ignited, and at last melts, assuming a fine bluish green colour; and, when cold, crystallizes into quadrilateral pyramids. This bluish green colour, according to Mr Magellan, as well as the former, when a thin film of the metal is interposed betwixt the eye and the luminous body, is owing to transmitted light. "The green light (says he) is transmitted in both cases, since all reflected colours are produced by the transmission of light, as the ingenious philosopher Mr Delaval has lately discovered and demonstrated, in his very elaborate treatise on this subject, inserted in the 2d vol. of the *Memoirs published in 1785*, by the Philosophical Society of Manchester." Sir Isaac Newton in his *Optics*, (page 162, edit. 1730,) accounts for that phenomenon, saying, that "gold foliated, and held between the eyes and the light, looks of a greenish blue, and therefore (says he) massy gold lets into its body the blue rays to be reflected to and fro within it, till they be stopped and stifled; while it reflects the yellow outwards, and therefore looks yellow. It is therefore, in the two above cases, that some of the blue rays are transmitted along with the yellow ones; and both together appear of a bluish green. If gold be exposed to the joined rays of light, excepting only the yellow ones, which we suppose stopped after they were separated by a prism, it only looks white like silver; "which shows (says Sir Isaac Newton) that its yellowness arises from the excess of intercepted rays, tinged that whiteness with their colour when they are let to pass. It is a pleasing observation to look with a deep magnifier on various pieces of gold, silver, and Dutch (copper) leaves, between the eye and the sunbline. The particles of silver are seen in the form of oblong dark lumps, with some interstices, like net-work, between them: those of the copper leaf are more numerous and more regularly distributed; but the particles of the gold leaf appear like little green semi-transparent and similar particles, uniting between themselves by nearly diaphanous joints, as if they were forced to flatten on their edges, rather than they would break their mutual cohesion with one another."

(9.) **GOLD; FORMS AND PLACES IN WHICH IT IS FOUND.** Gold is more generally found native than any other metal; (see *CHEMISTRY*, § 981.) though Bergman says, he does not know an instance of its ever being found perfectly free of alloy. Kirwan says it is seldom found so, being generally alloyed with silver, copper, or iron, and sometimes with all the three. According to Walmersley, native gold is found, 1. In solid masses, in Hungary, Transylvania, and Peru. 2. In grains, in the Spanish West Indies. 3. In a vegetable form, like the branches or twigs of plants. 4. In a druse figure, as if composed of groups or clusters of small particles united together, found in Hungary. 5. Composed of thin plates, on thin pellicles, covering other bodies, found in Siberia. 6. In a crystalline form in Hungary. Gold is also found in the form of thick solid pieces. It is in general more frequently imbedded in quartz, and mixed with it, than with any other stone; and the quartz in which the gold is found in the Hungarian mines, Mr Magellan tells us, is of a peculiar mild appearance. Sometimes, however, it is found in limestone, hornblende, &c. Europe

is principally supplied with gold from Chili and Peru in South America. A small quantity is likewise imported from China and the coast of Africa. The principal gold mines of Europe are those of Hungary, Saitzburg, and Adelfers in Smaland. Some gold is also extracted from the silver mines of Osterharberger, in the province of Dalarna. Native gold has been found in Lapland, above Tornea, and in Wästerman pd. In Peru it is found mixed with a stony matter not well known, from which it is extracted by amalgamation. Mr Pallas mentions three gold mines in Peru, near the Pyschma, in which 100 men are employed. Sometimes kernels or lumps of a spongy texture, and very light, are met with, which contain a good quantity of gold dust. Gold is also found separate from any matrix, in lumps of visible grains mixed with sands, in the beds of rivers. It is visibly dispersed through masses of sand, of a yellowish red or violet colour. In this state it is so universally diffused through every kind of earth, that Mr Bergman thinks it the most common of all the metals, iron excepted. If 100 lb. of sand contain 24 grains of gold, the separation is said to be worth attending to. In Africa 5 lb. of sand often yield 63 grains of gold, or even more; and the heaviest sand, which is often black or red, contains the most. In Hungary, however, only ten or twelve grains of gold are contained in 20,000 lb. of sand; and even this trifling quantity has been extracted, though with loss. Gold is brought down with most of the large rivers. In Transylvania the Avanyos affords subsistence to upwards of 100 gypsy families, who gather gold from its sands. In Brazil it is found in great abundance in the beds of rivers.

(10.) GOLD, FULMINATING. See AURUM, § 2, 3; and CHEMISTRY, Index. M. Magellan takes notice of its extraordinary fulminating property, and says that its *frigor* is 64 times greater than that of an equal quantity of gun-powder. According to Bergman, the strength of the explosion is 176 times greater; 20 grains of aurum fulminans being equivalent to half a pound of gun-powder. Bergman accounts for the amazing strength of this explosion, by supposing it owing to the quantity of air extricated at the time; but this, according to his own account, cannot be at all sufficient for such a purpose; and Magellan is of opinion, that "this wonderful phenomenon seems not yet completely accounted for, by any hypothesis yet known." See EXPLOSION, § 5.

(11.) GOLD, INDESTRUCTIBILITY OF. The strongest heat of any furnace does not change the metallic properties of gold. Messrs Boyle and Kunckel kept gold for several months in the fire of a glasshouse without producing any change upon it. It appears, however, that, by the violent heat of the sun beams, collected in the focus of a burning-glass, some alteration may be produced in it. Homburg observed that gold, when exposed to the lens of Tschirnhausen, formed, was volatilized, and even vitrified; and Macquer found, that the metal, when exposed to the lens of Mr Trudaine, exhaled a fume which gilded silver, and was therefore gold in a volatile state: the globule of melted gold was agitated with a rapid circular motion, and became covered with a

dull and as it were calciform pellicle; and that a violet vitrification was formed on the side of the globule. This vitrification extended, and produced a kind of bubble or of a larger curvature, than that of the sand which stuck upon it as the transparency appears on the selenite of the glass increased in size, while the gold gradually diminished: the support always, tinged with a purple colour, seemingly by the absorption of part of the glass. It not permit him to vitrify a quantity of it. He observes, that it is a necessity, that the violet glass should be red combustible matters, in order to justify that it is the calx of that perfect gold would evidently appear to be the calx revived into gold. But however this M. Fourcroy is of opinion, that this ought to be considered as a true vitrified calx of gold, with the greater probability, as in experiments with this metal the purple colour is constantly produced, and many preparations are employed to give that colour to porcelain. "Gold (says he) is therefore like the other metals; and only it likewise does silver, a stronger heat, and time to unite with the base of air than talc substances." Mr Kirwan, on the other hand, tells us, that "gold exposed to most heat of Mr Parker's lens for 60 hours lost no sensible part of its weight; and in contact with earthy matters, it acquired a blue or purplish tinge, to which he believes an exceeding small portion to be dephlogisticated." This experiment of Mr Parker does not invalidate the query: for either Trudaine's lens may be more powerful than Mr Parker's; or the air being more clear than in England, the sun must be stronger. We are assured, that by means of the electric fire, it is instantaneously calcined and even whence we must conclude, not only that it is really calcinable, but that the electric fire is most infinitely more powerful than any other by its means we may in a moment at what either cannot be done otherwise: very imperfectly, even by the fiercest fire raised. The flame of a lamp blown by dephlogicated air is also found sufficient to volatilize Gold being thus indestructible by the operations of fire, equally resists its flow the atmosphere. It is altogether exempt from rusting; and though its surface becomes by exposure to the air, it is merely in consequence of the deposition of foreign bodies upon it produces no change, says M. Fourcroy, though, according to the experiments of Lavoisier, it seems capable of dividing it in the same manner as it does iron.

(12.) GOLD LEAF, OR GILT LEAF. See

(13.) GOLD LEAF, OR BEATEN GOLD beaten with a hammer into exceeding thin so that it is computed, that an ounce may be beaten into 1600 leaves, each 3 inches square, state it takes up more than 159,053 times more surface. See § 6; and LEAF, GOL.

beaten more or less, according to the kind of the work it is intended for; that for wire drawers to gild their ingots withal, is thicker than that for gilding the frames, &c. See GILDING, § IV, N^o ii, 1. GOLD, METHODS OF ASCERTAINING THE OF. As gold has been reckoned by the consent of mankind, the most valuable in the world, it is of great consequence to discover its degree of purity, to procure equality of value in the different pieces in use. The methods by which this is accomplished will be found related under the articles, ASSAY-MASTER, CARACT, § I, 3; METALLURGY.

GOLD, METHODS OF RECOVERING, FROM DRESSES. Some powdered sal ammoniac, dissolved with aquafortis into the consistence of a spread upon the gilt silver, and the piece with all the matter smokes and becomes nearly black; then thrown into water, it is rubbed with a scratch brush made of fine brass wire, and the gold easily comes off. Another way is to put the gilt silver into common aquafortis so hot as nearly to boil, and turning it frequently till it becomes all over black; then to be washed with a little water, and rubbed with the scratch brush, to get off what aquafortis may have left. This method is used; as the same aquafortis will serve repeatedly till it is saturated with the gold. To separate gold from gilt copper, some direct a solution of borax to be applied on the gilt parts, but others, with a pencil, and a little powder of borax to be sprinkled on the places thus moistened; the piece being then made red hot, and plunged in water, the gold is so far loosened, as to be scraped off with a brush. Others mix the solution with nitre and tartar, and form the mixture with vinegar into a paste, which is spread upon the gilt parts. Schlutter recommends mercury as being generally the least expensive for separating gold from the surface both of silver and copper. If the gilt vessel be round, it may be easily got off by turning it in a lathe and applying a proper tool, a skin being stretched underneath, for receiving the shavings. He says it is easy to collect into 2 oz. of shavings all the gold of a gilt vessel weighing 6 lb. Where the piece does not admit of this method, it is fixed, and scrapers applied of different sizes according to its size and figure; some large, and some small, and some with two handles; others small and pointed for penetrating into depressed parts. If the gold cannot be got off by either of these ways, a hammer must be used, though it takes off more of the silver underneath than the turning tool or scraper. The gold scrapings or filings may be separated from the silver or copper they contain, by several methods. See METALLURGY. The French *Encyclopédie* give a method of separating the gold from wood, that has been gilt. The gilt wood, is steeped for a quarter of an hour in a quantity of water sufficient to cover the wood very hot: the size being thus softened,

the wood is taken out, and scrubbed, piece by piece, in a little warm water, with short stiff bristle brushes of different sizes, some small for penetrating into the carvings, and others large for the greater dispatch in flat pieces. The whole mixture of water, size, gold, &c. is to be boiled to dryness, the dry matter made red hot in a crucible to burn off the size, and the remainder ground with mercury, either in a mortar, or, where the quantity is large, in a mill.

(16.) GOLD, MINERALIZATIONS OF. Gold is said to be mineralized, when it is mixed with some other substance in such a manner as not to be acted upon by aqua regia. In this manner gold is found mineralized by various minerals: as,

(i.) GOLD MINERALIZED BY QUICKSILVER, OR *Auriferous Cinnabar*, is said to be found in Hungary. M. Sage speaks of a specimen of gold from Hungary, then in the French king's cabinet at Paris, which was crystallized into quadrangular prisms of a grey yellowish colour and a brittle consistency, which he supposes to be the result of a mercurial amalgam of native gold.

(ii.) GOLD MINERALIZED BY SULPHUR. Many have insisted, that as gold and sulphur are not found to have any chemical attraction for one another, it is impossible that marcasite can contain any of the metal, or indeed that it can be found in any ore containing sulphur: but since we know by experience, that gold can be melted out of these ores, even after they have been digested in aqua regia, and that gold likewise enters into their sulphurated regulus, there is the greatest reason to believe, that some third substance, probably a metal, has by its admixture enabled the sulphur to unite with a certain quantity of gold. Marcasites, however, contain, at any rate, only a small quantity of gold, and none is to be expected from them in places where no gold is in the neighbourhood. "I am not perfectly clear (says Cronstedt) whether the gold is really dissolved and indurated, or, if I may so express myself, *vitriified* in the *schirls*; provided, by this mineral body, we mean a garnet substance. But I have seen a piece of what is called *schirl*, whose texture was exactly like the Schemnitz blende; and in this case it might perhaps hold the same contents."

(iii.) GOLD MINERALIZED BY SULPHUR AND IRON. Golden pyrites, or mercantile gold ore, is a close and compact substance of a bright yellow colour, in which gold is said to be mineralized by sulphur by means of iron, because it cannot be extracted by aqua regia or by amalgamation. A kind of gold pyrites is found at Adelfors in Smaland, which contains an ounce or less of gold in one cwt. of the ore. The Transylvania gold pyrites, according to Brunnich, in which no gold can be perceived by the naked eye, contain from 50 to 100, and 110 oz. and upwards, in one cwt. Those where the gold appears in the pyrites like strewed Spanish snuff, hold 250 oz. but they are very scarce. The mountain of Faczebaya, near Zalathna, is remarkable for its gold pyrites; and here they seem also to contain semi-metallic parts. M. Magellan thus accounts for the union of gold with this kind of pyrites: "It is well known, that gold may be dissolved by liver of sulphur. The

process given for this purpose by M. Apligny, p. 356 of his *Treatise on Colours*, is as follows: Reduce to powder 4 lb. of vegetable alkali (salt of tartar), and as many of sulphur, with one of the leaves of gold. Melt the mixture in a crucible with its cover; pour the fused matter out on a marble stone; pound it again when cold, and put the whole in a matras with hot water; which being filtrated is of a greenish-yellow colour, containing the gold dissolved. Now, as we know that *hepar sulphuris* has been found in several pyrites, and Mascagn. says, that he found it in those lagoons near Sienna in Italy; is it not very natural to conclude, that this noble metal may be really mineralized in the auriferous pyrites?"

(iv.) GOLD MINERALIZED BY ZINC AND IRON, is called *Schemnitz Blende*. Cronstedt informs us, that the ores of zinc at Schemnitz in Hungary contain a great deal of silver, and that this silver is very rich in gold. Professor Brunnich enumerates the following varieties of this ore: 1. Where the metal is mineralized by means of a cubic lead ore, containing silver, found in the mines of Michaeli and some places in Transylvania. 2. By a copper pyrites with silver. This kind of ore is called *giss* in Hungary; it has a compact surface of a pale yellow colour; but must not for that reason be confounded with the auriferous pyrites. 3. The Schemnitz ores in which the metal is mineralized by means of red glider ore. 4. By means of antimony, in which it sometimes appears. This kind is found at the foot of the Carpathian mountains. 5. By cubic lead ore, iron, and some unknown volatile parts. This ore, as described by Scopoli, is of a black colour; the richest pieces are lamellated almost like an iron glimmer, with a degree of flexibility. The vein is quartz, which is sometimes loose, and the metal scattered very minutely in it. It is found in Transylvania. 6. Native gold; with black lead (or molybdena), has been found near Rimezembat in Upper Hungary; but our author (Professor Brunnich) has not had any opportunity of examining whether it is mineralized by it or not. In all the above species, the gold is either entirely native, but so minutely divided, and so loosely scattered, that it can only be seen through microscopes, and often cannot be seen at all before it is separated by various processes: or it may not be in the form of native gold, but the metal as it were in embryo; in which case fire is necessary to bring the constituent parts together, and to add those that are wanting; in that case likewise it is never without silver. "To these (says Mr Magellan) may be added the following ores: 1. Gold, with arsenical pyrites, is found also at Saltzberg in Tyrol, in mountains of quartz and schistus. It contains only 25 grains in the quintal; nevertheless it affords a profit of L. 100 per annum. 2. With a white, red, or vitreous silver ore, near Schemnitz and Schemnitz in Hungary. 3. With a sulphurated ore of silver, iron, lead, and manganese, at Nagaya in Transylvania. Its specific gravity is 4.043, and it is said to afford 10 ounces per quintal. 4. With sulphurated iron, copper, and manganese, at Nagaya."

(17.) GOLD MOSAIC, is gold applied in patches on a proper ground, distributed into squares,

lozenges, and other compartments; patches shadowed to raise or heighten the rest. See § 16, N° 16.

(18.) GOLD ORES. See § 16, N° 16.

(19.) GOLD PLATES FOR ENAMELLING generally made of ducats whose fineness 23½ carats to 23½; as the finest gold for this purpose, unless where some pure gold are left bare and unpolished, as in watch-boxes, &c. for which purposes a small alloy is necessary, and silver is preferred, because the latter disposes the plate to turn green. See ENAMELLING, § 1.

(20.) GOLD, SHELL, is that used by jewellers and illuminers, and with which gold is written. It is made by grinding gold & gold beaters fragments, with a little honey afterwards separating the honey from the gold by water. When the honey is away, the gold may be put on paper or shells; whence its name. When it is diluted with gum water or soap suds, it makes gold powder, prepared from the gold leaf in the same manner, is general and when it is well scoured with varnish the end in japaners gilding as well as the

(21.) GOLD, SOLUTION AND PREPARATION OF. See CHEMISTRY, Index.

(22.) GOLD, STUN, or is flatted

(23.) GOLD THREAD, (See § 12.) over a thread of silk, by twisting it with and iron bobbins. To dispose the wire on silk, they pass it between two rollers; these rollers are of nicely polished steel about 3 inches in diameter. They are close to each other, and turned by a handle to one of them, which gives motion to the other. The gold wire in passing between is rendered quite flat, but without losing anything of its gilding; and is rendered exceedingly thin and flexible, that it is as fine as silk thread, by means of a hand wheel wound on the bobbins. See BROCADE EMBROIDERY, § 2; JACK, &c.

(24.) GOLD, VALUE OF, CONTRASTED WITH SILK. Mr Paucton, in his *Mémoire* 94, says, that one cubic foot (French) of gold is worth 2,153,000 *livres tournois* 89,708 *Louis d'Or* or guineas, and that the respective value of the same foot of gold is equal to 25.6 cubic silver; each of this last metal being worth about 84,000 French livres, or 3,50 and 8 shillings: so that if we suppose the gold of France to be but two of French livres, according to the estimate of M. Neckar, in his *Treatise upon the Commerce*, the whole amount should make a cube of gold less than 10 feet on each trisling, in a philosophical view, is the subject that excites the activity of 30 millions of human species.

(25.) GOLD, VITRIFICATION OF. See

(26.) GOLD, USES OF, IN THE ARTS applied to the surface of bodies, not on fire, but, by its indestructibility, prefer from the injuries of the atmosphere. The applying it in this manner is called ORNAMENTAL GILDING. The immensity of gold renders it

applied at much less expence than imagined. It is also used in gilding, &c. of solution by acids, or amalgam-mercury, which are called WATER-; was formerly used in medicine, and were ascribed to it; whence the of golden tinctures, elixirs, &c. of all these are now deservedly exploded. The best practitioners allow that gold, in manner it be prepared, is quite in-angerous. If we may believe Dr S. Liverpool, however, the *Essence of* a valuable ingredient in his *Balm of*

Wire, a cylindrical ingot of silver, ed with gold, and afterwards drawn through a great number of little round awing iron, each less than the other, sometimes no bigger than a hair. See *ING.*

Wire FLATTED, is the above wire between two rollers of polished steel, to be on a stick, or to be used flat with- as in brocades, laces, embroideries, &c. See *CADE*, § 3, 4.

COAST, in geography, a maritime trica, on the coast of Guinea, abound-; and extending 180 miles in length iver (N° V.) to Ponni. See *GUINEA*,

D, ISLE OF. See *GEZIRET*.

GOLD OF PLEASURE. *n. f.* [*mya-*nt.]

OF PLEASURE. See *MYAGRUM*.

RIVER, a river of Africa, in Guinea, which abound with gold dust.

RIVER, a river of America, in Ter- the Isthmus of Darien, S. of the abounding also with gold dust.

P, a town of Prussian Lithuania, 54; 68 miles ESE. of Konigsberg.

T, Melchior Haiminsfeld, a famous rian and compiler, born at Bischoff-erland, in 1576. He was in great the learned, but being a protestant, liged to change his place of residence, him always poor, "though as Dr erves) he was one of the most labori- fatigable compilers that ever existed." *7. Dict.* He died in 1635.

CH, a town of Saxony, in the prin- otha; 2. miles N. of Gotha.

OLDBEATER. *n. f.* [*gold and beat.*] occupation is to beat or foliate gold r matter.—Our *goldbeaters*, though, n profit sake, they are wont to use ld they can get, yet they scruple oy coined gold; and that the mint- wont to alloy with copper or silver, coin more stiff, and less subject to be trition. *Boyle*.

BEATERS. See *BEATER*, § 2.

OLDBEATERS SKIN. *n. f.* The in- um of an ox, which goldbeaters lay leaves of their metal while they beat the membrane is reduced thin, and pply to cuts or small fresh wounds, e common practice. *Quincy*.—When

your gillyflowers blow, if they break the pod, open it with a penknife, at each division, as low as the flower has burst it, and bind it about with a narrow slip of *goldbeater's skin*, which moisten with your tongue, and it will stick together. *Mort. Husb.*

GOLDBEATING, *n. f.* the art of beating gold. See *LEAF, GOLD*.

GOLDBERG, a town of Silesia, in the duchy of Lignitz, so named from a gold mine near it, formerly very rich. The natives manufacture linens and woollen. It is 8½ miles SW. of Lignitz, and 11 WNW. of Jauer. Lon. 16. 23. E. Lat. 51. 3. N.

* GOLDBOUND. *adj.* [*gold and bound.*] Encom- passed with gold.—

Thy air,

Thou other *goldbound* brow, is like the first.

Shak. Macb.

GOLD COAST. See *GOLD*, N° II, and *GUINEA*.

GOLD-CRONACH, a town of Franconia, in the principality of Bayreuth, so named from an ex- hausted gold mine. It is 5 miles N. of Bayreuth.

GOLDEGG, a town of Germany in Austria, 4 miles W. of St Polten.

(1.) * GOLDEN. *adj.* [*from gold.*] 1. Made of gold; consisting of gold.—

O would to God that the inclusive verge Of *golden* metal, that must round my brow, Were red hot steel to tear me to the brain. *Shak.*

Nine royal knights in equal rank succeed, Each warrior mounted on a fiery steed, In *golden* armour glorious to behold; The rivets of their arms were nail'd with gold. *Dryden.*

2. Shining; bright; splendid; resplendent.—

So sweet a kiss the *golden* sun gives not To those fresh morning drops upon the rose; Nor shines the silver moon one half so bright 'Thro' the transparent bosom of the deep. *Shak.*

'Tis better to be lowly born Than wear a *golden* sorrow. *Shak. Hen. VIII.*

Heaven's *golden* winged herald late he saw To a poor Galilean virgin sent. *Craighew.*

To her hard yoke you must hereafter bow, Howe'er she shines all *golden* to you now. *Dryd.*

And see the guardian angels of the good, Reclining soft on many a *golden* cloud. *Rowe.*

3. Yellow; of the colour of gold.—*Golden* ruffet- ing hath a gold coloured coat under a ruffet hair, and its flesh of a yellow colour. *Mortimer.* 4. Excellent; valuable.—

I have bought

Golden opinions from all sort of people, Which would be worn now in their newest gloss, Not cast aside so soon. *Shak. Macbeth.*

—That verse which they commonly call *golden*, has two substantives and two adjectives, with a verb betwixt them to keep the peace. *Dryden*.—Thence arises that *golden* rule of dealing with others as we would have others deal with us. *Watts's Logick.* 5. Happy; resembling the age of gold.—Many young gentlemen flock to him every day, and fleet the time carelessly, as they did in the *golden* world. *Shak.*

(2.) GOLDEN, in geography, a town of Ireland, in Tipperary, on the Suir; 8 miles from Dublin.

(3.) GOLDEN, a village of England in Cornwall, between Grampound and Truro.

(4.) GOLDEN

- (4.) **GOLDEN CALF.** See CALF, § 3.
 (5.) **GOLDEN CUP.** See RANUNCULUS.
 (6.) **GOLDEN EAGLE.** See ABYSSINIA, ETHIOPIA, § 64; and FALCO, N° 4.
 (7.) **GOLDEN FISH.** See CYPRINUS, N° 2.
 (8.) **GOLDEN FLEECE,** in the ancient mythology, was the skin and fleece of the ram upon which Phryxus and Helle are said to have swam over the sea to Colchis; and which being sacrificed to Jupiter, was hung upon a tree in the grove of Mars, guarded by two brazen-hoof'd bulls, and a monstrous dragon that never slept; but was taken and carried off by Jason and the Argonauts. Some authors have endeavoured to show that this fable is an allegorical representation of some real history, particularly of the philosopher's stone. Others have explained it by the profit of the wool trade to Colchis, or the gold which they commonly gathered there with fleeces in the rivers. See ARGONAUTS, N° I. § 2, 3.
 (9.) **GOLDEN FLEECE, ORDER OF THE,** a military order instituted by Philip the Good, duke of Burgundy, 1427; thus named from a representation of the golden fleece, born by the knights on their collars, which consisted of flints and steel. The king of Spain, as D. of Burgundy, is grand master of the order; the number of knights is fixed to 31. It is said to have been instituted on occasion of an immense profit which that prince made by wool; though others will have a chemical mystery couched under it, as that famous one of the ancients, which the adepts pretend to be the secret of the *elixir vite*, wrote on the skin of a sheep.
 (10.) **GOLDEN ISLAND,** an island of S. America, in the Gulf of Darien, and prov. of Terra Firma; where the Scots first attempted to settle, in 1698, before they took possession of the opposite shore, which they were at last obliged to relinquish, in consequence of the villainous combination of the English and Dutch merchants. See DARIEN, N° I, § 1, 1—5. Lon. 77. 10. W. Lat. 9. 0. N.
 (11.) **GOLDEN LAKE,** a lake in the island of Borneo. Lon. 113. 45. E. Lat. 3. 55. N.
 (12.) **GOLDEN LUNGWORT.** See HIERACIUM.

NI, a late celebrated dramatic author, ice in 1707. Having showed an un-
arly attachment to dramatic perfor-
father, Dr Goldoni, got a small thea-
his own house, in which, while a
he and his companions amused them-
ing comedies. He even became an
rote a comedy before he was 8 years
ring finished his grammatical and rhe-
s at Venice and Prague, he went to
study philosophy; but preferring the
ristotle, he went off with a company
s to Chiozzo. After attempting to
at Venice, he became secretary to
of that state at Milan. In this city,
s *Venetian Gondolier*, the first of his
it was acted and printed; and soon
osed several other pieces for a Vene-
y then at Milan, and whom he ac-
o Genoa, where he married. After
any, Florence, and Pisa, he returned
nd wrote comedies for the theatre of
These cost him so little trouble, that
wrote 16 new comedies, besides 42
for that theatre, within a year; and
e, tho' so rapidly executed, are confi-
best productions. The first edition
was published in 10 vols 8vo in 1753.
Rerwards a great number of pieces
re at St Luke, which were published
le of *The New Comic Theatre*. He
other pieces between 1753 and 1761;
ivitation of Duke Philip, took a jaunt
om whence he went to Rome. He
Paris, on the invitation of M. Ze-
niet actor on the Italian theatre there,
he engaged for two years. After this,
loyed as an Italian teacher to the
unts to the unfortunate Lewis XVI.;
e got only 4000 livres a-year, and a
oo louis d'ors in a gold box. As he
at court, but went when called, in a
he lost his eye-sight by reading while
In his 62d year, he wrote a French
itled *Bourru Bienfaisant*, which was
wis XVI's marriage; and for which
ouis from the king, besides consider-
m the performers and the booksellers.
Paris in 1792, aged 85; at a crisis,
rench Convention were intending to
erits liberally. As a dramatic author,
d equal to the best comic poets of
s; and in fertility of invention supe-
all. His whole works were printed
in 1788—91, in 31 vols 8vo. He has
ic *Moliere of Italy*; and Voltaire, in
e marquis Albergati, called him *the*
ature. His favourite work, generally
master-piece, was his *Terence*. His
s his *Volponi*. He greatly reformed

the Italian theatre, by purging it of those scurri-
lities and low jests which formerly disgraced it.

(1.) * GOLDPLEASURE. n. s. An herb. Dist.

(2.) GOLDPLEASURE. See MYAGRUM.

GOLDSBOROUGH, a town of the United
States, in the district of Main, 330 miles NE. of
Boston. Lat. 42. 10 N.

(1.) * GOLDSIZE. n. s. A glue of a golden
colour; glue used by gilders.—The gum of ivy is
very good to put into your *goldsize*, and other co-
lours. *Perichym.*

(2.) GOLD-SIZE FOR BURNISHED GILDING is
prepared of 1½ lb. of tobacco-pipe clay, ½ oz. of
red chalk, ¼ oz. of black lead, 40 drops of sweet
oil, and 3 drams of pure tallow: grind the clay,
chalk, and black lead, separately, very fine in wa-
ter; then mix them together, add the oil and tal-
low, and grind the mixture to a due consistence.

(3.) GOLD-SIZE FOR JAPANNING may be made
by pulverising gum animi and asphaltum, of each
one ounce; red lead, litharge of gold, and umbre,
of each one ounce and a half, mixing them with
a pound of linseed oil, and boiling them; stir
them till the whole be incorporated, and appears
when cold of the consistence of tar; strain the
mixture through a flannel, and keep it stoppered
up in a bottle for use. When used, it must be
ground with as much vermilion as will give it an
opake body, and diluted with oil of turpentine,
so that it may be worked freely with the pencil.
A more simple preparation is made with 1 lb. of
linseed oil and 4 oz. of gum animi; powder the
gum, and mix it gradually with the boiling oil;
let it continue to boil till it becomes of the con-
sistence of tar; strain it through a coarse cloth;
keep and use it as the other.

(1) GOLDSMITH, Oliver, a celebrated au-
thor, born at Roscommon in Ireland, in 1723.
His father, who possessed a small estate in that
county, had 9 sons, of whom Oliver was the 3d.
After being well instructed in the classics, he was,
with his brother the rev. Henry Goldsmith, placed
in Trinity college, Dublin, about the end of 1740.
In this seminary he took the degree of B. D. but
his brother not being able to obtain preferment,
Oliver turned to the study of physic; and, after
attending some courses of anatomy in Dublin,
proceeded to Edinburgh in 1751, where he studied
medicine under the professors of that university.
His benevolent disposition soon involved him in
difficulties; and he was obliged precipitately to
leave Scotland, in consequence of engaging to pay
a considerable sum for a fellow student. A few
days after, about the beginning of 1754, he ar-
rived in Sunderland, near Newcastle, where he
was arrested at the suit of a tailor in Edinburgh,
to whom he had given security for his friend. By
the good offices of Lauchlan MacLane, Esq; and
Dr Sleigh, then in the college, he was delivered
out of the hands of the bailiff; and took his pas-
sage on board a Dutch ship to Rotterdam, where,
after a short stay, he proceeded to Brussels. He
then visited great part of Flanders; and after pas-
sing some time at Strasburg and Louvain, where
he took the degree of M. B. he accompanied an
English gentleman to Berne and Geneva. He
travelled on foot most part of his tour, having
left England with very little money. Being of a
philo-

philosophical turn, capable of sustaining fatigue, and not easily terrified at danger, he became enthusiastically fond of seeing different countries. He had some knowledge of French and of music, and played tolerably well on the German flute; which, from an amusement, became at times the means of subsistence. His learning procured him an hospitable reception at most of the religious houses; and his music made him welcome to the peasants of Flanders and other parts of Germany. "Whenever I approached," he used to say, "a peasant's house towards night fall, I played one of my most merry tunes; and that procured me not only a lodging, but subsistence for the next day: but in truth, I must own, whenever I attempted to entertain persons of a higher rank, they always thought my performance odious, and never made me any return for my endeavours to please them." On his arrival at Geneva, he was recommended as a travelling tutor to a young man who had been left a considerable sum of money by his uncle, a pawnbroker near Holborn. This youth, who had been articled to an attorney, on receipt of his fortune determined to see the world; and, on engaging with his preceptor, made a proviso, that he should be permitted to govern himself; and Goldsmith soon found his pupil understood the art of directing in money concerns extremely well, as advance was his prevailing passion. Such curiosities on the way as could be seen for nothing, he was ready to look at; but if the light of them was to be paid for, he usually asserted, that he had been told they were not worth seeing. He never paid a bill without observing how amazingly expensive travelling was; and all this, though he was not yet 21! During Goldsmith's continuance in Switzerland, he assiduously cultivated his poetical talent, of which he gave some proofs while at the college of Edinburgh. It was here he sent the first sketch of his delightful poem called the *Traveller* to his brother the clergyman in Ireland, who lived with an amiable wife on an income of only 40l. a year. From Geneva Mr Goldsmith and his pupil visited the south of France; where the young man, upon some disagreement with his preceptor, paid him the small part of his salary which was due, and embarked at Marseilles for England. Our wanderer was left once more upon the world at large, and passed through various difficulties in traversing the greatest part of France. At length his curiosity being satisfied, he bent his course towards England, and arrived at Dover the beginning of the winter 1758. When he came to London, his cash did not amount to two livres. Being an entire stranger, his mind was filled with the most gloomy reflections. With difficulty he discovered that part of the town in which his old acquaintance Dr Sleight resided. This gentleman received him with the warmest affection, and liberally invited him to share his purse till some establishment could be procured for him. Goldsmith, unwilling to be a burden to his friend, eagerly embraced an offer which was made him soon after, to assist the late rev. Dr Milner in the academy at Peckham; and acquitted himself greatly to the Doctor's satisfaction: but having obtained some reputation by the criticism he had written in the *Monthly*

Review, Mr Griffith, the proprietor, entered in the compilation of it; and, resuming the profession of an author, he returned to London, as the mart where abilities only meet distinction and reward. As he was not in a good state, he adopted the strictest economy; and took lodgings in an obscure court in the Old Bailey, where he wrote several ingenious pieces. The late Mr Warrington, who gave great encouragement to literary abilities, became a patron to him, and introduced him as one of the writers in the *Commons*, in which his *Citizen of the World* first appeared, under the title of *Clarendon*. His fortune now began to improve. The simplicity of his character, the integrity of his mind, and the merit of his productions, made him very acceptable to a number of families; and he emerged from his obscurity in the Old Bailey to the political Temple, where he took handsome lodgings, and lived in a genteel style. The publication of his *Traveller*, and his *Vicar of Wakefield*, procured him the performance of his comedy, *The Good-natured Man* at Covent Garden theatre, placed him in the first rank of the poets of the century. Among many other persons who were desirous to know him, the duke of Northumberland; and a party that attended his introduction to the duke, shows a striking trait of his character. "Invited," said the Doctor, "by my friend, to wait upon the duke, in consequence of the satisfaction he had received from one of my productions. I dressed in the best manner I could; and, after having paid my compliments I thought necessary on the occasion, proceeded to Northumberland House, acquainted the servants that I had particular business with his Grace. They showed me into an antichamber; where, after waiting for some time, a gentleman very gently dressed appeared. Taking him for the duke, I complimented him on the honour he had done me when, to my great astonishment, he had mistaken him for his master, who came immediately. At this instant he entered into the apartment; and I was so confused on the occasion, that I wanted words barely to express the sense I entertained of the politeness, and went away extremely at the blunder I had committed." An anecdote exhibits the strict integrity of his mind. Previous to the publication of his *Deserters*, the bookseller had given him a note for 50s. for the copy, which the Doctor, a few hours after to one of his friends, served, it was a very great sum for so small a performance: "In truth," replied Goldsmith, "I think so too; I have not been easy since it; therefore I will go back and return the note;" which he absolutely did; and he went to the bookseller to pay him the account of profits produced by the sale of the piece; however, turned out very considerably the last rehearsal of his comedy intitled *Conqueror*, which Mr Coleman had

ed, on the Dr's objecting to the repetition of Tony Lumpkin's speeches, being it might injure the play, the manager at Keenness replied, "Psha, my dear be fearful of squibs, when we have almost these two hours upon a barrel." The piece, however, was re-urcommon applause by the audience; and of Coleman's observation put an Dr's regard for him. Notwithstanding excess of his pieces, by some of which 1800l. in one year, his circumstances a prosperous situation; partly owing ability of his disposition, and partly to the habit of gaming; the arts of which y little of, and thus became the prey to took advantage of his simplicity. Death he published the prospectus of Dictionary of Arts and Sciences; and by friends, Sir Joshua Reynolds, Dr Beauclerc, Mr Garrick, and others, ken to furnish him with articles upon jects, he entertained the most sanguine from it. OLDSMITH. *n. f.* [*gold* and *fmit*, Sax.] o manufactures gold.—

it chain nor *goldsmith* came to me. *Sba.*

PART II.

2. A banker; one who keeps money for others in his hands.—The *goldsmith* or scrivener, who takes all your fortune to dispose of, when he has beforehand resolved to break the following day, does surely deserve the gallows. *Swift.*

(3.) A GOLDSMITH, (§ 2. *def.* 1.) or SILVER-SMITH, is an artist who makes vessels, utensils, and ornaments, in gold and silver. There is a vast variety in the works made, and tools used, by goldsmiths, which we cannot here particularize. Works that have raised figures are cast in a mould, and afterwards carved, or polished and finished: plates or vessels of silver or gold, are beat out from thin flat plates; table and tea spoons, &c. are beat out from solid ingots, and their mouths struck up with a punch: tankards, and other vessels of that kind, are formed of plates soldered together, and their mouldings are beat, not cast. The business of the goldsmiths formerly required more labour than it does at present; for they were obliged to hammer the metal from the ingot to the thinness they wanted: but since the invention of flattening mills, the metals are reduced to the thinness required, at a small expence. As the goldsmith often has to make his own moulds, he ought to be a good designer, and have a taste in sculpture: he also ought to know enough of metallurgy to be able to assay and refine gold and silver, and to mix the exact quantity of alloy. The goldsmiths in London, employ different hands under them for the various branches of their trade; such as jewellers, box makers, toy-makers, turners, gilders, burnishers, chasers, refiners, founders, &c. Goldsmiths are superior tradesmen: Their wares must be assayed by the wardens of their own company in London, and marked; and the gold and silver must be of the standard fineness, under a penalty of 10l. Any false metal may be seized and forfeited to the king. The cities of Edinburgh, York, Exeter, Bristol, &c. have also places appointed for assaying gold and silver plate. Plate sent to the assay office, when discovered to be coarser than the standard, is broken and defaced; and the fees for assaying are limited. A duty is paid on silver plate of 1s. per oz.; and on gold plate of 16s. per oz.; besides which every goldsmith must take out a licence annually; for which he pays either 2l. or 5l. according to the extent of his business, with an addition of 15 per cent, agreeably to the late acts. The 2l. or rather 2l. 6s. licence allows him to make silver plate not exceeding 30 oz. and gold plate not exceeding 2 oz. in one piece. The 5l. 15s. licence qualifies him to make plate of any weight.

(4.) GOLDSMITH. See GOULDSMITH.

GOLDWELL, a town in Kent, W. of Ashford.

(1.) * GOLDYLOCKS. *n. f.* [*roma aurea*, Lat.] A plant.

GOLF, a village in Yorkshire, E. of Armin.

GOLEITA, or GOLETTA, an island of Africa, at the entrance of the Bay of Tunis; taken by the emperor Charles V, during his siege of that city, and retained for several years after. It is 29 miles N. of Tunis, and 375 E. of Algiers. Lon. 10. 20. E. Lat. 37. 10. N.

GOLSEZ, a town of Poland, in the palatinate of Sandomirz, 60 miles SSW. of Sandomirz.

Y y y

GOLF,

GOLF, a game much practised in Scotland, and said to be peculiar to this country. It has been very ancient; for there are statutes prohibiting it as early as 1457, lest it should interfere with the sport of archery. The rev Mr R. Walker, one of the ministers of Canongate, Edinburgh, derives the name from a Dutch game, called *Kolf*, in some respects similar, being played with clubs, though in others very different. See *KOLF*. Both, he supposes, are originally derived from the Greek word, *alepes*. See Sir J. Sinclair's *Stat. Acc.* XVI. 23—30. Golf is commonly played on rugged broken ground, covered with short grass, near the sea-shore. A field of this sort is in Scotland called *links*. The game is generally played in parties of one or two on each side. Each party has an exceeding hard ball, somewhat larger than a hen's egg. This they strike with a slender and elastic club, about 4 feet long, crooked in the head, and having lead run into it, to make it heavy. The ball being struck with this club, will fly to the distance of 200 yards, and the game is gained by the party who puts his ball into the hole with the fewest strokes. But the game does not depend solely upon the striking of the longest ball, but also upon measuring the strength of the stroke, and applying it in such direction as to lay the ball in smooth ground, whence it may be easily moved at the next stroke. To encourage this amusement, the city of Edinburgh, A.D. 1744, gave to the company of golfers a silver club, to be played for annually by the members, the victor to append a gold or silver piece to the prize. It has been played for every year since, except 1746 and 1747. For their better accommodation, 22 of the members subscribed 30*l.* each in 1768, for building a house for their meetings. The spot chosen for this purpose was the SW. corner of Leith links, where an area was feued from the magistrates of Edinburgh, and a commodious house and tavern built upon it.

GOLGOTHA, [ΓΟΛΓΟΘΑ, Syr. *i. e.* a place of skulls.] See *CALVARY*, N° 1.

GOLHEIM, a town of Germany, in the palatinate of the Rhine; taken by the French in Oct. 1794.

GOLI, or **GOLLI**, a small island of Maritime Austria, in the Quarnaro, and ci-devant Venetian Dalmatia, W. of the isle of Arbe. It feeds 2000 sheep.

GOLICH, a town of Russia, in the province of Irkutsch, on the Lena; 2 miles S. of Orlenga.

(1.) **GOLIUS**, James, a celebrated professor of Arabic and the mathematics at Leyden, descended from a very honourable family, and born at the Hague in 1596. He studied at Leyden, under Erpinus; and, having acquired all the learned languages, travelled into Asia and Africa. He was esteemed and honoured by Muley Zidan, emperor of Morocco and the Grand Signior. He brought home many MSS. to Leyden; and in 1644, succeeded Erpinus. As he had been an eye-witness of the wretched state of Christianity in the Mahometan countries, none ever solicited for a place of honour and profit with greater eagerness, than he did to procure a new edition of the New Testament, in the original language, with a translation into the vulgar Greek, by an Archiman-

drite; and as some of these Christians, in divine service, he asked among them an Arabic translation of 2 of the Protestants, with the Catechism. He was likewise appointed interpreter for the Arabic, Turkish, Persian, and languages. He published, 1. *The Bible*, in Arabic. 2. *The history of* written by Elmacin. 3. *Alferganus' Astronomy*, with a new version, and emendations. 4. An excellent Arabic & Persian Dictionary. He died in 1666.

(2.) **GOLIVS**, Peter, brother to 1 (N° 1.) was born at Leyden; and several works in Greek and Latin. 1. *monastery of Carmelites on the top of* banns.

GOLL, *n. f.* [corrupted, as *gl* from *gwil* or *gwol*, whence *gwaldan*, manage.] Hands; paws; claws. Used and obsolete.—They set hands, and her golden galls among them; and that saw not the colour of them, preheminence, *Sidney*.

GOLLERSDORF, a town of Germany, 4 miles SSE. of Sonneberg.

GOLLI. See *GOLI*.

GOLLING, a town of Bavaria, 14 miles SSE. of Salzburg, and Radstadt.

GOLLNITZ, a town of Upper Anhalt Zerbst; 7 miles NW. of Zerbst.

GOLNAW. See *GOLNOW*.

GOLNITZ, a town and river of 14 miles SE. of Kapfendorf.

GOLNIZ, a town of Germany, 3 miles S. of St Andre.

GOLNOW, or **GOLNAW**, a town of Saxony, in Pomerania, on the Ibm, of Stargard, and 13 NE. of Old Stett 59. E. Lat. 53. 46. N.

GOLOGRIZZA, a town of Maria in the province of Istria; 6 miles S. of

GOLOMBOITZ. See *COLOMBO*.

GOLPHINGTON, a town of Washington county, near the head of 26 miles ESE. of Otsego, 37 SW. and 50 NW. of Louisville.

(1.) **GOLSPY**, a parish of Scotland, of Sutherlandshire, 10 miles long from and 1½ broad. The climate is dry & the soil mostly light and fertile, but is sandy, and in others mossy. Sea-wart the coast, and is partly used as made into kelp. Haddocks, whiting turbot, and flounders also abound.

tion, in 1792, stated by the rev. Mr W in his report to Sir J. Sinclair, was 27 increased 398, since 1750; though, as it with Dr Webster's report in 1755 have decreased 90, between these p Mr Keith says it was supposed to have led within the course of the 18th century number of horses, in 1792, was 35 1000, and of black cattle 1500. Also were under oats, barley, pease, turnips and sown grass; besides 400 under 600 of hill ground in commons. 1

, a town of Saxony, in Brandenburg, of New Angermunde.

ZIUS, Henry, a famous engraver born in 1558, at Mulbreck, in the iers. He was taught engraving by n Cuerebert, and acquired it per- a he had a lame hand. He travelled many into Italy; visited Bologna, iples, Venice, and Rome. In this opted a singular disguise, making his for his master, while he himself ap- rrvant, kept by the other merely for ainting. Under this disguise he en- ll its variety. On his return he set- m, where he died in 1617, aged 59.

surpassed, and few have equalled, ommand of the graver and freedom

He copied the style of Albert Du- Leyden, and other old masters, with actness. He engraved several of his on wood, in *chiaro-scuro*. Of his

are very numerous, the following ebrated: 1. Six large upright plates, r-pieces. These he engraved to show, rfectly capable of imitating the styles cas, and others, whose works were igher estimation than his own: for d a new manner, which he pursued ought it superior, and not because ble of following the others. It is h one of them, the Circumcision, ked to give it the more plausible air ie actually deceived some of the most fleurs of that age; by one of whom for an original engraving of Albert subjects of these plates are, *The An- be Virgin; Her Meeting with Eliza- ivity; the Circumcision; the Adora- se Men; the Holy Family*. 2. *The Midas*; and, 3. *The Venetian Ball*, lates lengthwise,) from Theodore *The Boy and Dog*, a middling sized from a design of his own; an ad- 5. *The Necromancer*, a middling wal print, in *chiaro scuro*. 6. *Night* the same.

17, Hubert, a learned German, , in Gueldres, in 1526. He travel- ermany, France, and Italy, to make medals, &c. as well as to draw from lights he could to clear up ancient ras the author of several excellent ch he was so accurate, that he had at his own house, under his own l even engraved the plates with his

own hand. Among these his *Imperatorum fere omnium viva imagines, à J. Cesare ad Carolum V. ex veteribus numismatibus*, is an admirable work. He died at Bruges, in 1583, aged 57.

GOLUB, a town of Prussia, in Culm.

GOLUBENSKA, a town of Russia, in the coun- try of the Cossacks, on the Don, 200 miles ENE. of Azoph.

GOLYDDAN, an ancient British poet, who flourished in the end of the 7th and beginning of the 8th centuries. He was hard to Cadwallader, the last king of the South Britons.

GOMAR, Francis, an eminent author of the 17th century, born at Bruges. He was a man of extensive erudition, and was professor of Divinity and Hebrew, in the university of Groningen. He was a most zealous defender of the Calvinistic doc- trines against Arminius. He died at Groningen, in 1641.

(1.) GOMARA. See GOMERA.

(2.) GOMARA, or COMORA. See COMORA, No 1, 2.

GOMARISTS, a name given to the CALVIN- ists in Holland, occasioned by professor Go- MAR's defence of their tenets against Arminius and Episcopius. See ARMINIANS, § 1.

GOMASHTEH, in the commerce of Bengal, signifies one cent.

GOMBAULD, John Ogier DE, one of the best French poets in the 17th century, and one of the first members of the French academy, was born at St Just de Lussac, in 1567. He acquired the esteem of Mary de Medicis, and of the wits of his time. He was a Protestant, and died in 1666, a- ged 99. He wrote many works in verse and prose. His epigrams and sonnets are particularly esteem- ed. His posthumous works, entitled *Traitez et Lettres sur la Religion*, were printed at Holland, in 1678.

GOMBIN, GAMBIN, or GABIN. See GABIN.

GOMBRON, or } a city of Persia, in the pro-

GOMBROON, } vince of Farlihan, called by the natives Bander. This city owes its wealth and grandeur to the demolition of Ormus, and the downfall of the Portuguese empire in the East Indies. It is now justly accounted one of the greatest marts in the East; was built by the great Shah Abas, and from him obtained the name of *Bander-Abassi*, or *the court of Abas*. It stands on a bay about 27 miles N. of the island of Kishmish, and 9 from Ormus. The English began to settle here about 1631, when, in consideration of their services against the Portuguese, Shah Abas grant- ed them half the customs of that port. The city wants almost every thing that contributes to the happiness and even support of life. Towards the land it is encompassed by a wall; and towards the sea are several small forts, with a platform, and a citadel, mounted with cannon to secure it and the road against an enemy by sea. The houses in most of the streets are so out of repair, some half down, others in a heap of rubbish, that a stranger would imagine the town had been sacked; not a vestige of the wealth really contained in the place appear- ing in view. The bazars and shops round them are chiefly kept by Banians, whose houses are ge- nerally in good order. Most of the houses are built with earth and lime, but the best with stone.

Many of them have ventilators at top, which contribute greatly to the health of the inhabitants in the hot seasons. The most lively months are April, May, September, and October. With fish and mutton the inhabitants are well supplied. Rice is imported from India; and wheat is so abundant, that the poor subsist chiefly on bread and dates. The country abounds in the most delicious fruits, as apricots, peaches, pomegranates, pears, mangoes, grapes, quavas, plums, quinces, &c. But these advantages are more than overbalanced by the scarcity of fresh water, with which the inhabitants are supplied from Aïssen, a place 7 miles distant, there not being a spring or well in the town. For this reason people of condition retire into the country, in June, July, and August. Even the sea, during this season, is affected, in so much that the stench is as disagreeable as that of putrid carcases; and this is increased by the quantities of shell fish left on the shore, from which an exhalation arises that tarnishes gold and silver. At Aïssen the English factory have a country house and gardens; where they have whole groves of Seville orange trees, which, though not natural to the country, thrive well. They have likewise ponds of live fresh water, with every thing else that can moderate the heat of the climate, and render life agreeable and elegant. Gombroon is extremely populous, from the commerce carried on by the Dutch and English as well as the natives. The English factory is close by the sea, at some distance from the Dutch, which is a commodious and fine new building. A great part of the company's profits arises from freights. As the natives have no good ships of their own, and are extremely ignorant of navigation, they freight their goods for Surat, and other Indian marts, in English and Dutch bottoms, at an exorbitant rate. The commodities are, fine wines, raisins, almonds, prunellas, dates, pistachio nuts, ginger, silks, carpets, leather, tully, galbanum, ammoniac, asa-fetida, tragacanth, with other gums, and medicines. These are chiefly the produce of Carimania, which they bring to Gombroon in caravans. The English company had once a small factory in Carimania, chiefly for the sake of a fine wool produced there, and used by the hatters. Although the company pay no customs, yet they usually make a present to the Shahander, to avoid the trouble he has it in his power to give them. All private trade with the company's passies enjoy the same privileges, on paying two per cent to the company, one to the agent, and one to the broker. All private trade, either by European or country ships, has long been engrossed by the company's servants. Lon 36. 35. E. Lat. 27. 30. N.

* GOMERON *f.* The black greave of a cart wheel.

GOMEGNIES, a town of France, in the dep. of the North, and c. devant province of French Flanders; 4 miles E. of Quefroy.

GOMELRA, or GOMERLA, a small isle of Scotland near the W. coast of Mull.

(1.) GOMERA, or GOMARA, one of the Canary islands, between Ferro and Teneriffe, subject to the Spaniards, who conquered it in 1495. It is 20 miles long and 10 broad; producing corn and

fruits sufficient for the inhabitants. SW. of Teneriffe.

(2.) GOMERA, a town in the dep. of an excellent harbour, where the Spaniards take in refreshments. They work, and plenty of wine. Lon. 18. 6. N.

(1.) GOMERSAL, Robert, an English writer in the 17th century. His best composition is *The Levite's Revenge; a poem on* &c. He died in 1646.

(2.) GOMERSAL, a town W. of W. GOMEZ DE CASTRO, Alvarado, a Spaniard, born at St Eulalie near T. He wrote *The History of Cardinal* &c. died in 1580, aged 63.

GOMMERN, a town of Upper Saxony, on the Elbe; 8 miles S. of Magdeburg, and 10 NW. of Dessau.

GOMMERVILLE, a town of France, in the dep. of Eure and Loire, 10½ miles S. of Angers.

GOMORRAH, in ancient geography, the cities of the plain, or vale of Sodom, destroyed together with Sodom, by fire, on account of the wickedness of the inhabitants. To determine its particular situation is impossible.

GOMORRO ISLANDS. See GOMORRO.

(1.) GOMPHOSIS. *n. f.* A part of the articulation.—*Gomphosis* is the connection of the tooth to its socket. *Wise man*

(2.) GOMPHOSIS. See ANATOMY.

GOMPHRENA, GLOBE AMARANTH, or EVERLASTING FLOWER, is a genus of the digynia order, belonging to the tetradynamia class of plants; and in the ranking under the 54th order. The calyx is coloured; the exterior one diphyllous, with two carinated lobes; the nectarium cylindrical, with 6 capsular monolpermous. There are only one of which is common in our gardens, viz. the

GOMPHRENA GLOBOSA. It has branching all round, 2 or 3 feet high, with oval, lanceolate, opposite leaves, and side-shoots terminated by a globose head of flowers, composed of very small starry florets, closely crowded, the calices placed imbricately, beautifully coloured purple, white, and variegated. The flowers are small, and closely covered with that they scarcely appear. The leaves are placed scaly coverings, being of a silken, coloured and glittering, compact round head, about the size of a cherry, make a fine appearance in our plants, natives of India; and are used to taste and for medicinal growth, so that they may flower and produce ripe seed. They are sown in November; and if the flowers

full growth, and placed out of the sun, retain their beauty several months.

OMES, a department of the Helvetic republic in the Valais.

OMES, a town in the above department, 33 miles S. of Sion.

ONAIVES, a sea port town of Hispaniola, an excellent harbour. It has a medicinal spring in which baths were erected in 1772; a hospital for soldiers and sailors. Lon. 54. 15. W. Lat. 19. 36. N.

ONAIVES, a bay on the coast of Hispaniola, Cape St Nicolas. Lat. 19. 33. N.

API, or **GOUNONG-API**, one of the smallest islands in the East Indian Sea. It has no, and abounds with hogs, black cattle, &c.

QUAS, a nation inhabiting about the Cape of Good Hope, supposed by Dr Sparman to be a mixture of Hottentots and Caffres. See **HOTTENTOTS**.

ONAVE, an island in the bay of Leogane, W. coast of Hispaniola, about 44 miles long and uniformly 9 broad, except at the extremities.

ONAVE, another island on the W. coast of Hispaniola, 30 miles long, and 5 broad. Lon. 55. 15. W. Lat. 18. 51. N.

CELIN, a town of France, in the dept. of Isère, 13½ miles NNW. of Grenoble.

IDA, *n. f.* in the Hindoo language, signifies a river, and hence sometimes makes part of the names of rivers, in the E. Indies.

IDAGAMA, **GONDEGAMA**, or **GONDOLA**, a river of Indostan, which rises near Calcutta, forms the northern boundary of the province on the N. and enters the bay of Bengal at Hooghly.

GONDAR, the capital of Abyssinia, seated on the top of a hill of considerable height. It contains about 10,000 families in times of peace. At the W. end of the town is the king's palace; and a structure of considerable consequence.

ABYSSINIA. The hill on which the town is situated is in the middle of a deep valley, through which run two rivers: one of which, the **KAKHA**, flows from the Mountain of the Sun, flanks all the N. of the town; while the other, called the **grub**, falling from the Mountain Waggora, passes it on the N. and NE. and both rivers meet at the bottom of the hill about a quarter of a mile south of the town. Upon the bank opposite Gondar, on the other side of the river, is a large number of Mahometans; a great part of whom are employed in taking care of the king's and nobles' equipage both when they take the field, and when they return. They are formed into a body of proper officers; but never fight on either being entirely confined to their occupation, and chiefly by their care and dexterity in pitching and striking the tents, and in leading and conducting baggage waggons, they are of great service. Lon. 37. 33. E. Lat. 12. 34' 30" N.

GONDAR, **VALLEY OF**, a valley of Abyssinia, in which the city (N° 1.) is situated. It has

3 outlets; one S. to Dembea, Matsha, and the Agows; another on the NW. towards Sennaar, over the Mountain of the Sun; and the third N. leading to the Waggora over the high mountain Lamalman, and through Tigre to the Red Sea.

GONDET, a town of France, in the dept. of the Upper Loire, 10 miles S. of Puy.

GONDI, John Francis Paul, Cardinal de Retz, was the son of Philip Emanuel de Gondi, Count de Joigny, lieutenant general, &c. and was born in 1613. From a doctor of the Sorbonne, he first became co-adjutor to his uncle John Francis de Gondi, whom he succeeded in 1654 as Abp. of Paris; and finally made a cardinal. He has drawn his own character in his *Memoirs* with impartiality. From the greatest degree of debauchery, and still languishing under its consequences, he made himself adored by the people as a preacher. At the age of 23, he was at the head of a conspiracy against the life of Cardinal Richelieu; he precipitated the parliament into cabals, and the people into sedition: he was (says M. Voltaire) the first bishop who carried on a civil war without the mask of religion. However, he was at last obliged to quit France; and he lived the life of a vagrant exile for 5 or 6 years, till the death of his great enemy Cardinal Mazarin, when he returned on certain conditions. After assisting in the conclave at Rome, which chose Clement IX. he retired from the world, and ended his life like a philosopher, in 1679; which made Voltaire say, that in his youth he lived like Catiline, and in his old age like Atticus. He wrote his *Memoirs* in his retirement; the best edition of which is that of Amsterdam, 4 vols 12mo, 1719.

(1) * **GONDOLA**. *n. f.* [*gondole*, French.] A boat much used in Venice; a small boat.—

He saw did swim

Along the shore, as swift as glance of eye,
A little *gondelay*, bedecked trim

With boughs and arbours woven cunningly.

Spenser.

—In a *gondola* were seen together Lorenzo and his amorous Jessica. *Shak.*—

As with *gondolas* and his men, his

Good excellence the duke of Venice

Sails out, and gives the gulph a ring. *Prior.*

(2.) A **GONDOLA** is a flat boat, very long and narrow, chiefly used at Venice to row on the canals. The word is Italian. Du Cange derives it from the vulgar Greek *κενδύλας*, a bark, or little ship. The middle sized gondolas are upwards of 30 feet long and 4 broad: they always terminate at each end in a very sharp point, which is raised perpendicularly to the height of a man.

(3.) **GONDOLA** is also the name of a passage boat of 6 or 8 oars, used in other parts of the coast of Italy.

(1.) * **GONDOLIER**. *n. f.* [from *gondola*.] A boatman; one that rows a gondola.—

Your fair daughter,

Transported with no worse nor better guard,
But with a knave of hire, a *gondolier*,

To the gross clasps of a lascivious Moor. *Otello.*

(2.) **GONDOLIERS**. The address of the Venetian gondoliers, in passing along their narrow canals, is very remarkable: there are usually two to each gondola,

gondola, and they row by pushing before them. The fore man rests his oar on the left side of the gondola; the hindman is placed on the stern, that he may see the head over the tilt or covering of the gondola, and rests his oar, which is very long, on the right side of the gondola.

GONDON, a town of France, in the department of Upper Pyrenees; 7 miles SE. of Tarbes.

GONDORF, a town of Germany lately in the archbishopric of Treves, now included in the French republic, and department of the Rhine and Moselle; 4 miles ENE. of Munster-Mainfeld.

GONDRAIN, a town of France, in the dep. of Gers, $7\frac{1}{2}$ miles SW. of Condom, and 20. NW. of Auch.

GONDRECOURT, a town of France, in the department of the Meuse, and ci-devant province of Bar; seated on the Orney, 20 miles S. of St Michael, 21 SSE. of Bar-le-duc, and 9 SW. of Vaucouleurs.

GONDREVILLE, a town of France, in the department of Meurthe, and late province of Lorraine, with a castle, and a magnificent hospital; seated on a hill near the Moselle, 3 miles NE. of Toul, and 8 from Nancy. Lon. 6. 9. E. Lat. 48. 40. N.

* GONE. *part. pres.* [from *go*. See *To Go*.]
1. Advanced; forward in progress.—I have known sheep cured of the rot, when they have not been far gone with it, only by being put into broomlands. *Mort.*—The observer is much the brisker of the two, and, I think, farther gone of late in lies and impudence than his Presbyterian brother. *Saunders.* 2. Ruined; undone.—He must know 'tis none of your daughter, nor my sister; we are gone else. *Shak. Winter's Tale.* 3. Past.—

I'll tell the story of my life,

And the particular accidents gone by,

Since I came to this ill. *Shak. Tempest.*

4. Lost; departed.—When her masters saw that the hope of their gains was gone, they caught Paul and Silas. *Acts* xvi. 19.—Speech is confined to the living, and imparted to only those that are in presence, and is transient and gone. *Holder.* 5. Dead; departed from life.—

I mourn Adonis dead and gone. *Oldham.*

—A dog, that has his nose held in the vapour, loses all signs of life; but carried into the air, or thrown into a lake, recovers, if not quite gone. *Addison on Italy.*

GONESSE, a town of France, in the department of Seine and Oise, and ci-devant province of the Isle of France, seated on the Crould, 9 miles N. of Paris; famous for fine bread.

GONET, John Baptist, D. D. a Dominican friar, and doctor of the University of Bourdeaux, who flourished in the 17th century. He wrote a system of Theology, in 5 vols, and died in 1681.

GONEZ, or GENESA, an Indian deity. See *ABYDOS*, and *POLYTHEISM*.

* GONFALON, } *n. f.* [*gonfanon*, Fr. *gonfa-*

* GONFANON, } *na*, Ilandick, from *gunn*, a battle, and *fani*, a flag. *Mr Lye*] An ensign; a standard.—

Ten thousand thousand ensigns high advanc'd,
Standards and gonfalons, 'twixt van and rear,
Stream in the air. *Milton.*

GONGA, an ancient town of European Tur-

key, in Romania, near the Sea of Marmara, 37 miles NE. of Gallipoli. Lon. 37. 31. E. Lat. 41. 53. N.

GONGAS, a nation of Ethiopia, in the country on the W. of that of the *A*

GONGE. See *GONJAH*.

GONGORA, Lewis Da, an eminent poet, of the 16th century, descended of a famous family, and born at Cordova in Spain; the Spaniards reckon him one of their greatest poets, though none of his works were published during his death. He died in 1627.

GONIA, a town of Asiatic Turkey in Cilicia, 16 miles W. of Aphium Karahissar.

GONJAH, a kingdom of Africa, lying between that of Tombuctou on the N. and the Gulf of Guinea on the S. It is supposed by M. De L'Isle to be the GONGE of M. De L'Isle, and the *Gonche* of M. D'Anville.

(1.) GONJAH, the capital of the above kingdom, lies about 400 miles from Tombuctou, W. by S. of Cashna. Lon. 6. 10. W. Lat. 16. 10. N.

GONINS, a town of Poland, in the province of Bielsk, 48 miles NW. of Bielsk.

(1.) GONIOMETRICAL, *adj.* [from *goni*, angle, and *metron*, to measure.] belonging to the measurement of angles.

(2.) GONIOMETRICAL LINES, in geometry, lines used for determining the quantity of such as sines, tangents, secants, &c. A table of this subject is inserted in the *Philos. Trans.* § 26.

GONIOMETRY, *n. f.* the art or method of measuring angles. M. De Lagny presented several papers on this art to the Royal Academy, which are inserted in their *Memoirs* for 1721 and 1729. His method consists in measuring angles with a pair of compasses, without a circle, except an undivided semicircle. But as it has not been adopted by any succeeding mathematicians, and has been reckoned of no value by some, we shall refer the inquirer for a further description of it to the *Ac. Memoirs*, or Dr Hutton's *Mathematical Dictionary*.

GONKOFEN, a town of Lower Bavaria, 14 miles S. of Dingelshofen, and 14 E. of Landshut.

GONNELLI, John, an eminent Italian painter and sculptor of the 16th century, born at Bassano. His portraits of Pope Urban VI, Cosimo I, duke of Tuscany, have great merit. But having lost his sight at twenty years of age, he, merely by the sense of feeling, acquired perfection in sculpture. Several of his works are extant in France. He died at Rome in 1608.

GONNESSE. See *GONESSE*.

GONNEVILLE, a town of France, in the department of Lower Seine, 6 miles N. of Montiville.

GONNORD, a town of France, in the department of Maine and Loire; 4 miles NNW. of Vihiers, and 15 S. of Angers.

GONOCARPUS, in botany, a genus of plants, belonging to the tetrandria order, and to the class of dicotyledons.

GONON-BESAR, a mountain on the island of Java, famous for pepper.

(1.) * GONORRHOEA. *n. f.* [from *gonos*, a morbid running of venereal humors, and *rhoia*, mummy or stone mummy grows on the

they powder and boil it in milk, and o stop gonorrhoeas. *Woodw. on Fossils.* ORHOEA. See MEDICINE, and SURG.

TOWN of Hungary, 22 miles SW. of

VT, or GONTAUT, a town of France, of Lot and Garonne, 4 miles N. of and 6 ESE. of Marmande.

ILT, Armand DE, lord of BIRON, France, and a celebrated general in the , who signalized himself by his valour in several sieges and battles. He was master of the artillery in 1549, and he assaulted him at the massacre of St . He was the first who declared for He brought a part of Normandy under, and dissuaded him from retreating or Rochelle. He was killed by a at the siege of Epemay, on the 26th He was a very universal scholar, and a pocket-book, in which he wrote hing remarkable; which gave rise to court; when a person happened to g uncommon, they told him, *You at in Biron's pocket-book.*

IT. See GONTANT.

ER, a Latin author of the 13th century wrote *A History of Constantinople*, in

ZAGA, a market town of the Cisal-, in the department of the Mincio, duchy of Mantua; with a fine cardinal residence of the ancient dukes, of Mantua.

AGA, or } Lucretia, one of the most
GO, } illustrious ladies of the
; much celebrated for her wit, learn-
cate style. Hortensio Lando wrote
upon her, and dedicated to her his dia-
erating the passions. Her letters were
published at Venice in 1552. She was
en she was not 14 years of age to
anfrone, who afterwards engaged in a
gainst the duke of Ferrara; was de-
nprisoned, but, though condemned,
ath. She did all in her power to
erty, but in vain; for he died in pri-
hown such impatience under his mis-
made it imagined he lost his senses.
ould listen afterwards to any proposals
though several were made to her.
e from her pen was so much esteem-
lection was made even of the notes
her servants.

GEN, a town of Germany, in the Up. Rhine, and ci-devant county of annexed to the French republic, and the department of the Rhine and NE. of Creutznach.

AND, a rich county of Virginia, 40 and 14 broad; surrounded by Louisa, urico, Hanover, and Powhatan coun- Rivanna and James rivers. In 1795, 15,397 citizens, and 4,659 slaves.

OD. *adj.* comp. *better*, superl. *best*. *goed*, Dutch.] 1. Having, either ge- or any particular end, such physical

qualities as are expected or desired. Not bad; not ill.—God saw every thing that he had made, and behold it was very good. *Gen. i. 31.*—

A universe of death! which God by curse
Created evil; for evil only good. *Milton.*
Resolv'd

From an ill cause to draw a good effect. *Dryd.*
—Notwithstanding this criticism the verses were good. *Spectator.*—A man is no more to be praised on this account, than because he has a regular pulse and a good digestion. *Addison.*—

Ah! ne'er so dire a thirst of glory boast,
Nor in the critick let the man be lost:

Good nature and good sense must ever join;

To err is human, to forgive, divine. *Pope.*

2. Proper; fit; convenient; right; not wrong.—Amongst a man's peers a man shall be sure of familiarity, and therefore it is good a little to keep state: amongst a man's inferiors one shall be sure of reverence, and therefore it is good a little to be familiar.

Bacon.—If you think good, give Martius leave.

Bacon.—It was a good time to comply with the importunity of the gentlemen of Suffex. *Clarend.*

3. Conducive to happiness.—It is not good that the man should be alone. *Gen. ii. 18.*—We may as well pretend to obtain the good which we want without God's assistance, as to know what is good for us without his direction. *Smalridge.* 4. Uncorrupted; undamaged.—He also bartered away plumbs, that would have rotted in a week, for nuts, that would last good for his eating a whole year. *Locke.* 5. Wholesome; salubrious.—

A man first builds a country seat,

Then finds the walls not good to eat. *Prior.*

6. Medicinal; salutary.—The water of Nilus is sweeter than other waters in taste, and it is excellent good for the stone and hypochondriack melancholy. *Bacon.* 7. Pleasant to the taste.—Eat thou honey, because it is good; and the honeycomb, which is sweet. *Prov. xxiv. 13.*—Of herbs and plants some are good to eat raw; as lettuce, endive, and purslane. *Bacon.* 8. Complete; full.

—The Protestant subjects of the abbey make up a good third of its people. *Addison.* 9. Useful; valuable.—All quality, that is good for any thing, is originally founded upon merit. *Collier.*—We discipline betimes those other creatures we would make useful and good for somewhat. *Locke.* 10. Sound; not false; not fallacious.—He is resolved not to shew how slight the propositions were which Luther let go for good. *Atterbury.* 11. Legal; valid; rightly claimed or held—According to military custom the place was good, and the lieutenant of the colonel's company might well pretend to the next vacant captainship in the same regiment. *Wotton.* 12. Confirmed; attested; valid.—

Ha! am I sure she's wrong'd? Perhaps 'tis

malice!

Slave, make it clear, make good your accusation.

Smitb.

13. With *as* preceding. It has a kind of negative or inverted sense; *as good as*, no better than.—Therefore sprang there even of one, and him *as good as* dead, so many as the stars of the sky in multitude. *Heb. xi.* 14. With *as* preceding. No worse.—He sharply reprov'd them as men of no courage, which, being many times *as good as* in possession

possession of the victory, had most cowardly turned their backs upon their enemies. *Knolles*.—The master will be as good as his word, for his own business. *L'Estr.* 15. Well qualified; not deficient.—If they had held their royalties by that title, either there must have been but one sovereign over them all, or else every father of a family had been as good a prince, and had as good a claim to royalty as these. *Locke*. 16. Skilful; ready; dexterous.—Flatter him it may, I confess; as those are generally good at flattering who are good for nothing else. *Soutb.*—

I make my way where-e'er I see my foe;

But you, my lord, are good at a retreat. *Dryd.*

17. Happy; prosperous.—Behold how good and how pleasant it is for brethren to dwell together in unity. *Psaln cxxxiii. 1.*—

Many good morrows to my noble lord!

—Good morrow, Catesby, you are early stirring. *Shak.*

Good e'en, neighbours;

Good e'en to you all, good e'en to you all. *Shak.*

At my window bid good morrow. *Milton.*

Good morrow, Portius! let us once embrace. *Addison.*

18. Honourable.—

They cast to get themselves a name,
Regardless whether good or evil fame. *Milton.*
Silence, the knave's repute, the whore's good name,

The only honour of the wishing dame. *Pope.*

19. Cheerful; gay. Inured with any words expressing temper of mind.—They may be of good comfort, and ever go cheerfully about their own affairs. 2 *Mac. xi. 26.*—Quietness improves into cheerfulness, enough to make me just so good humoured as to with that world well. *Pope.* 20.

Considerable; not small though not very great.—A good while ago God made choice that the Gentiles by my mouth should bear the word. *Acts*

xv. 7.—The plant, having a great stalk and top, doth prey upon the grass a good way about, by drawing the juice of the earth from it. *Bacon.*—

Mintie and pomegranate, if they be planted, they a good space one from the other, they will meet.

Pembroke.—The king had provided a good fleet, and a body of three thousand foot to be embarked.

Clarendon.—We may suppose a great many degrees of littleness and lightness in these earthy particles, so as many of them might float in the air a good while, like exhalations, before they fell down. *Burnet.*—They held a good share of civil and military employments during the whole time of the usurpation. *Swift.* 21. Elegant; decent;

delicate: with breeding.—If the critick has published nothing but rules and observations in criticism, I then consider whether there be a propriety in his thoughts and words, clearness and delicacy in his remarks, wit and good breeding in his

railery. *Guardian.*—Mankind has been forced to invent a kind of artificial humanity, which is what we express by the word good breeding. *Spectator.*

—Those among them, who return into their several countries, are sure to be followed and imitated as the greatest patterns of wit and good breeding. *Swift.* 22. Real; serious; not feigned.—

Love not in good earnest, nor no farther in sport neither, than with safety and pure blush thou

may'st in honour come off again. Rich; of credit; able to fulfil engagements.

nio is a good man: my meaning, in *Cry* a good man, is to have you understand

is sufficient. *Shak.* 24. Having more such as are wished; virtuous; pious,

applied both to persons and actions, not evil.—For a good man some would

to die. *Rom. v. 7.*—The woman hath good work upon me. *Matt.*—

All man's works on me,
Good or not good, ingraft my merit;
Shall perfect, and for these my death

What reward

Awaits the good, the rest what pain

The only Son of light

In a dark age, against example good
Against allurements.

Such follow him, as shall be repaid
Part good, part bad, of bad the last

Grant the bad what happiness they
One they must want, which is to pay

Why drew Marcellus' good
breath,

When Nature sicken'd, and each
death?

Such was Rosecommon, not more
good.

With manners generous as his noble
No farther intercourse with Heaven

But left good works to men of low

25. Kind; soft; benevolent.—Matter

turned in her, that where at first likings

ners did breed good will, now good was

the chief cause of liking her manners

Glory to God in the highest, and on earth

and good will towards men. *Luke ii.*

out good nature man is but a better

man. *Bacon.*—

Here we are lov'd; and there we
Good nature now and passion strive

Which of the two should be above
And laws unto the other give.

—'Tis no wonder if that which affords
glory to God, hath no more good will

Decay of Piety.—

When you shall see him, sir, to do
'Twere such a thing, 'twould so

world,

'Twould make the people think you
natur'd.

—To teach him betimes to love and be
red to others, is to lay early the true

of an honest man. *Locke.*—Good sense and

ture are never separated, though the

world has thought otherwise. *Dryden.*

ty, mildness, tenderness, and a we

would tam bring back to its original

of virtue, I mean good nature, are

Dryden.—This doctrine of God's good

men, this command of men's proportion

will to one another, is not this the very

substance, this the very spirit and life

sole institution? *Spratt*.—It was his
asure to spread his healing wings over
; and to make every one sensible of
il to mankind. *Calamy*.—

ould you chide the young good natur'd
ce,
e him from you with so stern an air.

Addison.

ible; loving.—But the men were very
s, and we were not hurt. 1 *Sam.* xxv.

God is good to Israeli, even to such as
an spirit. *Pf.* lxxiii. 1.—You have good
ce of us always, desiring greatly to see
lio to see you. 1 *Thess.* iii. 6.—His i-
cessarily be adequate, being referred
else but itself, nor made by any other
the good liking and will of him that

his combination. *Locke*. 27. Compa-
ociable; merry. Often used ironical-
h he did not draw the good fellows to
aking, yet he eat well. *Clarendon*.—
mitted to drink without eating, will
custom of having the cup at his nose;

beginning and preparation to good fel-
cke.—It was well known, that Sir Ro-

a good fellow, in his youth. *Arbuth.*
etimes used as an epithet of slight
mplying a kind of negative virtue or
n from ill.—My good man, as far from

I am from giving him cause. *Shak.*—
the good man at home, and brought

lant. *Speñat*. 29. In a ludicrous sense.

other good women that love to do but
how handsome it is to louse themselves

ne, they that have been but a while
in well witness. *Spenser*. 30. Hearty;

dubious.—He, that saw the time fit
ery he intended, called unto us to fol-

high we both, bound by oath, and
ood will, obeyed. *Sidney*.—The good

nation to the present war has been
much experienced by the successes

tended it. *Temple*.—
ill, she said, my want of strength sup-

ence shall give what age denies.

Dryden's Fab.
o time. Not too fast.—In good time,

er, you have heard them dispute a-
um in the schools. *Collier*. 32. In

Really; seriously.—
mult I hold a candle to my shames?

emelves, good south, are too too light.

Shak.
To make.] To keep; to maintain; not

not to abandon.—There died upon
the chieftains, all making good the

any ground given. *Bacon*.—He forced
re in spite of their dragoons, which

there to make good their retreat. *Cla-*
we claim a proper interest above others

inent rights of the household of faith,
e good that claim, we are obliged a-

to conform to the proper manners
hat belong to this household. *Spratt*.—

out fear a dangerous war pursues;
made him first the danger chieft,
makes it good on virtue's score. *Dryd.*

PART II.

34. GOOD [To make.] To confirm; to establish.—
I farther will maintain

Upon his bad life to make all this good. *Shak.*

—To make good this explication of the article, it
will be necessary to prove that the church, which

our Saviour founded and the apostles gathered,
was to receive a constant and perpetual accession.

Pearson.—These propositions I shall endeavour to
make good. *Smulridge*. 35. GOOD [To make.] To

perform.—
While she so far extends her grace,
She makes but good the promise of her face.

Waller.
43. GOOD [To make.] To supply.—Every distinct
being has somewhat peculiar to itself, to make

good in one circumstance what it wants in another.

L'Estr.
(2.) * GOOD. adv. 1. Well; not ill; not a-
mish. 2. As GOOD. No worse.—

Was I to have never parted from thy side,
As good have grown there still a lifeless rib.

Milton.
—Says the cuckow to the hawk, Had you not as
good have been eating worms now as pigeons?

L'Estrange.
(3.) * GOOD. interjection. Well! right! It is
sometimes used ironically.

(4.) * GOOD. n. f. 1. That which physically
contributes to happiness; benefit; advantage; the

contrary to evil or misery. —
I fear the emp'rour means no good to us. *Shak.*

—Let me play the lion too: I will roar, that I
will do any man's heart good to hear me. *Shak.*

—He war'd indifferently 'twixt them, doing nei-
ther good nor harm. *Shak.*—

Love with fear the only God,
Merciful over all his works, with good

Still overcoming evil. *Milton*.
God is also in sleep, and dreams advise,
Which he hath sent propitious, some great good

Presaging. *Milton*.
Nature in man's heart her laws doth pen,
Prescribing truth to wit, and good to will. *Davies*.

—The lessening or escaping of evil is to be reck-
oned under the notion of good: the lessening or

loss of good is to be reckoned under the notion of
evil. *Wilkins*.—This caution will have also this

good in it, that it will put them upon considering,
and teach them the necessity of examining more

than they do. *Locke*.—Good is what is apt to cause
or increase pleasure, or diminish pain in us; or

else to procure or preserve us in the possession of
any other good, or absence of any evil. *Locke*.—

Refuse to leave thy destin'd charge too soon,
And for the church's good defer thy own. *Prior*.

Works may have more wit than does them
good,

As bodies perish through excess of blood. *Pope*.
—A thirst after truth, and a desire of good, are
principles which still act with a great and univer-

sal force. *Rogers*. 2. Prosperity; advancement.
If he had employ'd

Those excellent gifts of fortune and of nature
Unto the good, not ruin of the state. *B. Jansf.*

3. Earnest; not jest.—The good woman never
died after this, 'till she came to die for good and

all. *L'Estrange*. 4. Moral qualities, such as are
desirable; virtue; righteousness; piety; the con-

trary

Z z z

trary to wickedness.—Depart from evil, and do good. *Ps. xxiiv. 14.*—Not only eternal good from evil does not justify; but no good, no not a purposed good, can make evil good. *Hayday*—

O sons, like one of us is Man become,
To know both good and evil, since his taste
Of that defende' fruit, but let him boast
His knowledge of good lost, and evil got.
Happier had it suffic'd him to have known
Good by itself, and evil not at all. *Milton.*

Empty of all good, wherein consists
Woman's domestic honour, and chief prize. *Milton.*

—By good, I question not but good, morally so called, *bonum honestum*, ought, chiefly at least, to be understood; and that the good of profit or pleasure the *bonum utile*, or *jucundum*, hardly come into any account here. *South.*—

Nor holds this earth a more deserving knight
For virtue, valour, and for noble blood,
Truth, honour, all that is compriz'd in good. *Dryden.*

3. Good placed after bad, with *as*, seems a substantive; but the expression is, I think, vicious; and good is rather an adjective elliptically used, or it may be considered as adverbial. See GOOD, *adv.*—The pilot must intend some port before he steers his course, or he had *as good* leave his vessel to the direction of the winds, and the government of the waves. *South*—Without good nature and gratitude, men had *as good* live in a wilderness as in a society. *L'Estrange.*

(3.) GOOD, MORAL, (§ 4. def. 4.) denotes the right conduct of the senses and passions, or their just proportion and accommodation to their respective objects and relations. See MORALS.

(6.) GOOD, PHYSICAL. See § 1. def. 1.

GOOD BEARING. [*bonus gestus*.] in law. See ABEARING, and GOOD BEHAVIOUR. He that is bound to this, is more strictly bound than to the peace; because where the peace is not broken, the surety *de bono gestu* may be forfeited by the number of a man's company, or by their weapons.

GOODALL, Walter, a learned Scots antiquary and philologist, born in 1689. He was many years keeper of the Advocates Library, which gave him an opportunity of examining the original papers and authentic documents preserved among the records of that learned faculty, which he did not fail to improve. Being a zealous friend to the exiled royal house of Stewart, he was anxious to rescue the character of our unfortunate Q. Mary from the calumnies that had been thrown upon it, for near two centuries; and accordingly after much deep investigation, published a *Vindication* of that princess, which very much attracted the public attention, and exhibits equal proofs of his learning and industry in literary researches. He wrote several other pieces, and died at Edinburgh in 1751, in the 72d year of his age.

GOOD BEHAVIOUR, in law, an exact carriage and behaviour to the king and the people. A justice of the peace may, at the request of another, or where he himself sees cause, demand surety for the good behaviour; and to that end the justice may issue out his warrant against any persons whatsoever, under the degree of nobility; but when it is a nobleman, complaint is to be

made in the court of chancery, or where such nobleman may be bound to peace. Infants and females continue to find surety by their friends, may be to their good behaviour; and in such sometimes meet intervals, and all break the peace, or are suspected of affrays, assaults, battery, wounds, quarrelling, threatening, &c. Persons likewise bound to good behaviour in way of living, keeping bawdy-houses, houses, &c. and so may common whores, common whores, &c. He who demands surety for any violence offered, must take an oath of justice, that he goes in fear of his bodily harm, &c. and that it is not but from a regard to his own safety.

GOOD BREAKING. See BREACHING MANNERS.

* GOOD-CONDITIONED. *adj.* Well fitted or symptoms. Used both of persons, but not elegantly.—No symptoms of any kind by rejection, or good-conditioned. *Scarp's Surgery.*

GOODEROO, a lake of Abyssinia.
GOODLINGTON, a town in New Guinea, an island in the Indian Sea, near the W. coast of New Guinea, and 6 broad. Lon. 98. 30 E.

GOOD FRIDAY, a fast of the Church in memory of the sufferings and death of Christ. It is observed on the Friday before week. Among the Saxons it was Friday; probably on account of the word *frigg*, &c. then used. On Good Friday) on a plain form; and, after service is the cardinals wait on him back to they keep a deep silence, as a token of sorrow. In the night of Good-Friday perform the obsequies of our Saviour great crucifix, laid on a bed of state, flowers; these the bishops distribute assistants when the office is ended, and, on this day, set open a holy imitation of that of mount Calvary.

GOOD HENRY. See CHENORON.
(1.) GOOD HOPE, a Danish colony in Greenland. Lat. 64. 0. N.

(2.) GOOD HOPE, CAPE OF, a point in Africa, where the Dutch built a good fort; which were taken by the British of Aug. 1796. It is situated in the 6th Hottentots; for an account of the country at large, with its first &c. see that article. On approaching very remarkable eminence may in be discovered at a considerable distance the TABLE MOUNTAIN, from its apex it terminates in a flat horizontal line which the face of the rock descends at a singularly. In the summer season, mences in September, and continues the TABLE LAND or MOUNTAIN, suddenly capped with a white cloud called the *spreading of the Table-land* cloud seems to roll down the mountain; it is a sure indication of

of wind from the SE.; which generally with great violence, and sometimes continues for more, but commonly is of short duration. On the first appearance of this cloud, the inhabitants of TABLE BAY prepare for it, by striking their roofs and top masts, and making every thing as possible.—A little W. of the Table Land, divided by a small valley, stands on the east side of Table Bay a round hill, called the *Lion's Head*; and by many the *Lion's Head* there is a continuance from it contiguous to the sea, called the *Lion's Rump*; and when taken from a general view of the whole, it very much resembles that animal with his head erect. The *Head* and the *Lion's Rump* have each a fort on them, by which the approach of the town is announced to the governor, particularising the Dutch, the English, and the quarter from which the wind blows. On the E. separated by a small chasm from the Table Land, stands Charles's Mount, known by the appellation of the *Devil's Head*; and so called from the gusts of wind supposed to issue from it, which sometimes takes the shape of the cap that covers the Table Land, though these gusts are merely owing to the wind acquiring in coming through the chasm. When this phenomenon appears in the town, which is by no means so frequent as in the Cape, the sailors say, (as the *Devil's Tower* is contiguous to the Table Land,) that the *Devil* is going to *breakfast*; if in the forenoon, that he is going to *dinner*; if in the afternoon, that the cloth is spread for *dinner*; if in the evening, that the cloth is spread for *dinner*. The Table mountain rises about 3,567 feet above the level of the sea; the *Devil's Tower*, 2,764; and the *Lion's Head*, 2,764. In the neighbourhood of the latter lies CONSTANTIA, a town famous for its wines. (See that article.) The described high lands form a kind of amphitheatre about the Table valley, where the town stands. This is situated at the bottom of the middle height, or TABLE MOUNTAIN; and in the centre of TABLE BAY, so called from the Table mountain. FALSE BAY, on the SE. side of the Cape, is more secure than Table Bay, from the NW. winds. It is, however, less frequented, being 24 miles of very heavy road from the Cape, whence almost all necessaries must be brought. The most sheltered part of False Bay is on the W. side, called SIMON'S BAY. The latest and most particular, and perhaps the most just account of the Cape Town, is that given by Mr White in his *Journal of a Voyage to New South Wales*. From the ship he observes (p. 87.) "the town appears pleasant, but at the same time small; a smallness that arises from its being built in a valley between such stupendous mountains directly before it. On landing, however, you are surprised, and not a little disappointed, to find it not only extensive, but well built, and in a good style; the streets are spacious, and intersecting each other at right angles with great precision. This exactness in the formation of the streets, when viewed from the Table Land, is observed to be very great. The houses in general are built of stone, cemented with a glutinous kind of earth which

serves as mortar, and afterwards neatly plastered and white-washed with lime. As to their height, they do not in common exceed two stories, on account of the violence of the wind, which at some seasons of the year blows with great strength and fury. For the same reason thatch has been usually preferred to tiles or shingles; but the bad effects that have proceeded from this mode when fires happen, has induced the inhabitants in all their new buildings to give the preference to slates and tiles. The lower parts of the houses, according to the custom of the Dutch, are not only uncommonly neat and clean in appearance, but they are really so; and the furniture is rather rich than elegant. But this is by no means the case with the bed-rooms or upper apartments; which are very ill furnished. The streets are rough, uneven, and unpaved: But many of the houses have a space flagged before the door; and others have trees planted before them, which form a pleasant shade, and give an agreeable air to the streets. The only landing place is at the east end of the town, where there is a wooden quay running some paces into the sea, with several cranes on it for the convenience of loading and unloading the boats that come along side. To this place excellent water is conveyed by pipes, which makes the watering of ships both easy and expeditious. Close to the quay, on the left hand, stands the castle and principal fortress; a strong extensive work, having excellent accommodations for the troops, and for many of the civil officers belonging to the company. Within the gates, the company have their principal stores; which are spacious as well as convenient. This fort covers and defends the east part of the town and harbour, as Amsterdam fort does the west part. The latter, which has been built since commodore Johnston's expedition, and whereon both French and Dutch judgment have been united to render it effectual and strong, is admirably planned and calculated to annoy and harass ships coming into the bay. Some smaller detached fortifications extend along the coast, both to the east and west, and make landing, which was not the case before the late war, hazardous and difficult. In a word, Cape Town is at this time fortified with strength, regularity, and judgment. The governor's house is delightfully situated, nearly in the centre of an extensive garden, formerly the property of the Dutch East India company, usefully planted, and at the same time elegantly laid out. This garden is as public as St James's park; and for its handsome, pleasant, and well-shaded walks, is much frequented by persons of every description. At the upper end of the principal walk is a small space walled in for confining some large ostriches and a few deer; and a little to the right of this is a small menagery, in which the company kept a few wild beasts and curious birds. There are two churches in the town; one large, plain, and unadorned, for the Calvinists, and a smaller one for the Lutherans. The hospital, which is large and extensive, is situated at the upper end of the town, close to the garden; where the convalescents reap the benefit of a wholesome pure air, perfumed with the exhalations of a great variety of rich fruit trees,

trees, aromatic shrubs, and odorous plants and flowers; and likewise have the use of its productions. The Dutch East India company erected several other public buildings, which improve the appearance of the town. The two principal of these are, the stables and a house for the slaves. The former is a handsome range of buildings, capable of containing an incredible number of horses; which are small, spirited, and full of life. The latter is a building of a considerable extent, where the slaves, male and female, have separate apartments, in a very comfortable style, to reside in after their toil. The inhabitants of the Cape, though in their persons large, stout, and athletic, have not the characteristic phlegm of Dutchmen. The physical influence of climate may account for this. The ladies are lively, good-natured, and familiar; and from a peculiar gay turn, they admit of liberties that would be thought reprehensible in England, though perhaps they as seldom overstep the bounds of virtue as the women of other countries. The heavy draft work about the Cape is mostly performed by oxen; which are brought to an uncommon degree of usefulness and docility. It is not uncommon to see 14, 16, and sometimes 18, in one of their teams; when the roads are heavy, they sometimes, though rarely, yoke 20; all which the Hottentots, Malays, and Cape slaves, have in the most perfect subjection and obedience. One of these places himself on the fore part of the waggon, or, when loaded, on the top of the load, and with a tremendous long whip, which from its size he is obliged to hold in both his hands, manages these creatures with inexpressible address. They can make them either trot or gallop (a gait performed or kept up with difficulty by European oxen), with as much ease as if they were driving horses. They likewise manage horses with the same dexterity; and to see one of them driving 3, 4, 5, or, sometimes 6 pair, in hand, with one of these long whips, would astonish the most complete master of the whip in England. Carriages are not very numerous at the Cape, as the inhabitants in general travel in covered waggons, which better suit the roughness of the country. The governor and some of the principal people keep coaches, which are a good deal in the British style, and always drawn by six horses. The Cape lies W. of Cape Lagullas, the most southern extremity of Africa. Lon. 18° 23' E. Lat. 34° 29' S.

GOODLEIGH, a village in Devonshire.

* **GOODLINESS**. *n. f.* [from *goodly*.] Beauty; grace; elegance.—She sung this song with a voice no less beautiful to his ears, than her *goodliness* was full of harmony to his eyes. *Sidney*.—The stateliness of houses, the *goodliness* of trees, when we behold them, delighteth the eye. *Hooker*.

(1.) * **GOODLY**. *adj.* [from *good*.] 1. Beautiful; graceful; fine; splendid. Now little in use.—A prince of a *goodly* aspect, and the more *goodly* by a grave majesty, wherewith his mind did deck his outward grace. *Sidney*.—

A *goodly* city is this Antium. *Shak. Coriol.*
Patience and sorrow drove

Which should express her *goodness*: you have seen
Sunshine and rain at once. Her smiles and tears
Were like a winter May. *Shak. King Lear*.

Here from gracious England
Of *goodly* thousands.

—Rebekah took *goodly* raiment of Esau, and put them upon Jacob. *Gen.*

—There was not among the children
goodlier person than he. *1 Sam. 17.*

Both younger than they were;
And all their forms, much *goodlier*.

Waller.
SUCCESS, BAY OF. See COOK, N° III,

GDWIN, John, an English divine and
writer of the 17th century. He was
St Stephen, in Coleman Street, Lon-
as deprived of his benefice, for refu-
minister the sacrament indiscriminately.
lous republican, he wrote a Vindica-
execution of Charles I. ; which, after
ion, was burnt by the hangman. He
1661.

(2.) GOODWIN, Thomas, an English divine,
born at Rolesby, in Norfolk, A. D. 1600. To
avoid religious persecution he went to Holland,
and was chosen pastor of the English church at
Arnheim. He returned to England during the
civil war, and was elected a member of the cele-
brated Assembly of Divines at Westminster. Oli-
ver Cromwell appointed him president of Magda-
len College, Oxford ; and he attended him in his
last illness. Upon the restoration, he was ejected
from his presidency, and died soon after. He
wrote a number of tracts, which make 5 vols folio.

(3.) GOODWIN SANDS, or GODWIN SANDS, fa-
mous sand banks off the coast of Kent, lying be-
tween the N. and S. Foreland. As they run paral-
lel with the coast for 3 leagues together, at about
2½ leagues distant from it, they add to the security
of that capacious road, the Downs : for while the
land shelters ships with the wind from SW. to N.
W. only, these sands break all the force of the sea
when the wind is at ESE. The most dangerous
wind, when blowing hard on the Downs, is the
SSW. These sands occupy the space, that was
formerly a large tract of low ground, belonging
to Godwyn earl of Kent, father of K. Harold II. ;
and which being afterward given to the monastery
of St Augustin at Canterbury, the abbot neglec-
ting to keep in repair the wall that defended it
from the sea, the whole tract was drowned, A. D.
1100, leaving these sands, upon which so many
ships have since been wrecked. These sands lie
E. of the Downs 4½ miles from S. Foreland.

GOODWINSTON, a village in Kent.

* GOODY. *n. f.* [corrupted from *good wife*.]
A low term for civility used to mean persons —
So t, *goody* sheep, then said the fox, not so ;
Unto the king so rash you may not go.

Hubberd's Tale.
Swarm'd on a rotten stick the bees I spy'd,
Which erst I saw when *goody* Dobson died. *Gay.*

Plain *goody* would no longer down ;
'Twas madam in her program gown. *Swift.*

* GOODYSHIP *n. f.* [from *goody*.] The qua-
lity of *goody*. Ludicrous.—

The more shame for her *goodyship*,
To give so near a friend the slip. *Hudibras.*

GOOGINGS, in sea language, are clamps of
iron bolted on the stern-post of a ship, whereon
to hang the rudder, and keep it steady ; for which
purpose there is a hole in each of them, to receive
a correspondent spindle bolted on the back of the
rudder, which turns thereby as upon hinges.

GOOL, John VAN, an eminent Dutch painter
and man of letters, born at the Hague, in 1685.
He wrote a history of the lives and works of the
Flemish painters.

GOOMPTY, a river of Indostan Proper, which
rises in Rohilla, runs SE. by Lucknow and Jion-
pour, and falls into the Ganges below Benares.

GOOSANDER. See MERGUS, N° 4.

(1.) * GOOSE. *n. f.* plural *geese*. [*gos*, Saxon ;
goes, Dutch ; *gawe*, Erse, sing. *geewey*, plural.]
1. A large waterfowl proverbially noted, I know
not why, for foolishness.—

Thou cream-faced lown,
Where got'st thou that *goose* look ? *Shak. Macb.*
—Since I pluckt *geese*, play'd truant, and whipt
top,

top, I knew not what 'twas to be beaten till late-ly. *Shak.*—Birds most easily to be drawn near water-fowl; as the *goose* and *swan*. *Procham.*—

Nor watchful dogs, nor the more wakeful *geese*.

Disturb with nightly noise the sacred peace.

Dryd. Fables.

2. A taylor's smoothing iron.—Come jo, taylor; here you may roast your *goose*. *Shak.*

(1.) *Goose*, in ornithology. (§ 1. def 1.) See *ANAS*, § 4. 8, &c. Geese were held in great esteem amongst the Romans, for having saved the Capital from the invasion of the Gauls, by cackling and clapping their wings. They were kept in the temple of Juno; and the censors, when they entered upon their office provided meat for them. There was also an annual feast at Rome, at which they carried a silver image of a goose in state; and hanged a dog, because these animals did not bark at the arrival of the Gauls.

(2.) *Goose*, *ENSAE*, a peculiar species of geese, that frequent the coasts of the Orkney and Shetland Isles, in the winter, described by the rev. Mr Bremner, in his account of Walls and Flota. See *Sir J. Sinclair's Stat. Acc. XVII. 321*. From his description, they seem to be a species of *Mareca*. "Though less in size, (he says,) than the common grey goose, it weighs a great deal more. They sometimes weigh 12 lb. It is never seen on land, and, though it has pretty large wings, it is never seen to fly. The feet are so much in a right line with its body, that they can never be brought far enough forward to assist it in rising out of the water. Nor does nature seem to have intended, that it ever should fly; for in whatever manner it is attacked, pursued, or surprised, it always has recourse to diving. Being a bird of passage, it differs from all others in preferring the medium of water to that of air. How this bird hatches its young remains a profound secret, both as to the manner and place."

(4.) *Goose*, *GOLDEN*. See *ANYSSIMA*.

(1.) * *GOOSEBERRY*. *n. f.* (*goose* and *berry*, because eaten with young geese as sauce.) A berry and tree. The species are, 1. The common gooseberry. 2. The large manured gooseberry. 3. The red hairy gooseberry. 4. The large white Dutch gooseberry. 5. The large amber gooseberry. 6. The large green gooseberry. 7. The large red gooseberry. 8. The yellow-leaved gooseberry. 9. The striped leaved gooseberry. *Miller*.—August has upon his arm a basket of all manner of ripe fruits; as pears, plums, apples, *gooseberries*. *Procham.*—

Upon a *gooseberry* bush a snail I found;

For always snails near sweetest fruit abound.

Gay.

(2.) *GOOSEBERRY*, in botany. See *RIBES*.

(3.) *GOOSEBERRY*, *AMERICAN*. See *MELAS-TOMA*.

(4.) *GOOSEBERRY*, *BARBADOES*. See *CACTUS*.

GOOSEBERRY HILL, a hill in Cork, Ireland.

GOOSEBERRY ISLANDS, islands near the E. coast of Newfoundland, 24 miles NW. of Cape Bonaville.

GOOSEBERRY MOUNTAIN, a mountain of New York, on the W. bank of Hudson's River, 4 miles S. of Fort George.

GOOSEBERRY ROCKS, rocks on the Massachusetts, 3 miles N. of Marblehead.

* *GOOSECAP*. *s. f.* [from *goose* and *cap*] a silly person.

GOOSE CREEK, a river of Virginia, which flows into the Potomac, 2 mile S. of Thorpe, Fairfax county.

(1.) * *GOOSEFOOT*. *n. f.* [*chamæpodium*] a plant, *Miller*.

(2.) *GOOSEFOOT*. See *CHENOPODIUM*.

(1.) * *GOOSEGRASS*. *n. f.* *Clivia*; a plant, *Miller*. *Goosegrass*, or wild tansy, is a weed that grows in clays are very subject to. *Mort.*

(2.) *GOOSEGRASS*. See *GALUM*. *N.*

(3.) *GOOSEGRASS*, *GREAT*, or *WILD*. See *ASPERUGO*.

GOOSEHURST, a town N. of Snettisham.

GOOSE ISLAND, an isle in the Gulf of Mexico, near the coast of Labrador. Lon. W. Lat. 50. 51. N.

GOOSE-NECK, in a ship, a piece of wood on the one end of the tiller, to which is attached the whip staff or the wheel-rope for steering the ship.

GOOSE-TONGUE, a species of *Achnanthes*.

GOOSE-WING, in sea language. When a ship sails before, or with a quarter wind on the lee side, to make the more haste, they lay the boom and sail on the lee side; and a sail so set is called a *goose-wing*.

GOOSFY, a town near Standford, Leicestershire.

GOOTY, or *GUTTI*, a strong fort on the island of Gooty, formerly the seat of government of a Marhatta prince, and lately of a Marhatta prince, before his final defeat by the British in 1799. It is seated beyond the 10 miles S. by E. of Adon. Lon. 77. 35. E. Lat. 15. N.

GOPLO, a lake of Poland, in the p. of Brzask, 16 miles long and 4 broad, W. of Brzask.

GOPFENGEN, a town of Germany in the duchy of Wirtemberg, seated on the Vils mineral spring, 22 miles ESE. of Stuttgart 20 NNW. of Ulm. It has considerable manufactures. At present (Jan. 1801) there are in possession of it.

GORANTO, a town of Asiatic Tartary, 80 miles SW. of Satala.

(1.) *The GORBALS OF GLASGOW*, Scotland, in Lanarkshire, disjoined from Govan, in 1771; comprehending 200 acres. The soil is partly a strong blue clay, and partly sand, the air and the ground flat, abounding with coal. Govan colliery is supposed to have as much coal as would serve Glasgow for 100 years. 300 men are employed in it.

(2.) *GORBALS OF GLASGOW*, a village in the above parish, on the S. of the Clyde, anciently called Bridge-end. It contained 3000 inhabitants, and in 1799 5000; as stated by the rev. W. Anderson report to Sir J. Sinclair. Within three years (in 1795), it was expected that number doubled. There were then 556 looms in the place. Longevity is not uncommon. It lived to 100 and 104. Most of the vi-

748; and it was much damaged by fire in 1712, and 1782.

ARA, a town of the French republic in the dept. of Corsica, 8 miles NE. of

ATA, a town of Tunis, 20 miles S. of

ATOV, a town of Russia, in Nizegorod.

BELLIED. *adj.* [from *gorbelly*.] Fat; having swelling paunches.—Hang ye, knaves, are you undone? No, ye fat would your store were here. *Henry IV.*

BELLY. *n. s.* [from *gor*, dung, and according to *Skinner* and *Junius*. It may come from *gor*, Welsh, beyond, too, as seems to me more likely, may be from *gormand*, or *gorman's belly*, the glutton.] A big paunch; a swelling term of reproach for a fat man.

E. *n. s.* a pool to keep fish in. *Bailey*.

UM, or GORICHEM, a town of the Republic, in the dept. of Delft, and late Holland, which carries on a considerable cheese and butter. It is seated at the foot of the Ligne and Maese, 12 miles E. of 130 S. of Amsterdam. Lon. 4. 59. E. 1. N.

UD. *n. s.* An instrument of gaming, as from *Beaumont* and *Fletcher*. *Warburton*. y bones can reach at nothing now, but ninepins. *Beaum. and Fletcher*.—Let vulgar thy guts; for *gords* and Fulham-holds.

ELIZA, a town of Spain, in the province; 22 miles SSE. of Leon.

ES, a town of France, in the dept. of the Rhone, 9 miles W. of Apt, 12 of Avignon.

Æ! MONTES, or } The name of one
ÆUS MONTES, } or more mountains
2, upon which Noah's ark is said to
land after the general deluge, and on one
the Tigris rises.

IAN. See GORDIANUS, I, II, and III.
KNOT, in antiquity a knot made by
us, in one of the cords of his yoke, or
wre it, in the leathers of his chariot har-
ch was so very intricately twisted, that it
impossible to discover where it began or ended.
of Apollo having declared that, who-
d untie this knot should be master of all
who attempted it, but without success;
Alexander the Great, after likewise at-
in vain to untie it, cut it asunder with
his sword, and thus either eluded or fulfilled the
oracle. See GORDIUS, N° 1.

IANUS I, Mæcius Antonius, a Roman
emperor, for his virtues chosen emperor by the ar-
rested reign of Maximinus, A. D. 236. He
descended on the father's side from the Grac-
chi, and on the mother's from Trajan. He had
been consul, and was proconsul of Africa
before emperor; but his son being slain by
the governor of Mauritania, he killed
him in his 80th year. See ROME. He was so
fond of literature that he had collected in-
to 62,000 books.

IANUS II, Mæcius Antonius, surnamed

Africanus, the son of the preceding, by Annia
Orestilla, the grand-daughter of the emperor Mar-
cus Antoninus, was like his father very learned
and liberal. He was made consul by the emperor
Alexander, and afterwards associated with his fa-
ther in the empire, but slain in fighting against the
partisans of Maximinus, A. D. 237.

GORDIANUS III. Mæcius Antonius, grandson of
Gordianus I, by his daughter Faustina, a renown-
ed warrior, and styled *The guardian of the Roman
commonwealth*. He was treacherously assassinated
by Philip, an Arabian, one of his generals; who
succeeded him, A. D. 244. See ROME.

GORDIUM. a city of Phrygia Major, where
Alexander the Great cut the Gordian Knot.

(I.) GORDIUS, in fabulous history, a poor
husbandman who had two yokes of oxen, where-
with he ploughed his land and drew his wain.
An eagle sitting a long while upon one of his ox-
en, he consulted the soothsayers; a virgin bade
him sacrifice to Jupiter in the capacity of king.
He married the virgin, who bore to him MIDAS.
The Phrygians instructed by the oracle to set the
first person they met in a wain upon the throne,
met Gordius, and made him king. Midas for this
good fortune dedicated to Jupiter his father's cart;
and Gordius hung up the knot of the yoke in the
temple. See GORDIAN KNOT.

(II.) GORDIUS, in zoology, the HAIR WORM,
a genus of animals belonging to the class of *ver-
mes* and order of *intestina*. There are several spe-
cies; viz.

1. GORDIUS AQUATICUS, the water hair worm,
is 10 or 12 inches in length, and of about the
thickness of a horse hair; its skin is smooth and
glossy; its colour pale yellowish white all over,
except the head and tail, which are black. The
body is rounded, and very slender in proportion
to its length: the mouth is small, and placed ho-
rizontally; the jaws are of equal length, and ob-
tuse at their extremities. This species is common
in our fresh waters, especially in clay, through
which it passes as a fish does through the water,
and thus gives rise to many springs. This is the
species of worms, that in Guinea and in some o-
ther hot countries get into the flesh of the natives,
and occasion great mischief: with us, though fre-
quent enough in water where people bathe, it ne-
ver attempts this.

2. GORDIUS ARGILLACEUS, or clay hair-worm,
only differs from the preceding in colour, being
yellowish at the extremities, and in being chiefly
found in clay.

3. GORDIUS MARINUS, the sea hair-worm, is
filiform, twisted spirally, and lying flat, about
half an inch in length; of a whitish colour, smooth,
and scarcely diminishing at the head. It infests
herrings, bleaks, and various other fish.

4. GORDIUS MEDINENSIS, the muscular hair-
worm, is all over of a pale yellowish colour. It
is a native of both Indies; frequent in the morn-
ing dew, from whence it enters the naked feet of
the slaves, and occasions a disease common in those
countries, and to which children are very liable;
occasioning severe itchings, and often exciting in-
flammations and fevers. It infests the muscles of
the arms and legs, whence it may be drawn out
by a thread, tied round the head, but care must be
taken not to pull it out too fast.

be taken not to break it, as the remaining part will grow with redoubled vigour. Baths with infusions of bitter plants, and all vermifuges, destroy it.

1. GORDON, Alexander, M. A. an eminent Scots antiquary, an excellent draughtsman, and a great Greek scholar, who resided many years in Italy, visited most parts of that country, and travelled into France, Germany, &c. He was secretary to the Society for Encouragement of Learning, and afterwards to the Egyptian Club, composed of gentlemen who had visited Egypt, such as Lord Sandwich, Dr Shaw, Dr Pococke, &c. He succeeded Dr Stukely as secretary to the Antiquarian Society, which office he resigned in 1771 to Joseph Ames. He went to Carolina in 1772, where, besides a grant of land, he had several offices, such as register of the province, &c.; and died a justice of the peace, leaving a handsome estate to his family. He published, *A Itinerary Septentrionale, or a Journey through most parts of the Counties of Scotland, &c. &c. with 66 copperplates*, 1746, folio.

2. Supplement to the *Itinerary*, 1732, folio. 3. *The Lives of Pope Alexander VI. and his son Caesar Borgia*. 4. A complete History of the ancient Amphitheatres, 1730, 8vo, afterwards enlarged in a second edition. 5. An Essay towards explaining the hieroglyphical figures on the Ciffin of the ancient Mummy belonging to Capt. William Boscawen, 1737, folio, with cuts. 6. Twenty plates of all the Egyptian Mummies and other Egyptian Antiquities in England, 1739, fol.

(2.) GORDON, hon. George, or Lord George Gordon, 3d son of Cosmo George, D. of Gordon, by Catherine daughter of William E. of Arden, was born at London, Dec. 19th, 1750, and K. George II. was his godfather. He early entered into the navy, but quitted it during the American war, in consequence of an altercation with E. Sandwich about promotion. He was elected M. P. for Ludgerthall, Wilts, in 1774; and during several sessions animadverted with great freedom and no small humour, on the speeches and proceedings of both ministry and opposition. An alarm having been excited by the repeal of certain penal statutes against the Roman Catholics in 1779, Lord George was chosen president of the Protestant Association at London; and on the 2d June 1780, went to the house of Commons, to present their petition against that reſcissory act, attended by about 60,000 of the petitioners. The dreadful consequences of this imprudent measure are related under the article ENGLAND, § 101 and 102. Lord George was imprisoned in the tower, on the 9th June 1780; and tried for high treason, but acquitted on the 4th Feb. 1781; on which occasion there was a very general illumination in London, and 4851. were subscribed to reimburse the expences of his trial. On the 4th

he was excommunicated by the Abp. of York for not appearing in court as a witness. In Feb. and June 1787 he was in the court of King's Bench, for publishing the Queen of France, the French and the Empress of Russia; and also a pamphlet entitled, *A Petition to*

Lord G. Gordon from the Prisoners in praying that he would secure their liberty, writing them from being sent to Botany Bay; petition, upon trial, was proved to be written by himself, for the purpose of criminal justice of England. Being charged with these charges, he, on the 24th June, fled to Holland, where he turned Jew, and was circumcised; but, returning to England, he was apprehended on the 7th Dec. 1788, at Ham; and on the 28th Jan. 1789, was committed to imprisonment for 5 years, and to jail till he should find bail for his good behaviour in £10,000. Not being able to find bail, at the end of that period to the extent required, he was sentenced to imprisonment for 7 years, July 1789, he presented a petition to the Assembly of France, and was visited by eminent revolutionists. He died Nov. 1793, a fever attended with delirium, in the 43rd year of his age. As an author, his publications, and miscellaneous, abounded with matter, and were not destitute of argument; as a speaker his language was animated, and his style elegant. Of his eccentricities we shall not say; but his conversion from Christianity to the strict sects of Presbyterian Secedarianism, was so very sincere a measure, indeed it was real; it can be accounted upon one supposition. But whatever we thought of his head, it is but justice to say, that his benevolence to his fellow-creatures proved, that his heart was impregnated with the finest feelings of sensibility and humanity.

(3.) GORDON, James, a learned lawyer, flourished in the end of the 16th and the 17th centuries. He was descended of a family of rank, and settling in France, he brewed at Bourdeaux and Paris. He died in 1614.

(4.) GORDON, Thomas, a Scots author, Kirkcudbright, famous for his translation of the Bible. He came young to London, where he supported himself by teaching, until he procured employment under Dr Hoadley in queen Anne's time, but in what way is not now known. He first distinguished himself in the defence of Dr Hoadley in the Hoadley controversy: which recommended Mr Trenchard, in conjunction with whom he wrote the well known *Cato's Letters*, a series of important public subjects. This was followed by another periodical paper, entitled the *Independent Whig*; which continued some years after Mr Trenchard's death, against the hierarchy of the Church, but with more acrimony than was Cato's Letters. At length Sir Robert Walpole retained him to defend his administration, which end he wrote several pamphlets, till the time of his death, July 18th 1750, he was commissioner of the wine licenses, and of the he had enjoyed many years. He was married. His second wife was the widow of his friend Trenchard, by whom he had children. He published English translations of Tacitus, with additional discourses to which contain much useful matter. T

led, 1. *A Cordial for Low-spirits*, in 1 2. *The Pillars of Priestcraft and Oppression*; in 2 vols. 8vo. were published at 1.

don, in geography, a parish of Scotland, in geography, a parish of Scotland, 7 miles long, and from 2

The air is salubrious; the surface is a soil partly light and sandy, partly loam. Above 200 black cattle, and several of sheep are fed annually. The population, stated by the rev. Alex. Duncan, to Sir J. Sinclair was 912, and had 5 since 1755. Barley, corn, and turnips chief produce. Agriculture is improved from 10,000 to 12,000 bolls are annual; the mills.

ON, EAST; } 2 villages in the above
ON WEST; } parish.

NA, a town of Naples, in the prov. miles SW. of Molise.

NIA, in botany; a genus of the power, belonging to the monadelphia class

The calyx is simple; the style five-cornered stigma quinquetid; the capsule

lar; the seeds two-fold with a leafy is a tall and very straight tree, with

ramidial head. Its leaves are shaped like the common bay, but serrated. It

flour, June and July. The flowers grow about 5 inches long, are monopetalous; succeeded by conic capsules with a

1. The stamina are headed with yellow. This tree retains its leaves all the year, only in wet places, and usually in water.

RE. *n. f.* [gore, Saxon; gor, Welsh, &c.] 1. Blood effused from the body.

A grilly wound,
forth gush'd a stream of gore blood

er goodly garment stain'd around,
deep sanguine dy'd the grilly ground.

's crimes the youth unhappy bore,
his father's eyes with guiltless gore.

ted or congealed.—
The bloody fact

ing'd; though here thou see him die,
dust and gore.

id beard and knotted tresses flood,
is gore, and all his wounds ran blood.

in globe-making. See GLOBE, § 1,

, in heraldry, one of the abatements, denoting to Gullim, denotes a coward.

consisting of two arch lines drawn sinister chief, and the other from

the, both meeting in an acute angle of the fess point. See HERALDRY.

ISLAND, an island in the South Pacific discovered by Captain Cook. Lon.

at. 64. 0. N.

E. *v. a.* [geberian, Saxon.] 1. To

to noble eye profane a tear
be gor'd with Mowbray's spear.

ART. II.

No weaker lion's by a stronger stain;
Nor from his larger tusks the forest bear
Commission takes his brother swine to gore.

For arms his men long pikes and javans bore,
And poles with pointed steel their foes in battle
gore.

2. To pierce with a horn —
Some tols'd, some gor'd, some trampling down
he kill'd.

He idly butting, feigns
His rival gor'd in every knotty trunk.

(1.) GOREE, a small island of Africa, near Cape de Verd, subject to the French. It is a small spot not exceeding 1 m. in circumference, but important from its situation for trade, near Cape Verd; whence it has been a bone of contention between European nations. It was first possessed by the Dutch, from whom, in 1663, it was taken by the English; but in 1665 it was retaken by the Dutch, and in 1677 by the French, in whose possession it remained till 1759, when it was reduced by commodore Keppel, but restored to the French in 1763. It was retaken by the British in the American war, but again restored at the peace of 1783. Lon. 17. 25. E. Lat. 14. 40. N.

(2.) GOREE, an island of the Batavian republic, in the dept. of Delit, near the mouth of the Meuse, 10 miles in circumference, and 2 miles N. of Schowen. Lon. 20. 26. E. of Ferro. Lat. 51. 49. N.

(3.) GORFF, the capital of the above island, 6 miles S. of Heivoetsluys, and 8 S. of Briel. Lon. 3. 50. E. Lat. 51. 55. N.

(1.) GOREY, a borough and post town of Ireland, in Wexford, otherwise called *Newborough*; 18 miles N. of Wexford, and 45 S. of Dublin. Lon. 6. 50. W. Lat. 52. 30. N.

(2.) GOREY MOUNTAINS, mountains of Ireland, in the county of Donegal, 14 miles SW. of Derry.

GORGAST a town of Germany, in Brandenburg, 4 miles W. of Cultrin.

(1.) * GORGE. *n. f.* [gorge, Fr.] 1. The throat; the swallow.—There were birds also made so finely, that they did not only deceive the sight with their figures, but the hearing with their songs,

which the watery instruments did make their gorge deliver. *Sidney*.—And now how abhorred in my

imagination it is! my gorge rises at it. *Shak. Hamlet*.

—Her delicate tenderness will find itself abated, begin to heave the gorge, disbelieve and abhor the

Moor. *Shak. Othello*. 2. That which is gorged or

swallowed. Not in use.—
And all the way, most like a brutish beast,
He spewed up his gorge, that all did him detest.

(2.) GORGE, in architecture, the narrowest part of the Tuscan and Doric capitals, lying between the astragal, above the shaft of the pillar, and the annulets.

(3.) GORGE, in fortification, the entrance of the platform of any work. See FORTIFICATION.

* To GORGE. *v. n.* [gorger, Fr.] 1. To fill up to the throat; to glut; to satiate.—

Being with his presence gorged, gorg'd, and
fail.

He that makes his generation restless,
To gorge his appetite.

A a a a

Gorge

Gorge with my blood thy barbarous appetite.

Dryden.

—I desire that they will not *gorge* the lion either with nonsense or obscenity. *Addison.*—

Nor would his slaughter'd army now have lain
On Africk's sands, disfigur'd with their wounds,
To *gorge* the wolves and vultures of Numidia.

Addison's Cato.

The giant, *gorg'd* with flesh, and wine, and blood,

Lay stretch'd at length, and snoring in his den.

Addison.

2. To swallow: as, *the fish has gorged the boat.*

(1.) * **GORGED**, *adj.* [from *gorge*] Having a *gorge* or throat.—

Look up a height, the shrill *gorg'd* lark so far
Cannot be seen or heard. *Shakespeare.*

(2.) **GORGON**, in heraldry, the bearing of a crown, coronet, or the like, about the neck of a lion, a swan, &c. The term is also used when the *gorge* or neck of a peacock, swan, or the like bird, is of a different colour or metal from the rest.

* **GORGEOUS**, *adj.* [from *gorgias*, old French. *Skinner.*] Fine; splendid; glittering in various colours; showy; magnificent.—

O, that decent should dwell

In such a *gorgeous* palace! *Shakespeare. Romeo and Juliet.*

As full of spirit as the month of May,

And *gorgeous* as the sun at Midsummer. *Hamlet. IV.*

—He bad them look upon themselves and upon their enemies: themselves dreadful, their enemies *gorgeous* and brave. *Hayward.*—

The *gorgeous* East, with richest hand,

Pours on her kings barbaric pearl and gold.

Milton.

With *gorgeous* wings, the marks of lov'reign sway,

The two contending princes make their way.

Dryden's Virgil.

* **GORGEOUSLY**, *adv.* [from *gorgeous*.] Splendidly; magnificently; finely.—The duke, one solemn day, *gorgeously* clad in a suit all over spread with diamonds, lost one of them of good value. *Wotton.*

* **GORGEOUSNESS**, *n. f.* [from *gorgeous*.] Splendour; magnificence; show.

(1.) * **GORGET**, *n. f.* [from *gorge*.] The piece of armour that defends the throat.—

He with a palsy fumbling on his *gorget*,

Shakes in and out the rivet.

Shakespeare.

—He did oftentimes spend the night in the church alone praying, his head piece, *gorget*, and gauntlets lying by him. *Knolles.*—

See how his *gorget* peers above his gown,

To tell the people in what danger he was.

Ben Jonson.

About his neck a threefold *gorget*,

As rough as trebled leathern target. *Hudibras.*

(2.) A **GORGET** is a kind of breast plate like a half moon, with the arms of the prince thereon; worn by the officers of foot. They are either gilt or silver, according to the colour of the buttons on the uniforms.

(3.) **GORGET**, or **GORGERET**, in surgery, the concave or cannulated conductor, used in lithotomy. See **SURGERY**.

GORGAS, a celebrated orator of Sicily, born Leontium, about A. A. C. 417. According to

Quintilian, he was the first extemporizer, but this is not true. Men began extempore, before they studied it. Status, of gold was erected to him at 5.

GORGOLIONE, a town of Neopropolis at Babilonia; 15 miles E. of (1.) * **GORGON**, *n. f.* [2939.] A snake-haired, of which the sight turned it to stone; any thing ugly or horrid.—

Gorgons and hydra, and chymera

Why didst thou not encounter

And try the virtue of that *gorgon*

To stare me into statue.

(2.) The **GORGONS**, in antiquity were three sisters, whose names were EURYALE, and MINUSA; the latter a mortal, but the two former were said to eat nor death. They are described on their shoulders, with serpents' heads, their hands were of brass, and of a prodigious size, so that they were terror to mankind. Pausanias says, they were the daughters of Phorbus, or Phorbus, whose death Medusa, his daughter, the Labyria dwelling near the lake. The queen, being fond of hunting in the neighbouring countries quire was Perseus, having made war on them the queen, when he came to take a field of battle, he found the queen's helmet extremely beautiful, that he ordered it cut off, and carried it with him to show who could not behold it without others represent them as a kind of men, covered with hair, who lived in forests. Others, again, make them resembling wild sheep, whose eyes had and fatal influence.

(1.) **GORGONA**, a small island of sea of Tuscany, and near that of Cor miles in circumference; remarkable quantities of anchovies taken near it. E. Lat. 43. 22. N.

(2.) **GORGONA**, a small island of 18 miles W. of the coast of Peru, 2 miles in circumference. It has several rivulets of excellent water, but is so that rains. Lon 79. 3. W. Lat. 3.

GORGONIA, in natural history zoophytes, formerly called *ceratoph* English named *sea-fans*, *sea feathers*, &c. Linnæus and Pallas consider them a nature in their growth, between angetables; but Mr Ellis shows them to mals of the polype kind, growing up form resembling a shrub, and in no p They differ from the fresh water polyp their qualities, and particularly in po their own substance a hard and solid m many of the purposes of the bone in o The surface of the *gorgonia* is compo of scales, so well adapted to each oth for defence from external injury: or, as some have called it, the *barbo* fits of proper muscles and tendons the openings of their cells; for sendi thence their polype suckers in search

ing them in suddenly, and contracting
er muscles of their starry cells, in order
hese tender parts from danger; and also

RITZ. } county, with a castle; seat-
Lisqozo, 20 miles NE. of Aquileia, and
ice. It was taken by the French in 1797,
s military stores. Lon. 13. 43. E. Lat.

ZIA, a village of Maritime Austria, in
in the isle of Pago.

ORKAI, a country of Asia, between
d Qude.

RKAH, a town in the NE. part of the
ntry; near Napaul, 200 m. N. of Benares.

ÆUS, Abraham, an eminent antiquary,
ntwerp, in 1540. He collected the rings
of the ancients, and published an ac-
a prodigious number of them, in 1601,
title, *Dactylis theca; five Annulorum Si-*
quorum apud priores tam Græcos quam
us ex ferro, ære, argento, et auro, Promp-

This was the first part of the work: the
titled, *Variarum Gemmarum, quibus un-*
fignando uti solita, sculpturæ. In 1608,
hed his collection of medals: which,
if we may believe the *Scaligerana*, it is
lways to trust. He resided at Delft, and
e in 1609. His collections of antiques
by his heirs to the prince of Wales.

ATE, a town of the Cisalpine republic,
p. of Montagna; on the W. bank of the
io, opposite Lecco.

ITZ, a strong town of Germany, in Up-
tia, subject to the elector of Saxony;
the Neisse; 50 miles W. of Dresden,
I. of Prague. Lon. 15. 15. E. Lat. 51.

4, LOCH, a lake of Perthshire, 2½ miles
Loch Bruich, abounding with delicious

trouts, about 10 inches long, but very thick in
proportion.

* GORMAND. *n. f.* [*gourmand*, Fr.] A greedy
eater; a ravenous luxurious feeder.

* To GORMANDIZE. *v. n.* [from *gormand*.]
To eat greedily; to feed ravenously.

* GORMANDIZER. *n. f.* [from the verb.] A
voracious eater.

GORMAZ, or ST ESTIVAN DE GORMAZ, a
town of Spain in Old Castile, on the Duero, 6
miles below Borgo d'Olma.

GORMES, a town of Germany in Austria, 5
miles ENE. of hbrnsprunn.

GORO, a port of Maritime Austria, seated on
one of the mouths of the Po.

GORODITSCH, three towns of Russia; 1. in
the province of Kiev, 112 miles SE. of Kiev: 2.
in that of Penza, 32 miles E. of Penza: 3. in that
of Tobolsk, 20 miles ESE. of Tobolsk.

GORODNIA, a town of Russia, in the pro-
vince of Tver 20 miles E. of Tver.

GORODNITSK, a town of Russia, in the
province of Tchernigov, on the Snov, 32 miles
NNE. of Tchernigov.

GORODOK, a town of Russia, in the govern-
ment of Poletsk, 56 miles E. of Poletsk

GORON, a town of France, in the department
of Mayenne, 9 miles NW. of Mayenne.

GORONTALE, or } a town on the E. coast of
GORONTANO, } the island of Celebes.

GOROPIUS, John, M. D. a native of Brabant;
author of a work, entitled, *Origines Antuerpianæ*,
wherein, among other legendary stories, he at-
tempts to prove that the Flemish was the original
language, spoken by Adam and Eve.

GORREUS, John, M. D. a physician of Paris,
in the 16th century, who published a translation
of *Nicander*. He was born in 1500. Being a pro-
testant, he suffered much from religious persecu-
tion; and his coach being one day suddenly seized
by a party of soldiers, he was attacked with a de-
lirium; and died in 1572.

* GORSE. *n. f.* [*gorf*, Saxon.] Furz; a thick
prickly shrub that bears yellow flowers in Winter.

GORT, a town of Ireland in the county of Gal-
way, 16 m. SSE. of Galway, and 98 from Dublin.

GORTA, or ST MARIA LA GORTA, an island
in the Pacific Ocean. Lon. 135. 0. W. Lat. 26.
35. N.

GORTAHURK, a town of Ireland, in Done-
gal, Ulster.

GORTERIA, in botany; a genus of the poly-
gamia frustranea order, belonging to the syngen-
esia class of plants; and in the natural method
ranking under the 49th order, *Compositæ*. The re-
ceptacle is naked; the pappus woolly; the flo-
rets of the radius ligulated or plane; the calyx
imbricated with spinous scales.

GORTIN, a village of Ireland in Tyrone.

GORTSCHITZ, a river of Germany, in Ca-
rinthia, which runs into the Gurk, 3 miles S. of
Eberstein.

GORWAY, a river of Wales in Carnarvon.

* GORY. *adj.* [from *gore*.] 1. Covered with
congealed blood.—

When two boars with rankling malice met.
Their gory sides the fresh wounds fiercely fret.

Spenser.
Wb3

Why dost thou shake thy *gory* locks at me?
Thou canst not say I did it. *Shak.*

3. Bloody; murderous; fatal. Not in use.—

The origination of our blood forbids

A *gory* emulation 'twixt us twain. *Shak.*

GORZ, or GORITZ. See GURITZ.

GORZE, a town of France, in the dept. of Moselle, and ci-devant prov. of Lorraine, $7\frac{1}{2}$ miles SW. of Metz.

GORZEGNO, a town of the Piedmontese republic, in the dep. of Boronda, and late duchy of Monterrat; seated on the Bormida, 13 miles SE. of Alba, and 15 E. of Bene.

GORZKE, a town of Germany, in the duchy of Magdeburg, 34 miles E. of Magdeburg.

GOS, a river of Germany, in Carinthia, which runs into the Malentheim.

GOSBECK, a town of Suffolk, near Needham.

GOSCHGOSCHULNK, a town of the United States in Delaware, on the Ohio, much frequented by owls.

GOSCHUTZ, a town of Silesia, in the principality of Oels; 4 miles N. of Pessenberg.

GOSE, a river of Upper Saxony, which runs into the Ocker, near Goslar.

GOSELBACH, a river of Upper Saxony, which runs into the Saale; near Merzburg.

GOSLIBERG, a mountain of Sura, 10 miles W. of Landsberg.

(1.) GOSFORD, a barony and decayed village of Scotland, in E. Lothian, 5 miles E. of Preston Pans, in Aberlady parish; anciently the property of the Aitchisons of Glencairnly, the ancestors of Lord Viscount Gosford in Ireland.

(2.) GOSFORD, a town of England, in Oxfordshire, SE. of Woodstock.

(3.) GOSFORD CASTLE, an elegant seat of Lord V. Gosford, in Armagh, Ireland, 2 miles from Market-hill.

(4.) GOSFORD, NORTH, } two English villages

(5.) GOSFORD, SOUTH, } in Northumberland, near Newcastle.

(1.) * GOSHAWK. *n. f.* [*gos*, goose, and *hawk*.] A hawk of a large kind.—

Such cruel his awful visage on them cast;

So seem poor doves at *goshawks* flight aghast.

Fairfax.

(2.) GOSHAWK. See FALCO, N° 35.

(1.) GOSHEN, in ancient geography, a district of Egypt, which Joseph procured for his father and brethren. It was the most fruitful part of the country; and its name seems to be derived from the Hebrew, *Goshem*; which signifies "rain;" Calmet thinks that Goshen, which Joshua (x. 41. xi. 16. xv. 11.) makes part of the tribe of Judah, is the same land of Goshen, which was given to Jacob and his sons by Pharaoh. Gen. xlii. 26. It is certain that the country lay between Palestine and the city of Tanais, and that the allotment of the Hebrews reached southward as far as the Nile. Josh. xii. 1.

(2.) GOSHEN, a town of Connecticut in Litchfield county, 7 miles NNW. of Litchfield.

(3.) GOSHEN, a township of Middlesex in Hampshire county, 14 miles N. of Northampton and 112 W. by N. of Boston, containing 681 inhabitants in 1790.

(4.) GOSHEN, a township of New York, in O-

range county, containing 2442 souls in 1790, whom 316 were electors.

(5.) GOSHEN, a town in the above to (N° 4.) containing about 150 inhabitants with an academy, court house and Presbyterian church. It is 18 miles N. of New York, 4 NNE. of Philadelphia. Lon. 0. 52. E. of ty. Lat. 41. 24 N.

(6.) GOSHEN, a township of Pennsylvania in Chester county.

(7.) GOSHEN, a township of Vermont in Windham county, W. of Sandbury.

GOSHGOSHUNK, a Moravian settlement in Pennsylvania, on the Allegheny, 15 miles from Fort Franklin.

GOSILIA, a river of Bosnia, which runs into the Siretza.

GOSLAR. See GOSLAR.

(1.) * GOSLINO. *n. f.* (from *goose*, young goose, a goose not yet full grown do you goosling and wagging so like if you were lipst at? says the goose to the L'Kite.—Nature hath instructed even a *goosling* to stick together, while the kite is flying over their heads. *Swift.* 2. A talking tree and 1 nest.

(2.) GOSLINO, in geography, a town in Austria, 12 miles S. of Slavonian Waidbruck.

GOSNARTH, a town near Preston.

(1.) * GOSPEL. *n. f.* [*godes*, *ipeli*, or good tidings; *euaggelion*; *euangelion* from happy tidings, *euangelion*.] 1. God's word; book of the Christian revelation. —

Thus may the *gospel* to the rising sun
Be spread, and flourish where it first begun.

—All the degrees whereof Scripture tre-
conditionate, receiving Christ as the *gospel*, him, as Lord and Saviour, the former, and the latter, being the condition of scripture and the rejecting, or not receiving him, condition of the scripture reprobation. —

—How is a good Christian animated and by a steadfast belief of the promises of the *Bentley*. 2. Divinity; theology.

(2.) The GOSPEL, comprehends the life, actions, death, resurrection, after doctrine of Jesus Christ, recorded in the 4 St. Matthew, St. Mark, St. Luke, and St. John are thence called EVANGELISTS. The church never acknowledged any more than four gospels as canonical. See BIBLE, §

* To GOSPEL, *v. n.* (from the noun.) with sentiments of religion. This word *gospel*, in whom I alone have found it, though so venerable in itself, with some irony; I suppose from the *gospelists* who been held in contempt.—

Are you to *gospel*?

To pray for this good man, and for
Whose heavy hand hath bow'd you to

* GOSPELLER. *n. f.* (from *gospel*.) of the followers of *Wickliffe*, who first a reformation from poetry, given the *gospelists* in reproach, from their professing and preach only the *gospel*.—

spellers have had their golden days,
 den down our holy Roman faith.

GOSSNITZ, a town of Upper Saxony, in Al-
 tenburg, 3 miles E. of Schmollen.

GOSSWEINSTEIN, or **GOSSMANSTEIN**, a
 town of Franconia, in Bamberg, 20 miles ESE. of
 Bamberg, and 23 NNE. of Nuremberg.

(**I.**) **GOSSYPIUM**, **COTTON**, a genus of the
 polyandria order, belonging to the monadelphia
 clats of plants; and in the natural method rank-
 ing under the 37th order, *Commiferae*. The ca-
 lyx is double, the exterior one trid; the capsule
 quadrilocular; the seeds wrapt in cotton wool.
 There are 4 species, all natives of warm climates.

1. **GOSSYPIUM ARBOREUM**, the *tree cotton*, has
 an upright woody perennial stalk, branching 6 or
 8 feet high; palmated, four or five-lobed smooth
 leaves; and yellow flowers, succeeded by large
 pods filled with seeds and cotton

2. **GOSSYPIUM BARBADENSE**, the *Barbadoes*
shrubby cotton, has a shrubby stalk branching 4 or
 5 feet high, three-lobed smooth leaves, glandu-
 lous underneath; and yellow flowers succeeded
 by oval pods, containing seeds and cotton.

3. **GOSSYPIUM HERBACEUM** the common her-
 baceous cotton, has an herbaceous smooth stalk
 two feet high, branching upwards; five-lobed
 smooth leaves; and yellow flowers from the ends
 of the branches, succeeded by roundish capsules
 full of seeds and cotton.

4. **GOSSYPIUM HIRSUTUM**, the *hairy Ame-*
rican cotton, has hairy stalks branching lateral-
 ly 2 or 3 feet high; palmated, three and five lo-
 bed

bed hairy leaves; and yellow flowers, succeeded by large oval pods furnished with seeds and cotton.

(II.) *Gossypium*, CULTURE OF THE. The three last species are annual, but the first is perennial both in root and stalk. In warm countries these plants are cultivated in great quantities in fields for the sake of the cotton; but the *HERBACEUM* species (N^o 3.) is most generally cultivated. The pods are sometimes as large as middling-sized apples, closely filled with the cotton surrounding the seed. When these plants are raised in this country, they must be continually kept in a warm stove, where they will produce seeds and cotton. They are propagated by seeds. See COTTON, N^o 1, § i—vii. The American Islands produce cotton shrubs of various sizes, which rise and grow up without any culture; especially in low and marshy grounds. Their produce is of a pale red; some paler than others; but so short that it cannot be spun. None of this is brought to Europe, though it might be usefully employed in making hats. The little that is picked up, serves to make matrassea and pillows. The cotton shrubs, that supply our manufactures, require a dry and stony soil, and thrive best in grounds that have been tilled. The plant appears more flourishing in fresh lands than in those which are exhausted; but while it produces more wood, it bears less fruit. A western exposure is fittest for it. The culture begins in March and April, and continues during the first spring rains. Holes are made at 7 or 8 feet distance, and a few seeds thrown in. When they are 5 or 6 inches high, all the stems are pulled up, except 2 or 3 of the strongest. These are cropped twice before the end of August. This precaution is necessary, as the wood bears no fruit till after the second pruning; and, if the shrub was suffered to grow more than 4 feet high, the crop would not be greater, nor the fruit so easily gathered. The same method is pursued for 3 years; for so long the shrub may continue, if it cannot conveniently be renewed oftener with the prospect of an advantage that will compensate the trouble. This useful plant will not thrive if great attention is not paid to pluck up the weeds that grow about it. Frequent rains promote its growth; but they must not be incessant. Dry weather is particularly necessary in March and April, which is the time of gathering the cotton, to prevent it from being discoloured and spotted. When gathered in, the seeds must be picked out from the wool with which they are naturally mixed. This is done by a cotton mill; composed of two rods of hard wood, about 18 feet long, 18 lines in circumference, and fluted two lines deep. They are confined at both ends, so as to leave no more distance between them than is necessary for the seed to slip through. At one end is a little millstone, which, being put in motion by the foot, turns the rods in contrary directions. They separate the cotton, and throw out the seed contained in it. See COTTON, N^o 1, § vii, 2.

(1.) GOTHA, a city of Germany, Upper Saxony, and capital of the duchy of GOTHA. This town had its name from who fortified it in their march to it only a village till surrounded with a shop of Mentz in 964. It is situated on the Leina, well built and strong. It has 2 handsome churches and a hospital. Its chief trade is in dyer's work. They have 3 crops, but the 3d grow castle or ducal palace was rebuilt in 1574 by duke Ernest the Pious, who that and the town to be encompassed and ramparts; and gave it the name *Hein*, or the *Castle of Peace*, in opposition to the ancient name of *Grimmerstein*, or the *Furies*. It is situated on a neighbour from whence there is a vast prospect plain. In one of the apartments the collection of valuable rarities, and a noble library. It is 18 miles W. of Erfurt. Lon. 10. 30. N.

(2.) GOTHA, or SAXE-GOTHA, Germany in Upper Saxony. See S.

(3.) GOTHA, a river of Sweden, land, which rises from lake Wenne to the North sea at Gottenburg.

GOTHARD, ST, one of the highest mountains of Switzerland. From the top, the

or travellers, and a monastery for one of the most pleasing prospects. It is 8 miles from Altorf, and is the canton of Uri, on the confines of the Grisons, and Italy. Its ancient name, according to Ptolemy and Strabo, was *Adula*, N° 1.) Hence the modern name, Despreause, styles it *Monte Adule*. The Rufs, the Rhone, the Aar, the and some inferior rivers rise in it. According to M. Micheli, its highest point is 2,730 above the level of the sea, though others say 2000. Considered in its utmost extent, besides St Gothard proper, the mountains of Crispian, Fourche, and Vogelsberg. Its top is covered with snow and ice. It has some mines of fine iron. This tremendous mountain was passed on the 26th May 1800, by a division of the army under general Moncey, consisting of 1000 men; who, pushing their advanced guard, drove the Austrians under general Kray to Lake Maggiore.

GOTTENBURG. See **GOTTENBURG**.

ELBA, a river of Sweden, which runs into the Baltic at Gottenburg.

IC, *adj.* relating to the Goths. See **IC**, *Index*.

THLAND, the most southern province of Sweden, being a peninsula, encompassed on three sides by the Baltic Sea, or the channel at the entrance. It was long in the possession of the Danes, but was ceded to Sweden in 1658. It contains 48 towns, and is divided into 10 parishes.

HLAND, EAST, or **OSTROGOTHIA**, a province of Sweden, bounded on the E. by the Gulf of Bothnia, S. by Smaland, W. by the Wetter lake, which divides it from W. Gothland, and on the N. by the Baltic Sea and Sundermanland. It is about 100 miles long and 70 broad, and was formerly governed by its own monarchs. See **GOTHS**. It produces wheat, grain, fruits, wood, minerals, and iron. Its chief towns are Nordkioping, Soderkioping, and Wadstena.

HLAND, SOUTH, a country of Sweden, divided into 3 provinces, viz. Schonen, Blekingen; which have undergone various vicissitudes; being sometimes subject to the Danes, and at other times recovered by the Swedes; till at last they were finally annexed to Sweden by Charles X, at the treaty of Brinnar in 1658.

HLAND, WEST, or **WESTROGOTHIA**, a province of Sweden, bounded on the E. by the Gulf of Bothnia, S. by Smaland; W. by the Scagerrack; and N. by the Baltic Sea. It is about 115 miles long and 15 broad. It was anciently governed by its own monarchs, and is fertile in corn and fruits, and has extensive fisheries. The rivers, lakes, and sea coast are full of fish. Iron, alum, &c. are manufactured by the natives. The chief towns are Gotland, Wenneburg, Lidkioping, and Falkenberg.

OTHLAND, or **GOTTLAND**, an island of Sweden, in the Baltic, 70 miles long, and not above 25 broad. It was formerly an inde-

pendent kingdom. From its situation it has been called *The Eye of the Baltic*. The soil is fertile, and the hills abound with pastures, wood, and stone quarries. Corals, cornelians, agates, and beautiful petrifications are also found in it. In 1361, this island was ravaged by Valdemar III. king of Denmark. In 1403, Albert surrendered it to queen Margaret. King Eric, her successor, lived 3 years in it after his deposition, but in 1449 gave it up to Christian I. It was restored to Sweden, in 1645, by treaty. Wisby is the capital. Lon. from 18. 6. to 19. 6. E. Lat. from 56. 54. to 57. 56. N.

(1.) **GOTHOFRED**, or **GODFREY**, Dionysius or Denis, an eminent lawyer, born of an illustrious family at Paris, in 1549. France being involved in confusion by the leaguers, he accepted of a professor's chair at Geneva, until he was employed by Henry IV.; but being afterwards stripped of his employments as a Huguenot, he retired to Heidelberg, from whence no offers could detach him. The disturbances in the Palatinate obliged him, in 1621, to take refuge in Strasburg, where he died in 1622. He wrote a great number of books; his principal work is the *Corpus Juris Civilis, cum notis*.

(2.) **GOTHOFRED**, Theodore or Theodosius, son of Denis, (N° 1.) was born at Geneva in 1580. As soon as he had finished his studies, he went to Paris; where he conformed to the Romish religion, and applied with indefatigable industry to the study of history, that of France particularly, wherein he became very eminent. In 1632, Lewis XIII. made him one of his historiographers, with a stipend of 3000 livres; and, in 1636, he was sent to Cologne, to assist at the treaty of peace negotiating there, on the part of France, by the cardinal of Lyons. This treaty being removed to Munster, Gothofred was sent thither, where he drew up Memoirs on the subject; and continued in that city, in the king's service, to his death in 1649. His principal work is his *Account of the Ceremonial of the Kings of France*.

(3.) **GOTHOFRED**, James, brother of Theodore, was born at Geneva in 1587. Applying himself to the study of the law, he obtained the professor's chair there, was made counsellor of the city, and was several times employed in France, Germany, Piedmont, and Switzerland, to negotiate their affairs in the name of the republic. He died in 1662; and his chief work is his *Codex Theodosianus, cum perpetuis commentariis, &c.*

(4.) **GOTHOFRED**, Denis, son of Theodore, (N° 2.) was born at Paris in 1615. He studied history after his father's example; became an eminent man in that department of knowledge; and obtained the reversion of his father's place of historiographer royal, from Lewis XIII. when he was but 25 years of age. He published his father's *Ceremonial of France*; finished his *Memoirs of Philip de Commines*; and was preparing a *History of Charles VIII.* when he died in 1681.

(5.) **GOTHOFRED**, John, son of Denis, (N° 4.) succeeded his father in his office and wrote also on history and antiquities. He completed and published his father's *History of Charles VIII.*; and wrote a *Journal de Henry III.*; *Memoirs de la reine Marguerite*, &c. He died in 1732.

GOTHS,

GOTHS, a warlike nation, famous in the Roman history, who came originally out of SCANDINAVIA, the name given by the ancients to Sweden, Norway, Lapland and Finmark. According to the most probable accounts, they were the first inhabitants of those countries; and from thence sent colonies into the islands of the Baltic, the Cimbric Chersonesus, and the adjacent places. The time of their first settling in Scandinavia, and of their first peopling the abovementioned islands and Chersonesus, are equally uncertain; though the Gothic annals state the latter to have happened in the time of Serug the great grandfather of Abraham. This first migration of the Goths is said to have been conducted by their king Eric; in which all the ancient Gothic chronicles, as well as the Danish and Swedish ones agree. Their 2d migration is said to have happened many ages after; when, being overstocked with people, Berig, then king of the Goths, went out with a fleet in quest of new settlements. He landed in the country of the Uimerugians, now Pomerania, drove out the ancient inhabitants, and divided their lands among his followers. He fell next upon the Vandals, whose country bordered on that of the Uimerugians, and overcame them; but instead of forcing them to abandon the country, he only made them share their possessions with the Goths. The Goths, who settled in Pomerania and the adjacent parts of Germany, being greatly increased, they undertook a 3d migration in great numbers under Filimer the Great, their 5th prince after leaving Scandinavia; and taking their route eastward, entered Scythia, advanced to the Cimmeric Bosphorus, and driving out the Cimmerians, settled near the Palus Mæotis. Thence in process of time, being greatly increased in Scythia, they resolved to seek new settlements; and accordingly taking their route eastward, they traversed several countries, and at length returned into Germany. Their leader in this expedition was the celebrated Woden. See ODIN and WODEN. At what time Woden reigned in this country, is quite uncertain; but all historians agree, that he went in quest of new settlements with incredible numbers of people following him. He first entered Rossia, comprehending the countries of Prussia, Livonia, and great part of Muscovy: Thence he went by sea into the N. parts of Germany; and having reduced Saxony and Jutland, he at last settled in Sweden, where he reigned till his death, and became so famous that his name reached all countries, and he was by the northern nations worshipped as a god. He is said to have brought the Runic characters out of Asia, and to have taught the northern nations the art of poetry; whence he is styled the father of the Scaldi or Scalds, their poets, who described in verse the exploits of the great men of their nation, as the bards did among the Gauls and Britons. The Romans distinguished the Goths into two classes; the OSTROGOTHS and VISIGOTHS. Their names they received before they left Scandinavia, the *visigotls* being so called by the Latins from *Weser-gotls*, or those who inhabit the western part of Scandinavia, as the Ostrogoths were those who inhabited the eastern part of that country. Their history affords no hint of importance till

the time of their quarrelling with the Romans, which happened in the reign of Caracalla; that period, it becomes so closely interwoven with that of the Romans, that for the most particulars of it we must refer to the article After the destruction of the Roman Empire, the Heruli, the Ostrogoths, under Theodoric, came masters of the greatest part of Italy, overcame and put to death Odoacer the Heruli in 494. They retained their dominion in this country till A. D. 553; when they were conquered by Narfes, Justinian's general, &c. The Visigoths settled in Spain in the reign of Honorius, where they founded a kingdom, which continued till the country was subdued by the Moors. See SPAIN. The Goths were famous for their hospitality and kindness to strangers, even before they embraced Christianity. It is said, that from them being eminently hospitable, they were called *Goths*, by the neighbouring nations; that name, according to Grimm and other writers, being derived from the German *guten*, which signifies good. They encountered Dio, the study of philosophy above all other sciences or foreign nations, and often derived from among their philosophers. Paganism only allowed but countenanced among them; every one being valued or respected according to the number of his wives. By so many wives he had an incredible number of children; they kept but one at home, sending out the rest in quest of new settlements; and thus swarms of people which over-ran the countries. With them adultery was a capital and irreversibly punished with death. It prevailed among them when they were conquered by the Romans only by the name of Germani (most ancient name); as appears from Menander, who was himself of that nation. From Horace, who greatly commends them for the modesty of their women. Their laws fell little short of those of the ancient Romans. Their government was monarchical; their religion was the same with that of the ancient Germans; and their dress is described by Apollonius in the following words: "They are (he) with high shoes made of hair, and reaching to their ankles; their knees, thighs, and without any covering; their garments of various colours scarce reaching to the knee; the only cover the top of their arms; they wear cassocks with a red border; their belts their shoulder; their ears are covered with locks; they use hooked lances and iron pikes."

GOTTELSBRUNN, a town of Germany, in the N. of Brunswick.

* **GOTTEN**, *part. pass. get.*—Widder be gotten for good. Job xxviii. 15.—Few when they are gotten into an office, are thoughtful to the execution of it. *Temple.*

GOTTENBURG, or **GOTHENBORG**, a strong town of Sweden, in W. C. with a good harbour, at the mouth of the Göta; which is the best situated for commerce of any in Sweden, as it lies without the city. It occupies the site of an ancient town *Ladby*, which was built by Gustavus V

lowed with considerable privileges, soon he great emporium for the trade of the provinces. Charles IX, when duke of S., having in 1604 laid the foundations of town in the island of Hisingen at no great from Lodeſe, called it *Gottheborg*, (now g.) in honour of his duchy. Upon his

to the throne, he erected in his new trading company; drew thither many, particularly the Dutch, to whom he an exemption from all duties of export port during 30 years; a corps of English ch troops, under the command of Wil- wart; and granted to the Calvinists esta- herein the free exercise of their religion, place in Sweden where this toleration was

l. The town, being in 1611 reduced by the Danes, was rebuilt in the reign us Adolphus in its present situation, and a confirmation of its ancient rights, with t of several additional privileges. It is very singular situation. At a small dis-

m the sea is a marthy plain, scarcely more a mile broad, watered by the Gotha and and almost entirely inclosed with high rocks, so bare and rugged, that they produce a single blade of grass, and ex- barren an appearance as the summits of

st Alps. Gottenburg stands partly upon t, and partly in the plain; and is divid- these different situations, into the Upper er Town. The latter is entirely level, d by several canals in the manner of the

owns; and its houses are all constructed s: the upper part hangs on the declivi- rows of buildings rise above each other cats of an amphitheatre. The whole is fortified; and its circumference is near exclusive of the suburbs, called HAGA,

: towards the harbour. The streets are mly straight: a few of the houses are of ut most of them are constructed with nted red. The harbour is formed by two rocks, and is about a quarter of a mile h. Its entrance is defended by the fort

Elsborg, which stands upon a small nd, and contains a garrison of 252 men. rg has a Royal Society of Sciences and s, upon the plan of that of Upsal.—Mr informed by a merchant who had re- years at Gottenbnry, that, during that

A British consul and several British mer- ide at Gottenburg: and a chapel, with a aplin, is appropriated to their use. Lon. Lat. 57. 44. N.

ERN, a town of Upper Saxony, in t, 4 miles NW. of Langen Salza.

ESBERG, a town of Silesia, in Schweid- iles SSW. of Freyburg, and 12 SW. of itz.

OTTINGEN, a considerable town of ony in the duchy of Brunswick; formerly nperial, but now subject to the elector of

Hanover. Here king George II. founded an uni- versity. It is seated on the Leine, in Lon. 10. 5. E. Lat. 51. 32. N.

(2) GOTTINGEN, a town of Sweden, with a good harbour, on the borders of W. Gothland, near the mouth of the Moludal. It has a citadel, towards the land and sea. Being built of wood, it has often suffered by fire. It is a bishop's see and contains 13,000 inhabitants, who carry on a considerable trade by sea. It lies 28 miles SW. of Stockholm, and 164 N. of Copenhagen. Lon.

11. 34 E. Lat. 58. 29. N.

GOTTLEBER, John Christopher, a learned critic, born in 1733. His chief work is *Animad- versions* on different portions of Plato. He died in 1785.

GOTTLEUVE, a town of Upper Saxony, in Meissen, 6 miles SW. of Konigstein, and 8 S. of Pirna.

GOTTLIEBEN, a town of the Helvetic repub- lic, near the lake of Constance, where John Huss was confined in 1415; 3 miles from Constance.

GOTTLSTORF, a town of Germany in Auf- tria, 5 miles SE. of Altenmarkt.

(1.) COTTOLENGO, a district of the Cisal- pine republic, in the dep. of Mela, containing 1 town, several villages and harbours, and 2500 citizens, in 1797.

(2.) COTTOLENGO, the capital of the above district.

GOTTON, 2 small towns of England; 1. in the Isle of Wight: 2. near Taunton, Somersetsh.

* GOTTORP, a town of Denmark, in the duchy of Sleswic, capital of Holstein Gottorp, where the duke has a very fine palace. Lon. 9. 56. E. Lat. 54. 36. N.

GOTTSBERG. See GOTTESBERG.

GOTTSCHED, a German poet, born at Kon- ingsberg, who by his works contributed to spread a taste for literature in Germany. His dramatic pro- ductions, wherein his wife assisted him and shared his fame, banished from the German theatre those buffooneries, which formerly disgraced it. He died at Leipzig in 1766, 4 years after his wife.

GOTTSCHKE, a town of Germany in Car- niola, 23 miles SSE. of Laybach, and 160 SSW. of Vienna.

GOTTZENDORF, a town of Germany, in Austria, 5 miles S. of Aigen.

GOTZEL, or GOTSEL, a town of Lower Bavaria, 36 miles E. of Ratisbon.

(1.) GOVAN, a parish of Scotland chiefly in Lanarkshire, with a small part in Renfrewshire; 5 miles long, from E. to W. and between 3 and 4 broad. The Clyde runs through its whole length, and often overflows its banks, which abound with free-stone. Agriculture is in a state of high im-

provement, though the soil is not naturally fertile; being originally clay, till, barren sand, and heath; besides about 100 acres of moor. The usual crops are wheat, oats, barley, beans, pease, potatoes, and grass. The population in 1792, stated by the rev. J. Pollock, in his report to Sir J. Sinclair, was 2518. The parish of GORBALS having been

joined with this in 1755, when Dr Webster made up his lists of the population of Scotland, Mr Pollock states the total number of souls in both parishes at 8318, and the increase of both at 3,929.

The horses are mostly above the common size. There is one sheep farm, of 198 acres; 4 bleach-fields; 1 printing field, 8 mill, 3 for corn, 1 for fluff, 1 for paper, and 3 for other manufactures. On the N. boundary of this parish, the counties of Dunbarton, Lanark and Renfrew, the parishes of New Kirkpatrick and Renfrew, and the properties of 3 heritors, all meet in one point.

(2.) **GOVAN**, a village in the above parish, (N^o 1) about one mile long, containing 224 families, in 1792.

GOVANDORE, a bay on the coast of Chili.

GOUANIA, in botany; a genus of the monocotyledon order, belonging to the polyanthus class of plants. The calyx of the hermaphrodite is quinquefid; there is no corolla; there are 5 antheræ covered with an elastic calyptra or hood; the style trifid; the fruit, inferior to the receptacle of the flower, divisible into three seeds. The male is like the hermaphrodite, but wanting stigma and germen.

GOVARDO. See **GAVARDO**, N^o 1 and 2.

GOUD *n. f.* Wool; a plant. *Dist.*

GOUDA, or **TURKOW**, a considerable town of the Batavian republic, in the dep. of Delft, and late prov. of S. Holland, remarkable for its stately church. It is seated on the river Yssel, 9 miles NE. of Rotterdam, and 21 S. of Amsterdam. Lon. 4. 37. E. Lat. 52. 2. N.

GOUDELIN, or **GOUDOUILL**, Peter, a Gascon poet, born at Toulouse, in the 17th century, and reckoned the Homer of Gaskoy. His verses have much sprightliness, with a delicate simplicity, which to those who relish the Gascon language is enchanting. He died in 1629.

GOUDHURST, a town of Kent, 12 miles SW. of Maidstone, and 44 SE. of London. Lon. 0. 31. E. Lat. 51. 8. N.

GOUDIMEL, Claudius, a musician of the 16th century, who was put to death by the bigotted catholics at Lyons, for setting the psalms of Marot and Bezant to music.

GOUDOZ, a town of Turkey in Natolia, 72 miles ENE. of Kantaja.

GOUDT, Henry, usually called *Count Goudt*, was born of a noble family at Utrecht, in 1570; and was a knight of the Palatinate. Being fond of painting and engraving, he applied himself diligently to drawing, and made a great proficiency therein. He then went to Rome, where he contracted an intimacy with Adam Elsheimer; studied his manner, and made his works models for imitation. Those pictures which Goudt himself painted were delicately touched, in colour and pencil resembling Elsheimer. On his return to Utrecht, a young woman who was in love with him, and desirous of fixing his affections upon herself, gave him in his drink a love philtre, which terminated in a very melancholy manner, by depriving him of his senses; and in this dreadful state he dragged on a miserable life to the age of 69, his death happening in 1619. It is remarkable, that though lost to every other subject when painting was spoken of he would discourse upon it in a very rational manner. He engraved 7 beautiful prints after the pictures of Elsheimer, which are well known to the curious, and are to be met with in most choice collections. He work-

ed with the graver only, in a very neat manner, produced a most powerful effect, not by engraving the strokes, according to the usual manner, but by crossing them with additional equally neat, 4 or 6 lines, one over another, in the deep shadows. The weeds and other the fore ground in his admirable prints are very lively expressed. The 7 prints engraved above, are, 1. *Ceres drinking from a cup.*

An old woman appears holding a key at the door of the cottage, and a boy making a sign by her laughing and pointing at the sky, for which contempt he was metamorphosed into a frog. The powerful and striking of this engraving cannot be properly expressed. This print is also called the *Flight into Egypt*; a night scene, in which the moon and stars are introduced with great effect. 3. The angel with Tobias, who is drawn by his side. The background is a landscape with the words in the fore ground, and the tops of the trees in front, as well as the flowers hanging from them, are beautifully engraved. 4. The angel with Tobias, carrying a fish of water. The background, a landscape with Baucis and Philemon entertaining Jupiter and Mercury. 6. A landscape, called the *repentance of the dawn of day*. The engraving is beautiful. 7. The beheading of St. John the Baptist. A very small upright oval print, which is the rarest.

GOVE *n. f.* A mow. *Tuffer.*

To GOVE *v. n.* To mow; to put in a mow, or mow. An old word.

Load safe, carry home, follow time! Gove just in the barn, it is out of despair.

(1.) **GOVEA**, Anthony, a Latin poet of the 16th century; author of Latin plays which have been admired. His editions of Terence display great judgment and accuracy. He died in 1613.

(2.) **GOVEA**, Martial and Andrew, thren of Anthony, were also men of letters. The former was a grammarian and poet; the latter a college at Coimbra. He died in 1613.

(3.) **To GOVERN** *v. a.* [*gubernare*, Latin] 1. To rule as a chief; to manage. — This inconvenience is more hard to bear in the governor than the governed; as in a vital part is more incurable than in a limb. *Spenser on Ireland.*

Slaves to our passions we become, It grows impossible to govern men. 2. To regulate; to influence; to direct at present against war, though it puts it into my hands, and though such turbulent spirits as you are, govern all tunes of peace. *Darwin.* — The chief business is to carry always in his eye, and by it to govern all his counsels, designs, &c. *Atterbury.* 3. To manage; to restrain.

Go after her, she's desp'rate; go after her. 4. [In grammar.] To have force with syntax; as, *amo governs* the accusative. Listen, children, unto me, And let this your lesson be,

language evermore

that *govern* go before. *Mauger's Gram.*
lot ; to regulate the motions of a ship.

To GOVERN. v. n. To keep superiority
have with haughtiness.—

By that rule,
r wicked atoms may be working now
e bad counsel, that you still may *govern*.

Dryden.

GOVERNABLE. *adj.* [from *govern*.] Sub-
junct authority ; subject to rule ; manageable.
-xiom of the former part of a man's
yet grown up to be headstrong, makes
governable and safe. *Locke.*

GOVERNANCE. *n. f.* [from *govern*.] 1. Go-
; rule ; management.—Jonathan took
ance upon him at that time, and rose up
if his brother Judas. 1 *Mac.* ix. 31. 2.
; as that of a guardian.—

he knew not, neither his own ill,
rough wife handling, and fair *governance*,
recurred to a better will. *Spenser.*

it ! shall king Henry be a pupil still,
the surly Gloster's *governance* ? *Shak.*
our ; manners. Obsolete.—

ikest is to fall into misfortune
s regardless of his *governance*. *Spens.*

GOVERNANT. *n. f.* [*gouvernante*, *Frén.*]
ho has the care of young girls of quality.
e usual and proper word is *governess*.

GOVERNESS. *n. f.* [*gouvern-ress*, old *Fr.*
e.] 1. A female invested with authority.

The moon, the *governess* of floods,
her anger, washes all the air,
heumatick diseases do abound. *Shak.*

orefs ; A woman that has the care of
lies.—He presented himself unto her, fall-
n upon both his knees, and holding up
s, as the old *governess* of Danae is paint-
the suddenly saw the golden shower.

is three younger children were taken from
ne's in whose hands he put them. *Clarend.*

orefs ; an instructress ; a directress.—
fiction that severe *governess* of the life of
igs upon those souls she seizes on. *Mor-*

theism.

GOVERNMENT. *n. f.* [*gouvernement*,
1. Form of a community with respect
isposition of the supreme authority.—

em to be but two general kinds of *govern-*
he world : the one exercised according
bitrary commands and will of some single
and the other according to certain orders
ntroduced by agreement or custom, and
e changed without the consent of many.

-No *government* can do any act to
lf : the supreme legislative power can-
e itself not to be absolute. *Leffey.* 2.

ished state of legal authority.—

'There they shall found
government, and their great senate chuse

gh the twelve tribes, to rule by laws or-
in'd. *Milton.*

le he survives, in concord and content
mons live, by no division rent ;

e great monarch's death dissolves the
government. *Dryden.*

one knows, who has considered the na-

ture of *government* ; that there must be in each
particular form of it an absolute unlimited power.

Addition.—Where any one person or body of men
seize into their hands the power in the last resort,
there is properly no longer a *government*, but
what Aristotle and his followers call the abuse or
corruption of one. *Swift.* 3. Administration of
publick affairs.

Safety and equal *government* are things
Which subjects make as happy as their kings.

Waller.

Those *governments*, which curb not evils,
cause ;

And a rich knave's a libel on our laws. *Young.*

4. Regularity of behaviour. Not in use.—

You needs must learn, lord, to amend this
fault ;

Though sometimes it shews greatness, courage,
blood,

Yet oftentimes it doth present harsh rage,

Defect of manners, want of *government*,

Pride, haughtiness, opinion, and disdain.

Shak. Hen. IV.

'Tis *government* that makes them seem divine ;
The want thereof makes thee abominable.

Shak. Hen. VI.

5. Manageableness ; compliance ; obsequiousness.

Thy eyes windows fall,

Like death, when he shuts up the day of life ;

Each part-depriv'd of supple *government*,

Shall stiff and stark, and cold appear, like death.

Shak.

6. Management of the limbs or body. Obsolete.

Their god

Shot many a dart at me with fierce intent ;

But I them warded all with wary *government*.

Spenser.

7. [In grammar.] Influence with regard to con-
struction.

(2.) **GOVERNMENT** is also used for a post or
office, which gives a person the power or right
to rule over a city, or a province, either supreme-
ly or by deputation.

(3.) **GOVERNMENT** is likewise used for the city,
country, or place, to which the power of govern-
ing is extended.

(4.) **GOVERNMENT, CIVIL**, was instituted for
the preservation and advancement of mens civil
interests, and for the better security of their lives,
liberties, and properties. The use and necessity
of government is such, that there never was an
age or country without some sort of civil authori-
ty ; but as men are seldom unanimous in the means
of attaining their ends, so their differences in
opinion as to government has produced various
forms of it. According to Montesquieu, and most
other writers, they may in general be reduced to
three kinds. 1. The republican. 2. The mo-
narchical. 3. The despotic.—The first is that, in
which the people in a body, or only a part of the
people, have the sovereign power ; the 2d, where
one alone governs, but by fixed established laws ;
but, 3d. in the despotic government, one person
alone, without law and without rule, directs eve-
ry thing by his own will and caprice. See *Law*.

On the subject of government at large, see Mon-
tesquieu's *Spirit of Laws*, l. 2. c. 1. ; Locke, ii.
129, &c. 4to edit. 1768 ; Sidney on Government ;

Sir Thomas Smith, *de Repub. Angl. and Acherly's* Britannie Constitution. As to the Gothic government, its original and fruits, &c. see Montefquieu's *l'Esprit des Loix*, l. 12. c. 2.—With respect to the feudal policy, how it limited government, see FEUDAL SYSTEM, § 5. 7.

GOVERNOLLO, a town of the Cisalpine republic, in the dept. of Mincio, and ci devant duchy of Mantua, anciently called *Ambuletum*. On the 24th Aug. 1796, the French, under Bonaparte, defeated the Austrians under general Wurmser, near this town, and took 1100 prisoners according to some accounts; but the rev. Mr Cruttwell states the battle to have happened in the beginning of September, and the loss of the Austrians at no less than "10,000 prisoners." (*New Univ. Gaz. Suppl.*) In April 1799, it was taken by the Austrians; but recovered with the rest of the Cisalpine republic, after the battle of Marengo in 1800. Governolo is seated at the junction of the Mincio and the Po, 12 miles SE. of Mantua, Lon. 1. 56. E. Lat. 45. 4. N.

GOVERNOUR. *n. f.* [*gouverneur*, French.] 1. One who has the supreme direction.—It must be confessed, that of Christ, working as a *ciad* or and a *governour* of the world by providence, ille partakers. Hooker.—They beget in us a great idea and veneration of the mighty author and *governour* of such stupendous bodies, and excite and elevate our minds to his adoration and praise. *Beatl.* 2. One who is invested with supreme authority in a state.—For the kingdom is the Lord's, and he is the *governour* among the nations. *Ez.* xxii. 28.—The magistrate cannot urge obedience upon such potent grounds as the minister; if is disposed, can urge disobedience; as, for instance, if my *governour* should command me to do a thing, or I must give, or forfeit my estate; and the minister steps in and tells me, that I offend God, and run my soul, if I obey that command, 'tis easy to see a greater force in this persuasion. *South.* 3. One who rules any place with delegated and temporary authority.—

To you, lord *governour*,
Remains the centure of this hellish villain.

Shak. Othello.

4. A tutor; one who has care of a young man.—

To Eltham will I, where the young king is,
Being ordain'd his special *governour*;

And for his safety there I'll best devise. *Hen. VI.*
—The great work of a *governour* is to fashion the carriage, and form the mind; to settle in his pupil good habits, and the principles of virtue and wisdom. *Locke.*—During the minority of kings, the election of bishops, and other affairs of the church, must be left in the hands of their *governours* and courtiers. *Lesep.* 5. Pilot; regulator; manager.—Behold all the ships, which though they be so great, and are driven of fierce winds, yet they are turned about with a very small helm, whithersoever the *governour* blesch. *Ju. iii.* 4.

GOUEZEC, a town of France, in the dept. of Finisterre, 4½ miles SE. of Chateaulin, and 10½ N. E. of Quimper.

GOUGANE BAGO, a lake of Ireland, in the county of Cork, 10 miles N. of Bantry.

(1.) * GOUGE. *n. f.* [French.] A chisel having

a round edge, for the cutting of such wood to be rounded or hollowed. *Moxon.*

(2.) A GOUGE is a round hollow chisel, to cut holes, channels, grooves, &c. in stone, &c.

(3.) GOUGE, Thomas, a dissenting clergyman of the 17th century, minister of St Sep London. He was a man of uncommon piety, a great promoter of useful knowledge. He had above 300 schools in Wales. He died in 1687, and though he was a nonconformist, Abboton preached his funeral sermon.

(4.) GOUGE, William, the father of T (Nº 1.) was born at Stratford le Bow, but the established church. His works make 2 folio. It is remarked of him, that he was absent from morning and evening prayer years, and that he read 15 chapters in every day. He died in 1651.

* GOUJERES. *n. f.* [from *gouze*, Fr camp trull.] The French disease. *Laumon.*

GOUJET, Claude Peter, a French author, compiler, born at Paris, in 1797. He published 1. A supplement to Moreau's Dictionary; 2. A supplement to Dupin's Bibliotheque of Historical Writers; 3. An abridgement of the Dictionary; 4. Bibliotheque Françoise, & died in 1767. He had collected a library of 5 volumes.

GOJIM, a town of Portugal, in the district of Beira.

GOVINDPOUR. See CALCUTTA, §

GOULART, Simon, a famous minister, born at Senlis in 1543, and one of the indefatigable writers of his time. He made considerable additions to the Catalogue of the truth composed by Illyricus; and has a great reputation by his works; the principal which are, 1. A translation of Seneca's selection of memorable histories. 2. A translation of St Cyprian *De lapsis*. 3. Several devotional treatises. He died at Geneva in 1611.

GOULDSBOROUGH, a town of the States, in the district of Maine and 1 county, with a good harbour, 330 mi Boston. Lon 67. 45 W. Lat. 44. 25. N.

GOULDSMITH, Francis, an English who flourished in the reign of Charles I. In other works, he translated *Sophompaneas* play of Grotius into English verse.

GOULVIN, a town of France, in the Finisterre, 4 miles N. of Lesbovin, and 1 St Pol.

GOUNONG API. See GONAPI.

GOUNVILLE, John Heralid, a French author, born in 1625, originally only a val D. of Roucheffoucault, who advanced to several high offices. He wrote *Memoirs*, or important anecdotes of the French minister Mazarine to Colbert. He died in 1707.

GOVON, a town of the Piedmontese in the dept. of the Sesia, 6 miles N. of A

GOURA, or GURA, a town of Poland, on the Vistula, 12 miles from Warsaw.

GOVRA, a town of Persia, in the province of Irak, 35 miles E. of Isfahan.

GOUKAINCOURT, a town of France

Meuse, 8 miles N. of Estain, and 15 un.

U, a town of France, in the dept. of Oafts, 8 miles S. of Lamballe, and 9 is.

U, a cape on the E. coast of Jersey, 4 St Helier.

GOURD. *n. f.* [*gouborde*, Fr.] 1. A fruit of some species are long, of- or bottle-shaped. *Miller*.—

li hafts, and from each bough and brake, t, and juiciest gourd, will pluck such e

ain our angel guest. *Milt. Par. Lost.*

Is abound so much in oil, that a sweet one may be drawn from thence by

they are of the four greater cold seeds, in emulsions. *Hill* 2. A bottle [from

Fr.] *Skinner*.—The large fruit so called ped hollow, for the purpose of con-

carrying wine, and other liquors: any leathern bottle grew to be called

name, and so the word is used by

inner.

GOURD, in botany. See CUCURBITA.

GOURD, BITTER. See CUCUMIS.

GOURD, ETHIOPIAN SOUR. See ADANSON-

GOURD TREE. See CRESCENTIA.

GOUT. *n. f.* [from gourd] A swelling leg after a journey. *Ferrier's Dict.*

GOUT, a town of France, in the dept. miles N. of Cahors, and 27 WNW.

GOUT, 1. 24. E. Lat. 45. 43. N.

GOUT, DOMINIC DE, an illustrious French private gentleman of Calcony. The

iving inhumanly massacred a colony of who had settled in Florida, Gourgues

re revenge on them, an account of en under the article FLORIDA. On

e was received with acclamations by sen, but was forbid to appear at court.

h invited him to command an English the Spaniards, in 1593; but he died his way to England.

GOUT, a town of France in the dept. of 4 miles NNW. of Faouet, and 27 W.

GOUT, a town of France, in the dept. me, and late duchy Normandy, cele-

a butter market. It is seated on the les NW. of Paris. Lon. o. 36. W.

GOUT, N.

GOUT, Mary, Lady of. See JARS.

GOUT, *n. f.* [*cuculus*.] A fish.

GOUT, a town of Scotland, in Renfrew- creek of the Clyde, near a copper

es W. of Greenock.

GOUT, INCOURT, a town of France in the of the Meuse, 7 miles E. of Gondre-

7 S. of Vancouleurs.

GOUT, T, a French protestant minister, born 1635. He left France on the revoca-

dict of Nantz, and went to Holland, came professor of Greek and Theolo-

ingen. He died there, in 1704. He *ventarii Linguae Hebraice*, and several

(1.) * **GOUT**. *n. f.* [*goutte*, French.] 1. The arthritis; a periodical disease attended with great pain.—The gout is a disease which may affect any membranous part, but commonly those which are at the greatest distance from the heart or the brain, where the motion of the fluid is the slowest, the resistance, friction, and stricture of the solid parts the greatest, and the sensation of pain, by the dilaceration of the nervous fibres, extreme. *Arb.*

One that's sick o' th' gout, had rather

Groan so in perplexity, than be cur'd

By th' sure physician death. *Shak. Cymb.*

This very rev'rend lecher, quite worn out

With rheumatism, and crippled with his gout,

Forgets what he in youthful times has done

And swings his own vices in his son. *Juv.*

2. A drop [*goutte*, French; *gutta*, Latin.] Gut for drop is still used in Scotland by physicians.—

I see thee still,

And on the blade o' th' dudgeon gout of blood,

Which was not so before. *Shak. Macbeth.*

(2.) **GOUT**. See MEDICINE, *Index*. In the new system of medicine, the gout is considered as a

disease not arising from plethora, but from the very opposite cause, viz debility; and therefore to

be cured by means the reverse of those formerly too generally prescribed. The late Dr BROWN

cured the gout repeatedly, both in his own habit and those of his patients, by wine, spirits, o-

pium, and a full diet of animal food. See BRUNSIAN SYSTEM, § 8.

(3.) * **GOUT**. *n. f.* [French.] A taste. An affected cant word.—Catalogues serve for a direc-

tion to any one that has a gout for the like studies. *Woodw. on Poff.*

(1.) * **GOUTWORT**. *n. f.* [*gout* and *wort*, *podagraria*.] An herb. *Alm.*

(2.) **GOUTWORT**. See MEGOPodium.

* **GOUTY**. *a. f.* [from *gout*.] 1. Afflicted or diseased with the gout.—There dies not above

one of a thousand of the gout, although I believe that more die gout. *Grant*—

Knots upon his gouty joints appear,

And chalk is in his crippled fingers found.

Dryd. Pers.

—Most commonly a gouty constitution is attended with great acuteness of parts, the nervous fibres,

both in the brain and the other extremities being delicate. *Arbuth.* 2. Relating to the gout.—There

are likewise other causes of blood spitting; one is the settlement of a gouty matter in the substance

of the lungs. *Blackmore.*

GOUVEA, a town of Portugal, in Beira.

GOUVERNANTE, in botany, the Spanish name of a plant which the Indians in California use

in decoction, as a sudorific drink for curing the venereal disease. It is a new species of daphne.

(See DAPHNE, § II.) It is a middle sized shrub, with angular and knotty branches, covered with

an adhesive varnish; the lateral ones alternate, and near each other; the leaves small, petiolated,

bilobed, opposite, smooth above; indistinctly veined below; the blossoms axillary, sometimes ter-

minating, pedunculated; solitary, but sometimes in pairs. The calyx is quadrifid, egg shaped, the

size of the corolla, placed beneath the fruit, deciduous. Corolla polypetalous; petals 4, small,

entire, egg-shaped, fixed on the receptacle: sta-

mina

mina is fixed to the receptacle; the length of the corolla: threads channelled, concave on one side, convex on the other: wings veiled, anthers simple. Pistil, germ oblong, covered with 5 angles and 5 cells; seeds oblong; pericarpium covered with fine hairs. *Peyrouse's Voyage*, vol. 3d.

GOUX, a town of France in the dept. of Doubs, 5 miles NW. of Pontarlier, and 9 SE. of Ornans.

(1.) GOUYE, Thomas, an eminent French mathematician, born at Dieppe, in 1650. He was a member of the society of Jesuits. His chief work is *Mathematical and Philosophical Observations*, in 2 vols 8vo. He died at Paris in 1725.

(2.) GOUYE OF LONGUEMARE, another French author, who wrote various memoirs and dissertations to illustrate the history of France.

GOUZON, a town of France in the dept. of Creuse, 15 miles E. of Gueret.

(1.) GOWER, John, one of the most ancient English poets, was cotemporary with Chaucer, and his intimate friend. He studied the law, and was some time a member of the society of Lincoln's-inn. Some have asserted that he was a judge. In the first year of Henry IV. he became blind, which he laments in one of his Latin poems. He died in 1402; and was buried in St Mary Overie, which church he had rebuilt chiefly at his own expence, so that he must have lived in affluent circumstances. His tomb was magnificent, and curiously ornamented. It still remains, but has been repaired in later times. From the collar of SS round the neck of his effigies, which lies upon the tomb, it is supposed that he had been knighted. With regard to his poetical talents, it is sufficient to say, that he was admired at the time when he wrote. He wrote, 1. *Speculum meditantis*, in French, in ten books. There are two copies of this in the Bodleian library. 2. *Vox clamantis*, in Latin verse, in 7 books. Preserved also in the Bodleian library, and in that of All-souls. It is a chronicle of the insurrection of the commons in the reign of Richard II. 3. *Confessio amantis*; printed at Westminster by Caxton in 1493, Lond. 1532, 1545. It is a sort of poetical system of morality, interspersed with a variety of moral tales. 4. *De rege Henrico IV.*; printed in Chaucer's works. There are likewise several historical tracts, in MS. written by our author, which are to be found in different libraries; also some short poems printed in Chaucer's works.

(2.) GOWER, ST, or ST GOAR. See GOAR, N° 3.

GOWER'S ISLAND, an isle in the S. pacific ocean, which has no anchorage near it. Lon. 158. 56. E. Lat. 7. 55. S.

(1.) * GOWN. *n. f.* [*gonna*, Italian; *gown*, Welsh and Erie.] 1. A long upper garment.—They make garments either short, as cloaks, or, as gowns, long to the ground. *Abbot's Descript. of the World*.—If ever I said a loose-bodied gown, sew me up in the skirts of it, and beat me to death with a bottom of brown thread; I said a gown. *Shak.*—

In length of train descends her sweeping gown,
And by her graceful walk the queen of love is known. *Dryd.*

2. A woman's upper garment.—I despise your new gown, 'till I see you dressed in it. *Pope.* 3.

The long habit of a man dedicated peace, as divinity, medicine, law.—The themselves are so mean in Irish counties, will not yield any competent minister, honest minister, scarcely to buy him a gun on Ireland.—

Girt in his Gabin gown the hero is
Yet not superior to her sex's care
The mode she fixes by the gown she
Of silks and chins she's the last appe
In these great points she loads the com

4. The dress of peace.—

He Mars depos'd, and arms to yield;

Successful councils did him soon
As fit for close intrigues as open fight

(2.) THE GOWN, (*§ 1. def. 1. 1.*) is a sort of garment, worn over the ordina hanging down to the feet. It is fashionably for ecclesiastics and for laymen; they gave the name *roga virilis*, i. e. gown, to a plain kind of gown which assumed when arrived at puberty. Particularly denominated *pretexta*. See *TEXTA*, &c. In some universities, wear a scarlet gown. In the Sorbonne, always are in gowns and caps. They wear gowns of two or more colours.

(3.) Gown is also taken in the sense magistracy or the profession of arms. In this sense it was that Cicero *arma toga*.

* GOWNED. *adj.* [from gown.] A gown.—

A noble crew about them waited
Of sage and sober peers, all gravely gown'd
In velvet white as snow the troops
The seams with sparkling emeralds

* GOWNMAN. *n. f.* [*gown* and *man* devoted to the arts of peace; one whose habit is a gown.—

Let him with pedants
Pore out his life amongst the lazy gown
—Thus will that whole bench, in an be composed of mean, fawning gown dants upon the court for a morsel of bread

GOWRAN, a borough, and post town, in the county of Kilkenny, 3 Ballinabola castle, 8 E. of Kilkenny, Dublin. It is governed by a portreev and town clerk. Here are the ruin church, and the handsome seat of the Clifden. Lon. 7. 0. W. Lat. 52. 34.

(1.) GOWRIE, Earl of. See SCO

(2.) GOWRIE, CAUSE OF, a fertile Perthshire, lying between Perth and along the north banks of the Tay, producing excellent crops. The great it is comprehended in the parish of ERROL, N° 1.

GOXHILL, two small towns; 1.

shire, near Barton: 2. near Hornsey,

GOYAVA, a town of Africa, on the

GOYAVE, a town of Grenada,

coast of the island. Lon. 61. 31. W. L

GOYAVES, a town of Guadaloupe

John VAN, painter of landscapes, pieces, was born at Leyden in 1596; instructed by Isaac Nicholai, a good afterwards by Esaias Vanderelde, a celebrated landscape painter of his time. Soon rose into general esteem; and more spread throughout Europe than of any other matter, as he possessed common readiness of hand and free-hand. It was his practice to sketch the villages and towns on the banks of rivers, the sea-ports in the Low Countries; and the scenes of inland villages, where the scenes appeared picturesque. Those he affected as subjects for his landscapes; enriched with cattle, boats, and figures in the understood perspective, and the which enabled him to give his pictures a pleasing and agreeable effect. He died in 1660.—His best pieces are generally his name and the year; and his pictures will be for ever estimable. His pictures have a greyish cast, occasioned by a colour called *Haerlem blue*, then used, but now disused, as it is apt to lose that greyish tint. His best works are highly in most parts of Europe, and large prices, being ranked with those of Teniers. They are not now easily found if undamaged, though his slighter ones are sufficiently common.

GRABAW, a river in Derby and Lancashire, empties into Mersey.

GRABEN, a town of England, in Monmouthshire, near Abergavenny.

GOZEN, a sea port of Morocco, on the Atlantic, near Mogador.

GRABO, an island of the Mediterranean, 4½ miles from Malta, and 24 miles long. It is supposed to be the island of Calpe, celebrated by Homer. It is surrounded by high rocks, which render it not easy to land; yet it is very fertile in the middle. It had 6000 inhabitants in 1551, when the English took it; but in 1559, it was retaken by the Spaniards, grand master of Malta. The possession of it along with Malta, in 1800, it was retaken by the British under Sir Alexander, on the 28th of September 1798.

GRADO DI CANDIA, an island of the Mediterranean, near Candia. Lon. 41. 31. E. of Ferro. N.

Regnier DE, a celebrated physician, born at Middelburg, in Holland, in 1641. He studied at Prussia, and was educated in medicine where he acquired great honour by publishing *De Succo Pancreatico*. He also wrote three pieces upon the organs of generation male and female; upon which subject he was in controversy with Swammerdam. He died, aged 32; and his works, with his letters, were published at Leyden in 1677.

GRABOW, a town of Bohemia, in the circle of Moravia, 17 miles WNW. of Leitmeritz.

GRABOW, a town of Poland, in the palatinate of Lublin, 12 miles S. of Kalish.

GRABAW, a town of Poland, in the palatinate of Belez, 28 miles NNW. of Belez.

(1.) * **To GRABBLE**. *v. a.* To lie prostrate on the ground. *Ansforth*.

(2.) * **To GRABBLE**. *v. n.* [probably corrupted from *grapple*.] To grope; to feel eagerly with the hands.—My blood chills about my heart at the thought of these rogues, with their bloody hands *grabbling* in my guts, and pulling out my very entrails. *Arbutnot's John Bull*.

GRABE, John Ernst, a very learned writer in the beginning of the 18th century, born at Königsberg in Prussia. He was educated in the Lutheran religion; but the reading of the fathers led him into doubts. He presented to the electoral consistory at Sambia in Prussia a memorial containing his doubts. The elector ordered 3 eminent divines to answer them. Their answers shook him in his resolution of embracing the Roman Catholic religion; and one of them, Spener, advised him to go to England. He went; and K. William III. gave him a pension, which was continued by queen Anne. He was ordained a priest of the church of England, and honoured with the degree of D. D. by the university of Oxford; upon which occasion Dr George Smalridge pronounced two Latin orations, which were afterwards printed. He wrote, 1. *Specilegium S. S. Patrum, ut et Hereticorum, Jaculi post Christum natum*, 8vo. 2. An edition of the Septuagint, from the Alexandrian MS. in St James's library. 3. Notes on Justin, &c.; and other works, which are esteemed.

(1.) **GRABEN**, a town of Croatia

(2.) **GRABEN**, a town of Silesia, in Oels.

(1.) **GRABERN**, a town of Bohemia.

(2.) **GRABERN**, a town of Germany in Austria, 3 miles N. of Sonneberg.

GRABINETZ, a town of Maritime Austria, in Istria, 14 miles NE. of Pedena.

GRABO, a town of Sweden in E. Gothland, 11 miles SE. of Linköping.

GRABOW, a town of Germany in Mecklenburg, 22 miles S. of Schwerin.

GRACAY, a town of France, in the dept. of Cher, 12 miles NNW. of Issoudun, and 10 SW. of Vierzon.

GRACCHOPOLIS, or the city of Gracchus, the ancient name of Cracow, in Poland.

GRACCHURIS, a city of Castile in Spain, built by Sempronius Gracchus, formerly called Illurcia.

(1.) **GRACCHUS**, Sempronius, the father of Tiberius and Caius (Nº 2, 3.) by Cornelia the daughter of Scipio. He was proconsul in Spain, subdued the Celtiberians, and rebuilt or repaired **GRACCHURIS**.

(2, 3.) **GRACCHUS**, Tiberius and Caius. Tiberius being tribune of the Roman people, demanded in their name, the execution of the Agrarian law; by which all persons possessing above 200 acres of land were to be deprived of the surplus, for the benefit of the poor citizens, amongst whom an equal distribution of them was to be made. Having carried his plan into execution by violent measures, he fell a victim to his zeal, being assassinated, A. A. C. 133. Caius his brother pursuing the same steps, was killed by the consul Opimius, A. A. C. 121. See **ROME**.

(1.) * **GRACE**.

(1.) • GRACE. *n. f.* [*grace*, French; *gratia*, Latin; *grace*, Etic.] 1. Favour; kindness.—If the highest love in no base person may assure to *grace*, then may I hope your beauty will not be without pity. *Sidney*.—

O momentary *grace* of mortal men,
Which we more hunt for than the *grace* of God!
Shakespeare.

Such as were popular,
And well deserving, were advanc'd by *grace*.
Daniel.

—Is this the reward and thanks I am to have for
those many acts of *grace* I have lately passed? *King*
Charles.—

Yet those remov'd,
Such *grace* shall one just man find in his sight,
That he relents, not to blot out mankind. *Milt*.
—He receiv'd all the *graces* and degrees, the pro-
cutorship and the doctorship could be obtained there.
Clarendon.—

Or each, or all, may win a lady's *grace*;
Then either of you knights may well deserve
A princess born. *Dryden's Fables*.

None of us, who now your *grace* implore,
But held the rank of sov'reign queen before.
Dryden.

Proffer'd service I repaid the fair,
That of her *grace* she gave her maid to know
The secret meaning of this moral show. *Dryden*.

2. Favourable influence of God on the human
mind.—The *grace* of God, that passeth under-
standing, keep your hearts and minds. *Common*
Prayer.—The evil of sin is that we are especially
to pray against, most earnestly begging of God,
that he will, by the power of his *grace*, preserve
us from falling into sin. *Duty of Man*.—

Prevenient *grace* descending had remov'd
The stony from their hearts, and made new flesh
Regenerate grow instead. *Milton*.

3. Virtue; effect of God's influence.—Within the
church, in the public profession and external com-
munion thereof, are contained persons truly good
and sanctified, and hereafter saved; and together
with them other persons void of all saving *grace*,
and hereafter to be damned. *Pearson*.—

How Van wants *grace*, who never wanted wit.
Pope.

4. Pardon; mercy.—
Noble pity held
His hand a while, and to their choice gave space
Which they would prove, his valour or his *grace*.
Hamer.

How and sue for *grace*
With suppliant knee. *Milton*.

5. Favour conferred.—
I should therefore esteem it great favour and
grace,
Would you be so kind as to go in my place. *Prior*.

6. Privilege.—
But to return and view the cheerful skies,
To few great Jupiter imparts this *grace*. *Dryd*.
7. A goddess, by the heathens supposed to bestow
beauty.—

This forehead, where your verse has laid
The loves delighted and the *graces* play'd. *Prior*.

8. Behaviour, considered as decent or unbecom-
ing.—The same words in Phuloclea's mouth, as
from one woman to another, so as there were no

other body by, might have had a better
perchance have found a gentler reed.
Have I reason or good *grace* in—

9. Adventitious or artificial beauty;
pearance.—

One lilac only, with a statlier g
Presum'd to claim the oak's and e
And, looking round him with a me
Spread his exalted boughs to wave
Her purple habit fits with such
On her smooth shoulders, and so

—To write and speak correctly gives
gains a favourable attention to wit
say. *Locke*. 10. Natural excellence.—
me, that things of principal excellen
thus bitten at by men whom God
with *graces*, both of wit and learning
purposes. *Hooker*.—

To some kind of men,
Their *graces* serve them but as ene
In his own *grace* he doth exalt h
More than in your advancement.

The charming Lausus, full of g
To Turnus only second in the gra
Of manly men, and features of the

hat's more rare, a poet shall say *grace*.

Pope.

GRACE, among divines, (§ 1. *def.* 2, 3.) is

For the free love and favour of God, the spring and source of all the benefits re from him. 2. For the work of the ewing the soul after the image of God ; usually guiding and strengthening the be- obey his will, to resist and mortify sin, come it.

GRACE at meals. See § 1. *def.* 17. The the moral obligation of this ceremony, om different passages of the New Testa- e so well known, that it is needless to em. Others have been drawn from the of different nations, of very remote anti- thenæus tells us, in his *Deipnosoph.* lib. ii he famous regulation made by Amphic- z of Athens, as to the use of wine, both ces and at home, he required that the

Jupiter the Sustainer should be decently rently pronounced. The same writer, in . 149. quotes Hermias, an author extant ne, who mentions a people in Egypt, in- of Naucratis, whose custom it was, af- had placed themselves in the usual pos- ating at the table, to rise again and kneel ; a priest began to chant a grace, according d form amongst them ; and when that ; they joined in the meal in a solemn fa- manner. Heliodorus has a passage in his s to the same purpose, that it was the of the Egyptian philosophers, to pour out and put up ejaculations before they sat meals. Porphyry, in his treatise *De ab-* iv. p. 408, gives a great character of the gymnosophists in Egypt for the strictness lives ; and observes, that at the sounding l before meals, which consisted only of ad, fruits, and herbs, they went to pray- ich being ended, the bell sounded again, sat down to eating. In general this was as usage among the ancient Greeks, de- m yet older ages, according to Clement ndria. He mentions, that these people, ey met together to refresh themselves with : of the grape, sung a piece of music, in of the Hebrew psalms, which they call- *tion*. Livy, lib. xxxix. speaks of it as a ustom among the Romans, that they of- crifice and prayer to the gods at their id computations. But one of the fullest ics is given by Quintilian, *Declam.* 301. *ensam*, says he, *ad quam cum venire capi-* *as invocamus* ; “ We approached the ta- supper together), and then invoked the

The Jesuit Trigautius, in his very elegant uctive narrative of the expedition of their ries into China, B. i. p. 69. gives a similar of the Chinese, who “ before partaking ntertainment, pour out wine upon the

X. PART II.

ground, as a thankful oblation to the Lord of hea- ven.” The Turks pray for a blessing on their meat ; and many more instances might be pro- duced of nations who have constantly observed the like custom, in some way or other. The cele- brated Jewish historian Josephus, giving a detail of the rites and customs of the Essenes, who were confessedly the strictest and most pious professors of the Jewish religion, says “ The priest begs a blessing before they presume to take any nourish- ment ; and it is looked upon as a great sin to take or taste before ; When the meal is over, the priest prays again ; and the company with him bless and praise God as their preserver, and the donor of their life and nourishment.” Philo, in his book *De vita contemplativa*, gives a similar ac- count of a body of men and women stricter than even the Essenes. From the Hebrew ritual it ap- pears, that the Jews had their hymns and psalms of thanksgiving, not only after eating their pass- over, but on a variety of other occasions, at and after meals, and even between their several cour- ses and dishes. Aristæus (as quoted by R. Eleazar,) says “ Moses commands, that when the Jews are going to eat or drink, the company should imme- diately join in sacrifice or prayer.”

(4.) **GRACE**, or **GRACEFULNESS**, in the human character, is an agreeable attribute, inseparable from motion as opposed to rest, and as compre- hending speech, looks, gesture, and loco-motion. As some motions are homely, the opposite to graceful, it may be inquired, With what motions is this attribute connected ? No man appears graceful in a mask ; and therefore, laying aside the expressions of the countenance, the other mo- tions may be genteel, may be elegant, but of them- selves never are graceful. A motion adjusted in the most perfect manner to answer its end, is ele- gant ; but still somewhat more is required to com- plete our idea of grace or gratefulness. What this *more* may be, is the nice point. One thing is clear from what is said, that it must arise from the expressions of the countenance : and from what expressions so naturally as from those which indi- cate mental qualities, such as sweetness, benevo- lence, elevation, dignity ? This promises to be a fair analysis ; because of all objects mental quali- ties affect us the most ; and the impression made by a graceful appearance, upon every spectator of taste, is too deep for any cause purely corporeal. The next step is, to examine what are the mental qualities, that, in conjunction with elegance of motion, produce a graceful appearance. Sweet- ness, cheerfulness, affability, are not separately sufficient, nor even in conjunction. Dignity alone, with elegant motion, produce a graceful appear- ance ; but still more graceful with the aid of other qualities, those especially that are the most exalted. See **DIGNITY**, § 3. But this is not all. The most exalted virtues may be the lot of a person whose countenance has little expression ; but such a person cannot be graceful. To produce this appearance, must be added, an expressive countenance, display- ing to every spectator of taste, with life and energy, every thing that passes in the mind. Collecting these circumstances together, grace may be de- fined, “ that agreeable appearance, which arises from elegance of motion, and from a countenance

C C C

expressive

expressive of dignity." Expressions of other mental qualities are not essential to that appearance, but they heighten it greatly. Dancing affords great opportunity for displaying grace, and haranguing still more. See DANCING, DECLAMATION, and ORATORY. But in vain will a person attempt to be graceful who is deficient in amiable qualities. A man, it is true, may form an idea of qualities he is destitute of; and, by means of that idea, may endeavour to express these qualities by looks and gestures: but such studied expression will be too faint and obscure to be graceful.

(5.) GRACE, ACT OF, the appellation given to the act of parliament, 1695, c. 31, which allows prisoners for civil debts to be set at liberty, upon making oath that they have not whereof to support themselves in prison, unless they are allowed by the creditors on whose diligences they were imprisoned, within ten days after intimation made for that purpose.

(6.) GRACE, DAYS OF, three days immediately following the term of payment of a bill, within which the creditor must protest it, if payment is not obtained, in order to entitle him to recourse against the drawer.

(7.) GRACE, HEAR OF, a species of RUTH.
* To GRACE, *v. a.* [from the noun.] 1. To adorn; to dignify; to embellish; to recommend; to decorate.—This they study, this they practise, this they grace with a wanton superfluity of wit. *Hooker.*

I do not think a braver gentleman,
More daring, or more bold is now alive,
To grace this latter age with noble deeds. *Shak.*
Little of this great world can I speak,
And therefore little shall I grace my cause,
In speaking for myself. *Shak. Othello.*
—There is due from the judge to the advocate
some commendation and *gracing*, where causes
are well handled. *Bacon.*

Rich crowns were on their royal scutcheons
plac'd,
With sapphires, diamonds, and with rubies grac'd. *Dryden.*

By both his parents of descent divine;
Great Jove and Phœbus grac'd his nobler line. *Pope.*
Though triumphs were to generals only due,
Crowns were reserv'd to grace the soldiers too. *Pope.*

2. To dignify or raise by an act of favour.—
He writes
How happily he lives, how well belov'd,
And daily graced by the emperor. *Shak.*
—He might at his pleasure grace or disgrace whom
he would in court. *Knoles.*

Dispose all honours of the sword and gun,
Grace with a nod, and ruin with a frown. *Dryden.*

3. To favour.—
When the guests withdrew,
Their courteous host saluting all the crew,
Regardless pass'd her o'er, nor grac'd with kind
adieu. *Dryden.*

* GRACE-CUP, *n. f.* [*grace* and *cup*.] The cup
or health drunk after grace.—

The *grace cup* serv'd, the cloth away,
Jove thought it time to shew his play. *Prior.*

* GRACED, *adj.* [from *grace*.] 1. Beautiful;

graceful. Not in use.—He saw this gem
of the properest and best graced mien
saw, being of a middle age and a m
Sidney. 2. Virtuous; regular; chaste.

Epicurism and lust
Make it more like a tavern or a broth
Than a grac'd palace. *Shak.*

(1.) * GRACES, *n. f.* Good graces is
seldom used in the singular —

Den and delivery of her heart,
Her goods and chattels, and good
And person, up to his embraces.

GRACES, GRATIÆ, or CHARITES, in theology, were fabulous deities, three who attended on Venus. Their names, Ibalia, and Euphrosyne; i. e. *shining*, and *gay*; or, according to some authors, Euphrosyne, and Egleia. They by some to be the daughters of Jupiter, one the daughter of Oceanus; and by Bacchus and Venus.—Some will have to have been four; and make them the three HORÆ, Hours, or rather with the days of the year. A marble in the king of Sardinia represents the three Graces in the center, with a fourth seated and covered by a veil, with the words underneath, *Adhuc*. But this group we may understand three Graces, and Venus, who was their youngest daughter of Jupiter by Dione. They were always supposed to have hold of each other's hands, and never parted. They were depicted, to show that the Graces borrow from art, and that they have no other than those of nature. Yet in the first ages not represented naked, as appears from (lib. vi. and ix.) who describes their statues. They were of wood, all but their feet, and hands, which were white. Their robe or gown was gilt; one of them held a rose, another a dye, and the third a branch of myrtle.

GRACES, in geography, a village in Essex, Baddow.

GRAS A DIOS, [Span. i. e. *Thanks to God*.] Mexico, in the province of Honduras.

GRACILE. *adj.* [*gracilis*, Latin.] Slender;

GRACILENT. *adj.* [*gracilentus*, Lat.] Lean.

GRACIS, a muscle of the leg, so called from its shape. See ANATOMY, § 216.

GRACILITY. *n. f.* [*gracilitas*, Lat.] Slenderness.

GRACIA, one of the AZORES. It has no inhabitants; produces wheat, wine, and abounds with black cattle. It exports cheese.

GRACIOUS. *adj.* [*gracieux*, Fr.] 1. Merciful.—Common sense and reason could not convince them, that the good and gracious God would be pleased, nor consequently worship any thing barbarous or cruel. *South*.—2. *and gracious*, and a lover of knowledge of the most amiable things. *Burton*.—3. Favourable; kind.—And the Lord showed mercy unto them, and had compassion on his xxxiii. 23.—

Unblam'd Ulysses' house,
I find receipt so gracious. *Chapman*.

From now reveal
The beam of light; from now inspire
Me to sing, my hand to touch the lyre.

Prior.
He; favoured.—Doctrine is much more
taught *graciously* by example than by rule.

made us *gracious* before the kings of
that they gave us food. 1 *Esdr.* viii. 80.
who was now general of the horse, was
gracious to prince Rupert than Wilmot

had been. *Clarend.* 4. Virtuous; good.—Kings are no less unhappy, their issue not being *gracious* than they are in losing them when they have approved their virtues. *Shak. Winter's Tale*. 5. Excellent. Obsolete.—The grievous abuse which hath been of councils, should rather cause men to study how so *gracious* a thing may again be reduced to that first perfection. *Hooker*. 6. Graceful; becoming. Obsolete.—Our women's names are more *gracious* than their Rutilia, that is, red head. *Comden*.

* **GRACIOUSLY**. *adv.* [from *gracious*.] 1. Kindly; with kind condescension.—His testimony he *graciously* confirmed, that it was the best of all my tragedies. *Dryden*.—

He heard my vows, and *graciously* decreed
My grounds to be restor'd, my former flocks to feed. *Dryden*.

—If her majesty would but *graciously* be pleased to think a hardship of this nature worthy her royal consideration. *Swift*. 2. In a pleasing manner.

* **GRACIOUSNESS**. *n. f.* [from *gracious*.] 1. Kind condescension.—The *graciousness* and temper of this answer made no impression on them. *Clarendon*. 2. Pleasing manner.

GRACULA, the GRACKLE, in ornithology, a genus belonging to the order of *picæ*. The bill is convex, cultrated, and bare at the point; the tongue is not cloven, but is fleshy and sharpish; it has 3 toes before and one behind. See *Pl. CLXIX. fig. 1*. There are 12 species. The most remarkable are the following:

1. **GRACULA BARITA**, the *boat-tailed grackle*, is about the size of a cuckoo. The bill is sharp, black, and an inch and a half in length; the general colour of the plumage is black, with a gloss of purple, especially on the upper parts; the legs and claws are black, the latter hooked. There is a singularity in the folding up of the tail-feathers, which, instead of forming a plain surface at top, sink into a hollow like a deep gutter. It always carries its tail expanded when on the ground, folding it up in the above singular manner only when perched or flying. It inhabits Jamaica, and feeds on maize, beetles, and other insects, as well as on the fruit of the banana. It is likewise common in North America. They breed in swamps, and migrate in September.

2. **GRACULA CRISTATELLA**, the *Chinese starling*, is a little bigger than a blackbird. The bill is yellow or orange: and the general colour of the plumage blackish, with a tinge of blue: the legs are a dull yellow. These birds talk and whistle very well, and are common in China, where they are much esteemed; and the figures of them are seen frequently in Chinese paintings. Their food is rice, insects, worms, and such like.

3. **GRACULA QUISCUA**, the *purple jack-daw*, or *Barbados blackbird*, is about the size of a blackbird, and is black, but most beautifully and richly glossed with purple, especially on the head and neck. The female is wholly brown, but deepest on the wings and tail. This species inhabits Jamaica, Carolina, Mexico, and other parts of North America. These birds generally feed on maize, whence they are named *maize-thieves*; but this is not their only food. In spring, soon after the maize seed is put into the ground, they scratch it

up again; and as soon as the leaf comes out, they take it up with their bills, root and all; but when it is ripe they do still more damage, for at that time they come by thousands, and are so bold, that if disturbed in one part of a field they only go to another. In New Jersey and Pennsylvania 3d. per dozen was once given for the dead birds, and by means of this premium they were nearly extirpated in 1750; when the persecution of them was abated on account of the great increase of worms which had taken place in the meadows, and which in the preceding year had left so little hay in New England as to occasion an importation from other parts. The grackles were therefore again tolerated, as it was observed that they fed on these worms till the maize was ripe. These birds build in trees. They pass the winter in swamps, which are quite overgrown with wood, only appearing in mild weather; and after the maize is got in, are content to feed on the aquatic tare grass, and if pressed by hunger, buck wheat and oats, &c. they are said also to destroy that pernicious insect the *ARACHUS PISI*. Their note is pretty agreeable; but their flesh is not good to eat.

4. *GRACULA RELIGIOSA*, the lesser grackle, or Indian *Star*, is about the size of a blackbird, the bill an inch and a half long, and of an orange colour. The general colour of the plumage is black, glossed with violet, purple, and green, in different reflections of light: on the quills is a bar of white; the feathers and legs are orange yellow, and the claws of a pale brown. This species, which is found in several parts of the East Indies, in the Isle of Hainan, and almost every isle beyond the Ganges, is remarkable for whistling, singing, and talking well, much better and more distinct than any of the parrot genus. Its food is of the vegetable kind. Those kept in this climate are observed to be very fond of cherries and grapes; if cherries are offered to one, and it does not immediately get them, it cries and whines like a child, till it has obtained them. It is very tame and familiar.

GRACULUS. See *CORVUS*, § III, N° 10.

GRADACCIO, a hill of Corsica, in the middle of the island; on which there are two lakes, where the chief rivers take their rise.

(1.) * *GRADATION*. *n. f.* [*gradation*, French; *gradus*, Lat.] 1. Regular progress from one degree to another.—The desire of more and more rises by a natural *gradation* to most, and after that to all. *L'Esperance*. 2. Regular advance step by step.

From thence,

By cold *gradation*, and well balanc'd form,

We shall proceed with Angelo. *Shakesp.*

—The psalmist very elegantly expresseth to us the several *gradations* by which men at last come to this horrid degree of impiety. *Tillotson*. 3. Order; sequence; series—

'Tis the curse of service;

Preferment goes by letter and affection,

Not, as of old, *gradation*, where each second good hour to the first. *Shak. Othello*.

4. Regular process of argument.—Certain it is, by a direct *gradation* of consequences from this principle of merit, that the obligation to gratitude

flows from, and is enjoined by, the first of nature. *South.*

(2.) *GRADATION*, in logic, (§ 1 *Art.*) of reasoning, otherwise called *Sorites*.

(3.) *GRADATION*, in painting, a gradual sensible change of colour, by the softening of the tints and shades.

(4.) *GRADATION*, in rhetoric, the *CLIMAX*.

* *GRADATORY*. *n. f.* [*gradus*, Lat.] from the cloisters into the church. *Atterbury*.

GRADECK, a town of Lithuania, 10 miles SSW. of Grodno.

GRADES, or *GRADUS*, a town of Prussia, 5 miles N. of Gork, and 5 W. of Friedland.

GRADETZ, a town of the Helvetii, 6 miles E. of Sion.

* *GRADIENT*. *adj.* [*gradient*, Lat.] moving by steps.—Amongst those *gradations*, that iron spider is especially remarkable, which, being but of an ordinary bigness up and down as it had been above.

GRADIGNA, a town of Maritima, 7 miles SSE. of Capua d'Alba.

GRADISKA, a strong and populous town of Croatia, 10 miles S. of Zagreb.

(1.) *GRADISKA*, a town of Croatia, 10 miles S. of Zagreb. It is surrounded by the Turks in 1691. It is surrounded by the Austrians, and is seated on the Save, 20 miles S. of Pest, 133 W. of Belgrade, and 100 W. of Vienna. Lon. 18. 39 E. Lat. 45. 18.

(2.) *GRADISKA*, or *GRADISCA*, a town of Germany, in the circle of Austria, 10 miles S. of Trieste, and formerly included in the territory of Goritz, but now in that of Goritz; built in 1473, to stop the roads of the Turks.

It was blockaded by the French under Bernadotte and Serurier, on the 19th of May, and surrendered next day, though 4000 Austrians, (led by Bonaparte) and 10 pieces of cannon, with 8 stand of arms, 15 SE. of Udine, 13 SE. of Udine, 13 SE. of Vienna. Lon. 13. 37 E. Lat. 45. 18.

(3.) *GRADISKA*, or *GRADISCA*, a town of Austria, formerly a county of Friuli, 10 miles S. of Goritz. *Gradisca* N° 1. is the capital.

(4.) *GRADISKA*, or *GRADISCA*, a village in Maritime Austria, and late Venetia, 10 miles WSW. of Udine. It was taken by the French, under general Gueuz, in March, 1797, after a sharp engagement, the Austrians were defeated with the loss of 450 men, one general and 6 pieces of cannon, and the archduke Charles narrowly escaped as a prisoner.

(5.) *GRADISKA*, or *GRADISCHKA*, a town of Austria, 1 mile from Windisch-Grätz.

GRADISTA, a town of European Bulgaria, near Servia, 40 miles S. of Varna.

GRADITZ, a town of Bohemia, 10 miles N. of Kompostitz, 12 miles N. of Kompostitz.

(1.) *GRADIZ*, a town of Spain, in the kingdom of Asturias, 10 miles NW. of Oviedo.

(2.) *GRADO*, a podestaria or district of Austria, in the Dogado of Venice, including the lakes and islands.

ADO, an island on the S. coast of Friuli, in the above district. (N° 2.) Lon. 13. E. 45. 52. N.

ADO, a strong town in the above island, 6 miles E. by N. of Venice, containing 20 souls. It has an ancient cathedral, seated on the borders of the Dogad.

GRADUAL. *adv.* [*graduel*, Fr.] Progress degrees; advancing step by step; from to another.—

Nobler birth

figures animate with *gradual* life,

with sense, reason, all summ'd up in man.

Milton.

I suppose a *gradual* natural progress of nature, from great things and persons to greater, till at length, by many steps, they come to be at greatest. *South.*

GRADUAL. *n. s.* [*gradus*, Latin.] An orb.—

ere the *gradual* prostrate they ador'd,
venerable, and thus the saint implor'd.

Dryden.

ADUALITY. *n. s.* [from *gradual*.] Regression.—This some ascribe unto the of the elements, others to the *graduality* of light. *Brown.*

ADUALITY. *adv.* [from *gradual*.] 1. Progress; in regular progression.—When the sun rises over the fixed stars, and eclipses them, it vanishes; not *gradually*, like that of the moon, but all at once. *Newton's Opticks.*—The sun being weans us *gradually* from our life the nearer we approach towards it. *Swift.*—Human creatures are able to stand much greater density in diving, and of standing upon the tops of mountains, provided the ascent be made *gradually*. *Arbutnot.* 2. In human reason doth not only *gradually*, but it actually differ from the fantastic reason of the brute. *Brown.*

GRADUATE. *n. s.* [*gradué*, Fr. from Latin.] A man dignified with an academic degree.—

Graduates I dislike the learned route,
I use a female doctor for the gout.

Bramston.

GRADUATE. See DEGREE, § 3.

GRADUATE. *v. a.* [*graduier*, French; Latin.] 1. To dignify with a degree in university.—John Tregonwel, *graduated* and dubbed a knight, did good service. *Survey of Cornwall.*—Concerning columns and adjuncts, architects make such a noise, in terms of architraves, frizes, and cornices, enough to *graduate* a master of this art.

2. To mark with degrees.—The places marked where the spirits stood at the severest heat, and according to these observations he *graduates* his thermometers. *Derham.* 3. To raise to a higher place in the scale of mechanical term.—The tincture was capable to *graduate* as much silver as an equal weight that gold. *Boyle.* 4. To heighten or improve.—Not only vitriol is a cause of heightening, but the salts of natural bodies; and dyestuffs and *graduate* their colours with salts. *Pulgar Errors.*

GRADUATION. *n. s.* [*graduation*, French; from *graduate*.] 1. Regular progression by succession of degrees.—The *graduation* of the parts of the universe is likewise necessary to the perfection of the whole. *Grew.* 2. Improvement; exaltation of qualities.—Of greater repugnancy unto reason is that which he delivers concerning its *graduation*, that heated in fire, and often extinguished in oil of Mars or iron, the loadstone acquires an ability to extract a nail fastened in a wall. *Brown.* 3. The act of conferring academical degrees.

GRADWEIN, a town of Stiria, 6 miles NW. of Graz.

(1.) GRÆCIA, Greece. See GREECE.

(2.) GRÆCIA, MAGNA, in ancient geography, part of the outermost coast of Italy, originally inhabited by Greeks. See ITALY.

GRÆCUS. See GREECE.

(1.) GRÆME, John, a Scottish poet, born at Carnwath in Lanarkshire, in 1748, whose posthumous poems have been much admired. His father was a farmer, and he was taught grammar at Lanark, under Mr R. Thomson, brother-in-law of the celebrated poet, and his progress was rapid. In 1766, he went to the University of Edinburgh, where he soon surpassed the most industrious, and spoke Latin with elegance and accuracy. He also acquired considerable knowledge in mathematics, natural philosophy, metaphysics, and the Belles Lettres. In 1769, he gave the first specimens of his poetical genius. In 1770, he was admitted into the theological class; but the fatal disease, which cut him off, now began to appear, in the form of a gradual decline, and soon ended in a deep consumption. He died July 26, 1772. His poems, consisting of 50 elegies and other miscellaneous pieces, were collected and printed at Edinburgh in 1773, in 8vo, the expence being defrayed by his friends.

(2.) GRÆME. See GRAHAM.

GRÆMSAY, a small island and parish of Scotland, in the county of Orkney, 1½ miles long and 1 broad, united to the parish of Hoy. See HOY. The population of this island, in 1794, stated by the rev. Robert Sands, in his report to Sir J. Sinclair, consisted of 36 families, and 160 souls.

GRAESATZ, a town of Hungary, in Croatia, 30 miles S. of Bihaez.

GRÆVIUS, John George, one of the most learned writers in the 17th century. In the 24th year of his age, the elector of Brandenburg made him professor at Duisbourg. In 1658, he was invited to Deventer to succeed his former master Gronovius. In 1661, he was appointed professor of eloquence at Utrecht; and in 1673, professor of politics and history. He fixed here, and refused several advantageous offers. He had the satisfaction to be sought after by divers princes, and to see several of them come from Germany to study under him. He died in 1703, aged 71. His *Thesaurus antiquitatum et historiarum Italiae*, &c. and other works are well known.

GRAFABERG, a town of Austria, 5 miles SW. of Scrattenthaal.

GRAFENDORF, a town of Austria, on the Beilach, 4 miles S. of St Polten.

GRA-

GRAFENHAYNCHEN, a town of Saxony, 11 m. SE. of Dessau, and 11 SW. of Wittenberg.
GRAFENSCHLAG, a town of Austria, 4 m. S. of Zwettl.

GRAFENWORTH, a town of Austria, 11 m. SW. of Sonneberg.

(1.) * GRAFF. *n. f.* A ditch; a moat. See GRAVE.—Though the fortifications were not regular, yet the walls were good, and the *graff* broad and deep. *Clarendon*.

(2.) * GRAFF. GRAFT. *n. f.* [*greffe*, French.] A small branch inserted into the stock of another tree, and nourished by its sap, but bearing its own fruit; a young cyon.—God gave unto man all kind of seeds and *graffs* of life; as the vegetative life of plants, the sensual of beasts, the rational of man, and the intellectual of angels. *Raleigh*.—It is likely, that as in fruit trees the *graff* maketh a greater fruit, so in trees that bear no fruit it will make the greater leaves. *Bacon's Natural History*.—

'Tis usual now an inmate *graff* to see

With insolence invade a foreign tree. *Dryden*.
—If you cover the top with clay and horse-dung, in the same manner as you do a *graff*, it will help to heal the sooner. *Mortimer*.—

Now the cleft rind inserted *graffs* receives,
And yields an offspring more than nature gives.

Pope.

(1.) * To GRAFF To GRAFT. *v. a.* [*greffer*, French.] 1. To insert a cyon or branch of one tree into the stock of another.—

His growth is but a wild and fruitless plant;
I'll cut his barren branches to the stock,

And *graff* you on to bear. *Dryden's Don Sebastian*.
With his pruning hook disjoin
Unbearing branches from their head,

And *graff* more happy in their stead. *Dryden*.

2. To propagate by insertion or inoculation.—

Now let me *graff* my pears and prune the vine. *Dryden*.

3. To insert into a place or body to which it did not originally belong.—And they also, if they bide not still in unbelief, shall be *grafted* in; for God is able to *graff* them in again. *Romans*.

These are th' Italian names which fate will join

With ours, and *graff* upon the Trojan line. *Dryden's Æneid*.

4. To impregnate with an adskitious branch.—
We've some old crab-trees here at home, that will not

Be *grafted* to your relish. *Shak. Coriolanus*.
The noble isle doth want her proper limbs;

Her royal stock *graff* with ignoble plants. *Shak*.

5. To join one thing so as to receive support from another.—This resolution against any peace with Spain is a new incident *grafted* upon the original quarrel, by the intrigues of a faction among us. *Swift*.—

May one kind grave unite each hapless name,
And *graff* my love immortal on thy fame. *Pope*.

(1.) * To GRAFF. *v. n.* To practise insertion.—

In March is good *grafting* the skilful do know,
So long as the wind in the East do not blow:
From moon being chang'd, 'till past be the prime,
For *grafting* and cropping is very good time.

Tusser.

They have fruit in greater plenty the way is to

graff, not only upon young stocks, but vers boughs of an old tree; for they great numbers of fruit; whereas, if you upon one stock, the tree can bear but

GRAFFENBERG, a town of the Upper Carniola, 19 miles SE. of Layb

GRAFFLNDORFF, a town of the GRAFFENECK, a town of Austria

SW. of Sonneberg.

GRAFFENTHAL, a town of Saxtenburg, 7 miles S. of Saalfeld.

GRAFFEN-TONNA, a town of Saxe-Gotha, 8 miles N. of Gotha.

GRAFFENWARK, a town of the GRAFIGNY, France, a French

reiss of the celebrated *Peruvian Letters*, been translated into all the languages

She was born in 1693, and married to Lorrain's chamberlain: after whose death

to Paris with mademoiselle De Guise, talents were much admired. She died in 1758, aged 65.

GRAFT. See GRAFF, § 1, 2.

* GRAFT. *n. f.* [from *graff* or *g* who propagates fruit by grafting.—I ed, by the trials of the most skilful these parts, that a man shall seldom fail cherries born by his graft the same year the insertion is made. *Barlyn*.

(1.) GRAFTING, *n. f.* or EXCERPT gardening, is the taking a shoot from one inserting it into another, in such a way both may unite closely and become one the ancient writers on husbandry and this operation is called INCISION, to do from inoculation or budding, which the *serere oculus*

(II.) GRAFTING, ACCOUNT OF THE USE, AND THEORY OF. Grafting hath lasted from the most remote antiquity; but its origin and invention has been differently reported by naturalists. Theophrastus tells us, that a man having swallowed a fruit whole, cast it into a cleft or cavity of a rotten tree; where some of the putrid parts of the wood being washed with the rains, it budded, and a shoot grew within this tree another tree of a different kind. This led the husbandman to certain grafting. Pliny says, that a countryman to make a pallisade in his grounds, that endure the longer, he filled up and finished the bottom of the pallisade, by running it with the trunks of ivy. The effect was, that the stakes of the pallisade, as they became engrafted into the trunks, and large trees; which suggested to him the art of engrafting. The use of grafting to propagate any curious sorts of fruits of certain of the kinds; which cannot be done by any other method: for as all the good fruits are accidentally obtained from seeds, so the seeds, when sown, will many of them die and produce such fruit as is not worth cultivating; but when shoots are taken from the old trees, as produce good fruit, these will never lose their kind, whatever be their stock to which they are grafted. The reason of

engrafting is somewhat obscure; and had not been given the first hint, all our knowledge would never have led us to it. The effect is ordinarily attributed to the diversity of the ducts of the graft from those of the stock, whence the figure of the particles of the graft is passing through them to the rest of the tree. They, from some observations of Agricola, suggest something new on this head. The stock, on this, he thinks, is only to be considered as a vessel of vegetable matter, which is to be filtered by the cion, and digested, and brought to maturity, as the time of growth in the vessels of the stock directs. A cion, therefore, of one kind, grafted on a tree of another, may be rather said to live in the tree it is grafted in, than to unite with it: for it is visible that the cion preserves its natural purity, though it be fed and nourished by a mere crab; which is, without doubt, owing to the difference of the vessels in the graft and those of the stock: so that grafting is justly compared to planting. In prosecution of this view of that ingenious author, it may be said, that the natural juices of the earth, by filtration and comminution in passing through the soil, &c. before they arrive at the cion, are already partly elaborated and refined; and so disposed for a more easy, plentiful, and perfect assimilation and nutrition; the cion must necessarily grow and thrive more rapidly, than if it were put immediately upon the ground, there to live on coarser fare and undergo more digestion: and the fruit produced by the graft, after preparation in the cion, must be finer and more exalted, than if fed immediately from the soil, perfectly prepared and altered juices of the earth.

GRAFTING, CHANGES SAID TO BE PRODUCED BY. Many have talked of changing of colour or producing mixed fruits, by engrafting one tree upon another of the same class; but as the grafts draw the juices from the stock to the pulp of the fruit, there is little hope of succeeding in this expectation by ever so many repeated attempts. But if, after changing the graft and stock, you set the seed of the fruit produced by the graft in a good mould, it is possible that a new mixed plant may be produced. Thus the almond and peach may, by changes in the graftings, and by interchanging the stones of the peaches, and of the shells of the almonds, and by variations of the stem, root here and there, alter their nature so that the coat or pulp of the almond may become like to the nature of the peach, and the peach may have its kernel enlarged into a kind of almond. And on the same principle, the curious M. Du Hamel has observed, that, in grafting, there is always found at the insertion of the graft, a change in the direction of the fibres, and a twisting or turning about of the vessels, greatly imitating that in the formation of glands in animal bodies: and thence he conjectures that a new sort of viscus being thus formed, the fruit may be so far influenced by it, as to be altered on the new branch; but that no such

sudden and essential changes can be effected by those means, as many writers on agriculture pretend. He observes, however, that this anatomical observation would not have been sufficient to convince him of the falsity of these relations, had not experiment joined to confirm him in this opinion. He tried many grafts on different trees; and, for fear of error, repeated every experiment of consequence several times: but all served only to convince him of the truth of what he at first suspected. He grafted in the common way the peach upon the almond, the plum upon the apricot, the pear upon the apple, the quince, and the white thorn; one species of plum on other very different species, and upon the peach the apricot and the almond. All these succeeded alike: the species of the fruit was never altered; and in those which would not come to fruit, the leaves, the wood, and the flowers, were all the same with those of the tree from whence the graft was taken. Writers on agriculture have also mentioned a very different sort of grafting; namely, the setting of grafts of one tree upon stocks of a different genus; such as the grafting the pear upon the oak, the elm, the maple, or the plum, &c. M. Du Hamel tried a great number of those experiments carefully, and found every one of them unsuccessful; and the natural conclusion from this was, that there must be some natural alliance between the stocks and their grafts, otherwise the latter will either never grow at all, or very soon perish.

(IV.) **GRAFTING, CIRCUMSTANCES CONTRIBUTING TO PROMOTE OR PREVENT SUCCESS IN.** Notwithstanding the facility with which grafts generally take on good stocks, there are many accidents and uncertainties attending them in their different periods. Some perish immediately; some, after appearing healthy for many months, and some even for years. Of these last some die without the stock suffering any thing; others perish together with the stocks. It is certain, that the greater part of grafted trees do not live so long as they would have done in their natural state; yet this is no invariable rule: for there are some which evidently live the longer for this practice; nay, there are instances of grafts which, being placed on stocks naturally of short duration, live longer than when placed on those which are more robust and lasting. These irregularities have been but little considered, though they might be made productive of considerable advantages. One great requisite for the succeeding of any graft is, that it be in its own nature capable of so close and intimate an union with the substance of the stock, that it becomes as it were a natural branch of it. If all trees resembled one another in their structure and juices, the size and elasticity of their vessels, &c. probably the grafts of all trees would succeed upon one another; but this is not the case. Trees are composed of numerous arrangements of hollow fibres, and these are different and unequal in every species of tree. In order to the succeeding of a graft, it is plain that there must be a conformity in its vessels and juices with those of the stock. The more nearly they agree in this, probably the better they succeed; and the farther they differ, the worse. If there be some difference in the solid

parts of trees, there are evidently many more in the juices. The sap in some trees is white as milk, in others it is reddish, and in some as clear and limpid as water. In some, it is thin and very fluid; in others, thick and viscous. In the taste and smell of these juices there are also no less differences: some are sweet, some insipid, some bitter, some acrid, and some fetid: the quality of the sap thus makes a very great difference in the nature of trees; but its quantity, and derivation to the parts, is scarce less observable. Of this we have familiar instances in the willow and the box; one of which will produce longer shoots in one year than the other in 20. Another difference yet more striking, and indeed more essential in regard to the growth of grafts than all these, is the different season of the year at which trees shoot out their leaves, or ripen their flowers. The almond tree is in flower before other trees in general have opened their earliest buds; and when other trees are in flower, this is full of leaves, and has its fruit set before the mulberry begins to push out its earliest buds. When we consider all these differences in trees, we are apt to wonder how it is possible for a branch of one to live upon another; and it becomes a much more perplexing question how any graft can succeed, than how such numbers come to miscarry. A graft of one pear upon another shall be seen to succeed presently as if upon its own tree; and in a fortnight will gain six inches in length, and so of some others. This must be owing to the great similarity between the stock and the graft in all respects; and a great contrariety or difference in the structure of parts will make as remarkable a difference on the other hand. An instance of this may be observed in the plum and the elm; which no art can ever make to succeed upon one another, whether the plum be grafted on the elm, or the elm upon the plum stock. These are examples of the extremes of easy growth, and of absolute decay; but there are many conjunctions of trees which see in of a middle nature between the two, and neither immediately perish, nor entirely succeed. Of these, such as were grafted in autumn usually remain green the whole winter without pushing; and those which are grafted in spring remain green a month or longer, but still without shooting. Some have also been known to make a few shoots the first, or even the ad sap season after the operation; but all perish at the end of these times. Of this kind are the grafts of the pear tree upon the elm, the maple, and the horn-beam, and the mulberry upon the elm and fig, with many others. When we inquire into the cause of this, we find these grafts, though unnatural, have yet had a communication with the stock by means of a few small vessels, which has been sufficient to keep them green, or even to make them shoot a little, during the great ascent of the sap: But the greater number of the fibres have had all the white no communication, and are found purified, dried up, or covered with a putrid juice. This has evidently happened by means of the disproportion in size between the vessels of the stock and of the graft, and the great difference between their natural juices, which are obstacles sufficient to prevent either an union of the fibres or the introduc-

tion of new sap. The grafts of the plum, and of the plum on the elm grow very vigorously for the first year; every appearance of succeeding shoots always perish in the ad. or 3d. year. An almond graft upon the plum stock shoots out very vigorously at first; but the stock immediately under the graft perishes, the graft absorbing too much juice, and the graft necessarily perishes. The decay of the whole generally begins in the spring, plainly from the difference in the natural shooting of the two trees; the plum pushing very vigorously, and consequently the stock of its juices, at a time of its nature, the juices are but scanty in it, and the sap does not begin to rise. The grafts of the plum on the almond, the same cause, furnished with an abundance of sap which they have at that time so much need of, and consequently they are certainly successful, as the other of inanition. A graft on the plum succeeds and lives longer than it would have done on the elm; the reason seems to be, that the tender tree, shoots with great vivacity, and produces more branches than the root is able to sustain. Thus the peach trees are full of dead wood; and often their large branches and sometimes their whole trunk, decay. The plum, being a slow shooter, communicates its virtue to the graft; and consequently sends out shoots which are robust and strong, and are no more than the root is able to supply with nourishment; consequently the tree is the more lasting.

(V.) GRAFTING, GENERAL DIRECTIONS. The grafts, or cions, when the grafting is effected, are young shoots of the summer's growth, for they must be less than one year, and such as grow on the trunk, and robust but moderate; such also as are firm and well ripened. The ways be chosen from healthy trees, that the middle part of each shoot is the best graft, cut at the time of grafting, 4 or 5 inches in length, or so as to have 4 or 5 joints, but should be preserved at full length till time, and then prepared as follows: The grafts, when they are to be cut from the trees in February, is better, before the buds begin to swell, much for shooting: in collecting such as have not made lateral or side shoots, cut them off at full length; and if they are used as soon as they are collected, lay them in some dry earth in a warm hot bed for some time; and, if severe weather should cover them with dry litter.

(VI.) GRAFTING, SEASONS PROPER FOR PERFORMING THE OPERATION. The best season for performing the operation is February and March. When performed in February, it is generally most successful for cherries, plums, and pears; but best adapted for apples.

(VII.) GRAFTING, TOOLS AND MANNER. There are, 1. A strong knife for cutting off the heads of the stocks, and

tion of the graft; also a small hand saw for personal use in cutting off the heads of large stocks. 2. A common grafting knife, or strong open-knife, for cutting and shaping the grafts for insertion; also to slope and form the stock for the reception of the grafts. 3. A flat grafting chisel and small mallet for clefting large stocks in cleft-grafting, for the reception of the grafts. 4. A quantity of new bass strings for bandaging for tying the grafted parts close, to secure the grafts, and promote their speedy union with the stock. And, 5. A quantity of grafting clay, being closely round the grafts after their insertion and binding, to defend the parts from being dried by the sun and winds, or too much cooled by wet, or pinched by cold; for these grafts ought to be closely surrounded with a coat of clay, in such a manner as effectually to guard them from all weathers, which would prove injurious to young grafts, and destroy their cementing property, so as to prevent the junction: therefore, a kind of stiff loamy mortar must be made of strong fat loam, or, in default thereof, of tough binding clay, either of which may be laid in a heap, adding thereto about $\frac{1}{4}$ of horse dung free from litter, and a portion of cut hay, mixing the whole well together, adding a little water: then let the whole be beaten with a stick upon a floor, or other substance; and as it becomes too dry, apply water, at every beating turning it over, always continuing to beat it well at top till it be quite flat; which must be repeated more or less according to the nature of the clay, but should be several times done the first day: next morning repeat the beating, still moistening it with water; by thus repeating the beating 6 or 8 times a day for 2 or 3 days, or every other day at least for a week, it will be in proper order for observing, it should be prepared a week at least before it is used, but a month is better.

III.) GRAFTING, VARIOUS METHODS OF. There are different methods of grafting practised; as *Whip-grafting*, *Cleft-grafting*, *Crown-grafting*, *Side-grafting*, *Root-grafting*, *Grafting by approach*, or *Inarching*: but the first three are most commonly used; and Whip-grafting is the best of all, as being most expeditious and successful.

Crown-GRAFTING. Cut the head of the stock off, horizontally, and pare the top smooth; cut one side sloping $1\frac{1}{2}$ or 2 inches deep, and the lower part of the graft sloping the same way, making a sort of shoulder at top of the graft part. Then place it upon the sloped part of the stock, resting the shoulder upon the crown of the stock, and bind the parts close together with a string, bringing it in a neat manner several times round the stock and graft; then clay the whole with a coat an inch thick on every side, from about an inch or more below the bottom of the graft, to an inch over the top of the stock, finishing the whole coat of clay in a kind of oval globe form, rather longwise, up and down, close effectually about the cion, and every part so that no sun, wind, or wet may penetrate, to prevent which is the whole intention of claying. Examine it now and then, to see if it any where

L. X. PART II.

cracks or falls off, and if it does, it must be instantly repaired with fresh clay.

2. **Cleft-GRAFTING** is so called, because the stock being large is cleft or slit down the middle for the reception of the graft; and is performed upon stocks from about one to two inches diameter. First, with a strong knife cut off the head of the stock; or if the stock is very large, it may be headed with a saw; and cut one side sloping upwards about $1\frac{1}{2}$ inches to the top; then proceed with a strong knife or chisel, to cleave the stock at top, cross-way the slope, fixing the knife towards the back of the slope, and strike it with a mallet, so as to cleave the stock about two inches, or long enough to admit the graft, keeping it open with the chisel; this done, prepare the cion, cutting it to such length as to leave 4 or 5 eyes, the lower part of which being sloped on each side, like a wedge, $1\frac{1}{2}$ or 2 inches long, making one side to a thin edge, the other much thicker, leaving the rind thereon, which side must be placed outward in the stock; the cion being thus formed, and the cleft in the stock being kept open with the chisel, place the graft therein at the back of the stock the thickest side outward, placing the whole cut part down into the cleft of the stock, making the rind of the stock and graft join exactly; then removing the grafting chisel, each side of the cleft will closely squeeze the graft, so as to hold it fast; it is then to be bound with a ligature of bass, and clayed over, as directed above, (see § 1.), leaving 3 or 4 eyes of the cions uncovered. If it be intended to graft any pretty large stocks or branches by this method, two or more grafts may be inserted in each. 1. In this case the head must be cut off horizontally, making no slope on the side, but smooth the top, then cleave it quite across, and place a graft on each side, as the stock may be cleft in two places, and insert two grafts in each cleft; they are thus to be tied and clayed. This method of grafting may be performed upon the branches of bearing trees, when intended either to renew the wood or change the sort of fruit. Towards the end of May, or the beginning of June, the junction of the graft and stock in either method will be effectually formed, and the graft begin to shoot, when the clay may be taken off, and in a fortnight or three weeks after the bandages likewise.

3. **Crown-GRAFTING** is commonly practised upon such stocks as are too large to cleave, and is often performed upon the large branches of apple and pear trees, &c. that already bear fruit, when it is intended to change the sorts, or renew the tree with fresh-bearing wood. It is termed *crown-grafting*, because the stock or branch being headed down, several grafts are inserted at top all around betwixt the wood and bark, so as to give it a crown-like appearance. This kind of grafting should not be performed until March or early in April; for then the sap being in motion, renders the bark and wood of the stock much easier to be separated for the admission of the graft. The manner of performing it is this: First, cut off the head of the stock or branch with a saw horizontally, and pare the top smooth; then having the grafts, cut one side of each flat, and somewhat sloping, an inch and a half, forming a

D d d

late.

set of shoulder at top of the stock to rest upon the crown of the stock; and then raising the rind of the stock with a wedge, so as to admit the cion between that and the wood two inches down, place the graft with the flat side next the wood, thrusting it down far enough for the shoulder to rest upon the top of the stock; and in this manner may be put 3, 4, 5, or more grafts into one large stock or branch. When the grafts are thus inserted, let the whole be tied tight and well clayed; but leave 2 or 3 eyes of each graft uncovered, and raise the clay an inch above the top of the stock, so as to throw the wet quickly off, without lodging about the grafted parts, which would ruin the whole. Crown-grafting may also be performed, by making several clefts in the crown of the stock, and inserting the grafts round the top of the clefts. The grafts will be pretty well united with the stock, and exhibit a state of growth, by the end of May or beginning of June, and the clay may then be taken away. The trees grafted by this method succeed extremely well; but, for the first two or three years, have this inconvenience attending them, that they are liable to be blown out of the stock by violent winds; which must be remedied by tying long sticks to the body of the stock or branch, and tying each graft up to one of the sticks.

4. *Root-Grafting* is performed by Whip-grafting cions (See § 6) upon pieces of the root of any tree of the same genus, and planting the root where it is to remain. It will take root, draw nourishment, and feed the graft.

5. *Side-Grafting* is by inserting grafts into the sides of the branches without heading them down; and may be practised upon trees to fill up any vacancy, or for the purpose of variety, to have several sorts of apples, pears, plums, &c. upon the same tree. It is performed thus. Fix upon such parts of the branches where wood is wanted to furnish the head or any part of the tree; there slope off the bark and a little of the wood, and cut the lower end of the grafts to fit the part as near as possible; then join them to the branch, and tie them with bawls, and clay them over.

6. *Whip-Grafting* is always performed upon small stocks, from about the size of a goose quill to half an inch or a little more or less in diameter, but the nearer the stock and graft approach in size the better. It is called *whip-grafting*, because the grafts and stocks being nearly of a size, are sloped on one side, to fit each other, and tied together in the manner of whips. The method is as follows: Cut off the head of the stock at some clear smooth part; then cut one side sloping upward, about 1½ or near 2 inches in length, and make a notch or small slit near the upper part of the slope downward about half an inch long, to receive the tongue of the cion; then prepare the cion, cutting it to 3 or 6 inches in length, forming the lower end also in a sloping manner, so as exactly to fit the sloped part of the stock, as if cut from the same place, that the rinds of both may join evenly in every part; and make a slit so as to form a sort of tongue to fit the slit made in the slope of the stock; then place the graft, inserting the tongue of it into the slit of the stock, applying the parts as evenly and close as

possible; and immediately tie the part and cover them with clay, as above directed. This sort of grafting may also be performed, if necessary, upon the young shoots of a tree, if intended to alter the sort; have more than one slit on the stem the middle or end of May, the grafts united with the stock, as will be seen shooting of the graft; then the clay wholly taken away; but suffer the stock to remain some time longer, until they seem to swell and be too much obnoxious to the signature; then take it wholly off.

7. *Grafting by Approach*, or *Approach*, is, when the stocks designed to be united, the tree from which you intend to take either grow so near, or can be placed together, that the branch or graft may approach the stock, without separating the tree, till after its union or junction; so that the graft being bound they approach and form a sort of all the names. Being a sure method, it is only practised upon such trees as are made to succeed by any of the others. When intended to propagate any tree or shrub by this method of grafting, &c. is of the hardy kind, and the soil ground, a proper quantity of for stocks must be set round it; and of a proper height, the work of approach may be performed; or, if the branches designed to be grafted from is too high, in that case stocks must be planted; a slight stage must be erected around the due height to reach the branches; containing the stocks must be placed stage. This method of grafting is performed with the head of the stock sometimes with the head left on it united with the stock; though by preserving the stock, the work is much easier and having no top, its whole effort is tied to the nourishment of the graft; stocks properly placed, either planted in or in pots around the tree to be then make the most convenient brand the stock, and mark on the body of the parts where they will most easily stock, and in those parts of each to way the bark and part of the wood inches in length, and in the same the stock in the proper place for the graft; then make a slit upwards so as to form a sort of tongue, and downwards in the stock to admit it; be then joined, slipping the tongue into the slit of the stock, making it in an exact manner, and tie them close with bawls, and afterwards cover the due quantity of clay, as in the other. After this, let a stout stake be fixed part of each graft; to which let the stock and graft be fastened, which prevent their being disjoined by the operation being performed in spring, main in that position about a month will be united, and the graft may be

the mother tree. In doing this, be-
erform it with a steady hand, so as not
r break out the graft, sloping it off
close to the stock; and if the head
s was not cut down at the time of
must now be done close to the graft,
clay and bandage must also be cleared
replaced with new, to remain a few
r. If the grafts are not firmly united
ock in the period above mentioned,
emain another year till autumn, before
e separated from the parent tree. By
f grafting may be raised almost any
or shrub, which is often done by way
, to ingraft a fruit-bearing branch of
upon any common stock of the same
rchy a new tree bearing fruit is raised
nthis. This is sometimes practised u-
and lemon trees, &c. by grafting bea-
s of a fruit tree upon any common
! from the kernels of any of the same
it, or into branches of each other, so
oranges, lemons, and citrons, all on
ee.

GRAFTING, NEW METHOD OF. An anony-
r, in a treatise published at Hamburg,
sanitates Hortensium Novæ, recommends
od of grafting trees, so as to have very
ramids of fruit upon them, which will
eauty, flavour, and quantity, all that
erwise produced. This, he says, he
perienced, and gives the following me-
ng it;—The trees are to be transplant-
on, and all their branches cut off. Ear-
llowing summer the young shoots are
d off, and the buds are then to be en-
them in an inverted direction. This,
da not only to the beauty of the pyra-
also makes the branches more fruitful.
be closely connected to the trunk, and
ied in with the common ligature: they
laced circularly round the tree, three
h circle, and these circles at six inches
m one another. The old trees may be
this manner, the success having been
good in those of 20 years standing;
ost eligible trees are those which are
orous, and full of juice, and are not a-
per or two thick. When these young
ansplanted, they must be fenced round
to defend them from the violence of
and there must be no dung put to them
e thoroughly rooted, for fear of rotting
e the fibres strike. The buds ingrafted
all, that the wounds made in the bark
them, not being very large, may heal
; and if the buds do not succeed, which
ceived in a fortnight, there must be o-
n their place. The wound made to re-
buds must be a straight cut, parallel to
n; and the piece of bark taken out must
ards, that the rain may not get in at
d. In the autumn of the same year,
e a green and flourishing pyramid; and
ummer it will flower, and ripen its fruit

GRAFTON, Richard, an English histo-

rian, born at London, in the reign of Henry VIII.
He published, 1. *An Abridgement of the Chronicles
of England*; and, 2. *A Chronicle and large History
of the Affairs of England and Kings of the same,
ordered from the Creation of the World*. He died
in the reign of Q. Elizabeth.

(2.) **GRAFTON**, a town of England, in Gloucester-
shire, on the borders of Worcestershire, and near
Bredon hill; from the side of which, in Feb. 1764,
16 acres of land slipped down and covered a large
field at the foot of the hill. This extraordinary
occurrence is ascribed to the great rain which had
fallen incessantly for some time before.

(3.) **GRAFTON**, a township of Massachusetts, in
Worcester county, containing 900 citizens in 1795;
8 miles E. of Worcester, and 40 SW. of Boston.

(4.) **GRAFTON**, an extensive county of New
Hampshire, bounded on the E. by Maine District,
S. by Strafford, Hillsborough and Cheshire coun-
ties; W. by Vermont, and N. by Canada. It is
divided into 50 townships and 17 locations; and
contained 13,451 citizens and 21 slaves in 1797.

(5.) **GRAFTON**, a township of the above coun-
ty, (N^o 4.) containing 401 inhabitants in 1797;
13 miles SE. of Dartmouth, and 19 SW. of Ply-
mouth.

(6.) **GRAFTON**, or **GRAFTON ISLAND**, one of
the Bashee islands in the E. Indian Sea. Lon. 139.
o. W. Lat. 21. 4. N.

(7—15.) **GRAFTON** is also the name of 9 Eng-
lish villages; viz. 1. in Cheshire, on the Dee NW.
of Malpas: 2. in Bucks, near Leighton: 3. in
Northamptonsh. NE. of Kettering: 4. in Oxford-
sh. on the Isis: 5. in Shrewsbury: 6. and 7. East
and West in Wilts: 8. in Worcestershire near
Bromsgrove: and 9. in Yorksh. SE. of Borough-
bridge.

GRAFUESKOI, a fort of Russia, in the prov.
of Kolivan, on the Irtysh.

GRAGNANO, a town of Italy, in the repub-
lic of Lucca, 4 miles NE. of Lucca.

GRAGNONA, a town of the Cisalpine repub-
lic, in the dept. of Crostolo, and late duchy of
Modena.

(1.) **GRAHAM**, George, clock and watch ma-
ker, the most ingenious and accurate artist in his
time, was born in 1675. After his apprentice-
ship, Mr. Tompion received him into his family,
purely on account of his merit; and treated him
with a kind of parental affection as long as he lived.
Beside his universally acknowledged skill in his
profession, he was a complete mechanic and astro-
nomer; the great mural arch in the observatory
at Greenwich was made for Dr Halley, under his
immediate inspection, and divided by his own hand;
and from this incomparable original, the best fo-
reign instruments of the kind are copies made by
English artists. The sector, by which Dr Bradley
first discovered two new motions in the fixed stars,
was of his invention and fabric; and when the
French academicians were sent to the north to
ascertain the figure of the earth, Mr Graham
was thought the fittest person in Europe to sup-
ply them with instruments: those who went to
the south were not so well furnished. He was
for many years a member of the Royal Society, to
which he communicated several ingenious and

Mahometan Paradise. And to crown all, the most elegant oratory was called in, and the imagination excited to its highest pitch, by the most lush descriptions, (though in the most chaste language,) delivered by the Doctor himself, in his *extrinsic Lecture on Generation*; which he read in the most elegant and graceful manner to very crowded audiences. It cannot be doubted, that this exhibition, pushed away in all the London terms in the most extravagant terms, must have brought in a great deal of money from the votaries of the Doctor; yet instead of making money by his lectures and lectures, he only run himself in debt, by the immense expense attending them. This was the more surprising, as the Doctor, so long living luxuriously, not only abstained from spirits, and all strong liquors, but even from animal food, eating nothing but vegetables, and drinking nothing but cold water. Consistent with this abstinence, he recommended the same to others, in a *Sermon*, which he preached in the Tolbooth of Edinburgh, in 1783, and afterwards printed and sold for the benefit of his library that text, *All Flesh is Grass*. (Isaiah xl. 6.) The occasion of his imprisonment was this.—In May 1783, while his Temple of Health was in vogue, he paid a 2d visit to his native city, and the first time gave his fellow citizens a specimen of his rhetorical powers, by delivering his *extrinsic Lecture on Generation*, a subject which the magistrates of Edinburgh considered as so very improper for public discussion, that they exerted their authority to suppress it. Upon this our Doctor published a fresh advertisement, reflecting in the keenest terms upon the city magistrates, and containing such striking personal scurrility against a respectable member of council, that the magistrates incarcerated him in the tolbooth. Upon his applying however to the Lords of Session for a bill of suspension, he got out of jail, and continued to deliver his *extrinsic lecture*, as long as public curiosity lasted. But though he doubtless collected money by this exhibition, he never afterwards recovered character in Scotland so as to be employed again in his medical capacity, by a people of rank;—not even by those to whom he had formerly been of signal service. During the winter session of 1784, he took it into his head to attend the lectures of all the medical professors in the university of Edinburgh; as well as those of the late celebrated Dr John Brown, (see BROWN, p. 2.) to whose erudition and abilities he paid very high compliments, although his system of medicine was diametrically opposite to his own. **THE BRUKONIAN SYSTEM.**) In 1785 and 1786, Dr Graham visited Newcastle, and various other places in England; but in the end of 1787, he returned to Edinburgh in a new and extraordinary character, viz. that of a teacher sent from God, to announce the MILLENNIUM, the 2d coming of Christ, and the final consummation of all things. The cause of this phrenzy some ascribed to his abominable manner of living; others to his having changed too suddenly to that, from former habits of dissipation; others to distress of circumstances, and others to the large quantities of æther, which is certain, that at this time he daily swallowed.

But whether all of these causes might not co-operate, certain it is, that the most fanatical enthusiasts in the darkest ages could not have published more ridiculous advertisements, than the Doctor at this time issued. He not only styled himself "*the servant of the Lord! O! W. L!*" (i. e. as he explained it, "Oh wonderful love!") but commenced a new chronological æra, dating his bills "the 1st, 2d, &c. days of the first month of the 1st year of the *New Jerusalem Church!*" But before the commencement of the 2d month, the servant of the Lord was most profanely confined by order of the magistrates, not indeed in the tolbooth as formerly, but in his own house. At last he was obliged to confess, that "he felt the devil, the world, and the flesh, too strong for him, and therefore he supposed that the Lord must look out for another fore-runner of his second coming." Amidst all the eccentricities, however, of this singular character, it is but justice to mention, that on a variety of occasions he has given proofs of a benevolent and charitable disposition; and what is still more to his honour, he has upon all occasions, when he visited Edinburgh, paid the utmost attention and respect to his aged parents. It afforded indeed a singular contrast of character to observe him, at the very time he was giving public lectures, of such a nature, as, in the opinion of the magistrates, tended to excite all the young fellows in the city to those vices which youth are generally but too prone to, daily riding out in his coach with his parents, who were two of the most strict old-fashioned Calvinistic Presbyterians in the metropolis.—Amidst the various vicissitudes of Dr Graham's life, nothing was more fortunate for him, than that one of his medical treatises should have proved beneficial to a gentleman of fortune at Geneva; who, as a mark of his esteem and gratitude, sent him a bond, upon the bank of England, settling on him an annuity of L. 50 a-year for life. What this gentleman's disease was, or what the mode of cure recommended in the treatise, we have not heard; but amongst other eccentric methods of cure recommended to his patients by the Doctor, one of the most extraordinary was, his *burying them alive up to the neck in earth* for 10 or 12 hours together. This method he practised himself, as well as recommended to his patients, but we have not heard any authentic accounts of a single cure made by this practice. On the contrary, his sister's husband, who had been afflicted with a kind of dropical swelling over great part of his body, underwent the operation, but died soon after the experiment. The Dr's method of sleeping and cloathing himself was perhaps as different from the ordinary practice as his regimen of eating and drinking. He made it a point to wear no woollen clothes, nor any thing made of any animal substance: and he slept upon a hair mattress, without feather-bed or blankets, and with his windows open in all weathers and seasons. He alleged, and perhaps with some truth, that most of our diseases are occasioned by too much heat; and he carried his cooling regimen so far, that in 1787, he was in terms with the tacksmen of the King's Park, for liberty to build a house

house upon the top of Arthur's Seat, in order to try how far he could bear the utmost degree of cold, that the climate of Edinburgh affords; but, though the tackman was willing, the noble proprietor could not be prevailed upon to give his consent, lest the multitude of the Doctor's patients and visitors should destroy the grass in the park. This singular genius died at Edinburgh, 23d June, 1794.

(4.) GRAHAM, Mrs Catherine M'Aulay. See MACAULAY.

(5.) GRAHAM, Sir John, of Abercorn, or Dundaff, one of the brave patriots who fought along with Wallace, against the English invaders under Edward I. He was killed at the battle of Falkirk, in 1298, where the following inscription (repeatedly renewed) is to be seen on his monument:

*"Mente manique potens, et VALLÆ fidus Achates,
Conditur hic GRAHAMUS, bello interfectus ab Anglia,
XXII. Julii, 1298."*

Thus translated by one of our old Scots poets:

"Here lies Sir John the Graham, Wallace's true Achates,

"A hero stout and bold, sell'd by the English
bawties."

(6.) GRAHAM, Sir Richard, lord viscount Preston, eldest son of Sir George Graham of Netherby, in Cumberland, Bart. was born in 1648. He was sent ambassador by Charles II. to Lewis XIV. and was master of the wardrobe and secretary of state under James II. But when the Revolution took place, he was tried and condemned, on an accusation of attempting the restoration of that prince; though he obtained a pardon by the queen's intercession. He spent the remainder of his days in retirement, and published an elegant translation of Boethius on the consolation of philosophy. He died in 1693.

GRAHAM'S DYKE. See ANTONINUS'S WALL.

GRAHAM'S MOOR, a moor of Scotland in Stirlingshire, 1 mile SE of Falkirk, where the brave Sir John Graham was killed, and the patriotic Sir W. Wallace fought his way through the English army in 1298.

GRAHAMSTON, a village of Scotland, in Lanarkshire, near Glasgow, containing 896 inhabitants in 1791.

GRAIÆ MONTES, in ancient geography, the name given by Pliny to that part of the Alps, which lies between France and Italy, and by which they pass out of Italy into the ci-devant province of Provence.

GRAIGEMANACH, a town of Ireland, in Kilkenny, on the Barrow, over which it has a bridge, 10 miles from the sea. The tide flows up to it.

GRAIGSTOWN, a town of Ireland, in the county of Kilkenny and prov. of Leinster.

* GRAIL. *n. f.* [from *grele*, Fr.] Small particles of any kind.—

Hereof this gentle knight unweeting was,
And, lying down upon the sandy *grails*,
Drank of the stream as clear as crystal *grails*. *Spens.*

(1.) GRAIN, John Baptist LE, counsellor and master of requests to Mary de Medicis queen of France, was born in 1565, and was much esteemed by Henry IV. He wrote a work entitled *De regibus*, containing *The History of Henry the Great*,

and of Lewis XIII. from the beginning of to the death of the marshal d'Ancre. This history is reckoned to be wrote with fidelity, and the spirit of a true patriot; it contains many things not to be found elsewhere, and vigorously defends the edict that had been issued to the reformed. He died at Paris in 1621.

(2.) * GRAIN. *n. f.* [*graine*, Fr. *grano*, Italian, has all the following significations. 1. A single seed of corn.—

Look into the seeds of time,
And say which *grains* will grow, and which
not.

—His reasons are as two *grains* of wheat,
Two bushels of chaff. *Shak. Merch. of Ven.*

Let them pronounce the steep Tarpeian
Vagabond, exile, flaying, pent to stocks;
But with a *grain* a day, I would not lose them.

Their mercy at the price of one tarpeian
—Many of the ears, being six inches long,
17 *grains* in them, and none less than 15.

Shak. Timon. 2. Corn.—

As it ebbes, the seedman
Upon the slime and ooze scatters his seed,
And shortly comes to harvest.

Fales no longer swell'd the tennens
Nor Phœbus led his oxen on the plain.
—'Tis a rich soil, I grant you; but covered
with weeds than *grain*. *Collier on the
The seed of any fruit.* 4. Any minute
any single body.—

Thou exist'st on many thousand *grains*
That issue out of dust. *Shak. Hamlet.*

By intelligence
And proofs as clear as founts in Jove.

We see each *grain* of gravel. *Shak. Hamlet.*

5. The smallest weight, of which in Troy weight it makes 2 scruples, and in Troy weight a pennyweight, a grain so named because it is of equal weight with a grain of barley. It is a precious diamond, whose *grains* are double, twice double in their value. *Hoyds* began at a known body, a barley corn, 1 whereof is therefore called a *grain*; which being multiplied, to scruples, drachms, and pounds. *Holder*.—The trial being made with lead and lead, weighing severally even in the air; the balance in the water weighed 4 drachms and 41 *grains*, and about weight in the air a drachms and 19 *gr* balance kept the same depth in the water as his brain.

Outweigh'd his rage but half a *grain*.
6. Any thing proverbially small.—For world before thee is as a little *grain* of thine. *Wyd. xi. 21*.—It is a sincerely pliable temper, that neglects not to make use of of grace. *Hammond*.—The ungrateful person to himself, and subsists by the good others, of which he himself has not the least. *Soub.* 7. GRAIN of ALLOWANCE. Some indulged or remitted; something above the exact weight.—He, whose very heart must be seen with *grains* of allowance, too mild, moderate, and forgiving, would always give some *grains* of allowance to the sacred science of theology. *Harris on the*

on of the fibres of wood, or other fir.—

by the conflux of meeting sap,
found pine, and divert his *grain*
and errant from his course of growth.

Shakepeare.

y of the wood as modified by the fir.

ech, the swimming alder, and the plane,
, and linden of a softer *grain*. *Dryden.*
ly considered with respect to the form
of the constituent particles.—The
sea-horse, in the midst of the solid
ins a curdled *grain* not to be found
paw.—Stones of a constitution so com-

grain so fine, that they bear a fine
ward. 11. Dyed or stained substance.
re red roses flush up in her cheeks,
pure snow with goodly vermil stain,
tion dy'd in *grain*.

Spenser.

Over his lucid arms
y vest of purple flow'd,
han melibzean, or the *grain*
worn by kings and heroes old. *Milton.*
pensive nun, devote and pure,
che of darkest *grain*
with majestick train.

Milton.

The third, his feet
d from either heel with feather'd mail,
ur'd *grain*! *Milton's Paradise Lost.*
r; disposition; inclination; humour
rection of fibres.—

r minds, preoccupied with what
er mult do than with what you should do,
u against the *grain* to voice him consul.

Shakepeare.

Hudibras, it is in vain,
argue 'gainst the *grain*. *Hudibras.*
ents, weary'd out with fruitless care,
their hopes of eating, and despair;
much against the *grain*, forc'd to retire,
s for supper, and provide a fire. *Dryd.*
art; the bottom.—The one being trac-
ild, the other stiff and impatient of a
ey lived but in cunning concord, as
ied together, but not united in *grain*.

14. The form of the surface with re-
ghness and smoothness.—The smaller
s of cutting substances are, the smaller
scratches by which they continually
ar away the glais until it be polished;
never so small, they can wear away
otherwise than by grating and scratch-
reaking the protuberances; and there-
it no otherwise than by breaking its
o a very fine *grain*, so that the scratch-
ings of the surface become too small
s. *Newton's Opticks.*

thing.

OAST. See MALAGUETTA.

DORGE, Andrew, a French physician
pher of the Epicurean sect, born at

Caen in Normandy, in 1616. Among other works
he published a curious treatise on fire, light, and
colours. He died in 1676.

* GRAINED. *adj.* [from *grain*.] Rough; made
less smooth.—

Though now this *grained* face of mine be hid
In sap consuming Winter's drizzled snow,

Yet hath my night of life some memory. *Shak.*

(1.) GRAINGER, James, an English divine of the
18th century, author of a valuable work entitled
The Biographical History of England: in 4 vols 8vo.
He was vicar of Shiplake in Oxfordshire, and was
seized with an apoplectic fit, while administering
the sacrament, April 14th, 1776, and died next
morning.

(2.) GRAINGER, a new county of the United
States in Tennessee, in Hamilton district.

(3.) GRAINGER FORT, a fort in Tennessee, on
the N. side of the Holston, at its mouth.

(1.) * GRAINS. *n. s.* [without a singular.] The
husks of malt exhausted in brewing.—

Give them *grains* their fill,

Husks, draff, to drink and swill. *Ben Jonson.*

(2.) * GRAINS OF PARADISE. *n. s.* [*cardamo-
mun*, Latin.] An Indian spice.

(3.) GRAINS OF PARADISE. See AMOMUM, § 2.

GRAINVILLE, a town of France in the dep.
of the Lower Seine, 3 miles S. of Cany, and 13½
N. of Caudebec.

* GRAINY. *adj.* [from *grain*.] 1. Full of corn.
2. Full of grains or kernels.

(1.) GRAITNEY, a parish of Scotland, in Dum-
fries shire, lying along the Solway Frith, in the
form of an oblong square, 6 miles long and 3 broad.
The climate is temperate, the air healthful, and
many of the natives long-lived; instances occurring
of people dying at 100, 103, 110, and 111. The
Eden, Esk, and Sark, uniting form the head of the
Solway Frith and the S. boundary of the parish.
The rivers and the coast abound with salmon, stur-
geons, cod, flounders, trouts, pikes, &c. The
soil is various, but fertile; mostly dry and sandy;
with some mosses. The annual produce has been
greatly increased by the inclosures and other im-
provements made by the proprietors. Of 10,240
acres, 2000 are annually under oats, 550 under
barley, 200 in potatoes, 80 under wheat, pease,
and beans, 60 in turnips, 15 under flax, 600 in
meadow and sown grass, 6000 in pasture, and 735
in moss. The total produce is valued at 18,241 l.
15 s. The exports are estimated at 7,810 l. The
live stock, in 1793, was 186 horses, 40 sheep, 528
swine, and 900 black cattle, valued at 7,342 l.
Coals, wood, tar, salt, and slates, are imported
to the amount of 10,190 l. The population, in
1793, stood along with the above particulars, by
the rev. J. Morgan, in his report to Sir J. Sinclair,
was 1815; and the increase, since 1755, 759. In
autumn 1792, *natural tar* was found in a hollow
of a tree-stone quarry. The statute labour being
commuted, the roads and bridges are good.

(2.) GRAITNEY GREEN, a village in the above
parish, long famous for the clandestine marriages
of young persons of fortune from England; per-
formed according to the rites of the church of
England, by a blacksmith, who is said to gain
near 1,000 l. a-year by this encroachment on the
clerical office.

(3.) **GRAITNEY HILL**, [supposed to have been originally named *Great-Know*], a hill in the above parish, (N^o 1.) to which it gives name.

GRAJUELA, a town of Spain, in Murcia.

GRAIUS Mons, in ancient geography, the name given by Tacitus to the highest of the **GRAIÆ MONTES**; now called *Monte St Bernard*, famous for being passed, notwithstanding its tremendous height, and eternal snow, in May, 1800, by general Bonaparte, with 30,000 troops, and all their heavy artillery, &c. See **BERNARD**, N^o 7.

GRACLE. See **GRACULA**.

GRALLÆ, in ornithology, an order of birds analogous to the *bruta* in the class of *mammalia*, in the Linnæan system. See **ZOOLOGY** and **ORNITHOLOGY**.

GRAM, a river of Denmark, which runs into the North Sea, 2 miles N. of Ripen.

GRAMAFFETTEN, a town of Germany, in Austria, 12 miles SW. of Freustadt.

GRAMAT, a town of France, in the dep. of Lot; 8 miles SW. of St Cere and 21½ NNE. of Cahors. Lon. 19. 23. E. of Ferro. Lat. 44. 47. N.

GRAMATA, a town of Turkey, in Epirus.

GRAMAYE, John Baptist, a historian and poet, born at Antwerp, and provost of Arnheim. He travelled over Germany and Italy, but in going to Spain, was carried off by African corsairs to Algiers. He returned to the Netherlands, and died at Lubeck. He published, 1. *Africa illustrata, libri X.* in 1622; 4to. 2. *Diarium Algeriensis*: 3. *Peregrinatio Belgica*: a curious work: 4. *Antiquitates Flandriæ*: fol. and, 5. *Historia Namurcensis*.

• **GRAMERCY**, *interj.* [contracted from *grant me mercy*] An obsolete expression of surprise.—

Gramercy, sir, said he; but mote I weet

What strange adventure do ye now pursue?

Spenser.

Gramercy, lovely Lucius, what's the news?

Shakesp.

(1.) **GRAMINA**, **GRASSES**; one of the seven tribes or natural families, into which all vegetables are distributed by Linnæus in his *Philosophia Botanica*. They are defined to be plants which have very simple leaves, a jointed stem, a husky calyx termed *gluma*, and a single seed. This description includes the several sorts of corn as well as grasses. In Tournefort they constitute a part of the 15th class, termed *apetalæ*; and in Linnæus's sexual method, they are mostly contained in the 2d order of the 3d class, *triandria digynia*. This numerous and natural family of the grasses has engaged the attention and researches of several eminent botanists; particularly Ray, Monti, Michell, and Linnæus. M. Monti, in his *Catalogus stirpium agri Bononiensis, gramina ac hujus modi affinia complectens*, printed at Bononia in 1719, divides the grasses from the disposition of their flowers, as Theophrastus and Ray have done before him into 3 sections or orders—These are, 1. Grasses having flowers collected in a spike. 2. Grasses having their flowers collected in a panicle or loose spike. 3. Plants that in their habit and external appearance are allied to the grasses. This class would have been natural if the author had not improperly introduced sweet-rush, juncus, and arrow-head grass, into the 3d section. Monti enumerates

about 306 species of the grasses, and reduces under Tournefort's genera; added three new genera. Scheuchzer's *rislographia*, published like wise in 1717, divides the grasses, as Monti, from the disposition of their flowers, into the 5 following sections with flowers in a spike, as phalaris, seta and frumentum. 2. Irregular grasses, as anthus and cornucopiz. 3. Grasses growing in a simple panicle or loose spike, as millet. 4. Grasses with flowers in a compound panicle, or diffused spike, as poa. 5. Plants by their habit nearly grasses, as cypres grass, scirpus, linum, and scuecheria. He has enumerated 300 species, which he describes with accuracy. Micheli has divided the grasses into 10 sections, which contain in all 44 genera, and 770 species, from the situation and number of the flowers.

(2.) **GRAMINA**, the 4th order in Linnæus's system of a Natural Method, constitutes a numerous and natural family of the **GRAMINEÆ**, *Index*; and **GRASS**.

• **GRAMINEOUS**, *adj.* [*gramineus*, Lat.] Grassy. *Gramineous* plants are such as have a leaf without a footstalk.

• **GRAMINIVOROUS**, *adj.* [*gramineus*, Lat.] Grass eating; living upon grass. The ancients were versed chiefly in the diet of the grass, among which the *graminivorous* kind, as the coloured choroides. *Sharp's Surgery*.

(1.) • **GRAMMAR**, *n. f.* [*grammatica*, Latin; *γραμματική*, Greek.] 1. The art of speaking correctly; the art which teaches the relations of words to each other.—To be a grammarian is to be conversant in the grammar and idioms of the language, then as a rhetorician to make all their use to his eloquence. *Pell.*—We make a man a grammarian, whom we will not allow to speak the rules of grammar. *Dryden's* *Defence of the speaking language*, according to the grammar of that language, do yet speak improperly. *Locke*. 2. Propriety or justness of speech according to grammar—*Varium est nomen per femina*, is the sharpest satire that can be made on woman; for the adjectives *man* and *animal* must be understood to be *grammar*. *Dryden*. 3. The book that teaches the various relations of words to one another.

(2.) **GRAMMAR**, **ENGLISH**. See **ENGLISH GRAMMAR**.

(3.) **GRAMMAR**, **PHILOSOPHIC**, or **UNIVERSAL**. "Grammar," says the rev. Mr Bruce, is not an art, necessarily supposes the existence of language; and as its design is to teach any language to those who are ignorant of it, it must be adapted to the genius of that language of which it treats.—But grammar considered as a science, views language as the sign of significant of thought. Neglecting particular arbitrary modifications introduced for beauty or elegance, it examines the relation between words and ideas; the relation between those particulars, which are the language, and those which are only the sign, and thus furnishes a certain standard, by which different languages may be compared, and several excellencies or defects pointed out.

led *Philosophie or Universal Grammar*."

. See LANGUAGE.

GRAMMAR SCHOOL. *n. s.* A school in which learned languages are grammatically taught. "Thou hast most traitorously corrupted the realm in erecting a *grammar school*." *Henry VI.*—The ordinary way of teaching in a *grammar school* I cannot exclude.

GRAMMAR, UNIVERSAL. See § 3.

GRAMMARIAN. *n. s.* [*grammarien*, Fr. *mar.*] One who teaches grammar; a teacher. —Many disputes the ambiguous nature of the word created among the *grammarians*. —They who have called the torture of *grammarians*, might also call the plague of translators. *Dryden*.

GRAMMARIAN was anciently a title of honour, and erudition, being given to persons who were learned in any art or faculty. But it has been used as a term of reproach, to signify a peddling person, employed about words, but inattentive to the true beauties of science and delicacy of sentiment. The *anatomists*, called also *philologists*, must not be confounded with the GRAMMATISTS, whose business was to teach children the first principles of language. Varro, Cicero, Metellus, Julius Cæsar, thought it no dishonour to be grammarians, who had many privileges to them by the Roman emperors.

GRAMMATICAL. *adj.* [*grammatical*, Fr. *gram.*, Lat.] 1. Belonging to grammar. —The art of virtue still being set before their eyes, that taught them with far more diligent *grammatical* rules. *Silvery*.—I shall take notice of consonants, not from the *grammatical* rules of any language, but from the discourses framed by single articulations. *Holder*. 2. Taught by grammar. —I can know more than the *grammatical* rules, unless born with a poetical genius. *Johnson*.

GRAMMATICALLY. *adv.* [from *grammar*] According to the rules or science of grammar. —A sentence is distinguished into the subject, verbs, pronouns, adverbs, and other parts of speech which compose it, then it is analysed *grammatically*. *Watts*.—As we teacheth us to speak properly, so it is rhetoric to instruct how to do it elegantly, adding beauty to that language that is naked and *grammatically* true. *Baker*.

GRAMMATICASTER. *n. s.* [Lat.] A mean person; a low grammarian.—I have not patience with the doubts, the remarks, and digressions of the French *grammaticasters*.

GRAMMATICIST, *n. s.* a teacher of the first principles of grammar.

GRAMMONT, a town of France, in the department, and ci-devant province of Auvergne, 5 miles SW. of Desse.

GRAMMONT, a town of France, in the department of Vienne, and ci-devant prov. of Lorraine, famous for its abbey; 15 miles NE. of Lyons. Lon. 1. 30. E. Lat. 46. 1. N.

GRAM. II.

(2.) GRAMMONT, or GEERSBERGH, a town of the French republic, in the dep. of the Scheldt, and ci-devant prov. of Austrian Flanders, originally a fort built on a hill by the Goths, and thence called *Gottelheim*. Baldwin earl of Flanders purchased the lordship of one Gerard in 1068, built a town and called it after him *Gerardmont*, which has been since gradually corrupted to *Grammont*. It is seated on the Dender, which divides it into the Higher and Lower town; 10 miles S. of Oudenarde, 17 SE. of Ghent, and 20 W. of Brussels. Lon. 1. 59. E. Lat. 50. 47. N.

GRAMPIAN HILLS, a chain of mountains in Scotland, which run from E. to W. almost the whole breadth of the kingdom. See ALPS, and SCOTTISH, and SCOTLAND.

GRAMPIUS MOUNTAINS, one of the above mountains, mentioned by Tacitus, where Calgacus waited the approach of Agricola, and where the battle was fought so fatal to the brave Caledonians. It gives name to the whole ridge.

* GRAMPLE. *n. s.* A crab-fish. *Linnaeus*.

GRAMPOUND, a town of England, in Cornwall, seated on the Valle, over which there is a bridge. The inhabitants have a considerable manufacture of gloves; and send 2 members to parliament. This town is supposed to be the *Gramba* of the ancients, as it stands on the same river; and that on the building of the bridge, the name was changed into *Grand-pond*. It was made a borough by Edward III, and endowed with large privileges, particularly freedom from toll throughout all Cornwall, a market on Saturday, and 3 fairs; which the burghers hold of the duchy of Cornwall in fee farm, at the rent of about 12 guineas. Its privileges were confirmed by Henry VIII; but it did not send members to parliament till the reign of Edward VI. It is a corporation, and has a mayor, 8 magistrates, a recorder, and town clerk. The mayor is chosen annually the Tuesday before Michaelmas, and the members by the majority of the magistrates and freemen. There is a chapel of ease in the town; the parish church, being at Creed, about a quarter of a mile off. It is 45 n. SW. of Launceston, and 244 W. by S. of London. Lon. 4. 49. W. Lat. 50. 22. N.

(1.) * GRAMPUS. *n. s.* A large fish of the cetaceous kind.

(2.) GRAMPUS. See DELPHINUS, N° II, § iii, 1.

(1.) GRAN, a river of Hungary, which runs into the Danube, opposite the town of Gran.

(2.) GRAN, or ESZTERGAN, a large and strong town of Hungary, the see of an archbishop. It was taken by the Turks in 1540; but retaken in 1683, by the king of Poland, and prince Charles of Lorraine, after a siege of 5 days. It is seated at the conflux of the Danube and the Gran (N° 1.) 55 miles SE. of Presburg, and 82 ESE. of Vienna. Lon. 4. 49. E. Lat. 47. 46. N.

(1.) GRANA, a town of the Piedmontese republic, in the ci-devant duchy of Aosta, 12 miles ESE. of Aosta.

(2.) GRANA, a sea port town of Spain, in Galicia, 2 miles W. of Ferrol.

(1.) GRANADA, a province of Spain, which was long an independent kingdom. See SPAIN. It made a part of the ancient Bætica; and was inhabited by the Bæthuli, the Gitanos, &c. It is

Sometimes called *Upper Andalusia*. It is bounded on the S. and E. by the Mediterranean, on the W. and N. by Lower Andalusia, and on the N.E. by Murcia. Its extent from W. to E. is 140 miles; but its greatest breadth exceeds not 80. The air is temperate and healthy; and though there are many mountains in the province, and some of them very high, yet they are almost every where covered with vines and fruit trees, together with laurel, myrtle, sweet basil, thyme, lavender, marjoram, and other aromatic herbs, which give an exquisite taste to the flesh of their sheep and cattle. A great deal of silk and sugar, flax and hemp, honey and wax, is also produced here; besides dates and acorns, superior to the best nuts; good stone for building; several sorts of gems; sumach, used in dressing goat skins; and galls, of which a dye is made for leather. The valleys, with which the mountains are intermixed, are extremely beautiful and fertile. The inhabitants of some of the highest mountains are descendants of the Moors; and, though they are now Roman Catholics, retain, in a great measure, their ancient customs, language, and language. The principal rivers are the Xeris and Guadalquivir. Great quantities of salt are made in this province, which, though neither so populous, nor so well cultivated as when subject to the Moors, yet is as rich to us as any in Spain. It was the last Spanish kingdom possessed by the Moors, and was not annexed to the crown of Castile until 1492.

(2.) GRANADA, the capital of the above province, (N^o 2.) is situated at the foot of the Sierra Nevada, or the Snowy Mountains, in a wholesome air and fruitful country, 18 miles S. of Madrid. It lies upon a high hill, and is the Darro. The Xeris runs under the walls, and thence two rivers are formed from the melting of the snow with which the mountain is constantly covered. The Darro is said to carry away 100 grains of gold; and its name, derived from *lat. aurum*, may be altered as a proof of this: the Xeris runs with its stream full of pieces of silver. When Charles V. came to Granada, in 1526, with the empress Isabella, the city presented to him with a crown made of gold gathered from the Darro. The city is large and populous, containing a great number of very fine public and private buildings. Its walls, which are adorned with many towers of equal distance, are said to be invulnerable. Here are two castles: the one built by the Moors, and the other by Charles V. and Philip II. They both command a very fine prospect; and the first is so large, that it looks like a city by itself; and, it is said, has room to accommodate 40,000 people, exclusive of the royal palace, and the convent of St. Francis. There is also a court of education; a royal tribunal; and an university, founded in 1526, with the lee of an archbishop, who has a revenue of 40,000 ducats per annum. Many noblemen, clergymen, and wealthy citizens, reside in this city, of which the silk trade and manufacture is very great, and the arsenal is said to be the best furnished of any in Spain. The inhabitants, who are partly descended of the Moors, are well supplied with water. There are several fine squares, particularly that called the *Bicaramia* or *Piazza Mayor*, where the bull fights are held;

and without the city is a large plain, full of villages, called *La Vega de Granada*. Moors are said to keep it still, but through all the holes that have been made. The last Moorish ambassador who came obtained permission of the king to see the great tower of the Alhambra, not to remain from exclaiming, that the Moors had deprived them and their that delightful country. See ALHAMBRA. It had formerly 30 gates; 18, that which still remains; 2d. Bab al-Azhar, of conference, because, with the Moor place of resort, where they conversed; 3d. Vivarabla, so called from its being a square which still bears that name; 4th. Bab al-Rach, or the gate of provisions; 5th. Bab al-Fil, or the gate of the elephants, which led to the solitude; 6th. Bab al-Mir, or Bab al-Mir, the new gate; 7th. that which is opened to the east; 8th. Bab al-Luz, of the Alhambra; 9th. Bab al-Adim, of the bones of Adam; 10th. Bab al-Cad, of the cadaver; the Moors kept this a long time, because it had been the enemies who should take the city, by 11; 12th. Bab al-Azhar, or of the moon's gates; 13th. Bab al-Ele, the lion; 14th. Bab al-Azhar, the lion's gate; 15th. Bab al-Rach, the gate of the Ban al-Rach, now the Moor; 16th. that of the Darro; 17th. that of the Darro; 18th. that of the Darro; 19th. the gate of Bab al-Hamra, by the side of the Alhambra. The least more monuments in Granada than other city in Spain. From the great descriptions in and about the city, and the pieces of the Alhambra and Generali, it is supposed that people intended to make the great depository of their religious customs, and magnificence. There is what does not bear some marks of the but, notwithstanding this abundance, the reign of the Moors in Spain had in confusion and obscurity. The of the Spaniards, their superstition; and they hate the Moors, have much contempt and hatred; they have either destroyed to be effected by time, every where bore the mark of mahometanism, still serving the monuments of antiquity, at the same time were those of their own glory and the solidity of their construction, than curiosity or a love of the arts, by those which still exist, although daily go. From the hall of *Cameras*, mentioned ALHAMBRA, there is a modern staircase, one, which corresponded to the beauty, having been destroyed. At the gallery, a part of which is inclosed by a railing, this is called the *prison of the* wife of the last king of Granada having been there. The Gomels and Zemiles of distinction, bore false witness to virtue. This event happened as follows when Abdal-Latif reigned in Granada. The Moors had carried their arms and had been bravely repulsed. Abd-

fin one of his pleasure houses for this when the Zegrís and Gomels, who were the secret enemies of the Abencerrages, took this opportunity to represent them as subjects, who employed their immense wealth in the favour of the people and despoiled the sovereign. They accused Albin Hamet, the richest and most powerful among them, of an illicit commerce with the queen, and witnesses who asserted they had been frequently seen, at Generalif, under a large tree, Albin Hamet in the arms of the queen. The fury of Abdali may easily be conceived; he swore the destruction of the Abencerrages, but the Zegrís, too prudent to allow him to break forth, advised him not to let it be known that numerous and powerful family, informed of their perfidy. It will be seen, they, to entice them into the snare, they can unite and put themselves in a position of defence, revenge upon their heads is reserved to the crown. This advice was followed; Abdali went to the Alhambra, leaving his guards to arm themselves, and order to attend. The Abencerrages were surprised by one, and beheaded as soon as they entered the hall of the lions, where there is still a wall of alabaster which was quickly filled with heads and blood. Thirty five heads were struck off, and all the Abencerrages who had followed his master, and received in the hurry of the execution, the opportunity of withdrawing and giving to the rest of the unhappy family of assistance. These immediately assembled in arms, crying out through the city "Treason! treason! Let the king instantly puts to death the Abencerrages!" with whom they were favourites, did in assisting them: 14,000 men were in arms, and proceeded towards the city shouting all the way, Let the king die! His secret should have been so kept, and severely repenting of having followed pernicious counsels he had received, the castle gates to be shut; but they were already on fire. Muley Hacén, who had been chosen to abdicate the throne in favour of his son, the tumult of the people, had one more and presented himself to appease the citizens; but he no sooner appeared, he was lifted up by the multitude nearest the castle, and cried out, "Behold our king, we will follow him, long live Muley Hacén;" and surrounded by a strong guard, the Abencerrages and other nobles, entered the castle, accompanied by above 100 soldiers. But they found the queen, with her women, and in the situation at the sudden revolution, of no new not the cause. They asked for the king, and being informed he was in the hall, they entered it furiously, and found him surrounded by the Zegrís and the Gomels, and in a few hours killed upwards of 200 of them. The bodies of the beheaded Abencerrages were laid upon black cloth, and carried to the sea. Muza, brother to Abdali, who

by his great actions had gained the favour of the people, appealed the Abencerrages; and having got information that the queen had taken refuge in a mosque near the mountains, now called St Helena, went and brought her back to the castle of Alhambra. Abdali shut himself up in the castle, and refused to see the queen. Those who had accused her of adultery, however, persisted in their false accusation, and said, they would maintain, with arms in their hands, against all who should dare to contradict them, that the queen was guilty. She was imprisoned, and the day arriving on which she was to be executed, when none among the Moors offering to defend her, some Christian knights presented themselves, and conquered her false accusers, so that she was immediately set at liberty. The taking of Granada soon followed this combat; Muza and the Abencerrages having, it is said, facilitated the conquest of it by Ferdinand and Isabella. From the Alhambra we enter the Generalif by the low gate, which favoured the escape of Abdali when Ferdinand took Granada. *Generalif* signifies, in Arabic, *the house of pleasure*. It was built by Omar, who was so fond of music, that he retired to this palace, to enjoy that amusement. It is the most pleasant situation in the environs of Granada. It is built upon a very high mountain whence waters rush from every side, in torrents, and fall in beautiful cascades into the courts, gardens, and halls of that ancient palace. The gardens form an amphitheatre, and are full of trees, venerable from their antiquity. Two cypresses in particular are noted, called the Cypresses of the queen, because it was near them that the perfidious Gomels impeached the virtue of that princess and the honour of the Abencerrages. Of this place, travellers observe, that the writers of romances have never imagined a scene equal to it. Granada was formerly called ILLIBERIA, and founded, says tradition, by Liberia, a great-granddaughter of Hercules, daughter of Hispan, and wife to Hesperus, a Grecian prince, and brother to Atalanta. Others maintain that it was founded by IBERUS, grandson of Tubal, and that it took the name of *Granada*, or *Grenata*, from Nata the daughter of Liberia; the word *Gar*, in the language of the time, signifying grotto; i.e. the grotto of Nata, because that princess studied astrology and natural history in this country. It is certain that such a person as Nata, or Natayde, existed in the first ages of Granada; and that in the place where the Alhambra now stands, there was a temple dedicated to Nativala. Granada is said to have been founded A. A. C. 2808. In the time of the Romans it was a municipal colony. A description of Granada, in Latin, written in 1560, by George Hofmhel, a merchant at Antwerp, who travelled into Spain, is to be found in the work, intitled *Civitates orbis terrarum*, printed at Cologne in 1576; with a good plan of the city of Granada. This city is 125 miles S.W. of Murcia, and 183 S. of Madrid. Lon. 3. 30. W. Lat. 37. 17. N.

(3.) GRANADA, or GRENADA, one of the Caribbee islands. See GRENADA.

(4.) GRANADA, a town of Mexico in the province of Nicaragua, seated on the lake Nicaragua, 70 miles from the S. Sea. It was taken twice by

the French buccaneers, and pillaged. The inhabitants carry on a great trade by means of the lake, which communicates with the N. Sea. Lon. 83. 20 W. Lat. 11. 8. N.

(5.) GRANADA, New, a province of S. America, in Terra Firma, about 75 miles in length, and as much in breadth. It is bounded on the N. by Cartagena and St. Martha, on the E. by Venezuela, on the S. by Popayan, and on the W. by Darien. It contains mines of gold, copper, and iron; horses, mules, good pastures, corn, and fruits. It belongs to the Spaniards, and Santa Fe de Bogota is the capit.

GRANADE. See GRENADE.

GRANADIER. See GRENADE.

GRANADILLOES, or GRENADES, dangerous bands of the Caribbees, in America, having St. Vincent on the N. and Granada on the S. They were ceded to Britain by the treaty of peace in 1763, but have been since neglected. Lat. 18. 0. N.

(1.) GRANADO, a town of Spain in Seville, 13 miles N. of Ayamonte.

(2.) GRANADO. See GRENADE.

GRANAL, a town of Spain, in the province of Leon, 28 miles SE. of Leon.

(1.) GRANARD, or GRENAH, [Irish, *Grianard*, i. e. the height of the sun.] a borough and post town of Ireland, in Longford, Leinster; 52 miles from Dublin, 16 S. of Cavan, and 11 NE. of Longford. In this town annual prizes are given to the best performers on the Irish harp. It has a barrack for a company of foot; and before the Union with Great Britain, returned two members to parliament. It was formerly the residence of the chiefs of N. Tiffin. It has fairs 3d May and 1st Oct. Lon. 7. 30. W. Lat. 53. 44. N.

(2.) GRANARD, MOAT OF, a remarkable hill thought to be artificial, and the site of a Danish fort; which commands from its summit a most extensive prospect into 6 or 7 different counties.

GRANARUOLO, a small town of the Cisalpine republic, in the dep. of Anoué, and ancient papal province of Romagna.

(1.) * GRANARY. *n. f.* [*granarium*, Lat.] A place where thrashed corn.—Ants, by their labour and industry, contrive that corn will keep as dry in their nests as in our granaries. Addison.

The naked nations clothe,

And be th' exhaust'ds granary of a world.

Thomson's Spring.

(2.) * GRANARY, CAUTIONS TO BE OBSERVED IN erecting. Sir Henry Wotton advises to make it look toward the north, because that quarter is the coolest and most temperate. Mr. Worthington gives, that the best granaries are built of brick, with quarters of timber wrought in the masonry, and little boards may be used, with which the walls of the granary must be lined, so that the corn, when there may be no room left for air. The corn may be mowed one above another, which should be mowed with a scythe, because the scythe leaves the corn dry, and better, and more easily dried. The two most common ways to be observed in mowing grain, is to mow it in rows, or in rows, and to mow it in the most convenient way.

(3.) * GRANARY, METHOD OF MANAGING

CORN IN. The method of ordering parts of England, particularly in Kent. To separate it from dust and other matter it is thrashed, they toss it with one end to the other of a long and the lighter substances fall down in the room, and the corn only is carried or end to end of it. After this the corn, and then bringing it into the room, is spread about half a foot thick, about twice in a week; once a week peat the screening it. This management continues about two months; after which a foot thick for two months more; time they turn it once a week, or twice, so be damp, and now and then after about 5 or 6 months they increase the thickness in the heaps, and they once or twice in a month, and screen them. After a year they lay it 2½ feet thick, and turn it once in 3 weeks or 4 screen it proportionably. When it is 5 years or more, they turn it once a year, and screen it once a quarter; and however it is kept, the oftener the turning is repeated, the better the grain. It is proper to leave 27 area of a year very side of the heap of corn, and spaces, to which they turn and toss. In Kent they make two square ends of the floor, and one round in the means of which they throw the corn upper into the lower rooms, and so turn and air it the better. Their granaries with two partitions, to separate the corn, which falls into a bag, and only full this is thrown away, the part of corn remaining behind. Corn has been kept in our granaries 20 years; served, that the longer it is kept the yields in proportion to the corn, as and whiter the bread is, the superfluous only evaporates in the keeping. A Swiss, in Switzerland, they keep corn 20 years by these methods. The public granaries are 7, 8, or 9 stories high, have the walls in every 10 or 12 feet down one to another. They are built to be though every way surrounded with corn contracts no dampness, and the convenience of coming up to it their lading. The Russians preserve subterranean granaries of the figure of a wide below and narrow at top; the platted, and the top covered with take care to have the corn well dried laid into these storehouses, and other means of drying; the summer dry weather is not to collect it sufficiently. All wheat, barley, and rye, of a great part are then laid up in parcels of 10, 20, 30, or 40 bushels, according to the size of and this they keep turning every day keep it sweet and fit for shipping. Some storehouses have of very large quantities of these stores, all the corn of former years having been found to be by one night's mould, that though

, fit for shipping or keeping, and proper use, yet in the morning it was found and sticking. In this case there is no remedy the turning of all such corn 3 or 4 times a month or longer; in which time it will be recovered, though sometimes not. A storm of thunder and lightning is only observed in such corn as is not a year old, and is sweated thoroughly in the straw before it is threshed out. The latter inconvenience is remedied by a timely care; but as to the remedy that can be done is carefully to examine the stores of the last year's corn after every storm, that if any of it have been so affected it may be cured in time; for a neglect of this will utterly destroy it. According to Virgil's rules, a granary should always be at the house, and have its openings only to the north, so that the corn may not be exposed to the winds from the S. and W. which are very dangerous to it; whereas the contrary ones are necessary and wholesome to it, serving to dry it from all external humidity, from the sun's heat, &c. There must also be openings in the walls to be set open in dry weather, partly to let in fresh air, and partly to let out the warm effluvia which are often emitted by the corn. The roof of the roofs should always be of tiles, because in the worst seasons, when the other openings cannot be safe, there will always be a constant inlet for fresh air, and a way out for the warm air by their joinings, which are never close. There should be any windows to the south, great care should be taken to shut them up in moist weather, and to guard against hot southern winds. There must be no cellar, or any other damp place under a granary; nor should it ever be built over stables; for in either of these cases the corn will certainly be spoiled by the vapours, and be made damp in the one, and ill tasted in the other.

GRANARY, METHODS OF DESTROYING THAT INFEST GRAIN IN. The preservation of grain from the ravages of insects may be effected by timely and frequent screening, and exposure to the sun; (See § 5.) as little or no inconvenience will follow corn or malt lodged dry, but a great deal of damage results from a neglect of these precautions. For, whether the obvious damage arises from the weevil, the moth, or the beetle, that damage is increased at the time the vermin make their nests; and under either of these species, they begin in this last state of existence, only proper care of their respective kinds of vermiculi; while they continue in that form do the damage.

In this last, or insect state, they eat little; the principal business being to deposit their eggs, which unerring instinct prompts them to do. Large collections of grain furnish food for the vermin while in a vermicular state. It is the business of industry to prevent future ravages of these ravagers, by destroying the eggs previous to their hatching; and this is best effected by frequent screening, and exposure to the winds of wind or fresh air. By frequently turning the grain, the cohesion of their eggs is broken, and the nidus of these minute worms is destroyed, which on hatching collect together, and form numerous nests of a cobweb-like lub-

stance for their security. To these nests they attach, by an infinity of small threads, many grains of corn together, first for their protection, and then for their food. When their habitations are broken and separated by the screen, they fall thro' the small interstices, and may be easily removed from the granary with the dust. Those that escape an early screening will be destroyed by subsequent ones, while the grain is but little injured; and the corn will acquire thereby a superior purity. But by inattention to this, and sometimes by receiving grain already infected into the granary, these vermin, particularly the weevil, will soon spread themselves in that state every where upon the surface, and darken the walls by their number. Under such circumstances hens, with new hatched chickens, if turned on the heap, will traverse, without feeding (or very sparingly so) on the corn, wherever they spread; as they seem insatiable in the pursuit of these insects. When the numbers are reduced within reach, a hen will fly up against the walls, and brush them down with her wings, while her chickens seize them with the greatest avidity. This being repeated as often as they want food, the whole species will in a day or two be destroyed. Of the phalæna, or moth, and the small beetle, they seem equally voracious: on which account they may be deemed the most useful instruments in nature for eradicating these noxious and destructive vermin.

(5) **A GRANARY, METHODS OF VENTILATING GRAIN IN.** M. Du Hamel and Dr Hales recommend various contrivances for blowing fresh air through corn laid up in granaries or ships, to preserve it sweet and dry, and to prevent its being devoured by weevils or other insects. This may be done by nailing wooden bars or laths on the floor of the granary about an inch distant from each other, when they are covered with hair cloth only; or at the distance of 2 or 3 inches, when coarse wire-work, or basket-work of osier is laid under the hair-cloth, or when an iron plate full of holes is laid upon them. These laths may be laid across other laths, nailed at the distance of 15 inches, and two or more deep, that there may be a free passage for the air under them. The under laths must come about six inches short of the wall of the granary at one end of them; on which end a board should be set edgeways, and sloping against the wall: by this disposition a large air-pipe is formed, which, having an open communication with all the interstices between and under the bars, will admit the passage of air below forcibly through a hole at the extremity of it, into all the corn in the granary, that will consequently carry off the moist exhalations of the corn. The ventilators for supplying fresh air may be fixed against the wall, on the inside or outside of the granary, or under the floor, or in the ceiling; but wherever they are fixed, the handle of the lever that works them must be out of the granary, otherwise the person who works them would be in danger of suffocation, when the corn is fumed with burning brimstone, as is sometimes done for destroying weevils. Small moveable ventilators will answer the purpose for ventilating corn in large bins in granaries, and may be easily moved from one bin to another. If

If the granary or corn ship be very long, the main air-pipe may pass lengthwise along the middle of it, and convey air, on both sides, under the corn. In large granaries, large double ventilators, laid on each other, may be fixed at the middle and near the top of the granary, that they may be worked by a wind-mill fixed on the roof of the building, or by a water-mill. The air is to be conveyed from the ventilators through a large trunk or trunks, reaching down through the several floors to the bottom of the granary, with branching trunks to each floor, by means of which the air may be made to pass into a large trunk along the adjoining cross walls: from these trunks several lesser trunks, about 4 inches wide, are to branch off, at the distance of 3 or 4 feet from each other, which are to reach through the whole length of the granary, and their farther ends are to be closed: some of one inch or one sixth of an inch are to be left open at the four joinings of the boards, where they are nailed together, that the air may pass through them into the corn. In some of these lesser trunks there may be sliding shutters, to stop the passage of the air through those trunks which are not covered with corn; or to ventilate one part of the granary more briskly than others, as there may be occasion. There must also be wooden shutters, hung on hinges at their upper part, so as to shut close of themselves; these must be fixed to the openings in the walls of the granary on their outside; by these means they will readily open to give a free passage for the ventilating air, which ascends through the corn to pass off, but will instantly shut when the ventilation ceases, and thereby prevent any dampness of the external air from entering: to prevent this, the ventilation should be made only in the middle of dry days, unless the corn, when first put in, is cold and damp. In lesser granaries, where the ventilators must be worked by hand, if these granaries stand on saddles, so as to have their lowest floor at some distance from the ground, the ventilators may be fixed under the lowest floor, between the saddles, so as to be worked by men standing on the ground, without or within the granary. A very commodious and cheap ventilator may be made for small granaries, by making a ventilator of the door of the granary; which may be easily done by making a circular screen, of the size of a quarter of a circle, behind the door: but for this purpose, the door must open, not inwards but outwards of the granary, so that as it falls back, it may be worked to and fro in the screen; which must be exactly adapted to it in all parts of the circular side of the screen, as well as at the top and bottom. But there must be a stop at about 8 or 10 inches from the wall, to prevent the door from falling back further; that there may be room for a valve in the screen to supply it with air; which air will be drawn in by the door, through a hole made in the wall near the floor, into the main air-trunk, in which there must be another valve over the hole in the wall, to prevent the return of the air.

GRANATAN, a town of Upper Saxony, in Erzgebürg, 12 miles NE. of Freyburg.

(1.) * GRANATE. *n. f.* [from *granum*, Lat.]

A kind of marble so called, because it is marked

with small variegations like grains. O GRANITE.

(2.) THE GRANATE, OR GARNET, is of fossils ranking among the siliceous, according to Magellan, analogous to them being composed of the siliceous, and calcareous earths, with a greater portion of iron. The opaque and black contain about a fifth part of iron; but phanous ones only a sixtieth, according to Cronstedt. The garnets, properly so called, contain a greater quantity of siliceous earth than both, and both are now justly ranked with the earths. The general properties of the garnets, according to Cronstedt, are as follows: 1. fusible as it contains less metallic matter, more transparent or glassy in its texture, and with salt of kelp, it may, on a piece of coal, be converted into glass by the fire, which cannot be done without flint. 2. transparent garnet may, without any addition, be brought to a black opaque slag by the fire. 3. It is never, as far as is hitherto known, pure, or without some mixture of metallic iron, which may be extracted by the methods. The garnet matter during the fusion, has either been formed in small quantities, or else had the power of passing into crystals, though closely confined in substances; since garnets are generally to be found in other solid stones, and sometimes in harder ones, such as quartz and chert. Cronstedt informs us, that garnet is easily melted by borax or the vegetable alkali. And Brunich, most of the garnets strike fire. Cronstedt observes, that the metallic calx mixed with other earthy substances, may alter their fusibility; iron, for instance, in the argillaceous and micaceous earths, them fusible, though otherwise they are not. Hence there may be some reasons for considering the garnet as a quartz impregnated with iron, yet, on the whole, he thinks it will be better to call the garnet a stone of a different order, we have experiments sufficient to warrant the reduction of the number of earths. The garnet is never found but in an indurated state divided into the garnet properly so called, shirl or cockle; though this perhaps is owing to the figure of their crystals than any thing. Wallerius makes the specific gravity of it from 3600 to 3900, and even 4400; Briffart it 4100; and Cotes says, that the garnet hemia are 4300, those of Sweden heavier. Some make it no less than 5000. The steamed is the Syrian garnet; which is red, inclining to purple, very transparent, less beautiful than the oriental amethyst, according to Magellan, is the amethyst of Pliny, and is found in Syria, Calcutta, Cambodiaa, and Ethiopia. The Sorani ancients was another kind of garnet of a blue inclining to yellow, called *vermeil* French, and *gracinto guarnacino* by the latter, the former having the name of *rubens* among the last mentioned people. The *rannus* comes from Sorian or Surian, a Pegu, from whence these gems are

ic garnets have a yellow colour, in y are called HYACINTHS. Like other e divided into oriental and occiden- means only *more* or *less* valuable; s being always called *oriental*, where- ne from. Some very fine ones are emia; they are also met with in Pyma. in Silesia. S. Sapho, in the ne, in Switzerland, in Spain, and in heir colour is supposed to proceed nd, according to M. Saussure, even ental garnets attract the magnetic all distance. In the focus of a good the garnet melts into a brown mass, acted by the magnet; which shows rs into its composition in a consider- on. Some garnets, however, con- old; and some, called by the Ger- pen, contain tin. M. Magellan is of the *lapis abaniticus* of Pliny, and an- hich he mentions of a deep purple, ie garnets. 4. The cockle or snail. The garnets abound so much with y are sometimes worked with profit it metal; in which case no notice is atural character of the stone, in the as is done with clays and jaspers that for in these the quantity of metal is mented, until at last they acquire the f iron itself. The greatest part of owever, contain only from 6 to 12 on, which is too poor to be worked th advantage as an ore of that me- ny of the garnet kind are to be tried they contain, the iron ought to be them by the common process; and at the same time contains tin or ill likewise be included in the iron. extracted out of it, however, by a r augmented; the lead and tin sweat- rm of drops, though always some- with iron. None of the garnet kind found in the form of an earth prod; though at Swappawari, in Lap- found a bole which has the same he garnet; and the hornblende of h is somewhat harder than this bole, appearance of cockle.

ATE PASTE. See GARNET, § 4.

US, in lithology, a genus of fossils, ive, under its English name GRA- 2. See also GARNET, § 1. and 2. o species, viz.

RUS CRASSUS, the coarse grained ivy hard stone, crystallizing in form balls, mostly of a reddish brown co- und of a reddish brown and whitish r, in different parts of Sweden.

RUS CRYSTALLIZATUS, the crystal- is reckoned among the precious rying in its colour and form of its han any of them. Sometimes it is dark colour; sometimes yellowish sometimes brown, black or opaque. both in lustre and hardness to the o- elding to the file, although it will ith steel. The crystals are some- ur, but frequently assume rhombi-

dal, tetradecahedrai, and almost all other regular forms.

GRANBOROUGH, a town of Warwickshire.

(1.) GRANBY, Marquis of. See MANNERS.

(2.) GRANBY, a township of Connecticut, in Hartford county, 18 miles N. of Hartford, bor- dering on Massachusetts.

(3.) GRANBY, a township of Massachusetts, in Hampshire county, 90 miles W. of Boston, con- taining 596 citizens, in 1795.

(4.) GRANBY, a town of S. Carolina, on the Congaree.

(5.) GRANBY BAY, a bay on the N. coast of Hispaniola. Lon. 61. 25. W. Lat. 15. 42. N.

GRANCEY, a town of France, in the dept. of Cote d'Or, 10½ miles N.W. of Is sur Tille.

(1.) * GRAND. *adj.* [*grand*, French; *grandis*, Latin.] Great; illustrious; high in power or dig- nity.—God had planted, that is, made to grow the trees of life and knowledge, plants only pro- per and becoming the paradise and garden of so *grand* a Lord. *Raleigh's Hist.* 2. Great; splen- did; magnificent.—

A voice has flown

To re-enslave a *grand* delign.

Young.

3. Principal; chief.—

What cause

Mov'd our *grand* parents, in that happy state,

Favour'd of heav'n to highly, to fall off

From their Creator.

Milton.

4. Eminent; superiour: very frequently in an ill sense.—

Our *grand* foe, Satan.

Milton.

So clomb this first *grand* thief into God's fold.

Milton.

5. Noble; sublime; lofty; conceived or expressed with great dignity. 6. It is used to signify ascent or descent of consanguinity.

(2.) GRAND, in geography, a town of France, in the dept. of Vosges, 9 miles W. Neufchateau.

(3.) GRAND, Anthony LE, a Cartesian philoso- pher of the 17th century, author of several works, the best of which is entitled, A Sacred History from the Creation to the time of Constantine the Great, 8vo.

(4.) GRAND, Joachian LE, a French political author, born in 1653. He was a man of general knowledge, and was much esteemed at the court of Lewis XIV. He died at Paris in 1733.

(5.) GRAND, Mark Antony LE, a celebrated French poet and actor. He was author of several comedies, which were published in 4 vols 12mo. He died at Paris in 1723.

(6.) GRAND ASSIZE. See ASSIZE, § 2.

(7.) GRAND DISTRESS, (*distressio magna*.) in English law, a writ of distress, so called on ac- count of its extent, which reaches to all the goods and chattels of the party within the county. This writ lies in two cases: either when the tenant or defendant is attached and appears not, but makes default; or where the tenant or defendant hath once appeared, and after makes default. On such occasions, this writ lies by common law, in lieu of a petit cape.

(8.) GRAND GUSTO, among painters, a term used to express that there is something in the pic- ture very great and extraordinary, calculated to surprise, please, and instruct. Where this is found,

Cicely

they say, the painter was a man of *grand gusto*; and they use the words *sublime* and *marvellous*, when they speak of a picture, in much the same sense.

(9.) GRAND JURY, } &c. See JURY, LAR-
(10.) GRAND LORNEY, } CENV, &c.

* GRANDAM *n. f.* [*grand* and *dam* or *dame*.]

1. Grandmother; my father's or mother's mother.

I meeting him, will tell him that my lady

Was fairer than his *grandam* and as chaste

As may be in the world. *Shak. Troil. and Cres.*

—We have our forefathers and great *grandames* all before us, as they were in Chaucer's days.

Dryden.

Thy tygers heart believeth thy angel face:

Too well thou shew'st thy pedigree from Rune:

Thy *grandame's* was the first by Pyrrha thrown.

Dryden.

2. An old withered woman.—

The women

Cry'd, one and all, the suppliant should have right,

And to the *grandame* hag adjudge'd the knight.

Dryden.

GRAND ANSE, or JEREMIA, a town in the W. part of Hispaniola.

* GRANDAUGHTER. *n. f.* [*grand* and *daughter*.]

The daughter of a son or daughter.

GRAND BAY, a bay on the S. of Newfoundland.

GRANDBY, a town in Nottinghamshire, SE. of Bingham. It has a fair Nov. 1.

GRAND CHAMP, a town of France in the dept. of Morbihan, 7 miles NNW. of Vannes.

* GRANDCHILD. *n. f.* [*grand* and *child*.]

The son or daughter of my son or daughter; one in the second degree of descent.—Augustus Cæsar, out of indignation against his daughters and Atrippe his *grandchild*, would say that they were not his seed, but imposthumes broken from him. *Bacon.*

These hymns may work on future wits, and to

May great *grandchildren* of thy praises grow.

Donne.

—He hoped his majesty did believe, that he would never make the least scruple to obey the *grandchild* of K. James. *Clarendon.*

Fair daughter, and thou son and *grandchild* both!

Milton.

He 'scaping, with his gods and reliques fled,

And tow'rd the shore his little *grandchild* led.

Denham.

GRANDCOUR, a town of the Helvetic republic,

in Bern, 10 miles W. of Friburg.

GRANDCOURT, a town of France, in the dept. of the Lower Seine, 15 miles E. of Dieppe, and 4. N. of Neufchâtel.

(1.) GRANDE, a river of Africa, the S. branch of the NIGER. It runs into the Western Ocean.

(2, 3.) GRANDE, two rivers of S. America; 1. in Peru, near Cuzco, whose lands are rich in gold; 2. in Brazil. Both run into the Atlantic.

(4.) GRANDE, a town of Norway, in the diocese of Drontheim, 28 miles W. of Drontheim.

(1.) * GRANDEE. *n. f.* [*grand*, Fr.; *grandis*, Lat.] A man of great rank, power, or dignity.—They had few sharper and some milder differences which might easily happen in such an interview of *grandees*, both viceroy on the parts which they swayed. *Storace.*—When a prince or

grandee manifests a liking to such a thing, he is generally set about to make himself master of such things. *South.*—Some parts of monarchy are rather for ornament than for use; they furnish out viceroysalties for the king and posts of honour for the noble families.

(2.) GRANDEE, in Spain, is used to denote the prime lords of the court, to whom the king has once given leave to be in his presence: There are some *grandees* made by the king's saying simply, Others are *grandees* by descent; as the king's saying, *Be covered for thy grandfather*. These last are reputed far above the first. Some have 3 or 4 *grandeeships* in the family.

GRANDEESHIP, *n. f.* the office of a *grandee*. See last article.

GRANDENTZ. See GRAUDENTZ.

GRANDE-PRE. See GRANDPRAIRIE.

(1.) GRANDE RIVIERE, a river in France.

(2.) GRANDE RIVIERE, a town in France, on the above river, 20 miles SW. of Paris.

GRANDESHAGEN, a town in Pomerania, 2 miles NW. of Greifswald.

GRANDET, a French biographer, much esteemed for the purity of his style, born in 1646, and died in 1724.

* GRANDEVITY. *n. f.* [from Latin.] Great age; length of life.

* GRANDEVOUS. *adj.* [*grand* and *evous*.]

Long lived; of great age. *Dryden.*

(1.) * GRANDEUR. *n. f.* [French.] Splendour of appearance; magnificence; magistracy or great officer, he looks on all approaches by the multiplied attendance, by the distance of court.

grandeur. *South.* 1. Elevation of language, or mien.

(2.) GRANDEUR. See SUBLINEITY.

(1.) * GRANDFATHER. *n. f.* [*grand* and *father*.]

The father of my father or mother, or above my father or mother in the scale. One was saying that his great-grandfather, and father died at sea; that he heard him, an' I were as you, I come at sea. Why, faith he, who great-grandfather, and grandfather, die? He answered, where but in the answer, an' I were as you, I would in bed. *Bacon.*—Our grandchild's rags hung up in Westminster hall, a hundred millions, whereof they are arrears, and boast that their grandchild is rich and great. *South.*

(2.) GRANDFATHERS, in geogra-

phy, large mountains in the SE. corner of France, in which the head waters of French Catalaw rivers take rise.

GRANDGOR, or GLENGORE, a place in Scotland for the port of

Trans. N° 469. sect 3. there is a continuation of K. James IV. ordering this disease, or who had attended all forthwith to repair to an island in

Forth. If the grandgor was the pestilence came into Europe at the year 1495, it must have made a rapid

have caused such an alarm at Edinburgh.

ANDIFICK. *adj.* [*grandis* and *facio*, Making great. *Dith*

ANDINOUS. *adj.* [*grando*, Latin.] Full consisting of hail. *Dith*.

ISLAND, the name of 3 islands in N. viz. 1st. in the mouth of Lake Ontario, 5 to Britain, 20 miles long and 4 broad; N. side of Lake Superior; and 3. in the 4 miles N. of Fort Erie, about 6 miles 3 broad.

ISLES, 2 large islands in Lake Cham- ch about 9 miles long. They belong to of Vermont, and form two townships.

ANDITY. *n. f.* [from *grandis*, Latin.] 1; grandeur; magnificence. An old word. ets excel in *grandity* and gravity, smooth- propriety, in quickness and briefness. *Remains.*

LAKE, a lake of N America, in New k, near St John's river, 30 miles long, 10 broad, and in some places 40 fathoms

IDLUCE, a town of France in the dep. 14 miles SE. of Mans.

MANAN, an island of the Atlantic, on der of the United States, 6 miles SE. of ello.

DMONT. See GRAMMONT, N° 1.

NDMOTHER. *n. f.* [*grand* and *mother.*] er's or mother's mother.—Thy *grand-* is, and thy mother Eunice. 2 *Tim.* i. 5.

DOLA, a town of Portugal in Etrema- miles SE. of Setuval.

DPRE, a town of France, in the dep. ies, and late prov. of Champagne; feat- Aire, 33 miles E. of Rheims. On the 1794, the French under Dumouriez. ated near this town by the allied army

D. of Brunswick, and forced back to ould; on the 16th the Prussians entered ; but on the 30th they were driven out n. Kellerman, after losing 3000 men in pidemical fever and dysentery.

DRIEUX, a town of France in the dep. , 10½ miles NW. of Langogne.

AND RIVER, or RIO GRANDE, a river which runs into the Atlantic, in Lou. . Lat. 11. 0. N.

AND RIVER, a river of N. America, 13 NW. into Lake Erie, 80 miles SW. : Isle.

IDSIRE. *n. f.* [*grand* and *fire.*] 1. Grand-

c'st thou, that I will leave my kingly one,

n my *grandfire* and my father sat? *Shak.* *grandfire*, and his brother, to whom fame rom two conquer'd parts o' th' world, ir name. *Denham.*

e wreaths his *grandfire* knew to reap e toil and military sweat. *Prior.* cestor, poetically.—

should a man, whose blood is warm hin,

his *grandfire* cut in alabaster? *Shak.*

: the portal, carv'd in cedar wood, n their racks, their godlike *grandfires* d. *Dryden.*

PART II.

So mimick ancient wits at best,
As apes our *grandfires* in their doublets drest.

Pope.
* **GRANDSON.** *n. f.* [*grand* and *son.*] The son of a son or daughter.—

Almighty Jove augment your wealthy store,
Give much to you, and to his *grandsons* more.

Dryden.
—Grandfathers in private families are not much observed to have great influence on their *grandsons*, and, I believe, they have much less among princes. *Swift.*

GRAND-SONE, a town of France, in the dept. of Doubs, 4 miles E. of Besançon.

GRANDS SEAUX, or GREAT SEALS, a nation of N. American Indians, who inhabit the country S. of the Missouri. They have about 300 warriors.

(1.) **GRANDVILLE,** a town of France in the dept. of the Channel, and ci-devant prov. of Normandy, partly seated on a plain, partly on a rock; forming an oval peninsula and surrounded with walls and 2 gates. It has a harbour capable of containing 60 ships, and contains about 2,500 citizens. It is 12 miles NW. of Avranches, 15 S. by E. of Coutances, and 185 W. of Paris. Lon. 1. 32. W. Lat. 48. 50. N.

(2.) **GRANDVILLE,** a town of France in the dept. of Meuse, 3 miles SW. of Longwy.

GRAND VILLIER, a town of France, in the dept. of Oise, 14 miles NNW. of Beauvais.

GRANEN, a town of Spain in Arragon, 13 miles S. of Huesca.

GRANENA, a town of Spain, in Catalonia, 10 miles S. of Lerida.

GRANEVSKIA, a fort of Russia, on the Volga, in the province of Saratov.

GRANEWOLDEN, a town of Norway, 26 miles S. of Christiania.

(1.) * **GRANGE.** *n. f.* [*grange*, French.] A farm: generally a farm with a house at a distance from neighbours.—One, when he had got the inheritance of an unlucky old *grange*, would needs sell it; and, to draw buyers, proclaimed the virtues of it: nothing ever thrived on it, saith he; the trees were all blasted, the swine died of the measles, the cattle of the murrain, and the sheep of the rot; nothing was ever reared there, not a duckling or a goose. *Ben Jonson's Discov.*—At the moated *grange* resides this dejected Mariana. *Shak.*

The loose unletter'd hinds,
When for their teeming flocks and *granges* full
In wanton dance they praise the bounteous Pan.

Milton.
—If the church was of their own foundation, they might chuse, the incumbent being once dead, whether they would put any other therein; un- less, perhaps, the said church had people be- longing to it; for then they must still maintain a curate: and of this sort were their *granges* and priories. *Ayliffe.*

(2.) **GRANGE** [from *granum*, Lat. grain.] is also an ancient term for a barn, or place wherein to lay up and thresh corn. Hence also **GRAN- GER,** or *granzier*, a grange-keeper or farmer.

(3.) **GRANGE** is also used for an inn.

(4.) **GRANGE,** Joseph Chancel DE LA, a French

F F F

author

author born in 1701, celebrated for his talents and misfortunes; which last he drew upon himself by publishing a severe philippic against Philip D. of Orleans. He wrote several tragedies of great merit. He died in 1785, aged 82.

(5.) GRANGES, M. DE LA, a learned and judicious French critic, born at Paris in 1738. He published a translation of Lucretius; and his translation of Seneca was published after his death, in 1771.

(6.) GRANGE, a parish of Scotland, in Banffshire, so named from *Grange*, a farm. (See N° 1.) 6 miles long from N. to S. and 5 miles broad. It contains about 16,000 acres, of which little more than 4000 are in tillage. The church is 4 miles E. of Keith, 10 N. of Huntly, 12 S. of Portsoy, and 16 SW. of Banff. The hills along the S. side of it. The parish being hilly, the climate is cold and moist. About $\frac{1}{3}$ of the soil is fertile; the rest is mostly a poor clay upon till, or moor. The produce is oats, barley, pease, turnips, potatoes and flax. The population, in 1792, stated by the rev. Francis Forbes in his report to Sir J. Sinclair, was 3572, and had decreased 225, since 1755. The number of horses was 422, of sheep 2582, and of black cattle 1843. The roads are bad. Improvements in agriculture had been introduced by the late lord Findlater, but are retarded by high rents, short leases, and severe services; as well as by oppressive mill-multiplication till of late that they were commuted. Mr Forbes says, the people also complain much of the excessive and dissolvent laws as unequal and oppressive. Notwithstanding all these dissuasive pages, the parish produces more grain than supplies the inhabitants, except in very bad seasons. In 1768, the crop after it was cut down, was almost entirely swept away by an overflowing of the Isla. Linen yarn and coarse linens are the only manufactures. About 25,000 holls of lime are also made annually, as the parish abounds in lime-stone.

(7.) GRANGE, a town of France, in the dep. of Vosges, 5 miles ESE. of Bruyeres.

(8.) GRANGE, a town of Sweden, in the province of Dal-carlia, 30 miles S. of Fahlun.

(9.—20.) GRANGE is also the name of 13 English villages: viz. 1. in Cheshire, on the Dec; 2. in Cumberland, near Kefwick; 3. in Dorsetsh. near Wareham; 4. NE. of Durham; 5. in Gloucestersh. 6. in Hampshire, NE. of Itching-stoke; 7. in Herefordsh. near Brompton-Brian; 8. in Kent, 1 mile from Gillingham; 9. in Lancashire, with a port for small vessels; 10. N. of Lincoln; 11. in Northumberland, SW. of Morpeth; and 12. in ditto, near Pontiland.

(21.—25.) GRANGE, is also the name of 5 small towns in Ireland: viz. 1. in Antrim; 2. and 3. in Meath; 4. in Sligo; and 5. in Tyrone.

(26.) GRANGE, CAPE LA, a cape on the N. side of

the dep. of Upper Saone; 7 $\frac{1}{2}$ miles SSE. of

GRANGER, or GRAINGER, James, M. D. born at Dunfermline, about 1723. He was a translation of Tibullus, several medical tracts, a poem on the Sugar Cane, and other

poetical pieces. He died in the W. where he had chiefly practised, in 1769.

(27.) GRANGE. See GRANGES, N° 1.

GRANGES, a town of France in the Lot and Gironne; 6 miles E. of Turenne.

GRANGNANO, a town of Naples; 35 miles W. of Salerno.

GRANHULT, a town of Sweden in 35 miles NW. of Calmar.

GRANI, [from *grann*, Irish, a heavy ancient winter, mulchies or whistles] Roman Catholics give as a reason why they refused to the lady, *Quia barbari, & non best grannos, dum peculum inter epulas sum liquore pilos infundunt, quam ut infundunt.*

GRANICUS, a small river near the in Lesser Asia, remarkable for the gained by Alexander the Great over Darius.—Authors disagree about the of the Persian, though all agree that vastly more numerous than the Grecian and Grecian tell us, that the Persian a sister of 200,000 foot and 20,000 horse makes the total amount to 200,000; but tells us, that they were only 100,000 to 150,000 horse. The Macedonian army exceed 30,000 foot and 5000 horse. The cavalry lined the banks of the Grani to oppose Alexander wherever he should a passage; and the foot were posted in cavalry on an easy ascent. Parmenio had Alexander to allow his troops to retreat themselves; but he replied, having crossed the Hellespont, it would grace to him and his troops to be rivulet. Accordingly a proper place the river was no sooner found, than he led a strong detachment of horse to himself followed with the right wing, commanded in person; the trumpets in time sounding, and loud shouts of joy through the whole army. The Persian such showers of arrows against the detached Macedonian horse, as caused some confusion of their horses being killed or wounded they drew near the bank a most blow ensued; the Macedonians advanced, and the Persians pushing them back river. Alexander, who observed they were in, took the command of the and landing in spite of all opposition, Persian cavalry, after an obstinate give ground. However, Spithrochates, of Ionia, and son in law to Darius, killed his ground, and did all that lay in to bring them back to the charge. Alexander full gallop to engage him, and slightly wounded at the first encounter. Spithrochates having thrown his javelin with advanced sword in hand to meet him, who ran him through with his pike his arm to discharge a blow with his But Rosaces, brother to Spithrochates, in time gave Alexander such a furious blow head with his battle-axe, that he beat off and slightly wounded him through the As he was ready to repeat the blow, C

Broke of his scymitar cut off Rosaces's head, thus in all probability saved the life of his son. The Macedonians then, animated by example of their king, attacked the Persians with new vigour, who soon after betook themselves to flight. Alexander immediately charged enemy's foot with all his forces, who had now led the river. The Persians, disheartened at defeat of their cavalry, made no great resistance. The Greek mercenaries retired in good order to a neighbouring hill, whence they sent messages to Alexander desiring leave to march off un molested. But he, instead of coming to a parley with them, rushed furiously into the middle of his mail body; where his horse was killed under him, and he himself in great danger of being cut in pieces. The Greeks defended themselves with incredible valour for a long time, but were at almost entirely cut off. In this battle the Persians said to have lost 20,000 foot and 2,500 horse, the Macedonians only 55 foot and 60 horse.

(2.) **GRANITE**, *n. f.* [*granit*, Fr. from *grain*, Lat. because consisting as it were of grains, small distinct particles.] A stone composed of coarse and very large concretions, rudely connected together; of great hardness, giving fire like steel; not fermenting with acids, and infusibly calcinable in a great fire. The hard red granite with black spots, commonly called *porphyry*, forms a very firm, and though rude, beautifully variegated mass. It is found in immense strata in Ireland, but not used there. Cornwall it is found in prodigious masses, and brought to London, for the steps of public buildings. Hard red granite, variegated with black and white, now called *oriental granite*, is valuable for its extreme hardness and beauty, and capable of a most elegant polish. *Hill on Fossils*.—*Abaster*, marble of divers colours, both simple and mixed, the *opulites*, *porphyry*, and the *misc*. *Woodward*.—There are still great pillars of *granite*, and other fragments of this ancient temple. *Addison on Italy*.

(2.) **GRANITE**, in natural history, is a distinct genus of stones. See § 1. Of this genus there are species: 1. The hard white granite, (§ 1.) is a very valuable kind, consisting of a beautiful congeries of very variously constructed and differently coloured particles, not diffused among or running into one another, but each pure and distinct, though firmly adhering to which ever of the others it comes in contact with, and forming a very firm mass. 2. The hard red granite variegated with black and white, is common in Egypt and Arabia. This species is also found in many parts of Europe. There are fine tables, &c. equal to the best oriental granite, at Mount Edgecumbe in Devonshire, which are wrought from stone found in that county. It is also found in other counties of England. 3. The pale whitish granite, variegated with black and yellow. This is sometimes found in strata, but more frequently in loose nodules, and used for paving the streets. Some of these kinds of stones are found in almost every country, and in many places they are found of immense bigness. The largest mass of this kind in the known world, being as an unconnected stone, is found near the Cape of Good Hope in Africa, and of which we

have the following description in the *Philosophical Transactions*, vol. 68. p. 101, given by Mr Anderson in a letter to Sir John Pringle. "The stone is so remarkable, that it is called by the people here the *Tower of Babel*, and by some the *Pearl Diamond*. It either takes the last name from a place near which it is situated, or it gives name to the tract of cultivated land called the *Pearl*. It lies upon the top of a ridge of low hills, beyond a large plain, about 30 miles from the Cape Town; beyond which, at a little distance, is a range of hills of a much greater height. It is of an oblong shape, and lies N. and S. The South end is highest; the E. and W. sides are steep and high; the top is rounded, and slopes away gradually to the N. end, so that you can ascend it by that way, and enjoy a most extensive prospect of the whole country. I could not precisely determine its circumference, but it took us above half an hour to walk round it; and by making every allowance for the rugged way, and stopping a little, I think the most moderate computation must make it exceed half a mile. The same difficulty occurred with respect to knowing its height; but I think, that, at the S. end, it is nearly equal to half its length.—I am uncertain whether it ought to be considered as the top of the hill, or a detached stone, because there is no positive proof of either, unless we were to dig about its base; but it would certainly impress every beholder, at first sight, with the idea of its being one stone, not only from its figure, but because it is really one solid uniform mass from top to bottom, without any interruption. It has indeed a few fissures, which do not reach deeper than 4 or 5 feet; and near its north end a stratum of a more compact stone runs across, which is not above 12 or 14 inches thick, with its surface divided into little squares, or oblongs, disposed obliquely. This stratum is perpendicular. Its surface is also so smooth, that it does not appear to have formerly been joined to, or separated from, any other part by violence, but enjoys the exact situation where it was originally placed; and has undergone little change from being exposed for so many successive ages to the calcining power of a very hot climate."—A part of this stone being examined by Sir William Hamilton, he determined it to be a granite, and of the same nature with the tops of some of the Alps; and supposes both to have been elevated by volcanic explosions.

(3.) **GRANITE**, in Lithology, a genus of stones of the order of *petræ*, belonging to the class of *saxa*. The principal constituent parts of this stone are *felt-spar* or *rhombic quartz*, *mica*, and *quartz*. These ingredients constitute the hardest sort of granite, and that most anciently known. That into which *schoerl* enters is more subject to decomposition. They never have any particular texture or regular form, but consist of enormous shapeless masses extremely hard. In the finer granites the quartz is transparent; in others generally white or grey, violet or brown. The felt-spar is generally the most copious ingredient, and of a white, yellow, red, black, or brown colour. The mica is also grey, brown, yellow, green, red, violet, or black; and commonly the least copious. The *schoerl* is generally black, and

abounds in the granites that contain it. Hence the colour of the granites depends principally on that of the spar or schoerl. The red granites consist commonly of white quartz, red felt spar, and grey mica; the grey ones of white quartz, grey or violet felt spar, and black mica. The black granites commonly contain schoerl instead of felt-spar; and the green usually contain green quartz. On exposing granite to the flame of a blow pipe, the component ingredients separate from one another. Mr Gerbard, having melted some in a crucible, found the felt spar run into a transparent glass; below it the mica lay in form of a black slag, the quartz remaining unaltered. It melted somewhat better when all the three were powdered and mixed together; though even then the quartz was still discernible by a magnifying glass. Hence we may explain the reason why grains of a white colour are sometimes found in volcanic lavas. The mixture of mica prevents the flux or quartz from splitting or cracking; and hence its infusibility and use in furnace-building. Granites are seldom flaty or laminated. In those of a close texture, the quartz and schoerl predominate. They take a good polish; for which reason the Egyptians formerly, and the Italians still work them into large pieces of ornamental architecture, for which they are extremely fit, as not being liable to decay in the air. Faber, in his letters from Italy, mentions a kind of stone named *GRANITONE*, composed of felt spar and mica: a substance of this kind, which moulders in the air, is found in Finland; which is said to contain felt-spar, and sometimes common salt. In that country it is called *rapakivi*. Wallerius describes 18 species of granites, besides many others akin to this genus. Those described by Cronstedt are, 1. Loose or friable, which comes from France, and is used at the brass-works for casting that metal in. 2. Hard or compact, of which there are two varieties, red and grey. The former is met with of two kinds; viz. fine-grained from Swappari in Lapland, or coarse grained from the province of Dalarna in Sweden. The grey, with other colours, is met with on the coast round Stockholm and Norland in Sweden.

GRANITELLO, a genus of stones of the order of petra, belonging to the class of laxa. There are 2 species, 1. That composed of distinct particles, found in several of the mountainous parts of Sweden. In some of these there is a predominance of quartzose particles, in others of micaceous; in which last case the stone is slaty, and easily split. 2. That composed of convoluted particles. It is met with of different colours, as whitish, grey, greenish, and reddish. Both these kinds of stone are used in building furnaces, on account of the powerful resistance they make to the fire; but the latter is preferable to the other, on account of its containing a little of a refractory clayish substance. It is likewise of great use in mills, where the fellow is a coarse sand stone.

GRANIFONE. See *GRANITE*, § 3.

GRANIVOROUS, *adj.* [*granum* and *voro*, Lat.] Eating grain; living upon grain. — *Granivorous* birds, as a crane, upon the first peck of their bills, can distinguish the qualities of hard bodies, which the sense of men discerns not without mul-

lication. *Spous.*—Panick affords a nourishment, both for *granivorous* birds and kind. *Arbutus*

GRANNA, a town of Sweden, in Småland, 12 miles NNE. of Jönköping.

* GRANNAM, *n. f.* [for *grandam*.] mother. Only used in burlesque works.

Of my kind *grannam* told me, with warning

GRANOLIERS, a town of Spain, in Catalonia, 12 miles NNE. of Barcelona.

GRANSEE, a town of Germany, in the Palatinate, 30 miles NNW. of Bish.

GRANSKEVITZ, a town of Upper Hungary, 12 miles NW. of Ruck.

GRANSO, an island in the Baltic, on the coast of Sweden. Lon. 16. 36. E. of Paris 57. 46. N.

(1.) GRANSON, a town of the Helvetia in Neuchâtel. It was besieged in 1474, by the bold duke of Burgundy; and after a long siege surrendered at discretion, when the duke barbarously massacred the garrison; but he afterwards defeated with an army of 30,000 only 10,000 Swiss. It lies 16 miles SW. of Neuchâtel. Lon. 6. 30. E. Lat. 46. 50. N.

(2.) GRANSON, a ci-devant bailiwick in Switzerland, of which the above town (No. 1.) is the capital, between Lake Neuchâtel and Mont Blanc.

(1.) GRANT, Francis, Lord Colclough, a eminent lawyer and judge in Scotland, descended from a younger branch of the Grants of Colclough. He was born about 1660, and having entered the law, made a distinguished figure at the bar, by opposing the old lawyers, who argued on the inability of the Convention to make any disposition of the crown abilities he moved in favour of the revolution, commended him to an extensive practice which he acquired to much honour, the union between the two kingdoms was not long, Q. Anne, without application, created a baronet, with a view of securing his interest in that measure; and soon after created lord of session. The same good qualities, commended him to this house, as he was conspicuous in the discharge of his office, which he continued for 25 years with the highest reputation, when after an illness which lasted but a few days he expired without agony on March 18th 1711. In the *Biographia Britannica*, it is recorded with honour, "That as an advocate he was under in the management of business; but at the same time that he spared no pains, he would use it. He had so high an idea of the dignity of the profession, that he held it equally criminal to neglect any honest means of coming at justice, or to use of any arts to elude it. In respect to his private character he was very considerate, and his private charities were very considerable. He grew in proportion with his profits. He did not suffer a just cause to be lost through a want of money. He was such an enemy to oppression, that he never denied his assistance as laboured under it; and with respect to the dignity of all professions in Scotland, he served without a log. Whenever he sat as lord of

f causes was remarkably full, for his being equally established for knowledge, there were none who had a good their own pretensions, but were desisting them before him, and not many sit down satisfied with his decision.

Sentences were reversed, and when it was commonly owing to himself; mature reflection, or upon new real at the re-hearing, he saw any just altering his judgment, he made no scrupling it; being persuaded, that it was as well as more just, to follow truth, port opinion: and his conduct in this head of lessening, raised his reputation. Yet, however, with all this great stock of age, experience, and probity, trust matters of blood, or venture to decide cases on the lives of his fellow-creatures was the reason that, though often could never be prevailed upon to act in the judiciary court.—In his private was as amiable as he was estimable in. He was charitable without ostentation, in his friendships, and beneficent to any thing to do with him. He was strictly just, but so free from avarice, that finding him more intent on the business to him by others than on his own, he left the care of placing out his money to prevent his postponing, as he was such kind of affairs, when securities offered the circumstances of them to be in form of cases, and so procured him in his own concerns as if they had been silent. He was so true a lover of learning, much addicted to his studies, that, finding the multiplicity of his business at bar, and his great attention to his as a judge, he found time to write volumes on very different and important subjects political, which were remarkably and highly serviceable to the government of a more extensive nature, such as *law, religion, and education*, which were presented to George II. when prince of Wales, whose command his then secretary, Molyneux, wrote him a letter of which were many gracious expressions in relation to the piece as to its composition, besides these, many discouraging subjects, for the exercise of his own mind for the better discovery of truth; no farther than his own closet, and a simple of modesty were not communicated to his most intimate friends."

DR. PATRICK, Lord Prebendary, a learned lawyer and judge in Scotland, Edinburgh, in 1698. In 1754, he was on the bench. He wrote several tracts against rebellion in 1745, and died at Edinburgh aged 64.

GRANT. *n. s.* [from the verb.] 1. The giving or bestowing. 2. The thing granted—a boon.—

Courtiers juggle for a grant,
When they break their friendship plead their want.
Dryden.

3. [In law.] A gift in writing of such a thing as cannot aptly be passed or conveyed by word only; as rents, reversions, services, advowsons in gross, commons in gross, tithes, &c. or made by such persons as cannot give but by deed, as the king, and all bodies politic; which differences be often in speech neglected, and then is taken generally for every gift whatsoever, made of any thing by any person; and he that granteth it is named the grantor, and he to whom it is made the grantee. A thing is said to be in *grant* which cannot be assigned without deed. *Coovel.*—All the land is the queen's, unless there be some *grant* of any part thereof, to be shewed from her majesty. *Spenser.*—Not only the laws of this kingdom but of other places, and the Roman laws, provide that the prince should not be deceived in his *grants*. *Davenant.* 4. Concession; admission of something in dispute.—But of this so large a *grant*, we are content not to take advantage. *Hooker.*—

'This *grant* destroys all you have urg'd before.
Dryden.

* To GRANT. *v. a.* [from *garantir*, Fr. *Jamieson* and *Skinner*; perhaps, as *Minshew* thinks, from *gratuite*, or rather from *gratia*, or *gratificor*.] 1. To admit that which is not yet proved; to allow; to yield; to concede.—They gather out of Scripture general rules to be followed in making laws; and so, in effect, they plainly *grant*, that we ourselves may lawfully make laws for the church. *Hooker.*—I take it for *granted*, that though the Greek word which we translate *saints*, be in itself as applicable to things as persons; yet in this article it signifieth not holy things, but holy ones. *Pearson.*—

Grant that the fates have firm'd, by their decree,

The Trojan race to reign in Italy. *Dryden.*

Suppose, which yet I *grant* not, thy desire
A moment elder than my rival fire,
Can chance of seeing first thy title prove?

Dryden.

—If he be one indifferent as to the present rebellion, they may take it for *granted* his complaint is the rage of a disappointed man. *Addison.* 2. To bestow something which cannot be claimed of right.—The God of Israel *grant* thee thy petition that thou hast asked of him. 1 *Samuel* xvii.—Then hath God also to the gentiles *granted* repentance unto life. *Acts* xiii. 18.—

Didst thou not kill this king?

—I *grant* ye.

—Do't *grant* me, hedgehog? then *grant* me too,
Thou may'st be damned for that wicked deed.
Shak.

He heard, and *granted* half his prayer;

The rest the winds dispers'd. *Pope.*

GRANTA, a river of England, which runs into the Cam at Cambridge.

* GRANTABLE. *adj.* [from *grant*.] That which may be granted.—The office of the bishop's chancellor was *grantable* for life. *Ayliffe.*

* GRANTEE. *n. s.* [from *grant*.] He to whom any grant is made.—To smooth the way for popery in Mary's time, the *grantees* were confirmed by the pope in the possession of the abbey-lands. *Swift.*

GRANT-

GRANTHAM, a populous town of Lincolnshire, which has good inns of great resort, on the road, from London to York. It is supposed to have been a Roman town, from the remains of a castle formerly dug up in it. It is governed by an alderman and 12 justices of the peace, a recorder, a coroner, an escheator, and 12 common councillors. It has a fine large church with a stone spire, one of the loftiest in England, being 300 feet high; and, by a deception of the sight, it seems to lean to one side. Grantham has a good free school, where Sir Isaac Newton received his first education, besides two charity schools. It is a borough, and sends 4 members to parliament. It is seated on the Witham, 38 miles S. of Lincoln, and 110 N. of London. Lon. 0. 36. W. Lat. 52. 59. N.

GRANTLEY, a town in York, SW. of Rippen.

* **GRANTOR**. *n. f.* [from *grant*.] He by whom any grant is made.—A *duplex querela* shall not be granted under pain of suspension of the grantor from the execution of his office. *Ayliffe*.

(1.) **GRANVILLE**, George, lord Lansdowne, was descended from a very ancient family, derived from Rollo the first duke of Normandy. At 21 years of age he was sent to Trinity college in Cambridge, where he remained 5 years: but at the age of 13 was admitted M. A. having, before he was 21, spoken a set of verses of his own composition to the duchess of York at his college, when she visited the University of Cambridge. In 1696, his comedy called the *Sir gallants* was acted at the theatre royal in Lincoln-Inn fields, as his tragedy called *Heroic Love* was in 1698. In 1702 he translated into English the *second Olympian of Demosthenes*. He was M. P. for the county of Cornwall in 1710; afterwards secretary of war, comptroller of the household, then treasurer, and one of the privy council. In 1711, he was created baron Lansdowne. On the accession of K. George I. in 1714, he was removed from his treasurer's place; and in 1715 entered his protest against the bills for attainting lord Bulingbroke and the duke of Ormond. He entered deeply into the scheme for raising an insurrection in the W. of England; and was committed to the Tower, where he continued two years. In 1719, he made a speech in the house of Lords, against the bill to prevent occasional conformity. In 1722, he withdrew to France, and continued abroad near 10 years. At his return in 1732, he published a fine edition of his works in 2 vols. quarto. He died in 1735, leaving no male issue.

(2.) **GRANVILLE**. See **GRANDVILLE**, N° 1.

(3.) **GRANVILLE**, a fertile county of N. Carolina, in Hillsbury district, bounded on the SE. by Warren county, S. by Wake, SW. and W. by Orange, and N. by Virginia. It contained 6,819 citizens, and 4,163 slaves, in 1795. Williamsborough is the capital.

(4.) **GRANVILLE**, a town in Kentucky.

(5.) **GRANVILLE**, a township of Massachusetts, in Hampshire county, 14 miles W. of Springfield, containing 1979 inhabitants, in 1795.

(6.) **GRANVILLE**, a township of New York, in Washington county, containing 2240 inhabitants in 1792.

(7.) **GRANVILLE**, a township of Maryland, in Annapolis county.

* **GRANULARY**. *adj.* [from *gran* and compact; resembling a small grain. Small coal, with sulphur and nitre, properly mixed, tempered, and formed into balls, do make up that powder which guns. *Brown's Vulgar Errors*.

(1.) * **To GRANULATE**. *v. a.* [from *granum*, Latin.] To be formed into grains.—The juice of grapes, insipid, *granulates* into sugar. *Spratt*.

(2.) * **To GRANULATE**. *v. a.* 1. To make into small masses or granules. 2. To excite appetite.—I have observed, in many gullets, before its entrance into the stomach much dilated, and thick set, or as it were, *granulated* with a multitude of glandules, which was provided with its excretory vessels.

GRANULATED, *part. pass.* that has undergone granulation. See the next.

(1.) * **GRANULATION**. *n. f.* [from *granulate*.] 1. The act of melting metal into cold water, so as to *granulate* or congeal into small grains: thus done through a colander, or a sieve. Gunpowder and some salts are likewise *granulated*, from their resemblance to *Quincy*. 2. The act of showing or forming small masses.—Fests in wounds, by the growth of the little *granulations* of the process of time harden them, and produce a scabula. *Sharp's Surgery*.

(2.) **GRANULATION**, in chemistry, a method by which metallic substances are reduced into small roundish particles, to facilitate combination with other substances. This consists only in pouring the melted metal into a vessel filled with water, which mean time to be agitated with a bar of melted copper, however, which is done with great violence on the contact of these precautions are to be observed. It works at Bristol, copper is *granulated* in a danger of explosion, by letting it fall into a large cistern of cold water cool brass plate. In the middle of the plate, in which is secured with sturdy small vessel, whose capacity does a spoonful, perforated with many small holes through which the copper passes. As cold water passes through the cistern, and to grow hot the copper will fall to the bottom and run into flat plates instead of balls. Lead or tin may be *granulated* by the same method when melted into a box; the interior of which is rubbed with powdered charcoal, and strongly shaken till the grains are solid. Metals are *granulated*, because the process renders them incapable of being fused, and because filing is long and tedious render the metal impure by an admixture from the file.

* **GRANULE**. *n. f.* [from *granum*.] A small compact particle.—With an microscope, where the naked eye did not see powder, the assisted eye could discern

e blue, and some yellow. *Bayle on*

LOUS. *adj* [from *granule*.] Full of

a village in Kilkenny, Ireland.

W, a town of Germany in Bran-
denburg SE. of Prenzlau.

GRAPE. *n. s.* [*grappe*, French; *krappe*,
German] the fruit of the vine, growing in clus-
ter from which wine is expressed.—

Will not glean thy vineyard, neither
pluck every *grape* of thy vineyard;
leave them for the poor and stranger.

—
con for thy sake

the mention make;

action by thee fell,

at, I lov'd thee well.

Cowley.

the vines in early flow'r deserv'd,

and discolour'd on the sunny side. *Pope.*

G, the fruit of the vine. See **VINE**,

VINE; also **CURRENT** and **RAISIN**.

GRAPE HYACINTH, or **GRAPE Flow-**
er.

G **HYACINTH**. See **HYACINTHUS**.

G, **MANGROVE**. } Two species of

G, **SEA-SIDE**. } **POLYGONUM**.

n. s. plur. in the manege, a term used
for arrests or many tumours that hap-
pen to a leg.

GRAPNEL, in artillery, is a combination of
wrought into a thick canvas bag, and cord-
ed together, so as to form a kind of cy-
linder diameter is equal to that of the ball
of the cannon. The number of shot in a
grapple according to the service or size of the
service nine is always the number;
it is increased to any number or size,
one and a quarter in weight to three
pounds. In sea-service the bottoms and
sides of iron, whereas those used by land

GRAPNEL. *n. s.* [*grape* and *stone*.] The
stone contained in the grape.—

an obedient nature knows his will,

grapestone, or a hair can kill *Prior.*

GRAPHICAL. *adj* [*grape*.] Well delineated

with a needle, or bodkin, or knife,

when the fruit or trees are young;

grow, so the letters will grow more

graphical. *Bacon's Natural History.*

GRAPHICALLY. *adv.* [from *graphical*] In a

manner; with good description or de-

scribe the hyena odorata, or civet cat, is

described graphically by *Castellus.*

gar Errors.

GRAPNEL. *n. s.* [*grapin*, French.] 1.

or belonging to a little vessel. 2. A

grapple with which in fight one ship fastens

on another.

GRAPNELS, or **GRAPPLINGS**, (§ 1. *def.* 1.)

are fitted with 4 or 5 flukes or claws, and com-
monly used to ride a boat or other small vessel.

* **GRAPPLE.** *n. s.* [from the verb.] 1. Con-
test hand to hand, in which the combatants seize
each other: the wrestlers hold.—

As when earth's son, Antæus strove

With Jove's Alcides, and, oft foil'd, still rose

Fresh from his fall, and fiercer grapple join'd,

Throttled at length in th' air, expir'd and fell,

Milton.

Or did his genius

Know mine the stronger demon, fear'd the grap-
ple,

And, looking round him, found this nook of fate,

To skulk behind my sword? *Dryd. Don Sebast.*

2. Close fight.—In the grapple I boarded them:
on the instant they got clear of our ship, so I alone
became their prisoner. *Hamlet.* 3. Iron instru-
ment by which one ship fastens on another.—

But Cymon soon his crooked grapples cast,

Which with tenacious hold his foes embrac'd.

Dryden.

(1.) * **To GRAPPLE.** *v. n.* [*grabbelen*, Dutch;
krappeln, German] 1. To contend by seizing each
other, as wrestlers.—They must be also practised
in all the locks and grips of wrestling, as need
may often be in fight to tugg or grapple, and to
close. *Milton.*—

Living virtue, all achievements past,

Meets envy, still to grapple with at last. *Waller.*

—Does he think that he can grapple with divine
vengeance, and endure the everlasting burnings?
South.—

Antæus here and stern Alcides strive,

And both the grappling statues seem to live. *Add.*

2. To contest in close fight.—

I'll in my standard bear the arms of York,

To grapple with the house of Lancaster. *Shak.*

Sometimes, from fighting squadrons of each

fleet,

Two grappling Ætnas on the ocean meet,

And English fires with Belgian flames contend.

Dryden.

(2.) **To GRAPPLE.** *v. a.* 1. To fasten; to fix;
to join indissolubly. Now obsolete.

Grapple your minds to sternage of the navy,

And leave your England as dead midnight still.

Shakespeare's Henry V.

That business

Grapples you to the heart and love of us. *Shak.*

2. To seize; to lay fast hold of.—For Hippagines,
vessels for the transporting of horse, we are indebted
to the Salaminians; for grappling hooks to A-
nacharis. *Heylyn.*

* **GRAPPELMENT.** *n. s.* [from *grapple*.] Close
fight; hostile embrace. Not in use.—

They catching hold of him, as down he lent,

Him backward overthrew, and down him stay'd

With their rude hands and grievous grappelement.

Spenser.

(1.) **GRAPPLING.** See **GRAPNEL**, § 2.

(2.) **Fire-GRAPPLING**, an instrument nearly re-
sembling the Grapnel, (See **GRAPNEL**, § 2.) but
differing in the construction of its flukes, which
are furnished with strong barbs on their points.
These machines are usually fixed on the yard-arms
of a ship, to grapple any adversary whom she in-
tends

tends to board. They are more particularly useful in FIRE-SHIPS for the purposes described under that article.

GRAS, Antony Le, a French writer, born in 1691. He published translations of Cornelius Nepos, and of the works of the primitive fathers, into French. He died in 1761, aged 70.

GRASHOLM, one of the small Orkney Isles, half a mile S. of Shapinsay.

(1.) * GRASHOPPER. *n. f.* [*grass* and *hop*.] A small insect that hops in the summer grass. The *cricket* of the Latins is often by the poets translated *grasshopper*, but improperly.—

Her waggon spokes made of long spinners legs,

The cover of the wings of grasshoppers. *Shak.*
—Grasshoppers eat up the green of whole countries. *Bacon.*

Where silver lakes with verdant shadows crown'd,

Disperse a grateful chitina all around ;

The grasshopper avoids th' untainted air,

Nor in the midst of Summer ventures there. *Addison.*

—The women were of such an enormous stature, that we appeared as grasshoppers before them. *Spectator.*

(2.) GRASHOPPER, or more properly GRASSHOPPER, in entomology. See GRYLUS.

* GRASIER. See GRAZIER.

GRASKA, a town of Poland, in the palatinate of Bracław, 30 miles SW. of Bracław.

GRASMARK, a town of Sweden, in the province of Warmeland, 44 miles N. of Carlstadt.

GRASON, an island in the gulf of Bothnia, near the coast of Sweden, 15 miles long and 2 broad. Long. 18. 20. E. Lat. 60. 22. N.

* GRASP. *n. f.* [from the verb.] 1. The gripe or seizure of the hand.—

Nor wanted in his grasp

What seem'd both spear and shield. *Milton.*

This hand and sword have been acquainted well ;

It would have come before into my grasp,

To kill the ravisher. *Dryd. Don Sebastian.*

—The left arm is a little defaced, though one may see it held something in its grasp formerly. *Aldis.*

2. Possession ; hold.—

I would not be the villain that thou think'st

For the whole space that's in the tyrant's grasp,

And the rich East to boot. *Shak. Macbeth.*

3. Power of seizing —

Wunn the direful grasp

Of savage hunger, or of savage heat. *Milton.*

—They look'd upon it as their own, and had it even within their grasp. *Clarendon.*

(1.) * To GRASP. *v. a.* [*graspare*, Italian.] 1. To hold in the hand ; to gripe.—O fool that I am, that thought I could grasp water and bind the wind. *Sidney.*

In his right hand

Grasping ten thousand thunders which he sent

Before him, such as in their souls infix'd

Plagues. *Milton's Par. Lost.*

Kings, by grasping more than they can hold,

First made their subjects, by oppression, bold.

Denham.

Doom, as they please, my empire
I'll grasp my sceptre with my dagger

Dryd. Iván.

2. To seize ; to catch at.—This grasp militia of the kingdom into their own I desired the Summer before. *Clarendon.*

For what are men who grasp at gain
But bubbles on the rapid stream of

(2.) * To GRASP. *v. m.* 1. To endeavour to seize ; to try at.—So end orbitant are the desires of men, that grasp at all, and can form no scheme happiness with less. *Swift.* 2. To strive ; to grapple. Not now in use.—

See, his face is black, and full of
His hands abroad display'd, as one
And tugg'd for life. *Shak.*

3. To gripe ; to encroach.—

Like a miser 'midst his ill

Who grasps and grasps 'till he can be

* GRASPER. *n. f.* [from *grasp*.]

grasps, seizes, or catches at.

(1.) * GRASS. *n. f.* [*grax*, Saxon.] mon herbage of the field on which cattle herb with long narrow leaves.—Ye are as the heifer at grass, and belloo as by 11.—The beef being young, and one was thin, light, and moist, and not of to endure the salt. *Temple.*

You'll be no more your former
But for a blooming nymph will pass
Just fifteen, coming Summer's grass

(II.) GRASS, in botany, is defined as having simple leaves, a stem generally tubular, a husky calyx, called Glum seed single. Hence wheat, oats, bark properly grasses, while clover and similar plants are not grasses, though so called by that name. Of grass the leaf for cattle, the small seeds for birds, and grain chiefly for man. And it is observed nature has so provided, that cattle (seldom eat the flower intended to produce unless compelled by hunger. For the different sorts of grain and grasses, BANDRY, and the names of the genera der.

(III.) GRASSES, CULMIFEROUS, divided into two general classes for the pur farmer, that it might be of use for him to, viz. 1st, Those which, like the annual kinds of corn, run chiefly to seed leaves gradually decaying as these towards perfection, and becoming total or falling off entirely when the seed Rye-grass belongs to this class in the 1st To it likewise may be assigned the v dogs-tail grass, and fine bent grass. 2 whole leaves continue to advance even seed-stalks are formed, and retain the and succulence during the whole season case with the fescue and poa tribes whose leaves are as green and succulent seeds are ripe and the flower stalks so any other time. "It is wonderful,"

arks, to see how long mankind has ne-
 make a proper advantage of plants of
 ortance, and which, in almost every
 e the chief food of cattle. The farmer,
 of distinguishing and selecting grasses
 ills his pastures either with weeds, or
 proper grasses; when by making a right
 ter some trials, he might be sure of the
 and in the greatest abundance that his
 is of. At present, if a farmer wants to
 his land to grass, what does he do? He
 es his seeds indiscriminately from his
 hay-rick, or sends to his next neighbour
 ly. By these means, besides a certain
 all sorts of rubbish, which must neces-
 sarily, if he chances to have a large pro-
 portion of good seeds, it is not unlikely but that
 weeds for dryland may come from moist,
 grow naturally, and the contrary. This
 is a lovely method of proceeding, as one
 rick could not possibly prevail universally:
 he case as to all grasses except the daniel
 what is known in some few counties by
 of the *Suffolk grass*; and this latter in-
 wing, I believe, more to the soil than
 of the husbandman. Now, would the
 at the pains of separating once in his
 pint or a pint of the different kinds of
 , and take care to sow them separately,
 the time he would have wherewithal to
 run properly, according to the nature
 and might at the same time spread
 separately over the nation, by supply-
 ing shops. The number of grasses fit for
 is, I believe, small; perhaps half a do-
 zenscore are all he need to cultivate;
 and all the trouble would be of such a talk,
 that the benefit, must be obvious to e-
 very first sight. Would not any one be
 as wild who should sow wheat, barley,
 pease, beans, vetches, buck-wheat,
 and weeds of all sorts together? yet how
 less absurd to do what is equivalent in
 grasses? Does it not import the farmer
 good hay and grass in plenty? and will
 be equally on all sorts of food? We
 contrary. Horses will scarcely eat hay
 so well enough for oxen and cows.
 Linnæus, are particularly fond of one
 is, and fatten upon it faster than any
 Sweden. And may they not do the
 same? How shall we know till we have
facts relating to Nat. Hist) As most
 now scarce any of the grasses by name,
 without such knowledge little improve-
 ment made in this branch of husbandry,
Plate CLXIX. given figures of those
 have been recommended as the most
 viz.
 1. ANNUAL MEADOW, *Poa annua*.
 is (says Mr Stillingfleet) makes the
 It grows every where by way sides,
 found commons. It is called in some
Suffolk grass. I have seen whole fields
 of Suffolk, without any mixture of o-
 ; and, as some of the best salt butter
 of London comes from that county, it
 is to be the best grass for the dairy. I

have seen a whole park in Suffolk covered with
 this grass; but whether it affords good venison, I
 cannot tell, having never tasted of any from it.
 I should rather think not, and that the best pas-
 ture for sheep is also the best for deer. However,
 this wants trial. I remarked on Malvern hill
 something particular in relation to this grass. A
 walk that was made there, for the convenience of
 the water-drinkers, in less than a year was cover-
 ed in many places with it, though I could not
 find one single plant of it besides in any part of
 the hill. This was no doubt owing to the fre-
 quent treading, which above all things makes this
 grass flourish; and therefore it is evident that roll-
 ing must be very serviceable to it. It has been
 objected, that this grass is not free from *bents*,
 by which word is meant the flowering stems. I
 answer, that this is most certainly true, and that
 there is no grass without them. But the flowers
 and stems do not grow so soon brown as those of
 other grasses; and being much shorter, they do not
 cover the radical leaves so much; and therefore
 this grass affords a more agreeable turf without
 mowing, than any other whatever that I know of.”
 The seeds of this species drop off before they are
 dry, and, to appearance, before they are ripe. The
 utmost care is therefore necessary in gathering the
 blades, without which, very few of the seeds will
 be saved. It ripens from the middle of April, to
 so late, it is believed, as the end of October; but
 mostly disappears in the middle of the summer.
 It grows in any soil and situation, but rather af-
 fects the shade.”

2. GRASS, BULBOUS FOXTAIL, *Alopecurus bul-
 bosus*, is recommended by Dr Anderson, in his
Essay on Agriculture, &c. as promising on some
 occasions to afford a valuable pasture grass. It
 seems chiefly, he observes, to delight in a moist
 soil, and therefore promises to be only fit for a
 meadow pasture grass. The quality, that first re-
 commended it to his notice, was the unusual firm-
 ness that its matted roots gave to the surface of
 the ground, naturally soft and moist, in which
 it grew; which seemed to promise that it might
 be of use upon such soils, chiefly in preventing
 them from being much poached by the feet of
 cattle which might pasture upon them. Moist
 soils especially are so much hurt by poaching, that
 any thing that promises to be of use in preventing
 it deserves to be attended to.

3. GRASS, COCK'S TAIL, or FEATHER, *Stipa
 pennata*. See STIPA.

4. GRASS, CREEPING MEADOW, *Poa compressa*,
 according to Dr Anderson, seems to be the
 most valuable grass of any of this genus. Its
 leaves are firm and succulent, of a dark Saxon
 green colour, and grow so close upon one an-
 other, as to form the richest pile of pasture grass.
 The flower stalks, if suffered to grow, appear in
 sufficient quantities; but the growth of these does
 not prevent the growth of the leaves, both advan-
 cing together during the whole summer; and
 when the stalks fade, the leaves continue as green
 as before. Its leaves are much larger and more
 abundant than the common meadow grass, *Poa
 trivialis*; and therefore it better deserves to be
 cultivated.

5. GRASS, CREEPING SOFT, *Holcus lanatus*. See HOLCUS.

6. GRASS, CRESTED DOG'S-TAIL, *Cynosurus erythraus*. Mr Stillingfleet imagines this grass to be proper for parks, from his having known one, where it abounds, that is famous for excellent venison. He recommends it also, from experience, as good for sheep; the best mutton he ever tasted, next to that which comes from hills where the purple and sheep's fescue, the fine bent, and the silver hair grasses abound, having been from sheep fed with it. He adds, that it makes a very fine turf upon dry sandy or chalky soils; but unless swept over with the scyth, its flowering stems will look brown; which is the case of all grasses which are not fed on by variety of animals. For that some animals will eat the flowering stems is evident by commons, where scarcely any parts of grasses appear but the radical leaves. This grass is said to be the easiest of the whole group to collect a quantity of seeds from. It flowers in June, and is ripe in July.

7. GRASS, FINE BENT, *Agrostis canaliculata*, is recommended by Mr Stillingfleet, from his having always found it in great plenty on the best sheep pastures, in the different counties of England that are remarkable for good mutton. This grass flowers and ripens its seed the latest of them all. It seems to be lost the former part of the year, but vegetates luxuriantly towards the autumn. It appears to be fond of moist ground. It retains its seed till full ripe; flowers the latter end of July, and is ripe the latter end of August. The same may be said of the MOUNTAIN and SILVER HAIR GRASSES.

8. GRASS, FLOTE, or FLOATING FESCUE, *Festuca fluitans*. See FESTUCA, N° 2. It is surprising that the seeds of this plant, which are used as nutritious food in Sweden, Germany, &c. have hitherto been neglected in Britain, as they are so easily collected and cleaned. There is a clamminess on the ear of the flote fescue, when the seeds are ripe, that tastes like honey: and for this reason perhaps they are called *manna seeds*. Linnaeus, in his *Flora Suecica*, (art. 95.) says, that the bran of this grass will cure horses troubled with botts, if kept from drinking for some hours. Concerning this grass we have the following information by Mr Stillingfleet. "Mr Dean, a very sensible farmer at Rulcomb, Berkshire, assured me that a field, always lying under water, of about 4 acres, was covered with a kind of grass, that maintained 5 farm horses in good heart from April to the end of harvest, without giving them any other kind of food, and that it yielded more than they could eat. He, at my desire, brought me some of the grass, which proved to be the flote fescue with a mixture of the marsh bent; whether this last contributes much towards furnishing so good pasture for horses, I cannot say. They both throw out roots at the joints of the stalks, and therefore are likely to grow to a great length. In the index of dubious plants at the end of Ray's Synopsis, there is mention made of a grass under the name of *gracilis coninum supinum longissimum*, growing not far from Salisbury, 24 feet long. This must by its length be a grass with a creeping stalk; and that there is a grass in Wiltshire growing in wa-

tery meadows, so valuable, that an acre has been sold for 10l. to 11l., I have been informed by persons. These circumstances incline me to think it must be the flote fescue; but whatever it be, it certainly must deserve to be brought into notice.

9. GRASS, GREAT MEADOW, *Poa annua*. It seems to approach in many respects to that of the purple fescue; only that its leaves are broader, and not near so long; being only 2 or 3 inches at their greatest length. It produces few seed stalks and many long, an abiding plant. It affects chiefly the edges of meadows, though it is to be found in good pastures. It is very retentive of its seeds, and may therefore be suffered to remain till the stalks are quite dry. It blossoms in the latter end of June, and its seeds are ripe in July.

10. GRASS, MEADOW FOXTAIL, *Setaria pectinata*. Linnaeus says, this is a poor grass, growing on grounds that have been dug up. Mr Stillingfleet was informed, that the best seed that comes to London is from the meadows where this grass abounds. It is scarce in many parts of the year from hay ricks, as it does not ripen its seeds without rubbing, which is the case with few grasses. It is amongst the most grateful to cattle. It is ripe about the latter end of July.

11. GRASS, MOUNTAIN HAIR, *Agrostis alba*. See N° 7. and AIRA.

12. GRASS, NEW AMERICAN, *Agrostis canaliculata*. A grass from America, named *Agrostis canaliculata*, some time ago much advertised and sold, as possessing the most wonderful qualities. The seeds of it were sold at the enormous price of 10s. the bushel. But we have not heard that it has answered expectation. On the contrary, Mr Anderson in his *Bee*, (Vol. i. p. 38.) says, "it has upon trial been found to be good for nothing. Of the seeds sown, few of them germinated: but even of plants made the same, to ascertain, that the grass, in its quality, is among the poorest of the kind, that it is an annual plant, and altogether unsuitable to the farmer."

13. GRASS, PURPLE FESCUE, *Festuca ovina*. See FESTUCA, N° 3.

14. GRASS, RYE, *Hordium marinum*. It is properly the *SECALE VILLOSUM*. The darnel, *Solomon perenne*, is also, in some parts of England, improperly called *rye grass*.

15. GRASS, SILVER HAIR, *Aira caerulea*. See N° 7. and AIRA.

16. GRASS, SHEEP'S FESCUE, *Festuca ovina*. See FESTUCA, N° 3. This is perhaps the most valuable grass of all. It is observed to thrive in lands of all qualities and in all parts of meadows. It does not part with its seeds till some time after they are ripe, and is very dry. It makes the thickest and closest sward of them, and sends up but few flower stalks in proportion to its leaves. It flowers in the latter end of June, and its seeds are ripe in July.

17. GRASS, VERNAL, *Anthriscus vernalis*. It grows very commonly on dry hills, and is found in rich meadow land. It is one of the

GRASSES.

Plate CLXX

Climbing Soft Grass. Purple Ryegrass. Sharpe Ryegrass. Small Grass leaved Plantain. Bulbous Foxtail Grass. Great Meadow Grass.

Ryegrass

as we have; and from its being found on
s of pastures as sheep are fond of, and
nce excellent mutton comes, it is most
e a good grass for sheep pastures. It
teful odour to hay. In one respect, it
y to gather, as it sheds its seeds upon
ubbing. A correspondent of the Bath
however, mentions a difficulty that oc-
ollecting them, owing to its being far-
with taller grasses at the time of its ripen-
eing almost hid among them. If it be
lly watched when nearly ripe, he ob-
d gathered within a few days after it
maturity, great part of the seed will be
twisted elastic awns, which adhere to
lift them out of their receptacles with
notion from the wind, even while the
ear remain quite erect. It is found
the moist parts of meadows; very little
y pastures. It flowers about the begin-
y, and is ripe about the middle of June.

* GRASS OF PARNASSUS. *n. f.* [*par-*
in.] A plant.—This plant is called *sur-*
m mount Parnassus, where it was sup-
row; and because the cattle feed on it,
l the name of grass, though the plant
eimbance to the grass kind. *Miller.*

ASS OF PARNASSUS. See PARNASSIA.

GRASS WALKS are made, for the most
by sowing grass seeds, but by laying
l indeed the turfs from a fine common
re much preferable to sown grass: but
r plats are to be made by sowing, the
s to procure the seed from those pastures
grass is naturally fine and clear; or else
e of keeping it from spiry or benty grass
ry great, and it will scarce ever look
—To sow grass walks, the ground must
ig; and when it has been dressed and
it must be carefully raked over, and all
and stones taken off, and then covered
ch thick with good mould. The seed
wn pretty thick, that it may come up
short; it must then be raked over again,
he seed, that if the weather should be
may not be blown away. Where grass
gardens, either for lawns or walks,
ild always be a good quantity of the
oil or Dutch clover sown with it; for
ake a fine turf much sooner than any o-
grass, and will retain a better verdure
ther of the grass tribe. To keep grass
home, and in good order, sow in au-
seed over any places that are not well
where the grass is dead; but nothing
grass so much as mowing and constant
When turf is laid in gardens, it is a ge-
ice to cover the surface of the ground
turf, either with sand or very poor earth,
keep the grass fine, by preventing its
o rank. This is proper for very rich
ut not for middling, or poor land; for
is practised in such places, the grass
wear out and decay in patches. When
n from a common or down, such ought
n as is free from weeds: and when it

is deligned to remain for years without renew-
ing, a dressing should be laid upon it every other
year, either of very rotte - Jung, althe-, or, where
it can easily be procured, rotten tan; but these
dressings should be laid on early in the winter, that
the rain may wash them into the ground, other-
wise they occasion the grass to burn, when the
warmth of the summer begins. When grass is thus
dressed and well rolled and mowed, it may be kept
very beautiful for many years; but where it is not
dressed, or fed with sheep, it will rarely continue
handsome more than eight or ten years.

(VIII.) GRASS WRACK. See ZOSTERA.

* To GRASS. *v. n.* [from the noun.] To breed
grass; to become pasture.—

Land arable, driven, or worn to the proof,
With oats ye may sow it, the sooner to *grass*,
More soon to be pasture, to bring it to pass.

Tusser.

(1.) GRASSE, a town of France, in the dept.
of Aude, and late province of Languedoc, seated
on the Orbieu, at the foot of Mount Courbiere;
14 miles SE. of Carcassone, and 18 SW. of Nar-
bonne.

(2.) GRASSE, a town of France, in the dept.
of Var, and ci-devant province of Provence. It
is seated on a hill, 15 miles WSW. of Nice, and
9 WNW of Antibes. Lon. 6. 56. E. Lat. 43. 42. N.

GRASSELLA, a town of France, in the dept.
of Aude, 21 miles SW. of Narbonne, and 26
NNW. of Perpignan. Lon. 20. 17. E. of Ferro.
Lat. 43. 5. N.

GRASSENA, a town of the Piedmontese re-
public, in the dep. of Sesia, and late duchy of A-
osta; 18 miles E. of Aosta.

GRASSETORTH, a town of Austria.

GRASSHOPPER. See GRILLUS

* GRASSINESS. *n. f.* [from *grassy*.] The state
of abounding in grass.

(1.) GRASSMERE, a lofty mountain of Cum-
berland, near Buttermere.

(2.) GRASSMERE, a village of Northumberland,
between Kendal and Kelwick, seated on a pro-
montory, that projects far into the lake N° 3.

(3.) GRASSMERE WATER, a beautiful lake in
Westmoreland, near Ambleside and Rydal. Its
banks are formed into small bays, by bold pro-
jecting eminences, some of rock and some of turf.

* GRASS-PLOT. *n. f.* [*grass* and *plot*.] A small
level covered with short grass.—

Here on this *grass-plot* in this very place,

Come and sport.

Shak. Tempest.

—The part of your garden next your house should
be a parterre for flowers, or *grass-plots* bordered
with flowers. *Temple.*—They are much valued by
our modern planters to adorn their walks and
grass-plots. *Mortimer.*

* GRASS-POLY. *n. f.* A species of WILLOW-
WORT.

* GRASSY. *adj.* [from *grass*.] Covered with
grass; abounding with grass.—

Ne did he leave the mountains bare unseen,
Nor the rank *grassy* fens delights untry'd. *Spens.*

Rais'd of *grassy* turf

Their table was, and mossy seats had round.

Milton.

The most in fields, like herded beasts, lie down.
To dews obnoxious, on the *grassy* floor. *Dryd.*

GRASWINCKEL, a learned Dutch civilian, born at Delft, in 1600. He was a man of taste, and published several works, wherein he distinguished himself in the belles lettres, as well as in law. He died at Mechlin, in 1666.

GRATAROLUS, William, a learned physician of the 16th century, born at Bergamo in Italy. He taught medicine with reputation at Padua, but having embraced the Protestant religion, he retired to Switzerland, where he was made professor of physic. He died at Basil in 1568, aged 42. He wrote several curious works in Latin; amongst which are, 1. The manner of preserving and improving the memory. 2. Of preserving in health travellers, men of letters, magistrates, and studious persons, &c.

GRATCHI, a town of Russia, in the country of the Cossacs, 20 miles NW. of Tzantzinz.

(1.) * **GRATE**. *n. s.* [*crates*, Lat.] 1. A partition made with bars placed near to one another, or crossing each other: such as in cloisters or prisons.—I have grated upon my friends for three reprieves for you, and your couch fellow Nim: or else you had looked through the *grates*, like a gemmy of baboons. *Shak.*—

Out at a little *grate* his eyes he cast
Upon those bordering hills, and open plain.

Daniel.

—A fan has on it a nunnery of lively black eyelid
vestals, who are endeavouring to creep out at the
grates. *Addison.* 2. The range of bars within which fires are made.—My dear is of opinion that an old fashioned *grate* consumes coals, but gives no heat. *Spectator.*

(2.) **GRATES FOR FIRES** (§ 1. *def.* 2.) are composed of ribs of iron placed at small distances from one another, so that the air may have sufficient access to the fuel, and the accumulation of the ashes, which would choke the fire, may be prevented. Grates seem peculiarly adapted to the use of pit coal, which requires a greater quantity of air to make it burn freely than other kinds of fuel. The hearths of the Britons seem to have been fixed in the centre of their halls, as is yet practised in some parts of Scotland, where the fire is nearly in the middle of the house, and the family sit all around it. Their fire place was perhaps nothing more than a large stone, depressed a little below the level of the ground, and thereby adapted to receive the ashes. About a century ago, it was only the floor of the room, with the addition of a bank of clay. But it was now changed among the gentlemen for a portable fire-pan, raised upon low supporters, and fitted with a circular grating of bars. Such were in use among the Gauls in the first century, and among the Welsh in the tenth.

(1.) * **To GRATE**. *v. a.* [*gratter*, Fr.] 1. To rub or wear any thing by the attrition of a rough body.—

Thereat the fiend his gnashing teeth did *grate*.

Spenser.

Blind oblivion swallow'd cities up,

And mighty states characters are *grated*

To dusty nothing. *Shak Troilus and Cressida.*

—If the particles of the putty were not made to stick fast in the pitch, they would, by rolling up and down, *grate* and fret the object metal, and

fill it full of little holes. *Newton's Opticks.*
offend by any thing harsh or vexatious.

Thereat enraged, soon he 'gan
Grinding his teeth, and *grating* his

—They have been partial in the gold
and chosen out those softer and more
tates, which would less *grate* and
Decay of Piety.—

Just resentment and hard usage
Th' unwilling word and *grating* ear
Take it, for 'tis thy due. *Drake.*

—This habit of writing and discourse
I unfortunately differ from almost the
dom, and am apt to *grate* the ears of
I could wish, was acquired during my
ship in London. *Swift.* 3. To form
collection of asperities or hard bodies.—

The *grating* shock of wrathful
Shak.

On a sudden open fly,
With impetuous recoil and jarring
Th' infernal doors, and on their hinges
Harsh thunder, that the lowest bottom
Of Erebus. *Milton's Paradise Lost.*

(2.) * **To GRATE**. *v. n.* 1. To
as to injure or offend; to offend, as
sion or importunity.—

Wherein have you been galled by
What peer hath been suborn'd to
That you should seal this lawless

Of forg'd rebellion with a seal divine
—I have *grated* upon my good friends
reprieves for you, or else you had lost
the *grates*. *Shak.*—Paradoxing in of
the faculty must be so tenderly managed
to *grate* upon the truth and reason
L'Estrange—This *grated* harder upon
of men. *South*—I never heard him make
complaint, in a case that would have
on some men's patience, and have filled
with discontent. *Locke.* 2. To make
as that of a rough body drawn over, and
are not so nice as to cast away a sharp
cause the edge of it may sometimes *grate*

* **GRATEFUL**. *adj.* [*gratus*, Lat.]
ving a due lease of benefits; willing to
ledge and to repay benefits.—

A *grateful* mind

By owing owes not, but still pays.

—When some degree of health was
erted all his strength in a return of *grat*
nition to the author of it. *Fell*—

Years of service past,

From *grateful* souls exact reward at last

2. Pleasing; acceptable; delightful; &
Whatsoever is ingrate at first, is made
custom; but whatsoever is too pleas
groweth quickly to satiate. *Bacon's Essays.*

—A man will endure the pain of
thirst, and refuse such meats and drinks
grateful to his appetite, if he be pers
they will endanger his health. *Hobbes.*—
is the more *grateful* to strangers, in ref
being a frontier town, and bordering
nations, many languages are used
Brown's Travels.—

golden fruits on loaded branches shine,
grateful clusters swell with floods of wine.

Pope.

GRATEFULLY. *adv.* [from *grateful*.] 1. Inclined to acknowledge and repay bene-
 due sense of obligation.—

A new wak'd, thus *gratefully* reply'd.

Milton.

gh remains for household charge beside,
 and tender children to sustain,
gratefully to feed his dumb deserving train.

Dryden's *Virgil*.

prus long by men and gods obey'd,
 ers toil she *gratefully* repaid. *Granville*.
 aising manner.—Study detains the mind
 perpetual occurrence of something new,
gratefully strike the imagination. *Watts*.

GRATEFULNESS. *n. f.* [from *grateful*.] 1. A
 ide; duty to benefactors. Now obso-
 letonian knight having sometime served
 more *gratefulness* than good courage de-
 n. *Sidney*.—

ngs beforehand, ties of *gratefulness*,
 ind of glory ringing in our ears. *Herbert*.
 of being acceptable; pleasantness.

ELEY, a town of England, in Hamp-
 the SE. side of Quarley-hill, between
 and Salisbury, where, in 926, king A-
 eld a grand council of the nobles.

GRATER. *n. f.* [*gratoir*, Fr. from *grate*.] 1.
 coarse file with which soft bodies are
 powder.—

ler handed touch a nettle,
 stings you for your pains,
 p it like a man of mettle,
 soft as silk remains.

is with common natures,
 hem gently they rebel,
 be rough as nutmeg *graters*,
 e rogues obey you well.

A. Hill.

GRATES, a cape on the E. of Newfoundland.

GRATIAN, the son of Valentinian I. by
 wife, was associated in the empire by his
 : Amiens in 365, and succeeded him in
 rince equally extolled for his wit, elo-
 modesty, chastity, and zeal against here-
 associated Theodosius with him in the em-
 advanced the poet Ausonius to the confu-
 : made a great slaughter of the Germans
 urg, (See *ARGENTORA*.) and hence was
 l *Alemannicus*. He was the first emperor
 sed the title of *Pontifex Maximus*, on ac-
 its being a Pagan dignity. He was assas-
 y Andragathius in 375, in the 24th year
 e.

GRATIAN, a British soldier in the Roman
 ho was crowned emperor by the legions
 1, about A. D. 407, but was murdered
 within 4 months. See *ENGLAND*, § 12.

GRATIAN, a famous Benedictine monk, in
 century, born at Chiufi. He was em-
 ear 24 years in composing a work, entit-
Concordantia Discordantium Ca-
ecuse he there endeavoured to reconcile
 ns which seemed contradictory to each o-
 his work was published in 1151. As he
 ntly mistaken, in taking one canon of one
 or one passage of one father, for another,

and has often cited false decretals, several authors
 have endeavoured to correct his faults; and chiefly
 Anthony Augustine, in his excellent work, intit-
 led, *De emendatione Gratiani*. To the decretals
 of Gratian, the popes principally owed the great
 authority they exercised in the 13th and following
 centuries.

GRATIANI, Jerome, an Italian dramatic writ-
 ter of the 16th century, who, among other pieces,
 wrote a tragedy, called *Cromwell*, which was
 much esteemed.

* **GRATIFICATION.** *n. f.* [*gratificatio*, Lat.] 1. The act of pleasing.—They are incapable of
 any design above the present *gratification* of their
 palates. *South*. 2. Pleasure; delight.—How hard-
 ly is his will brought to change all its desires and
 averfions, and to renounce those *gratifications* in
 which he has been long uied to place his happiness.
Rogers. 3. Reward; recompence. A low word.

* **To GRATIFY.** *v. a.* [*gratificor*, Latin.] 1.
 To indulge; to grant by compliance.—

You steer between the country and the court,
 Nor *gratify* whate'er the great desire,
 Nor grudging give what publick needs require.

Dryden.

2. To delight; to please; to humour; to soothe.—

But pride stood ready to prevent the blow;
 For who would die to *gratify* a foe? *Dryd. Fab.*

The captive generals to his car are ty'd;

The joyful citizens tumultuous tide

Echoing his glory, *gratify* his pride. *Prior.*

—A palled appetite is humorous, and must be
gratified with sauces rather than food. *Tatler*.—

At once they *gratify* their scent and taste.

While frequent cups prolong the rich repast.

Pope.

A thousand little impertinencies are very *grati-*
fying to curiosity, though not improving to the
 understanding. *Addison*.—3. To requite with a
 gratification: as, I'll *gratify* you for this trouble.

* **GRATINGLY.** *adv.* [from *grate*.] Harshly;
 offensively.

GRATINGS, in a ship, are small edges of sawed
 plank, framed one into another like a lattice or
 prison grate, lying on the upper deck, between
 the main mast and fore-mast, serving for a defence
 in a close fight, and also for the coolness, light,
 and conveniency of the ship's company.

GRATIOLA, **HEDGE HYSSOP**: A genus of the
 monogynia order, belonging to the diandria class
 of plants; and ranking according to the natural
 method in the 40th order, *Personate*. The corol-
 la is irregular; there are two barren stamina; the
 capsule is bilocular; the calyx has seven leaves,
 with the two exterior ones patulous. There are
 four species; the most remarkable of which is the

GRATIOLA OFFICINALIS, the common hedge
 hyssop, grows naturally on the Alps and other
 mountainous parts of Europe. It has a thick,
 fleshy, fibrous, creeping root, which propagates
 very much, when planted in a proper soil and si-
 tuation. From this arise several upright square
 stalks, garnished with narrow spear-shaped leaves,
 placed opposite. The flowers are produced on
 the side of the stalks at each joint: they are shaped
 like those of the fox-glove, but are small, and of
 a pale yellowish colour.—This herb has an emetic
 and purgative virtue; to answer which intentions,

it was formerly used by the common people in England, but was never much prescribed by the physicians, and at last fell totally into disuse. It is the subject of a dissertation by Dr James Kosciuszko, of Warsaw, in Poland; who gives some remarkable accounts of its effects in mania and obdurate venereal cases. It was given in powder, or in extract, to the quantity of half a drachm of the first, and a whole drachm of the second, at each dose. From the cases he relates the author draws the following conclusions: 1. The gratiole may be given with safety both to male and female patients. 2. In all disorders proceeding from a superabundance of serum in the fluids, it appears to be a most effectual remedy. 3. In consequence of this, it is had recourse to with very great advantage in melancholy and mania arising from that state of the system. 4. It powerfully promotes purging, vomiting, sweat, and urine; and is therefore much superior to any of the usual evacuating medicines, most of which prove only active in promoting one of these discharges at once. 5. The most obstinate cases of gonorrhoea, fluor albus, and venereal ulcers, are cured by the powder.—In some instances it has induced salivation; but whether it can always be made to produce that effect, is not yet altogether certain. 6. The powder prepared from the extract, and exhibited with sugar, does not induce vomiting; and, on the contrary, the powder of the root always promotes that evacuation.

(1.) GRATIOLE, one of the AZORES. See GRACIOSA. It is about 10 miles long and 8 broad. It has several towns and forts. La Plata is the capital. Lon. 10. 12. W. of Ferro. Lat. 39. 2. N.

(2.) GRATIOLE, or GRACIOSA, one of the Canary Islands. See CANARY, § 9. Lon. 13. 7. W. Lat. 29. 15. N.

* GRATIS, *adv.* [Latin.] For nothing; without a recompence.—

The people cry you mock'd them; and, of late,
When 'orn was given them *gratis*, you repin'd.

Shakespeare.

—They sold themselves; but thou, like a kind fellow, gav'st thyself away *gratis*, and I thank thee for thee. *Shak.*—The taking of us, though he judged lawful, yet never approved by practice, but lent still *gratis* both to friends and strangers. *Fell.*—Kindred are no welcome clients, where relation gives them a title to have advice *gratis*. *L'Estrange.*—I scorned to take my degree at Utrecht or Leyden, though offered it *gratis* by those universities. *Arbutnot.*

(1.) * GRATITUDE, *n. f.* [*gratitudo*, low Latin.] 1. Duty to benefactors.—

Forbid

That our renowned Rome, whose *gratitude*
Tow'rd her deserving children is enroll'd,

Should now eat up her own! *Shak. Coriol.*

Suspicious thoughts his pensive mind employ,
A sullen *gratitude*, and clouded joy. *Harte.*

2. Desire to return benefits.—

The debt immense of endless *gratitude*. *Milt.*
—*Gratitude* is properly a virtue, disposing the mind to an inward sense and an outward acknowledgment of a benefit received, together with a readiness to return the same, or the like. *South.*

(2.) GRATITUDE, in ethics, is a turning the mind to an inward sense and acknowledgment of benefits received. Ingratitude, Mr Paley observes, checks voluntary beneficence; hence the want of a grateful temper is a considerable importance. A 2d reason for cultivating that temper is; That the man which is touched with the kindness of a benefactor, is capable of being affected with goodness, and of becoming, in consequence of that affection, a source of the most exalted virtue. The love of the blindest gratitude. It is a mistake, to imagine, that this virtue is omitted in the precept, which is "to love God, because he first loved us" supposes the principle of gratitude, and its proper object.

(3.) GRATITUDE, INSTANCE OF. Frescobald, a Florentine merchant, had a plentiful fortune, of which he was liberal and civil. One day a young stranger applied for charity. Frescobald asked him his name, and of what country? "I am (he) a native of England; my name Cromwell, and my father-in-law is a man. I left my country to seek my fortune, and came with the French army that was at Gathay, where I was a page to a lord, and carried his pike and burget." Frescobald, pitying his necessities, clothed him, took him into his house till he had recovered strength by better diet; and, at his request, mounted him upon a good horse, and gave him a bag of gold in his pocket. Cromwell returned to his native land; where he got into the service of a lord, Woolsey; and after his death, he was so effectually into the favour of Henry he made him a baron, viscount, E. of last lord high chancellor. Mean time, by repeated losses, was reduced to poverty. Some English merchants being indebted to him for the sum of 15,000ducats, became to London for payment. In pursuit of this affair, he was met by the lord chancellor as he was going to court; who immediately alighted him, and asked him, If he was not Sir John Frescobald? "Yes, Sir," (said he) "my most humble servant." "My servant (said the Chancellor) No; you are my special friend, relieved me in my wants, laid the foundation for my greatness, and, as such, I receive since the affairs of my sovereign will admit a longer conference, I beg you will sit down with me this day with your company at my house, and dine with me." Frescobald was astonished at this great man should be that acknowledging his obligations, but, recollecting his poverty and carriage, he concluded it to be a mistake, and therefore went to his house. He came soon after; and taking his seat, he turned to the lord high chancellor, and, addressing him as a nobleman, saying, "This is the gentleman who first contributed to my advancement," told them the whole story; led him into his dining room, and placed him next to him.

company being gone, the Chancellor's affair had brought him to England? gave him the true state of his circumstances, to which Cromwell replied, "I am sorry for misfortunes, and I will make them as good as I can; but, as men ought to be repaid, they are kind, it is fit I should repay you." Then leading him into his study, he first took out 16 ducats, and delivering them to Sigebald, said, "My friend, here is the money you lent me at Florence, with ten more laid out for my apparel, and ten more for my horse; but as you might have made advantage of this money in trade, take these four bags, which is 400 ducats." He next caused him to write the names of his debtors, and the amount they owed; which he transmitted to one of his clerks, with a charge to find out the men, and compel them to pay him in 15 days under the penalty of his displeasure; and thus in a short time the whole sum was paid. All this time Sigebald was entertained in the Chancellor's study, who proposed to him to continue in England, and offered him the loan of 60,000 ducats, if he would trade here; but he desired to return to Florence, which he did, with extraordinary favours from Lord Cromwell. *Hackwell's* *Life*, c. 10. p. 436.

GRATIUS of Falisci, a Latin poet, cotemporary with Virgil, the author of a poem entitled *De Arte*, or *the Manner of writing with dogs*. The best edition is that of Leyden, 12mo, with the learned notes of Janus Ulitius: 1645, 8vo.

GRATUITOUS. *adj.* [*gratuitus*, Latin; *gratis*, Voluntary; granted without claim or reward. Do not mistake the *gratuitous* blessings of heaven for the fruits of our own industry. *L'Estrange* said without proof.—The second motive to introduce this *gratuitous* declination is the same poet gives us. *Ray*.

GRATUITOUSLY. *adv.* [from *gratuitous*.] Without claim or merit. 2. Without proof.—I know whence came this obliquity of direction, which they *gratuitously* tack to matter: ascribe will and choice to these particles. *Bib. Princ.*

GRATUITY. *n. s.* [*gratuité*, Fr. from *gratia*.] A present or acknowledgment; a free gift. Every man might have pretended to comply with him, and dismissed him with a small *gratuity*. *the Od.*—He used every year to present him with an almanack, upon the score of some little gratuity we gave him. *Swift*.

GRATULATE. *v. a.* [*gratulari*, Latin.] To congratulate; to salute with declarations of joy.

To gratify the good Andronicus, and salute his safe return to Rome, the people will accept whom he admires. *Shak.*

Whither away so fast?
No farther than the Tower,
To salute the gentle princes there. *Shakesp.*
No nature could behold so dire a crime,
To salute at least my native clime,
In such a land, which such a monster bore,
So distant from our Thracian shore. *Dryd.*
To salute joy for; to mention with expressions

Yet give thy jealous subjects leave to doubt,
Who this thy 'scape from rumour *gratulate*,
No less than if from peril; and devout,
Do beg thy care unto thy after state. *Ben Jon.*

* **GRATULATION**. *n. s.* [from *gratulari*, Lat.] Salutations made by expressing joy; expression of joy.—They are the first *gratulations* wherewith our Lord and Saviour was joyfully received at his entrance into the world, by such as in their hearts, arms, and bowels embraced him. *Hooker*.

The earth

Gave signs of *gratulation*, and each hill. *Milt.*
—Your enjoyments, according to the standard of a Christian desire, require no addition: I shall turn my wishes into *gratulations*, and, congratulating their fulness, only wish their continuance. *South*.

* **GRATULATORY**. *adj.* [from *gratulate*.] Congratulatory; expressing congratulation.

(1.) **GRATZ**, or **GRAZ**, a handsome town of Germany, capital of Stiria, with a castle seated on a high rock, an university, a great number of palaces, and a fine arsenal. The castle communicates with the river by means of a deep well. The empress-dowager Mary Theresa, was obliged to retire hither during the war of 1741 and 1742. It was taken by the French in March, 1797. It is seated on the Muer. Lon. 16. 5. E. Lat. 47. 4. N.

(2.) **GRATZ**, a town of Silesia, in the principality of Troppau, seated on the Mora, 4 miles S. of Troppau.

GRATZARNITZA, a town of European Turkey, in Bosnia, 36 miles ENE. of Serajo.

GRATZEN, a town of Bohemia, in the circle of Bechin; 17 miles NE. of Rosenberg.

GRAVASELE, a town of Naples, in the province of Basilicata; 15 miles E. of Venosa.

GRAUDENTZ, or **GRUDZIANDS**, a town of Polish Prussia, in the palatinate of Culm, with a castle, seated on the Vistula, 14 miles NNE. of Culm, 30 N. of Thorn, and 110 NW. of Warsaw. Lon. 18. 52. E. Lat. 53. 36. N.

(1.) * **GRAVE**. *adj.* [*grave*, Fr. *gravis*, Latin.] 1. Solemn; serious; sober; not gay; not light or trifling.—

To th' more mature,

A glass that featur'd them; and to the *grave*,
A child that guided dotards. *Shak. Cymb.*

We should have else desir'd

Your good advice, which still hath been both
grave

And prosperous, in this day's council. *Shak.*
—That *grave* awfulness, as in your best breed of mastives, or elegancy and prettiness, as in your lesser dogs, are modes of beauty. *More against Atheism*.—Even the *grave* and serious characters are distinguished by their several sorts of gravity. *Dryden's Fables, Preface*.—

Youth on silent wings is flown;

Graver years come rolling on. *Prior*

To laugh, were want of goodness and of grace;
And to be *grave*, exceeds all power of face. *Pope*

Folly-painting humour, *grave* himself,
Calls laughter forth. *Thomson*

—They have as much reason to pretend to, and as much necessity to aspire after, the highest accomplishments of a Christian and solid virtue, as the *gravest* and wisest among Christian philosophers.

phers. *Law.* 2. Of weight; not futile; credible. Little used.—The Roman state was of all others the most celebrated for their virtue, as the *gravest* of their own writers, and of strangers, do bear them witness. *Greus's Cym.* 3. Not showy; not tawdry: as, a *grave* suit of cloaths. 4. Not sharp of sound; not acute.—Accent, in the Greek names and usage, seems to have regarded the tone of the voice; the acute accent raising the voice, in some syllables, to a higher, *i. e.* more acute pitch or tone, and the *grave* depressing it lower, and both having some emphasis, *i. e.* more vigorous pronunciation. *Holder.*

(1.) GRAVE, in grammar, a species of accent opposite to acute. The grave accent is expressed thus ('); and shows, that the voice is to be depressed, and the syllable over which it is placed pronounced in a low deep tone.

(2.) GRAVE, in music, is applied to a sound which is in a low or deep tone. The thicker the chord or string, the more grave the tone or note, and the smaller the acuter. Notes are supposed to be the more grave, in proportion as the vibrations of the chord are less quick.

(3.) GRAVE, in the Italian music, serves to denote the slowest movement.

(4.) GRAVE, a final syllable in the names of places, is from the Saxon *graf*, a grove or cave. *Gibson's Camden.*

(5, i.) GRAVE, in geography, a strong city of the Batavian republic, in the dept. of the Dommel and Scheldt, and ci devant province of Dutch Brabant; with a fort, seated in a marshy country on the S. side of the Meuse. In 1323, John III, D. of Brabant, obtained it from Otho, lord of Cuyck. It was taken by the French, under Pichegru, Dec. 28, 1794, by capitulation; after a bombardment of 30 weeks, during which hardly one house escaped. It lies 8 miles S. of Nimègue, 30 E. of Bois-le-duc, and 34 SE. of Utrecht. Lon. 5. 45. E. Lat. 51. 46. N.

(ii.) GRAVE, a town of France, in the dep. of the Upper Alps, 16 miles NW. of Briançon.

(7, i.) GRAVE. *n. f.* [*graf*, Sax.] The place in the ground in which the dead are repositied.—

Now it is the time of night,

That the *graves*, all gaping wide,

Every one lets forth his spright,

In the church-way paths to glide. *Shak.*

Thou wilt not leave me in the loathsome *grave*. *Milton.*

To walk upon the *graves* of our dead masters,

Is our own security. *Denham's Sophy.*

—A flood of waters would overwhelm all those fragments which the earth broke into, and bury in one common *grave* all the inhabitants of the earth. *Burnet.*—They were wont once a-year to meet at the *graves* of the martyrs; there solemnly to recite their sufferings and triumphs, to praise their virtues, to bless God for their pious examples, for their holy lives and their happy deaths. *Nelson.*

(ii.) GRAVES, among the Jews were generally out of the city, though there are instances of their interring the dead in towns. Frequent mention is made of graves upon mountains, in highways, in gardens, and private houses; so that nothing on this head seems to have been determined. The

fame may be observed with respect to the Thebans had a law that every one who had distinguished themselves were buried in the public forum. The custom was, however, to bury out chiefly by the highway side. The law forbidden by the law of the XII tables burn the dead in the city; but some in pulchres in Rome, though they paid an indulgence.

(1.) GRAVE. *v. a.* *preter.* *grav* pass. *graven.* [*graver*, Fr. *grave*.] 1. To carve a figure or inscription in any substance.—

Cornice with bossy sculptures *graven*.—Later vows, oaths, or leagues can out those former *gravings* or characters just and lawful oaths were made upon *K. Charles.*—

Thy sum of duty let two words be
O! may they *graven* in that heart
Be humble and be just.

2. To carve or form.—What profited image, that the maker thereof had? *Hab. ii. 18.* 3. To copy paintings upon metal, in order to be impressed on *gravures* can and ought to imitate the colours by the degrees of the lights and 'tis impossible to give much strength to *grave*, after the works of the schools, imitating in some sort the colour of *Dryden's Dufres.* 4. [From *grave*.] Not in use.—

There's more gold:

Do you damn others, and let this damn
And ditches *grave* you all! *Shak.*

5. To clean, caulk, and sheath a ship. 4

(2.) GRAVE. *v. n.* To write or on hard substances.—Thou shalt make pure gold, and *grave* upon it. *Ex. xxxi.*

* GRAVE-CLOATHS. *n. f.* [*grave* and *The dress of the dead.*—

But of such subtle substance and so
That like a ghost he seem'd, whose *grave*
were unbound.

—And he that was dead came forth, he and foot with *grave-cloaths*. *Job. xl. 4.*

GRAVEDONA, or } a town of the
GRAVEDONO, } republic, in the
Lario, and ci-devant duchy of Milan;
the W. bank of Lake Como, 41 miles N.

(1.) GRAVEL. *n. f.* [*graver*, Fr. Dutch; *gravel*, Armoric.] 1. Hard consisting of very small pebble stones, consists of flints of all the usual sizes and of the several sorts of pebbles: sometimes few pyrites, and other mineral bodies, or intermixed, and common sand. *Wooden* armour, all gilt, was so well handled, that ed like a glittering sand and *gravel*, is with silver rivers. *Sidney.*—

Proofs as clear as founts in July, 1

We see each grain of *gravel*. *Shak. Ham.*

—Providence permitted not the earth to self in base *gravels* and pebbles, instead of stones. *Moss.*—

rep, and yet so clear, we might behold
 gravel bottom, and that bottom gold. *Dryd.*
 per garden at Kensington was at first no-
 a gravel pit. *Spe&.*—Gravel walks are
 uit-trees. *Mört. Hufb.* 2. [*Gravelle*, Fr.]
 After concreted in the kidneys.—If the
 rittle it will often crumble, and pass in
 of gravel: if the stone is too big to pass,
 method is to come to a sort of a compo-
 ruce with it. *Arbutnot.*

GRAVEL, (§ 1. *def.* 1.) in natural history
 meaning, a congeries of pebbles, which,
 with a stiff loam, makes lasting and elegant
 walks; an ornament peculiar to our gar-
 den, which gives them an advantage over
 other nations.

GRAVEL, (§ 1. *def.* 2.) in medicine. See
 E, *Index*; and ALKALI.

GRAVEL WALKS. To make these proper-
 bottom should be laid with lime rubbish,
 stones, or any other hard matter, for
 ches thick, to keep weeds from growing
 and over this the gravel is to be laid 6
 inches thick. This should be laid rounding
 the middle, by which means the larger
 stones run off to the sides, and may be raked
 out; the gravel should never be screened
 before it is laid on. It is an error to lay these
 round, which not only makes them un-
 equal upon, but takes off from their appa-
 rent smoothness. One inch in 5 feet is a sufficient rise
 in the middle; so that a walk of 20 feet wide
 should only 4 inches higher at the middle than
 at the sides, and so in proportion. As soon as
 the gravel is laid, it should be raked, and the large
 stones run off again: then the whole should
 be rolled both lengthwise and crosswise; and the
 roller should draw the roller should wear shoes
 on his heels, that he may make no holes; be-
 cause wheels made in a new walk are not easily re-
 mended. The walks should always be rolled 3 or
 4 times a week, after which they will
 hold more firmly than otherwise they could
 be made to do. Gravel, with some loam ad-
 mixed, binds more firmly than the rawer kinds;
 but gravel is naturally very harsh and sharp,
 so as to add a mixture of loam to it. The
 best for walks is such as abounds with
 round pebbles, which, being mixed with
 loam, are bound so firmly together, that
 they never afterwards injured either by wet or
 dry. These are not so liable to be turn-
 ed up by the feet in walking, as the more irregu-
 lar pebbles, and remain much more firm
 in places after rolling.

GRAVEL, *v. a.* [from the noun.] 1. To
 cover with gravel.—Moss groweth upon
 especially such as lie cold, and upon the
 in divers terraces; and again, if they
 are trodden, or if they were at the first gra-
 velled. 2. To stick in the sand.—William
 the Conqueror, when he invaded this island, chan-
 ced to arrive to be gravelled; and one of his
 horses fell so fast in the sand, that he fell to the
 ground. 3. To puzzle; to stop; to put
 to; to embarrass.—I would kiss before I
 say, you were better to speak first, and
 then were gravelled for lack of matter you
 had. **PART II.**

might take occasion to kiss. *Shak.*—The disease it-
 self will gravel him to judge of it; nor can there
 be any prediction made of it, it is so sharp. *Hewel.*
 —What work do our imaginations make with e-
 ternity and immensity? And how are we gravelled
 by their cutting dilemmas? *Glanville's Sceptis.*—

Mat, who was here a little gravelled,
 Tost up his nose, and would have cavill'd. *Prior.*
 4. [In horsemanship.] To hurt the foot with gra-
 vel confined by the shoe.

* GRAVELESS. *adj.* [from *grave*.] Wanting a
 tomb; unburied.—

My brave Egyptians all,
 By the discarding of this pelleted storm,
 Lie graveless. *Shak. Ant. and Cleopatra.*

GRAVELINES, a very strong town of the
 French republic, in the dep. of the North, and
 ci-devant French Flanders, with a castle and har-
 bour. It was ceded to France by the treaty of the
 Pyrenees, and is seated in a marshy country on the
 river Aa, near the sea, 12 miles E. of Calais. Lon.
 2. 13 E. Lat. 50. 59. N.

* GRAVELLY. *adj.* [*graveleux*, French; from
gravel.] Full of gravel; abounding with gravel;
 consisting of gravel.—There are some natural
 spring waters that will insipidate wood; so that
 you shall see one piece of wood, whereof the part
 above the water shall continue wood, and the part
 under the water shall be turned into a gravelly
 stone. *Bacon's N. Hist.*—If you live in a consump-
 tive air, make choice of the more open, high, dry,
 and gravelly part of it. *Harvey on Consumptions.*

GRAVELLY LAND, or SOIL, that abounding
 with gravel or sand, which easily admits of heat
 and moisture; and the more stony such lands
 are, the more barren they prove, in general;
 though not always; for there are gravelly lands
 in different places in Scotland pretty fertile, which
 have proved barren upon removing the stones, and
 recovered their fertility, when the stones and gra-
 vel were restored.

GRAVELOT, an eminent French engraver,
 born at Paris in 1699. He resided 13 years in Eng-
 land. The finest editions of the French poets were
 ornamented by his works. He died at Paris in 1773.

GRAVELOTTE, a town of France, in the dep.
 of Moselle; 4 m. N. of Gorze, and 6 SW. of Metz.

* GRAVELY. *adv.* [from *grave*.] 1. Solemnly;
 seriously; soberly; without lightness or mirth.—
 Thou stand'st

Gravelly in doubt when to hold them wise. *Milt.*
 —A girl longs to tell her confidant that she hopes
 to be married in a little time, and asks her very
 gravelly what she would have her to do. *Spe&.*—

Wisdom's above suspecting wiles;
 The queen of learning gravelly smiles. *Swift.*
 —A formal story was very gravelly carried to his
 excellency, by some zealous members. *Swift.*—

Is't not enough the blockhead scarce can read,
 But must he wisely look, and gravelly plead?
Young.

2. Without gaudiness or show.

GRAVEN, a town of Norway, 24 miles SW.
 of Bergen.

(1.) GRAVENAC, a county of Suabia.
 (2.) GRAVENAC, the capital of the county,
 (N^o 1.) 30 miles W. of Ulm. Lon. 9. 28. E. Lat.
 48. 22. N.

GRAVENAII,

GRAVENAU, a town of Lower Bavaria, 20 miles N. of Passau, and 50 ESE. of Ratisbon.

* **GRAVENESS**, *n. f.* [from *grave* + *Seriousness*; solemnity and sobriety of behaviour.—

You no less become as

The light and careless merry that it wears,

Then settled are his fables, and his weeds

Importing health and *graveness*.

Hamlet.

But yet beware of counsels when too full;

Numbers make long disputes and *graveness* dull.

Denham.

GRAVENHORST, a town of Germany, in the circle of Westphalia, 4 miles NE. of Rheine.

GRAVENMACHFREN, a town of the French republic, in the dep. of Forêts, and late duchy of Luxembourg. It has an ancient monument about 1500 years old. This town was sacked and burnt by the marquis of Brandenburg, in 1441. It is 25 miles ENE. of Luxembourg, and 12 NW. of Treves.

GRAVENWERT, a town of Lower Bavaria, 25 m. N. of Amberg, and 45 ENE. of Nuremberg.

* **GRAVEOLENT**, *adj.* [*graveolens*, Latin.] Strong scented. *Diss.*

(1.) * **GRAVER**, comp. of *grave*. See **GRAVE**.

(2.) * **GRAVER**, *n. f.* [*graveur*, Fr. from *grave*]

1. One whose business is to interbe or carve upon hard substances; one who copies pictures upon wood or metal, to be impressed on paper.—If he makes a design to be graved, he is to remember that the *graver* does not alter their colours as the painters do; and that by consequence he must take occasion to find the shades of his design in the natural shadows of the figures, which he has disposed to cause the effect. *Dryden's Dunciad*. 2. The file or tool used in graving.—With all the care wherewith I tried to do the known way of softening *graver*, I could not soften this. *Boyle*.—

The toil of different labour stole,
Some work to do, some the *graver* guile.

Gay's Fan

(3.) **GRAVER**, *n. f.* [*graving*, *f.* II, 1, 2]

GRAVEROL, a French advocate, born at Nismes, in 1635. He was author of *The Sorberiana*, and several other works. He died in 1694.

(1.) **GRAVESANDE**, a town of the Batavian republic, in the dept. of Delft, and late province of S. Holland; 6 miles WSW. of Delft, and 4 from the coast. It was anciently the chief residence of the Counts of Holland.

(2.) **GRAVESANDE**, William James, LL. D. and F. R. S. an eminent mathematician, born of an ancient family at Delft in Holland, in 1688. He studied the civil law at Leyden, but mathematical learning was his favourite amusement. When he had taken his degree in 1707, he settled at the Hague, and practised at the bar, in which situation he cultivated an acquaintance with learned men; with a society of whom, he published a periodical review, intitled *Le Journal Littéraire*, which was continued without interruption from 1713 to 1742, when he died. The most considerable of his works are, 1. *A Treatise on Perspective*; 2. An introduction to the Newtonian philosophy, or a treatise on the elements of physics confirmed by experiments; 3. A treatise on the elements of algebra, for the use of young students; and, 4. A course of logic and metaphysics. The ministers of the republic consulted him on many occasions,

and his skill in calculation was often of service to them; as well as his address in decyphering secret correspondence of their enemies. He was sent by the States to congratulate George I. on his accession; and on his return appointed professor of mathematics and astronomy at Leyden, where he was the first that taught Newtonian philosophy. He was intimate acquainted with Sir Isaac Newton, and was of his doctrine.

(1.) **GRAVESEND**, a town of Kent, situated on the banks of the Thames, 21 miles from London; and has a castle mounted with cannon, to command the river, directly opposite to Tilbury fort. This town was plundered and burnt by the French and Spaniards in the reign of Richard II. penance which, the king vested it with the sole privilege of carrying passengers by water to London at 4s. the whole fare, head, which was confirmed by Henry V. now the fare is 9d. a head in the summer, and 1s. in the winter. The former must not carry more than 40 passengers, the latter only 20. ply here at the landing of people from Dover, to carry them to Rochester, at 2s. This town and Milton were incorporated by Elizabeth, and granted some peculiar privileges. Great quantities of garden stuffs are sold here, and other places, where the soil is good. Gravesend is preferred to that of Ramsgate, outward bound ships are obliged to stop here till they have been visited by the house officers; and for this purpose the block house fires a musket: but the inward bound all pass by without notice, put waiters on board, if they are not sufficient. As those outward bound general provisions here, the place abounds with provisions. The town being burnt down in 1727, was granted by the parliament in 1731, to the Corporation. In 1624, one Mr Pannock gave the town a school, besides one for a master to employ the poor; and there is a charity school for 24 boys, who are both taught and clothed. The town-house was erected in 1763, and an act was passed for paving and lighting.

(2, 3.) **GRAVESEND**, a township and parish in the County of Long, 10 miles N. by E. of the city.

(4.) **GRAVESEND**, a sea port town of Kent, on the S.W. side of the island, seated on a point of land.

(5.) **GRAVESEND**, a village in Hertfordshire, 10 miles N. of St. Albans.

GRAVESON, a town of France in the Mouths of the Rhone, 5 miles NE. of Arles.

* **GRAVEST**, *superl. of grave*. See **GRAVE**.

* **GRAVE-STONE**, *n. f.* [*grave* and *stone*] a stone that is laid over the grave; the monument.

Timon, presently prepare thy
Lye where the light foam of the sea
Shall thy grave stone daily.

GRAVID, *adj.* Big with child. *40.* It is surprising that Dr Johnson should have used this adjective, when he inserts its ab-

* **GRAVIDITY**, *n. f.* [*gravidus*, Latin] pregnancy; state of being with child.—Women who are not always the forementioned

hese the signs of *gravity* and obstruc-
ard to be distinguished in the beginning.

DONA. See GRAVEDONA.

METER, *n. f.* [from *gravis* weighty,
to measure.] an instrument or glass
by Citizen Guyton Morveau, entirely
principles of Nicholson's Hydrometer.
METER and HYDROSTATICS.

AVINA, a town of Naples, in the
ari, with a bishop's see, 9 miles W. of
id 32 SW. of Biri. Lon. 17. 0. E.
N.

AVINA, John Vincent, an eminent
illustrious lawyer of Italy, born at
1654. He was professor of the canon
college of Sapienza at Rome; where
1718. His works are both curious and
chief of them is, *De ortu et progressu*
s. They were printed in 4to at Leip-
with notes by Mascovius.

AVINA, Peter, an Italian poet, born at
and much esteemed by gen. Gonsalvo,
s, and Prosper Colonna. He wrote,
roman style, Discourses on Matters re-
Law and to the Belles Lettres, as well
He died in 1525, aged 75.

VING. *n. f.* [from *grave*.] Carved
ifal to work in gold; also to grave any
graving, and to find out every device
be put to him. 2 *Cero* ii. 14.

LA VITAIE. *v. n.* [from *gravis*, Lat.]
the centre of attraction —

who have nature's steps with care
u'd,

atter is with active force endu'd,
its parts magn-tick pow'r exert,
ach other *gravitate*, assert. *Blackmore*.
tle matter must be of the same sub-
all other matter, and as much as is
led within a particular body must *gra-*
y with that body. *Bentley*.

RAVITATION. *n. f.* [from *gravitate*.]
ing to the centre.—The most confide-
menon belonging to terrestrial bodies
ral action of *gravitation*, whereby all
ies, in the vicinity of the earth, do
els towards its centre. *Bentley*.—

the loose mountain trembles from on

itation cease, if you go by? *Pope*.

VITATION, in natural philosophy, is
listinguished from GRAVITY. Thus
his takes gravity for that force where-
ould fall to the earth; but gravitation
diminished by the centrifugal force.
NIAN PHILOSOPHY.

AVITY. *n. f.* [*gravitas*, Lat. *gravite*,
ght; heaviness; tendency to the cen-
quality by which all heavy bodies tend
centre, accelerating their motion the
approach towards it, true philosophy
be unsolvable by any hypothesis,
it into the immediate will of the
all bodies, considered within the con-
fluid, there is a twofold *gravity*, true
, and vulgar or comparative: abso-
is the whole force by which any bo-

dy tends downwards; but the relative or vulgar
is the excess of *gravity* in one body above the speci-
fic *gravity* of the fluid, whereby it tends downwards
more than the ambient fluid doth. *Quincy*.—Bodies
do swim or sink in different liquors, according to
the tenacity or *gravis* of those liquors which are to
support them. *Brown's Vulg. Err.*—Though this
increase of density may at great distances be ex-
ceeding slow, yet if the elastick tone of this medi-
um be exceeding great, it may suffice to impel
bodies from the denser parts of the medium to-
wards the rarer, with all that power which we
call *gravity*. *New. Opt.* 2. Atrociousness; weight
of guilt.—No man could ever have thought this
reasonable, that had intended thereby only to
punish the injury committed, according to the
gravity of the fact. *Hooker*.—3. Seriousness; solem-
nity.—There is not a white hair on your face but
should have his effect of *gravity*. *Shak. Hen. IV.*

Our youths and wildness shall no whit appear,

But all he buried in his *gravity*. *Shak. Jul. Caesar*.
—For the advocates and council that plead, pa-
tience and *gravity* of hearing is an essential part
of justice. *Bacon*.—

Great Cato there, for *gravity* renown'd.

Dryden.

—The emperors often jested on their rivals or
predecessors, but their mints still maintained their
gravity. *Addison*.—He will tell you with great
gravity, that it is a dangerous thing for a man
that has been used to get money, ever to leave it
off. *Law*.

(2.) GRAVITY, or GRAVITATION, (for they are
most commonly used synonymously.) signifies ei-
ther the force by which bodies are pressed towards
the surface of the earth, or the manifest effect of
that force; in which last sense the word has the
same signification with *weight* or *heaviness*. Con-
cerning gravity in the first sense of the word, or
that active power by which all bodies are impelled
towards the earth, there have been great disputes.
Many eminent philosophers, and among the rest
Sir Isaac Newton himself, have considered it as
the first of all second causes; an *incorporeal* or *spi-*
ritual substance, which never can be perceived any
other way than by its effects: an universal property
of matter, &c. Others have attempted to ex-
plain the phenomena of gravitation by the action
of a very subtle ethereal fluid; and to this expla-
nation Sir Isaac, in the latter part of his life, seems
not to have been averse. He has even given a con-
jecture concerning the matter in which this fluid
might occasion these phenomena. But for a full
account of the discoveries of this great philosopher
concerning the laws of gravitation, the conjectures
made by him and others concerning its cause, the
various objections that have been made to his
doctrine, and the state of the dispute at present,
see the articles ASTRONOMY, ATMOSPHERE, AT-
TRACTION, EARTH, ELECTRICITY, FIRE, LIGHT,
NEWTONIAN PHILOSOPHY, REPULSION, PLE-
NUM, VACUUM, &c.

(3.) GRAVITY, SPECIFIC, denotes the weight
belonging to an equal bulk of every different sub-
stance. Thus the exact weight of a cubic inch of
gold, compared with a cubic inch of water, tin,
lead, &c. is called its *specific gravity*. See HYDRO-
STATICS, and SPECIFIC GRAVITY.

H h h h 2 GRAULHET.

GRAULHER, a town of France, in the dep. of Tarn, 9 miles NE. of Lavaur, and 15 NW. of Castres.

(1.) **GRAUNT**, Edward, an eminent English grammarian of the 16th century. He was head master of Westminster school, and published a work entitled, *Græcæ Linguae Specilegium, et Institutio Græcæ Grammaticæ*. He died in 1601.

(2.) **GRAUNT**, John, P. R. S. author of a curious and celebrated book, entitled, *Natural and Political Observations made upon the Bills of Mortality*. He was a haberdasher, but gave up his trade, and all public employments, on account of his religion. He was educated a puritan; afterwards professed himself a Socinian; but at last declared himself a Roman Catholic. He died in 1674.

GRAUSZYSZKI, a town of Poland, in the palatinate of Wilna; 18 miles SE. of Wilna.

* **GRAY**. *v. s.* The serous juice that runs from flesh not much dried by the fire—Meat we love half raw, with the blood trickling down from it, delicately terming it the *gray*, which in truth looks more like an ichorous or raw bloody matter. *Haver. on Consump.*—There may be a stronger broth made of vegetables than of any *gray* soup. *Arbutnot.*

(1.) * **GRAY**. *adj.* [*greg*, Saxon; *grau*, Dan. *grau*, Dutch.] 1. White with a mixture of black.—

They left me then, when the gray headed even,
Like a sad votarist in palmer's weed,
Rode from the hindmost wheels of Phœbus' wain.

Milton.

—These *gray* and dun colours may be also produced by mixing whites and blacks, and by consequence differ from perfect whites, not in species of colours, but only in degree of luminousness. *Newton's Optics*. 2. White or hoary with old age.—Living creatures generally do change their coat with age, turning to be *gray*; as is seen in men, though some earlier and some later; in horses, that are dappled and turn white; in old squirrels that turn grizzly, and many others. *Bacon's Nat. Hist.*—Thou hast neither forsaken me now I am become *gray* headed, nor suffered me to forsake thee in the late days of temptation. *Watson.*

Anon

Gray headed men and grave, with warriors
mix'd,

Assemble.

Milton's Par. Lost.

—The restoration of *gray* hairs to juvenility, and renewing the exhausted marrow, may be effected. *Glanville.*—

Gray headed infant! and in vain grown old!

Art thou to learn that in another's gold

Lie charms resistless?

Dryden's Juv.

—We most of us are grown *gray* headed in our dear master's service. *Spectator.*—

Her *gray* hair'd synods damning books unread,
And Bacon trembling for his brazen head. *Pope.*

3. Dark like the opening or close of day; of the colour of ashes.—Our women's names are more gracious than their Cæcilia, that is, *gray* eyed. *Camden.*—

The *gray* ey'd morn smiles on the snowing night,

Chequ'ring the eastern clouds with streaks of light.

Shak.

'Tis say you *gray* is not the morning
'Tis but the pale reflex of Cynthia's light
Soon as the *gray* ey'd morning breaks
And in the doubtful day the woodcock
Gay

(4.) * **GRAY**. *v. s.* A *gray* colour—
Down sunk the sun, the closing day
Came onward, mantled o'er with dusk

(3.) **GRAY**, or **GREY**. § 1 *def. l.* See § 3, and **DYING**, *Part III.* *Sec. II.* In ege they make several sorts of grays; as red or blackened gray, which has spots of dispersed here and there. The *gray* which has spots of a darker colour than of the body. The light or silver *gray* there is but a small mixture of black in sad or iron gray, which has but a final of white. And the brownish or sandy gray, where there are bay coloured hairs with the black.

(4.) **GRAY**, in geography, a town in the dep. of Upper Saône, and in Franche Compté. It is a trading place seated on the Saône, 25 miles NE. of Besançon. E. Lat. 47. 30. N.

(5.) **GRAY**, or **GRAY ABBAY**, a town in the county of Down, 89 miles lin, famous for its linen manufacture.

(6.) **GRAY**, a post town and town in the United States, in the district of Massachusetts, in the county of Worcester, 15 miles N. by W. of Boston, and 149 from Boston. The population was 577.

(8.) **GRAY**, Lady Jane. See **GRAY**.

(9.) **GRAY**, Mary of Leiden. See **BUT**.

(10.) **GRAY**, Thomas, an admired English writer was the youngest and only surviving son of a reputable citizen of London, and was born in 1716. He was educated at Eton, where he contracted a friendship with Mr Horace Walpole, and with Mr Richard West, who was chancellor of Ireland. Mr West and were both intended for the bar; but was diverted from that pursuit by an accident, Mr Walpole in his travels; accepted without any determined plan of a literary life. During his travels, he wrote of letters to Mr West and to his parents are printed with his poems; and when he was in London, finding himself in narrow circumstances, with a mind not disposed for active employment, he retired to Cambridge, and devoted himself to study. Soon after his return, his father died; and the melancholy impressed on the event may be traced in his admirable *written in a country church-yard*, which is supposed to have been begun at this time. The pulse of his sorrow for the death of his father, birth to a very tender sonnet in English, model of Petrarch; and also to a sonnet in hexameters, written in genuine majesty, with which he intended to begin his books *De Principiis cogitandi*. From 1742, to his death, his principal residence was at Cambridge; from which he was absent any considerable time, except in 1759 and 1762; when, on the spring

useum, he took lodgings in Southamp-
 in order to have recourse to the Harleian
 MSS. there deposited, from which he
 eral curious extracts, amounting in all
 able-sized folio, at present in the hands
 Walpole. About 1747, Mr Mason, the
 Mr Gray's poems, was introduced to
 Mason had written some imitations of
 juvenile poems, *viz.* A Monody on the
 Mr Pope, and two pieces intitled *Il-*
and Il Pacifico on the peace of Aix-la-
 ; and Mr Gray revised them. This laid
 fation of an intimacy which continued
 interruption till Mr Gray's death. About
 ; Gray had put his last hand to his cele-
egy written in a country church-yard, and
 nunicated it to his friend Mr Walpole,
 od taste was too much charmed with
 er him to with-hold the sight of it from
 instance. Accordingly it was shown about
 time in MS. and received with all the
 it to justly merited. At last the publisher
 f the magazines having obtained a sur-
 copy of it, Mr Gray wrote to Mr Wal-
 iring that he would put his own MS. in-
 ands of Mr Doddsley, and order him to
 nmediately. This was the most popular
 r author's publications. It ran through
 litions in a very short time; and was
 nlated into Latin by Messrs Anstey and
 and by Mr Lloyd. From 1759 to 1762,
 ally resided in London. In July 1768,
 Grafton wrote him, that his majesty had
 sed to offer to him the professorship of Mo-
 ory in the university of Cambridge, then
 This place was valuable, the salary being
 year; and was the more acceptable to
 that it was given him without solicitation.
 indeed remarkably disinterested in all his

Though his income, before this addi-
 very small, he never read or wrote with-
 of making his labours useful to himself.
 be said to have been one of those few
 s in the annals of literature, who are de-
 self interest, and at the same time atten-
 economy; and also was one of those very
 omists, who possess that talent, untine-
 th the slightest stain of avarice. When
 nstances were at the lowest, he gave a
 sums in private charity, as would have
 dit to an ampler purse. He seems early
 have had an intention of publishing an
 f Strabo; for his papers contain a great
 of notes and geographical disquisitions on
 or, particularly with respect to that part
 which comprehends Persia and India.
 fatigable pains which he took with the
 of Plato, and the number of critical and
 ry observations which he has left upon
 very part of his works, plainly indicate,
 nan in Europe was better prepared to re-
 ad illustrate that philosopher than Mr Gray.
 work, on which he bestowed uncommon
 as the *Anthologia*. In an interleaved copy
 ollection of Greek epigrams, he has tran-
 scribed several additional ones, which he selected
 sensive reading; has inserted a great num-
 critical notes and emendations, and sub-

joined a copious index. But whether he intended
 this performance for the press or not, is uncer-
 tain. The only work, which he meditated upon
 with this direct view from the beginning, was a
history of English poetry, upon a plan sketched out
 by Mr Pope. He has mentioned this himself in
 an advertisement to those three fine imitations
 of Norse and Welch poetry, which he gave the
 world in the last edition of his poems. But after
 he had made some preparations for the execution
 of this design, being informed, that Mr Warton,
 of Trinity College, Oxford, was engaged in a
 work of the same kind, he relinquished the under-
 taking; and soon after, on that gentleman's de-
 siring a sight of his plan, our author readily sent
 him a copy of it. Mr Gray had acquired a great
 knowledge of Gothic architecture. He had seen
 and studied in his youth, while abroad, the Ro-
 man proportions, both in ancient times, and in
 the works of Palladio. In his later years he ap-
 plied himself to consider those stupendous struc-
 tures of more modern date that adorn our own
 country; which, if they have not the same grace,
 have undoubtedly equal dignity. He endeavour-
 ed to trace this mode of building from the time
 it commenced through its various changes, till it
 arrived at its perfection in the reign of Henry VIII.
 and ended in that of Elizabeth. Thus he arrived
 at so very extraordinary a pitch of sagacity, as to
 be able to pronounce at first sight, on the precise
 time when every particular part of any of our
 cathedrals was erected. But the favourite study
 of Mr Gray for the last ten years of his life was
 natural history, which he then rather resumed
 than began; as by the instructions of his uncle
 Antrobus, he was a considerable botanist at 15.
 The marginal notes which he has left on Linnæus
 and other writers on the vegetable, animal, and
 fossile kingdoms, are very numerous: but the
 most considerable are on Hudson's *Flora Anglica*,
 and the 10th edition of the *Systema Naturæ*.
 While employed on zoology, he read Aristotle's
 treatise on that subject with great care, and ex-
 plained many difficult passages of that obscure an-
 cient, by the lights he had received from modern
 naturalists. He died in 1771; and an edition of
 his poems, with memoirs of his life and writings,
 were published in 4to, in 1775, by Mr Mason.
 Mr Gray's character, has been drawn by the Rev.
 Mr Temple, rector of Mamhead in Devonshire,
 in a letter to Mr Boswell. "Perhaps (says Mr
 Temple) he was the most learned man in Europe.
 He was equally acquainted with the elegant and
 profound parts of science, and that not superfi-
 cially but thoroughly. He knew every branch of
 history, both natural and civil; had read all the
 original historians of England, France, and Italy:
 and was a great antiquarian. Criticism, meta-
 physics, morals, politics, made a principal part
 of his plan of study; voyages and travels of all
 sorts were his favourite amusement; and he had
 a fine taste in painting, prints, architecture, and
 gardening. With such a fund of knowledge, his
 conversation must have been equally instructing
 and entertaining; but he was also a good man, a
 well bred man, a man of virtue and humanity.
 There is no character without some speck, some
 imperfection; and I think the greatest defect in

He was an affection in delicacy, or rather effeminacy, and a visible fallidousness, or contempt and disdain of his inferiors in science. He also had, in some degree, that weakness which disgusted Voltaire so much in Mr Congreve." (See CONGREGATE.) "Perhaps it may be said: What signifies so much knowledge, when it produces so little? Is it worth taking so much pains to leave no memorial but a few poems? But let it be considered, that Mr Gray was, to others, at least innocently employed; to himself, certainly beneficially. His time passed agreeably; he was every day making some new acquisition in science; his mind was enlarged, his heart softened, and his virtue strengthened; the world and mankind were shown to him without a mask; and he was taught to consider every thing as trifling, and unworthy the attention of a wise man, except the pursuit of knowledge, and the practice of virtue in that state wherein God hath placed us."

(11.) * GRAY. *n. f.* A badger. *Ainsworth.*

GRAY ABBEY. See GRAY, N° 5.

* GRAYBEARD. *n. f.* [gray and beard.] An old man; in contempt.—

Youngling, thou canst not love so dear as I.
—Graybeard, thy love doth freeze. *Shak.*

Have I in conquest stretch mine arm so far,
To be afraid to tell graybeards the truth?

Shakespeare.

(12.) * GRAYLING. *n. f.* [*thymallus.*] The umber, a fish.—The grayling lives in such rivers as the trout does, and is usually taken with the baits, and after the same manner; he is of a fine shape, his flesh white, and his teeth, those little ones that he has, are in his throat. He is not so general a fish as the trout, nor so good to eat *Walton's Angler.*

(2.) GRAYLING, in ichthyology, a species of SALMO. In angling for this fish your hook must be armed upon the shanks with a very narrow plate of lead, which should be slenderest at the bent of the hook, that the bait (a large grasshopper, with the uppermost wing pulled off) may come over to it the more easily. At the point let there be a cad-bait in a continual motion. The jag-tail, which is a worm of a pale flesh-colour, with a yellow tag on its tail, is an excellent bait for the grayling in March and April.

* GRAYNESS. *n. f.* [from gray.] The quality of being gray.

GRAYS, or GRAYS-THURROCK, a town of England in Essex, on the banks of the Thames, opposite Dartford. It has a market on Thursday, and lies 12½ miles SE. of Rumbold, and 24 E. of London. Lon. 5. 24. E. Lat. 51. 26. N.

GRAY'S TOWN, a town of Ireland, in the county of Tipperary, and province of Munster.

GRAZ, or GRATZ. See GRATZ, N° 1.

GRAZALEMA, a town of Spain in Granada, 8 miles W. of Ronda.

(1.) * To GRAZE. *v. a.* [from grass.] 1. To tend grazing cattle; to set cattle to feed on grass. Jacob graz'd his uncle Laban's sheep. *Shak.*

O happy man, saith he, that, lo! I see

Grazing his cattle in those pleasant fields,

If he but know his good! *Dan. Civil War.*

2. To feed upon.—

I was at first as other beasts, that
The trodden herb, of abject thought

Their feeds around.

Free from their harness, graze the bow

—Some graze their land 'till Christmas
longer. *Mori.*

This Neptune gave him, when he
His scaly flocks that graze the war

The lambs with wolves shall graze
dant mead.

3. To supply with grass.—He hath
barn to repair, and a field or two
cows, with a garden and orchard *Shak.*

(2.) * To GRAZE. *v. n.* 1. To feed on grass.—The greatest of my pig
my ewes graze, and my lunds suck, *Shak.*
where you will, you shall not house

Leaving in the fields his grazing

He sought himself some hospitable

The more ignoble through

Attend their stately sleeps, and sleep
long.

2. To supply grass.—Physicians ad-
tients to remove into airs which are
paigns, but grazing, and not overgrowing

Bacon.—The sewers must be kept so
may not stay too long in the Spring:

ground continueth the wet, whereby
graze to purpose that year. *Bacon.*

of grazing ground is that near the
commonly very rich land. *Mori.*

move on devouring.—As every state
the other that was oppressed, so the

usually grazed. *Bacon.* 4. [From *raja*]
To touch lightly.—

Mark then a bounding valour is on

That bring dead, like to the bullets,
Breaks out into a second course of

Killing in relapse of mortality. *Shak.*

GRAZE LE BOIS, a town of France, u
of Maine, 6 miles E. of Maine and 9 of

* GRAZER. *n. f.* [from *graze.*]

grazes or feeds on grass.—

His flock daily crops

Their verdant dinner from the moss

* Sufficient: after them the cackling
Close grazer, finds wherewith to eat

GRAZIE, an isle of Maritime Aus-
district of Dorio Duro, near Venice as

gio. It has a church with elegant pias

* GRAZIER. *n. f.* [from *graze.*]

feeds cattle.—All graziers prefer their
meaner pastures to better. *Bacon.*—One

which fillet the husbandman's barns, ti
folds, and the tradesman's shop. *Houel.*

fusion increased when he found the
father to be a grazier. *Sprad.*—Of agric

desolations made in the country by engra-
sers, and the great yearly importations

from England, are lamentable instances u
discouragement it lies. *Smyth.*

I.

GREASE. *v. a.* [from the noun.] 1. To
oint with *grease*. 2. To bribe; to
presents.—

Envy not the store
as'd advocate that grinds the poor.

GREASE. *n. s.* [from *grease*.] Oiliness;
on the most of these stones, after they
e appears always, as it were, a kind
or unctuousity. *Boyle.*

GREASY. *adj.* [from *grease*.] 1. Oily; fat;

gments, scraps, the bits and *greasy* re-

reaten faith.
with *grease*.—

Even the lewd rabble
their roaring throats, and grumbled

ave hugg'd the *greasy* rogues; they
ed me. *Osw.*

, and see that they be big-boned, and
greasy, well curled close wool. *Mort.*

of body; bulky: in reproach.—Let's
ther against this *greasy* knight. *Shak.*

GREAT. *adj.* [*great*, Sax.; *groot*, Dut.]

bulk or number.—Judas one of the
, and with him a *great* multitude with

aves. *Mat. xxvi. 47.*—All these cities
with high walls, gates, and bars, be-

alled towns, a *great* many. *Deut. iii. 5.*

mental air diffus'd

to the uttermost convex

eat round. *Milton.*

od created the *great* whales. *Milton.*

on horrible, on all sides round,

eat furnace flam'd. *Milton.*

The tallest pine

Norwegian hills, to be the mast

great admiral. *Milton.*

ny quality in a high degree.—There

a *great* fear. *Pf. xiv. 5.*

ow'r was *great*. *Milton.*

Great triumph and rejoicing was in heav'n.

Milton.

Charms such as thine, inimitably *great*

He only could express. *Broome.*

3. Having number or bulk, relative or compara-

tive.—The idea of so much is positive and clear:

the idea of *greater* is also clear, but it is but a

comparative idea. *Locke.*—4. Considerable in ex-

tent or duration.—Thou hast spoken of thy ser-

vants house for a *great* while to come. 2 *Sa. vii. 19.*

5. Important; weighty.—

Make sure

Her favours to thee, and the *great* oath take

With which the blessed gods assurance make.

Chapman.

Many

Have broke' their backs with laying manors on

them,

For this great journey. *Shak. Hen. VIII.*

What is low raise and support,

That to the height of this *great* argument

I may assert eternal Providence,

And vindicate the ways of God to men. *Milt.*

On some *great* charge employ'd

He seem'd, or fix'd in cogitation deep. *Milton.*

By experience of this *great* event,

In arms not worse. *Milton.*

After silence then,

And summons read, the *great* consult began.

Milton.

—And though this be a *great* truth, if it be impar-

tially considered, yet it is also a *great* paradox to

men of corrupt minds and vicious practices. *Tillot.*

6. Chief; principal.—

Hear the king's pleasure, cardinal, who com-

mands you

To render up the *great* seal presently. *Shak.*

7. Venerable; adorable; awful.—

Thou first art wot God's *great* authentick

will,

Interpreter, through highest heav'n to bring.

Milton.

8. Wonderful; marvellous.—

Great things, and full of wonder. *Milton.*

9. Of high rank.; of large power.—

Such men as he be never at heart's ease,

Whilst they behold a *greater* than themselves.

Shak. Julius Caesar.

Worthiest by being good,

Far more than *great* or high. *Milton.*

Of all the *great*, how few

Are just to heav'n, and to their promise true!

Pope's Odyssey.

Misfortune made the throne her seat,

And none could be unhappy but the *great*.

Rowe.

Despise the farce of state.

The sober follies of the wise and *great*. *Pope.*

The marble tombs that raise on high,

Whose dead in vaulted arches lie;

These, all the poor remains of state,

Adorn the rich, or praise the *great*. *Parnel.*

10. General; extensive in consequence or influ-

ence.—

Prolifick humour soft'ning all her globe,

Fermented the *great* mother to conceive. *Milt.*

11. Illustrious; eminent; noble; excellent.—()

Lord

Lord, thou art *great*, and thy name is *great* in might. *Jer. x. 6.*

The *great* Creator thus reply'd, *Milton.*

The *great* Son return'd

Victorious with his saints. *Milton.*

Fair angel, thy desire that tends to know

The works of God, thereby to glorify

The *great* work-master, tends to no excess

That reaches blame. *Milton.*

Great are thy works Jehovah, infinite

Thy pow'r! what thought can measure thee,
or tongue

Relate thee! *greater* now in thy return,

Than from the giant angels: thee that day

Thy thunder magnified, but to create

Is *greater* than created to destroy. *Milton.*

The *great* luminary,

Aloof the vulgar constellations thick,

That from his lordly eye keep distance due,

Dispenses light from far. *Milton.*

Here Cæsar grac'd with both Minervas shone,

Cæsar, the world's *great* master, and his own.

Pope.

Scipio,

Great in triumphs, in retirement *great.* *Pope.*

12. Grand of aspect; of elevated mien.—

Such Dido was; with such becoming state,

Amidst the crowd, she walks serenely *great.*

Dryd. Virg.

13. Magnanimous; generous; high minded.—In her every thing was goodly and stately; yet so, that it might seem that *great* mindedness was but

the ancient-bearer to the humbleness. *Sidney.*

14. Opulent; sumptuous; magnificent.—

Not Babylon,

Nor *great* Alcázar, such magnificence

Equall'd in all their glories. *Milton.*

—He disdain'd not to appear at *great* tables and festival entertainments. *Alterb.*

15. Intellectually *great*: sublime.—

This new created world, how good, how fair,

Answering his *great* idea. *Milton.*

16. Swelling; proud.—Solyman perceived that Vienna was not to be won with words, nor the

defendants to be discouraged with *great* looks; wherefore he began to batter the walls. *Knolles.*

17. Familiar; much acquainted. A low word.

—Those that would not censure, or speak ill of a man immediately, will talk more boldly of those that are *great* with them, and thereby wound

their honour. *Bacon.*

18. Pregnant; teeming.—

His eyes sometimes even *great* with tears. *Sidney.*

Their bellies *great*

With swelling vanity, bring forth deceit. *Sandys.*

This fly, for most he stings in heat of day,

From cattle *great* with young keep thou away.

May's Virg.

19. It is added in every step of ascending or descending consanguinity: as *great* grandson & the

grandson of my grandson.—I dare not yet affirm for the antiquity of our language, that our *great*—

great—*great* grandfathers tongue came out of Ferns. *Camden's Remains.*—What we call *great*—

great grandfather they called forthafader. *Camden's Remains.*—Their holyday-cloaths go from father to

son, and are seldom worn out till the 2d or 3d generation; so that is it common enough to see a

countryman in the doublet and breeches of his

great grandfather. *Addison.*

20. His

grievous. A proverbial expression.—

matter to live lovingly with good meek persons. *Taylor's Devotion.*

(21.) *GREAT* is also a title appropriated to princes, as, the *great* Turk, the

the *great* cham of Tartary, the *great*

revenge, &c.

(3.) *GREAT* is also a surname bestowed on several kings and emperors, as, Alexander the *great*; Charles the *great*; &c.

(4.) * *GREAT. n. f.* [from the *adj.* *great*]. The whole; the gross; the whole in a

for and future state;

to keep her from his arms.

Dryden.

ocles raised the Athenians to their *greatness*.

PART. II.

ness at sea, which he thought to be the true and constant interest of that commonwealth. *Swift*.

3. Swelling pride; affected state.—My lord would have you know, that it is not of pride or *greatness* that he cometh not aboard your ships. *Bacon*. 6. Merit; magnanimity; nobleness of mind.—

Greatness of mind and nobleness their seat Build in her loveliest. *Milton*.

7. Grandeur; state; magnificence.—

Greatness with Timon dwells in such draught, As brings all Brobdignag before your thought.

Pope.

GREAT RIDGE, a ridge of the ALLEGANY mountains between the Savannah and the Alamaha.

GREAT SKELIG, an island of Ireland on the coast of Kerry, in Munster.

* GREAVE. *n. s.* [*græf*, Saxon.] A grove. *Spenser*.—

Yet when there haps a honey-fall,

We'll lick the firupt leaves,

And tell the bees that theirs is gall

To that upon the *greaves*.

M. Drayton.

(1.) GREAVES, John, an eminent physician and antiquary, the eldest son of John Greaves rector of Colemore, near Alresford in Hampshire. He was born in 1602, and educated at Balliol College in Oxford, from which he removed to Merton. He was afterwards chosen professor of geometry, in Gresham college. His ardent thirst of knowledge led him to travel into several parts of Europe, where he eagerly seized every opportunity of improving it. His next voyage was into the eastern countries; where nothing remarkable in the heavens, earth, or even subterraneous places seems to have escaped his observation. He, with indefatigable industry, and even at the peril of his life, collected a considerable number of Arabic, Persian, and Greek MSS. for Abp. Laud. Of these he well knew the value, as he was a master of the languages in which they were written. He also collected for that prelate many oriental gems and coins. He took a more accurate survey of the pyramids than any traveler who went before him. On his return from the East, he visited several parts of Italy a second time. During his stay at Rome, he made a particular inquiry into the true state of the ancient weights and measures. Soon after he finished his 2d voyage, he was chosen Savilian professor of astronomy at Oxford, for which he was eminently qualified. His books relating to oriental learning, his *Pyramidographia*, or a description of the pyramids in Egypt, his *Epochæ Celebriores*, and other curious and useful pieces, of which Mr Ward has given us a catalogue, show him to have been a great man. Those which he intended to publish would have shown him to be a greater; but he was stopped in his great career by death in 1652.

(2.) * GREAVES. *n. s.* [from *gréves*, Fr.] Armour for the legs; a sort of boots. It wants the singular number.—He had *greaves* of brass upon his legs. 1 Sam. xvii. 6.—

A shield make for him, and a helm, fair *greaves*, and curets such

As may renown thy workmanship, and honour him as much.

Chapman.

GREBE.

GREBE. See *CORYMBUS*, N^o 2, 3, and 12.

GREBENS TEIN, a town of Hesse Cassel, 13 m. NW. of Cassel, and 16 NNE. of Naumburg.

GREBIN, a town of Prussia, in Pomerania, 6 miles SE. of Danzig.

GRECIAN. See *GREEK*.

GRECINUS, Julius, a Roman Senator and a man of letters, born at Trevis, in the reign of Augustus. He was a man of exemplary virtue, and was put to death by Caligula, for refusing to accuse an innocent man who had incurred that tyrant's displeasure.

* *GRECISM*. *n. f.* [*gracismus*, Lat.] An idiom of the Greek language.

GREEDINO, a town of Franconia, in the bishopric of Aichstadt, 13 miles NE. of Aichstadt.

* *GREE*. *n. f.* [*gré*, French; probably from *gratia*.] Good will; favour; good graces.—

And falling her before do lowly knee,

To her makes present of his service seen,

Which she accepts with thank and goodly *gree*.

Spenser.

(1.) GREECE, in many respects, one of the most deservedly celebrated countries in the world, was anciently bounded on the N. by Macedonia and the river Strymon, on the W. by the Ionian sea; on the S. by the Mediterranean; on the E. by the Egean sea and Archipelago. It extended from the Strymon, by which it was parted from Thrace, to the promontory of Tenarus, the southernmost point of the Peloponnesus, now the Morea, about 6° 20' of latitude, or nearly 440 English miles, and in breadth from E. to W. about 350 miles.

(2.) GREECE, ANCIENT NAMES OF THE INHABITANTS OF. The general names by which the inhabitants of this country were known to the ancients were those of *Graeci*, or *Graeci*, from whence the name of *Greece* is plainly derived. These names are thought to come from *Γραεὺς*, the father, or (according to some, the son, of Thessalus, who gave name to Thessaly; but some modern critics derive it from *Raga*, the same with *Reu*, the son of Peleg, by the transposition of a letter to soften the sound.—These names were afterwards changed for *ΑΧΑΙΟΙ* or *ΑΧΙΒΙΟΙ*, and *ΗΛΛΗΝΕΣ*, the first, as is supposed, from *Αχαιῶν*, the son of Xuthus, the son of Hellen, and father of Ion; or, according to the fable, the son of Jupiter: the other from Hellen, above-mentioned, the son of Deucalion, and father of Dorus, from whom came the *Dores*, afterwards a famous nation among the Greeks.—Another name by which the Greeks were known in some parts of the country, was that of *ΠΕΛΑΣΓΟΙ*, which the Arcadians, the most ancient people in Greece, deduced from their pretended founder *Pelasgus*, who is said to have got such footing in Peloponnesus, that the whole peninsula from him was called *ΠΕΛΑΣΓΙΑ*. But the most ancient name of all is universally allowed to have been that of *ΙΩΝΕΣ*, which the Greeks themselves derived from Ion the son of Xuthus; or, as the fable hath it, of Apollo, by Creusa the daughter of Erechtheus the grandson of Deucalion. Josephus, however, affirms, that their original is of much older date; and that *JAVAN*, the son of Japhet, and grandson of Noah, was the first who peopled these countries; which Bochart has also rendered very pro-

bable. It is true, indeed, that among the themselves, only the Athenians and such as sprang from them, were called *Ιωνες*; but this is also plain beyond exception, that others gave this name to all the inhabitants of the country.

(3.) GREECE, ANCIENT SAVAGE STATE. The inhabitants of Greece in the first ages, according to their own historians, appear to have been savages scarce a degree removed from beasts. They lived indifferently on every fruit, and root that came in their way; and lay either in open fields, or at best sheltered themselves in caves, and hollow trees: while the country remained one uncultivated desert.—The first improvement they made in their way of life, was the exchanging of their old food for the more wholesome atoms, building huts for themselves to sleep in, and covering their bodies with skins of beasts. For all this, it seems, they were still holden to *Pelasgus* above mentioned (see above) by some to be *ΠΕΛΑΓ* spoken of in Scripture, who was highly revered by them on account of his reformation in their way of life. However, it seems wrought none in them. On the contrary, they who had nothing but a hole to sleep in, began now to rob one another of these slender acquisitions. In process of time, put them under a necessity of joining themselves into companies, and making head, that they might either more safely defend themselves against their neighbours, or preserve what they had. Laws they had none except that of the strongest; so that those only lived in safety who inhabited the most barren and craggy places; and hence for a long time had no settled inhabitants, the weakest being always turned out by the strongest. Their gigantic size and strength, if we believe Plutarch, added so much to their pride and cruelty, that they seemed to glory in committing the greatest acts of violence and bloodshed on those that unhappily fell into their hands.

(4.) GREECE, ANCIENT STATES AND DOMINIONS OF. The next advance towards civilisation was their forming themselves into regular states, to cultivate the lands, and build towns for their safety. Their original barbarity and mutual violence prevented them from uniting into one nation, or even into any considerable confederacy, and hence the great number of states in Greece was originally divided. The most considerable of these small principalities mentioned in the following: in Peloponnesus were those of Sicyon, Argos, and Messenia, Achaea, Arcadia, and Laconia. In Graecia Propria, that part of Greece which lay without Peloponnesus, were those of Attica, Megara, Boeotia, Epichnemidia, Doris, Phocis, Locris, and Aetolia. In Epirus were the Molossians, Cassiopaëi, Dryopes, Chaonians, and Acarnani. In Thessaly those of Thessaliotis, Estiotis, Pelasgiotis, and Phthia. All these were at one time or other severally governed by kings of the country, though we only find the names of many mentioned in the histories of the more considerable kingdoms of Sparta, Attica, Thebes, &c.

(5.) GREECE, GENERAL HISTORY OF THE SIEGE OF TROY. The creation

however, for some time, did not much use; the inhabitants of the new kingdoms and destroyed one another with-

Attica was the only place in any degree secure from these incursions, because it was a solitude of every thing that could invite an enemy; but those cities fared much less well which were situated on the sea-coasts; they were in continual danger of being plundered by sea or land: for pirates at that time infested all those seas than robbers did. And this was one main cause why the ancient cities of Greece were situated at considerable distance from the shore; but still, as all their safety consisted in the arms they could make against an invader, the inhabitants were under a necessity of going armed, and being ever on their guard. The chief arising from these continual robberies was, that they occasioned a great part of the lands to lie uncultivated; the people only planted and sowed as much as was barely necessary for their support; there was so great a neglect of agriculture, that there could be little room for any discoveries in the useful arts and trades. Hence, when other nations had improved themselves to a very high degree, the Greeks seem to have been utterly ignorant of every useful art. During this period of barbarity, the most renowned Grecian heroes, Hercules, Theseus, &c. performed their exploits; which, however exaggerated by poets, no doubt had a foundation in truth. The poets are of opinion, that the Grecian heroes were entirely fictitious, and their exploits deformed by those of the Hebrew worthies, such as Samson, &c. Yet, considering the excess of barbarity which at that time prevailed throughout Greece, it seems not at all improbable, that some persons of extraordinary courage might undertake the cause of justice, and travel about like the more modern knights errant in quest of adventures.

GREECE, GENERAL HISTORY OF, TILL THE CONQUEST OF ALEXANDER THE GREAT. The history of Greece from the time of its union in which we find the Greeks united against Troy, for the particulars of the Trojan War. Their success in this war, which ended about A. A. C. 1184.) cost them vast numbers of their bravest warriors; great numbers of the survivors being killed on their return; and many of those who returned had lost their fortune to get back again, being plundered, or driven out of their country. It is probable however, that their having been so long a time in Asia, might contrivance the Greeks somewhat sooner than it otherwise would have been; and accordingly, we find their history somewhat improved. and as it were beginning to emerge from darkness. The continual wars, indeed, in which they were engaged among themselves, no long time, prevented them from making considerable progress in those arts in which they afterwards made so great improvement. These wars, which indeed never ceased till the Greeks preserved their liberty, ren-

dered them brave, and skilled in the military art, above all other nations; but at the same time they effectually prevented them from making permanent conquests, and confined them within the bounds of their own country: while the different states were one way or other so equally balanced, that scarce one of them was able perfectly to subdue another. The Spartans, however, having, with great difficulty, reduced the kingdom of Messene, and added its territories to their own, became the leading people in Greece. Their superiority was long disputed by Athens; but the Peloponnesian war at last determined that point in favour of the Spartans, when the city of Athens was taken, and its walls demolished by Lysander the Spartan general. See ATTICA, § 13. By the battle of Leuctra, the Spartans lost that superiority which they had maintained for 500 years, and which now devolved on the Thebans. After the death of Epaminondas, the celebrated Theban general, however, as no person was found possessed of his abilities, the Thebans were again obliged to yield the superiority to the Spartans. But by this time the Greeks had become acquainted with the luxuries and elegancies of life; and all the rigour of their original laws could not prevent them from valuing these as highly as other people. This did not indeed abate their valour, but it heightened their mutual animosities; at the same time that, for the sake of a more easy and comfortable life, they became more disposed to submit to a master. The Persians, whose power they had long dreaded, and who were unable to resist them by force of arms, at last found out, by the advice of Alcibiades, the proper method of reducing the Grecian power; namely, by assisting them by turns, and supplying one state with money to fight against another, till they should all be so much reduced, that they might become an easy prey. Thus the Greeks were weakened, though the Persians did not reap any benefit from their weakness. Philip of Macedon entered into the same political views; and partly by intrigue, partly by force, got himself declared Generalissimo of Greece. His successor Alexander the Great completed their subjection; and by destroying the city of Thebes, and exterminating its inhabitants, struck such a terror throughout Greece, that he was as fully obeyed by all the states as by any of the rest of his subjects.

(7.) GREECE, HISTORY OF, TILL ITS SUBJUGATION BY THE TURKS. During the absence of Alexander in Persia the Greeks attempted to shake off the Macedonian yoke, but were quelled by his general Antipater. The news of Alexander's death was to them a matter of the utmost joy; but their mutual animosities prevented them from joining in any solid plan for the recovery of their liberties, and hence they continued to be oppressed by Alexander's successors, or other tyrants, till Aratus, the Achæan, about 268 B. C. formed a design of setting his country free from these oppressors. He persuaded a number of the small republics to enter into a league for their own defence, which was called the *Achæan league*; and notwithstanding that the republics, taken singly, had very little strength, they not only maintained their independence, but soon became formidable when united.

This association continued to become daily more and more powerful; but received a severe check from Cleomenes III. king of Sparta, which obliged them to call in Antigonus to their assistance. This prince overcame Cleomenes at the battle of Sellasia, and afterwards made himself master of Sparta. Thus he became a more formidable enemy than the one he had conquered, and the recovery of the Grecian liberties was incomplete. Soon after this, the Greeks began to feel the weight of a power more formidable than any which they had yet experienced; namely, that of the Romans. That indolent and haughty republic first inter-meddled with the Grecian affairs, under pretence of setting them at liberty from the oppression of Philip VI. of Macedon. This, by a proper union among themselves, they might have accomplished; but in this they acted as though they had been insatuated; receiving with the utmost joy the decree of the Roman consul, who declared them free; without considering, that he who had thus given them liberty, might take it away at his pleasure. This lesson, however, they were soon taught, by the total reduction of their country to a Roman province; yet this can scarce be called a misfortune, when we look back to their history, and consider their outrages upon one another: nor can we sympathize with them for the loss of that liberty, which they only made use of to fill their country with slaughter and bloodshed. After their conquest by the Romans, they made no united effort to recover their liberty. They continued in quiet subjection till the beginning of the 15th century. About that time, they began to suffer under the tyranny of the Turks, and their sufferings were completed by the taking of Constantinople in 1453. Since that time, they have groaned under the yoke of a most despotic government, so that all traces of their former valour, ingenuity, and learning, are now in a manner totally extinct. Whether the exertions of Passwan Oglou, or those of the French shall tend to revive their ancient spirit, time must determine.

(8.) GREECE, PRESENT STATE OF. Modern Greece, now called EUROPEAN TURKEY, and by the Turks RUMELIA, comprehends Macedonia; Albania, now called ARNAUT; Epirus; Thessaly, now JANA; Achaia, now LIVADIA; the Peloponnesus, now MOREA; together with the islands on its coast, and in the Archipelago. The continent of Greece is seated betwixt 36° and 43° lat. N. and between 19° and 26° lon. E. of London. On the N. it is bounded by Bulgaria and Servia, from which it is divided by a ridge of mountains; on the S. by the Mediterranean sea; on the E. by Romania and the Archipelago; and on the W. by the Adriatic. Its length is above 400 miles, and its utmost breadth about 350. The air is extremely temperate and healthy; and the soil fruitful, though badly cultivated; yielding corn, wine, delicious fruits, and abounding with cattle, fowls, and venison. See GREEKS, § 3, 8, and 10.

(11) * GREECE. *n. s.* [corrupted from *degrees*. It is written likewise *greece* or *grice*.] A slight of steps. Obsolete.—

Ev'ry *greece* of fortune
Is smother'd by that below. *Shak.*
—After the procession, the king himself remaining

seated in the quire, the lord archbishop, *greece* of the quire, made a long oration. *Henry VII.*

GREECESTER, a small town of Northumberland. *N. o.* Otterburn.

* GREEDILY. *adv.* [from *greedy*.] ravenously; voraciously; with keen desire.—

Greedy she engorg'd without restraint
He swallow'd it as *greedy*

As parched earth drinks rain.
Ev'n deadly plants, and herbs of poison
Wild hunger seeks; and to prodigious
We *greedy* devour our certain death.

* GREEDINESS. *n. s.* [from *greedy*.] voracity; hunger; eagerness, or desire.—

Fox in stealth, wolf in *greediness*.
—Thither with all *greediness* of ass, she
gone, and there they intend to sup. *Shak.*
Ter's Tale.—

If thou wert the wolf, thy *greediness*
Sift thee. *Shak.*

I with the same *greediness* did
As water when I thirst, to swallow

* GREEDY. *adj.* [from *greedy*, Sax. *greedig*, Dutch.] 1. Ravenous; voracious.—

—As a lion that is *greedy* of his prey.
—Be not unsatiable in any dainty thing
greedy upon meats. *Ecclus. xxxiv.*
the *greedy* ravens to be Elias's caterpillars
him food. *King Charles.* 2. Eager;
desirous. It is now commonly taken
sense.—

Greedy to know, as is the mind of
Their cause of death, swift to the

—The ways of every one that is *greedy* of
Stern look'd the fiend, as frustrated
Not half suffic'd, and *greedy* yet to kill
While the reaper fills his *greedy* bin
And binds the golden sheaves in

—How fearful would he be of all *greedy*
just ways of raising their fortune? *Love*

(1.) GREEK, or GRECIAN, *adj.* In
Greece.

(2.) GREEK BIBLES. See BIBLE, § Y

(3.) GREEK CHURCH, is that part of
an church which is established in Greece
likewise to some other parts of Turkey
It is so called, in contradistinction from the
Romish church; also the *Eastern church*
from the *Western*. The Roman
Greek church the *Greek schism*; because
do not allow the authority of the pope
pend wholly, as to matters of religion
own patriarchs. They have treated the
matics ever since the *revolt*, as they call
patriarch Photius.

(4.) THE GREEK LANGUAGE, as prof
writings of the celebrated authors of
Homer, Hesiod, Demosthenes, Aristophanes,
Xenophon, &c. has a great variety of
expressions, suitable to the genius of
of a polite and learned people, who
for arts and sciences. In it, proper as
nificative; which is the reason that it

borrow so many terms from it. When invention, instrument, machine, or the like is discovered, recourse is generally had to look for a name to it; the facility whereof is there compounded, affording such expressiveness of its use; such are, barometer, thermometer, microscope, telescope, &c. But of medicine most abounds with such a diaphoretic, diagnosis, diarrhoea, hæmorrhage, hydrophobia, phthisis, atrophy, &c. The copiousness and significancy of the language wherein it excels most, if not all, other languages, it has also 3 numbers, viz. a singular, a plural; a number of tenses in its verbs, which makes a variety in discourse, prevents a monotony that always accompanies too great uniformity, and renders that language peculiar for all kinds of verse. The use of the aorist, of the aorists and preterite, together with compound words already mentioned, give it a peculiar force and brevity, without abridgement from its perspicuity. It is difficult to perceive the precise difference between the modern and ancient Greek; which consists in the termination of the nouns, pronouns, verbs, &c. not what obtains between some of the dialects of Italian or Spanish. There are also in the modern Greek many new words, not to be met with in the ancient. We may therefore distinguish three periods of the Greek tongue: the first of which is the time when Constantinople became the capital of the Roman empire; the second lasted from that period to the taking of Constantinople by the Turks; and the third from that time to

GREEK MONKS and NUNS, of whatever order consider St Basil as their founder and common father, and esteem it the highest crime to deviate from his constitutions. There are several beautiful convents with churches, in which the monks perform divine service day and night. The monks are *Cenobites*, or live together, in the same habit, eat at the same table, and observe the same exercises and employments.

GREEK ORDERS, in architecture, are the Doric, Ionic, and Corinthian; in contradistinction to the two Latin orders, the Tuscan and Composite. **ARCHITECTURE**, *Index*.

GREEKS, the people of Greece.

GREEKS, CHARACTER OF THE MODERN. Modern Greeks are said to be very covetous, crafty, treacherous, great pederasts, and at the same time revengeful to the highest degree; and superstitious. They are so much despised by the Turks, that these do not value even a Greek as much as a Mahometan. Yet Baron De Tott says, that twenty Greeks, who were natives of Macedonia, defeated eighty Turkish soldiers; and that the killing of the exploits of Alexander, the Trojan War, &c. See his *Memoirs*, volume 2d. The Turks are remarkable for their taciturnity; they never use any unnecessary words: but the Greeks, on the contrary, are very talkative and glibly. The Turks generally practise what religion enjoins, but the Greeks do not; and misery puts them upon a thousand mean and scandalous practices, authorised by hadith, and perpetuated from father to son. The

Greek women have fine features and beautiful complexions: their countenances still very much resemble those of the ancient Greek statues.

(9.) **GREEKS**, HISTORY OF THE. See ATTICA, CONSTANTINOPLE, GREECE, § 5—7, SPARTA, THEBES, &c.

(10.) **GREEKS**, RELIGION AND CLERGY OF THE. Christianity was planted in Greece soon after the death of our Saviour, and flourished there for many ages in great purity; but since the Greeks became subject to the Turkish yoke, they have sunk into the most deplorable ignorance, in consequence of the slavery and thralldom under which they groan, and their religion is now greatly corrupted. It is indeed little better than a heap of ridiculous ceremonies and absurdities. The head of the Greek church is the patriarch of Constantinople; who is chosen by the neighbouring archbishops and metropolitans, and confirmed by the emperor or grand vizir. He is a person of dignity, being the head and director of the eastern church. The other patriarchs are those of Jerusalem, Antioch, and Alexandria. Mr Tournefort tells us, that the patriarchates are now generally set to sale, and bestowed upon those who are the highest bidders. The patriarchs, metropolitans, archbishops, and bishops, are always chosen from among the Caloyers or Greek monks. Before the patriarchs receive their patents and the castan, which is a vest of linsey-woolsey, or some other stuff, presented by the grand signior to ambassadors and other persons newly invested with some considerable dignity, they are obliged to make large presents to the vizir, &c. The income of the patriarch of Constantinople is said to amount to no less than 120,000 guilders, of which he pays the one half by way of annual tribute to the Ottoman Porte, adding 6000 guilders as a present at the feast of Bairam. The next person to a bishop among the clergy is an archimandrite, who is the director of one or more convents, which are called *mandren*; then come the abbot, the arch-priest, the priest, the deacon, the under deacon, the chanter, and the lecturer. The secular clergy are subjected to no rules, and never rise higher than high priest. They are allowed to marry once; but it must be with a virgin, and before they are ordained. They have neither glebe nor tythes, but depend on the perquisites that arise from their office; and they seldom preach but in Lent. The Greeks have few nunneries; but many convents of monks, who are all priests, and, students excepted, obliged to follow some handicraft employment, and lead a very austere life. The Greeks deny the supremacy of the pope, and abhor the worship of images; but have many pictures of saints in their churches, whom they pray to as mediators. Their fasts are very severe. They believe also in the doctrine of transubstantiation, and that the Holy Ghost does not proceed from the Son. They admit not of purgatory, says Mr Thevenot: but yet they allow a third place, where they say the blessed remain, in expectation of the day of judgment. At mass they consecrate with leavened bread; and both priests and laymen communicate under both kinds, and women and children as well as men. When they carry the sacrament to the sick, they do not prostrate themselves before it, nor expose it

it to be adored: nor do they carry it in procession, or have any particular feast in honour of it. Baptism is performed among them by plunging the whole body of the child thrice into water. Immediately after baptism, they give it confirmation and the communion; and seven days after that, it undergoes the ceremony of ablation. When a priest is married, among other ceremonies, the bridegroom and bride drink each two glasses of wine; then the glass is given to the priest, who merrily drinks off the rest of the wine, and breaking the glass, says, So may the bridegroom break the virginity of the bride.

(I, i.) * GREEN. *adj.* [*grun*, German; *groen*, Dutch] 1. Having a colour formed commonly by compounding blue and yellow; of the colour of the leaves of trees or herbs. The green colour is said to be most favourable to the sight.—The general colour of plants is *green*, which is a colour that no flower is of: there is a greenish primrose, but it is pale, and scarce a *green*. *Bacon's N. Hist.*

Groves for ever *green*. *Pope.*

2. Pale; sickly: from whence we call the maid's disease the *green sickness*, or *chlorosis*. Like it is *Sappho's* *χλωροεν νωσος*.—

Was the hope drunk

Wherein you drest yourself? Hath it slept since?

And wakes it now to look so *green* and pale

And what it did so freely? *Shak. Macbeth.*

—There's never any of these demure boys come to any proof: they fall into a kind of male *green sickness*. *Shak. Henry IV.*—

'Till the *green sickness* and love's force betray'd

To death's remorseless arms th' unhappy maid.

Garth.

3. Flourishing; fresh; undecayed: from trees in Spring.—If I have any where said a *green* old age, I have Virgil's authority; *Sed cruda deo viridisque senectus*. *Dryden.* 4. New; fresh: as, a *green* wound.—

The door is open, fir; there lies your way:

You may be jogging while your boots are *green*.

Shakespeare.

Griefs are *green*;

And all thy friends, which thou must make thy friends,

Have but their fangs and teeth newly ta'en out.

Shak. Henry IV.

In a vault,

Where bloody Tybalt, yet but *green* in earth,
Lies festering in his blood. *Shak. Rom. and Jul.*

—A man that studieth revenge keepeth his own wounds *green*, which otherwise would heal and do well. *Bacon*.—I might dilate on the temper of the people, the power, arts, and interest of the contrary party, but those are invidious topics, too *green* in our remembrance. *Dryden.* 5. Not dry.—If a spark of error have thus far prevailed falling even where the wood was *green*, and farthest off from any inclination unto furious attempts; must not the peril thereof be greater in men, whose minds are of themselves as dry fuel, apt beforehand unto tumults? *Hooker*.—

Being an olive tree

Which late he sell'd; and being *green*, must be
Made lighter for his manage. *Chapman.*

—Of fragility the cause is an impotency tended, and therefore stone is more brittle than metal, and so dry wood is more fragile than *Bacon's N. H.*—If you but consider a piece of wood burning in a chimney, you will discern, in the disbanded parts of it, the elements. *Boyle*.—The *green* do often heat and the ripe, so heated, give fire to *Mort. Husb.* 6. Not roasted; half ripe: thus head we may rank those words which different ideas, by a sort of an unaccounted fetched analogy, or distant resemblance, has introduced between one thing and another, as when we say the meat is *green*, when roasted. *Hart's Log.* 7. Unripe; immature: because fruits are *green* before they are ripe.

My fallad days,

When I was *green* in judgment, cold

O charming youth, in the first opinion
So many graces in so *green* an age.

You'll find a difference

Between the promise of his *greener* day

And these he masters now. *Shak.*

—If you would fat *green* geese, shut them up: they are about a month old. *Mort. Husb.*

Stubble geese at Michaelmas are laid

Upon the spit, next May produce green

Erg.

(ii.) * GREEN. *a. s.* 1. The *green* colour of different shades.—

Her mother bath intended

That, quaint in *green*, she shall be lovely

But with your presence cheer'd, they
mourn;

And walks wear fresher *green* at your re-

—Cinnabar, illuminated by this beam, appears the same red colour as in day light; and the lens you intercept the *green* making making rays, its redness will become more and lively. *Newton's Optics*.—Let us but mix the two colours of yellow and blue: if mingled together in any considerable proportion they make a *green*. *Hart's Logic.* 2. A plain.—

For this down trodden equity, we're
In warlike march these *greens* before you

O'er the smooth enamel'd *green*,

Where no print of step hath been,

Follow me as I sing.

The young *Æmilie*, fairer to be seen

Than the fair lily on the flow'ry *green*.

3. Leaves; branches; wreaths.—

With *greens* and flow'rs recruit their
hives,

And seek fresh forage to sustain their lives

Ev'ry brow with cheerful *green* is crown'd

The feasts are doubled, and the bowls go

The fragrant *greens* I seek, my brows I

INCLOTH. n. f. A board or court of n the counting-house of the king's the taking cognizance of all matters t and justice within the king's court- correcting all the servants that shall —For the *greencloth* law, take it in se, I have no opinion of it. *Bacon.*
-CLOTH, BOARD OF, is composed teward and officers under him, who is court has power to maintain the verge, or jurisdiction of the court- is every way about 200 yards from

the last gate of the palace where his majesty re- sides. It takes its name from a green cloth spread over the board where they sit. Without a warrant first obtained from this court, none of the king's servants can be arrested for debt.

(3.) **GREEN-CLOTH, CLERKS OF THE**, were two officers of the board of green cloth, who appoint- ed the diet of the king and his household; and kept all records, ledgers, and papers relating there- to; made up bills, parcels, and debentures for salaries, and provisions and necessaries for the of- ficers of the buttery, pantry, cellar, &c. They also waited upon foreign princes when entertained by his majesty. But this was abolished in 1782.

(1.) **GREENE**, Edward Burnaby, an English poet of considerable merit, who published trans- lations of Anacreon and Pindar, with several origi- nal poems and plays. He died in 1788.

(2.) **GREENE**, a county of Georgia, bounded on the E. by Wilkes and S. by Washington counties; and on the W. and N. by the Oconee. It cou- tained 4028 citizens, and 1377 slaves, in 1795. Greensborough is the capital.

(3.) **GREENE**, a county of Kentucky, bounded by Hardin and Jefferson counties on the E. the state of Tennessee on the S. the Mississippi on the W. and the Ohio on the N.

(4.) **GREENE**, a township of New York, in Tioga county, on the E. side of the Chenengo.

(5.) **GREENE**, a county of Tennessee, in Wash- ington district, containing, in 1795, 7287 citizens, and 454 slaves.

* **GREENEYED. adj.** [*green* and *eye*.] Having eyes coloured with green.—

Doubtful thoughts, and rash embrac'd despair,
And shudd'ring fear, and *greeney'd* jealousy.

Shak.

(1.) **GREENFIELD**, a township of Massachu- setts, in Hampshire county, on the W. coast of the Connecticut, containing 1498 citizens in 1790.

(2.) **GREENFIELD**, a flourishing town in the a- bove township, 4 miles N. of Deerfield, and 114 W. by N. of Boston.

(3.) **GREENFIELD**, a town of New York, in Sa- ratoga county. It had 380 electors in 1795.

(4, 5.) **GREENFIELD**, two villages of England, in Lincolnshire and Oxfordshire.

(L) * **GREENFINCH. n. f.** [*chloris*.] A kind of bird.—The chaffinch, *greenfinch*, dormouse, and other small birds, are injurious to some fruits. *Mortimer.*

(2.) **GREEN-FINCH**, in ornithology, the English name of the greenish *fringilla*, with the wings and tail variegated with yellow. See **FRINGILLA**, N° 12.

(1.) * **GREENFISH. n. f.** [*asellus*, Lat.] A kind of fish. *Ainsworth.*

(2.) **GREEN-FISH.** See **ONISCUS**.

* **GREENGAGE. n. f.** A species of plum.

(1.) **GREENHOLM**, one of the Orkney isles, 14 miles SW. of Eda.

(2.) **GREENHOLM**, one of the Shetland islands, 10 miles NNW. of Lerwick.

(1.) * **GREENHOUSE. n. f.** [*green* and *house*.] A house in which tender plants are sheltered from the weather.—If the season prove exceeding pier- cing, which you may know by the freezing of a moistened cloth set in your *greenhouse*, kindle some charcoal.

charcoal. *Berlyn's Kalendar*.—Sometimes our road led us into several hollow apartments among the rocks and mountains, that look like so many natural greenhouses, as being always shaded with a great variety of trees and shrubs that never lose their verdure. *Addison*.—A kitchen garden is a more pleasing sight than the finest orangery or artificial greenhouse. *Spektor*.

(2.) A GREEN-HOUSE, or CONSERVATORY, is a house in a garden, contrived for sheltering and preserving the most curious and tender exotic plants, which in our climate will not bear to be exposed to the open air, especially during the winter season. These are generally large and beautiful structures, equally ornamental and useful. Their length must be proportioned to the number of plants intended to be preserved in them, and cannot therefore be reduced to rule: but their depth should never be greater than their height in the clear; which, in small or middling houses, may be 16 or 18 feet, but in large ones from 20 to 24 feet; and the length of the windows should reach from about one foot and a half above the pavement, and within the same distance of the ceiling, which will admit of a cornice round the building over the heads of the windows. Their breadth cannot be in proportion to their length; for if in the largest buildings they are more than 7 or 7½ feet broad, they will be extremely inconvenient. The piers between the windows must be as narrow as may be to support the building; for which reason they should either be of stone or of hard burnt bricks. If the piers are made of stone, they should be 30 inches wide in front, and sloped off behind to about 18 inches, by which means there will be no corners to take off the rays of the sun. If they are of brick, they will require to be at least 3 feet in front, but they should be in the same manner sloped off behind. Over the greenhouse may be rooms for drying and preserving seeds, roots, &c. and behind it a place for tools and other purposes; and both those behind, and the rooms above, will be of great use in keeping off the frosts, so that the wall between them need not be of more than two bricks and a half in thickness. The floor of the greenhouse, which should be laid either with Bremen squares, Purbeck stone, or flat tiles, must be raised two feet above the surface of the adjoining ground, or if the situation be damp, at least 3 feet; and if the whole is arched with low brick arches under the floor, they will be of great service in preventing damp; and under the floor, about two feet from the front, it will be advisable to make a flue of ten inches wide and two feet deep; this should be carried the whole length of the house, and then returned back along the hinder part, and there be carried up into funnels adjoining to the tool-house, by which the smoke may be carried off. The fire-place may be contrived at one end of the house, and the door at which the fuel is put in, as also the ash grate, may be contrived to open into the tool house, and the fuel being laid in the same place, the whole will be out of sight. *Bridley* advises, that the front of green houses, in the colder parts of England, be built in a sweep or semicircle, so that one part or other of it may receive the sun's rays all day. The use of fires must,

however, be very sparing in this place; one winter in 3 or 4 will require them only when the weather is very severe; frost cannot well be kept out any other way, is an expedient that is good to have in as it may save a whole house of plants; the side of the windows, in front of the house, there should be good strong shutters, with hinges, to fold back close to the piers, may not obstruct the rays of the sun. The part of the house should be either built of stucco or plastered with mortar, and in order to prevent the frosty air from passing through the walls. When the greenhouse is wainscotted, the walls should be painted with lime and hair behind the wainscot, to keep out the cold; and the wainscot, as well as the ceiling and every part within the house, should be painted white, to reflect the sun's rays. There should be a number of trellises with forms of plants, to be placed hindmost, the lowest of the windows; and the rows of plants should rise gradually, so that the heads of the plants should be entirely above the first row; and between them there should be a space of at least 18 inches, for the convenience of watering the plants, and for the free circulation of the air. The plants which should be placed in the greenhouse are, phorbia, cereuses, and other succulent plants, among orange trees, and other common house plants, is always destructive, making them receive an improper heat, which plants of that kind imbibed very much. They should therefore be placed in two wings at the end of the green house; which, if well managed, will be a great beauty, as well as of use in wintering. These wings may be made capable of receiving warmth also by more flues, and may contain a hot-bed of tanner's bark, many of the tender plants, natives of warm countries. Whilst the front of the greenhouse is facing south, one of the wings may be facing the SE. and the other the SW. By this the heat of the sun is reflected from one wing to the other all day, and the main green-house is guarded from winds. These two wings may be so contrived as to maintain plants of different degrees of heat, which may be easily effected by the extent of the fire-place, and the manner of conducting the flues: the wing facing the south is the most proper for the warmest plants; it may be divided in the middle by a wall of glass, with glass doors opening from one wing to the other. In each of these there is a fire-place, with flues carried up again to the roof, through which the smoke should pass as many times the length of it as the height will admit of the number of flues the longer that the smoke is in passing the more heat will be given to the house with a less quantity of fuel. The other wing, facing the north, should be divided and furnished with flues in a different manner; and thus different degrees of heat may be obtained, according to the seasons, and the particular sorts of plants that are to be preserved. There are no shades behind these wings, but they should not be less than three bricks thick.

k part, having sloping roofs, which are covered with tiles or slates, should be lined with reeds, under the covering. The sloping glasses of the houses should be made to slide and take off, that they may be drawn down more or less in warm weather to admit air to the plants; and upright glasses in front may be so contrived as that every other may open as doors upon hinges, the alternate glasses may be divided into two: the upper part of each should be so contrived as to be drawn down like shades, so that either of them may be used to admit air, in a greater or less quantity as there may be occasion. As to the management of the plants, Mortimer recommends turning the mould about them from time to time, sprinkling a little fresh mould in them, and a little warm dung on that; as also to water them when the leaves begin to wither and curl, and to use a little oil, which would make them fade and be dry; and to take off such leaves as wither and become dry.

GREENISH. *adj.* [from *green*.] Somewhat green; tending to green.—

With goodly *greenish* locks, all loose, unty'd,
Each had been a bride. *Spenser.*

In this order the green of all vegetables seems to arise, partly by reason of the intenseness of their colour, and partly because, when they wither, some of them turn to a *greenish* yellow. *Newton.*

1.) **GREEN ISLAND**, an island of England, on the coast of Dorsetshire, near Poole.

2.) **GREEN ISLAND**, the name of two isles in Ireland; 1. in Carlingford Bay: 2. on the coast of Donaghadee: both included in Down county.

3.) **GREEN ISLAND**, an isle on the coast of Holland, 12 miles ENE. of Cape Grafton.

4.) **GREEN ISLAND**, an island on the W. end of Jamaica. It has a harbour with good anchorage.

5.) **GREEN ISLAND**, one of the VIRGIN ISLES.

6.) **GREENLAND**, a general name given to the most easterly parts of America, stretching towards the north pole, and comprehending some islands to the N. of Europe, lying in very high latitudes. This country is divided into West and East Greenland.

GREENLAND, EAST, was long considered as a part of the continent of West Greenland, but is now discovered to be an assemblage of islands lying between $76^{\circ} 46'$ and $80^{\circ} 30'$ lat. N. and between 9° and 20° lon. E. It was discovered by Hugh Willoughby in 1553, who called it **GREENLAND**; supposing it to be a part of the European continent. In 1595, it was again visited by William Barentz and John Cornelius, two Dutchmen, who pretended to be the original discoverers, and called the country **SPITZBERGEN**, from the many sharp-pointed and rocky mountains with which it abounds. They alleged that the coast discovered by Sir Hugh Willoughby was some other country; which accordingly the Hollanders delineated on their maps and charts by the name of *Willoughby Land*; whereas in fact no such land ever existed; and long before the voyage of these Dutchmen, Steven Barrow, an English shipmaster, had coasted along a desolate country from Lat. 78° to $80^{\circ} 11'$, which was undoubtedly Spitzbergen. The

sea in the neighbourhood of the islands of Spitzbergen abounds very much with whales. It is the common resort of the whale-fishing ships from different countries, and the country itself is frequently visited by these ships; but till the late voyage of Capt. Phipps, by order of his Majesty, the situation of it was erroneously laid down. It was imagined that the land stretched to the northward as far as 82° N. lat. but Capt. Phipps found the most northerly point of land, called *Seven Islands*, not to exceed $8^{\circ} 30'$. Towards the E. he saw other lands at a distance, so that Spitzbergen plainly appeared to be surrounded by water on that side, and not joined to the continent of Asia, as former navigators had supposed. He also explored the N. and W. coasts, but was prevented by the ice from sailing so far N. as he wished. The coast appeared neither habitable nor accessible. It is formed of high, barren, black rocks, without the least marks of vegetation; in many places bare and pointed; in others covered with snow, appearing even above the clouds. The valleys between the high cliffs were filled with snow and ice. "This prospect," says Capt. Phipps, "would have suggested the idea of perpetual winter, had not the mildness of the weather, the smooth water, bright sun shine, and constant day-light, given a cheerfulness and novelty to the whole of this romantic scene." The current ran along this coast half a knot an hour north. The height of one mountain seen here was found by geometrical mensuration to be $1503\frac{1}{2}$, or $1503\frac{1}{8}$ feet. By a barometer constructed after De Luc's method, the height was found to be $1588\frac{1}{2}$ feet. On this occasion Capt. Phipps remarks, "I cannot account for the great difference between the geometrical measure and the barometrical according to M. de Luc's calculation, which amounts to $84\frac{1}{2}$ feet. I have no reason to doubt the accuracy of Dr Irving's observations, which were made with great care. As to the geometrical measure, the agreement of so many triangles, each of which must have discovered even the smallest error, is the most satisfactory proof of its correctness. Since my return I have tried both the theodolite and barometer, to discover whether there was any fault in either; and find them, upon trial, as I had always done before, very accurate." There is good anchorage in Schmeerenburgh harbour, lying in Lat. $74^{\circ} 44'$ N. Lon. $9^{\circ} 50' 45''$ E. in 13 fathom, sandy bottom, near the shore, and well sheltered from all winds. Close to this harbour is an island called *Amsterdam Island*, where the Dutch used formerly to boil their whale-oil; and the remains of some conveniency erected by them for that purpose are still visible. The Dutch ships still resort to this place for the latter season of the whale-fishery. The stone about this place is chiefly a kind of marble, which dissolves easily in the marine acid. There were no appearances of minerals of any kind, nor any signs of ancient or modern volcanoes. No insects, or any species of reptiles, were seen, not even the common earth worm. There were no springs or rivers; but plenty of water was produced from the snow which melted on the mountains. The most remarkable views which these dreary regions present are those called *Icebergs*. They are large

bodies of ice filling the valleys between the high mountains. Their face towards the sea is nearly perpendicular, and of a very lively light green colour. One was about 300 feet high, with a cascade of water issuing from it. The black mountains on each side, the white snow, and greenish coloured ice, composed a very beautiful and romantic picture. Large pieces frequently broke off from the icebergs, and fell with great noise into the water. One piece was observed to have floated out into the bay, and grounded in 24 fathoms; it was 50 feet high above the surface of the water, and of the same beautiful colour with the iceberg from which it had separated. These islands are totally uninhabited, though it doth not appear but that human creatures could subsist on them, notwithstanding their vicinity to the pole. Eight English sailors, who were accidentally left here by a whale-fishing ship, survived the winter, and were brought home next season. The Dutch then attempted to settle a colony on Amsterdam island above mentioned; but all the people perished, not through the severity of the climate, but of the scurvy, owing to the want of those remedies which are now happily discovered, and which are found to be so effectual in preventing and curing that dreadful disease.—The late account also of six Russian sailors who staid four years in this inhospitable country, affords a decisive proof, that a colony might be settled on East Greenland, provided the doing so could answer any good purpose.

II. GREENLAND, WEST, is now determined by our latest maps to be a part of the continent of America. That part of it, which the Europeans have any knowledge of, is bounded on the W. by Baffin's Bay, on the S. by Davis's Straits, and on the E. by the northern part of the Atlantic Ocean. It is very mountainous, and some parts of it are so high, that they can be discerned 30 leagues off at sea. The inland mountains, hills, and rocks, are covered with perpetual snow; but the low lands on the sea side are clothed with verdure in summer. The coast abounds with inlets, bays, and large rivers; and is surrounded with a vast number of islands of different dimensions. In many places, however, on the E. coast especially, the shore is inaccessible by reason of the floating mountains of ice. The principal river, called *Baal*, falls into the sea in Lat. 64° where the first Danish lodge was built in 1721; and has been navigated above 40 miles up the country.

(1.) GREENLAND, ACCOUNT OF THE FIRST SETTLEMENT AT. West Greenland was first peopled by Europeans in the 8th century, when a company of Icelanders, headed by one Eric Rande, or Ronx, a Norwegian, were by accident driven on the coast. On his return he represented the country in such a favourable light, that some families followed him thither, where they soon became a thriving colony, and bestowed on their new habitation the name of GROENLAND, or *Greenland*, on account of its verdant appearance. This colony was converted to Christianity by Bp. Arnald, a missionary from Norway, sent thither by the celebrated OLAF, or OLAVS, the first Norwegian monarch who embraced the true religion, about A.D. 1203. The Greenland settle-

ment continued to increase and thrive in proportion, and in a short time the country was provided with many towns, churches, schools, bishops, &c. under the jurisdiction of the Bishop of Drontheim. A considerable commerce was carried on between Greenland and Norway, and a regular intercourse maintained till the death of Andreas the last bishop was sent over. At that time all correspondence was cut off, and the intercourse of Greenland has been buried in obscurity. This strange and abrupt cessation of all intercourse has been attributed to various causes, but the most probable is the following: The colony, from its first settlement, had been inhabited by the natives, a barbarous and fierce people, agreeing in customs, garb, and appearance to the *ESQUIMAUX*. The nation, called the *ESQUIMAUX*, exterminated the Iceland settlers, who had inhabited the western district, in the 11th century, so that when the brethren of the colony came to their assistance, they found not only the natives, but some cattle and flocks of sheep remaining about the country. They themselves afterwards experienced the same fate, and were destroyed by these *Schrellings*, whose remains still inhabit the western parts of Greenland. From tradition say, that the houses, whose ruins still appear, were inhabited by strangers, whom their ancestors had driven from East Greenland. Mr. Crantz says, "the colony was found to be still existing in 1540." One would imagine that there had been some considerable alteration in the country since the 15th century, so that the coast of Greenland is now become almost totally inaccessible, though formerly visited with very little. It is also natural to ask, by what means the people of the eastern colony surmounted the above mentioned obstacles when they sought the assistance of their western friends; how they returned to their own country; and how our historians learned the success of their mission? Concerning all this we have very little satisfactory information. All that can be gleaned from the most authentic records is, that Greenland was divided into two districts, called *West* and *East*: that the western division contained 4 parishes and 100 villages; that the eastern district was still more flourishing, as being more fertile, sooner settled, and more frequented by shipping from Norway. There are also accounts, though most of them romantic, which render it probable that the eastern colony still subsists, who, at one time or other, may have given the imperfect information above mentioned. This colony comprised extensive parishes, 190 villages, a bishopric, and two monasteries. The present inhabitants of the western district are entirely ignorant of the eastern part, from which they are divided by high mountains and deserts, and still more

apprehensions: for they believe the easterners to be a cruel, barbarous people, who devour and eat all strangers who fall into their hands.

GREENLAND, ACCOUNTS OF OTHER ATTEMPTS TO COLONIZE. About 1570, several expeditions were sent successively by the kings of Denmark to discover the eastern district; but they all failed. Among these adventurers, Magnus, or Helmsen, after having surmounted many dangers, got sight of the land; which, however, he could not approach. At his return, he reported that the ship was arrested in the middle of the strait by rocks of loadstone at the bottom of the sea. In 1576, Capt. Martin Frobisher was sent on the same errand by Q. Elizabeth. He likewise discovered the land; but could not reach it, and returned to England; yet not before he had sailed sixty leagues in the strait which still bears his name, and landed on several islands, where he had some communication with the natives. He had likewise taken possession of the land in the name of Q. Elizabeth; and brought home several pieces of heavy black stone, from which the miners of London extracted a proportion of silver. In the ensuing spring, he undertook a second voyage, at the head of a small squadron, equipped at the public expence; entered the straits a second time, discovered upon an island a gold and silver mine, and named upon different bays, islands, and mountains; and brought away a lading of furs, and other commodities. He was accompanied by two natives, a male and a female, who were English kidnapped. Encouraged by this success, another armament was fitted out under the command of Martin Frobisher, consisting of 15 sail, with a considerable number of soldiers, miners, smelters, and bakers, to remain all the winter in the mines in a wooden fort, the difficulties of which they carried out in the summer. They met with boisterous weather, thick fogs, and violent currents upon the coast of Greenland, which retarded their operations until the season was far advanced. Part of the wooden fort was lost at sea; and they were short of provisions and fuel sufficient for the winter. The admiral therefore determined to remove the large quantities out of a new mine, and to procure as much ore as he could procure; of this he gave the name of *the Countess of Suffolk*. He likewise built a house of stone and lime, and here, to conciliate the affections of the natives, they left a quantity of small morrises, knives, beads, looking-glasses, leaden and other toys, together with several barrels of bread. They buried the timber of the ship, so that it could be easily found next year; and sowed peas, and other grain, by way of experiment, to know what the country would produce. Having taken these precautions, they sailed in the beginning of September; and after a stormy passage, arrived in England: but Frobisher was never prosecuted. Christian IV. of Denmark, being desirous of discovering a Greenland settlement, sent three ships under Capt. Godske Lindenow; who in 1605 reached the E. coast of Greenland, and traded with the savage inhabitants, but found no signs of a civilized people. Had he actually landed in the eastern division, he must have perceived some remains of the ancient colony, even in the ruins of their convents and villages. Lindenow kidnapped two of the natives, who were conveyed to Copenhagen; and the same cruel fraud was practised by other two ships which sailed into Davis's Straits, where they discovered divers fine harbours and delightful meadows covered with verdure. In some places they are said to have found a considerable quantity of ore, every hundred pounds of which yielded 26 oz. of silver. Admiral Lindenow made another voyage to the coast of Greenland in 1606, directing his course to the W. of Cape Farewell. He coasted along Davis's Straits; and having made some observations on the face of the country, the harbours and islands, returned to Denmark. Carsten Richards, being detached with two ships on the same observation, discovered the high land on the E. side of Greenland; but was hindered by the ice from approaching the shore. Other expeditions have been planned and executed with the same bad success, by a Danish company of merchants. Two ships returned from W. Greenland, loaded with yellow sand, supposed to contain a large proportion of gold. This being assayed by the goldsmiths of Copenhagen, was condemned as useless, and thrown overboard: but from a small quantity of this sand, which was reserved as a curiosity, an expert chemist afterwards extracted a quantity of pure gold. The captain, who brought home this adventure, was so chagrined at his disappointment, that he died of grief, without having left any directions concerning the place where the sand had been discovered. In 1654, Henry Moller, a rich Dane, equipped a vessel under the command of David de Nelles, who sailed to the W. coast of Greenland, from which he carried off three women of the country. Other efforts have been made, by order of the Danish king for the discovery of the old Iceland colony in Greenland; but all of them miscarried, and people began to look upon such expeditions as chimerical. At length the Greenland company at Bergen in Norway, transported a colony to the W. coast, about Lat. 64°, which sailed in 1712, accompanied by the Rev. Hans Egede, to whose ability and accuracy, we are indebted for the best and most authentic account of modern Greenland. He endeavoured to reach the eastern district, by coasting southwards, and advanced as far as the States Promontory; but the season of the year and the continual storms, obliged him to return. In 1724, a ship equipped by the company, sailed on this discovery, with a view to land on the East side opposite to Iceland; but the vast shoals of ice, which barricaded that part of the coast, rendered this scheme impracticable. In 1728, Christian VI. caused horses to be transported to Greenland, in hopes that the settlers might travel over land to the eastern district; but the icy mountains were impassable. Lieutenant Richards, in a ship, which had wintered near the new Danish colony, attempted, in his return to Denmark, to land on the eastern shore; but all his endeavours proved abortive. Mr Egede says, that the only practicable method of reaching that part of the country, will be to coast north-about

but saw no signs of a civilized people. Had he actually landed in the eastern division, he must have perceived some remains of the ancient colony, even in the ruins of their convents and villages. Lindenow kidnapped two of the natives, who were conveyed to Copenhagen; and the same cruel fraud was practised by other two ships which sailed into Davis's Straits, where they discovered divers fine harbours and delightful meadows covered with verdure. In some places they are said to have found a considerable quantity of ore, every hundred pounds of which yielded 26 oz. of silver. Admiral Lindenow made another voyage to the coast of Greenland in 1606, directing his course to the W. of Cape Farewell. He coasted along Davis's Straits; and having made some observations on the face of the country, the harbours and islands, returned to Denmark. Carsten Richards, being detached with two ships on the same observation, discovered the high land on the E. side of Greenland; but was hindered by the ice from approaching the shore. Other expeditions have been planned and executed with the same bad success, by a Danish company of merchants. Two ships returned from W. Greenland, loaded with yellow sand, supposed to contain a large proportion of gold. This being assayed by the goldsmiths of Copenhagen, was condemned as useless, and thrown overboard: but from a small quantity of this sand, which was reserved as a curiosity, an expert chemist afterwards extracted a quantity of pure gold. The captain, who brought home this adventure, was so chagrined at his disappointment, that he died of grief, without having left any directions concerning the place where the sand had been discovered. Other efforts have been made, by order of the Danish king for the discovery of the old Iceland colony in Greenland; but all of them miscarried, and people began to look upon such expeditions as chimerical. At length the Greenland company at Bergen in Norway, transported a colony to the W. coast, about Lat. 64°, which sailed in 1712, accompanied by the Rev. Hans Egede, to whose ability and accuracy, we are indebted for the best and most authentic account of modern Greenland. He endeavoured to reach the eastern district, by coasting southwards, and advanced as far as the States Promontory; but the season of the year and the continual storms, obliged him to return. In 1724, a ship equipped by the company, sailed on this discovery, with a view to land on the East side opposite to Iceland; but the vast shoals of ice, which barricaded that part of the coast, rendered this scheme impracticable. In 1728, Christian VI. caused horses to be transported to Greenland, in hopes that the settlers might travel over land to the eastern district; but the icy mountains were impassable. Lieutenant Richards, in a ship, which had wintered near the new Danish colony, attempted, in his return to Denmark, to land on the eastern shore; but all his endeavours proved abortive. Mr Egede says, that the only practicable method of reaching that part of the country, will be to coast north-about

in small vessels, between the great flakes of ice and the shore; as the Greenlanders have declared, that the currents continually rushing from the bays and inlets, and running SW. along the shore, hinder the ice from adhering to the land; so that there is always a channel open, through which vessels of small burden might pass, especially if lodges were built at convenient distances on the shore, for the direction of the adventurers.

(4.) GREENLAND, CLIMATE AND GENERAL APPEARANCE OF. That part of the country which is now visited and settled by the Danes and Norwegians, lies between 64° and 68° lat. N.; and thus far it is said the climate is temperate. In summer, which continues from the end of May to the middle of Sept. the weather is warm and comfortable, while the wind blows easterly; though even at this time storms often rage with incredible violence; and in calm weather, the coasts are infested with fogs that are equally disagreeable and unhealthy. Near the shore, and in the bays and inlets, the low land is clothed with the most charming verdure: but the inland mountains are perpetually covered with ice and snow. To the N. of Lat. 68° , the cold is prodigiously intense; and towards the end of August, all the coast is covered with ice, which never thaws till April or May, and sometimes not till the end of June. Nothing can exhibit a more grand and dazzling appearance, than those prodigious masses of ice that surround the coast in various forms, reflecting a multitude of colours from the sun beams, in calm weather; but when the wind blows, and the waves rise in vast billows, the violent shocks of these pieces of ice dashing against one another fill the mind with horror. Greenland is seldom visited with thunder and lightning, but the *Aurora Borealis* is very frequent and bright. At the time of new and full moon, the tide rises and falls upon this coast about three fathoms; and it is remarkable, that the springs and fountains on shore rise and fall with the flux and reflux of the ocean.

(5.) GREENLAND, INHABITANTS AND DISEASES OF. This country is but thinly inhabited. The people who now inhabit the western coast of Greenland, and who, without doubt, are the descendants of the ancient *Schrellings*, who exterminated the first Iceland colony, (see § ii.) bear a near resemblance to the Samoiedes and Laplanders in their persons, complexions and way of life. They are stout, brawny, and inclined to corpulency; with broad faces, flat noses, and thick lips, black hair and eyes, and a yellowish tawny complexion. They are for the most part vigorous and healthy, but short-lived; few of them reaching the grand climacteric; and many dying in infancy, and youth. They are subject to a weakness in the eyes, occasioned by the piercing winds and the glare of the snow. The leprosy is known among them, but is not contagious. Those that dwell in the northern parts are tormented with dysenteries, rheums, pulmonary disorders, boils, and epilepsies. The small-pox being imported from Copenhagen, in 1734, made terrible havoc among these poor people, who are utterly destitute of any knowledge of the medical art, and depend entirely for assistance upon their *angskuts* or conjurers.

(6.) GREENLAND, LANGUAGE AND MANNERS OF THE NATIVES OF. All the Greenlanders hitherto discovered speak the same language, different dialects prevail in different parts of the country. It abounds with double consonants, is so guttural, that the pronunciation of words is not to be learned except by those who have been accustomed to it from their infancy. The letters C, D, F, Q, and X, are not in their alphabet. Like the North American inhabitants of Kamtschatka, they have a great number of long polysyllables. Their words, as well as verbs, are inflected at the end by the terminations, without the help of prepositions, but their language being defective, they adopted many words from the Norwegian, notwithstanding the endeavours of the missionaries, they have no great reason for their proselytes among the natives. They pay great respect to the Danes, whom they regard as their masters, and hear the truths of Christian religion expounded without doubt of the racy of their teachers, but at the same time without understanding them. They believe in the immortality of the soul; as well as in the evil spirit whom they call *Tornagarjuk*, but they have formed the most ridiculous notions of *Angskuts*, who are supposed to be his ministers, differ concerning the principles of his existence; some affirming that he is without shape; others, that he has the shape of a man; others, that he has a large human body, one arm; while others affirm that he is smaller than a man's finger, with many other absurdities. They have also a peculiar kind of magic by which they believe all the elements of spirits, from among which each of the phets is supplied with a familiar, named *Angskut*, who is always ready when summoned to his assistance.

(7.) GREENLAND, MANNERS, CHARACTER AND CUSTOMS OF THE NATIVES OF. In this country the people dwell in huts built of stone or turf, on one side are the windows, covered with seals or rein-deer. These huts are seldom more than two ells above the surface of the ground, the rest of them being sunk in the earth for defence against wind and cold. Several families dwell in one of these houses, possessing each a separate apartment, before which is a hearth with a lamp placed on a tripod, over which is a kettle: above is a rack or shelf on which clothes are dried. They burn train oil lamps; and instead of wick, they use moss, which fully answers the purpose. Their fires are not only sufficient to heat the house but likewise produce such a heat, that the house is like a bagnio. The door is so contrived, that as little cold air as possible may be admitted. The house within is lined with old skins rounded with benches for the convenience of the natives. In summer they dwell in tents made of poles fixed in a conical form, covered with deer's skins, and on the outside with skins, dressed so that the rain cannot penetrate. In their dispositions the Greenlanders are phlegmatic, indolent, and slow of spirit.

ry quiet, orderly, and good-natured. In affection, they seem to equal the natives warmest climates. Two of them were carried and brought to Denmark; but thought by the king and court, to the utmost, quite unhappy; and one of them always upon seeing an infant in its mother's arms, it was concluded, that he had left a wife young child in Greenland. They live peaceably together, and having every thing in common, without strife, envy, or animosity. They are hospitable, but slovenly to a degree almost beyond extent. They never wash themselves with water; but lick their paws like the cat, and then rub their faces with them. They eat after their manner without washing their dishes; devour the victuals as they devour them; and even lick the sweat, they scrape off from their faces with their hands. The women wash themselves with their urine, which they imagine makes their hair grow; and in winter, go out immediately after, the liquor freeze upon their skin. They strip their victuals off the ground, and devour the flesh with avidity. In times of scarcity they subsist on pieces of old skin, reeds, sea weeds, root called *tugloronet*, dressed with train oil. The intestines of rein deer, the entrails of birds, and all sorts of offals, are counted as among these savages; and of the scrapings of skins they make pan-cakes. At first, they did not taste the Danish provisions without abhorrence; but now they are become extremely fond of bread and butter, though they still retain their aversion to tobacco and spirituous liquors; in particular they differ from almost all savages in the face of the earth. The Greenlanders content themselves with one wife; who is valued, as among other savage nations, to do all the drudgery, and may be corrected, or even repulsed, by the husband at pleasure. Heroes, warriors, and extraordinary personages, are distinguished with a plurality of wives. Their young women are generally chaste and bashful; but at some of their feasts, in the midst of their jollity, a man will sit with his neighbour's wife behind a curtain of skins; and all the guests, thus coupled, sit in their turns. The women think themselves happy if an angelut or prophet will thus honour them with his caresses. These people marry within the prohibited degrees of consanguinity, nor is it counted decent in a couple to whom have been educated in the same family. They have a number of ridiculous superstitious customs. While a woman is in labour, they hold a chamber-pot over her head, as a charm to hasten the delivery. When the child is born, the mother licks and slabs it all over to render it, as she imagines, more strong and

GREENLAND, METHODS OF HUNTING AND FISHING. The Greenlanders are constantly employed either in fishing or hunting. At sea they catch the whales, morse, seals, fish for eating, and fowls. On shore they hunt the rein-deer in different parts of the country. They drive these animals, which feed in large herds, into a narrow strait, where they kill them with arrows. Their boats are made of fir tree, wound about with the

twisted sinews of animals: the string is of the same stuff, or of seal skin: the arrow is a full fathom in length, pointed with a bearded iron, or a sharp bone; but those with which they kill birds are blunt, that they may not tear the flesh. Sea fowls they kill with lances, which they throw to a great distance with surprising dexterity. Their manner of catching whales is quite different from that practised by the Europeans. About 50 persons, men and women, set out in one long boat, which is called a *kone boat*, from *kone* a woman, because it is rowed by females only. When they find a whale, they strike him with harpoons, to which are fastened with long lines some seals skins blown up like bladders. These, by floating on the surface, not only discover the back of the whale, but hinder him from diving under water for any length of time. They continue to pursue him until he loses strength, when they pierce him with spears and lances till he expires. On this occasion they are clad in their spring coats consisting of one piece, with gloves, boots, and caps of seal-skin so closely laced and sewed that they keep out water. Thus accoutred, they leap into the sea; and begin to slice off the fat, even under water, before the whale is dead.—They have many different ways of killing seals; namely, by striking them with a small harpoon equipped also with an air-bag; by watching them when they come to breathe at the air-holes in the ice, and striking them with spears; by approaching them in the disguise of their own species, that is, covered with a seal-skin, creeping upon the ice, and moving the head from side to side as the seals are accustomed to do. By this stratagem the Greenlander moves towards the unsuspecting seal, and kills him with a spear. The Greenlanders angle with lines made of whale-bone cut very small, by means of which they succeed wonderfully. The Greenland canoe, like that used in Nova Zembla and Hudson's bay, is about three fathoms in length, pointed at both ends, and three quarters of a yard in breadth. It is composed of thin rafts fastened together with the sinews of animals. It is covered with dressed seal-skins both below and above, in such a manner that only a circular hole is left in the middle, large enough to admit the body of one man. Into this the Greenlander thrusts himself up to the waist, and fastens the skin so tight about him that no water can enter. Thus secured, and armed with a paddle broad at both ends, he will venture out to sea in the most stormy weather to catch seals and sea fowl; and if he is overset, he can easily raise himself by means of his paddle. A Greenlander in one of these canoes, which was brought with him to Copenhagen, outstripped a pinnace of 16 oars, manned with choice mariners.—The *kone-boat* is made of the same materials, but more durable; and so large, that it will contain 50 persons with all their tackle, baggage, and provisions. She is fitted with a mast, which carries a triangular sail made of the membranes and entrails of seals, and is managed without the help of braces and bowlings. These *kones* are flat bottomed, and sometimes 60 feet in length. The men think it beneath them to take notice of them; and therefore they are left to the conduct of the women, who indeed are obliged to do all the drudgery.

drudgery, including even the building and repairing their houses, while the men employ themselves wholly in preparing their hunting implements and fishing tackle.

(9.) **GREENLAND, MINERALS OF.** Greenland is thought to contain many mines of metal, though none of them are wrought. To the southward of the Danish colony are some appearances of a mine of copper. Mr Egede received a lump of ore from one of the natives; and here he found calamine of a yellow colour. He sent a considerable quantity of sand of a yellow colour, intermixed with streaks of vermilion, to the Bergen company. They probably found their account in this present; for they desired him by a letter to procure as much of that sand as possible; but he was never able to find the place where he saw the first specimen. It was one of the smallest among a great number of small islands; and the mark he had set up was blown down by a violent storm. Possibly this might be the same mineral of which Captain Probissher brought so much to England. This country produces rock crystals both red and white, and whole mountains of the *asbestos* or *incombustible flax*. Around the colony, which is called *Good Hope*, they find a kind of bastard marble of various colours, which the natives form into bowls, lamps, pots, &c.

(10.) **GREENLAND, QUADRUPEDES, BIRDS, FISH, &c. OF.** The animals which abound most in Greenland are, rein-deer, foxes, hares, dogs, and white bears. The hares are white, and very fat; the foxes are white, greyish, and bluish; and smaller than those of Denmark and Norway. The natives keep a great number of dogs, which are large, white, or speckled, and rough, with upright ears. They are timorous and stupid; and neither bay, nor bark, but sometimes howl dimly. The natives yoke them in sledges; which, though heavy laden, they will draw on the ice at the rate of 70 miles in a short winter's day. These poor animals are very ill rewarded for their service: being left to provide for themselves, except when their masters happen to catch a great number of seals, when they are regaled with the blood and entrails. Greenland is frequented by great numbers of ravens, eagles of a prodigious size, falcons, and other birds of prey; besides a kind of linnets, which warble very melodiously. Whales, sword fish, porpoises, sea cows, sea wolves, &c. abound on the coasts; also holybuts, turbot, cod, haddocks, &c. The dubious animals also, called *mermaids*, *sea serpents*, and *krakens*, said to be found on the coast of Norway, are said likewise to dwell in these seas. Mr Egede assures us, that, in 1734, the sea serpent was seen off the new Danish colony, and raised its head mast high above the surface of the water. See **KRAKEN, MERMAID, and SERPENT.**

(11.) **GREENLAND, SOIL AND PRODUCE OF.** The soil varies like that of all other mountainous countries. The hills are barren, being frozen throughout the whole year; but the valleys and low grounds, especially near the sea, are rich and fruitful. The ancient Norwegian chronicles inform us, that Greenland formerly produced a great number of cattle; that considerable quantities of butter and cheese were exported to Nor-

way, and, on account of their peculiarity, set apart for the king's use; that of the country yielded excellent wheat, large oaks were found here, which grew as big as apples. Some of these oaks were in the southern parts, and in many marks of ploughed land are easily perceived. At present, however, the country is desolate, and cattle, though in many places it is excellent pasture; and, if properly cultivated, perhaps yield grain also. Mr Egede found barley near a bay adjoining to the sea. It sprang up so fast, that by the end of the summer it was in full ear; but being nipped by a frost, never arrived at maturity. Turneps are of an excellent taste and flavour are also here. The sides of the mountains are clothed with wild thyme, which is fragrant to a great distance. The beet is very common in this country, and others not described by botanists. The fruits of Greenland are juniper berries, rice, bil-berries, and bramble-berries. It has been said of the fertility of Greenland, that it must be understood of that part between lat. 60° and 65°. The more parts are totally destitute of herbs and even of grass.

(12.) **GREENLAND, TRADE TO, AND RESPECTING IT.** A joint stock of 40,000 £ statute to be raised by subscribers, was incorporated for 14 years from the first of 1693, under the name of the **GREENLAND COMPANY**. They were empowered to employ ships of catching whales, &c. into and from the Greenland seas; and to make laws for the government of the persons employed on their ships, &c. Stat. 4 and 5; Will. III. The Company was farther encouraged by an act in 1696; but partly by unskilful management, and partly by real losses, it was necessary of breaking up, before the end of the term assigned to it, ending in 1707. A person who will adventure to Greenland fishing, shall have all the privileges granted the Greenland company, by 1 Anne, cap. 16. thus the trade was again laid open. As may import whale-fins, oil, &c. of fish the Greenland seas, without paying any duty &c. stat. 10 Geo. I. cap. 16. And ship-owners in the Greenland fishery are to be licensed, provided with boats, so many fishing lines, harping irons, &c. and be allowed to proceed; and on their return shall be per ton bounty, for whale-fins, &c. 16 Geo. II. cap. 33. The bounty was increased, but has been lately diminished since this diminution the trade has increased. **WHALE-FISHERY.**

(II.) **GREENLAND**, a town of English county, and parish of Hambledon.

(III.) **GREENLAND**, a town of New Hampshire, in Rockingham county, near the coast, of Portsmouth, containing 634 citizens. **GREENLANDERS**, the natives of Greenland. See **GREENLAND**, N° I, § 5—7; also C III, § 11.

(1.) **GREENLAW**, [from *Green* and *law*]

cal hill.] a parish of Scotland, in Berwickshire, it 7½ miles long from N. to S. and 2 broad on average. The surface on the N. is mountainous, on the W. mossy. The climate and soil very various. One half of the parish is inclosed, two thirds of it are arable. The air is healthy and except on the hills, mild. Agriculture, fowls, and the breed of cattle are much improved. Wheat, barley, oats, pease, turnips, clover, and rye-grass are produced in great quantities. The population in 1785, stated by the Rev. W. Simson, in his report to Sir J. Sinclair, was 1,210, and had increased 315, within 30 years ending. The number of horses, in 1792, was 1,500, and of black cattle 850. Mr. Simson proposes to add to the improvement of the parish, by inclosing and cultivating the lower parts of the hills and planting trees on the higher.

GREENLAW, a town in the above parish, 20 miles WSW. of Berwick, 20 W. of Edinburgh, 36 SE. of Edinburgh, and 80 from Glasgow. The population in 1785, was about 1,200. Greenlaw has fairs on the 22d May and last day in Oct.

GREENLEIGHTON, a village of Northumberland, 10 W. of Morpeth.

GREENLY. *adv.* [from *green*.] 1. With a green colour. 2. Newly; freshly. 3. Immature. 4. Wanly; timidly. Not in use.—Kate, do not look *greenly*, nor gasp out my eloquence; have I cunning in protestation. *Shak.*

GREEN MOUNTAINS, a range of mountains, in the United States chiefly in that of Vermont, extending NNE. and SSW. and dividing the waters which run eastward into the Connecticut from those which flow W. into Lake Champlain, Lake Erie, and Hudson's River.

GREENNESS. *n. s.* [from *green*.] 1. The quality of being green; viridity; viridness.—A tree grew such a sort of trees, as either excellent for fruit, stateliness of growth, continual verdure, or poetical fancies have made at any time famous. *Sidney*.—In a meadow, though the green grass and greenness delights, yet the variety of flowers doth heighten and beautify. *Ben Jonson*.—By reason, which discourses on what it finds in phantasy, can consider greenness by itself, or coldness, or coldness, singly and alone by itself. 2. Immaturity; unripeness.—This prince, yet the errors in his nature were excused by the greenness of his youth, which took all the time upon itself, loved a private man's wife. 3. Freshness; vigour.—Take the picture of a man in the greenness and vivacity of his youth, and in the latter date and declension of his drooping years, and you will scarce know it to belong to the same person. *South*. 4. Newness.

GREENOCK, [from *Grianeg*, Gael. *i. e.* sunny bay.] a parish of Scotland, in the NW. of Renfrewshire, extending 4½ miles along the S. side of the Frith of Clyde, in the form of the letter D, but with the curvature more protracted. The surface is mostly hilly, rising in a gradual ascent from a level strip along the shore, to 800 feet above the sea level, 2 miles SE. of Greenock, and appearing like a sweep of a large circle. The coast is shelvy, rough and stony; and abounds with sea ware. The soil near the coast

is light and gravelly, on the ascent various; earth, clay, till, moss, &c. The hills afford beautiful and extensive prospects, which might be still farther embellished by plantations. The population, in 1755, was only 1886, but it has since increased greatly. See § 4.

(2.) **GREENOCK**, a sea-port town of Scotland, in Renfrewshire, and one of the ports of Glasgow, 22 miles W. of that city. It is the best built town on all the coast; the chief resort of the herring fishery, and otherwise a place of great trade. The harbour was made by Sir John Shaw of Greenock, whose ancestors built the church; and the family had here a castle. This town is a borough of barony, erected in 1757, and is governed by a council of 9 feuars, 2 of whom are bailies. Its trade increased rapidly between 1784 and 1791. In 1784, the tonnage of shipping, British and foreign, amounted only to 2,626 tons inwards, and 15,389 outwards. But in 1791, it had increased to 58,838 tons inwards, and 50,381 outwards. From 5th Jan. 1791, to 5th Jan. 1792, there were entered at this port, 45,054 barrels of herrings; besides large quantities sold for home consumption. The chief imports are rum, sugar, cotton, mahogany, grain, naval stores, pot-ash, oil, timber, fruits, wines, &c. The exports are all kinds of British goods, coals and herrings. The chief manufactures are corlage, sail-cloth, soap, candles, shoes, saddlery, and sugar. Ship-building is also carried on. One vessel of 1100 tons was launched in 1791. Greenock has fairs in July and Nov. Lon. 4. 29. W. Lat. 55. 54. N.

(3.) **GREENOCK, BAY OF**, a bay of Scotland, on the coast of Renfrewshire, formerly called the Bay of St Lawrence. The Frith of Clyde here expands into a fine basin 4 miles wide, and land-locked on all sides.

(4.) **GREENOCK, NEW PARISH OF**, a parish of Scotland, disjoined from the old parish (Nº 1) about 1740, and comprehending the town (Nº 2.) with its suburbs, and the village of *Crasfurd-dike* adjoining on the E.; altogether above a mile along the Frith of Clyde in length, but hardly ½ of a mile in breadth. The population in 1755 stated by Dr Webster, was 1972, and that of both old and new parishes only 3858. But in Jan. 1792, by the rev. Arch. Reid's report to Sir J. Sinclair, it amounted to 14,499, besides above 700 persons on board coasting vessels; whence the increase in both parishes, within 37 years, was not less than 11,142.

GREENOGH, a town of Ireland, in Cork.

GREENORE POINT, a cape of Ireland, on the coast of Wexford. Lon. 6. 13. W. Lat. 52. 16. N.

(1.) **GREENSBOROUGH**, a post town of Georgia, capital of Greene county, 30 miles from Lexington, and 78 W. by S. of Augusta.

(2.) **GREENSBOROUGH**, a town of Maryland, in Caroline county, 7 miles N. of Danton, and 22 SE. by E. of Chester.

(3.) **GREENSBOROUGH**, a township of Vermont, in Orleans county, adjoining to Minden on the NW. and to Wheelock on the SE.

GREENSBURG, a post town of Pennsylvania, capital of Westmoreland county, containing about

about 600 citizens in 1795. It is 31 miles SE. by E. of Pittsburg, and 270 W. by N. of Philadelphia. Lon. 4. 23. E. of that city. Lat. 40. 18 N.

(1.) * GREENSICKNESS. *n. f.* [*green* and *sickness*.] The disease of maids, so called from the paleness which it produces.—Sour eructations, and a craving appetite, especially of terrestrial and absorbent substances, are the case of girls in the *greensickness*. *Arbutnot.*

(2.) GREEN-SICKNESS. See MEDICINE, *Index*.

GREEN-SILVER, the name of an ancient custom within the manor of Writtel in the county of Essex in England, which is, that every tenant whose fore door opens to Greenbury, shall pay an half-penny yearly to the lord, by the name of GREEN-SILVER.

(1.) GREENSTED, a village of England, in Essex, near Chipping-Ongar, remarkable for its ancient church, built before the Norman conquest; the walls of which are formed of the solid trunks of trees placed in rows, which seem capable of still lasting for ages.

(2.) GREENSTED, a town in Northumberland.

(1.) GREENSVILLE, a county of Virginia, bounded on the W., N. and E. by Brunswick, Southampton, and Suffolk counties, and on the S. by N. Carolina. It is 24 miles long and 20 broad; and contained 2742 citizens and 3620 slaves, in 1795.

(2.) GREENSVILLE. See GREENVILLE.

* GREENSWARD. *n. f.* [*green* and *sward*].

* GREENSWORD. *n. f.* of the same original with *swarth*. The turf on which grass grows.—

This the prettiest low-born lass that ever

Ran on the *greensward*. *Shak.*

After break their fast

On *greensward* ground, a cool and grateful taste.

Dryden.

—In shallow soils all is gravel within a few inches; and sometimes in low ground a thin *greensward*, and sloughy underneath; which last turns all into a bog. *Swift.*

(1.) GREENVILLE, a county of S. Carolina, in Washington district, bounded on the E. by Spartanburg, and S. by Pendleton counties; W. by Georgia and N. by Carolina; and containing 5,897 citizens in 1795, and 606 slaves.

(2.) GREENVILLE, or GREENSVILLE, a town of S. Carolina, in Darlington county, and capital of Cheraws district, 135 miles N. by E. of Charleston, and 77½ SW. by S. of Philadelphia. Lon. 4. 29. W. of that city. Lat. 34. 34. N.

(1.) GREENVILLE, a post town of N. Carolina, the capital of Pitt county; 27 miles from Washington, 53 SW. of Edenton, 444 of Philadelphia. Lon. 2. 19. W. of that city. Lat. 35. 11 N.

(4.) GREENVILLE, a post town of Treuffe, in Gloucester county, 653 miles SW. of Philadelphia.

(5.) GREENVILLE, a fort and settlement of the United States, in the north western territory; 6 miles NW. of Fort Jefferson.

(6.) GREENVILLE BAY, a town and port of entry on the E. side of the island of Grenada.

GREEN WAX is used where estates are delivered to the sheriff out of the exchequer, under the seal of that court, made in green wax, to be levied in the several counties. It is mentioned in the 43d stat. Ed. III. c. 9. and 7 Hen. IV. c. 4.

(1.) * GREENWEED. *n. f.* [*green* and *weed*.]

(2.) GREENWEED. See GENISTA, *Index*.

(1.) GREENWICH, a town of England pleasantly situated on the bank of the river, 5 miles E. of London. It had formerly a palace, built by Humphry duke of Gloucester, enlarged by Henry VII. and completed in 1530. The latter often chose this town for his place of residence; as did also Q. Mary II. and Elizabeth, who were born in it. D. Howard built a tower on the top of the steep hill, which was finished by Henry VIII. afterwards demolished, and a royal observatory erected in its place by Charles II. furnished with mathematical instruments for astronomical observations, and a deep dry well for observing the stars in the day time. The palace afterwards neglected, king Charles II. (who had bought the park, walled it about and planted it down, and began another, of which he died to see the first wing magnificently finished) king William III. in 1694, granted 1000 acres of ground to be converted into a hospital for old and disabled seamen, the children of those who lost their lives in the service, and for the encouragement of navigation. The first wing, which cost king Charles 36,000 l. was the first wing of the hospital towards the river. The front to the Thames consists of 100 of stone buildings, with the ranger's house in the centre of the area, but detached from the hospital. These buildings connect each other, and have their tops crowned with balustrades. The buildings which correspond with them, though in a more elegant style; and have domes at the ends, which are 120 feet high, supported by columns. Under one of these is the library, which is finely painted by Sir James Thornhill, contains many royal portraits; and under the chapel, which was destroyed by fire broke out in the hospital on the 10th of 1785, and totally consumed the dome at the top of the building, with the chapel, is the most elegant in the world, the great hall, and 8 wards containing the lodges for 600 prisoners. The dome was rebuilt in 1785; but the reparation of the whole was not yet completed. On the side of the area which opens to these buildings from the river, is placed a large terrestrial and celestial globe, which the stars are gilt; and in the centre of the area is a statue of George II. About 1000 disabled seamen are maintained in this hospital. Besides private benefactions, to the value of near L. 60,000, the British parliament settled upon it the earl of Derwent's estate, to the value of L. 6000 per ann. for strangers who see it, pay 2d. each; and as come is applied to the support of the nautical school for the sons of sailors: For support of which, every seaman in the royal and in the merchant service, also pays 6d. which is stopped out of their pay, and in at the six penny receiver's office in 1797. On this account, a seaman, who can produce an authentic certificate of his being dis-

fit for service, by defending any ship, his Majesty's British subjects, or in ship from the enemy, may be admitted hospital, and receive the same benefit if he had been in his Majesty's service. Besides the seamen and widows pensioned, about 100 boys, the sons of bred up for the service of the royal here are no out-pensioners as at Chel- of the mariners has a weekly allowance weighing 16 oz. each; 3 lb. of beef, 1, a pint of pease, 1½ lb. of cheese, 2, 14 quarts of beer, and 1s. 2-week money: the tobacco money of the boat- 6d. a week each, that of their mates and that of the other officers in propor- rank: besides which, each common receives once in two years, a suit of blue at, 3 pair of stockings, 2 pair of shoes, 18, 3 shirts, and 2 night caps. Out is given for showing the hall, only 3d. ng is allowed to the person that shows rest makes an excellent fund for the maintenance of not less than 20 poor boys, siners that have been either slain or dis- service of their country. This is called *the duke of Nor-* ge, though it was founded and endow- g by Henry earl of Northampton the orfolk's brother, and by him committed e of the Mercers company. To this longs a chapel, in which the earl's d; which, as well as his monument, ved hither several years ago from the . PART II.

chapel of Dover castle. The pensioners, besides meat, drink, and lodging, are allowed 18d. a week, with a gown every year, linen once in two years, and hats once in 4. In 1560, Mr Lambard, author of *The Preambulation of Kent*, also built an hospital, called *Queen Elizabeth's College*, said to be the first erected by an English Protestant. There are likewise two charity schools in this pa- rish. The Thames is here very broad, and the channel deep; and at very high tides the water is salt. This is the chief harbour for the king's yachts. The town contains about 1500 houses; and a market on Wed. and Sat. was instituted in 1737; the direction of which is in the governors of the royal hospital, to which the profits arising from it were to be appropriated. The English astrono- mers reckon their longitude from Greenwich.

(2.) GREENWICH, a township of Connecticut, in Fairfield county, 40 miles E. of New York, and 50 W. of Newhaven.

(3.) GREENWICH, a township of Massachusetts, in Hampshire county, containing 1045 citizens in 1790; 20 miles E. of Northampton, and 75 W. of Boston.

(4—6.) GREENWICH, 3 towns of New Jersey: viz. 1. in Cumberland county, on the Cohanzy, 15 miles SE. of Salem, and 66 S. by W. of Philadelphia: 2. in Gloucester county, on the E. bank of the Delaware; 3 miles N. by E. of Woodbury, and 6 SE. of Philadelphia: and, 3. in Suffex coun- ty, on the Delaware, 31 miles SW. of Newton, containing 1971 citizens and 64 slaves.

(1.) * GREENWOOD. *n. s.* [*green* and *wood*.] A wood considered as it appears in the Spring or Summer. It is sometimes used as one word.— Among wild herbs under the *greenwood* shade. *Fairfax*.—

It happened on a Summer's holiday,

That to the *greenwood* shade he took his way;
For Cymon shunn'd the church. *Dryden*.

(2, 3.) GREENWOOD, two townships of Pennsyl- vania: 1. in Cumberland, and 2. in Mifflin coun- ties.

(4.) GREENWOOD, an extensive forest of Con- necticut, in Litchfield county.

(1.) * TO GREET. *v. a.* [*grator*, Lat. *gretari*, Saxon.] 1. To address at meeting.—

I think if men, which in these places live,
Durst look in themselves, and themselves retrieve,
They would like strangers greet themselves.

Donne.

I would gladly go,

To greet my Pallas with such news below. *Dryd.*

2. To address in whatever manner.—

My noble partner

You greet with present grace, and great predic- tion;

To me you speak not. *Shak. Macbeth*.

Now, Thomas Mowbray, do I turn to thee,
And mark my greeting well; for what I speak,
My body shall make good. *Shak. Richard II.*

3. To salute in kindness or respect.—

My lord, the Mayor of London comes to greet you,

—God bless your grace with health and happy days. *Shak.*

Now the herald lark

Left his gopund nest, high tow'ring to descry

L I I

T 6

The morn's approach, and greet her with his song. *Milton.*

Once had the early matrons run

To greet her of a lovely son. *Milton.*

The sea's our own; and now all nations greet;

With bounding sails, each vessel of our fleet. *Haller.*

Thus pale they meet, their eyes with fury burn;

None greets: for none the greeting will return;

But in dumb fury, each arm'd with care,

His toe profess, as brother of the war. *Dryd.*

4. To congratulate.—

His lady, loving all that channel from far,

Approacht in haste to greet his victorie. *Spenser.*

5. To pay compliments at a distance.—

The king's a-bed,

And sent great largess to your officers;

This diamond he greets your wife withal,

By the name of most kind hostess. *Shak. Macb.*

6. To meet, as those who go to pay congratulations. Not much in use.—

Your haste

Is now urg'd on you.

—We will greet the time. *Shak. K. Lear.*

(2.) * To GREET. *v. n.* To meet and salute.—

There greet in silence, as the dead are wont,

And sleep in peace. *Shak.*

Such was that face on which I dwelt with joy,

Ere Greece assembled stem'd the tides to Troy;

But parting then for that detested shore,

Our eyes, unhappy! never greeted in we. *Pope's Odyssey.*

* GREETER. *n. s.* [from the verb.] He who greets.

* GREETING. *n. s.* [from greet.] Salutation at meeting, or compliments at a distance.—

I from him

Give you all greetings, that a king, as friend,

Can send his brother. *Shak. Winter's Tale.*

* GREEZE. *n. s.* [Otherwise written *greece*.]

See GREECE, or GRIEZE, or GRICE; from *de-gree*. A flight of steps; a step.

GRIFFENSTAIN, a town of Austria, on the

Danube, 6 miles N.W. of Kloster-Newburg.

* GREGAL. *adj.* [from *gregus*, Lat.] Belonging to a flock. *Dich.*

* GREGARIOUS. *adj.* [from *gregarius*, Lat.] Going in flocks or herds, like sheep or partridges.—

No birds of prey are gregarious. *Ray on the Great.*

GREGOIE, an island of Africa, in the Ja-

quin, on the Gold Coast, where the Europeans

have factories; 3 miles from the sea.

GREGORIA, a town of New Mexico.

(1.) GREGORIAN CALENDAR, that which

shows the new and full moon, with the time of

Easter, and the moveable feasts depending there-

on, by means of epacts disposed through the fev-

eral months of the Gregorian year. See CHRO-

NOLOGY, Sect. V. and KALENDAR.

(2.) GREGORIAN STYLE, the New Style, now

used, which succeeded the Julian Style, in Britain

in 1752.

(3.) GREGORIAN TELESCOPE. See OPTICS,

Index.

(4.) GREGORIAN YEAR. See CHRONOLOGY,

§ 49.

(1.) GREGORIO, ST, an island of Maritime

Austria, in the prov. of Quararo, 3 miles long

half a mile broad. The natives deal in

sheep, of which there are 2,000 on the island.

rum, SHAH ABBAS; published *cum notis*

sons, in 1627, 8vo.

(16.) GREGORY, K. of Scots. See SCOT

(17.)

GREGORY, Theodore, surnamed *Thaumaturgus*, on account of his miracles, was the scholar; and was elected bishop of Neocaesarea, his birth place, about A. D. 240, during the reign of the Emperor Diocletian. He assisted at the council of Antioch, against Paulus Samosatenus; and died in 258. He had the satisfaction of leaving only 17 years in his diocese, where there were but 17 years when he was ordained. Of his works till extant, A consolatory oration to Origen on his death; a consolatory epistle; and some other pieces.

GREGORY, Bishop of Nyssa, one of the fathers of the church, and author of the Nicene Creed, born in Cappadocia, about A. D. 331. He was chosen bishop of Nyssa in 372, and banished by Emperor Valens for adhering to the Nicene Creed. He was afterwards, however, recalled by the bishops in several important affairs, and died in 396. He wrote, Commentaries on the scriptures; Sermons on the mysteries; Mysteries; Dogmatical treatises; Parænetics; Letters on church discipline: &c. His style is very allegorical and

GREGORY, George Florentius, bishop of Eusebia, one of the most illustrious bishops and writers of the 6th century, was descended from a noble family in Auvergne. He was educated by his uncle Gallus, bp. of Clermont; and distinguished himself so much by his learning that in 573 he was chosen bp. of Tours. He went to Rome to visit the tombs of the apostles, where he contracted a friendship with Pope Gregory the Great, and died in 595. He was exuberant with regard to miracles. He wrote, The history of France. 2. The lives of the saints, and other works. The best edition is by F. Rumart, in 1699.

GREGORY, surnamed NAZIANZEN; from Nazianzus, a town of Cappadocia, of which his father was bishop, was born, A. D. 324, at Azianus near it, and was one of the most illustrious of the Greek church in the 4th century. He was made bishop of Constantinople; finding his election contested by Theophrastus, bp. of Alexandria, he voluntarily resigned about 382, in the general council of Constantinople. His works are extant, printed at Paris in 1609. His style is said to be to that of the most celebrated orators of Greece.

GREGORY, David, Esq. of Kinardie, in Aberdeenshire, was the son of the rev. John Gregory, minister of Drumoak, and elder brother of James Gregory (Nº 23.) the celebrated inventor of the reflecting telescope. He was born in 1627, and went into apprenticeship to a mercantile house in London, succeeding to the estate of Kinardie, and of an elder brother, he preferred science to commerce, and even studied medicine for some time. In this branch of science he acquired proficiency, that he not only indulged the poor by prescribing for them with no fee, but came to be consulted by the nobility and gentry, though even from a distance. He was the first person in Scotland who had a barometer; and having directed attention to the changes in it, he was

frequently able to prognosticate the changes in the weather. Hence he came to be suspected by the superstitious as a conjuror; and a deputation was actually sent him by the presbytery upon the subject; but he soon removed their suspicions, so that no trial for witchcraft took place. About 1700, he removed to Aberdeen, and during the war with France, in the reign of Q. Anne, invented an improvement in artillery, by which the shot of great guns could be rendered much more destructive to the enemy. By the assistance of a watchmaker, he made a model of this engine, which was submitted to the inspection of Sir Isaac Newton; but the philanthropic baronet disapproved of all inventions for the destruction of the human race, and the model was never more heard of. He was twice married, and had 32 children; of whom 3 sons became eminent in science; being all professors in universities; viz. David at Oxford, (Nº 22.) James at Edinburgh, and Charles at St Andrews. He died at Aberdeen, in 1720, aged 93.

(22.) GREGORY, David, F. R. S. Savilian professor of astronomy at Oxford, whom Dr Smith has termed *sublimissimi ingenii mathematicus*, was the eldest son of the above Mr Gregory. (Nº 21.) He was born at Aberdeen in 1661, and received the earlier parts of his education in that city. He completed his studies at Edinburgh; and, being possessed of the mathematical papers of his uncle, soon distinguished himself likewise as the heir of his genius. In the 23d year of his age, he was elected professor of mathematics in the university of Edinburgh; and published, in the same year, *Exercitatio Geometrica de dimensione figurarum, sive specimen methodi generalis determinandi quasvis figuras*, Edinburgh; 1684; 4to. He saw very early the excellence of the Newtonian philosophy; and had the merit of being the first who introduced it into the schools by his public lectures at Edinburgh. "He had (says Mr Whiston) already caused several of his scholars to keep acts, as we call them, upon several branches of the Newtonian philosophy; whilst we at Cambridge, poor wretches, were ignominiously studying the fictitious hypothesis of the Cartesians." In 1691, on the report of Dr Bernard's intention of resigning the Savilian professorship of astronomy at Oxford, David Gregory went to London; and being patronised by Sir Isaac Newton, and warmly befriended by Mr Flamsteed, he obtained the vacant professorship, for which Dr Halley was a competitor. This rivalry, however, instead of animosity, laid the foundation of friendship between these eminent men; and Halley soon after became the colleague of Gregory, by obtaining the professorship of geometry in the same university. Soon after his arrival in London, Mr Gregory had been elected F. R. S. and, previously to his election into the Savilian professorship, had the degree of M. D. conferred on him by the university of Oxford. In 1693, he published in the *Philos. Transf.* a resolution of the Florentine problem *de Testudine velifera mi quadrabili*; and he continued to communicate to the public, from time to time, many ingenious mathematical papers by the same channel. In 1695, he printed at Oxford *Catoptrica et Dioptrica Sphæricæ Elementa*; a work which contains

the substance of some of his public lectures at Edinburgh. This valuable treatise was republished first with additions by Dr William Brown, with the recommendation of Mr Jones and Dr Desaguliers; and afterwards by the latter, with an appendix containing an account of the Gregorian and Newtonian telescopes, together with Mr Hadley's tables for the construction of both those instruments. In the end of this treatise, there is an observation which shows, that what is generally believed to be a discovery of a much later date, the construction of achromatic telescopes, which has been carried to great perfection by Mr Dollond and Mr Ramsden, had occurred to the mind of David Gregory, from the reflection on the admirable contrivance of nature in combining the different humours of the eye. See *Catopt. et Dioptr. Sphæricæ*. Oxon. 1695, p. 98. In 1704, our author published at Oxford, *Astronomiæ Physicæ et Geometricæ Elementa*; a work which is accounted his master-piece. It is founded on the Newtonian doctrines, and was esteemed by Sir Isaac Newton himself as a most excellent explanation and defence of his philosophy. In 1703, he published a folio edition of Euclid in Greek and Latin. In this work, although it contains all the treatises attributed to Euclid, Dr Gregory has been careful to point out such as he found reason, from internal evidence, to be the productions of some inferior geometrician. Dr Gregory engaged, soon after, with his colleague Halley, in the publication of Apollonius's Conics, but he had not proceeded far in this undertaking when he died, in the 49th year of his age, at Maidenhead in Berkshire, A. D. 1710. To the genius and abilities of David Gregory, the most celebrated mathematicians of the age, Sir Isaac Newton, Dr Halley, and Dr Keill, have given ample testimonies. Besides those works published in his lifetime, he left in MS. *A Short Treatise of the Nature and Arithmetic of Logarithms*, which is printed at the end of Dr Keill's translation of Commandine's Euclid; and a *Treatise of Practical Geometry*, which was afterwards translated, and published in 1745, by Mr MacLaurin. He married, in 1695, Elizabeth, the daughter of Mr Ouphant of Langtown. By this lady he had four sons, of whom the eldest, David, was appointed regius professor of modern history at Oxford by king George I. and died in 1767, in an advanced age, after enjoying for many years the dignity of dean of Christ church in that university.

(21.) GREGORY, James, F. R. S. one of the most eminent mathematicians of the 17th century, was the 2d son of the rev. Mr Gregory, and brother to David (Nº 21.) and was born at Aberdeen in 1638. His mother was a daughter of Mr David Anderson of Finzaugh, a gentleman who possessed a singular turn for mathematics. This mathematical genius would seem to have been hereditary in the family. Alexander Anderson, cousin german of David, was professor of mathematics at Paris, and published there in 1612, *Supplementum Apollonii rearsæ*, &c. The mother of James Gregory inherited the genius of her family; and observing in herself, while yet a child, a strong propensity to mathematics, she instructed him herself in the elements of that science. He received his e-

ducation in the languages at Aberdeen, and through the usual course of academical studies the Marischal college. At the age of 24 he finished his treatise, entitled, *Optica promissa abditæ radiorum reflexorum et refractorum geometricæ enucleata; cui subnectitur appendix thymiorum astronomiæ problematum resolutiohibens*; London, 1663; a work of great value in which he gave the world an invention of his own, and one of the most valuable of the discoveries, the construction of the reflecting telescope. This discovery attracted the attention of the mathematicians, who were soon conscious of its great importance to the sciences of optics and astronomy. The manner of placing two specula upon the same axis appearing to Sir Isaac Newton to be attended with the disadvantage of losing the central rays of the larger speculum, proposed an improvement on the instrument, giving an oblique position to the smaller speculum, and placing the eye-glass in the focus of the tube. But the Newtonian construction of the reflecting instrument has been long abandoned for the al or Gregorian, which is now universally used where the instrument is of a moderate size, though Mr Herschel has preferred the Newtonian form for the construction of those immense telescopes, which of late years he has so frequently employed in observing the heavens. The University of Padua being then in high reputation for mathematical studies, James Gregory went there soon after the publication of his *Optica*, and fixing his residence there for some years, published in 1667, *Vera Circuli et Hyperbolæ quadratura*; in which he propounded another discovery of his own, the invention of an infinite verging series for the areas of the circle and hyperbole. To this treatise, when republished in 1668, he added a new work, intitled, *Compendium universalis, inserviens quantitationi curvarum transmutationi et mensuræ*; in which he is supposed to have shown, for the first time, a method of the transmutation of curves. These works attracted the notice, and the correspondence of the greatest mathematicians of the age, and of Huygens, Halley, and Wallis; and thus being soon after chosen F. R. S. of London, contributed to enrich the Philosophical Transactions by many valuable papers. Through this he carried on a dispute with Mr Huygens, terminated by his treatise on the quadrature of the circle and hyperbole, to which that able mathematician had started some objections. Of this controversy, it is sufficient to say, that, in the opinion of Leibnitz, (who however allows Mr Gregory the highest merit,) Mr Huygens has pointed out though not errors, some considerable defects in the treatise above mentioned, and has proposed a much simpler method of attaining the end. In 1668, Mr Gregory published at London *Exercitationes Geometricæ*, which contributed to extend his reputation. About this time he was elected professor of mathematics in the university of St Andrew's; an office which he held 16 years. During his residence there, he married in 1669, Mary, the daughter of George James, a celebrated painter, whom Mr Walpole has called the Van Dyke of Scotland. In 1674, he was

thematical chair in the university of
This place he had held for little more

GREGORY, John, M. D. professor of me-
: university of Edinburgh, was the son
s Gregory, professor of medicine in
ge Aberdeen, and grandson of the a-
N° 23. His father was first married
: Forbes, daughter of Sir John Forbes
usk; by whom he had six children,
om died in infancy. He married after-
Chalmers, only daughter of the rev.
almers, principal of King's college, by
had two sons and a daughter. John,
k of the three, was born at Aberdeen,
4. Losing his father in the 7th year
the care of his education devolved on
ther, Principal Chalmers, and on his
r, Dr James Gregory, who, upon the
of their father, a short time before his
been appointed to succeed him in the
p of Medicine in King's college. He
ed much in his infant years, and du-
ole course of his studies, to the atten-
ousin, the celebrated Dr Reid, of the
f Glasgow. The rudiments of his clas-
ion he received at the grammar school
n; and, under the eye of his grandfa-
mpleted, in King's college, his studies
and Greek languages, and in the sci-
ies, mathematics, and natural philo-
s master in philosophy and in mathe-
Mr Thomas Gordon, professor of phi-
King's college. In 1742, Mr Gregory
inburgh, where the school of medicine
sing to that celebrity which has since
bly distinguished it. Here he attended
eal lectures of the elder Dr Monro, of
on the theory of medicine, and of Dr
on the practice. He heard likewise
ons of Dr Alston on the materia medica
y, and of Dr Plummer on chemistry.
cal Society of Edinburgh, instituted for
cussion of all questions relative to me-
philosophy, had begun to meet in 1737.
iety Mr Gregory was a member in 1742,
e when Dr Mark Akenfide, his fellow
id intimate companion, was a member
e institution. In 1745, our author went
and attended the lectures of those ce-
rofessors Gaubius, Albinus, and Van
hile at this place he had the honour of
om the King's college of Aberdeen, an
degree of M. D. and soon after, on his
a Holland, was elected professor of phi-
that university. In this capacity he
es in 1747, 1748, and 1749, on mathe-

matics, and on experimental and moral philoso-
phy. In the end of 1749, however, he resigned
his professorship of philosophy, his views being
turned chiefly to the practice of physic. Previ-
ously, however, to his settling as a physician at
Aberdeen, he went for a few months to the Con-
tinent. Some time after his return to Scotland,
Dr Gregory married, in 1752, Elisabeth, daughter
of William Lord Forbes; a young lady who, to
the exterior endowments of great beauty and en-
gaging manners, joined a very superior under-
standing. With her he received a handsome addi-
tion to his fortune; and during their union, which
was only 9 years, enjoyed the highest portion of
domestic happiness. Of her character it is enough
to say, that her husband, in that admired work,
A Father's Legacy to his daughters, the last proof
of his affection for them, declares, that, "while
he endeavours to point out what they should be,
he draws but a very faint and imperfect picture of
what their mother was." The field of medical
practice at Aberdeen being at that time in a great
measure pre-occupied by his elder brother, Dr
James Gregory, and others, our author went to
London in 1754; and being already known as a
man of genius, he found an easy introduction to
many persons of distinction, both in the literary
and polite world. The late George Lord Lyttle-
ton was his friend and patron. An attachment,
founded on a striking similarity of manners, taste,
and disposition, grew up into a firm and perma-
nent friendship; and to that nobleman, to whom
Dr Gregory was wont to communicate all his li-
terary productions, the world is indebted for the
publication of the *Comparative View of the State
and Faculties of Man*, which made him first known
as an author. He likewise enjoyed the friendship
of the late Edward Montague, Esq. and of his
lady, the celebrated champion of the Fame of
Shakespeare against the cavils and calumnies of
Voltaire. In 1754, Dr Gregory was chosen F. R. S.
of London. In that city his professional talents
would doubtless have procured him a very exten-
sive practice; but the death of his brother, Dr
James Gregory, in November, 1755, occasioning
a vacancy in King's college, Aberdeen, which he
was solicited to fill, he returned to his native
country in 1756. Here our author remained till
the end of 1764, when he changed his place of re-
sidence for Edinburgh, where, in 1766, on the re-
signation of Dr Rutherford, he succeeded as pro-
fessor of the practice of physic; and was appoint-
ed first physician to his majesty for Scotland, on
the death of Dr Whytt. On his first establish-
ment in the university of Edinburgh, Dr Gregory
gave lectures on the practice of physic, in 1767,
1768, and 1769. Afterwards, by agreement with
Dr Cullen, professor of the theory of physic, these
two eminent men gave alternate courses of the
theory and the practice. As a public speaker, Dr
Gregory's manner was simple, natural, and ani-
mated. As his subject in a great degree precluded
the graces of oratory, he expressed his ideas with
uncommon perspicuity, and in a style happily at-
tempered between the formality of studied com-
position and the ease of conversation. The only
lectures which he committed fully to writing,
were those introductory discourses which he read
at

at the beginning of his annual course, and which are published under the title of *Lectures on the Duties and Qualifications of a Physician*. Of these, which were written with no view to publication, many copies were taken by his pupils, and some from the original M. S., which he freely lent for their perusal. These lectures were first published in 1770, and afterwards in an enlarged and more perfect form in 1772; when he also published, *Elements of the Practice of Physic, for the use of Students*; a work intended solely for his own pupils, and to be used by himself as a text-book to be commented upon in his course of lectures. In his lectures, Dr Gregory never attempted to mislead the student by flattering views of the perfection of the science, but was rather anxious to point out its defects; wisely judging, that a sense of the imperfections of a science is the first step towards its improvement. With this view he exposed the fallaciousness of the several theories and hypotheses, which have had the most extensive currency, and perpetually inculcated the danger of systematizing with limited experience, or an imperfect knowledge of facts. Yet in the work last mentioned, he did not entirely neglect the systematic arrangements of other authors. These, however, he warned his pupils, that he had not adopted from any conviction of the rectitude of those theories to which they referred, but only as affording that degree of method, and regularity of plan, which is the best help to the study of any science. Considering a rational theory of physic to be as yet a desideratum, it was his object to communicate to his pupils the greatest portion of practical knowledge, as the only basis on which such a theory could ever be reared. Thus desirous of establishing the science of medicine upon the solid foundation of practice and experience; and knowing that many things asserted as facts by medical writers have been assumed on a very careless observation, while confirming a favourite theory; and that, on the other hand, many real and important facts have, from the same spirit of system, been explained away and discredited; he constantly endeavoured, both by his precept and example, to inculcate to his pupils the necessity of extreme caution either in admitting or in denying medical facts, or what are commonly given as such. To the desire of enforcing this necessary caution is owing that multitude of queries respecting matters of fact, as well as matters of opinion, which occurs in the *Elements of the Practice of Physic*. Dr Gregory, soon after the death of his wife, and, as he himself says, "for the amusement of his solitary hours," employed himself in the composition of that admirable tract, intitled, *A Father's Legacy to his Daughters*; a work which, though never intended by its author for the public eye, it would have been an unwarrantable diminution of his fame, and a capricious refusal of a general benefit to mankind, to have limited to the sole purpose for which it was originally designed. It was, therefore, with great propriety, published after the author's death by his eldest son. This work gives a most amiable display of the piety and goodness of his heart, and his consummate knowledge of human nature. It manifests such solicitude for their welfare, as strongly recommends the advice

which he gives. He speaks of the fame the most honourable terms, and labours in its estimation, whilst he plainly, yet gently, points out the errors into which ladies are apt to fall. It is particularly in what high and honourable terms he speaks of the Holy Scriptures, of Christian faithful ministers; how warmly he speaks to his daughters the serious and devoted of God in public and private. He dwells on that temper and behaviour, which is peculiarly suited to their education, and circumstances; and recommends that gentleness, and modesty, which adorn the character of the ladies, and do particular honour to the sex. His advices, with regard to love and marriage, are peculiarly wise and judicious. They show what careful obligation lies on female domestic conduct, and on the effects of possessing or wanting the qualities which he recommends. There is something peculiarly curious, animated, and interesting in his directions to them, how to judge of the truest and most honourable passion in, and in the other sex; and in the very accurate distinction which he makes between the delicacy. Nothing can be more striking, nothing more likely to give its full effect, than the affectionate manner in which he mentions their mother, and the irreparable loss, and they sustained by her early death, in this tract, the professor shines with as much lustre as a husband and father, and is adapted to promote domestic happiness. His letters were evidently written under the shadow of an early death, which Dr Gregory had to apprehend from a constitution subject to gout, which had begun to appear at intervals even from his 15th year. His mother, whom he inherited that disease, died in 1770, while sitting at table. Dr Gregory prognosticated for himself a similar event of which, among his friends, he was not without apprehension of the nearest approach. In the beginning of 1773, in conversation with his son, Dr James Gregory, remarking, that having for the 3 preceeding years had no return of a fit, he might make it with a pretty severe attack at that season, he received the observation with some degree as he felt himself then in his usual state. The prediction, however, was too true, and he was gone to bed on the 9th Feb. 1773, with an apparent disorder, he was found dead in bed. His death had been instantaneous, probably in his sleep; for there was not the least discomposure of limb or of feature,—a *paralytic*. Dr Gregory, in his person, was considerably above the middle size. His frame was compacted with symmetry, but not elegance. His limbs were not active; he was somewhat in his gait; and his countenance a fullness of feature and a bearing of no external indication of superior abilities, otherwise when he engaged in conversation, his features then became animated, and his voice expressive. He had a warmth of tone,

ve a pleasing interest to every thing

Samuel Carlowitz, a late eminent na-
the Russian service, born at Inver-
shire. The rev. Mr Andrew Ro-
ster of that parish, gives the following
of this Scoto-Russian admiral. "The
1. Greig was a native of this town,
d under the present School-master,
in early period of life into the British

service. While in the navy of Great Britain, he
distinguished himself at the defeat of Conflans by
Adm. Hawke, the taking of the Havannah, and
several other engagements in that successful war.
After the peace of 1763, he entered into the Rus-
sian service; and there at the battle of Chio, con-
tributed principally, by his advice and exertions
to the destruction of the whole Turkish fleet.
Sensible of his great professional merit, her imper-
ial majesty promoted him, (though a foreigner)
to the chief command of the Russian navy, which
he raised to a degree of respectability and import-
ance it never before had attained. In reward of
his great services, the empress bestowed on him
many honourable marks of distinction, and an
estate in Livonia, which his family now enjoy.
In the last war between the Russians and Turks,
which last were joined by the Swedes, he, in the
Baltic, defeated the Swedish fleet; and had not a
part of his squadron, through cowardice, refused
to come into action, he probably had captured or
sunk the whole of them. Soon after this, he was
seized with a fever, and died at Revel, on the
26th Oct. 1788. He was no less illustrious for
courage and naval skill, than for piety, benevo-
lence and every private virtue." *Sir J. Sinclair's*

(1.) GRENADA, one of the Caribbee islands.
It is the last of the Windward Caribbees; and lies
30 leagues N. of New Andalusia, on the continent.
According to some, it is 24 leagues in compass;
according to others, only 22. It is 28 m. long,
and in some places 15 broad. The chief port,
formerly called *Louis*, now *St George's*, stands on
the W. side of the island, in the middle of a large
bay, with a sandy bottom. It is said that 1000
barks, from 300 to 400 tons, may ride secure from
storms; and that 100 ships, of 1000 tons each,
may be moored in the harbour. A large round
basin, which is parted from it by a bank of sand,
would contain a considerable number of ships, if
the bank was cut through: but by reason of it,
the large ships are obliged to pass within 80 paces
of one of the mountains lying at the mouth of the
harbour; the other lying about half a mile distant.
The island abounds with game, fish, and very
fine timber. A lake on a high mountain, about
the middle of the island, supplies it with streams
of fresh water. Several bays and harbours lie
round the island, some of which might be fortified
to great advantage; so that it is very convenient
for shipping, not being subject to hurricanes. The
soil is capable of producing tobacco, sugar, indi-
go, pease, and millet. In 1638, M. Poincy, a
Frenchman, attempted to make a settlement in
Grenada; but was driven off by the Caribbeans,
who resorted to this island in greater numbers
than

than to the neighbouring ones. In 1650, M. Parquet, governor of Martinico, carried over from that island 200 men, furnished with presents to reconcile the savages, and with arms to subdue them, in case they should prove intractable. The savages are said to have been frightened into submission by the number of the Frenchmen; but, according to some French writers, the chief not only welcomed the new-comers, but, in consideration of some knives, hatchets, flintars, and other toys, yielded to Parquet the sovereignty of the island, reserving to themselves their own habitations. The Abbe Raynal informs us, that these first French colonists, *imagining* they had purchased the island by these trifles, assumed the sovereignty, and soon acted as tyrants. The Caribs, unable to contend with them by force, took their usual method of murdering all those whom they found in a defenceless state. This produced a war; and the French settlers having received a reinforcement of 300 men from Martinico, forced the savages to retire to a mountain; from whence, after exhausting all their arrows, they rolled down great logs of wood on their enemies. Here they were joined by other savages from the neighbouring islands, and again attacked the French, but were defeated anew; and were at last driven to such desperation, that 40 of them, who had escaped from the slaughter, jumped from a precipice into the sea, where they all perished, rather than fall into the hands of their enemies. From thence the rock was called *le Morn des Sautours*, or "the hill of the leapers;" which name it still retains. The French then destroyed the habitations and all the provisions of the savages; but fresh supplies of Caribbeans arriving, the war was renewed with great vigour, and great numbers of the French were killed. Upon this they resolved totally to exterminate the natives; and having accordingly attacked the savages unawares, they inhumanly put to death the women and children, as well as the men; burning all their boats and canoes, to cut off all communication between the few survivors and the neighbouring islands. Notwithstanding all these barbarous precautions, however, the Caribbeans proved the irreconcilable enemies of the French; and their frequent insurrections at last obliged Parquet to sell all his property in the island to the Count de Cerillac in 1653. The new proprietor, who purchased Parquet's property for 30,000 crowns, sent thither a person of brutal manners to govern the island. He behaved with such insupportable tyranny, that most of the colonists retired to Martinico; and the few who remained condemned him to death after a formal trial. In the whole court of justice that tried this miscreant, there was only one man (called *Archangel*) who could write. A farrier was the person who impeached: and he, instead of the signatures, sealed with a horse-shoe; and Archangel, who performed the office of clerk, wrote round in these words in French, "Mark of M. de la Brie, counsel for the court." It was apprehended that the court of France would not ratify a sentence, given with such unusual formalities; and therefore most of the judges of the governor's crimes, and witnesses of his execution, disappeared. Only those remained whose obscurity

screened them from the pursuit of an estimate, taken in 1700, there were no more than 251 white people, 55 or mulattoes, and 525 slaves. They were reduced to 64 horses and 569. The whole culture consisted of 300 sugar and 51 of indigo.—The island in 1664 to the French West India 100,000 livres. This unfavourable was changed in 1714, owing to the condition of Martinico. The rich that island were sent to the Spanish their way touched at Grenada to the ments. The privateering traders took this navigation, taught the island the value of their soil, which cultivation. Some traders furnished tants with slaves and utensils to plantations. An open account was between the two colonies. Grenada its debts gradually by its rich produce balance was on the point of being the war in 1744 interrupted the between the two islands, and progress of the sugar plantations. supplied by the culture of coffee, suffered during the hostilities with necessity. The peace of 1748 revived and opened all the former sources of 1753, the population of Grenada was white people, 175 free negroes, and The cattle amounted to 2968 horns, 2456 horned cattle, 3278 sheep, 331 hogs. The cultivation rose to plantations, 1,725,600 coffee trees, 171 trees, and 800 cotton plants. It consisted of 5,740,450 trenches of coffee banana trees, and 243 squares of yams. The colony made a rapid proportion to the excellence of its 1762 the island was taken by the British one of the mountains at the George's harbour was strongly fortified have made a good defence, but sent out firing a gun; and by the treaty 1763 the island was ceded to British cession, and the management of the that event, the Abbe Raynal has the marks.—"This long train of evils," on and mismanagement of his count thrown Grenada into the hands of who are in possession of this conquest of 1763.—England has not made a ginning. and out troops, and to shed blood. The colony was filled with suspicions. The persons who had laid themselves under a necessity of using violent methods, were afraid of being massacred in their own plantations. They have declined, or been totally interrupted. Quietness has at length been restored. The number of slaves has been increased as far as possible, and the produce has been raised to the level of what it was under the French government. The plantations will still be improved by the neighbourhood of a dozen of islands, called *GRENADILLOES*, that are dependant on the island. (See that article.) In 1779, the conquest of this island was accomplished by D'Estaing, French admiral. Immediately after his conquest of St Lucia, being reinforced by a Squadron of M. de la Motte, he set sail for Grenada with a fleet of 26 sail of the line and 12 frigates, on board 10,000 land forces. Here he arrived on the 2d of July; and landed 3000 troops, Irish, being part of the brigade composed of Irish in the service of France. They were conducted by Count Dillon, who directed them in such a manner as to surround the fort and harbour. To oppose these, Lord M'Cartney, the governor, had only about 150 men, and 300 or 400 armed inhabitants; but all resistance was evidently vain, he determined nevertheless to make an honourable and brave defence. The preparations he made were such as induced D'Estaing himself to be present at the attack; and, even with his vast superiority of force, the first attack on the entrenchments was unsuccessful. The 2d continued two days, when the garrison were obliged to yield to the immense disparity of numbers who assaulted them, after having killed or wounded 300 of the antagonists. Having thus made themselves masters of the intrenchments on the hill, they then turned the cannon of them towards the town which lay under it; on which the governor offered a capitulation. The terms, however, were so extraordinary and unprecedented, that the governor and inhabitants agreed in rejecting them; and determined rather to surrender upon any conditions, than upon those which were offered so extravagant. On this occasion D'Estaing is said to have behaved in a very haughty and arrogant manner; indulging his soldiers also in the unwarrantable liberties, and in which they had proceeded much farther, had they not been restrained by the Irish troops in the French service. In the mean time admiral Byron, who had been convoying the homeward bound West India fleet, hastened to St Vincent, in hopes of recovering it; but being informed, by the way, that a descent had been made at Grenada, he changed his course, hoping that Lord M'Cartney would be able to hold out till his arrival. On the 6th of July he came in sight of the French fleet; without regarding D'Estaing's superiority of ships of the line and as many frigates, determined if possible to force him to a close engagement. The French commander, however, was not confident of his own prowess as to run the risk of an encounter of this kind; and having already

achieved his conquest, had no other view than to preserve it. His designs were facilitated by the good condition of his fleet; which, being more lately come out of port than that of the British, sailed faster, so that he was thus enabled to keep at what distance he pleased. The engagement began about eight in the morning, when admiral Barrington with his own and two other ships got up to the van of the enemy, which they attacked with the greatest spirit. As the other ships of his division, however, were not able to get up to his assistance, these three ships were necessarily obliged to encounter a vast superiority, and of consequence suffered exceedingly. The battle was carried on from beginning to end in the same unequal manner; nor were the British commanders, with their utmost efforts, able to bring the French to a close engagement. Thus captains Collingwood, Edwards, and Cornwallis, stood the fire of the whole French fleet for some time. Captain Farthaw of the Monmouth, a 64 gun ship, threw himself singly in the way of the enemy's van; and admiral Rowley and captain Butchart fought at the same disadvantage: so that finding it impossible to continue the engagement with any probability of success, a general cessation of firing took place about noon. It recommenced in the same manner about 3 P. M. and lasted, with different interruptions, till evening. During this action some of the British ships had forced their way into St George's harbour, not imagining that the enemy were already in possession of the island. They were soon undeceived, however, by perceiving the French colours flying ashore, and the guns and batteries firing at them. This discovery put an end to the design which had brought on the engagement; and as it was now high time to think of providing for the safety of the British transports, which were in danger from the number of the enemy's frigates, the engagement was finally discontinued. During this action some of admiral Byron's ships had suffered extremely. The *Lion* of 64 guns, captain Cornwallis, was found incapable of rejoining the fleet which were plying to windward; and was therefore obliged to bear away alone before the wind. Two other ships lay far astern in a very distressed situation; but no attempt was made to take them, nor did the French admiral show the least inclination to renew the engagement. Grenada was restored to Great Britain by the peace in 1783. George's town, or St George's, is the residence of the governor; and the governor, gen. Matthew, made a proclamation to the citizens of a clock and bells in 1780. The garrison then consisted of artillery, two regiments of Europeans, and one of blacks. As there are several small islands subject to the laws enacted in Grenada, they each elect a person to represent them in the general assembly, which is always held in St George's. As none of the Grenadines have a harbour fit for large vessels, the produce of them is conveyed in small vessels to St George's, from whence it is exported to the different parts of Europe, Africa, America, &c. From the number of vessels that arrive there yearly from different places, and from its being the seat of the Legislature, it has become so populous, that two news papers are published in it. Although the

the peace of 1763, all the French inhabitants who inclined to remain in the island, became invested with the privileges of British subjects; and although these privileges were confirmed in 1768, yet the treatment which they experienced from the British settlers, proved to be extremely oppressive, that they at last broke out into a formidable insurrection. On the 21 March 1795, the old French inhabitants, being joined by the mulattoes under Fedon, seized the towns of Grenville and Gouyave, plundered the former, murdered 11 of the English inhabitants, and took the rest prisoners. On the 31b. 150 troops were sent against the rebels, but were obliged to retreat. The most barbarous massacres now took place on both sides; and gen. Lindley, finding himself unable to quell the insurrection, put an end to his own life. On the 16th April, gen. N. Chiles, arriving from Martinico, assumed the command, and various engagements took place, wherein sometimes the insurgents and sometimes the British had the advantage. In this distracted state the island continued till Dec. 1795, when the British landed a body of troops, who joined the rebels, and reduced great part of the island, but on the 15th June 1796, the French commander, M. J. St. Y., surrendered all the French posts by agreement to the British under gen. Abercrombie; and Fedon and his associates escaped into the woods, after having murdered all their prisoners. The British obtained complete possession on the 17th June; since which tranquillity has been restored. Lon. 61 40. W. Lat. 12. 0. N.

(2.—3.) *GRANADA*. See *GRANADA*.

(1.) *GRÉNADE*, a town of France, in the dept. of Landes, 7 miles E. of St Sever.

(2.) *GRÉNADE*, a town of France, in the dept. of Upper Garonne, 12 miles NNE. of Toulouse.

(3.) * *GRANADE*, *n. f.* [from *ponum granatum*, Lat.] A little hollow globe or ball of iron, or other metal, about two inches and a half in diameter, which, being filled with fine powder, is set on fire by means of a small fusée fastened to the touch-hole; as soon as it is kindled, the case flies into many shatters, much to the damage of all that stand near. *Horris*.

(4.) *GRÉNADES*, or *GRÉNADES*, are thrown by the grenadiers into those places where the men stand thick, particularly into trenches and other lodgements made by the enemy. They were invented about 1694. The author of *the Military Dictionary* has the following remark on the use of grenades: "Grenades have unaccountably sunk into disuse, but I am persuaded there is nothing more proper than to have grenades to throw among the enemy who have jumped into the ditch. During the siege of Cassel, under Count de La Lippe, in the campaign of 1762, a young engineer undertook to carry one of the outworks with a much smaller detachment than one which had been repulsed, and succeeded with ease from the use of grenades; which is a proof that they should not be neglected, either in the attack or defence of posts." The word *GRANADO* takes its rise from hence, that the shell is filled with grains of powder as a pomegranate is with kernels.

(1.) * *GRÉNADIER*, *n. f.* [grenadier, French, from *grenade*.] A tail foot soldier, of whom there

is one company in every regiment: each is employed to throw grenades—

Peace alays the shepherd's fear

Of wearing cap of *grenade* or.

(2.) *GRANADIER* are armed with firelock, a bayonet, and a pouldrussade. They wear a cap, are the tallest and bravest fellows, and are always upon all attacks. Every battalion has generally a company of them; and the grenadiers belong to each company, of which, on division, are drawn out a company of themselves. These are the right of the battalion.

GRÉNAILLE, a name given by writers to a preparation of copper, of Chinese use as a red colour in some china, particularly for that colour which is *oil-red* or *red in oil*. The china with this is very dear. The manner in which to procure the preparation is thus: The Chinese no such thing as silver coined, they use in commerce bars or masses; these they pay and receive in large bars among a nation so full of fraud as the Chinese is no wonder that these are often adulterated with too great an alloy of copper. They pay ever, in this state in common payments, some occasions, however, such as the taxes and contributions, on which they require their silver pure and fine: on such occasions they have recourse to people, whose business it is to refine the silver, and separate it from the lead it contains. Thus they do it in furnaces for the purpose, and with very convenience. While the copper is in fusion, they take a brush, and dip the end of it in water; then, with the handle of the brush, they sprinkle it by degrees upon the melted copper; a little scale forms itself by this means on the surface of the matter, which they take off while the pincers of iron, and immediately throw it into a large vessel of cold water, it forms a powder which is called the *grénaille*; and the operation every time they intend to separate the copper; and this furnishes them as much *grénaille* as they have occasion for.

GRÉNAN, Benignus, professor of law at Harcourt, was born at Noyers, in Burgundy, 1681. He was the intimate friend of Voltaire, but his rival in poetry and eloquence.

oems in a pure stile, and his sentiments are it. He died at Paris in 1723.

NANT, a town of France, in the dept. of Marne, 10 miles S.E. of Langres.

NCHEN, a town of the Helvetic republic, Valais, 25 miles E. of Sion.

NOBLE, a large, populous, and ancient France, in the dept. of Here, and ci-devant of Dauphiny, anciently called **ACCUSI COLONIA**. See that article. It contains number of handsome structures, particularly arches and ci-devant convents. The leather goods made here are highly esteemed. It is on the Here, over which there are 2 bridges into a large street on the other side of the Lon. 5. 49. E. Lat 45. 12. N.

NVILLE, the capital of the island of Gre. It was plundered, and putly burnt by the regents, on the 2d March 1795. See **GRE** N° 1.

PPIN, a town of Germany, in the electo-Saxony, 2 miles NNW of Bitterfeld.

S, CAPE AU, a promontory of N. America, the E. side of the Mississippi, in the North Territory.

SHAM, Sir Thomas, an opulent merchant of London, descended from an ancient family of Norfolk. He was born in 1519. His father's king's agent at Antwerp, for taking up of the merchants. Being appointed to the office, he, in 1551, removed to that city with his family. This employment was suspended on the accession of Q. Mary, but, on proper retraction, was restored to him again. Q. Elizabeth knighted him, and made him her agent in parts. About this time, he built a large house on the W. side of Bishopsgate Street, named **GRESHAM COLLEGE**. His father had intended building a house or exchange for the merchants to meet in, instead of walking in the open street, but Sir Thomas went beyond his father's intention, and if the citizens would provide a proper piece of ground, to build a house at his own expense, which being accepted, he fulfilled his proper the plan of the exchange at Antwerp. On the 29th of Jan. 1570, when the new edifice was finished, the queen came and dined with the merchants; and caused a herald with a trumpet to proclaim it by the name of the *Royal Exchange*. In consequence also of a promise to endow a college for the profession of the seven liberal sciences, he made a testamentary disposition of his house in part for that purpose. See **COLLEGE**, § II. He left several other benefactions, and died in 1579. He had a mind every way suited to fortune, generous and benign: ready to do good actions, and encourage them in others. He was a great friend and patron of the learned martyrologist, John Fox. He was well acquainted with the ancient and several modern languages; he had a very comprehensive knowledge of all affairs relating to commerce, foreign and domestic; and his success was equal to it, he seemed the highest commoner in England, in his time. He transacted queen Elizabeth's mercantile affairs so constantly, that he was called *merchant*; and his house was sometimes

appointed for the reception of foreign princes upon their first arrival in London.

GRESHAM COLLEGE. See **COLLEGE**, § II N° 1.

GREVENSTEIN, a town of Germany, in the circle of the Lower Rhine, and duchy of Westphalia, 16 miles W. of Brilon.

GREVERAD, a town of Germany, in the circle of Westphalia, and duchy of Berg, 1 mile N. W. of Solingen.

GREVILLE, Fulke, lord Brook, a poet and miscellaneous writer, born in 1554, and descended from the noble families of Beauchamps of Powick and Willoughby de Brook. In company with his cousin Sir Philip Sidney, he began his education at a school in Shrewsbury: thence he went to Oxford, and afterwards to Cambridge. He next visited foreign courts, and thus added to his knowledge of the ancient languages a perfect knowledge of the modern. On his return to England, he was introduced to Q. Elizabeth by his uncle Robert Greville; and by means of Sir Henry Sidney, lord president of Wales, was nominated to some lucrative employments in that principality. In 1581, when the French commissioners, who came to treat about the queen's marriage with the duke of Anjou, were entertained with tilts and tournaments, Mr Greville, who was one of the challengers, so signalized himself, as to "win the reputation of a most valiant knight." He continued a constant attendant at court, and a favourite with the queen to the end of her reign; during which he obtained the office of treasurer of marine causes, a grant of the manor of Wedgnoek, and the honour of knighthood. In her reign he was several times elected M. P. for Warwickshire, and from the journals seems to have been a man of business, as his name often appears in committees. On the accession of K. James I. he was installed knight of the Bath; and soon after obtained a grant of the ruinous castles of Warwick, which he repaired at a considerable expence. In

1624, he was made under-treasurer, chancellor of the exchequer, one of the privy council, and gentleman of the bed-chamber; and in 1620, he was raised to the dignity of baron. He was also privy counsellor to K. Charles I. in the beginning of whose reign, he founded a history lecture in Cambridge. Having thus attained the age of 74, thro' a life of continued prosperity, universally admired as a gentleman and a scholar, he fell by the hands of an assassin, one of his own domestics, who immediately stabbed himself with the same weapon with which he had murdered his master. This fellow's name was Haywood; and the cause is said to have been a severe reprimand, for his presumption in upbraiding his master for not providing for him after his death. He had been witness to lord Brook's will, and knew the contents. Some say he stabbed him with a knife in the back, others with a sword. This affair happened at Brook-house, in Holborne. Lord Brook was buried with great pomp in St Mary's church at Wewick, in his own vault, over which he had erected a monument of black and white marble, ordering at his death the following inscription to be engraven upon the tomb: "Fulke Greville, servant to Q. Elizabeth, counsellor to K. James, and friend to Sir Philip Sidney. *Trophæum Peccati.*" He wrote several works in verse and prose, among which are, 1. Two tragedies, *Alaham* and *Mulapha*. 2. A Treatise of Human Learning, &c. in verse, folio. 3. The Life of Sir Philip Sidney. 4. An Inquisition upon Fame and Honour, in 86 Sonnets. 5. *Serilia*, a collection of 109 songs. 6. His Remains, consisting of political and philosophical poems.

GREVILLERS, a town of France, in the dept. of the Straits of Calais, near 2 miles W. of Bapaume.

GREVILLUS. See GRÆVUS.

GREUSSN, a town of Upper Saxony, in Schwartzburg, 16 miles N. of Erfurt.

* GREUT. *n. f.* A kind of fossil body.—A sort of tin ore with its *greut*; that is, a congeries of crystals, or sparks of spar, of the bigness of hay salt, and of a brown shining colour immersed therein. *Grew's Museum.*

(1.) GREW, Nehemiah, a learned English writer, of the 17th century, who had a considerable practice as a physician in London, and succeeded Mr Oldenburgh in the office of secretary to the Royal Society. In this capacity, pursuant to an order of council, he drew up a catalogue of the natural and artificial rarities belonging to the society, under the title of *Museum Regalis Societatis*, &c. 1681. He also wrote, besides several pieces in the Philosophical Transactions, 1. The Comparative Anatomy of the Stomach and Guts, fol. 2. The Anatomy of Plants, fol. 3. *Traктатъ de falsi Cathartici natura et usu.* 4. *Cosmologia Sacra*, or a Discourse of the Universe as it is the Creature and Kingdom of God, folio. He died suddenly in 1721.

(2.) * GREW. The preterite of *grow*.—

The pleasant talk he fails not to renew;

Soft and more fresh ev'ry touch it *grew*. *Dryd.*

GREWFSMEHLN, or a town of Mecklenburg, 14 miles W. of Wismar.

GREWIA, in botany, a genus of the *dria* order, belonging to the *gynandria* plants; and in the natural method ranking the 17th order, *Columifera*. The calyx is taphyllous; there are 5 petals, each with a slender scale at the base; the berry is singular. There are two species, &c.

1. GREWIA AFRICANA, with oval serrated leaves, is a native of Senegal, from whence its seeds were brought by Mr. Linn. In this country it rises with a stem 5 or 6 feet high, sending out many lateral branches with a brown hairy bark, and lanceolate spear-shaped serrated leaves; but the plant does not flower in Britain. This species it must be kept constantly in a warm place. In summer, they require a large dose of air, and should have water three or four times a week in warm weather; but in winter they should be sparingly watered. The negroes highly value a decoction of the bark, and a never failing remedy against venereal disease.

2. GREWIA OCCIDENTALIS, with oval leaves. It is a native of the Cape of Good Hope, and grows to the height of 10 or 12 feet. Its stem and branches greatly resemble the small leaved elm, the bark being smooth and of the same colour with that when young. The leaves are also very like those of the elm, and fall off in autumn. The flowers are produced along the young branches from the axils of the leaves, and are of a bright purple colour. This species, though a native of a warm climate, bears the open air in this country; only to be sheltered in a green-house during winter, and may be propagated by cuttings or layers in pots filled with soft loamy earth.

(1.) * GREY. *adj.* [grey, French. *gris*, properly written *gray*.] See GRAY.—The Russian, Sir, while life I spared at suit of beard *Shak. King Lear*—

Our green youth copies what grey is.

When venerable age commends the fo

(2.) GREY, Lady Jane, a most illustrious and unfortunate lady, descended of the blood of England by both parents, was the eldest daughter of Henry Grey marquis of Dorset, and the daughter of Charles Brandon lord St. Mary the dowager of Lewis XII. king of France, who was the youngest daughter of Henry VIII. king of England. She was born in 1537, at her father's seat in Leicester. She covered an early propensity to all kinds of literature; and having a fine genius, improved the tuition of Mr. Elmer, she made a wonderful progress in the languages, arts, and sciences. She understood perfectly both kinds of philosophy, and could express herself very properly in Latin and Greek; and Sir Thomas Chaloner (in *Memorials*, Vol. III. p. 93.) says, that she was well versed in Hebrew, Chaldean, Arabic, and Italian. He adds, that "she played on the lute, and was a curious hand at the needle;" and that she adorned her musical instruments with a variety of sweet, assisted by all the graces which could bestow. In 1553, the duke of

Northumberland, who were now, after the fall of Somerset, arrived at the height of power, began on the decline of king Edward's health, to think how to prevent that reverse of fortune which, as things then stood, they foresaw must happen upon his death. To obtain this end, no other remedy was judged sufficient but a change in the succession of the crown, and transferring it into their own families, by rendering Lady Jane Grey. Those most excellent and amiable qualities, which had rendered her dear to all who had the happiness to know her, joined to her near affinity to the king, subjected her to become the chief tool of an ambition not her own. With this view she was married to lord Guildford Dudley, 4th son of the duke of Northumberland, without discovering to her the real design of the match; which was celebrated with great pomp in the end of May; and was so much to the king's satisfaction, that he contributed bounteously to the expense of it from the royal wardrobe. Edward VI. died in July following; and Lady Jane, with infinite reluctance, overpowered by the solicitations of her ambitious friends, allowed herself to be proclaimed queen of England, on the strength of a deed extorted from that prince by her father-in-law the duke of Northumberland, which set aside the succession of queen Mary, queen Elizabeth, and Mary queen of Scots. Her regal pageantry continued but a few days. Queen Mary's hereditary right prevailed; and the unfortunate Lady Jane Grey and her husband were committed to the Tower, and on the 13th Nov. arraigned and found guilty of high treason. On the 12th February following they were both beheaded on Tower hill. Her magnanimity in this dreadful scene was astonishing. Immediately before her execution, she addressed herself to the weeping multitude with amazing composure and coherency; and died in charity with that wretched world which she had so much reason to execrate. Thus did the pious Mary begin her reign with the murder of an innocent young creature of 18; who for simplicity of manners, purity of heart, and extensive learning, was hardly ever equalled in any age or country. But, alas! Jane was an obstinate heretic! Fleckenham, Mary's chaplain, visited her in the tower and tried to convert her to the catholic faith, but found her by far his superior in argument. Her writings are, 1. Four Latin Epistles; three to Bullenger, and one to her sister lady Catharine. The last was written the night before her execution, in a blank leaf of a Greek Testament: a circumstance which seems to have led Dr Watkins, in his *Biog. Diſt.* to say, it was written "in the Greek language." These letters are printed in a work entitled *Epistolæ Helveticæ Reformatoribus, vel ad eos scriptæ*, &c. Tiguri, 1742, 8vo. 2. Her Conference with Fleckenham. *Ballard.* 3. A letter to Dr Harding, her father's chaplain. Printed in the *Phoenix*, vol. ii. p. 28. 4. A Prayer for her own use during her confinement. In Fox's *Acts and Monuments.* 5. Four Latin verses; written in prison with a pin. They are as follows:

*Non aliena putes, homini quæ obtingere possunt:
Sors hodierna mihi, tunc erit illa tibi.*

Jane Dudley.

Deo juvante, nil nocet livor malus:

Et non juvante, nil juvat labor gravis.

Post tenebras spero lucem.

6. Her Speech on the Scaffold. *Ballard.* It began thus: "My Lords, and you good Christians, people who come to see me die; I am under law, and by that law, as a never erring judge, am condemned to die: not for any thing I have offended the queen's majesty; for I will wash my hands guiltless thereof, and deliver to my God my soul as pure from such trespass as innocence from injustice; but only for that I consented to that thing I was enforced unto, constraint making the law believe I did that which I never understood. &c.—Hollinghed, Sir Richard Baker, Bale, and Fox, tell us that she wrote several other things, but do not mention where they are to be found."

(3.) GREY, Richard, D. D. a learned English divine, born in 1693, and educated at Oxford, where he took the degree of M. A. in 1719. He obtained the rectories of Kilncote in Leicestershire and Hindon in Northamptonshire, with other benefices. He published many sermons and religious tracts; besides the following: 1. *Memoria Technica*, or a New Method of Artificial Memory; which the first edition was printed in 1730, and the 4th in 1756: 2. *A System of English Ecclesiastical Law*, 8vo, 1741: 3. *The miserable and distracted State of Religion in England, upon the Downfall of the Church established*; 8vo, 1736: 4. *A new and easy Method of Learning Hebrew without points*; 1738: 5. *Historia Josephi*, and 6. *Paradoxmata Verborum*, 1739: 7. *Liber Jobi*, 1741: 8. *Answer to Warburton's Remarks*, 1744: 9. *Novæ Methodus Hebraicæ discendi*, &c. 1751: and 10. A Translation of Mr H. Browne's poem, *Animi immortalitate*. He was married; and died Feb. 28, 1771, aged 78, leaving several daughters.

(4.) GREY, Zachary, LL. D. an English divine, born in 1687. He studied and graduated at Cambridge. He was vicar of St Giles's and St Peter's in Cambridge, and was author of about 30 different works; particularly *An Answer to Neal's History of the Puritans*; 3 vols 8vo. His edition of *Hudibras*, 1744, was satirized by Warburton and Henry Fielding. He died in 1766, aged 79.

GREY FRIARS. See FRANCISCANS.

(1.) * GREY-HOUND. *n. f.* [*grigbund*, Saxon] A tall fleet dog that chafes in light.—First may trusty greyhound transform himself into a tyger. *Sidney.*—

So, on the downs we see, near Wilton fair
A haſt'ned hare from greedy greyhounds go.

Sidney.

Th' impatient greyhound, ſlipt from his
Bounds o'er the glebe to catch the fearful hare.

Dryden.

(2.) GREY-HOUND. See CANIS, § I, vi. N° 7; and (2.) 11, 23. Among a litter of grey-hound puppies, the best are always those which are lightest. These will make the nimblest dogs as they grow up. The grey-hound is best for open countries where there is little covert. In these places there will sometimes be a course after a hare two or three miles or more, and both the dog and the game in sight all the while. It is generally supposed that the grey-hound bitch will be

the dog in running: but this seems to be an error; for the dog is both longer made, and considerably stronger, than the bitch of the same kind. In breeding their dogs, the bitch is principally to be regarded; for it is found by experience, that the best dog and a bad bitch will not get so good puppies, as an indifferent dog with a good bitch. The dog and bitch should be as nearly as possible of the same age; and for breeding perfect dogs, they should not be more than 4 years old. An old bitch may be used with a young dog, but the puppies of a young bitch and an old dog will never be good for any thing. The general food for a grey-hound is chippings or raspings of bread, with soft bones and gristles; and those chippings ought always to be soaked in beef or mutton broth. The proper exercise is courting him 3 times a-week, and rewarding him with blood; which will animate him in the highest degree, and encourage him to prosecute his game. But the hare also should always have fair play. She should have the *down*, as it is called; that is, have leave to run about 12 score yards before the dog is slipped at her, that he may have some difficulty in the course, and not pick up the game too easily. If he kills the hare, he must never be suffered to tear her; but she must be taken from him, his mouth cleaned of the wool, and the liver and lights given him by way of encouragement. Then he is to be led home, and his feet washed with butter and beer, and about an hour after he is to be fed. When the dog is to be taken out to course, he should have nothing in the morning but a toast and butter, and then he is to be kennelled till taken out to the field. The kennelling these dogs is of great use, always giving them spirit and nimbleness when they are let loose. The best way of managing a fine grey-hound is, never to let him stir out of the kennel, except when feeding, walking, or courting.

GREYLACH, a town of Germany in Carniola, 8 miles N. of Radolfswert.

GREY LEAGUE. See GRISONS.

GREVS AU, a town of Silesia, in Nieße.

GREZ, or GREZ EN BOUSRE, a town of France, in the department of Maine, $7\frac{1}{2}$ miles ENE. of Chateau Gontier.

GREZELS, a town of France in the dep. of Lot, 8 miles N. of Moncuq.

GREZZANA, or } a town of the Veronese, in

GREZZANO, { Maritime Austria, according to the division of that province between the emperor and the Cisalpine republic, made by the treaty of Campo Formio, in 1797: but by the late conquest of the Veronese, by the French and Cisalpines under Gen. Brune in Dec. 1800, and subsequent annexation of the whole province, it is now in the Cisalpine republic. This town is 12 miles N. of Verona, and 2 of Breonio; and is seated near the *Bridge of Beja*, a remarkable bridge formed by Nature, which connects two hills together. Its arch is 10 Veronese feet broad, and no less than 114 feet high.

GRIAS, in botany: A genus of the monogynia order, belonging to the polyandria class of plants; and in the natural method ranking with those of which the order is doubtful. The corolla is tetrapetalous; the calyx quadrifid; the stigma sessile and cruciform; the fruit is a plum with an eight-furrowed kernel. There is but one species, viz.

GRIAS CAULIFLORA, the anchovy-tree, a native of Jamaica. The leaves are nearly oval, and about three feet long. It has a stringy bark, upon the upper part of which come forth the canes. The fruit is large, and contains a stone with 8 furrows. These fruits are eaten by the inhabitants.

GRIAZNUCHA, a town of Russia in the gov. of Saratov, 40 miles SSW. of Saratov.

GRIAZOVE FZ, a town of Russia in the gov. of Vologda, Lon. 58. 10. E. of Ferro. Lat. 51. 28. N.

GRIBALDUS, Matthew, a learned man of Padua, who left Italy in the 16th century, in order to make a public profession of the Protestant religion. After having been for some time possessed of the civil law at Tubingen, he was obliged to it, having imbibed some doubts respecting the doctrine of the Trinity: but he was seized at Basel, where he would have met with very severe treatment, had he not pretended to renounce his opinions; but as he relapsed again, he would certainly have been put to death, had he not died of a plague in 1664. He wrote *De methodo a studenti in juri civili*; and several other works which are esteemed.

GRIBNER, Michael Henry, a learned man of Germany, born at Leipzig in 1681. After spending some time in the Journal of Leipzig, he made professor of law at Wittenberg, whence he passed to Dresden, and was at last recalled to Leipzig to succeed M. Mencke. He died in 1751. Besides several academical dissertations, he wrote 1. *Principia processus judicarii*; 2. *Principia juris prudentiae naturalis*, a small work much esteemed; 3. *Opuscula juris publici et privati*.

GRICANE, a town of European Turkey, in Moldavia, 20 miles N. of Jassi.

* GRICE. *n. f.* 1. A little pig. *Could mean* 2. A step or greze.—

No, not a *grice*!

This is a step to love. *Shak. Twelfth Night*

* To GRIDE. *v. n.* [*gridar*, Ital.] To cut to make way by cutting. A word elegant, but not in use.—

His poignant spear hath thrust with puissant force,
That through his thigh the mortal steel did *gride*.
Spenser

So fore

The *griding* sword, with discontinuous wound,
Pass'd through him! *Milton's Paradise Lost*

* GRIDELIN. *adj.* A colour mixed of white and red.—

The ladies dress'd in rich *symars* were set,
Of Florence satten, flower'd with white and green,
And for a shade betwixt the bloomy *gridelin*.

Dryden's Fables

* GRIDIRON. *n. f.* [*grind*, Mianick, a grate, and *iron*.] A portable grate on which meat is laid to be broiled upon the fire.—He had added two bars to the *gridiron*. *Spektator*.

(1.) * GRIEF. *n. f.* [from *grieve*; *griff*, Wel, probably from the English.] 1. Sorrow; trouble for something past.—

I will instruct my sorrows to be proud;
For *grief* is proud, and makes his owner stout.

Shak.

—Wringing of the hands, knocking the breast, *are* but

emonies of sorrow, the pomp and of an effeminate *grief*, which speak not the greatness of the misery as the small-mind. *South.*—The mother was so affected by the loss of a fine boy, who was her only child, that she died for *grief* of it. *Addison.* 2. *Grief*. [*Grief*, Fr.] Not in use.—*Shak.* anxious for redress of all these *griefs*, will set this foot of mine as far as goes farthest.

The king hath sent to know the nature of your *griefs*, and whereupon the injury from the breach of civil peace should hostility? *Shak. Henry IV.* disease. Obsolete.

IEP. The influence of this passion on the body is very great. Its effects resemble in some respects those of fear, with, however, some difference owing perhaps to its being in general of longer duration. Grief diminishes the bodily heat, and particularly the force of the pulse and circulation; as appears by the frequent sighs and deep respirations which attend it, and is not to be necessary exertions, in order to the passage of the blood through the vessels, it diminishes perspiration, obstructs the discharge, produces paleness of the skin, various complaints, and scirrhus of the parts. It aggravates the scurvy, and the variety of putrid and contagious distempers; as people more apt to receive the infection. When it comes on suddenly, and to a great degree, it causes a palpitation of the heart, and renders the pulse irregular. Blindness, and sudden death, have followed the violence of this sensation. Its effects of changing the colour of the hair are well known. Opiates, and warm liquors, are good cordials in this case.

GRAM. in botany; a genus of the pentamerous class, belonging to the decandria class of plants. The calyx is quinquefid; there are 5 perianth-filaments persisting; and 5 monospermous seeds.

GRAUENSTEIN, a town of Germany, in Austria, NE. of Steyregg.

GRABACH, a town of Austria, 2 miles N. of Vienna.

GRABURG, a town of Germany in Stiria.

GRABACH, a town of Germany, in Austria, NE. of Waidhofen.

GRABHEL, a fort of Germany, in Stiria.

GRACE, Constantia, a native of the county of Kerry in Ireland, was one of the most famous women on record, though she was born poor, and died at the age of 27, in which she was an excellent Greek and Latin scholar, and understood history, divinity, philosophy and mathematics. She proved her skill in her dedication of the Dublin edition of the works of lord Carteret, and by that of Terence; to whom she also addressed a Greek epistle. She wrote many elegant English poems, which were inserted by Mrs Barber at her own request. When lord Carteret was lord of Ireland, he obtained a patent for Mr Grace to be the king's printer; and to reward the uncommon merit of his wife, caused her life to be published in it.

GRIESBACH, a town of Germany, in Lower Bavaria, 14 miles W. of Passau.

GRIESKIRCHEN, a town of Austria, 6 miles SW. of Efferding, and 104 W. of Vienna.

GRIET, a town of the French republic, in the dep. of the Roer, and ci-devant duchy of Cleves, 4 miles E. of Cleves.

* *GRIEVANCE*. *n. s.* [from *grief*.] 1. A state of uneasiness. Out of use. 2. The cause of uneasiness. Used of such causes as are the effects of human conduct.—What remedy can be found against *grievances*, but to bring religion into countenance, and encourage those who, from the hope of future reward, and dread of future punishment, will be moved to justice and integrity? *Swift.*

(1.) * *To GRIEVE*. *v. a.* [*greuer*, French; *griever*, Flemish; *gravis*, Latin.] 1. To afflict; to hurt.—For he doth not afflict willingly, nor *grieve* the children of men. *Luke* iii. 33.—Forty years long was I *grieved* with this generation. *Psalms*.—It repented the Lord that he had made man on the earth, and it *grieved* him at his heart. *Gen.* vi. 6.—

Griev'd at the thought, he vow'd his whole endeavour

Should be to close those breaches. *Rowe.*

2. To make sorrowful.—When one man kills another, thinking that he killeth a wild beast; if the same man remembreth afterwards what he hath done, and is not *grieved* for the fact, in this case he hath sinned; because his not grieving is offensive unto God, though the fact were merely besides his will. *Perkins.*

(2.) * *To GRIEVE*. *v. n.* To be in pain for something past; to mourn; to sorrow, as for the death of friends. It has sometimes *at* and sometimes *for* before the cause of grief: perhaps *at* is proper before our misfortunes, and *for* before our faults.—Do not you *grieve at* this. *Shak.*—

How didst thou *grieve* then, Adam, to behold The end of all thy offspring, end so sad? *Milton.*

With equal mind what happens let us bear; Nor joy nor *grieve* too much for things beyond our care. *Dryden.*

* *GRIEVINGLY*. *adv.* [from *grieve*.] In sorrow; sorrowfully.—

Grievingly, I think,

The peace between the French and us not values The cost that did conclude it. *Shak.*

* *GRIEVOUS*. *adj.* [*gravis*, Latin; or from *To grieve*.] 1. Afflictive; painful; hard to be born.—To the flesh, as the apostle himself granteth, all affliction is naturally *grievous*. *Hooker*—Correction is *grievous* unto him that forsaketh the way, and he that hateth reproof shall die. *Prov.* xv. 10. 2. Such as causes sorrow.—To own a great but *grievous* truth, though they quicken and sharpen the invention, they corrupt the temper. *Watts.* 3. Expressing a great degree of uneasiness.—He durst not disobey, but sent *grievous* complaints to the parliament of the usage he was forced to submit to. *Clarendon.* 4. Atrocious; heavy.—

It was a *grievous* fault,

And grievously hath Cæsar answer'd it. *Shak.*—Crying sins I call those, which are so heinous, and in their kind so *grievous*, that they hasten God's judgments and call down for speedy ven-

grance upon the sinner. *Perkins*. 5. Sometimes used adverbially in low language.—

He cannot come, my lord; he's grievous sick. *Shak.*

* **GRIEVOUSLY**, *adv.* [from *grievous*.] 1. Painfully; with pain.—

Wide was the wound, and a large lukewarm flood,

Red as the rose, thence gushed grievously. *Spens.*
2. With discontent; with ill-will.—Gritus perceiving how grievously the matter was taken, with the danger he was in, began to doubt. *Knolles*. 3. Calamitously; miserably.—I see how a number of souls are, for want of right information, oftentimes grievously vexed. *Hooker*. 4. Vexatiously; to a great degree of uneasiness.—Houses built in plains are apt to be grievously annoyed with mire and dirt. *Ray*.

* **GRIEVOUSNESS**, *n. f.* [from *grievous*.] Sorrow; pain; calamity.—They fled from the swords, from the drawn sword, and from the bent bow, and from the grievousness of war. *Isaiah* xxi. 25.

GRIFALCO, 2 towns of Naples; viz. 1. in Calabria Ultra, 4 miles N. of Squillace: 2. in Otranto, 17 miles SE. of Otranto.

GRIFFB, a fort of Maritime Austria, in Dalmatia, near Spalatro.

GRIFFEN, a town of Germany, in Carinthia, 4 miles N. of Wolckenmark.

GRIFFENHAKEN, a town of Prussian Pomerania, in the duchy of Stettin, on the Oder. Lon. 54. 42. E. Lat. 53. 25. N.

(1.) * **GRIFFIN**. *n. f.* [This should rather (1.) * **GRIFFON**.] *n. f.* [This should rather be written *gryphon*, or *gryphon*; *gryps*, *gryph*; but it is generally written *griffon*.] A fabled animal said to be generated between the lion and eagle, and to have the head and paws of the lion, and the wings of the eagle.—Of all bearings among these winged creatures, the griffin is the most ancient. *Prædium*—Arctæus, a poet of Proconesus, affirmed, that near the encircled nations griffins defended the mines of gold. *Brown*.

(2.) The GRIFFON, GRYPHUS, by the ancients, was supposed to have 4 legs, wings, and a beak; the upper part representing an eagle, and the lower a lion: and to watch over gold mines, hidden treasures, &c. This imaginary animal was consecrated to the sun; and the ancient painters represented the chariot of the sun as drawn by griffons. M. Spanheim observes the same of those of Jupiter and Nemesis. The griffin is commonly seen on ancient arms; and is born in coat-armour. Guiliam blazons it rampant; allegorically, that any very fierce animal may be blazoned as well as the lion. Sylvester, Morgan, and others, use the terms *segræant* instead of rampant. The griffin is also an ornament of architecture in constant use among the Greeks, and was copied from them, with the other elegancies of architectural enrichments, by the Romans. See *SPHYNX*.

(3.) The GRIFFON in Scripture is that species of the eagle called in Latin *offruga*, the osprey; and *grif*, of the verb *grif*, *paras* to break. See *FALCO*, N° 9, 13.

* **GRIG**, *n. f.* [*Aricke*, Bavarian, a little duck.] 1. It seems originally to have signified any thing below the natural size. 2. A small eel. 3. A

merry creature. [Supposed from the *Grigulus festivus*, Latin.]

Hard is her heart as flint or stone,
She laughs to see me pale;

And merry as a grig is grown,
And brisk as bottled ale

GRIGNAN, a town of France, in the ment of Drome, 10 miles SSE. of Mout

GRIGNOL, a town of France, in the ment of Dordogne; 10 miles SSW. of

GRIGNOLS, a town of France, in the ment of Gironde, 9 miles SE. of Bazas

* **TO GRILL**, *v. a.* [*grille*, a grate, broil on a grate or gridiron.

* **GRILLADE**, *n. f.* [from *grill*.] broiled on the gridiron.

* **TO GRILLY**, *v. a.* [from *grill*.] signifies, as it seems, to harass; to harrow

For while we wrangle here and jar,
We are griled all at Temple bar.

* **GRIM**, *adj.* [*grimma*, Saxon.] countenance of terror; horrible; hideous.

The innocent prey in haste he doth
Which quit from death, yet quakes in
With change of fear to see the lion look

Grim Saturn yet remains
Bound in those gloomy caves with
chains.

Thou hast a grim appearance, and
Bears a command in't.

Their dear causes
Would to the bleeding and the grim
Excite the mortified man.

What if the breath that kindled the
fires,

Awak'd should blow them into scintils

Expert to turn the sway
Of battle, open when and where to die
The ridges of grim war.

He that dares to die,
May laugh at the grim face of law,
The cruel wrinkle of a tyrant brow.

Their swarthy hosts would darken
plains,

Doubling the native horror of the war
And making death more grim.

2. Ugly; ill-looking.—

So it stood up to him
Divine Ulysses; who with looks exceed
and grim,

This better check gave.

Grim visag'd war hath smooth'd his
front.

—Venus was like her mother; for her
but grim. *Shak.*

* **GRIMACE**, *n. f.* [French, from *grim* distortion of the countenance from habit, tion, or insolence.—

He had not spar'd to show his pique
Against th' haranguer's politicks,

With smart remarks of lecting faces,
And annotations of grimaces!

—The favourable opinion and good word
comes oftentimes at a very easy rate;

re looks and affected whims, set off with devotional postures and *grimaces*, and a little arts of dissimulation, cunning to wonders. *South.*—The buffoon apes, *aces* and gambols, carried it from the 1. *L'Espr.*—The French nation is addicted to *grimaçes*. *Spectator.* 2. Air of affectation. in a vizzard, to avoid *grimace*, all freedom, but to see the face. *Granv.* **GRIMALDI**, Francis, an eminent painter, called *Bolognese*, was born at Bologna in 1601, where he became a disciple of Annibal Carracci, which proved an honour to that illustrious school. From the school of Annibal he went to his studies at Rome, and improved himself until his superior talents recommended him to Innocent X. who afforded him immediate facilities of exerting his genius in his palace of Cavallo, and in the Vatican. His merit attracted the attention of the public, and increased his number of his friends; among whom was the Count of Pamphilio, and the principal nobility of Rome. His reputation reached cardinal Mazarin, who sent for him, settled a large pension on him, and employed him for three years in painting his palace and the Louvre, by the order of Louis XIII. The troubles of the state, and the calumnies raised against the cardinal, whose warmly espoused, put him so much in debt, that his friends advised him to retire to his native country. He did so, and painted a description of the exposition of the sacrament during the reign of Sixtus V., according to the custom of Rome. This picture was highly relished at Paris, and the king ordered him to paint such another for the gallery at the Louvre. Grimaldi after that returned to Rome, and found his patron Innocent X. but his successors Alexander VII. and Clement X. honoured him equally with their patron, and found him variety of employment. He was amiable in his manners, generous of counsel, respectful to the great without being obsequious, and charitable to the poor. The solace of his benevolence may serve to comfort the man. A Sicilian gentleman, who came from Messina with his daughter during the troubles of that country, was reduced to the want of bread. As he lived over against Grimaldi, he was soon informed of it; and in the evening, knocking at the Sicilian's door, he found him making himself known, tossed in and retired. The thing happening more than once, raised the Sicilian's curiosity to know the painter. Discovering him at last, by hiding behind the door, he fell down on his knees, and the hand that had relieved him. Grimaldi, surprised, offered him his house, and continued his friendship till his death. He died of a dropsy in 1680, and left a considerable fortune to his children. The genius of Grimaldi directed to landscape. His colouring is strong; his light and delicate; his situations are unpleasant; and the leafing of his trees is sometimes, indeed, his colouring appears too green; but those landscapes, painted in the manner of the Caracci, are models for all those who admire the Venetian school; and he designed his figures in

PART II.

an elegant taste. The pictures of this master are very rare, especially those of his best time; and when they are to be purchased, they afford large prices. Of his children, the youngest, named *Alexander*, proved a good painter, in the same style and taste with his father, though very far inferior to him: some of the pictures of Alexander, however, are either artfully, or injudiciously, ascribed to Francis.

* **GRIMALKIN**. *n. f.* [*gris*, French, grey, and *malkin*, or little *Moll.*] Grey little woman; the name of an old cat.—

Grimalkin, to domestick vermin sworn
An everlasting foe, with watchful eye
Lies nightly brooding o'er a chinky gap,
Protending her fell claws, to thoughtless mice
Sure ruin. *Philips.*

GRIMAUD, a town of France, in the dep. of Var, 12 miles S. of Frejus.

(1.) **GRIMBERG**, **GRIMBURG**, or **GRIMPERG**, a town of the French republic, in the dep. of Sarre and Moselle, and ci-devant electorate of Treves, 16 miles SE. of Trier.

(2.) **GRIMBERG**, a town of Westphalia, in the county of Marck, 12 miles W. of Dortmund.

GRIMBERGEN, a town of the French republic, in the dep. of Dyle, and ci-devant province of Austrian Brabant, with a castle and abbey; one mile from the canal between Brussels and Antwerp, and 6 miles N. of Brussels. Lon. 4. 27. E. Lat. 50. 57. N.

GRIMBURG. See **GRIMBERG**, N° 1.

GRIMBUSTERHOLM, one of the **ORKNEY** islands, near the coast of Pomona.

* **GRIME**. *n. f.* [from *grim*.] Dirt deeply insinuated; sullyng blackness not easily cleansed.—Swart, like my face, but her face nothing so clean kept; for why? she sweats: a man may go over shoes in the *grime* of it. *Shak. Comedy of Errors.*—Collow is the word by which they denote black *grime* of burnt coals or wood. *Woodward on Foss.*

* **To GRIME**. *v. a.* [from the noun] To dirt; to sully deeply.—

My face I'll *grime* with filth,
Blanket my loins, elf all my hair in knots. *Shak.*

* **GRIMLY**. *adv.* [from *grim*.] 1. Horribly; hideously; terribly.—

We've landed in ill time: the skies look *grimly*,
And threaten present blusters. *Shak. Winter's T.*

So Pluto, seiz'd of Proserpine, convey'd
To hell's tremendous gloom th' affrighted maid;
There *grimly* smil'd, pleas'd with the beauteous
prize,

Nor envy'd Jove his sunshine and his skies.

Addison's Cato.

2. Sourly; sullenly.—

The augurs

Say they know not; they cannot tell; look *grimly*,
And dare not speak their knowledge. *Shak.*

GRIMM, or } a town of Upper Saxony, in
GRIMMA, } Leipnick. It has a castle, three churches and a college. Its chief trade is in linens, flannels, thread, beer, and wood. It is 15 miles ESE. of Leipnick, and 42 WNW. of Dresden.

GRIMMEN, or **GRIMN**, a town of Pomerania, 14 miles S. of Stralsund. Lon. 13. 27. E. Lat. 54. 12. N.

GRIMMING, a mountain of Germany, supposed

posed to be the highest in Stiria, 16 miles W. of Rottenmann.

* GRIMNESS, *n. f.* [from *grim*.] Horror; frightfulness of visage.

GRIMNITZ, a town of Brandenburg, 1 mile NW. of Joachimsthal.

GRIMOLOW, a town of Poland, in the palatinate of Podolia, 46 miles NNW. of Kaminiac.

GRIMPERG. See GRIMBERG, N° 1.

GRIMSAY. See GRAMESAY.

GRIMSBY, a large sea port town of England, in Lincolnshire, 169 miles from London; said to be the second, if not the first, corporation in England. It had anciently 3 convents and a castle. It is governed by a mayor, high steward, recorder, 12 aldermen, 12 common council men, 2 bailiffs, 2 coroners, and a town clerk. It has several streets of good houses, and a church that looks like a cathedral. It was a place of great trade before its harbour was choked up; yet the road before it is a good station for ships that wait for a wind to get out to sea. Its chief trade is in coal and salt brought by the Humber.

GRIMSKEL, one of the Helvetic Alps.

GRIMSTA, a town of Sweden, in W. Gothland, 18 miles NE. of U idevall.

(1.) * GRIN *n. f.* [from the verb.] The act of closing the teeth and shewing them.—

He laughs at him: so's face too.

—O you mistake him; 'twas an humble grin,

The fawning joy of courtiers and of dogs.

Dryden.

—The muscles were so drawn together on each side of his face, that he shewed twenty teeth at a grin. *Addison.*—Deists are effectually beaten in all the combats at the weapons of men, that is, reason and arguments; and they would now attack our religion with the talents of a vile animal, that is, grin and grimace. *Watts on the Mind.*—

What lords are those saluting with a grin?

One is just out, and one is lately in. *Young.*

(2.) * GRIN *n. f.* [*gryn*, *gryne*, Sax.] A snare; a trap.—

Like a bird that hasteth to his grin,

Not knowing the perils. *Chaucer.*

—The grin shall take him by the heel, and the robber shall prevail against him. *Job xviii. 9.*

* To GRIN, *v. n.* [*grynnan*, Sax. *grinnen*, *grinden*, Dutch, undoubtedly of the same origin with *To grind*, as we now say to *grind the teeth*; *grincer*, Fr.] 1. To set the teeth together and withdraw the lips either in anger or in mirth.—

Death, death! oh, amiable, lovely death!

Come grin on me, and I will think thou art.

Shakspeare.

What valour were it, when a cur doth grin,

For one to trust his hand between his teeth,

When he might spurn him with his foot away?

Shakspeare.

—It was no unpleasant entertainment to me to see the various methods with which they have attacked me; some with piteous moans and outcries, others *grinning*, and only shewing their teeth. *Stillingfleet.*—

A Non's hide he wears;

About his shoulders hangs the shaggy skin;

The teeth and gaping jaws severely grin.

Dryden's Æneid.

They neither could defend, nor can;
But grin'd their teeth, and cast a look.

Madness, we fancy, gave an ill turn
To grinning laughter, and to frantick.

Fools grin on fools, and Stoicks say
Without one fag, the pleasures of a day.

3. To fix the teeth as in anguish.—I like grinning honour as Sir Walter hath; which if I can save, so; if not, I'll look'd for, and there's an end. *Shakspeare.*

GRINADIL, one of the Hebrides.

(1.) GRIND, a town of the French in the department of Essai, and late du Jura, 20 miles NNE. of Coblenz.

(2.) GRIND, an island near the coast of 9 miles NNW. of Harungen. Lon. 21. Ferro. Lat. 42. 18. N.

(1.) * To GRIND, *v. a.* *preter.* I *grind* pass *ground*. [*grindan*, *grynnan*, *grout*.

1. To reduce any thing to powder by friction by attrition.—And who soever on this stone, shall be broken; but on which it shall fall, it will grind him to powder. He that will have a cake out of the wheat needs tarry the grinding. *Shakspeare.*—What relation or affinity is there between mute body and cogitation, any more or grater? Is a small drop of rain any wider ocean? Or do we grind inanimate corn and rational meal? *Bentley's Sermon.* 2. To smooth by rubbing on something.

Meeting with time, slack things,

Thy fithe is dull; whet it, for shame!

No marvel, sir, he did reply,

If it at length deserve some blame;

But where one man would have me grind

Twenty to one too sharp do find it.

Against a stump his task the monster

And in the sharpen'd edge new vigour

Dryden.

3. To rub one against another.—

So up he let him rise; who with grin

And count'nance stern, upstanding, gain

His grated teeth for great disdain.

—Harsh sounds, as of a saw when it is set and the grinding of one stone against another a shivering or horror in the body, and set on edge. *Bacon's Nat. Hist.*—That the animals grind the substances which it is evident from the dissection of animals, which swallowed metals, which have been found on the side next the stomach. *Arbuthnot.*

4. To harass; to oppress.—Some merchant trademen, under colour of furnishing with necessaries, may not grind them; always keep them in poverty. *Bacon's Villiers.*—Another way the Spaniards is to grind the Neapolitans, and yet to take odium from themselves. *Addison.* 5. In lowing lines, I know not whether it is properly used for grinding, cutting.—

Not knowing 'twas my labour, I set

Of sudden shootings and of grinding

My throw came thicker, and my cries!

GRIND. *v. n.* 1. To perform the act ; to move a mill.—

Fetter'd they send thee
common prison, there to grind
the slaves and asses. *Milton's Agonistes.*
loved as in the act of grinding.—

Shrinking fibres start,
airy foam works o'er my grinding jaws.

Roscoe.

AL, a town near Burlington, Yorksh.

ELVALD, a town of the Helvetic re-
publicanton of Bern, 3 miles SSE. of Thun.

DER. *n. f.* [from *grind*.] 1. One that
that works in a mill. 2. The instru-
ment —

part a solid rock, to fear unknown,
dearer than the grinder's nether stone.

Sandys.

Now exhort

us to exercise the pointed steel
on hard rock, and give a wheely form
to the corrected grinder.

Philips.

Jobas, Sax. The back teeth; the dou-

ble teeth are in men of three kinds:

the fore teeth; broad, as the back-teeth,

all the molar-teeth, or grinders; and

the canine, which are between both.

Natural History.—

the raging lioness confounds,

the king lion with his javelin wounds;

their whelps, their grinders break; so

the old hunter starve for want of prey.

Sandys.

teeth or grinders, in Latin *molares*, are

round and broad a-top, and withal somewhat

rough, that, by their knobs and little

teeth may the better retain, grind, and

the aliments. *Ray on the Creation.*—Na-

great deal of labour to transmute ve-

get animal substances; therefore herb-

ivorous, which don't ruminate, have strong

teeth to chew much. *Arbut.* 4. The teeth,

contempt.—

who at sight of supper, open'd wide

before, and whetted grinders try'd.

Dryden's Juv.

Both he brought;

he brought them, and betwix't his grinders

he brought them, and betwix't his grinders

Dryden.

GRINDING, *n. f.* or TRITURATION, the

act of grinding or comminuting a solid body, and

reducing it into powder. See LEVIGATION, and

TRITURATION. The painters colours are grind-

able or porphyry, either with oil or

GRINDING is also used for rubbing or wear-

ing irregular parts of the surface of a body,

to bring it to the destined figure, whether

convex, concave, or the like. The grinding

of glass is a considerable art; for

GLASS-MAKING, *See* XIII.; and, for

optical glasses, see OPTICS.

GRINDING, in cutlery, the operation of

grinding edge-tools. This operation, as usually

attended with no small inconvenience,

is attended with a production of heat by friction. The

heat produced is so great, that hard tools are of-

ten softened and spoiled by the steel becoming ig-
nited, during the grinding. To prevent this ef-
fect, the grind-stone is partly immersed in a trough
of water; but in this case the rotation of the stone
must be moderate, and the work of course, slow,
else the water will be thrown off by the centrifug-
al force. When the water is applied from above
by a cock, the quantity is too small to counteract
the heat and preserve the necessary low tempera-
ture. It has even been found, that the edge or
point of a hard tool ground under water will be
softened, if it be not held so as to meet the stream,
sparks being often produced even under water.
To remedy this inconvenience, Mr Nicholson
made the following experiments. He procured a
Newcastle grind-stone of a fine grit, 10 inches in
diameter, and a mahogany block, to be used with
emery on it; both mounted on an axis, to be ap-
plied between the centres of a strong lathe. Both
were of the same diameter, and turned truly cy-
lindrical. The face of the mahogany block was
grooved obliquely in opposite directions, to afford
a lodgement for the emery: The face of the stone
was smooth, and a trough with water was placed
below it. The wooden cylinder was faced with
oil and emery. The tool to be ground was a file,
from which it was intended to grind off all the
teeth. The velocity of the rotation produced
by the lathe was so great as to turn the ap-
paratus about five revolutions in a second. Yet
the stone operated but slowly, and the trough was
quickly exhausted; so that the workman was ob-
liged to slacken the velocity on account of the
heat. The emery cylinder cut rather faster. But
although the friction was made to operate succes-
sively and by frequent changes on the whole sur-
face of the file, it soon became too hot to be held;
and when a cloth was used to defend the work-
man's hand, the work not only went on awkward-
ly, but the heat increased to such a degree, that
the oil was decomposed and emitted an empyreu-
matic smell. The stone was then allowed to dry,
and the file tried upon its face. It almost instan-
tly became blue, and very soon after, red-hot.
Both the cylinders were then covered with tallow,
by holding the end of a candle to each while turn-
ing round, and emery was sprinkled on the wooden
one. The file was then applied to the grind-stone
while in rapid motion. At first the friction was
hardly observable, but very soon afterwards, the
zone of tallow pressed by the file became melted,
and the stone cut very rapidly. Yet the file was
for a long time hardly heated at all; and when at
last it began to feel warm, its temperature was in-
stantly lowered by removing it to another zone of
the cylinder. The same effects were produced on
the wooden cylinder. This is easily explained u-
pon the modern theory of heat. When oil was
used on the wooden cylinder, the heat produced
by the friction was employed in raising the tempe-
rature of the file and the oil; but when tallow
was used instead of the oil, the greatest part of the
heat was exhausted in melting this substance. From
the increased capacity of the tallow when fused,
the heat was absorbed and became latent, instead
of raising the temperature: and when the melted
tallow began to grow hot, together with the file,
the temperature was easily reduced by employing

the heat on another zone of tallow. Mr Nichol-son used these two cylinders in a considerable quantity of work with great satisfaction. This discovery bids fair to be of great utility.

* GRINDLESTONE. GRINDSTONE. *n. f.* [from *grind* and *stone*.] The stone on which edged instruments are sharpened.—

—Such a light and mettled dance
Saw you never yet in France;
—And by the lead men, for the nonce,
—That turn round like grindstones. *Ben Jonson*.
—Literature is the *grindstone* to sharpen the cog-
tters, and to whet their natural faculties. *Ham-
mon*.
—Smiths that make hinges brighten them, yet sel-
dom file them; but grind them on a *grindstone*
All bright. *Moxon*.

(1.) GRINDON, a river of Northumberland, which runs into the sea near Berwick.

(2.) GRINDON, a town in Staffordshire.

(3.) GRINDON, a village in Durham.

(4.) GRINDON RICE, a village in Northumber-land, 9 miles N. of Wooler, memorable for a bat-
tle fought near it in 1468, in which the Scots were
defeated by the English under the earl of North-
umberland and his brother.

* GRINDSTONE. See GRINDLESTONE.

* GRINNER. *n. f.* [from *grim*.] He that grins.
The frightful grin grinner

Be the winner. *Addison's Spect.*

* GRINNINGLY. *adv.* [from *grim*.] With a
grinning laugh.

(1.) GRINSTED, EAST, a town in Wiltshire
near Salisbury, 29 miles from London, seated on
a hill, near the borders of Surry, and Ashdown
forest. It has a handsome church, which was re-
built after having been burnt down in 1683. On
the 12th Nov. 1785, the beautiful tower having
fallen to decay, fell down, and part lighting on
the church very considerably damaged it. An
hospital in the reign of king James I. for 31 poor
people of this town was built and endowed with
310 l. a year. It is a borough by prescription, go-
vern'd by a bailiff and his brethren; has sent bur-
geesses to parliament ever since the first of Edward
II, who are elected by about 35 burgage holders;
had a charter for a monthly market from Henry
VII and is generally the place for the assizes.
The returning officer here is the bailiff, who is cho-
sen by a jury of burgage-holders. Its market is on
Thursday, and its fairs, which are well frequen-
ted, are on July 13 and Dec. 11; which last is a
great market for Welsh runts, that are bought
up here by the Kentish and Sussex farmers, and
for fat hogs and other cattle.

(2.) GRINSTED, WEST, a borough in Sussex,
above 10 miles SW. of EAST GRINSTED, (N° 1)
18 N. of Lewes, and 29 S. of London. The coun-
ty assizes are sometimes held in it. Lon. O. 2. E.
Lat. 51. 12. N.

* GRIP. *n. f.* A small ditch. *Answorth*.

(1.) * GRIP. *n. f.* [from the verb.] 1. Grasp;
hold: seizure of the hand or paw.—

Therefore still on high
He over him did hold his cruel claws,
Threatning with greedy gripe to colonnally. *Spens.*
They put a barren sceptre in my gripe,
Thence to be wrench'd with an unlineal hand.
Shakespeare's Macbeth.

Should I

Slaver with lips, as common as the flame
That mount the Capitol; join gripe with
Made hardy with hourly falsehood as with

He gave me his hand,

And, with a feeble gripe, says, dear, my
Command my service. *Shakespeare's Ham-
let*.
I fell; and with my weight the helm moon
Was drawn along, which yet my gripe

2. Squeeze; pressure.—

For'd with this thought, at once be-
the breast;

'Tis true, the harden'd breast resists the
And the cold lips return a kiss ungrate

3. Oppression; crushing power.—

I take my cause
Out of the gripe of cruel men, and give
To a most noble judge the king my master

4. Affliction; pinching distress.—

Adam, at the news
Heart struck with chilling gripe of sorrow
That all his senses bound! *Milton's Par.*

Can't thou bear cold and hunger? *Shakespeare's Ham-
let*.

Fram'd for the tender offices of love,
Endure the bitter gripe of smarting passion

5. [In the plural.] Belly-ach; colic.—In
duce the choler is wanting; and the cause
a great fourth and gripe, with wind

(2.) GRIPES, (3 s, det. s.) in medicine,
choleric or painful disorder of the lower
caused by some sharp pungent matter
tine the parts, or by wind pent up in
times. See MEDICINE. Index.

(1.) * TO GRIP. *v. a.* [*gripan*, Goth.
Saxon; *gripan*, Dutch; *gripp*, Scot sh.
hold with the fingers closed; to grasp; to
with the fingers.—

He that speaks doth gripe the heart's
Whilst he that hears makes fearful ad
With weak'd brows. *Shakespeare's Ham-
let*.

2. To hold hard.—

He seized the shining bough with gripe
And rent away with ease the ring-ring gold

3. [*Griper*, Fr.] To catch eagerly; to sei-
You took occasion to be quickly w
To gripe the general way into your hands

4. To close; to clutch.—

Unlucky Welford; thy unfeeling mal
The more thou tickled, griper his hand th

5. To pinch, to press; to squeeze.—

A wond'rous way is for this lady w
From hon's claws to pluck the griper's prey
And hilt the dame came rushing thro
wood;

And next the famish'd hounds that soup
food,

And grip'd her flanks, and oft essay'd th
in blood. *Dryden's*

6. To give a pain in the bowels.—

Thus full of counsel to the den the w
Grip'd all the way, and longing for a vent

(2.) * TO GRIP. *v. n.* 1. To feel the
to have the belly ach.—Many people wou
reason, prefer the gripping of an hungry

which are a feast to others. *Locke*.—
he bulk, figure, texture, and motion
as a power to produce the sensations
and sometimes of acute pains or *grip-
pocke*. 2. To pinch; to catch at mo-
—It is mean revenue, by being scat-
worst of times growing upon him,
that had great ones, by *gripping*, made
d grew stark beggars. *Fell*.

* *n. f.* [from *gripe*.] Oppressor; u-
ioner.—Others pretend zeal, and yet
usurers, *grippers*, monsters of men,
Burton on Melancholy.

LABEN, a town of Germany, in the
lower Rhine, 3 miles N. of Erfurt.

NGLY. *adv.* [from *gripping*.] With
uts.—Clysters help, lest the medicine
uts, and work *grippingly*. *Bacon's Na-*

E. *n. f.* A greedy snatcher; a gripping
r.

OLM, a town of Sweden, in the Su-
25 miles N. of Stockholm.

ALD. See GRIEFWALD.

MBER. *n. f.* Used by *Milton* for am-

sts of chase, or fowl of game,
sult, or from the spit, or boil'd,
steam'd. *Milton's Paradise Reg.*

n. f. [See GREECE, as it should be
step, or scale of steps.—

speak like ourself; and lay a sentence,
a *grise* or step, may help their lovers
favour. *Shakespeare's Othello*.

3, a superstition greatly in vogue a-
groes in the interior parts of Africa.

according to Le Mire, are certain
eters mixed with magical figures
e Marabuts or priests upon paper.

is, that they are nothing else than
alcoran in Arabic; but this is denied

who brought over one of these grisgris
and showed it to a number of per-
skilled in oriental learning. None

d find the least trace of any character
ood. Yet, after all, this might be

e badness of the hand writing; and

xen. The grisgris intended for the

in the form of a cross, reaching from
to the neck behind, and from ear to

ear; nor are the arms and shoulders neglected.
Sometimes they are planted in their bonnets in
the form of horns; at other times, they are made
cut like serpents, lizards, or some other animals,
out of a kind of pasteboard, &c. There are
not wanting Europeans, and otherwise intelligent
seamen and merchants, who are in some degree
infected with this weakness of the country, and
believe that the negro sorcerers have an actual
communication with the devil; and that they are
filled with the malignant influence of that evil spi-
rit, when they see them distort their features and
muscles, make horrid grimaces, and at last imi-
tate all the appearance of epileptics.

GRISIGNANO, or } a populous town and dis-
GRISIGNONA, } trict of Maritime Aus-
tria, in Istria, on the N. side of the Quieto, 9 m.
E. of Capo.

* GRISKIN. *n. f.* [*grifgin*, roast meat, Irish.]
The vertebrae of a hog broiled.

GRISLEA, in botany: A genus of the mono-
gynia order, belonging to the octandria class of
plants: and in the natural method ranking under
the 17th order, *Calycantbeme*. The calyx is qua-
drifid; and there are four petals, one from each
incisure of it. The filaments are very long, as-
cending or running upwards; the capsule is glo-
bose, superior, unilocular, and polyspermous.

GRISLEHAMN, or } NEW, a sea port of
(1.) GRISLEHAVEN, } Sweden, in the prov.
of Uppland 50 miles NNE. of Stockholm.

(2.) GRISLEHAVEN, old, a seaport of Sweden
in Uppland 45 miles NNE. of Stockholm.

* GRISLY. *adj.* [*griflu*, Sax.] Dreadful; hor-
rible; hideous; frightful; terrible.—

His *grisly* locks, long grown and unbound,
Disordered hung about his shoulders round. *Spens.*

Where I was wont to seek the honey bee,
The *grisly* toadstool grown there might I see. *Spens.*

My *grisly* countenance made others fly;
None durst come near, for fear of sudden death.

Shaksp. Henry VI.

Back step'd those two fair angels, half amaz'd
So sudden to behold the *grisly* king;

Yet thus, unmov'd with fear, accost him soon.

Milton.

For that damn'd magician, let him be girt
With all the *grisly* legions that troop

Under the sooty flag of Acheron. *Milton.*

The beauteous form of fight
Is chang'd, and war appears a *grisly* sight. *Dryd.*

In vision thou shalt see his *grisly* face,
The king of terrors, raging in thy race. *Dryd.*

Thus the *grisly* spectre spoke again. *Dryden.*

Close by each other laid, they press'd the
ground,

Their manly bosoms pierc'd, with many a *grif-*
ly wound. *Dryden.*

So rushes on his foe the *grisly* bear. *Addison.*

GRISON, one of the GRENADILLOPS.

(1.) GRISONS, a people situated among the
Alps, and long allies of the Swiss, but now united

with the Helvetic republic. Their country is
bounded on the N. by the ci-devant counties of
Sargans and Bludenz, the canton of Glaris, and
the principality of Lichtenstein; on the S. by that

part of the Cisalpine republic, which comprehends
the ci-devant Italian bailiwicks, Chiavenna, and the
Valeteline;

Valteline; on the E. by the late territories of Venice and Milan, now included in the Cisalpine departments; and on the W. by some of the Italian bailiwicks, and the canton of Uri. It was divided into three leagues, viz. the *Grison or Grey League*, the *League of the House of God*, and that of the *Ten Jurisdictions*; which united formed one republic. The two first lie toward the S. and the third towards the N. The length of the whole is about 70 miles, and the breadth about 60. The inhabitants are said to have been named *Grisons*, from the grey coats they wore in former times. This country, lying among the Alps, is very mountainous; but the mountains yield good pasture for the cattle, sheep, and goats, with some rye and barley: in the vallies there is plenty of grain, pulse, fruits, and wine. It abounds also with hogs and wild fowl; but there is a scarcity of fish and salt, and their horses are mostly purchased of foreigners. The principal rivers are the Rhine, the Inn, and the Adda. It has also several lakes, most of which lie on the tops of the hills. The language of the Grisons is either a corrupt Italian or the German.

(2) **GRISONS, CONSTITUTION OF THE.** The present constitution of the Grisons is the same with that of the *HELVETIC REPUBLIC*, to which it is joined. But its late constitution was very democratic. Each of the leagues was subdivided into several lesser communities, which were so many democracies; every male above 16 having a share in the government of the community, and a vote in the election of magistrates. Deputies from the several communities constituted the general diet of the Grison leagues, which met annually, and alternately at the capital of each league; but they could conclude nothing without the consent of their constituents. Each of the Leagues was subdivided into a certain number of communities, which were a sort of republics, exercising every branch of sovereignty, except that of making peace or war, sending embassies, concluding alliances, and enacting laws relating to the whole country, which belonged to the provincial diets of the several leagues. The particular diets were composed of a deputy from each community; and both in them and the communities every thing was, and we suppose still is determined by a majority of votes. In the communities, every male above 16 had a vote. Besides the annual provincial diets for choosing the chiefs and other officers, and deliberating on the affairs of the respective leagues, there were general diets for what concerned all the three leagues or the whole body. In both these, the representatives could do nothing of themselves, but were tied down to the instructions of their principals. There was a general seal for all the three leagues; and each particular league had a separate seal. Besides the stated times of meeting, extraordinary diets were sometimes summoned, when either the domestic affairs of the state or any foreign minister required it. In the general diets, the Grey League had 28 votes; that of the House of God, 23; and that of the Ten Jurisdictions, 15. These leagues, at different times, have entered into close alliances with the neighbouring cantons and their associates. The bailiwicks belonging in common to the three leagues were those

of the Valteline, Chiavenna, and Sondrio, united to the Cisalpine republic; Meylan, and Jemina; the officers of which nominated successively by the several cantons every two years. The yearly revenue of the Grisons from their bailiwicks amounted about 11,500 florins. The public revenues there are but small, though there are many persons in the country that are rich. In extraordinary emergency, they tax their proportion to the necessity of the service people's abilities. They have no regular army, but a well disciplined militia; and upon occasion can bring a body of 30,000 fighting men into the field: but their chief security arises from narrow passes and high mountains by which they are surrounded.

(3.) **GRISONS, GENERAL HISTORY.** This country was anciently a part of the empire. After the extinction of the Roman empire in the west, it was some time subject to its successors, or those of Swabia. Then the bishop of Bâle, and other petty princes, dependent on the emperors of Germany, became masters of the country: at last, by the extinction of some of them, and by voluntary grants, and force, it got into the hands of the lords, and was erected into three distinct lordships. This country, as well as the whole of Switzerland, has suffered much during the late war, having been repeatedly and successively run by the French and Austrians. As the peace will be resumed under the articles Rastatt and Warr, it is only necessary here to say that the Austrians were driven out of the country in 1799, by the French under Gen. Masséna. In 5 days took 10,000 prisoners, 40 pieces of cannon, and 20 standards, with great quantities of ammunition and stores: that on the 10th of August following the Grison leagues were united to the *HELVETIC REPUBLIC*, except the Valteline, Chiavenna, and Bormio, which had been united to the *CISALPINE*, at their own desire. In that in Summer 1799, this country was again overrun by the Austrians; and that in June Feldkirch and Coire were taken, and the country recovered by the French under General Courbe.

(4.) **GRISONS, LAKE JURISPRUDENCE.** Of the jurisprudence, &c. of the Grisons the following account is given by Mr. Cook in *Travels in Switzerland*. "Throughout the leagues the Roman law prevails, modified by municipal customs. The courts of justice in each community are composed of the chief magistrate, who presides, and a certain number of judges chosen by the people: they have no regular salaries, but receive for their attendance a fee arising in some communities from the expenses of the process, which are defrayed by the parties; in others from a share of the fines. They have the power of pardoning or diminishing the penalty, and of receiving a composition in lieu of punishment. This mode of proceeding supposes what is absurd in theory as it is contrary to experience: judges will incline to mercy when it is the interest to convict; or will impartially inflict punishment, even when injurious to their own advantage.—The prisoners are examined

ently tortured for the purpose of forcing, when the judges either divide the merit the punishment for a composition. But a criminal trial is a kind of festivity, for whom a good repast is the expence of the prisoner if convicted; the following allusion, in Garth's *Displeased* with more wit than truth to our office, is literally fulfilled:—

"wretches die, that jurymen may *dine*." Punishments, however, are extremely sumptuous arising not from a want of the penal statutes, or from a propensity of the judges; but because the latter derive advantages from fining, than executing.

In a word, to use the expression of which is as true at present as it was in former times, "Many crimes go unpunished, if the offenders commit them have either great credit or money." It is remarkable, that torture is frequently applied, and for smaller degrees than in these independant republics, than in the provinces. The infliction of it depends upon the arbitrary will of the judges: of whom may order it for an offence of capital, nor even punishable by courts of law. Thus it is not uncommon, in the provinces where fines are divided among the judges, to torture women of loose conduct, or those of compelling them to confess with a view to have been connected; for as such offences are punishable by fines, the more perverted, the larger share of money is among the judges for the trouble of inflicting it. Even in the districts where the torture is not applied to the community, torture is often only inflicted, because, when the prisoner is found guilty, the expences of the prosecution are paid by the public, and the judges receive a salary. Even in the civil courts most decisions are made by bribing the judges; and in the ecclesiastical communities, wherein they are actually employed, they serve any other end than to enquire after the truth, or to prevent corruption; Coire, and a few other places, are excepted from this general remark. It is fortunate for the Grisons, that this iniquitous system has been abolished by the French revolution.

GRISONS, RELIGION AND CHURCH GOVERNMENT. "The religion of the Grisons (Mr Coxe) is divided into catholic and reformed. The doctrines of the reformation were introduced about 1524, and received at Fläsch first in the Ten Jurisdictions upon the Rhodaners; from thence they were extended to the Layenfeld and Malantz, and soon afterwards to the whole valley of Pretigau. The reformation spread with such celerity, that before the middle of the 16th century they were embraced by the league of the Ten Jurisdictions (except the community of Alvenew), the community of the House of God, and a few communities of the Grey League. The difference of religion excited a civil war between the two leagues at the first introduction of the reformation, as at the beginning of the troubles in France. In the latter instance, the two leagues were in arms; but the Catholics being over-

powered by the Protestants, matters were amicably adjusted. Since that period all religious concerns have been regulated with perfect cordiality. According to the general consent of the three leagues, each community being absolute within its little territory, has the power of appointing its own particular worship, and the inhabitants are free to follow either the Catholic or Reformed persuasion. In the administration of civil affairs religion has no interference: the deputies of the general diet may be members of either communion, as chosen by the communities which they represent. By this moderate and tolerating principle, all religious dissensions have been suppressed, and the most perfect amity subsists between the two sects. In spiritual concerns, the Catholics for the most part are under the jurisdiction of the bishop of Coire. For the affairs of the Reformed churches, each league is divided into a certain number of districts, the ministers whereof assemble twice every year: these assemblies are called *colloquia*. Each colloquium has its president, and each league a superintendant called a *dean*. The supreme authority in spiritual concerns is vested in the synod, which is composed of three deans, and the clergy of each league; the synod assembles every year alternately in each of the three leagues. Candidates for holy orders are examined before the synod. The necessary qualifications for admission into the church ought to be the knowledge of Hebrew, Greek, and Latin; but this rule is not strictly adhered to; many being ordained without the least acquaintance with either of those languages. Formerly Latin was solely used, as well in the debates of the synod as for the purpose of examining the candidates; but at present that tongue grows more and more into disuse, and German is employed in its stead. The number of reformed parishes in the whole three leagues amounts to 135, in the following proportion:—In the Grey League 46, in that of God's House 53, and in the League of Ten Jurisdictions 36. The ministers of these churches enjoy but very small salaries. The richest benefices do not perhaps yield more than L. 20, or at most L. 25 *per annum*, and the poorest sometimes scarcely L. 6. This scanty income is attended with many inconveniences. It obliges the clergy who have families to follow some branch of traffic, to the neglect of their ecclesiastical studies, and to the degradation of their professional character. Another inconvenience is superadded to the narrowness of their income. In most communities the ministers, though confirmed by the synod, are chosen by the people of the parish, and are solely dependent on their bounty. For these reasons, the candidates for holy orders are generally extremely ignorant. They cannot support that expence which is requisite to pursue their studies; they are not animated with the expectation of a decent competence; and, from the dependent mode of their election, are not encouraged to deserve their promotion by a consistent dignity of character.

GRISSAUNT, William, an eminent English Physician, Astronomer, and Mathematician of the 14th century. Being, from the ignorance and superstition of the times, suspected of magic, he retired to France, gave up mathematics, and applied

plied solely to medicine. His son was elected pope, and took the name of Urban V.

* GRIST. *n. f.* [*grist*, Saxon.] 1. Corn to be ground —

Get *grist* to the mill to have plenty in store,
Lest miller lack water. *Tusser's Husb.*

A mighty trade this lusty miller drove;

Much *grist* from Cambridge to his lot did fall,

And all the corn they us'd at scholar's hall.

Miller of Trump.

2. Supply; provision.—

Matter, as wise logicians say,

Cannot without a form subsist;

And form, say I, as well as they,

Must fail, if matter brings no *grist*. *Swift.*

3. *Grist* to *Mill*, is profit; gain.—The computation of degrees, in all matrimonial causes, is wont to be made according to the rules of that law, because it brings *grist* to the mill. *Ayliffe's Parergon.*

* GRISTLE. *n. f.* [*gristle*, Saxon.] A cartilage; a part of the body next in hardness to a bone.—No living creatures, that have shells very hard, as oysters, crabs, lobsters, and especially the tortoise, have bones within them, but only little *gristles*. *Bacon's Nat. Hist.*—Lest the asperity or hardness of cartilages should hurt the oesophagus or gullet, which is tender and of a skinny substance, or hinder the swallowing of our meat, therefore the annular *gristles* of the windpipe are not made round, or in true circles; but where the gullet touches the windpipe, there, to fill up the circle, is only a soft membrane, which may easily give way to the dilatation of the gullet.

Ray on the Creation.

* GRISTLY. *adj.* [from *gristle*.] Cartilaginous; made of gristle.—At last they spit out pieces of their lungs; it may be small *gristly* bits, that are eaten off from the lung pipes. *Harvey*—She has made the back bone of several vertebræ, as being more fit to bend, more tough, and less in danger of breaking, than if they were all one indurated bone without these *gristly* junctures. *Morse against Atheism*—Fins are made of *gristly* spokes, or rays connected by membranes; so that they may be contracted or extended like women's fans. *Ray on the Creation*—They have a louder and stronger note than other birds of the same bigness, which have only a *gristly* windpipe. *Grew*—

Each pipe, distinguish'd by its *gristly* rings,

To cherish life aerial pasture brings. *Blackmore.*

GRISTO, a town of Pomerania, one mile SSW. of Cammin.

GRISTOW, an island of Saxony, in the Dine-mow, between Cammin and the isle of Wollin.

GRISWOLD, PORT. See GRAYTON, N° 1.

(1.) * GRIT. *n. f.* [*gritta*, *grat*, Saxon.] 1. The coarse part of soil. 2. Ours husked, or coarsely ground. 3. Sand; rough hard particles, —Silenus bole, crackling a little betwixt the teeth, yet without the least particle of *grit*, feels as smooth as soap. *Grew*—

The sturdy pear tree here

Will rise luxuriant, and with toughest root

Pierce the obstructing *grit* and resistive marl.

Philips.

4. *Grits* are fusible found in minute masses, forming together a kind of powder; the several

particles of which are of no determin'd size, but seem the rudely broken fragments of maffes; not to be dissolved or diffused, but retaining their figure, and not coherent maffes. One sort is a fine, dull looking, which, if whetted with saw water, into a paste, dries almost immediately, and turns to a hard stony maff, such as is not afterwards diffused by water. This is the *petrolanus* of the ancients, mixed among ments used in buildings sunk into the soil in France and Italy an ingredient in the plasters, under the name of *porax*, common on the sides of hills in Italy. *Grit*, which is a coarse, beautifully species, is the *chrysolite* of the ancients, used in soldering gold, long supposed as it serves the purpose of soldering more than borax. The ferruginous black *grit*, is the black shining sand employed over writing, found on the shores of the *on Fossils*.

(2.) GRIT, ARGILLACEOUS, a genus of laccous earths. Its texture is more or less equable, and rough to the touch. It does not fire with steel, nor effervesce with acids, fresh broken and breathed upon, it has an earthy smell. Mr. Kirwan mentions one from Hollington near Uttoxeter, of a grey or whitish grey, and about the specific gravity of 2.388. Another, from Knepp, is of the specific gravity of 2.563, and is as to be used for fire stones. According to him the *grit* stone is of greater or less weight, mostly of a grey, and sometimes of a reddish colour, composed of a siliceous and argillaceous sand, but rarely of a sparry kind; with smaller particles closely compacted by a siliceous cement. It gives some sparks with indissoluble for the most part in acids, and is able to stand a strong fire. It is used for mill stones and whetstones; and sometimes for flint and for building.

* GRITTYNESS. *n. f.* [from *grit*.] The quality of abounding with *grit*.—I could find no sand by the sea nor any *grittiness*. *Mort. Husb.*

* GRITTY. *adj.* [from *grit*.] Full of *grit*; consisting of *grit*.—I could not do without the unevenness of the surface of the powder, little shadows let fall from the *grit* thereof. *Newton's Opt.*

GRITZGALLEN, a town of Courland, SSW. of Scelburg.

GRIVE, John De LA, an eminent Fregrapner, born at Sedan, in 1689. He was among other works, *The Topography*, which is reckoned very accurate. He died in 1750.

GRIVENSKOI, a town of Russia in the province of Novgorod.

* GRIZELIN. *adj.* more properly GRIZELIN.—The Burgundy, which is pale red, of all others, is the best for our climate. *Temple.*

GRIZOLLES, a town of France in the department of Sarthe, 15 miles SSE of Sarthe, and 10 miles of Toulouze.

GRIZY, a town of France in the department of Oise, 5 miles NW. of Pont Oise.

* GR

GRIZZLE. *n. f.* [from *gris*, gray; *grisaille*, a mixture of white and black; gray.—*Au dissembling cub! what wilt thou be, me has sow'd a grizzle on thy face?*

Shak.

GRIZZLED. *adj.* [from *grizzle*.] Interth gray.—To the boy Cæsar send this ad. *Shak*—

His beard was *grizzled*: no.

as I have seen it in his life.

Shak.

His hair just *grizzled*,
green old age.

Dryden.

grizzled locks, which nature did provide
ous growth, their asses ears to hide.

Dryden's Juv.

GRIZZLY. *adj.* [from *gris*, gray, French.] gray.—Living creatures generally do
ir hair with age, turned to be gray and
is seen in men, though some earlier,
; in horses that are dappled, and turn
d in old squirrels, that turn *grizzly*.

GROAT, an isle in the Atlantic, on the W.
ance, and in the dep. of Morbihan, 4

and 1½ broad; 18 miles NNW. of
Lon. 14. 9. E. Ferro. Lat. 74. 37. N.

GROAN. *n. f.* [from the verb] 1. Breath
h noise and difficulty, from pain, faint-
ness.—

las, poor country,

ghs and *groans*, and shrieks that rend
air,

e, not mark'd!

Shak Macbeth.

o slaughter, and to slaughter leave;

from hence their dying *groans* receive.

Dryden.

aching bosoms wear a visage gay,

ed *groans* frequent the ball and play.

Young.

rse dead sound.—

hects of fire, such bursts of horrid
der,

ans of roaring wind and rain, I never

er to have heard. *Shak. King Lear.*

GROAN. *v. n.* [*granan*, Saxon; *gronen*,
To breathe with a hoarse noise, as in
ny.—

Many an heir

fair edifices, for my wars,

ard *groan* and drop. *Shak. Coriol.*

n from out of the city, and the soul

ded crieth out. *Joh xxiv. 12.*—Repent-

ining for anguish of spirit. *Wisd. v. 3.*

malignant, to bad men benign,

own weight *groaning*. *Milt. Par. Lost.*

can so peculiarly gratify the noble dis-

humanity, as for one man to see ano-

ch himself as to sigh his griefs and

ins. *South.*—

he blazing pile his parent lay,

l brother *groan'd* his life away. *Pope.*

GROANFUL. *adj.* [*groan* and *full*.] Sad;

Not used.—

he kest it with so puissant wrest,

again it did aloft rebound,

against his mother earth a *groanful*

l. *Spenser.*

PART II.

(1.) * **GROAT.** *n. f.* [*groot*, Dutch; *grosso*, Italian.] 1. A piece valued at four pence. 2. A proverbial name for a small sum.—

My mother was wont

To call them woollen vassals, things created

To buy and sell with *groats*.

Shak.

I dare lay a *groat*,

A tertian ague is at least your lot.

Dryden.

—Imagine a person of quality to marry a woman
much his inferior, and without a *groat* to her
fortune. *Swift.* 3. **GROATS.** Oats that have the
hulls taken off. *Ainsworth.*

(2.) **GROAT**, (§ 1. *def.* 1.) Other nations, as
the Dutch, Polanders, Saxons, Bohemians, French,
&c. have likewise their groats, groote, groches,
gros, &c. In the Saxon times, no silver coin
bigger than a penny was struck in England, nor
after the conquest, till Edward III. who, about
the year 1351, coined grosses, i. e. *groats*, or great
pieces, which went for 4d. a piece: and so the
matter stood till the reign of Henry VIII. who, in
1504, first coined shillings.

GROAT'S HOUSE. See **JOHN O' GROAT'S HOUSE.**

GROBBENDONCK, a town of the French
republic, in the dept. of Deux Nattes, and late
prov. of Austrian Brabant; 10 miles E. of Ant-
werp.

GROBINEN, a town in the duchy of Cour-
land, 28 miles SSW. of Goldingen.

GROBOVCPOLE, a town of Russia, in the
prov. of Ekaterinenburg; 40 miles W. of Ekateri-
nenburg.

(1.) * **GROCER.** *n. f.* [This should be written
grosser, from *gross*, a large quantity; a *grocer*
originally being one who dealt by wholesale; or
from *grossus*, a fig, which their present state seems
to favour.]—A *grocer* is a man who buys and sells
tea, sugar, and plumbs and spices for gain. *Watts's*
Logick.—

Bnt still the offspring of your brain shall prove

The *grocer's* care, and brave the rage of Jove.

Garth.

(2.) **GROCERS** anciently were such persons as
engrossed all merchandize that was vendible; but
now they are incorporated, and make one of the
companies of the city of London.

* **GROCERY.** *n. f.* [from *grocer*.] Grocers ware,
such as tea; sugar; raisins; spice.—His troops be-
ing now in a country where they were not expec-
ted, met with many cart loads of wine, *grocery*,
and tobacco. *Clarendon.*

GROCYN, William, a learned English divine,
of the 15th century, born at Bristol, in 1441. He
held a disputation at Oxford before K. Richard III,
who rewarded him liberally. In 1485, he was
made a prebendary of Lincoln. In 1488, he tra-
velled into Italy, and studied Greek under Politian
and Demetrius Chalcondylas, though he had ac-
quired that language before. Upon his return he
taught it, and introduced the true pronunciation
of it into England. He was the friend and patron
of Erasmus. He died at Maidstone, in 1522, of the
palsy, aged 80. His works are mentioned by Bayle.
His Latin Epistle to Aldus Manutius is prefixed
to Linacre's translation of Proclus de Sphæra.
Ven. 1494.

GRONENBACH, or GRUNENBACH, of Germany in Suabia, belonging to the c. of Kempten; 13 miles NNW. of Kempten.

GRONES, a cape on the NW. coast of GRONESSE, a fort in the island of Jersey 11 miles NW. of St. Helier.

GRONEY, a river of Wales, which runs the UK, in Brecknockshire.

(1.) GRONINGEN, the most northerly ci-devant Seven United Provinces, was on the N. by the German ocean; on the E. late county of Drenthe; on the E. by the ric of Munster, and the principality of Eastland; and on the W. by the province of land, from which it was separated by the E. Its greatest length from SE. to NW. was 47 miles; its breadth was very unequal, the east being about 12 miles. It has rich pastures, large herds of cattle, plenty of sea and river fish, and of turf, with some forests and corn. There are several rivers in it; the principal the Hunte, the Eems, and the Fivel; and a great number of canals and dykes. The consisted of the deputies of the town of Groningen, and the Ommeland, or circumjacent country; and held their assemblies always in the town. The province had anciently governors, who bore the title of burg-graves; but their power being taken away, the people enjoyed great privileges. After it became subject to the Bp. of Utrecht; but off his yoke at last, and recovered its liberty 1536, it submitted to Charles V. and in 1568, it submitted to Charles V. and in 1568, it submitted to the union of Utrecht. The college much the same here as in the other provinces, the provincial states, council of state, provincial tribunal, and chamber of accounts. Six deputies were sent to the states general. Of the clergy there were 160 ministers, who formed 16 classes, whose annual synod was held, by the Groningen and Appingedam. It is now in the Batavian republic, and department of Eems. See EEMS, N° 1.

(2.) GRONINGEN, a strong city of the Batavian republic, in the dep. of Eems, and late ci-devant province, (N° 1.) is situated 12 miles from the German ocean, at the confluence of several rivulets, which form the Hunte. As Ships of considerable burden can get up to

ence of which it enjoys a good trade in
ice. Its university was founded in 1615,
and endowed out of the revenues of the
monasteries. The city, which was for-
merly of the Hanse towns, is large and popu-
lar; the seat of the high colleges, and con-
spicuous market-places, and 27 streets;
there are many fine houses, besides churches
and public structures. By the Fivel and the
Rhine was a communication with Westphalia.
It made such a gallant resistance against
the army of Munster, that he is said to have lost
more before it. Rodolphus Agricola and
two of the most learned men of their
age were born here. Under the jurisdiction of
a considerable district, called the *Gorecht*.

NOVIUS, John Frederic, a very learn-
ed man, was born at Hamburg in 1613; and
travelled through Germany, Italy, and
France, made professor of polite learning at
Leiden, and afterwards at Leyden, where he
died in 1681. He published, 1. *Diatriba in Statii,
et Sestertiis*. 3. Correct editions of Se-
nus, Livy, Pliny's Natural History, Ta-
citus, Gellius, Phædrus, &c. with notes;
and several other works.

NOVIUS, James, son of the preceding,
a learned man, was educated first at Ley-
den, and then at England, where he visited
various libraries, consulted the curious MSS. and
made acquaintance with several learned men.
He was chosen by the grand duke to be professor
of Greek at a considerable salary. He returned
to Leyden, after he had resided two years in
England, and consulted the MSS. in the Medicean
Library. In 1679, he was invited by the curators
of the University to a professorship; and his inau-
guration was so highly approved of, that
they added 400 florins to his stipend, and
continued it to his death in 1716. His principal
works are, *The treasure of Greek antiquities*, in 13
volumes, and a great number of dissertations,
on the lives of ancient authors. He was com-
pared to Hippocrates for the virulence of his style;
and his severity, with which he treated other great
writers, differed from him, exposed him to just

FELD, a town and ci-devant county
seat, in the circle of Westphalia, now an-
nexed to the French republic, and included in the
department of the Lower Meuse. The town is 4
miles E. of Maëstricht.

ROOM. *n. s.* [*grom*, Dutch.] 1. A boy;
or a servant.—

He called the a groom, that forth him led
To his lonely lodge. *Spenser.*

From Egypt's kings ambassadours they come;
Them many a squire attends, and many a groom.

Fairfax.

Think then, my soul! that death is but a groom
Which brings a taper to the outward room.

Donne.

—In the time of Edward VI. lived Sternhold, whom
king Henry his father had made groom of his cham-
ber, for turning of certain of David's psalms into
verse. *Peacham.*—

Would'st thou be touch'd

By the presuming hands of saucy grooms? *Dryd.*

Am I? the fold he rages, nor the sheep

Their shepherds, nor the grooms their bulls can
keep. *Dryden.*

2. A young man.—

I presume for to intreat this groom,

And filly maid, from danger to redeem. *Fairf.*

3. A man newly married.—

By this the brides are wak'd, their grooms are
dress'd;

All Rhodes is summon'd to the nuptial feast. *Dryd.*

(2.) GROOM is also applied to several superior
officers belonging to the king's household, as
groom of the chamber, groom of the stole. See
STOLE, and WARDROBE.

(3.) GROOM is more particularly used for a ser-
vant appointed to attend on horses in the stable.

GROOMSPORT BAY, a bay of Ireland, on
the coast of the county of Down.

GROOSENROT, a town of Germany, in
Holstein, 32 miles NNE. of Oldenburg.

(1.) * GROOVE. *n. s.* [from *grave*.] 1. A deep
cavern, or hollow in mines.—He might, to avoid
idleness, work in a groove or mine-pit thereabouts,
which at that time was little esteemed. *Boyle.* 2.
A channel or hollow cut with a tool.—The screw-
plate is a kind of steel well temper'd, with several
holes in it, each less than the other; and in those
holes are threads grooved inwards, which grooves
fit the respective taps that belong to them. *Moxon.*

(2.) GROOVE, among miners, is the shaft or pit
sunk into the earth, sometimes in the vein, and
sometimes not.

(3.) GROOVES, among joiners, the channel made
by their plough in the edge of a moulding, style,
or rail, to put their pannels in, in wainscotting.

* TO GROOVE. *v. a.* [from the noun.] To cut
a hollow.—Of the box every joint was well grooved.
Swift.

(1.) * TO GROPE. *v. n.* [*grapan*, Sax.] To feel
about where one cannot see.—

My sea-gown scarf about me, in the dark

Grop'd I, to find out them. *Shak. Hamlet.*

—We grope for the wall like the blind, and we
grope as if we had no eyes. *Is. lix. 10.*—

They meet with darkness in the clearest light;
And grope at noon, as if involv'd with night.

Sandys.

—A boy was groping for cells, and laid his hand
upon a snake. *L'Estr.*—This, no doubt, is better
for men than that they should in the dark grope
after knowledge; as St Paul tells us all nations
did after God. *Locke.*—

He heard us in our course,

And with his out-stretch'd arms around him
grop'd. *Addison.*

O' truth divine! enlighten'd by thy ray,
I grope and guess no more, but see my way.

Arbushnot.

(1.) * *To GROPE*, *v. n.* To search by feeling in the dark; to feel without being able to see.—How vigilant to *grope* mens thoughts, and to pick out somewhat whereof they might complain. *Hayward*.—They have left our endeavours to *grope* them out by twilight, and by darkness almost to discover that, whose existence is evidenced by light. *Brown's Vulgar Errors*.—

But Strephon, cautious, never meant

The bottom of the pan to *grope*.

Savist.

GROPENSTEIN, a town of Germany, in Carinthia, one mile N. of Welach.

* GROPER, *n. s.* [from *grope*.] One that searches in the dark.

GROPPER, John, an able polemical writer, born in Westphalia. He published *Enchiridion Christianæ Religions*, and several other works. He died in 1559.

(2.) GROS. See GROSS, N° 3.

GROSCA, an island in the Baltic Sea. Lon. 47. 0. E. of Ferro. Lat. 44. 39. N.

GROSE, Francis, Esq. F. A. S. an eminent English antiquary, the son of Francis Grose, Esq. jeweller, of Richmond, who fitted up the coronation crown of king George II. He was born in 1731, and was left an independent fortune; but had not a disposition to preserve it. He wrote, 1. *The Antiquities of England and Wales*, in 8 vols. 4to. and 8vo, which he began in 1773, and completed in 1787; containing 589 views, besides 40 plans, &c. 2. *The Antiquities of Scotland*, 2 vols. 4to. and 8vo, containing 190 views with a map; 3. *The Antiquities of Ireland*, 2 vols. 4to. and 8vo; 4. *A Treatise on Ancient Armour and Weapons*, 4to. 1785; with a supplement in 1789; 5. *A Classical Dictionary of the Vulgar Tongue*; 8vo. 1785; 6. *Military Antiquities*; 2 vols. 4to. 1786—88; 7. *The History of Dover Castle*; 4to. 1786; 8. *A Provincial Glossary, with a collection of Local Proverbs and Popular Superstitions*; 8vo. 1788; 9. *A Guide to Health, Beauty, Honour, and Riches*; 8vo. 10. *Rules for Drawing Caricatures*; 8vo. 1788; 11. *The Ohio; a collection of Essays*; 8vo. In summer, 1789, he set out on a tour in Scotland, and began to communicate his observations in folio numbers, with 4 plates each, in 1790. Before he had completed this work, he went to Dublin, with the intention of executing a similar work, with views and descriptions of the antiquities of Ireland, executed in the same elegant manner with those of Great Britain: but being seized with an apoplectic fit, at the house of Mr Hone in Dublin, he died on the 12th May, 1791, aged about 60. He had a great talent for drawing, which peculiarly qualified him for executing the works in which he engaged; and, being of an agreeable, humorous, and communicative disposition, he was much esteemed in the extensive circle of his friends. He visited almost every part of the three kingdoms, and was every where well received. His lamour was of that genuine kind, which exhilarates without offending either against virtue or good manners.

Yet a case of distress never failed to draw from his heart, and, where it was needed, from his purse. He married a lady at *Canterbury* by whom he had several children; of whom Daniel Grose, after serving several campaigns in America, was appointed Deputy Governor's settlement at Botany Bay, in 1790.

GROSEN, a town of Coupland, 28 miles Goldingen.

GROSLEY, Peter John, a French author, compiler, born at Troyes in 1718. He wrote the French *Encyclopedie*, and in the *Dictionnaire Historique*. He died at Troyes in 1783.

GROSON, a town of France, in the Jura, 3 miles SW. of Arbois, and 3 N. of

GROSONE, a town of Corsica, 3 miles Bastia.

(1.) * GROSS, *adj.* [*gross*, French; *gross* *lijan*; *crassus*, Latin.] 1. Thick; bulky.

The crows and choughs that wing the way air,

Shew scarce so gross as beetles. *Shakspeare*.

—There are two *gross* volumes concerning power of popes. *Baker on Learning*. 2. *Stupid*; *unskilful*; *enormous*—He *grossly* can how *gross* a thing it were for men of his wife and grave men, to live with such a man and to be tenants at will under them. *Hooker*. They can say that in doctrine, in church prayers, and in sacraments, the church hath very foul and *gross* corruptions. *Hooker* hath the natural understanding, even dry whole nations, been darkened, that they not discerned, no, not *gross* inquiry to *Hooker*.—There is a vain and imprudent their estates, which, though it does not like *gross* sins, yet disorders the heart, supports it with sensuality and dulness. *Law*. Intellectually coarse; palpable; impure; un-

To all sense 'tis *gross*,

You love my son; invention is aham'd,

Against the proclamation of thy passion,

To say thou do'st not. *Shakspeare*

Examples *gross* as earth exhort me.

Behold came last, than whom a spirit lewd

Fell not from heaven, or more *gross* to kick Vice for itself. *Milton*

—Is not religion so perfectly good in itself, all, in its Antheur, that, without the *gross* quality, we cannot but admire it? *Spenser* a *gross* mistake of some men, to think it wants only and imperfections do naturally us to be benignant. *Smarteridge*.—

But she dares never boast the present

So *gross* the cheat, it is beyond her power

4. Inelegant; disproportionate in bulk—

The sun's oppressive ray the mole at h

Of beauty blinding, gives the gloomy hue And feature *gross*. *Thomson*

5. Dense; not refined; not attenuated; 6.

—It is manifest, that when the eye fix the finer medium, and the object is in the things less greater, but contrariwise, the eye is placed in the *gross* medium, and just in the finer. *Bacon's Not. Hist.*—

Of elements,
 Or feeds the purer ; earth the sea,
 And the sea feed air. *Milt. Par. Lost.*
 Fumes are merry, *grosser* fumes are sad ;
 The reasonable soul run mad. *Dryden.*
 Look the mists in *grosser* air below,
 Their pinions in the painted bow. *Pope.*
 Dull.—

Both then the subtle sense excel,
 Are they that drown her in the blood ?

Davies.

A clear dream and solemn vision,
 Of things that no *gross* ear can hear.

Milton.

Can give more delight and knowledge by
 Tying of the question with perspicuity,
 Than others by talking of it in *gross*
 For whole hours together. *Watts.* 7.
 Rough ; opposite to delicate.—Fine and
 Captures are helped with nearness, and
 Distance. *Wotton's Architect.* 8. Thick ;
 —His stature was of just height and all
 The dimensions, avoiding the extremes
 Of meager. *Fell.*

GROSS. n. s. [from the adjective.] 1. The
 ; the main force.—

Belgians hop'd, that with disorder'd haste
 Per cut keels upon the sands might run ;
 With caution leisurely were past,
 Numerous *gross* might charge us one by one.

Dryd.

Asquists are of opinion, that, in a battle,
 Discharge upon the *gross* of the enemy,
 Veiling your piece at any particular per-
 . *Freeb.*—The *gross* of the people can
 Their prospect in the changes and revo-
 n of publick blessings. *Addis.* 2. The
 whole not divided into its several parts.
 General inducements are used to make
 Our cause in *gross*. *Hooker.*—There was
 In *gross*, that the soul was immortal.
Descrip. of the World.—There is confess-
 ion, the acknowledging our sins to God ;
 May be either general or particular : The
 When we only confess in *gross* that we
 The particular, when we mention the
 Sins and acts of our sins. *Duty of Man.*—

Remember, son,

A general : other wars require you ;
 The Saxon *gross* begins to move. *Dryd.*
 Standing the decay and loss of sundry
 Manufactures, yet, in the *gross*, we ship
 A third part more of the manufactures,
 Lead and tin, than we did twenty years past.
Trade. 3. Not individual ; but a body
 —He hath ribbons of all the colours i' th'
 They come to him by the *gross*. *Shak.*—
 Not instantly raise up the *gross*
 Three thousand ducats.

Shak.

Of the united design of many persons to
 One figure : after they have separated
 In many petty divisions, they rejoin
 Into a *gross*. *Dryd.* 4. The chief part ;
 Mass.—Comets, out of question, have
 Power and effect over the *gross* and mass
Bacon's Essay.—The articulate sounds
 Confused, though the *gross* of the sound
Bacon's Nat. Hist. 5. The number of

twelve dozen. [*Grosse*, French.]—It is made up
 Only of that simple idea of an unite repeated ; and
 Repetitions of this kind, joined together, make
 Those distinct simple modes of a dozen, a *gross*,
 And a million. *Locke.*

(3.) *GROSS*, a foreign money, in divers coun-
 tries, answering to our groat.

(4.) *GROSS*, [*Grossus*,] in our ancient law wri-
 ters, denotes a thing absolute, and not depending
 On another. Thus, *villain in gross*, *villanus in*
grosso, was a servant, who did not belong to the
 land, but immediately to the person of the lord ;
 Or a servile person not appendant or annexed to
 the land or manor, and to go along with the te-
 nures as appurtenant to it ; but like other personal
 goods and chattels of his lord, at his lord's plea-
 sure and disposal.

(5.) *GROSS*, *ADVOWSON IN*. See *ADVOWSON*.

(6.) *GROSS WEIGHT*, the weight of merchan-
 dizes and goods, with their dust and dross, as also
 of the bag, cask, chest, &c. wherein they are con-
 tained ; out of which *gross* weight, allowance is
 to be made of tare and tret.

(1.) *GROSSA*, a town of Germany, in Austria,
 3 miles S. of Baden.

(2.) *GROSSA*, an island of Maritime Austria, in
 the Adriatic, near the coast of Dalmatia, 6 miles
 long and 1 broad, according to Mr Cruttwell ;
 but Dr Oppenheim says, it is no less than 30 miles
 in length, 4 in breadth, and 60 in circumference,
 and comprehends 13 villages.

GROSS-BEAK. See *LOXIA*.

GROSSBOROUGH, a town of Ireland, in the coun-
 ty of Monaghan, and province of Ulster.

GROSS-BOTWAR, a town of Suabia, in the
 duchy of Wurtemberg, 10 miles SSE. Heilbronn,
 and 13 NNE. of Stuttgart.

GROSSEL-FINGEN, a town of Suabia, in
 the county of Hohen-zollern, 7 miles E. of Hohen-
 zollern.

GROSSETA, or *GROSSETO*, a town of Tus-
 cany, 14 miles ESE. of Piombino.

GROSSETESTE, Robert, Bp. of Lincoln, a
 learned English divine of the 12th century, born
 about A. A. 1175. He was the author of many
 works, was a good Greek scholar, and esteemed a
 man of a clear intellect.

GROSSEUVRE, a town of France, in the dept.
 of Eure, 6 miles S. of Evreux.

* *GROSSLY. adv.* [from *gross*.] 1. Bulkily ;
 in bulky parts ; coarsely : as, *this matter is grossly*
pulverized. 2. Without subtilty ; without art ;
 without delicacy ; without refinement ; coarsely ;
 palpably.—Such kind of ceremonies as have been
 so *grossly* and shamefully abused in the church of
 Rome, where they remain, are scandalous. *Hooker.*

Treason and murder ever keep together,
 As two yoke devils sworn to others purpose ;
 Working so *grossly* in a natural cause,
 That admiration did not whoop at them. *Shak.*

And thine eyes

See it so *grossly* shown in thy behaviour,
 That in their kind they speak it. *Shak.*

What ! are we cuckolds ere we have deserv'd
 it ?

—Speak not *grossly*. *Shak. Merch. of Venice.*
 —What I have said has been forced from me, by
 seeing a noble sort of poetry so happily restored
 by

by one man, and so *grossly* copied by almost all the rest. *Dryden*.—If I speak of light and rays as endued with colours, I would be understood to speak not philosophically and properly, but *grossly*, and according to such conceptions as vulgar people would be apt to frame. *Newton's Opticks*.—While it is so difficult to learn the springs and motives of some facts, it is no wonder they should be so *grossly* misrepresented to the public by curious inquisitive heads. *Swift*.

* **GROSSNESS**. *n. f.* [from *gross*.] 1. Coarseness; not subtilty; thickness; spissitude; density; greatness of parts.—

The purpose is perspicuous even as substance,
Whose *grossness* little characters sum up. *Shak.*

And I will purge that mortal *grossness* so,

That thou shalt like an airy spirit go. *Shak.*

—The cause of the epilepsy from the stomach is the *grossness* of the vapours which rise and enter into the cells of the brain. *Buron's Nat. Hist.*

Then all this earthy *grossness* quit;

Attir'd with stars we shall for ever sit,

Triumphing over death.

Milton.

—This being the first colour which vapours begin to reflect, it ought to be the colour of the finest and most transparent skies, in which vapours are not arrived at that *grossness* requisite to reflect other colours. *Newton's Opt.*—

For envy'd wit, like Sol eclips'd, was known
Th' opposing body's *grossness*, not its own.

Pope.
2. Inelegant fatness; unwieldy corpulence.—Wise men, that be over fat and fleshy, go to sojourn abroad at the temperate diet of some sober man; and so, by little and little, eat away the *grossness* that is in them. *Ajcham*. 3. Want of refinement; want of delicacy; intellectual coarseness.—I was three or four times in the thought they were not faeries; and yet the gulliness of my mind drove the *grossness* of the toppers into a received belief that they were faeries. *Shak.*—Whatever beauties it may want, 'tis free at least from the *grossness* of those faults I mention'd. *Dryd.*—What a *grossness* is there in the mind of that man, who thinks to reach a lady's heart by wounding her ears! *Clarissa*.

GROSSALZE, a town of Germany, in the duchy of Magdeburg, famous for its salt works, 12 miles S. of Magdeburg.

GROSSTESTE, Claude, a French protestant divine, who came to London, on the revocation of the edict of Nantes. He was minister of the Savoy. He wrote a treatise on the Inspiration of the Sacred Books, and several sermons. He died in 1713.

GROSSULARIA. See **RIBES**.

GROSSWIG, a town of Saxony, 4 miles SW. of Schmiedelburg. Amber is found near it.

GROSSZIG, a town of Upper Saxony, in Anhalt-Deßau, 19 miles SW. of Deßau.

* **GROT**. *n. f.* [*grotte*, French; *grotta*, Ital.] A cave; a cavern for coolness and pleasure.—

In the remotest wood and lonely *grot*,
Certain to meet that world of evils, thought.

Prior.

Awful see the Egerian *grot*.

Pope.

(1.) * **GROTESQUE**. *adj.* [*grotesque*, French;

grotesco, Italian.] Distorted of figure; wildly formed.—

The champaign head

Of a steep wilderness, whose hairy skin

With thicket overgrown, *grotesque* and

Accels deny'd. *Milton's*

—There is yet a lower sort of poetry and which is out of nature; for a farce is the try which *grotesque* is in a picture: the manners false, that is, not confining with the actions of a farce are all unnatural characters of mankind: *grotesque* is the balance of this. *Dryden's Dufresnoy*.

An hideous figure of their toes they
Nor lines, nor looks, nor shades, nor true,

And this *grotesque* design expos'd to view.

Palladian walls, Venetian doors,
Grotesco roofs, and stucco floors.

(2.) **GROTESQUE**, or **GROTESCA**, mixed painting, something whimsical, extremely monstrous; consisting either of things that are imaginary or so distorted, as to raise by ridicule. The word owes its derivation to the figures of this kind, being anciently used to adorn the *grottos* wherein the tombs of persons were inclosed. Such was that whose grotto was discovered near Rome years ago.

(1.) **GROTIUS**, Hugo, or more properly **DE GROOT**, one of the greatest men of his age was born at Delft in 1583. He made some progress in his studies, that at 15 he had some knowledge in philosophy, divinity, and a yet greater proficiency in polite letters as appeared by the commentary he had that age on Martianus Capella. In 1597 he accompanied the Dutch ambassador into England and was honoured with several marks of favour by Henry IV. He took his degree of LL. D. at that kingdom; and at his return to his country, pleaded at the bar before he was of age. He was not 24 when he was attorney general. In 1613 he settled at Amsterdam, and was nominated syndic of that city; he did not accept of the office, till a promise made him that he should not be removed. This prudent precaution he took from his knowledge, that the quarrels of the divines on the subject of grace, which had already given rise to factions in the state, would occasion trouble in the chief cities. The same year he was in England, on account of the divisions between the traders of the two nations with respect to the right of fishing in the northern seas; but he obtained no satisfaction. He was afterwards in England, to persuade the king and the divines to favour the Arminians; and he was several conferences with K. James I. on that subject. On his return to Holland, his attachment to Barneveldt involved him in great troubles; he was seized, and sentenced to perpetual imprisonment in 1619, and to forfeit all his goods and tithes. But after having been treated with favour for above a year and a half in his confinement, he was delivered by the advice and artifice

having observed that his keepers had tied themselves with searching and exact trunk full of foul linen, which used to be at Gorkum, but now let it pass without it, she advised him to bore holes in it, his being stifled, and then to get into compliance with this advice, and was carried to his friend's house in Gorkum; where dressed like a mason, and taking a rule and passed through the market-place, and on a boat went to Valvet in Brabant. He made himself known to some Arminians, and took a carriage to Antwerp. At first there was an intention of prosecuting his wife, who staid in Holland, and some judges were of opinion that she should be kept there in her husband's stead: but she was released by a plurality of voices, and was publicly applauded for her behaviour. He fled into France, where he met with a reception from that court, and Lewis granted a pension upon him. Having resided several years, he returned to Holland, on his receiving a very kind letter from Frederic Henry of Orange; but his enemies renewing their persecutions, he went to Hamburgh; where, in the court of Christina of Sweden made him her counsellor, and sent him ambassador into France. After he had discharged the duties of this office several years, he returned to give an account to the king of his embassy; when he took Holway, and received many honours at the king's court. He was introduced to her at Stockholm, where he begged that she would grant him that he might return to Holland. This he obtained with difficulty; and the queen gave him several marks of her esteem, though he had several enemies at her court too. As he was returning in the ship in which he embarked was cast on the coast of Pomerania; and being sick, he continued his journey by land; but he was forced to stop at Rostock, where he died on the 28th of November.

His body was carried to Delft, to be interred in the sepulchre of his ancestors. Notwithstanding the embassies in which he was employed, he composed a great number of excellent works, the principal of which are, 1. *De jure bellico*, which is esteemed a master-piece: 2. *De veritate* on the truth of the Christian religion: 3. *De prophetiis* on the holy scriptures: 4. The *annals of Holland*: and 5. A great number of *letters*: All written in Latin.

RIJUS, Peter, the 2d son of Hugh, (Noble) a famous lawyer and an acute philologist. He died in 1678.

RIJUS, William, brother to Hugh, was a famous lawyer, and wrote several books on law. He died in 1662.

ROTON, a township of Connecticut in Windham county, bounded on the W. by the town of New London. It contains 3,946 citizens in 1795. It contains **FORT GRISWOLD**, which defends the mouth of the Connecticut of New London.

ROTON, a town in the above township of New London city. It was burnt by the British, on the 6th Sept. 1781, and suffered a great amount of 23,217 l.

ROTON, a town and township of Mas-

sachusetts in Middlesex county, containing 1840 citizens, in 1795. The town is 35 miles NW. by W. of Boston, and 341 from Philadelphia. Lon. 71. 31. E. of that city. Lat. 42. 38. N.

(5.) **GROTON**, a small town of England, in Suffolk, between Sudbury and Hadley.

GROTSCAW, or **GROTSKAW**, a town of European Tur-

(1.) **GROTSKAW**, a key in the province of Servia, where a battle was fought between the Germans and Turks, in 1739, in which the Germans were forced to retreat with loss. Lon. 21. 0. E. Lat. 45. 0. N.

(2.) **GROTSKAW**, a province of Silesia.

(3.) **GROTSKAW**, a strong town, capital of the above province, seated in a fruitful plain. Lon. 17. 35. E. Lat. 50. 42. N.

(1.) **GROTTA**, a trading town of the Cisalpine republic, on the Adda, in the dep. of the Upper Po, abounding in honey and flax.

(2.) **GROTTA**. See **GROTTO**, § 2, 6.

(3.) **GROTTA FERRATA**. See **FRESCATI**.

(4.) **GROTTA MENARDA**, a town of Naples in Principato Ultra, 12 miles ESE. of Benevento.

(5.) **GROTTA ST LORIA**, a town of Naples in the prov. of Capitanata, 12 miles W. of Manfredonia.

GROTTAGLI, a town of Naples, in the prov. of Otranto, 9 miles of Tarento.

GROTTGAU, or **GROTTKAU**, a town and territory of Silesia, in the principality of Neisse, seated on the river Neisse, 14 miles N. of Neisse. Lon. 35. 19. E. of Ferro. Lat. 53. 41. N.

(1.) * **GROTTO**. *n. f.* [*grotte*, French; *grotta*, Italian.] A cavern or cave made for coolness. It is not used properly of a dark horrid cavern.—

Their carelets chiefs to the cool *grotto*s run,
The bow'rs of kings, to shade them from the sun. *Dryden*.

—This was found at the entry of the *grotto* in the Peak. *Woodward*.

(2.) **GROTTO**, or **GROTTA**, in natural history, a large deep cavern or den in a mountain or rock. The word is formed, according to Menage, &c. from the Latin *crypta*. Du Cange observes, that *grotta* was used in the same sense in the corrupt Latin. The ancient anchorites retired into dens and grottoes, to apply themselves the more attentively to meditation. **ELDEN HOLE**, **OKEY-HOLE**, **PEAKE'S HOLE**, and **POOL'S HOLE**, are famous among the natural caverns or grottoes of England. See these articles. In grottoes are frequently found crystals of the rock, stalactites, and other natural congelations, and those of an amazing beauty. M. Homberg conjectures, from several circumstances, that the marble pillars in the grotto of Antiparos vegetate or grow. That author looks on this grotto as a garden, whereof the pieces of marble are the plants; and endeavours to show, that they could only be produced by some vegetative principle. See **ANTIPAROS**. At Foligno in Italy is another grotto, consisting of pillars and orders of architecture of marble, with their ornaments, &c. scarcely inferior to those of art; but they all grow downwards: so that if this too be a garden, the plants are turned upside down.

(3.) **GROTTO**, (§ 1.) is also used for a little artificial edifice made in a garden, in imitation of a natural grotto. The outides of these grottoes are usually

ing, dissolve it in a glass-pan, to every ounce of which add two drams of the finest vermilion: when you have stirred them well together, and have chosen your twigs and branches, peeled and dried, take a pencil and paint the branches all over whilst the composition is warm; afterwards shape them in imitation of natural coral. This done, hold the branches over a gentle coal fire, till all is smooth and even as if polished. In the same manner white coral may be prepared with white lead, and black coral with lamp black. A grotto may be built with little expence, of glass, cinders, pebbles, pieces of large flint, shells, moss, stones, counterfeit coral, pieces of chalk, &c. all bound or cemented together with the above described cement.

(4.) GROTTTO, in geography, a district of Maritime Austria, in Friuli, in the territory of Carnia, on the Julian Alps.

(5.) GROTTTO DEL CANI, a little cavern near Pozzuoli, 12 miles from Naples, the steams whereof are of a mephitical or noxious quality; whence also it is called *bocca venenosa*, the poisonous mouth. See MEPHITIS. "Two miles from Naples (says Dr Mead), just by the Lago de Agnanno, is a celebrated mofeta, commonly called *la Grotta del Cani*, and equally destructive to all within the reach of its vapours. It is a small grotto about 8 feet high, 12 long, and 6 broad; from the ground arises a thin, subtil, warm fume, visible enough to a discerning eye, which does not spring up in little parcels here and there, but in one continued stream, covering the whole surface of the bottom of the cave; having this remarkable difference from common vapours, that it does not like smoke disperse into the air, but quickly after its rise falls back again, and returns to the earth; the colour of the sides of the grotto being the measure of its ascent: for so far it is of a darkish green, but higher only common earth. A dog I myself found no inconvenience by standing in it, so long as it did not rise above his head, and he was not at all affected by it."

owing to the columns of the mofeta, it promotes the contraction of the vessels, and the retarded circulation; the steam which remains in the vesicles of the lungs, may be sufficient to destroy the fluid. After the same manner it produces a *deliquium animi*: the lake of Agnanno has a greater virtue in it than others, and the person lying in this grotto was for a long time of a poisonous nature, and the same animals which breathed it, died. It is said that it destroyed the elasticity of the vessels of the lungs to such a degree as occasioned sudden death. It is also said that this steam is nothing else but the same which from time immemorial hath been known in that place in very great quantities, which cannot yet be investigated. Modern discoveries concerning it prove it to be pernicious when breathed in great quantity, by rarefying the blood, and hence the best method of recovery is to be apparently killed by fixed air, and then the degree of cold all over the body is to be condensed the blood as much as possible. The reason why the dogs recede from the lake Agnanno as above is because of the BLOOD, § 3, and DAMPS.

(6.) GROTTTO, or GROTTTO TERRENEA, a cavern near the village of Braccano in Italy, is thus described: "The *grotta del serpente* is large enough for two persons. It is perforated with several apertures, somewhat in the manner of which, at the beginning of the spring, issues a numerous brood of young serpents of various colours, but all free from any poisonous quality. In this cavern lie many persons, paralytics, arthritics, &c. quite naked; where the serpents remain for some time, and then the serpents are sold for the use of the people."

an elm growing hard by laden with them. discovery of this cave was by the cure of a going from Rome to some baths near this. Losing his way, and being benighted, he rested upon this cave. Finding it very warm, pulled off his clothes; and being weary and dry, had the good fortune not to feel the serpents about him till they had wrought his cure.

.) GROTO, MILKY, *Crypta Lactea*, a mile distant from the ancient village of Bethlehem, is so to have been thus denominated on occasion of the blessed Virgin, who let fall some drops of milk in giving suck to Jesus in this grotto. And as it has been commonly supposed, that the floor of this cavern has the virtue of restoring milk to women that are grown dry, and even of curing the same. Accordingly, they are always digging in the earth is sold at a good rate to such as have faith enough to give credit to the fable. An house has been built on the place, and a church erected by it.

ROTTOLA, a town of Naples, in the province of Basilicata, 4 miles SW. of Matera.

ROVA, a town of Africa, on the Grain Coast, 4 miles NW. of Cape Palmas.

.) GROVE, Henry, a learned and ingenious Presbyterian divine, born at Taunton in Somerset, in 1683. Having obtained a sufficient knowledge of classical literature, he went through a course of academical learning, under the rev. Mr. Allen of Taunton, who had a flourishing academy. He then removed to London, and studied under the rev. Mr. Rowe, to whom he was nearly attached. Here he contracted a friendship with several persons of merit, and particularly with Dr. Hoadly, which continued till his death, though they were of different opinions in several points of doctrine, and were often controverted among divines. After two years spent under Mr. Rowe, he returned into the country, and began to preach with great reputation. He had a sound judgment, a lively imagination, and a rational and amiable representation of Christianity, delivered in a sweet and well governed voice, which rendered him generally admired; and the spirit of piety which prevailed in his sermons procured him the esteem and friendship of Mrs. Singer, afterwards Mrs. Rowe, which she expressed in a fine letter on her death, addressed to Mr. Grove. Soon after beginning to preach, he married; and on the death of Mr. Warren, succeeded him in the academy of Taunton. This obliging him to reside there, he preached for 18 years to two small congregations in the neighbourhood; and though his salary both was less than 20l. a-year, and he had a large family, he went through it cheerfully. In 1708, he published a piece, intitled, *The Regimen of Diversions*, drawn up for the use of his scholars. About the same time, he entered into a dispute by letter with Dr. Samuel Clarke: they not being able to convince each other, the dispute was dropped with expressions of great mutual esteem. He next wrote several papers printed in the *Spectator*, viz. Numbers 588. 601. 626. 635. This last was republished, by the direction of Dr. Burnet bishop of London, in the *Evidences of the Christian Religion*, by Joseph Addison, Esq. In 1711 Mr. James, his partner in the academy, dying, he succeeded him in his pastoral charge at Taunton.

Fulwood, near Taunton, and engaged his nephew to undertake the other parts of Mr. James's work as tutor; and in this situation Mr. Grove continued till his death, which happened in 1738. His great concern with his pupils, was to inspire and cherish in them a prevailing love of truth, virtue, liberty, and genuine religion, without violent attachments or prejudices in favour of any party of Christians. He represented truth and virtue in a most engaging light; and though his income, both as a tutor and a minister, was insufficient to support his family, without breaking into his paternal estate, he knew not how to refuse the call of charity. Besides the above pieces, he wrote, 1. An Essay towards a Demonstration of the Soul's Immortality. 2. An Essay on the Terms of Christian Communion. 3. The Evidence of our Saviour's Resurrection considered. 4. Some Thoughts concerning the Proof of a Future State from Reason. 5. A Discourse concerning the Nature and Design of the Lord's Supper. 6. Wisdom the first spring of Action in the Deity. 7. A Discourse on Saving Faith. 8. Miscellanies in prose and verse. 9. Many Sermons, &c. After his decease, his posthumous works were published by subscription, in 4 vols 8vo, with the names of near 700 subscribers, among whom were some of the best judges of merit in the established church.

(2.) * GROVE. *n. f.* [from *grave*.] A walk covered by trees meeting above.—

I look'd toward Birnam, and anon methought
The wood began to move!

Within this three mile may you see it coming;
I say, a moving *grove*. *Shakespeare's Macbeth.*

Fortunate fields, and *groves*, and flow'ry vales;
Thrice happy isles! *Milton.*

She left the flow'ry field, and waving *grove*.
Blackmore,

Barish'd from courts and love,
Abandon'd truth seeks shelter in the *grove*.
Granville.

Can fierce passions vex his breast,
While every gale is peace, and every *grove*
Is melody? *Thomson's Spring.*

(3.) GROVE, in gardening, a small wood impervious to the rays of the sun. Groves are not only great ornaments to gardens; but also afford great relief against the violent heats of the sun, affording shade to walk under in the hottest parts of the day, when the other parts of the garden are useless; so that every garden is defective which has not shade. Groves are of two sorts, viz. either open or close. Open groves are such as have large shady trees, which stand at such distances, as that their branches approach so near each other as to prevent the rays of the sun from penetrating through them. Close groves have frequently large trees standing in them; but the ground under these are filled with shrubs or underwood: so that the walks which are in them are private, and screened from winds; by which means they are rendered agreeable for walking, at those times when the air is either too hot or too cold in other parts of the garden. These are often contrived so as to bound the open groves, and frequently to hide the walls or other inclosures of the garden; and when they are properly laid out, with dry

P P P P

walks

walks winding through them, and on the sides of these sweet smelling shrubs and flowers irregularly planted, they have a charming effect.

(4.) GROVES have been in all ages held in great veneration. The *proseuche*, &c. and high-places of the Jews, whither they resorted for the purposes of devotion, were probably situated in groves: See Joshua xxiv. 26. The *proseuche* in Alexandria, mentioned by Plutarch, had groves about them because he complains that the Alexandrians, in a tumult against the Jews, cut down the trees of their *proseuche*. The ancient Romans had a sort of groves near several of their temples, which were consecrated to some god, and called *lucus*, by An- tiphrasis, a *non lucendo*, as being shady and dark. The veneration which the ancient Druids had for groves is well known.

* To GROVEL. *v. n.* [*grifile*, Islandick. flat on the face. It may perhaps come by gradual corruption from *ground fill*.] 1. To lie prone; to creep low on the ground.

The steel head passage wrought,
And through his shoulder pierc'd; wherewith
to ground

He groveling tell, all gored in his gushing wound.

What let's it on there? King Henry's diadem,
Tach'd with all the honours of the world?

If so, gaze on, and grovel on thy face,
Until thy head be circled with the same.

Okemast and coeh, and corned fruit they eat,
Groveling like swine on earth, in lowest sort.

Now they lie
Groveling and prostrate on yon lake of fire.

Upon thy belly groveling thou shalt go.
—Let us conclude that all painters ought to re-
quire this part of excellence: not to do it, is to
want courage, and not dare to shew themselves;
to creep and grovel on the ground.

I must distinguish what's in his express;
His groveling sense will shew my passion less.

Several thoughts may be natural which are low
and groveling.

(1.) * GROUND. *n. f.* *'grund*, Sax. *grondt*,
Danish.} 1. The earth, considered as superficial-
ly extended, and therefore related to tillage, tra-
vel, habitation, or almost any action. The main
mass of terrene matter is never called the *ground*.
We never distinguish the terraqueous globe into
ground and water, but into *earth*, or land, and wa-
ter; again, we never say under *earth*, but under
ground.—Israel shall go on dry *ground* through the
sea. *Exodus. xiv. 26*—

Man to till the *ground*
None was, and from the earth a dewy mist
Went up, and water'd all the *ground*.

From the other hill
To their fix'd station, all in bright array,
The cherubim descend'd, on the *ground*
Gliding meteorous.

A black bituminous gurge
Boils up from under *ground*.

And yet so nimble he would bound.

As if he scorn'd to touch the *ground*.
2. The earth as distinguished from air or
—I have made man and beast upon the
Jeremiah—There was a Jew upon all the
Judges vi. 20—

They sum'd their wings, and for
an instant,

With clang despis'd the *ground*.

Too late young Turnus the delusion
Far on the sea, still making from the

3. Land; country.—

The water breaks its bounds,
And overflows the level *grounds*.

4. Region; territory.—

On heavenly *ground* they stood, and
shore

They view'd the vast immeasurable abode
With that same they, who from

Of old Euphrates to the brook that
Egypt from Syria *ground*, had general

original causes from whence they have
unknown. *Hooker.* — In the solution of
izer's objection, my method shall be, to
in the first place, the main *grounds* and
upon which he buildeth. *White.* —

Thou could'st not have discern'd
the serpent, speaking as he spake,
and of enmity between us known. *Milt.*
either of them ever think fit to make
ular relation of the *grounds* of their pro-
or the causes of their misadventures.
—

I judgment is the *ground* of writing well.

Roscommon.

once giv'n from her, and plac'd in you,
leave no *ground* I ever would be true.

Dryden.

easy to imagine how any such tradition
so early, and spread so universally, if
not a real *ground* for it. *Wilkins.* — If it
ought we not to conclude that there
ground and reason for these fears, and that
h not planted them in us to no purpose.
Thus it appears, that suits at law are
in themselves, but may lawfully be used,
no unlawfulness in the *ground* and way
ment. *Kettlewell.* — Upon that prince's
hough the *grounds* of our quarrel with
d received no manner of addition, yet
bought fit to alter his sentiments. *Swift.*
raculous increase of the professors of

Christianity was without any visible *grounds* and
causes, and contrary to all human probability and
appearance. *Atterbury.* 15. The field or place of
action —

Here was thy end decreed, when these men
rose;

And ev'n with theirs this act thy death did bring.

Or hasten'd at the least upon this *ground*. *Daniel.*

16. The space occupied by an army as they fight,
advance, or retire. — At length the left wing of the
Arcadians began to lose *ground*. *Sidney.* —

Heartless they fought, and quitted soon their
ground,

While our's with easy victory were crown'd.

Dryden.

— He has lost *ground* at the latter end of the day,
by pursuing his point too far, like the prince of
Conde at the battle of Seneffe. *Dryden's Fables,*
Preface. 17. The intervening space between the
flyer and pursuer. —

Ev'ning mist,

Ris'n from a river, o'er the marish glides,

And gathers *ground* fast at the labourer's heels,

Homeward returning. *Milton's Paradise Lost.*

— Superiors think it a detraction from their merit
to see another get *ground* upon them, and over-
take them in the pursuits of glory. *Spectator.* —

Even whilst we speak our conqueror comes on,
And gathers *ground* upon us every moment.

Addison.

18. The state in which one is with respect to op-
ponents or competitors. —

Had'st thou sway'd as kings should do,

Giving no *ground* unto the house of York,

They never then had sprung. *Shak. Henry VI.*

If they get *ground* and 'vantage of the king,

Then join you with them like a rib of steel,

To make them stronger. *Shak. Henry IV.*

— He will stand his *ground* against all the attacks
that can be made upon his probity. *Atterbury.* —

Whatever *ground* we may have gotten upon our
enemies, we have gotten none upon our vices, the
worst enemies of the two: but are even subdued
and led captive by the one, while we triumph so
gloriously over the others. *Atterbury.* 19. State

of progress or recession. — I have known so many
great examples of this cure, and heard of its being
so familiar in Austria, that I wonder it has gained
no more *ground* in other places. *Temple.* — The

squirrel is perpetually turning the wheel in her
cage: she runs apace, and wearies herself with
her continual motion, and gets no *ground*. *Dryden.*

20. The foil to set a thing off. —

Like bright metal on a sullen *ground*,

My reformation glittering o'er my fault,

Shall shew more goodly, and attract more eyes,

Than that which hath no foil to set it off. *Shak.*

(2.) GROUND, in etching, denotes a gummous
composition smeared over the surface of the metal
to be etched, to prevent the aquafortis from eat-
ing except in such places where this *ground* is cut
through with the point of a needle. See ETCHING.

(3.) GROUND, in painting, (§ 1. def. 9.) is pro-
perly understood of such parts of the piece, as have
nothing painted on them, but retain the original
colour upon which the other colours are applied
to make the representations. A building is said to
serve as a good *ground* to a figure when the figure is

painted on the building. The ground behind a picture in miniature, is commonly blue or crimson imitating a curtain of satin or velvet.

(4.) * **GROUND.** The preterite and part. pass. of *grind*—

How dull and rugged, ere 'tis *ground*

And polish'd, looks a diamond. *Hudibras.*

(5.) * **GROUND** is much used in composition for that which is next the ground, or near the ground.

* **To GROUND.** *v. n.* [from the noun.] 1. To fix on the ground. 2. To found, as upon cause, reason, or principle—*Wisdom groundeth her laws upon an infallible rule of comparison. Hooker.*—The church of England, walking in the good and old way of the orthodoxal primitive fathers, *groundeth* the religious observation of the Lord's-day, and of other Christian holidays, upon the natural equity, and not upon the letter of the fourth commandment. *White*—It may serve us to *ground* conjectures more approaching to the truth than we have hitherto met with. *Boyle.*—

If your own actions on your will you *ground*,

Mine shall hereafter know no other bound. *Dryd.*

—Some eminent spirit, having signalized his valour, becomes to have afluence to the people, to grow their leader in warlike expeditions; and this is *grounded* upon the principles of nature and common reason, which, where prudence and courage are required, rather incite us to fly to a single person than a multitude. *Swift.*—3. To settle in first principles or rudiments of knowledge.—Being rooted and *grounded* in love. *Eph. iii. 17.*

GROUND ANGLING, fishing under water without a float, only with a plumb of lead, or a bullet, placed about 9 inches from the hook; which is better, because it will not sink on the ground. This method of fishing is most proper in cold weather, when the fish swim very low. The morning and evening are the chief seasons for the ground-line in fishing for trout; but if the day prove cloudy, or the water muddy, you may fish at ground all day.

* **GROUND ASH.** *n. f.* A sapling of ash taken from the ground; not a branch cut from a tree.—

A lance of tough *ground ash* the Trojan threw,

Rough in the rind, and knotted as it grew. *Dryd.*—Some cut the young ashes off about an inch above the ground, which causes them to make very large straight shoots, which they call *ground-ash*. *Mortimer's Husbandry.*

* **GROUND-BAIT.** *n. f.* [from *ground* and *bait*.] A bait made of barley or malt boiled; which, being thrown into the place where you design to angle, sinks to the bottom, and draws the fish to it.—Take the depth of the place, where you mean after to cast your *ground bait*, and to fish. *Walton's Angler.*

* **GROUNDLEDLY.** *adv.* [from *grounded*.] Upon firm principles.—He hath given the first hint of speaking *groundedly*, and to the purpose, upon this subject. *Glanville.*

* **GROUND-FLOOR.** *n. f.* [from *ground* and *floor*.] The lower story of a house.

(1.) * **GROUND IVY.** *n. f.* [*Aedera terrestris*, Lat.] A herb, or trailing plant.—*Alehouse* or *ground ivy* is, in my opinion, of the most excellent use and virtue of any plants among us. *Temple.*

(2.) **GROUND IVY**, in botany. See *GLAUC*

* **GROUNDLESS.** *adj.* [from *ground*.] Without reason; wanting ground.—

But when vain doubt and *groundless* fear
Do that dear foolish bosom tear.

—We have great reason to look upon the pretensions which the Roman church makes as *groundless*, and to reject her fabulous accounts of them. *Atterbury.*—A man who distinguishes himself by their zeal, present establishment, should be careful to pay such a reverence for religion, as not to be *groundless* that reproach is which not only them, of being averse to our national religion. *Freeholder.*

* **GROUNDLESSLY.** *adv.* [from *groundless*.] Without reason; without cause; without reason.—Divers persons have produced by spirit of vitriol, or juice of lemons, *groundlessly* ascribed the effect to some quality of those two liquors. *Boyle on Colours.*

* **GROUNDLESSNESS.** *n. f.* [from *groundless*.] Want of just reason.—He does not want words either of my book or sermons, lest he should have discovered the notoriety and *groundlessness* of his calumny. *Telegraph.*

* **GROUNDLING.** *n. f.* [from *ground*.] A fish which keeps at the bottom of the water, one of the low vulgar. *Hammer*—It offers the soul, to hear a robustious perjury, low tear a passion to tatters, to very rap, the ears of the *groundlings*. *Shakspeare.*

* **GROUNDLY.** *adv.* [from *ground*.] Principally; solidly; not superficially.—use—A man, *groundly* learned already, much profit himself, in using by epitome to other men's works, for his own memory to shorter room. *Shakspeare.*

GROUND NETS. See *ARACHIS.*

* **GROUND-OAK.** *n. f.* [from *ground* and *oak*.] The planting of oaks were more in use for the making of hoops, either of stave or ring, one hoop made of the young shoots of *oak*, would outlast six of the best *ash*. *Boyle.*

(1.) * **GROUND-PINE.** *n. f.* [*Pinus terrestris*, L.] A plant.—The whole plant has a very strong smell, resembling that of resin; whence its *ground-pine*. It grows on dry and barren and in some places on the ditch banks by sides. *Hill's Mat. Med.*

(2.) **GROUND PINE**, in botany. See *TRIFOLIUM*

* **GROUND-PLATE.** *n. f.* [In architecture.] The outermost pieces of timber lying on or near the ground, and framed into one another with ties and tensions. In these also are mortises to receive the tensions of the joists, the sills and girders; and sometimes the trussing of the roof and chimney-way, and the binding of the roof. *Harris.*—In the orthographical schemes should be a true delineation, if it be a building, of the several sizes of the *ground-plate* summers, and beams. *Mortimer.*

* **GROUND-PLOT.** *n. f.* 1. The ground which any building is placed.—Wretched *plot*, where canst thou find any small ground for hope to dwell upon? *Sidney.*—

plot square five hives of bees contains; of industry and virtuous gains. *Harte.*
ography of a building.

D-RENT. *n. f.* Rent paid for the privilege of building on another man's ground.—A ground rent of five pounds. *Arbut.* was neither granted him, nor giv'n; nature's, and the ground rent due to 'n *Harte.*

D-ROOM. *n. f.* A room on the level ground.—I beseeched him, hereafter to a ground room; for that otherwise it impossible for an artist of any other kind him. *Tatler.*

GROUNDSEL. *n. f.* [*grund* and *file*, the, perhaps from *fella*, Lat.] The tim-d pavement next the ground.—The ne hath every one of its lights rabbit-tide about half an inch into the frame; e rabbits, but that on the *groundsel*, square; but the rabbit on the *ground*-l downwards; that rain or snow may all off. *Moxon's Mechanical Exercises.*

GROUNDSEL. *n. f.* [*senecio*, Lat.] A plant.

GROUNDSEL. See *BACCHARIS*, & *SENECIO*.
TACKLE, a ship's anchors, cables, general whatever is necessary to make at anchor.

GROUNDWORK. *n. f.* [*ground* and *work*.] 1. the first stratum; the first part of that to which the rest is additional.—there is in heav'n's expanded plain, when the skies are clear, is seen below, tals by the name of milky know;

groundwork is of stars. *Dryden's Fables.*

part of an undertaking; the funda- The main skill and *groundwork* will be hem such lectures and explanations,

opportunity, as may lead and draw ling obedience. *Milton.* 3. First prin-

nal reason.—The *groundwork* thereof lets true and certain, however they orance disguise the same, or through *yer's State of Ireland.*—The morals is ives of the poet, as being the *ground*-instruction. *Dryden.*

GROUP. *n. f.* [*groupe*, French; *greppo*, crowd; a cluster; a hurdle; a number together.—In a picture, besides the prin- which compose it, and are placed in it, there are less *groups* or knots of osed at proper distances, which are piece, and seem to carry on the same ore inferior manner. *Dryden's Dufres.* doubt but the poet had here in view of Zetus, in the famous *group* of figures ents the two brothers binding Dirce s of a mad bull. *Addison.*—

ould try your graving tools.

icious *group* of fools. *Swift.*

GROUP, in painting and sculpture, is an of two or more figures of men, beasts, ie like, which have some apparent re- ch other. See *PAINTING*.

GROUP. *v. a.* [*groupper*, French.] To put d; to huddle together.—The difficulty ing and disposing, or as the painters

term it, in *grouping* such a multitude of different objects, preserving still the justice and conformity of style and colouring. *Prior.*

GROUP ISLANDS, or } a cluster of islands lately
The GROUPS, } discovered in the South-
Sea. They lie in about S. Lat. 18. 12. and W. Long. 142. 42. They are long narrow slips of land, ranging in all directions, some of them ten miles or upwards in length, but not more than a quarter of a mile broad. They abound in trees, particularly those of the cocoa nut. They are inhabited by well made people, of a brown complexion. Most of them carried in their hands a slender pole about 14 feet in length. pointed like a spear; they had likewise something shaped like a paddle, about four feet long. Their canoes were of different sizes, carrying from three to six or seven people, and some of them hoisted a sail.

(1.) * **GROUSE.** *n. f.* A kind of fowl; a heath-cock.—

The squires in scorn will fly the house

For better game, and look for grouse. *Swift.*

(2.) **GROUSE,** or **GROWSE.** See *TETRAO*.

* **GROUT.** *n. f.* [*grut*, Saxon. In Scotland they call it *grouts*.] 1. Coarse meal; pollard.—King Hardicute, 'midst Danes and Saxons stout, Carous'd in nut-brown ale, and din'd on *grout*: Which dish its pristine honour still retains.

And when each prince is crown'd in splendour reigns. *King.*

2. That which purges off.—

Sweet honey some condense, some purge the *grout*;

The rest, in cells apart, the liquid nectar shout. *Dryden.*

3. A kind of wild apple. [*Agriomelum*, Latin.]

GROUTHEAD, or **GREATHEAD,** Robert, a learned bishop of Lincoln, born at Stow in Lincolnshire, or Stradbrook in Suffolk, in the end of the 12th century. His parents were so poor, that when a boy he was obliged to do the meanest offices, and even to beg his bread; till the mayor of Lincoln, struck with his appearance and the quickness of his answers to certain questions, took him into his family, and put him to school. Here his ardent love of learning, and admirable capacity for acquiring it, soon appeared, and procured him many patrons, who enabled him to prosecute his studies, first at Cambridge, afterwards at Oxford, and at last at Paris. In these three famous seats of learning, he spent many years in the most indefatigable pursuit of knowledge, and became one of the best and most universal scholars of the age. He was master not only of the French and Latin, but also of the Greek and Hebrew languages, which was a very rare accomplishment in those times. Roger Bacon, who was intimately acquainted with him, says that he spent much of his time for almost 40 years in the study of geometry, astronomy, optics, and other branches of mathematical learning, in all which he very much excelled. Theology was his favourite study, in which he read lectures at Oxford with great applause. In the mean time, he obtained several preferments in the church, and was at length elected and consecrated Bp. of Lincoln, A. D. 1235. In this station he soon became very famous, by the purity of his manners, the popularity of his preaching,

preaching, the vigour of his discipline, and the boldness with which he reprov'd the vices and oppos'd the arbitrary mandates of the court of Rome; of this last we shall give one example. Pope Innocent IV. had granted to one of his own nephews, named *Frederick*, who was but a child, a provision to the first canon's place in the church of Lincoln that should become vacant; and sent a bull to the Abp. of Canterbury, and Innocent, then papal legate in England, commanding them to see the provision made effectual; which they transmitted to the Bp. of Lincoln. But this brave and virtuous prelate boldly refused to obey this unreasonable mandate, and sent an answer to the papal bull containing the following severe reproaches against his holiness for abusing his power: "If we except the sins of Lucifer and Antichrist, there neither is nor can be a greater crime, nor any thing more contrary to the doctrine of the gospel, or more odious and abominable in the sight of Jesus Christ, than to ruin and destroy the souls of men, by depriving them of the spiritual aid and ministry of their pastors. This crime is committed by those who command the benefices intended for the support of able pastors, to be bestowed on those who are incapable of performing the duties of the pastoral office. It is impossible therefore that the holy apostolic see, which received its authority from the Lord Jesus Christ, for edification, and not for destruction, can be guilty of such a crime, or any thing approaching to such a crime, so hateful to God and so hurtful to men. For this would be a most manifest corruption and abuse of its authority, which would forfeit all its glory, and plunge it into the pains of hell." Upon reading this letter, his holiness became frantic with rage, and threatened to make the bishop an object of terror and astonishment to the whole world. "How dare (said he) this old, deaf, dotting fool, disobey my commands? Is not his master the king of England my subject, or rather my slave? Cannot he cast him into prison, and crush him in a moment?" But the cardinals brought the pope to think more calmly, and to take no notice of this letter. "Let us not (said they) raise a tumult in the church without necessity, and precipitate that revolt and separation from us, which, we know, must one day take place." Remarkable words, when we reflect when and by whom they were spoken! The bishop did not long survive this noble stand against the gross corruptions and tyranny of the church of Rome. He fell sick at his castle of Bugden that same year; and sensible that his death was drawing near, he called his clergy into his apartment, and made a long discourse to them, to prove that the reigning pope Innocent IV. was *Antichrist*. With this exertion his strength was so much exhausted, that he expired soon after, Oct. 9. 1253. A contemporary historian says, "He was a free and bold reprimander of the pope and the king; an admonisher of the prelates; a corrector of the monks; an instructor of the clergy a supporter of the studious; a censurer of the incontinent; a scourge and terror to the court of Rome; a diligent teacher of the scriptures; and a frequent preacher to the people. At his table he was hospitable, polite, and cheerful. In the

church he was contrite, devout, and full in performing all the duties of his office venerable, active, and indefatigable." *Trious Roger Bacon*, who had the best of his learning, by perusing his works, frequently conversing with him, both gave honourable testimony in his favour. *Grouthead Bp. of Lincoln*, and his *Adam de Marisco*, are the two most in the world, and excel all the rest both in divine and human knowledge. Excellent prelate was a very voluminous and composed a prodigious number of a great variety of subjects in philosophy, a catalogue of which is given by

GROUVILLE, a small town in Jersey, 3 miles E. of St. Helier.

GROUWE, a town of the Batavia, in the department of the Meuse, and prov. of Dutch Flanders, 5 miles NE.

(1.) * To GROW. *v. n. pret. pass. grown.* [*growan*, Saxon; *grow*, 1. To vegetate; to have vegetable increase by vegetation.—It is not the fruit that nourisheth man; but it is which preserveth them. *Wisd.* xvi. 12. sith the grass to grow for the cattle, and the service of man. *Ps.* civ. 14. 3. To be increased by vegetation.—In this country growth of that wood, which since in Europe to die red colours. *Actw*—*groweth* in the fields, at the first is tennis-ball, and white; and after growth mushroom colour, and full of light dust.

But say, where *grows* the tree? how far?

In colder regions men compose

Poison with art; but here it *grows*.

Thosetow'rs of oak o'er fertile plains

And visit mountains where they *grow* &

3. To shoot in any particular form—

Children, like tender oiers, take
And as they first are fashion'd, always

Dryd.

4. To increase in stature.—

I long with all my heart to see the
I hope he is much *grown* since last I saw

Shak.

—The poor man had nothing, save one little lamb, which he had bought and reared it *grew* up together with him and with his ren. 2 *Sam.* xii. 3. 5. To come to maturity from infancy: commonly followed by *up* the prince *groweth up* fast to be a man, a sweet and excellent disposition. *Baron to Villiers*.—The main thing to be considered every action of a child, is how it will be when he is bigger, and whither it will when he is *grown up*. *Locke*.—We are but to the world children, ignorant and unand we *grow up* in vanity and folly. *Wal* issue, as plants from a soil, or as branches the main trunk.—They will seem not to him, but *growing* out of him. *Dryden's* *ration*. 7. To increase in bulk; to become, or more numerous.—Bones, after full

me at a stay : as for nails they grow continually. *Bacon's Nat. Hist.*—

Then their numbers swell,
and grow upon us. *Denham.*

visions grow upon us, by neglect of practice : as every age degenerated from primitive, they advanced in nice enquiries. *Decay of*

8. To improve ; to make progress — in grace, and in the knowledge of our Lord and Saviour Jesus Christ. *2 Pet. iii. 18.*—He then bequeathed his best of legacies, his blessings ; most heartily exhorting the young growing hopes of his family. *Fell.*—As he grew forward in years, he was trained up to learning, under one Pronau, who taught the Pelasgick letter invented by the Pelasgi. *Pope's Essay on Homer.* 9. To advance in state.—

Nature, as it grows again towards earth, is weary'd for the journey dull and heavy.

Shak.
I doubted whereunto this would grow.

10. 24.—The king, by this time, was grown to an height of reputation for cunning and craft, that every accident and event that went on was laid and imputed to his foresight. *Bacon.*—But when to ripen'd manhood he shall grow, the greedy sailor shall the seas forego. *Dryd.*

11. To come by degrees ; to reach any state gradually.—After they grew to rest upon number, they were competent than vast, they grew to advancement of place, cunning diversions, and the like ; they grew more skilful in the ordering of battles. *Bacon.*—Verse, or the other harmony of words, I have so long studied and practised, that it is grown into a habit, and become familiar to me. *Dryden's Fables, Preface.*—The trespasses of the people are grown up to heaven, and their sins are beyond all restraints of law and authority.

12. To come forward ; to gather ground. The people seeing the end of their government nigh, they began to practice growing up, which may be a trouble to the next governor, will not attend to redress. *Spenser on Ireland.*—It was now the month of October, and Winter began to grow in : great rain, with terrible thunder and lightning, and mighty tempests, then fell abundantly. *Knolles.* 12. To be changed from one state to another ; to become either better or worse ; to

A good man's fortune may grow out at heels.

Shak.
Scipio Nasica feared lest, if the dread of that law were taken away, the Romans would grow idle to idleness or civil dissension. *Abbot*—

Hence, hence, and to some barbarous climate fly,

which only brutes in human form does yield,
and man grows wild in nature's common field,

Dryden.
The nymph grew pale, and in a mortal fright,
sweat with the labour of so long a flight. *Dryd.*

Patient of command
time he grew ; and growing us'd to hand,
he waited at his master's board for food. *Dryd.*
He may trade and be busy, and grow poor by
unless we regulate our expences. *Locke.*—
He will grow a thing contemptible, unless you
supply the loss of beauty with more durable

qualities. *Swift.*—Delos, by being reckoned a sacred place, grew to be a free port, where nations warring traded, as in a neutral country. *Arbutnot on Coins.*—

By degrees the vain, deluded elf,
Grew out of humour with his former self. *Harte.*
13. To proceed as from a cause or reason.—What will grow out of such errors, as masked under the cloak of divine authority, impossible it is that ever the wit of man should imagine, 'till time have brought forth the fruits of them. *Hooker.*—Shall we let light by that custom of reading, from whence so precious a benefit hath grown? *Hooker.*—Take heed now that ye fail not to do this : why should damage grow to the hurt of the king. *Ez. iv. 22.*—Hence grows that necessary distinction of the saints on earth and the saints in heaven ; the first belonging to the militant, the second to the triumphant church. *Pearson.*—The want of trade in Ireland proceeds from the want of people ; and this is not grown from any ill qualities of the climate or air, but chiefly from so many wars. *Temple.* 14. To accrue ; to be forthcoming.—

Ev'n just the sum that I do owe to you,
Is growing to me by Antipholis. *Shak.*

15. To adhere ; to stick together.—
Honour and policy, like unsever'd friends,
I, th' war do grow together. *Shak.*

—The frog's mouth grows up, and he continues so for at least six months without eating. *Walton.*—In burnings and scaldings the fingers would many times grow to the breast, and the arms to the sides, were they not hindered. *Wise man's Surgery* 16. To swell : a sea-term.—Mariners are used to the tumbling and rolling of ships from side to side, when the sea is never so little grown. *Raleigh.* 17. The general idea given by this word is procession or passage from one state to another. It is always change, but not always increase ; for a thing may grow less, as well as grow greater.

(2. To GROW. *v. a.* To plant ; to raise. This verb seems not to have been in use as an *active* verb, when Dr Johnson compiled his dictionary ; nor does such use of it appear indeed to be sanctioned by any good classical authority ; though within these few years some of the best modern writers on agriculture use it in this sense ; *to grow corn* or *grain* being quite the current expression, for what former authors would have called *raising* it. This innovation on the English language, appears to have arisen, not from *affectation*, like most of our other modern corruptions of style, but from *ignorance* of the difference between an *active* or *transitive* verb, and a *neuter* or *intransitive* one.

* GROWER. *n. s.* [from *grow*.] An increaser. It will grow to a great bigness, being the quickest grower of any kind of elm. *Mort. Hulb.*

* To GROWL. *v. n.* [grown, *Flemish*.] 1. To snarl or murmur like an angry cur.—

They roam amid' the fury of their heart,
And growl their horrid loves. *Thomson's Spring.*
—Dogs in this country are of the size of common mastiffs, and by nature never bark, but growl when they are provoked. *Ellis's Voyage.* 2. To murmur ; to grumble.—Othello, neighbours—how he would roar about a foolish handkerchief ! and then he would growl so manfully. *Gay.*

* GROWN. The participle of *grow*. 1. Advanced

2. Product; production; thing produced; act of producing—

Forbidding every bleak unkindly fog

To touch the prosperous *growth* of this tall wood.

Milton.

Our little world, the image of the great,
Of her own *growth* hath all that nature craves,
And all that's rare, as tribute from the waves.

Waller.

—The trade of a country arises from the native *growths* of the soil or seas. *Temple* —I had thought, for the honour of our nation, that the knight's tale was of English *growth*, and Chaucer's own. *Dryd.*

3. Increase in number, bulk, or frequency.—What I have tried, or thought, or heard upon this subject, may go a great way in preventing the *growth* of this disease, where it is but new. *Temple.* 4. Increase of stature; advance to maturity.—

They say my son of York

Has almost overta'en him in his *growth*.

Shak. Rich. III.

The stag, now conscious of his fatal *growth*,
To some dark covert his retreat had made.

Denham.

—Though an animal arrives at its full *growth* at a certain age, perhaps it never comes to its full bulk 'till the last period of life. *Arbutn on Alim.*

—If parents should be daily calling upon God in a solemn deliberate manner, altering and extending their intercessions, as the state and *growth* of their children required, such devotion would have a mighty influence upon the rest of their lives.

Law. 5. Improvement; advancement.—It grieved David's religious mind to consider the *growth* of his own estate and dignity, the affairs of religion continuing still in the former manner. *Hooker.*

(2.) GROWTH, the gradual increase of bulk and stature that takes place in animals or vegetables, to a certain period. The increase of bulk in human bodies has no life, owing to the immutability of the human form.

ly; swimming on the breast, water; but his limbs soon became able, and his body beginning grew up in so extraordinary age of 5 years he measured 4 months after, he was four feet at six, 5 feet, and bulky in proportion was so rapid, that every measure required to be made longer and not preceded by any sickness with any pain in the groin or age of 5 years his voice changed to appear, and at six he had 30; in short all the unquested berty were visible in him. It was in a condition of begetting or induced the rector of the parish his mother to keep him from conversation with children of the his wit was riper than is common the age of 5 or 6, yet its proportion to that of his body. still retained something childish bulk and stature, he resembled which at first sight produced contrast. His voice was strong great strength rendered him a labourer of the country. At 5, good distance 3 measures of when turned of six, he could shoulders and carry loads of way off; and these exercises him as often as the curious to by some liberality. Some people think that he should giant. A mountebank was parents for him, and flattered of putting him in a way of money. But all manner of hopes were suddenly become crooked, and he died in a few days.

maturity. In some places of the East girls have children at 9 years of age. lar instances of extraordinary growth rought. It seems at first view astonish- children of such early and prodigious not become giants; but when we con- the signs of puberty appear so much they ought, it seems evident, that the ly a more than usually rapid expansion s, as in hot climates; and accordingly en, instead of becoming giants, always die apparently of old age, long before term of human life.

WTHEAD. } *n. f.* [from *grofs* or *great*
WTNOL. } *head: capito, Latin.* } 1.
fish. *Ainsw.* 2. An idle lazy fellow.

leeping one hour refresheth his song,
not Hob growthead for sleeping too

Tusser.

DANSKY, a town of Croatia, 5 miles ovi.

NGEN, a town of Germany, in the urtemberg, 10 miles NE. of Tubingen, . of Stuttgard.

O. See PORTO GRUARO.

RUB. *n. f.* [from *grubbing*, or mining.] worm that eats holes in bodies.—There ce between a *grub* and a butterfly, and utterfly was a *grub*. *Shak. Coriolanus*.—

New creatures rise,
g mafs at first, and short of thighs;
oting out with legs, and imp'd with
s,
s proceed to bees with pointed stings.

Dryden.

The *grub*,
serv'd, invades the vital core;
s tenant! and her secret cave
hourly, preying on the pulp

Philips.

hick man; a dwarf. In contempt.— ne, a short clownish *grub*, would bear carcase of an ox, yet never tugged

arew.
s, in zoology, is the English name of le worms, produced from the eggs of and which at length are transformed insects of the same species with their
e ERUCA, § 1.

UB. *v. a.* [from *grahan*, preter. *grob* to dig, To dig up; to destroy by digging; to the ground; to eradicate by throwing he soil.—A foolish heir caused all the hedges about his vineyard to be *grub-*
s/r.—

Forest land,
ence the surly ploughman *grubs* the l.

Dryden.

bing up of woods and trees may dful, upon the account of their un- Mortimer.—As for the thick woods, nly Virgil but Homer mentions, they them *grubbed* up, since the promon- n cultivated and inhabited. *Addison.*

PART. II.

GRUBBING, in agriculture, the digging or pulling up the stubs and roots of trees. When the roots are large, this is a very troublesome and laborious task; but Mr Mortimer shows how it may be accomplished, in such a manner as to save great expence, by a very simple and easy method. He proposes a strong iron hook to be made about 2 feet 4 inches long, with a large iron ring fastened to the upper part of it. This hook must be put into a hole in the side of the root, to which it must be fastened; and a lever being put into the ring, 3 men, by means of this lever, may wring out the root, and twist the sap-roots asunder. Stubs of trees may also be taken up with the same hook, in which work it will save a great deal of labour, though not so much as in the other; because the stubs must be first cleft with wedges, before the hook can enter the sides of them, to wrench them out by pieces.

* To GRUBBLE. *v. n.* [from *grubben*, German; from *grub*.] To feel in the dark.—

Thou hast a colour;

Now let me rowl and *grub* thee:

Blind men say white feels smooth, and black feels rough:

Thou hast a rugged skin; I do not like thee.

Dryden.

GRUBE, a town of Germany, in the duchy of Holstein, 12 miles NNE. of Cismar.

GRUBEN, a town of Silesia in Neisse.

(1.) GRUBENHAGEN, a principality of Brunswick, belonging to his majesty as elector of Hanover. It is partly fertile, but the greater part is mountainous, and, besides feeding a great number of sheep and black cattle, abounds with mines of silver, copper, lead, iron, sulphur, calamine, and zinc; quarries of marble, slates, lime-stone, alabaster, and jasper of different kinds. It has also some mines of gold, but these are not rich. The forests abound with oak, beech, firs, elms, &c. The inhabitants are Lutherans, and carry on lined manufactures. Eimbeck is the capital.

(2.) GRUBENHAGEN, a town and castle in the above principality, 6 miles NW. of Nordheim, 7 SSW. of Eimbeck, and 45 S. of Hanover. Lon. 9. 36. E. Lat. 51. 45. N.

* GRUBSTREET. *n. f.* Originally the name of a street near Moorfields in London, much inhabited by writers of small histories, dictionaries, and temporary poems; whence any mean production is called *grubstreet*.—

Και ἰδὼν μὴ αἰδῶν, μὴ ἀλγία πικρὰ

Ἀσπασίως ἦεν ὕμνος ἱκανομαί.

—The first part, though calculated only for the meridian of *grubstreet*, was yet taken notice of by the better sort. *Arbutnot*.—

I'd sooner ballads write, and *grubstreet* lays.

Gay.

GRUCIUS, Nicolas, a French author, of the 16th century, born at Rouen, and nobly descended. He is said to have been the first who lectured on Aristotle in Greek. He wrote several works; the chief of which are 1. A treatise *De Comitibus Romanorum*: 2. Tracts against Sigonius: and, 3. A Translation of Castanedo's History of the Indies. He died at Rochelle, in 1572.

GRUCKFELDT, a town of Germany, in Carinthia,

Q q q q

rintbia,

guthia, with a fort on the Save. Lon. 15. 45. E. Lat. 46. 7. N.

GRUDICK, a town of Poland, in the palatinate of Lemberg, 28 mls SW. of Lemberg.

GRUDECK, three towns of Poland: viz. 1. in the palatinate of Bracław, 28 miles E. of Bracław; 2. in that of Kiow, 50 miles WNW of Bracław; 3. in that of Podolia, 32 miles W. of Kaminić.

GRUDEIANDS. See GRAUBENTZ.

* GRUDGE. *n. f.* [from the verb.] 1. Old quarrel; inveterate malevolence; fallen malice—Many countries about her were full of wars, which, for old grudges to Cinnth, were thought still would conclude there. *Sidney*—

Two household 3, both alike in dignity,
From ancient grudge break to new mutiny,
Where civil blood makes civil hands unclean.

Shakespeare.

Let me go in to see the general:
There is some grudge between 'em; 'tis not meet
They be alone.

Shak. Julius Cæsar.

Deep sefter'd hate;

A grudge in both, time out of mind, begun,
And mutually bequeath'd from fire to son.

Tate's Juvenal.

2. Anger; ill-will.—

The god of wit, to shew his grudge,
Clapt his ears upon the judge.

Swift.

3. Unwillingness to benefit.—

Those to whom you have

With grudge prefer'd me. *Ben Jon. Catiline.*

4. Envy; odium; invidious censure. 1. Remorse of conscience. *Ansforth.* 6. Some little commotion, or forerunner of a disease. *Ansforth.*

(1.) * *To GRUDOS v. n.* [from *gruger*, according to *Skinner*, which in French is to grind or eat. In this sense we say of one who resents any thing secretly, *he chaws it.* *Gruguel*, in Welsh, is to murmur; to grumble. *Grugh*, in Scotland, denotes a grumbling morose countenance.] 2. To envy; to see any advantage of another with discontent.—What means this baptizing me from your counsels? Do you love your sorrow so well, as to grudge me part of it? *Sidney.*—

'Tis not in thee

To grudge my pleasures, to cut off my train.

Shak. K. Lear.

He struggles into birth, and cries for aid;

Then helpless in his mother's lap is laid:

He creeps, he walks; and, issuing into man,

Grudges their life from whence his own began.

Dryden.

These clamours with disdain he heard,

Much grudge'd the praise, but more the rob'd reward.

Dryden.

—Do not, as some men, run upon the tilt, and taste of the sediments of a grudging uncommunicative disposition. *Specl.*—Let us consider the inexhausted treasures of the ocean; and though some have grudged the great share that it takes of the surface of the earth, yet we shall propose this too, as a conspicuous mark and character of the wisdom of God. *Bentley.*—I have often heard the Presbyterians say they did not grudge us our employments. *Swift.* 2. To give or take unwillingly. Let me at least a funeral marriage crave,
Not grudge my cold embraces in the grave. *Dryd.*

—They have grudged those contributions have let our country at the head of all the ments of Europe. *Adyson.*

(2.) * *To GRUDGE v. n.* 1. To murmur; to repine.—They knew the force of that curse, whereunto idolury maketh libel; there cause why the guilty should grudge or complain of injustice. We do not grudge or repine at our lot; we are contented with those circumstances of providence of God hath made to be ours. 2. To be unwilling; to be reluctant.—they go with as great grudging to Gravelly's ships, as if it were to be saved. *Res. Raleigh.*—

You steer betwixt the country and

Not satisfy what'er the great desire

Nor grudging give what publick need

Dryden.

3. To be envious.—Grudge not one

ther, brethren, lest ye be condemned.

4. To wish in secret. A low word.—

E'en in the most sincere advice he

He had a grudging still to be a knave.

5. To give or have any unealy remains; not whether the word in this sense be *grugens*, or remains; *grugens* being the corn that remains after the fine meat is the sieve.—

My Dolabella,

Hast thou not still some grudging?

* GRUDGINGLY. *adv.* [from *grudge*.] unwillingly; malignantly; reluctantly.

Like harpies they could scent a paction

Then to be sure they never fail'd their

The rest was firm, and bare attendance

Then drank and eat, grudgingly obey'd

GRUDOCZICZE, a town of Poland Russia, 24 miles WSW. of Hahlich.

GRUDOLO, a town of Naples, in the of Abruzzo Citra, 14 miles SE. of Solof.

GRUE, Thomas, a French writer, in his translations of English works into French among these were Roll's History of all and Rogers's Gate opened to the poor Paganini. He died about the end of century.

(1.) GRUEB, a town of Austria, 5 of Horn.

(2.) GRUEB, a town of Stiria, 6 mi Vottberg.

* GRUEL. *n. f.* [*gruan*, *gruelle*, from made by boiling oatmeal in water; as mixture made by boiling ingredients in

Finger of birth-strang'd babe,

Ditch-deliver'd by a drab;

Make the gruel thick and slab. *Shak.*

Was ever Tartar fierce or cruel

Upon the strength of water gruel?

—Gruel made of grain, broths, mak much hopped, posset-drinks, and in get ever relaxeth. *Arbushaot.*

* GRUFF. *adj.* [*gruff*, Dutch.] Sour harsh of manners.—

Around the fiend, in hideous order

Foul bawling infamy and bold debate

Gruff discontent, thro' ignorance mist

ellation of honour was such an one the
an one the stocky. *Addison.*

GRUFF. *adv.* [from *gruff*.] Harshly; rug-
gibly.—

orn of Mars high on a chariot stood,
h'd in arms, and *gruffly* look'd the god.

Dryden.

GRUFFNESS. *n. f.* [from *gruff*.] Ruggedness
arshness of look or voice.

GRUG, a river of Scotland, in Ross-shire,
over a precipice in the parish of Ed-
co yards in perpendicular height.

GRUS, [from *grus*, a crane.] the 14th
anus's Fragments of a Natural Method.

Y. Index.

GRUM, a town of Bohemia, in the circle
ratz, 10 miles E. of Geyersberg.

GRUMBERG, a town of Upper Saxony,
ia, 4 miles S. of Sangerhausen.

GRUMBLE. *adj.* [contracted from *grumble*.] Sour;
re. A low word.—Nie looked sour and
would not open his mouth. *Arbutnot.*

GRUMBACH, a river of Upper Saxony,
into the Saal, 4 m. NE. of Weissenfels.

GRUMBACH, a town of the French repub-
dep. of the Rhine and Nahe, and late
Chinegrave, 25 miles N. of Deux Ponts,
of Lutereck.

GRUMBACH, a town of Upper Saxony, in
viate of Meissen, 2 miles S. of Wilsdorf.

y. *Dryden.*

re a hoarse rattle.—

grumbling thunder join thy voice. *Motteux.*

Like a storm
thers black upon the frowning sky,
mbles in the wind. *Rowe's Royal Convert.*

Vapours foul
the mountains brow, and shake the woods
umbling wave below. *Thomson's Winter.*

* **GRUMBLER**. *n. f.* [from *grumble*.] One that
grumbles; a murmurer; a discontented man.—
The half-pence are good half-pence, and I will
stand by it: if I made them of silver, it would be
the same thing to the *grumbler*. *Swift.*

* **GRUMBLING**. *n. f.* [from *grumble*.] A mur-
muring through discontent; a grudge.—

I have sciv'd

Without or grudge or *grumbings*. *Shak. Temp.*

* **GRUME**. *n. f.* [from *grumeau*, Fr. *grumus*, Lat.]
A thick viscid consistence of a fluid; as the white
of an egg; or clot like cold blood. *Quincy.*

* **GRUMLY**. *adv.* [from *grum*.] Sullenly; mo-
rosely.

(1.) * **GRUMMEL**. *n. f.* [*lithospermum*, Latin.]
An herb.

(2.) **GRUMMEL**. See **LITHOSPERMUM**.

GRUMO, a town of Naples, in the province
of Bari, 3½ miles SSW. of Bidetto.

(1.) * **GRUMOUS**. *adj.* [from *grume*.] Thick;
clotted.—The blood, when let, was black, *gru-*
mous, the red part without a due consistence, the
serum saline, and of a yellowish green. *Arbutnot.*

(2.) **GRUMOUS BLOOD**, by its viscosity and stag-
nating in the capillary vessels, produces disorders.

* **GRUMOUSNESS**. *n. f.* [from *grumous*.]
Thickness of a coagulated liquor.—The cause may
be referred either to the coagulation of the serum,
or *grumousness* of the blood. *Wifeman.*

(1.) **GRUNAU**, a town of Lower Saxony, in
the duchy of Lauenburg, 18 m. NNE. of Mollen.

(2.) **GRUNAU**, a town of Silesia, in Neisse.

(1.) **GRUNBERG**, a town of Germany, in Up-
per Hesse, 10 miles E. of Greiffen, and 28 W. of
Fulda. The French kings of the Merovingian
race, and Charlemagne, held their courts in it.

(2.) **GRUNBERG**, a town of Silesia, in Glogau,
surrounded with vineyards; 12 miles N. of Frey-
stadt, and 24 NW. of Great Glogau. It has a
manufacture of cloth.

GRUND, or } a town of Brunswick, in the
GRUNDE, } Hartz Forest, 12 miles SW. of
Goslar. Lon. 13. 35. E. Lat. 52. 10. N.

GRUNDEL SEE, a lake of Germany, in Stiria,

(1.) **GRUNDLBACH**, a river of Franconia,
which runs into the Rednitz, 3 miles S. of Erlang.

(2.) **GRUNDLBACH**, a town of Franconia, in Nu-
remberg, 4 m. S. of Erlang, and 6 N. of Nuremberg.

GRUNEBERG, a town of Brandenburg.

GRUNER, John Frederic, an eminent German
author, born at Cobourg, in 1723. He published
1. *Miscellanea Sacra*; 2. An introduction to Ro-
man Antiquities; 3. Critical Remarks on the Clas-
sics: and, 4. A new edition of Cœlius Sædulus,
with commentaries. He died in 1778.

GRUNFELD. See **GRUNSFELD**.

GRUNHAYN, a town of Saxony, in Erzge-
burg, 15 miles S. of Chemnitz, and 46 WSW. of
Dresden.

GRUNHOFF, a town of Courland.

(1.) **GRUNINGEN**, a town of the Helvetic re-
public, capital of a ci-devant bailiwick, in Zurich;
12 miles E. of Zurich. It has a castle on a rock,
which has an extensive prospect. Lon. 8. 43. E.
Lat. 47. 14. N.

(2.) **GRUNINGEN**, a town of Germany, in Hal-
berstadt, on the Boden, 15 miles E. of Halber-
stadt. Lon. 11. 41. E. Lat. 52. 4. N.

GRUN-SEE, a lake of Bavaria.

* GRUNSEL. *n. f.* [More usually *groundfil*, unless Milton intended to preserve the Sax. *grund*.] The groundfil; the lower part of the building.—
Never came one

Who mourn'd in earnest, when the captive ark
Maim'd his brute image, head and hands lopp'd
off

In his own temple, on the *grundel* edge,
Where he fell flat, and sham'd his worshippers.

Milton.

GRUNSFELD, a town • Franconia, in the
bishopric of Würzburg, 6 miles NNW. of Mer-
genheim.

GRUNSTADT, a town of Germany, in the
late county of Leiningen, now included in the
French republic, and department of Mont Ton-
nerre; 28 miles S. of Mentz.

(1.) * GRUNT. *n. f.* [from the verb.] The noise
of a hog.—

Swine's snouts, swine's bodies, took they,
bristles, grunts. Chapman.

Ran cow and calf, and family of hogs,
In panick horror of pursuing dogs;
With many a deadly grunt and doleful squeak,
Poor swine, as if their pretty hearts would break.

Dryden.

From hence were heard
The grunts of bristled boars, and groans of bears,
And herds of howling wolves. Dryden's *En.*

(2.) GRUNT, in geography, a town of Austria,
near Gundersdorf.

* To GRUNT. To GRUNTLER. *v. n.* [*grunnie*,
Latin.] To murmur like a hog.—

And neigh, and bark, and grunt, and roar and
burn.

Like horse, hound, hog, bear, fire at every
turn. Shakespeare.

Lament, ye swine! in gruntings spend your
grief;

For you, like me, have lost your sole relief. Gay.

Thy brindled boars may slumber undisturb'd,
Or grunt secure beneath the chestnut shade. Tickel.

The stalling quean to louder notes doth rise,
To her full pipes the grunting hog replies;

The grunting hogs alarm the neighbours round.

Swift.

* GRUNTER. *n. f.* [from *grunt*.] 1. He that
grunts. 2. A kind of fish. [*grunter*.]

* GRUNTLING. *n. f.* [from *grunt*.] A young
hog.

GRUPPO, or TURNED SHAKE, a musical grace,
defined by Playford to consist in the alternate pro-
lation of two tones in juxtaposition to each other,
with a close on the note immediately beneath the
lower of them.

(1.) GRUS, in antiquity, a dance performed
yearly by the young Athenians around the temple
of Apollo, on the day of the Delia. The motions
and figures of this dance were very intricate, and
variously interwoven; some of them being intend-
ed to express the windings of the labyrinth where-
in the Minotaur was killed by Theseus.

(2.) GRUS, in astronomy, a southern constella-
tion, not visible in our latitude. The number of
stars in this constellation, according to Mr Sharp's
catalogue, is 53.

(3.) GRUS, in ornithology. See ARDEA, N° 3.

GRUSUE, a town of Norway, 6 m. N. of

* GRUTCH. *n. f.* [from the verb.] ill-will.—

In it he melted leaden bullets,
To shoot at foes, and sometimes pellets
To whom he bore so fell a grutch,
He ne'er gave quarter t' any such.

* To GRUTCH. *v. n.* [corrupted for the
rhyme from *grudge*.] To envy; to repine;
discontented. Not used.—

The poor at the enclosure doth grutch
Because of abuses that fall,

Lest some men should have but too
And some again nothing at all. T.

But what we're born for we must
Our frail condition it is such,

That what to all may happen here,
If't chance to me I must not grutch.

GRUTEN, a town of Germany, in
of Westphalia and duchy of Berg, 3 m.
of Medman.

GRUTER, James, a learned philo-
sophy, one of the most laborious writers of his
born at Antwerp in 1560. He was
when his father and mother, being per-
the Protestant religion by the danc-
governers of the Netherlands, carried
England. He imbibed the elements of
from his mother, who was one of the
ed women of the age, and besides French
and English, was a complete mistress
and well skilled in Greek. He studied
bridge, afterwards at Leyden, and
himself wholly to polite literature,
ling much he became professor in the
Heidelberg; near which city he died.
He wrote many works; the principal a
large collection of ancient inscriptions,
fastus crutius. 3. *Delectæ poetarum Gall-*
talorum, & Belgarum, &c.

GRUTLIN, a plain of the Helvetic
near the Lake of the Four Cantons, in
of Uri, famous for being the scene of the
ation of the 3 first Cantons, in defence
liberty. A. D. 1307.

GRUYERES, } a town, and ci-devant
GRUYERS, or } and bailwic, of the
GRUYIRES, } republic, in the c-
Friburg, famous for cheese; which a expe-
considerable amount to France, Germany
ly. A dangerous insurrection broke out
1781, which threatened the destruction o
of Friburg, before it was quelled by the
of troops from Bern. It lies 15 miles S. of
Lon. 7. 23. E. Lat. 46. 35. N.

GRUYNINGEN, a town of the Bu-
public, in the dept. of the Meuse, and
prov. of Zealand, and in the isle of S. B.

GRUZINO, a town of Russia, in the
Novgorod, 40 miles N. of Novgorod.

(1.) * GRY. *n. f.* [*gry*.] Any thing of lit-
as, the paring of the nails. Dr.

(2.) GRY, a measure containing one
line. A line is one tenth of a digit, or
one tenth of a foot, and a philosophical
third of a pendulum, whose diadromes,
mons, in the latitude of 45 degrees, are
to one second of time, or one sixth of a

LUS, the son of Xenophon, who slew
d Theban general EPAMINONDAS,
d himself at the battle of Mantinea,
p. Xenophon, who was sacrificing
rd of his death, instantly threw off
out upon being farther informed, that
ain the enemy's general, immediate-

us, in entomology, a genus of insects,
the order of hemiptera, comprehend-
ets, locusts, and grass hoppers. The
sters are these: The head is inflected,
aws, and furnished with palpi: The
ome of the species are setaceous, in
n; The wings are deflected towards
l round the sides of the body; the
re folded up, so as to be concealed
tra. All the feet are armed with two
e hind ones are formed for leaping.
subdivided into five different sections,
viz. the *Acridæ*, *Bullæ*, *Achetæ*, *Tet-*
Locustæ. All the GRILLI, except
which devour other insects, live u-

The *Achetæ* feed chiefly upon the
stigoniæ and *Locustæ* upon the leaves.

ACHETÆ are distinguished by two
ted above the extremity of their ab-
aving 3 stemmata; and by the tarsi
ied of 3 articulations. This family
aces called *Cricket*, on account of the
the insect makes. There are 28 spe-
ted in the new edition of the *Systema*
which the most remarkable are the

LLUS ACHETA CAMPESTRIS, the
and the DOMESTICUS (Nº 2.) are
of the same species, differing only
d habits; the latter being paler co-
having more of a yellow cast, and
ore of a brown. The antennæ are
a thread, and nearly equal to the bo-

The head is large, and round, with
and 3 smaller ones of a light yellow
d higher on the edge of the depres-
ie centre of which originate the an-
thorax is broad and short. In the
ytra are longer than the body, vein-
rumped on the upper part, crossed
other, and enfoldng part of the ab-
a projecting angle on the sides: They
their base a pale coloured band. In
the elytra leave one third of the ab-
vered, and scarcely cross each other;
all over of one colour, veined and
nor do they wrap round so much
en underneath. The female, more-
at the extremity of its body a hard
as long as the abdomen, thicker at
posed of two sheaths, which encom-
inæ: This implement serves the in-
and deposit its eggs in the ground.
le and female have two pointed soft

appendices at the extremity of the abdomen,
Their hinder feet are much larger and longer than
the rest, and serve them for leaping. Towards
sunset is the time the *field gryllus*, or CRICKET,
likes best to appear out of his subterraneous habi-
tation. In White's *Natural History of Selbourne*,
(Letter 46.) a very pleasing account is given of the
manners and economy of these insects; which,
however, "are so shy and cautious, (he observes,)
that it is no easy matter to get a sight of them;
for, feeling a person's footsteps as he advances,
they stop short in the midst of their song, and re-
tire backward nimbly into their burrows, where
they lurk till all suspicion of danger is over. At
first it was attempted to dig them out with a spade,
but without any great success; for either the bot-
tom of the hole was inaccessible from its termina-
ting under a great stone; or else, in breaking up
the ground, the poor insect was inadvertently
squeezed to death. Out of one so bruised a mul-
titude of eggs were taken, which were long and
narrow, of a yellow colour, and covered with a
very tough skin. More gentle means were then
used, and proved successful: a pliant stalk of
grass, gently intimated into the caverns, will probe
their windings to the bottom, and quickly bring
out the inhabitant; and thus the humane inquirer
may gratify his curiosity without injuring the ob-
ject of it. It is remarkable, that though these in-
sects are furnished with long legs behind, and
brawny thighs for leaping, like grasshoppers; yet
when driven from their holes they show no activi-
ty, but crawl along in a shiftless manner, so as
easily to be taken: and again, though provided
with a curious apparatus of wings, yet they never
exert them when there seems to be the greatest
occasion. The males only make that shrilling
noise, perhaps out of rivalry and emulation, as is
the case with many animals which exert some
sprightly note during their breeding time: it is rai-
sed by a brisk friction of one wing against the o-
ther. They are solitary beings, living singly male
or female, but there must be a time when the sexes
have some intercourse, and then the wings may
be useful perhaps during night. When the males
meet they fight fiercely, as our author found by
some which he put into the crevices of a dry stone
wall, where he wanted to have made them settle.
For though they seemed distressed by being taken
out of their knowledge, yet the first that got pos-
session of the chinks would seize on any that were
obtruded upon them with a vast row of serrated
fangs. With their strong jaws, toothed like the
shears of a lobster's claws, they perforate and
round their curious regular cells, having no fore
claws to dig, like the mole cricket. When taken
in the hand, they never offered to defend them-
selves, though armed with such formidable wea-
pons. Of such herbs as grow before the mouths
of their burrows they eat indiscriminately; and
on a little platform, which they make just by,
they drop their dung; and never, in the day
time, seem to stir more than two or three inches
from home. Sitting in the entrance of their ca-
vern, they chirp all night as well as day from the
middle of May to the middle of July: in hot wea-
ther, when they are most vigorous, they make the
hills echo; and in the stiller hours of darkness,
may

may be heard at a considerable distance. In the beginning of the season their notes are more faint and inward; but become louder as the summer advances, and so die away again by degrees. The thrilling of the *field cricket*, though sharp and stridulous, yet delights some hearers, filling their minds with ideas of every thing that is rural, and joyous. About the 10th of March, the crickets appear at the mouths of their cells, which they then open and shape very elegantly. All that ever I have seen at that season were in their pupa state, and had only the rudiments of wings, lying under a skin or coat, which must be cast before the insect can arrive at its perfect state; from whence I should suppose that the old ones of last year do not always survive the winter. In August their holes begin to be obliterated, and the insects are seen no more till spring. Not many summers ago I endeavoured to transplant a colony to the terrace in my garden, by boring deep holes in the sloping turf. The new inhabitants staid some time, and fed and sung; but wandered away by degrees, and were heard at a farther distance every morning; so that it appears that on this emergency they made use of their wings in attempting to return to the spot from which they were taken. One of these crickets, when confined in a paper cage and set in the sun, and supplied with plants moistened with water, will feed and thrive, and become so merry and loud as to be irksome in the same room where a person is sitting: if the plants are not wetted, it will die."

i. *GRYLLUS ACHETA DOMESTICUS*, the *Domestic*, or *Hearth cricket*, does not require to be sought after abroad for examination, nor is shy like the other sort: it resides altogether within our dwellings, intruding itself upon our notice whether we incline or not. It delights in new built houses; being, like the spider, pleased with the moisture of the walls. The stiffness of the mortar enables them to burrow and mine between the joints of the bricks or stones, and to open communications from one room to another. They are particularly fond of kitchens and bakers ovens, on account of their perpetual warmth. "Tender insects, (says Mr Whyte) that live abroad, either enjoy only the short period of one summer, or else doze away the cold uncomfortable months in profound slumbers; but those, residing as it were in a torrid zone, are always alert and merry: a good Christmas fire is to them like the heat of the dog-days. Though they are frequently heard by day, yet is their natural time of motion only in the night. As soon as it grows dusk, the chirping increases, and they come running forth, and are from the size of a flea to that of their full stature. As one should suppose, from the burning atmosphere which they inhabit, they are a thirsty race, and show a great propensity for liquids, being found frequently crowned in pans of water, milk, broth, or the like. Whatever is moist they affect; and therefore often gnaw holes in wet woollen stockings and aprons that are hung to the fire. These crickets are not only very thirsty, but very voracious; for they will eat the scummings of pots, yeast, salt, and crumbs of bread, and any kitchen offal and sweepings. In the summer we have observed them to fly, when it became

dusk, out of the windows, and over the bounding roofs. This feat of activity is for the sudden manner in which they leave their haunts, as it does for the men which they come to houses where they are known before. It is remarkable, that out of insects seem never to use their wings but they have a mind to shift their quarters and new colonies. When in the air they move *lata undose*, in waves or curves, like woodpeckers, opening and shutting their wings at a stroke, and so are always rising or falling. When they increase to a great degree, and once in the house where I am now writing become noisome pests, flying into the candle, dashing into people's faces, but may be by gunpowder discharged into their crannies. In families, at such times, like Pharaoh's plague of frogs, in the chambers, and upon their beds, and in the vena, and in their kneading-troubles. The long noise is occasioned by a brisk rattling of wings. Cats catch hearth crickets, and with them as they do with mice, devour them. Crickets may be destroyed, like wasps, in a glass half filled with beer, or any liquid, at their haunts; for being always eager to get to the bottom, they will crowd in till the bottles are full. A popular prejudice, however, frequently prevents their being driven away and destroyed: people imagine that their presence brings good luck to the house while they are in it, and it would be hazardous to destroy them.

ii. *GRYLLUS ACHETA GRYLLOIDES*, the *mole cricket*, is of a very unpleasant size, head, in proportion to the size of its body, small and oblong, with 4 long thick palpi, and long antennae as slender as threads. Between the antennae are situated the eyes, and between the two eyes are seen three stemmata or light organs, mounting to five in all, set in one line transverse. The thorax forms a kind of oval, oblong, most cylindrical, which appears as it were flattened. The elytra, which are short, reach to the middle of the abdomen, are crossed on the other, and have large black or brown fibres. The wings terminate in a point, not only than the elytra, but even than the antennae. This latter is soft, and ends in two or three appendices of some length. But what tutes the chief singularity of this insect are its fore feet, that are very large and flat, with long legs, ending outwardly in a large serrated and inwardly in a only; between which is situated, and often concealed, the tarsus. The whole animal is of a brown dusky color, haunts moist meadows, and frequents the ponds and banks of streams, performs its functions in a swampy wet soil. With a fore feet curiously adapted to the purpose, it rows and works under ground like the mole, raising a ridge as it proceeds, but seldom to up hillocks. As mole crickets often infest the sides of canals, they are an annoyance to the gardener, raising up ridges in the subterraneous progress, and rendering it unsightly. If they take to the kitchen they occasion great damage among the

s, by destroying whole beds of cabbages, legumes and flowers. When dug out they are very slow and helpless, and make no use of wings by day; but at night they come abroad, and make long excursions. In fine weather, about the middle of April, at the close of day they begin to solace themselves with a low, jarring note, continued for a long time without interruption, and not unlike the chattering of fern-owl, or goat sucker, but more inward. At the beginning of May they lay their eggs, Mr White informs us, who was once an eye-witness: "for a gardener at an house where he was on a visit, happening to be mowing on the 1st of that month, by the side of a canal, his scythe struck too deep, pared off a large piece of turf, and laid open to view a curious scene of domestic economy. There were many caverns and winding passages leading to a kind of chamber, very smoothed and rounded, and about the size of a moderate snuff-box. Within this secret nursery were deposited near 100 eggs of a dirty yellow colour, and enveloped in a tough skin, but too hard to be excluded to contain any rudiments of young, being full of a viscous substance. The eggs lay in a shallow, and within the influence of the sun, just under a little heap of fresh mowed mould, that which is raised by ants.—When mole-crickets fly, the move "*curfu undulo*," rising and falling in curves, like the other species mentioned in the text. In different parts of this kingdom people call them PEN-CRICKETS, *churr-sworms* and *evening-crickets*, all very apposite names."

GRYLLI ACRIDÆ, *Truxalides* of Fabricius, CRICKET family properly so called; of which the characters are these. The head is of a conical form, and longer than the thorax; and the antennæ are ensiform, or sword shaped. Of this genus there are 8 species, none of them found in America.

GRYLLI BULLÆ, or *Acrydia* of Fabricius: these are distinguished by a kind of crest or elevation on the thorax; their antennæ are shorter than the thorax, and filiform; and their palpi are equal. The chief and most obvious distinction of this genus is the form of its thorax, which is prolonged, forming the whole body, and decreases to the extremity of the abdomen. This prolongation of the thorax stands instead of elytra, of which this genus is destitute. It has only wings under this section of the thorax. Linnæus mentions a species in the thorax; which, however, is often wanting. This species is every where to be met with, in the fields, in woods, &c. There are 11 species, inhabitants of Europe and America. Among these the **GRYLLUS BULLA BIPUNCTATUS** is of a dark brown colour; sometimes besprinkled with spots of a lighter hue.

GRYLLI LOCUSTÆ, (the *Grylli* of Fabricius) or LOCUSTS *unarmed at the tail*. This family is distinguished by having the tail purple, without the feet of the *Achetæ*, or the tube of *Tettigonia*; their antennæ are filiform, and shorter than the abdomen; they have 3 stemmata, and 3 joints to the tarsi. To part of this description, however, there is an exception in the

GRYLLUS LOCUSTA GROSSUS, the antennæ of which are of a cylindrical form. According to Mr Barbutt, "few species vary so much in size and colours. Some of these insects are twice as long as others; the antennæ in most are filiform, but in this particular species cylindrical, composed of about 24 articulations, and but one fourth of the length of the body. As to colour, the small individuals are nearly quite red, spotted with black, with the under part of the body only of a greenish yellow. The larger subjects are all over of a greenish hue, the under part being of a deeper yellow; only the inside of the hinder thighs is red. But what characterises this species is, the form of the thorax, which has, above, a longitudinal elevation, attended by one on each side, the middle whereof drawing nigh to the first, forms a kind of X. Moreover, between the claws that terminate the feet, there are small spines, but larger in this species than the rest. This species is to be met with every-where in the country. The larvæ or caterpillars very much resemble the perfect insects, and commonly dwell underground." Of this tribe 118 other species are enumerated in the *Systema Naturæ*, natives of different parts of the globe; besides a considerable number which it is not yet ascertained, whether they are distinct species, or only synonymes or varieties of some of the others. The distinction of *Locusts* into families, (as characterised in § IV, v.) is extremely proper; and the difference of organisation, on which it is founded, has been observed to be adapted to the mode and the places in which the insects lay their eggs. But by taking the wings into consideration, there might have been formed three tribes or divisions, instead of two, upon the same natural foundation. Thus, according to the observations of the Abbé Ponce, (in his *Journal de Physique* for 1787, p. 224.) those which have their abdomen furnished with the tube or dart above mentioned, lay their eggs in a stiff sort of earth which that instrument perforates. During the operation, the dart opens; and being hollow and grooved on each side within, the egg slides down along the grooves, and is deposited in the hole. Of those which have the tail simple, i. e. which have *no dart*, some have long wings, and some very short. The long winged sort lay their eggs on the bare ground, and have no use for a perforating instrument; but they cover them with a glutinous substance, which fixes them to the soil, and prevents their being injured either by wind or wetness. Those, again, which have short wings, deposit their eggs in the sand; and to make the holes for this purpose, they have the power of elongating and retracting their abdominal rings, and can turn their body as on a pivot; in which operation long wings would have been a material impediment. The annals of most warm countries are filled with accounts of the devastations produced by locusts, which sometimes appear in clouds of vast extent. They seldom visit Europe in such swarms as formerly; yet in the warmer parts of it they are still formidable. Those which have at uncertain intervals visited Europe are supposed to have come from Africa; they are a large species about three inches long. The head and horns are of a brownish

coldness of our climate, and the humidity of our soil, are very unfavourable to their production; so that, as they are only animals of a year's continuance, they all perished without leaving a young generation to succeed them. When the locusts take their flight, it is said they have a leader at their head, whose flight they observe, and pay a strict regard to all his motions. They appear at a distance like a black cloud, which, as it approaches, gathers upon the horizon, and almost hides the light of day. It often happens, that the husbandman sees this imminent calamity pass away without doing him any mischief; and the whole swarm proceeds onward to settle upon some less fortunate country. In those places, however, where they alight, they destroy every green thing, stripping the trees of their leaves, as well as devouring the corn and grass. In the tropical climates they are not so pernicious, as in the more southern parts of Europe. In the first, the power of vegetation is so strong, that an interval of three or four days repairs the damage; but in Europe this cannot be done till next year. Besides, in their long flights to this part of the world, they are famished by the length of their journey, and are therefore more voracious wherever they happen to settle. But as much damage is occasioned by what they destroy, as by what they devour. Their bite is thought to contaminate the plant, and either to destroy or greatly to weaken its vegetation. To use the expression of the husbandmen, they burn wherever they touch, and leave the marks of their devastation for 3 or 4 years thereafter. When dead, they infect the air in such a manner that the stench is insupportable. Orosius tells us, that in the year of the world 3800, Africa was infested with a multitude of locusts. After having eaten up every thing that was green,

and gardens, which they filled with their excrement, they placed large quantities of heat in the form of a like combustible matter, in rows, and set on fire on the approach of the locusts, to no purpose; for the trenches were soon filled up, and the fires put out by the locusts. The swarms that succeeded each other, after one of these was in motion, and the young just hatched came to glean after the remains of the off the young branches, and the leaves of the trees. Having lived near a month in their worm-like state, they arrived at their full growth, and changed their worm-like state by casting their skins, and prepare themselves for this new state, by turning their hinder part to some bush, or the corner of a stone, when immediately they begin their motion used on this occasion, and first appear, and soon after the whole swarm is seen. The whole transformation was completed in 8 minutes, after which they remained in a languishing condition for some time, while the sun and air had hardened the ground, and dried up the moisture that remained from their former sloughs, they began to shake off their former greediness, with an increase of strength and agility. But they continued in this state before they were able to lay their eggs. After laying their eggs, they turn their course northward, and probably towards the sea. In that country, however, the fertility of the soil and warmth of the sun generally render the depredations of the locusts of little consequence; besides that the coldness of the air concurs to diminish their voracity. As they are naturally herbivorous, they often devour the leaves of other, and the victor devours the prey. They are the prey, too, of serpents and carnivorous birds. They

on wild herbs, without preying upon d cultivated lands, or making their way. The peasants look on them with in- while they are frisking about in the field, any measure to destroy them till the dan- ediate, and the favourable moment to : evil is elapsed. Their yearly number considerable, as the males are far more than the females. If an equal propor- allowed only for ten years, their num- be so great as to destroy the whole ve- stem. Beasts and birds would starve f subsistence, and even mankind would prey to their ravenous appetites. In : increase was so great from the multi- males, that all La Mancha and Portugal red with them and totally ravaged. rs of famine were spread even farther, d the fruitful provinces of Andalusia, nd Valencia. The amours of these are objects of surprise and astonish- their union is such that it is diffi- arate them. When this separation is after having lasted some hours, they uled, that the male retires immediate- ater for refreshment, where, losing the limbs, he soon perishes, and becomes y to the fish; having given life to his : the expence of his own. The female, ed, though not without violent strug- s the remainder of her days in some so- e, busy in forming a retreat under here she can secure her eggs, of which ly lays about 40, screening them by her own the intemperature of the air, as more immediate danger of the plough e, one fatal blow of which would de- e hopes of a rising generation. The her building this cell is equally surpri- e hinder part of her body, nature has er with a round smooth instrument, 8 gth, which at its head is as big as a wri- diminishing to a hard point, hollow the tooth of a viper, but only to be lens. At the root of this vehicle there with a kind of bladder, containing a matter, of the same colour, but without icy or tenacity of that of the silk-worm, by an experiment, made for the pur- infusion in vinegar, for several days, y effect. The orifice of the bladder s exactly with the instrument which et the glutinous matter. It is hid un- of the belly, and its interior surface the moveable parts of the belly, and of its motions, forming the most ad- texture for every part of its operations, lipose of this ingredient at pleasure, e fluid, which has 3 very essential pro- fl, being indissoluble in water, it pre- ung from being drowned; next, it re- t of the sun, otherwise the structure way and destroy its inhabitants; last- f against the frost of winter, so as to ecessary warmth within. For greater is retreat is always contrived in a soli- for though a million of locusts were n a cultivated field, not one would de-

posit her eggs there; but wherever they meet a barren and lonesome situation, there they are sure to repair and lay their eggs. These locusts seem to devour, not so much from a ravenous appetite, as from a rage of destroying every thing that comes in their way. It is not surprising, that they should be fond of the most juicy plants and fruits, such as melons, and all manner of garden fruits and herbs, and feed also upon aromatic plants, such as lavender, thyme, rosemary, &c. which are so common in Spain, that they serve to heat ovens: but it is very singular, that they equally eat mustard seed, onions, and garlic; nay even hemlock, and the most rank and poisonous plants, such as the thorn apple and deadly night-shade. They even prey upon crowfoot, whose causticity burns the very hides of beasts; and such is their universal taste, that they do not prefer the innocent mallow to the bitter surze, or rue to wormwood, consuming all alike, without predilection or favour, with this remarkable circumstance, that during the four years they committed such havoc in Estremadura, the love-apple, or *Lycopersicon solanum* of Linnæus, was the only plant that escaped their rapacious tooth, and claimed a respect to its root, leaves, flowers, and fruit. Naturalists may search for their motives, which I am at a loss to discover; the more as I saw millions of them light on a field near Almaden, and devour the woollen and linen garments of the peasants, which were lying to dry on the ground. The curate of the village, a man of veracity, at whose house I was, assured me, that a tremendous body of them entered the church, and devoured the silk garments that adorned the images of the saints, not sparing even the varnish on the altars. The better to discover the nature of such a phenomenon, I examined the stomach of the locust, but only found one thin and soft membrane, with which, and the liquor it contains, it destroys and dissolves all kinds of substances, equally with the most caustic and venomous plants; extracting from them a sufficient and salutary nourishment. Out of curiosity to know the nature of so formidable a creature, I was urged to examine all its parts with the utmost exactness: its head is of the size of a pea, though longer; its forehead pointing downwards like the handsome Andalusian horse; its mouth large and open; its eyes black and rolling, added to a timid aspect not unlike a hare. With such a dauntless countenance, who would imagine this creature to be the scourge of mankind! In its two jaws it has 4 incisive teeth, whose sharp points traverse each other like scissars, their mechanism being such as to gripe or to cut. Thus armed, what can resist a legion of such enemies? After devouring the vegetable kingdom, were they, in proportion to their strength and numbers, to become carnivorous like wasps, they would be able to destroy whole flocks of sheep, even to the dogs and shepherds; just as we are told of ants in America, that will overcome the fiercest serpents. The locust spends the months of April, May, and June, in the place of its birth: at the end of June its wings have a fine rose colour, and its body is strong. Being then in their prime, they assemble for the last time, and burn with a desire to propagate their species: this is

first direction of this formidable column is always against the wind, which if not too strong, the column will extend about a couple of leagues. The locusts then make a halt, when the most dreadful havoc begins; their sense of smell being so delicate, they can find at that distance a corn field or a garden, and after demolishing it, rise again in pursuit of another: this may be said to be done in an instant. Each seems to have, as it were, four arms and two feet; the males climb up the plants, as sailors do the shrouds of a ship, and nip off the tenderest buds, which fall to the females below. Many old people assured me, when so much mischief was done in 1754, it was the third time in their remembrance, and that they always are found in the pasture grounds of Extremadura, from whence they spread into the other provinces of Spain. They are certainly indigenous, being of a different shape from those of the North or the Levant, as is evident on comparing them with such in the cabinets of natural history. The locust of Spain is the only one that has rose coloured wings: besides, it is impossible they can come from any other part. From the north it is clear they do not, by the observations of so many ages; from the south they cannot, without crossing the sea, which is hardly possible by the shortness of their flight: and like birds of passage, they would be known. I once saw a cloud of them go over Malaga, and move towards the sea, and pass over it, for about a quarter of a league, to the great joy of the inhabitants, who concluded they would soon be drowned; but, to their disappointment, they suddenly veered about towards the coast, and pitched upon an uncultivated space surrounded with vineyards, which they soon after quitted. When once they appear, let the number demolished be ever so great, the proportion

stomach; and behind that, a wrinkled and furrowed within side there is still a third! so that it is with some probability, that all the genus chew the cud, as they so ruminant animals in their internal

(1.) GRYNÆUS, Simon, a learned professor at Vienna and afterwards in 1523. Being a protestant he much persecution, and in 1531 fled to England; where he received great favour from Sir Thomas More, to whom Erasmus recommended him. He was a learned man, and did great service to the commonwealth by his works, which were the first who published the works of Plato in Greek. He also published the works of Plato and Plato's works, with some of Proclus. He died at Basil, in 1531.

(2.) GRYNÆUS, Thomas, nephew of Simon (N^o 1.) was born at Syringen in 1531. He was equally learned and amiable, and his sons also eminent in literature.

GRYNAU, a town of the Helvetians, in the canton of Glaris, seated on the Rhine, 3 miles W. of Uznach.

GRYPHITES, in natural history, a fossil shell, veined with a head, and becoming gradually wider towards the mouth, where it ends in a circular orifice, or beak of this is very hooked. They are frequently found in our mountains in many counties. There are several species; some extremely rounded towards the back, others less so; and the thickness of the shell, when they are composed, are in some thin, in others thicker and larger,

ry good printer, but that Gryphius ble printer and corrector. He died 163d year: and his business was car- reputation by his son, Anthony Gry- of the most beautiful books of Sebas- s, is a Latin Bible: it was printed in the largest types that had then 2 vols folio.

Lon. 3. 50. E. Lat. 39. 15. N.

(2.) GUADALOUPE, a river of Spain, in Estre- madura.

(3.) GUADALOUPE, one of the CARIBBEE or LEEWARD islands, lying about mid-way between Antigua and Martinico. It is 45 miles long, 38 broad, and, being of an irregular figure, is about 240 miles in circumference. It is divided into two parts by a small arm of the sea, which is not above 6 miles long, and from 15 to 40 fathoms broad. This canal, named the *Salt River*, is na- vigable, but only carries vessels of 50 tons burden. That part of the island, which gives its name to the whole is, towards the centre, full of craggy rocks, where the cold is so intense, that nothing will grow upon them but fern, and some useless shrubs covered with mois. On the top of these rocks a mountain c lled *la Souffriere*, or the *Brimstone Mountain*, rises to an immense height. It exhales, through various openings, a thick black smoke, intermixed with sparks that are visible by night. From all these hills flow numberless springs, which fertilize the plains below, and moderate the burn- ing heat of the climate by a refreshing stream, so celebrated, that the galleons which formerly used to touch at the Windward Islands, had orders to renew their provision with this pure and salubri- ous water. Such is that part of the island pro- perly called *Guadaloupe*. That which is common- ly called *Grande Terre* has not been so much fa- voured by nature. It is indeed less rugged, but it wants springs and rivers. The soil is not so fer- tile nor the climate so wholesome. No European nation had taken possession of this island, when 550 Frenchmen arrived there from Dieppe on the 28 June 1635. Their provisions were so ill chosen, that they were spoiled in the passage, and were all exhausted, in two months. St Christopher's refused to spare them any; and their first attempts in husbandry could not as yet afford any thing. No resource was left but from the savages; but the superfluities of a people, who cultivate little, and never laid up stores, could not be great. The new comers came to a resolution to plunder them; and hostilities commenced on the 16th Jan. 1636. The Caribs, not thinking themselves in a condi- tion openly to resist an enemy, who had so much the advantage from the superiority of their arms, destroyed their own provisions and plantations, and retired to Grande Terre, and the neighbour- ing islands. From thence the most desperate came over to Guadaloupe, and concealing themselves in the forests, they shot with their poisoned ar- rows all the Frenchmen who were hunting or fishing. During night, they burned the houses and destroyed the plantations of their unjust spoilers. A dreadful famine was the consequence. The colonists were reduced to graze in the fields, and to dig up dead bodies for their subsistence. At last the government of Aubert brought about a peace with the savages, at the end of 1640. The remembrance of the hardships they had suffered proved a powerful incitement to cultivate all ar- ticles of immediate necessity; and afterwards in- duced an attention to those of luxury consumed in the mother country. Those, who had escaped the calamities they had drawn upon themselves, were soon joined by some colonists from St Chris- topher's, and from Europe. But still the prosper-

city of Guadaloupe was impeded by obstacles arising from its situation. The facility with which the pirates from the neighbouring islands could carry off their cattle, their slaves, and their crops, distressed them greatly. Intestine broils, arising from jealousies of authority, often disturbed the quiet of the planters. And the adventurers, who went over to the windward islands, disdaining a land that was fitter for agriculture than for naval expeditions, were easily drawn to Martinico by the convenient roads it abounds with. In 1700 the number of inhabitants amounted only to 383; white people, 325 savages, free negroes, and mulattoes; and 673 slaves, many of whom were Caribs. There were only 60 small plantations of sugar, and 66 of indigo, cocoa, and cotton. The cattle amounted to 1620 horses and mules, and 3699 head of horned cattle. This was the fruit of 60 years labour. But at the end of 1735, the colony was peopled with 9,643 whites, and 41,140 slaves. The saleable commodities were the produce of 334 sugar plantations, 15 plots of indigo, 46,840 stems of cocoa, 11,700 of tobacco, 2,157,713 of coffee, 11,748,447 of cotton. For provisions, it had 29 squares of rice or maize, 1219 of potatoes, 2,028,520 banana trees, and 31,577,950 trenches of cassava. The cattle consisted of 4946 horses, 2914 mules, 125 asses, 11,716 head of horned cattle, 11,161 sheep and goats, 1444 hogs. Such was the state of Guadaloupe when it was conquered by the British in April 1759. The British, informed of the advantage the French made of their trade with the colonies, sent large quantities of goods to the conquered island, and thus overstocked the market, and sink the prices of European commodities. The colonists bought them at low prices, and obtained long credit. To this credit, was soon added another arising from speculation: 14,721 negroes were carried thither, to hasten the growth and enhance the value of the plantations. But all hopes of advantage from the new conquest were frustrated, Guadaloupe with its dependencies being restored by the treaty of peace in 1763. By the survey in 1767, this island, including those of Desada, St Bartholomew, Margalante, and Saints, contained 11,263 white people; 752 free blacks and mulattoes, 72,761 slaves; in all 85,776 souls. The number of cattle was 5060 horses, 4854 mules, 111 asses, 17,378 horned cattle, 14,891 sheep and goats, and 2669 hogs: The number of plantations was 1983. The sugar works employed 414 mills. The annual produce of Guadaloupe, and the adjacent islands, was estimated many years ago at 46 millions of pounds of sugar, 21 millions of coffee, 320,000 lb. of cotton and 8000 of cocoa: besides logwood, ginger, rum, skins, &c. This island was taken by the British in April 1759, but retaken by the French under Victor Hugues, in Feb. 1795. Lon. from 43. 24 to 44. 11. W. of Ferro. Lat. from 15. 55. to 16. 37. N.

(4) GUADALOUPE, an island on the coast of Colombia. Lon. 118. 0. W. Lat. 29. 5. N.

(5) GUADALQUIVIR, one of the most famous rivers of Spain, rises in Andalusia, near the confines of Granada, and running quite through Andalusia, by the towns of Baiza, Andaxar, Cordova, Seville, falls at last into the Bay of Cadiz.

(1.) GUADARAMA, a river of Spain, Castile.

(2.) GUADARAMA, a town of Spain, above river, 18 miles NW. of Madrid; in chieft. Lon. 3. 48. W. Lat. 41. 45. N.

GUADIANA, a large river of Spain rises in New Castile, and, passing across mountains, falls down to the lakes called *Guadiana*, from whence it runs to Cadiz, Merida, and Badajoz in Extremadura; and after having run for some distance in Portugal, it separates Algarve, daluna, and falls into the bay of Lagos, Castro Marim and Agramonte.

GUADIX, a town of Spain, in Granada a bishop's see. It was taken from the Moors in 1253, who afterwards retook it, but the Christians again got possession of it in 1489. Lon. 3. 5. N.

GUADRAMIRO, a town of Spain, in Castile. Lon. 3. 5. N.

GUADUPE, or GRAND COMMERCE, a town of Mexico, the capital of Comancha, contains 12,000 people: 4 m. N. of Little Mexico.

(1.) GUAIACUM *n. f.* *Guaiacum*, a tree of the East Indies, the bark of which is used in medicine. It is excellent in many cases, and was once famous for curing a real disease, which it still does in some climates, but with us we find it must have a resin of it, improperly called *Guaiacum Hill*.

(11) GUAIACUM, in botany. *Licium Pockwood*; a genus of the monogynous, belonging to the decandria class of plants, the natural method ranking under the *Gruinales*. The calyx is quinquefid and the petals 5, and inserted into the calyx; the fruit is angulated, and trilobular or quinquelobular.

1. GUAIACUM AFRICUM, with many broad leaves, is a native of the Cape of Good Hope. The plants retain their leaves all the year. They have never yet flowered in this country. It is to be propagated by layers, and all the winter in a good green house.

2. GUAIACUM OFFICINALE, the common wood used in medicine, is a native of India islands and the warmer parts of America. There it becomes a large tree, having a thick, brownish bark, not very thick. The wood is firm, solid, ponderous, very resinous, with yellow colour in the middle, and of a mastic taste. The smaller branches are coloured bark, and are garnished with white flowers produced in clusters at the ends of the branches, and are composed of oval corals of a fine blue colour. This species is propagated by seeds, which must be sown from the countries where it naturally grows, must be sown fresh in pots, and in a good hot-bed, where they will come up in 4 weeks. While young, they may be kept in a bed of tan-bark under a frame during the winter, but in autumn they must be removed to a cold bed, where they should continue all the year. The wood of this species is of great use in medicine and in the mechanical arts. It is compact and heavy as to sink in water. The bark is often of a pale yellowish colour.

It is blacker, or of a deep brown. Sometimes marbled with different colours. It is so hard to break the tools used in felling it; and is therefore seldom used as firewood, but is of great use to the sugar-planters for making wheels and to the mills. It is also often made into bowls, stars, and other utensils. It is brought over to Britain in large pieces of 4 or 500 weight each; but from its hardness and beauty is in great demand for various articles of turnery ware. The wood, gum, bark, fruit, and even the flowers of the tree, possess medicinal virtues; but only the first, particularly the wood and resin, are now in general use in Europe. The wood has little or no smell, except when heated, or while rasping, when a slight aromatic one is perceived. When chewed, it impresses a mild acrimony, biting the palate and fauces. Its pungency resides in its resinous matter, which it gives out in some degree to water by boiling, but spirit extracts it wholly. Of the *bark* there are two kinds; one smooth, the other unequal on the surface: they are both weaker than the wood; though in a recent state, they are strongly cathartic. The gum, or resin, is obtained by wounding the bark in different parts of the tree, or by what has been called *jagging*. It exudes copiously from the wounds, though gradually; and when a quantity is found accumulated on the several wounded trees, hardened by exposure to the sun, it is gathered and packed in small kegs for exportation. This resin is of a friable texture, of a deep greenish colour, and sometimes of a reddish hue; it has a pungent acrid taste but little or no smell, unless heated. The tree also yields a spontaneous exudation from the bark, which is called the *native gum*, and is brought to us in small irregular pieces, of a bright opalescent appearance; it differs from the former in being much purer. In the choice of the wood, that which is the freshest, most ponderous, and darkest coloured, is the best; the largest pieces are to be preferred too; and the best method is to rasp them as wanted, for the finer parts are apt to be lost when the raspings or chips are kept. In rasping the resin, prefer those pieces which have bits of the bark adhering to them, and that easily separate therefrom by a quick blow. The resin is sometimes mixed with the gum of the manchineal tree; but this is easily detected by dissolving a little in spirit of wine or rum. The true gum imparts a whitish or milky tinge, but the manchineal gives a greenish cast. Mouch advises a few drops of *spirit. nitri dulc.* to be added to the spiritous solution, and then to be diluted with water, by which the gum will be precipitated in a blue powder; if the adulteration will appear floating in white fæces, &c. Guaiacum was first introduced into Europe as a remedy for the venereal disease, in 1508. It was attended with great success in slight affections, but failed where the disease was deep seated; and was at length superseded by mercury, to which it now only serves occasionally as an adjuvant in the *decottum lignorum*, of which guaiacum is the chief ingredient. It is esteemed a warm stimulating medicine; strengthening the stomach and other viscera, and remarkably promoting the urinary and cuticular discharges: hence, in cutaneous defecations, and other disorders proceeding

from obstructions of the excretory glands, and where sluggish serous humours abound, it is useful; rheumatic and other pains have often been relieved by it. It is also laxative. The resin is the most active principle in the drugs compounded with it. The resin is extracted from the wood in part by water, but much more perfectly by spirits. The watery extract, kept in the shops, proves considerably weaker than that made with spirit. This last extract is of the same quality with the native resin, and differs from that brought to us only in being purer. The gum or extracts are given from a few grains to a scruple or half a dram, which last dose proves for the most part considerably purgative. The officinal preparations of guaiacum are an extract of the wood, a solution of the gum in rectified spirit of wine, a solution in volatile spirit, and an empyreumatic oil distilled from the wood. The resin dissolved in rum, or combined with water, by mucilage or the yolk of an egg, or in form of the volatile tincture or elixir, is employed in gout and chronic rheumatism. The tincture or elixir has been given to the extent of half an ounce twice a-day, and is sometimes usefully combined with laudanum.

3. *GUAIACUM SANCTUM*, with many pairs of obtuse lobes, hath many small lobes placed along the mid rib by pairs of a darker green colour than those of the foregoing sort. The flowers are produced in loose bunches towards the end of the branches, and are of a fine blue colour, with petals fringed on the edges. This species is also a native of the West India islands, where it is called *bastard lignum vite*. It may be propagated like the last.

* *GUAIAVA*. See *GUAVA*.

GUAIRA, a prov. of S. America, in Paraguay.

GUALATA, a kingdom of Africa.

GUALDO, a town of Italy, in Ancona, 8 miles NW. of Nocera. It was almost destroyed by an earthquake in 1751. Lon. 12. 43. E. Lat. 43. 6. N.

(1.) *GUALEOR*, } or *Gowalier*, a province of

(1.) *GUALIOR*, } Asia, situated in the middle of Indostan.

(2.) *GUALIOR*, or *GUALEOR*, a large town of the above province, with a celebrated fortress of great strength. By the nearest rout, it is upwards of 800 miles from Calcutta, and 910 by the ordinary one; and about 280 from the British frontiers. In the ancient division of the empire it is classed in the Soubah of Agra, and is often mentioned in history. In the year 1008, and during the two following centuries, it was thrice reduced by famine. It must in all ages have been deemed a military post of consequence, both from its situation in respect to the capital, and from the peculiarity of its site. It stands on the principal road from Agra to Malwa, Guzerat, and the Deccan; near the place where it enters the hilly tract which advances from Bundelcund, Malwa, and Agimere, along the banks of the Jumnah. From all these circumstances, together with its natural and acquired advantages as a fortress, the possession of it was deemed of the utmost importance by the emperors of Indostan. Its palace was used as a state prison as early as 1317, and continued to be such until the downfall of the empire. On the dismemberment of the empire, Gualeor appears to have

have fallen to the lot of a rajah of the Jat tribe; who assumed the government of the district in which it is situated, under the title of Rana of Gohod. Since that period it has changed masters more than once; the Mahrattas, whose dominions extend to the neighbour hood of it, having sometimes possessed it, and at other times the Rana: but the means of transfer were always either famine or treachery, nothing like a siege having ever been attempted. Gualcor was in the possession of Madajee Scindia, a Mahratta chief, in 1779, when the council-general of Bengal concluded an alliance with the Rana; in consequence of which, 4 battalions of Sepoys, of 500 men each, and some pieces of artillery, were sent to his assistance, his district being over run by the Mahrattas, and himself almost shut up in his fort of Gohud. The grand object of his alliance was to penetrate into Scindia's country, and to draw Scindia himself from the western side of India, where he was attending the motions of gen. Godard, then employed in the reduction of Guzerat; it being Mr Hastings's idea, that when Scindia found his own dominions in danger, he would detach himself from the confederacy, of which he was the principal member, and thus leave matters open for an accommodation with the court of Poonah. Major William Popham was appointed to the command of the little army sent to the Rana's assistance; and being very successful, in clearing his country of the enemy, and driving them out of one of their own most valuable districts, was advised by Mr Hastings to attempt the reduction of the fort. Captain Jonathan Scott, then Persian interpreter to major Popham, in a letter to his brother, major John Scott, thus describes the fort and the occasion of its capture: "The fortress of Gualcor stands on a vast rock of about four miles in length, but narrow, and of unequal breadth, and nearly flat at the top. The sides are so steep as to appear almost perpendicular in every part; for where it was not naturally so, it has been scraped away; and the height from the plain below is from 200 to 300 feet. The rampart conforms to the edge of the precipice all round; and the only entrance to it is by steps running up the side of the rock, defended on the side next the country by a wall and bastions, and farther guarded by 7 stone gateways, at certain distances from each other. The area within is full of noble buildings, reservoirs of water, wells, and cultivated land; so that it is really a little district in itself. At the NW. foot of the mountain is the town, pretty large, and well built; the houses all of stone. To have besieged this place would be vain, for nothing but a surprise or blockade could have carried it. A tribe of banditti from the district of the Rana had been accustomed to rob about this town, and once in the dead of night had climbed up the rock and got into the fort. This intelligence they had communicated to the Rana, who often thought of availing himself of it, but was fearful of undertaking an enterprize of such moment with his own troops. At length he informed major Popham of it, who sent a party of the robbers to conduct some of his own spies to the spot." They accordingly climbed up in the night of the 3d of August, found the guards asleep, and thus, meeting with little resist-

ance, in the space of two hours, this important and astonishing fortress was completely reduced, with the loss of only 1 man killed and 22 wounded. On the side of the enemy, Bopgy, the governor, was killed, and most of the principal officers wounded. Thus fell the strongest fort in Indostan, garrisoned by a chosen band of 2000 men, on the 4th Aug. 1780; and which, since the capture of it by the British, was promised by the princes of Indostan, to be impregnable. In 1783, Madajee Scindia besieged this fortress, then possessed by the Rana of Gohod, with 20,000 men, and effected the reduction by the treachery of one of the Rana's officers, who effected the plan of admission of a party of his troops: These were immediately supported by another party, who attacked an opposite quarter, and got admission also. Gualcor is 10 miles from Reypour, 80 S. of Agra, and 130 from the Ganges. Lon. 78. 26. E. Lat. 26. 14 N.

GUALTEIRI, or } a town of the Cisalpine
GUALTERO, } public, in the dept. of
Cato, and late duchy of Reggio, 13 miles N. of Reggio.

GUAM, or GUANAW, the largest of the LADRON islands. It is about 120 miles in circumference; and is the only one among the memorable islands in the South Sea, which has been built in the European style, with a regular town, a church, and civilized inhabitants. The air is excellent, the water good, and the garden, fish, and fruits are exquisite; the flocks of Buffs, goats, hogs, and all kinds of poultry are inexhaustible. There is no port in which scorbutic diseases can be more speedily restored, or find better and more plentiful refreshments, than in this island, and not originally enjoy this abundance. When first discovered by Magellan in 1521, with the other principal islands that lie N. of it, they were all crowded with inhabitants, but afforded no refreshment to navigators, except fish, bananas coconuts and bread-fruit; and even these could not be procured but by force, amidst the showers of stones and lances of the natives. The Spaniards carried thither from America the first stock of cattle, sheep, plants, seeds, fruits, and garden stuffs which are all now found in such abundance. The Ladron islands were covered with inhabitants when they were discovered. See LADRON. Guam alone contained upon its coasts more than 10,000 people. These men were ferocious savages and bold thieves; but so incapable of supporting the yoke of civilization, that the Spaniards have seen them almost annihilated within two centuries. These fierce islanders, after having long defended, by cruel wars, the right of living like wild beasts, being at last obliged to yield to the Spanish arms, took the resolution of administering poisons to their women, to procure abortions, and to render them sterile, that they might not bring into the world beings that were not free, according to the ideas that they had of liberty. This desperate resolution was persisted in with so much obstinacy in the 9 Ladron islands, that their population, which at the time of the discovery consisted of more than 60,000 souls, does not now exceed 900 in the whole archipelago. About 30 or 40 years ago, the remains of the original natives were collected and exhibited

the island of Guam. The principal settlement, which the Spaniards call Agaña, is situated about twelve miles NE. of the place, on the shore, at the foot of a beautiful well-watered country. There are smaller settlements of Indians round the shore, composed of 5 or 6 families each, who cultivate fruits and grain, and employ themselves in fishing. The centre of the island is uncleared. The trees are fit for canoes and boats. The forests are very thick, and the Spaniards at first cleared certain portions to turn them into savannahs for feeding. They sow these spots with grass seeds, and the indigenous plants fit for pasturage. The woods being shaded on all sides, preserve coolness, and afford the flocks and herds shelter from the great heat of noon. The deer are multiplied astonishingly, and having no fear, must be shot when wanted, or tamed. The woods are also full of wild fowls. The flesh of all these animals is good. In the savannahs and forests, there is a multitude of pigeons, parroquets, and other birds, &c. Among the indigenous plants remarkable are, the cocoa-nut and sugar-cane. The woods also abound with various plants, as plantanes, citrons, lemons, orange-dwart thorny china orange with red flowers, &c. As many of these trees are in flower, they perfume the air with agreeable smells, and delight the eye with the most beautiful colours. The rivers of Guam, and her rivulets or torrents, abound in fish. Turtles grow here as large as in the West Indies, but are not eaten either by the Spaniards. The crops cultivated are, indigo, cotton, cocoa, and sugar-cane. Maize is of astonishing fertility; it is raised in plants of 12 feet high, bearing 8 or 10 ears, 9 to 10 inches long, well filled. The gardens are stored with mangoes and pine-apples. The former is one of the finest fruits; it was brought from Manilla, and is freely eaten in great quantities. Horseradish was brought to Guam from Manilla, and is common from Acapulco. The land rises from the shore towards the centre by a plain, but is not very mountainous. It is said, that the soil is equally rich over the whole island, except in the bay, which forms a peninsula almost barren. But the rest abounds with rice. The interior part of the country, called Agaña, many springs of fine water are seen, and basins of pure water, which, beneath thick trees, preserve a most agreeable coolness in spite of the heat of the climate. The inhabitants are such as they were discovered by Magellan; of short stature, rather dark, and in general dirty, though much improved. The women are handsome, well coloured, and of a reddish colour. Both sexes have become gentle, honest, and the men drink freely of the wine of the country. They are fond of music, dancing, &c. Lon. 7. 50. W. Lat. 13. 0. S. **GUAMANCA**, a district of Peru.

GUAMANCA, or } a province of Peru, which
(1.) **GUAMANGA**, } begins 240 miles NE. of Lima, and extends along the centre of the Cordilleras. The air is temperate; the soil fertile; and the mines abound with gold, silver, copper, lead, iron, quicksilver, leadstone, and sulphur.

(2.) **GUAMANGA**, the capital of the above province, with a bishop's see. It is remarkable for its manufactures. The houses are all built of stone and covered with slates. Lon. 7. 50. W. Lat. 13. 0. S.

GUAMAN-VILLAS, a fertile district of Peru, in Lima, 21 miles from Guamanga.

GUANAHAMI, or *Cat Island*, one of the **Bahamas**, memorable for having been the first part of the New World, discovered by Columbus, in 1492.

GUANANDO, a town of Peru, which was destroyed by an earthquake, in Feb. 1797.

GUANA-PATINA, a volcano of Peru, in the valley of Quilea, near Arequipa. An eruption from it, in 1600, attended with an earthquake, laid Arequipa in ruins.

GUANZAVELICA, a town of S. America in Peru, and in the audience of Lima. It abounds in mines of quicksilver. Lon. 71. 59. W. Lat. 12. 40. S.

GUARA, a town of Peru, between Truxillo and Lima.

(1.) * **GUARANTEE**. *n. f.* [*garant*, French.] A power who undertakes to see stipulations performed.—God, the great *guarantee* for the peace of mankind, where laws cannot secure it, may think it the concern of his providence. *South*.—A prince distinguished by being a patron of Protestants, and *guarantee* of the Westphalian treaty. *Addis. on the War*.—An oath is a promise made to God, and God is our superior, superior to kings. And he is also the *guarantee* and avenger of all breach of faith and injustice. *Lesley*.

(2.) **GUARANTEE**, or **WARRANTEE**, in law, a term signifying him whom the warranter undertakes to indemnify or secure from damage. See **WARRANTY**.

(3.) **GUARANTEE**, or } in matters of policy, the
GUARANTY, } engagement of neutral states, whereby they plight their faith that certain treaties shall be inviolably observed, or that they will make war against the aggressor.

* **To GUARRANTY**. *v. a.* [*garantir*, French.] To undertake to secure the performance of any articles.

GUARCHI, a fertile district of Peru, 18 miles E. of Lima, extending 120 miles along the Cordillera.

(1.) * **GUARD**. *n. f.* [*garde*, French; *ward*, Teutonic.] 1. A man, or body of men, whose business is to watch by way of defence or preven-

er, had their *guards* and spies, after the practice of tyrants. *Swift*. 2. A state of caution; a state of vigilance.—The great alteration which he made in the state ecclesiastical, caused him to stand upon his *guard* at home. *Davies*.—Temerity puts a man off his *guard*. *L'Est*.—It is wisdom to keep ourselves upon a *guard*. *L'Est*.—

Now he stood collected and prepar'd;

For malice and revenge had put him on his *guard*. *Dryden*.

—Others are cooped in close by the strict *guards* of those whose interest it is to keep them ignorant.

3. —Men are always upon their *guard* against an appearance of design. *Smalridge*. 3. Limitation; anticipation of objection; caution of expression.—They have expressed themselves with as few *guards* and restrictions as I. *Atterb*. 4. An ornamental hem, lace, or border. Obsolete. 5. Part of the hilt of a sword.

(2.) *GUARD*, in a general sense, signifies the defence or preservation of any thing; the act of observing what passes, to prevent surprise; or the care used to prevent any thing from happening contrary to our intentions or inclinations.

(3.) *GUARD*, in fencing, a posture proper to defend the body from the sword of the antagonist.

(4.) *GUARD*, in the military art, is a duty performed by a body of men, to secure an army or place from being surprised by an enemy. In garrison the guards are relieved every day: hence every soldier mounts guard once every day in time of peace, and much oftener in time of war. See *HONOURS*.

(5.) *GUARD, ADVANCED, or VAN-GUARD*. See *ADVANCE-GUARD*.

(6.) *GUARD, ARTILLERY*. See *ARTILLERY, N° 2*.

(7.) *GUARD, ARTILLERY QUARTER*, is fre-

in good order; where, after being drawn up, the small guards are placed at their respective posts: then the captain orders for their guards, who are appointed by the captain of the main guard, to mount in garrison at different posts, as the governor pleases.

(14.) *GUARD, PIQUET*, a detachment of foot, always in readiness in the barracks, where they are generally saddled. The foot draw up at the head of the column, frequently at the head of the column, afterwards return to their posts, and keep themselves in readiness to resist in case of an attack. They are always ready.

(15.) *GUARD, PROVOST*, a detachment of guard that attends the provost-marshal, to prevent desertion, &c. See *PROVOST*.

(16.) *GUARD, QUARTER*, a detachment commanded by a subaltern officer, and consisting of each battalion, 222 feet of the line, in each regiment.

(17.) *GUARD, REAR*, a detachment which brings up the rear of the army, composed of all the old guards. The rear-guard of a party is a detachment of about 500 paces behind the main guard, going out upon a march, to guard in their retreat. The rear-guard is placed in the rear of the main guard, to keep good order.

(18.) *GUARD, STANDARDS*, a detachment of a corporal, out of each company, to mount on foot in the front of the main guard, at the distance of 20 feet from the main guard, to keep good order.

20th. The first regiment is at present commanded by 1 colonel, 1 lieutenant-colonel, 3 majors, 23 captains, 1 captain lieutenant, 31 lieutenants, and 24 ensigns; and contains 3 battalions. The 2d. regiment has 1 colonel, 1 lieutenant-colonel, 2 majors, 14 captains, 1 captain lieutenant, 18 lieutenants, 16 ensigns; and contains only 2 battalions. The 3d. regiment is the same as the 2d.

1. GUARDS, HORSE, in Britain, are gentlemen chosen for their bravery, to be entrusted with the guard of the king's person; and were formerly divided into 4 troops named numerically. The 1st. troop was raised in 1660, and the command given to lord Gerard; the 2d. in 1661, and the command given to Sir Philip Howard; the 3d. in 1693, and the command given to earl Feverham; the 4th. in 1792, and the command given to earl Newburgh. Each troop had 1 colonel, 2 lieutenant-colonels, 1 cornet and major, 1 guidon and major, 2 exempts and captains, 4 brigadiers and lieutenants, 1 adjutant, 4 sub-brigadiers and cornets, and 60 private men. But the 4 troops are now turned into 2 regiments of life-guards.

2. GUARDS, HORSE GRENADIER, are divided into 2 troops. The 1st. troop was raised in 1693, and the command given to lieutenant-general Cholmondeley; the 2d. in 1752, and the command given to lord Forbes. Each troop has 1 colonel, 1 lieutenant-colonel, 1 guidon or major, 3 exempts and captains, 3 lieutenants, 1 adjutant, 3 cornets, and 60 private men.

3. GUARD, YEOMEN OF THE, were first raised by Henry VII. in 1485. They are a kind of pom-pers foot-guards to the king's person; and are generally called by a nickname the *Beef-Eaters*. They were anciently 250 men of the first rank under the king; and of larger stature than ordinary, each being required to be 6 feet high. At present there are but 100 in constant duty, and 70 more not on duty; and when any one of the 100 dies, his place is supplied out of the 70. They go dressed after the manner of king Henry VIII's time. Their first commander or captain was the earl of Oxford, and their pay is 28. 6d. per day.

4. GUARDS, EXTRAORDINARY, or detachments, are only commanded on particular occasions; either for the security of the camp, to cover foragers, or for convoys, escorts, or expeditions.

5. GUARDS, ORDINARY, such as are fixed during the campaign, and relieved daily.

6. GUARDS, THE LATE FRENCH, were divided into those within, and those without, the king's presence. The first were the *gardes du corps*, or body-guards; which consisted of 4 companies, the 1st. of which was anciently Scots. See § 24. The guards without were the *Gens d'Armes*, light horse, miqueleers, and two other regiments, the one of which was French and the other Swiss.

7. GUARDS, THE SCOTS, a celebrated band, which formed the 1st. company of the ancient *gardes du corps* of France. During the ancient intercourse between France and Scotland, the Scots often distinguished themselves in the service of the French. On this foundation the company of Scots guards, and that of Scots gendarmes, were instituted by Charles VII. of France; by whom the first standing army in Europe was formed, in 1485. See GENDARMES, § 3. Valour, honour, &c. VOL. X. PART II.

and fidelity, must have been very conspicuous features in the national character of the Scots, when so great and civilized a people as the French could be induced to choose a body of them, foreigners as they were, to guard the persons of their sovereigns. (Of the particular occasion and reasons of this predilection, we have a recital by Lewis XII. After setting forth the services which the Scots had performed for Charles VII. in expelling the English out of France, and reducing the kingdom to his obedience, he adds—"Since which reduction, and for the service of the Scots upon that occasion, and for the great loyalty and virtue which he found in them, he selected 200 of them for the guard of his person, of whom he made 100 men at arms, and 100 life-guards: And the 100 men at arms are the 100 lances of our ancient ordinances; and the life guard men are those of our guard, who still are near and about our person." (*Seyff's Hist. of Louis XII.*) As to their fidelity in this honourable station, Claud Seyffil says, "The French have so ancient a friendship and alliance with the Scots, that of 400 men appointed for the king's life-guard, there are 100 of the said nation who are the nearest to his person, and in the night keep the keys of the apartment where he sleeps. There are, moreover, 100 complete lances and 200 yeomen of the said nation, besides several that are dispersed through the companies: And for so long a time as they have served in France, never hath there been one of them found that hath committed or done any fault against the kings or their state; and they make use of them as of their own subjects." The ancient privileges of the Scottish life-guards were very honourable; especially of the 24 first. The author of the *Ancient Alliance*, says, "On high holidays, at the ceremony of the royal touch, the erection of knights of the king's order, the reception of extraordinary ambassadors, and the public entries of cities, there must be six of their number next to the king's person, three on each side; and the body of the king must be carried by these only, wheresoever ceremony requires. They have the keeping of the keys of the king's lodging at night, the keeping of the choir of the chapel, the keeping of the boats where the king passes the rivers; and they have the honour of bearing the white silk fringe in their arms, which in France is the *couronne couleur*. The keys of all the cities where the king makes his entry are given to their captain, in waiting or out of waiting. He has the privilege, in waiting or out of waiting, at ceremonies, such as coronations, marriages, and funerals of the kings, and at the baptism and marriage of their children, to take duty upon him. The coronation robe belongs to him; and this company, by the death or change of a captain, never changes its rank, as do the three others." This company's first commander, who is recorded as a person of great valour and military accomplishments, was Robert Patillock, a native of Dundee; and the band continued in great reputation till 1578. From that period, the Scots guards were less attended to, and their privileges came to be invaded. In 1612, they remonstrated to Louis XIII. on the injustice they had suffered, and set before him the services they had rendered to the crown of France. Attempts were made to

re-establish them on their ancient foundation; but no negotiation for this purpose was effectual. The troops of France grew jealous of the honours paid them: the death of Francis II. and the return of Q. Mary to Scotland, at a time when they had much to hope, were unfortunate circumstances to them: the change of religion in Scotland, was an additional blow: and the accession of James VI. to the throne of England, diminished altogether the interests of France and Scotland. The Scots guards of France had therefore, latterly, no connection with Scotland but the name.

(1.) * *To GUARD*. *v. a.* [*garder*, Fr. from our word *ward*, the *w* being changed by the French into *g*; as *Galles* for *Wales*.] 1. To watch by way of defence and security. 2. To protect; to defend.

Naked the graces *guarded* you from all
Dangers abroad, and now your thunder shall.

Milner.

Your pow'r you never use, but for defence,
To *guard* your own or other's innocence. *Dryd.*

Fix'd on defence, the Trojans are not slow

To *guard* their shore from an expected foe. *Dryd.*

—The port of Genoa is very ill *guarded* against the storms. *Addison on Italy*. 3. To preserve by caution.—One would take care to *guard* one's self against this particular imperfection, because it is that which our nature very strongly inclines us to. *Addison's Spectator*. 4. To provide against objections.—Homer has *guarded* every circumstance with as much caution as if he had been aware of the objection. *Broome on Odyssey*. 5. To adorn with lists, laces, or ornamental borders. Obsolete.

Give him a livery

More *guarded* than his fellows.

Shakeſp.

See a fellow

In a long motely, *guarded* with yellow. *Shak.*

(2.) * *To GUARD*. *v. n.* To be in a state of caution or defence.—There are cases, in which a man must *guard*, if he intends to keep fair with the world, and turn the penny. *Collier*.—To *guard* against such mistakes, it is necessary to acquaint ourselves a little with words. *Hart's Logic*.

(1.) GUARDIA, a town of Spain on the W. coast of Galicia, 14 miles WSW. of Tuy.

(2.) GUARDA, or GUARDIA, a strong city of Portugal, in the province of Beira, and a bishop's see, containing 200 inhabitants, a cathedral, and 4 churches. It is 14 miles S.W. of Almeida, and 13 E. of Lisbon. Lon. 6. 57. W. Lat. 40. 22. N.

GUARDIA, a cape of Africa, on the E. extremity of Aden, at the entrance of the Strait of Babelmanbel. Lon. 52. 5. E. Lat. 11. 45. N.

* GUARDIAN. *v. n.* [*from guard*.] State of wardship. Obsolete.

Young so tender, fair, and happy,

Run from me, and fly to the footstool before

Of such a man as thou art. *Shak. Othello*.

GUARDIA MAY, a seaport town of Spain, in Valencia, on the S. coast, 17 miles SSW. of Alicante. Lon. 1. 1. E. of Teneriffe. Lat. 38. 7. N.

GUARDIA, a town of Portugal, in Beira.

GUARDIA S. O. N. a town of Parma, 12 miles S. of Parma.

GUARDIAVALE, a town of Naples, in Calabria Ultra, 10 miles S. of Squillace.

GUARDIAN, a name appointed to row the boats which the ships of war which are laid up

in any harbour, &c. to observe that they keep a good looking-out, calling to the boat as she passes, and not suffering her to come on board, without having previously communicated the watch-word of the night.

* GUARDER. *n. s.* One who guards.

(1.) GUARDIA, or GUARDA. See GUARDIA.

(2, 3.) GUARDIA, two towns of Naples: the prov. of Basilicata, 15 miles SSE. of Potenza. 2. in Calabria Ultra, 15 miles W. of Reggio.

(4, 5.) GUARDIA, two towns of Spain: the province of Alva, 15 miles S. of Vitoria. 2. in New Castile, 22 miles ESE. of Toledo.

(6.) GUARDIA ALTEREZ, a town of Naples, the province of Molise, 21 miles NE. of Isernia. Lon. 14. 56. E. Lat. 41. 49. N.

(7.) GUARDIA GIRARDO, a town of Naples, the province of Molise, 15 miles NW. of Isernia.

GUARDIAGHELE, a town of Naples, in the province of Citra, 10 miles SSE. of Chieti.

GUARDIALOBARD, a town of Naples, in the Principato Ultra, 6 miles N. of Conza.

(1.) * GUARDIAN. *n. s.* Performing the office of a kind protector or superintendant.—My angel protects me unseen, like my guardian angel; and shuns my gratitude like a fair is beautiful by stealth, and conceals the gift she bestows the gift. *Dryden's Ded. to Cato*.

Thus shall mankind his *guardian* care
The promis'd father of the future age.

Mean while Minerva, in her *guardian*
Shoots from the starry vaults thro' fields

(2.) * GUARDIAN. *n. s.* [*from guardian*.] 1.

One that has the care of an orphan: it is to supply the want of parents.—I am father, as I have just cause, being her *guardian*. *Shak. Much Ado*—

When perjur'd *guardians*, proud with
our gains,

Choke up the streets, too narrow for the

—Hocus, with two other of the guardians, it is their duty to take care of the education of three girls. *Arbuckle*. 2. One to whom the care and preservation of any thing is committed.

I gave you a

Made you my *guardians*, my dearest

But kept a reservation to be found

With such a number. *Shak. As You Like It*.

—It then becomes the common sense to have truth at heart, and more especially who are the appointed *guardians* of the faith, to be upon the watch against *heresies*. 3. A repository or storehouse.

Where is Duncan's body?

—Carried to Colmekill.

The fiercest reverence of his pious
And *guardian* of their bones. *Shak. Macbeth*.

(3.) GUARDIAN, *n. s.* 1. 2. *guardian*, one who has the custody and care of persons as have not sufficient discretion of themselves, and their estates, and effects. The *guardian* is to take the profits of the minor's lands, and to account for the same, to be demanded within a reasonable time, and to convert

money, unless the minor is near of age, not such things himself; and to pay in: money in his hands, that might have been paid out; in which case it will be presumed the guardian made use of it himself. In the lands of the heir, without mention of any thing thereon, and to keep him: if he commits waste on the lands, forfeiture of the guardianship: 3 Edward I. persons, as guardians, hold over any land at the consent of the person who is deceased, they shall be adjudged trespassers, and accountable: 6 Ann. cap. xviii.

GUARDIAN OF THE CINQUE PORTS. See

GUARDIAN OF THE SPIRITUALITIES. He has the spiritual jurisdiction of any diocese during the vacancy of the see. He is guardian in law, or *jure magistratus*, of any diocese within his province, or guardian by delegation, as he whom the bishop or vicar-general doth for the time de-

GUARDIANSHIP. *n. f.* [from *guardian*.] The office of a guardian.—The curate stretched his power of souls, to a kind of tutelary power over goods and chattels. *L'Esprit*.—The law is true, not only in losses and indignities to ourselves, but also in the case of trust, where we are offered to others who are committed to our care and guardianship. *Kettlewell*.—The first who established the popular laws, assigning to himself the guardian-laws, and chief commands in war.

GUARANA, a river of Spain which rises in the province of La Estremadura; then enters Portugal W. of Badajoz, and after running through the province of Alentejo, falls into the sea between Ayamonte and Castromarin.

GUARDLESS. *adj.* [from *guard*.] Without

the *guardless* herd, their keeper slain, they were a prey in the Lybian plain. *Waller*.—The land, *guardless* and undefended, must receive a double incitement. *South*.

GUARDO, a town of Spain, in the province of Leon, 40 miles ENE. of Leon.

GUARDO. See GOVARDO, N° 1, and 2. GUARDSHIP. *n. f.* [from *guard*.] 1. Protection.—

How should I, by such a man led! How wise and careful *guardship* To save me from fatigue and hardship. *Swift*. [d *ship*.] A king's ship to guard the

GUARD-SHIP, (§ 1. *def.* 2.) is a vessel of war appointed to superintend the marine in a harbour, and to see that the ships which are not permitted to have their proper watchward kept by having their guard-boats around them. She is also to receive seamen who are taken during the time of war.

GUARDIAN, in botany; a genus of the monogynous class, belonging to the octandria class of plants. The calyx is quadrid; the petals four; the fruit is cylindric, having the antheræ in its

mouth; the capsule is quadrilocular and quadrivalvular; the seeds solitary.

GUARGALA, or GUEFGUELA, a town of Africa, and capital of a small kingdom of the same name, in Biledulgerid, S. of Mount Atlas. Lon. 9. 55. E. Lat. 28. 0. N.

GUARIBA, in natural history, a species of monkey found in the West Indies. See SIMIA.

(1.) GUARINI, Guarino, a native of Verona, descended of an illustrious family, famous for having been the first who taught Greek after the restoration of letters. He had acquired that language at Constantinople. He died in 1460.

(2.) GUARINI, John Baptist, a celebrated Italian poet, grandson to the preceding (N° 1.) born at Ferrara, in 1537. He was secretary to Alphonso D. of Ferrara, who intrusted him with several important commissions. After the death of that prince, he was successively secretary to Vincent de Gonzaga, to Ferdinand de Medicis grand D. of Tuscany, and to Francis Maria de Feltri duke of Urbino. He was well acquainted with polite literature; and acquired immortal reputation by his Italian poems, especially by his *Pastor Fido*, the most admired of all his works, and of which there have been innumerable editions and translations. He died in 1612.

GUARMA, or GUARMOY, a sea port of Peru, with a good harbour, about 130 miles NW. of Lima. Lon. 77. 49. W. Lat. 10. 10. S.

GUASCO, a river of S. America in Chili.

GUASTALLA, or GUASTELLA, a strong town of the Cisalpine republic, in the department of Mincio, and ci-devant duchy of Mantua, remarkable for a battle between the French and Imperialists in 1734; wherein the latter were defeated, with the loss of 5000 men. It is seated near the Po, at the junction of the Crostolo and the Tagliata, 15 miles N. of Reggio. Lon. 10. 33. E. Lat. 44. 55. N.

GUASTO, or VASTO, a town of Naples, in Abruzzo Citra, on the coast of the Adriatic, between the mouths of the Trigno and Aftenello, 15 miles SE. of Lanciano. Lon. 15. 6. E. Lat. 42. 29. N.

GUATAVITA, a lake of Terra Firma.

(1.) GUATIMALA, an Audience of N. America, in New Spain, above 750 miles in length, and 450 in breadth. It abounds in chocolate, which they use instead of money. It has 12 provinces under it; and the native Americans, under the dominions of Spain, profess Christianity, but it is mixed with many of their own superstitions. There is a great chain of high mountains, which run across it from E. to W. and it is subject to earthquakes and storms. It is however, very fertile; and produces great quantities of cochineal, cotton, cocoa nuts, &c.

(2.) GUATIMALA, a province of New Spain, in the above Audience, bounded on the W. by Soconusco, on the N. by Verapaz and Honduras, on the E. by Nicaragua, and on the S. by the South Sea.

(3.) GUATIMALA, or ST JAGO DE GUATIMALA, a large and rich town of New Spain; capital of the above audience and province, (N° 1, and 2.) with a bishop's see, and an university. It carries

on a great trade, especially in chocolate. On the 7th June 1773, it was swallowed up by an earthquake, when 8000 families perished. It has been since rebuilt at some distance from its former site. Lon. 91. 30. W. Lat. 14. 0. N.

(4.) GUATIMALA, VOLCANO OF, a burning mountain, in the above province, N° 1. Guatimala was almost ruined by it in 1541, but was afterwards rebuilt at a good distance from this dreadful mountain. Its eruptions added much to the horror of the earthquake in 1773.

(1.) * GUAVA. GUAIAVA. *n. f.* An American fruit. The fruit, says Sir Hans Sloane, is extremely delicious and wholesome. They have only this inconvenience, that being very astringent, they stop up the belly, if taken in great quantities. *Miller.*

(2.) GUAVA, in botany. See *Psidium*.

(1.) GUAXACA, a province of N. America, in New Spain, which is very fertile in wheat, Indian corn, cochineal, and cassia. It is bounded by the gulph of Mexico on the N., and by the South Sea on the S. It contains mines of gold, silver, and crystal.

(2.) GUAXACA, the capital of the above province, with a bishop's see. It does not contain above 1000 inhabitants; but it is rich, and they make very fine sweet-meats and chocolate. It has several rich convents. Lon. 100. W. Lat. 17. 45. N.

GUAYALAS, a fertile province of Peru, commencing 150 miles NNE. of Lima, and extending along the centre of the Cordillera.

GUAYANA, a town of Terra Firma, 25 miles S. of the gulf of Paria, and 173 SE. by E. of Calabaza.

GUAYAQUIL. See *Guiaquil*.

GUAYLES, a district of S. America, in Lima, W. of Guamales, abounding in cattle.

GUAYNAMOTA, a town of Mexico, in the province of Guadalupe, 70 miles NW. of Guadalupe.

GUAYRA, a town and district of S. America, in the province of La Plata, bounded by Brasil on the E. and Paraguay on the W.

GUBBIO, GUBIO, or EUGUBIO, a town of Italy, in the territory of the church, and in the duchy of Urbino, with a bishop's see, 84 miles N. of Rome. Lon. 12. 41. E. Lat. 43. 18. N.

GUBEL, a town of Bohemia.

GUBEN, a handsome town of Germany, in Lower Lusatia, seated on the Neisse, and belonging to the house of Saxe-Merlinburg, 62 miles NE. of Dresden. Lon. 14. 59. E. Lat. 51. 55. N.

GUBER, a kingdom of Africa, in Negroland, surrounded with high mountains. The villages, which are numerous, are inhabited by shepherds. There are also many artificers, and linen-weavers, who send their commodities to Tombuto. The whole country is overflowed annually by the Niger, and at that time the inhabitants sow their rice. There is one town which contains about 6000 families, among whom are many merchants.

* GUBERNATION. *n. f.* [*gubernatio*, Lat.] Government; superintendency; superiour direction — Perhaps there is little or nothing in the government of the kingdoms of nature and grace, but

what is transacted by the man Jesus, in the divine power and wisdom, and medium or conscious instrument of the *gubernation*. *Watts.*

GURIO. See *Gubbio*.

GUDENSBERG, a town of Germany, Cassel, 4 miles NNE. of Pritzel, and Cassel.

(1.) * GUDGEON. *n. f.* [*goujon*, Fr.] A small fish found in brooks and rivers, caught, and therefore made a proverb, a man easily cheated.—

'Tis true, no turbets dignify my
But *gudgeons*, rounders, what my
fords.

2. A man easily cheated.—This be you in, like so many *gudgeons*, to false arguments. *Sausfr.* 3. Something to a man's own disadvantage; a bait; ment: *gudgeons* being commonly used for pike.—

But fish not with this melancholy

For this fool's *gudgeon*, this opinion.

(2.) GUDGEON, in ichthyology; a cyprinus. See *Cyprinus*, N° 7. Though small, are of a pleasant taste, inferior to smelt. They spawn twice in a year, and their feeding is much like the streams and on gravel, sifting all flies; but they are easily taken with a worm, fishing near the ground; and other mouthed fish, will not easily get when struck. They may be killed by the hook being on the ground; or by a running line on the ground, without float. But although the small red worm best bait for these fish, yet walp, gold cadbait do very well. They may also be for with 2 or 3 hooks at once, and in sport, where they rise any thing large. Wiling for them, stir up the sand or gravel long pole; this will make them jump that place, bite faster and more eagerly.

(3.) GUDGEON, SEA. See *Gouzon*.

(1.) GUE, or GUE DE LONGON, a France, in the dep. of Eure and Loire, NE. of Chartres, and 4 W. of Douville.

(2.) GUE DE VELVIRE, a town of the dept. of the Vendee, 3 miles SSW. of May.

GUEBERSVEIR, a town of France, dep. of Upper Rhine, 6 miles SSW. of GUEBRES, or GABRES. See *Gab*. GUEBWILLER, a town of France, of Upper Rhine, 12 miles SSW. of Col. GUEBELL, a river of N. Wales, is merryshire, which runs into the Dure.

GUEGON, a town of France, in the Morbihan, 14 miles W. of Josselin.

(1.) GUILLERLAND, a county of Europe, bounded on the N. by Zuyder Zee; E. by the bishopric of M. the duchy of Cleves; S. by those of Brabant, and W. by the States of Holland. It was erected into a county peror Henry IV, in 1079; and into Lewis V, in 1339. It had dukes of it 1548, when it was yielded to Charles I

rters of Nimeguen, Zutphen, and ing acceded to the union, formed the **GUELDERLAND**, N^o 2. The towns of Michtendonck, Stralen, &c. were ceded by the treaty of Utrecht, and the territory of Ruremond, remained to France. Hence came to the house of Austria. The mentioned territories, called *Austrian Guelderland*, are now annexed to the **REPUBLIC**: (See that article.) as well as Dutch towns of Venlo and Stevens-

GUELDERLAND, one of the ci-devant **UNITED STATES**, which now forms the department of the Batavian republic. Its greatest N. to S. is about 47 miles, and nearly as much; but its figure is very irregular. The air here is much healthier and more salubrious than in the maritime provinces, the land being elevated. Excepting some part of the *Felstave*, it is watered by the Rhine, the Wahal, the Yssel, and the lesser streams. Under the old constitution it was divided into 3 districts, each of which had its own states and diets. Those for the first time were held twice a year at the end of the year, and sent 19 deputies to the states general. There are computed 285 Calvinist ministers, 4 Catholic congregations, 4 Lutheran, and 4 Anabaptist. The towns are Nimeguen, Zutphen, Arnhem, &c. This country suffered from inundations in Feb. 1799.

GUELDERLAND, AUSTRIAN. } See N^o 1;
GUELDERLAND, PRUSSIAN. } & FRENCH

GUERES, a strong town and district of the **REPUBLIC**, in the dep. of the Roer, and formerly of Prussian Guelderland. It is 10 miles NW. of Venlo, and near Amsterdam. It was taken by the French in Oct. 1794. Lon. 6. 21. N.

GUERES. See **GUELDERLAND**.

See **GUELPHS**.

GUERES, a town of the French republic in the dep. of the Moselle, and late prov. of Austrian Flanders. It is 10 miles W. of Courtray.

the surname of the royal family of

or **GUELPHS**, a celebrated faction in the 12th and 13th centuries. The Guelphs called Italy with blood and carnage. The Guelphs stood for the Pope, the Emperor. Their rise is referred by some to Conrad III. A.D. 1139; by others to Frederic I.; and by others to that of Frederic II. A.D. 1240, upon his being elected by Pope Gregory IX. But the opinion is that of Maimbourg, who says that two factions arose from a quarrel between two ancient and illustrious houses on the Rhine, viz. the Henries of *Gibel* and the Guelphs of Adorf. The name is supposed to have been formed from *Welfe*, or following occasion: the emperor having taken the duchy of Bavaria from the brother of Henry duke of Bava-

ria, Welfe, assisted by the king of Sicily, made war on Conrad, and thus gave birth to the faction of the Guelphs. Others derive the name from the German *Wolf*, on account of the grievous evils committed by that cruel faction: others deduce the denomination from that of a German called *Guelfe*, who lived at Pistoia; adding, that his brother, named *Gibel*, gave his name to the Gibelins.

GUEMAR, a town of France, in the dept. of the Upper Rhine, 7 miles N. of Colmar.

GUÉMENE, two towns of France, 1. in the dep. of Lower Loire, 9 miles N. of Blain: 2. in that of Morbihan, 9 miles W. of Pontivy.

GUENE, a town of France, in the dep. of Correze, 2 miles SE. of Tulle.

GUER, a town of France, in the dep. of Morbihan, 9 miles ESE. of Ploemel.

GUERAND, a town of France, in the dep. of Lower Loire, 46 miles W. of Nantes, and 250 WSW. of Paris. Lon. 2. 20. W. Lat. 47. 20. N.

GUERARD, a town of France, in the dep. of Seine and Marne; 6 miles W. of Coulomiers.

GUERCHE; 3 towns of France: 1. in the dep. of Cher, 7 miles N. of Sancerre: 2. in that of Indre and Loire, 24 miles NE. of Poitiers: 3. in that of Ille and Vilaine, 10½ miles S. of Vitre.

GUERCINO. See **BARBIERI**.

* **GUERDON.** *n. f.* [*guerdon, garden, Fr.*] A reward; a recompense, in a good and bad sense. A word now no longer in use.—

But to the virgin comes, who all this while
Amazed stands herself so mock'd to see,

By him who was the *guerdon* of his guile,
For so misfeigning her true knight to be. *Spens.*
—He shall, by thy revenging hand, at once receive the just *guerdon* of all his former villanies. *Knolles.*—

Faire is the spur that the clear spirit doth raise
To scorn delights, and live laborious days;
But the fair *guerdon* when we hope to find,
And think to burst out into sudden blaze,
Comes the blind fury with th' abhorred sheers,
And splits the thin-spun life. *Milton.*

GUERET, a town of France, capital of the dep. of Creuse, containing 3000 citizens; seated on the Gartempe, 35 miles NE. of Limoges and 170 S. of Paris. Lon. 1. 46. E. Lat. 46. 10. N.

GUERGUELA. See **GUARGALA**.

GUERICHE, or } Otho, a native of Prussia,
GUERICKE, } the most celebrated mathematician of his time, was born in 1602. He was the inventor of the air pump; and author of several works in natural philosophy, the chief of which is his *Experimenta Magdeburgica*. He died in 1686.

GUERIGNY, a town of France, in the dept. of Nievre, 8 miles N. of Nevers.

GUERLESQUIN, a town of France, in the dep. of Finisterre, 10 miles SE. of Morlaix.

GUERMANGE, a town of France, in the dep. of Meurthe, 4 miles E. of Dieuze.

GUERNADUAS, a town of Cuba.

GUERNSEY, an island in the British channel, on the coast of the French dept. of the Channel, (ci-devant Normandy,) subject to Britain; but, as well as the adjacent islands, governed by its own laws. See **JERSEY**. It extends from E. to W. in the form of a harp, and is 13½ miles from SW. to NE.

NE. and $12\frac{1}{2}$ where broadest, from E. to W. The air is very healthy, and the soil naturally more rich and fertile than that of Jersey; but the inhabitants neglect the cultivation of the land for the sake of commerce. They are, however, sufficiently supplied with corn and cattle, both for their own use and that of their ships. The island is well fortified by nature with a ridge of rocks, one of which abounds with emery, used by lapidaries in the polishing of stones, and by various other artificers. Here is a better harbour than any in Jersey, which occasions its being more resorted to by merchants; and on the S. side the shore bends in the form of a crescent, enclosing a bay capable of receiving very large ships. The island is full of gardens and orchards; whence cyder is so plentiful, that the common people use it instead of small beer, but the more wealthy drink French wine.

GUERRICAIZ, a town of Spain in Biscay.

GUESCHART, a town of France, in the dep. of Somme; 12 miles NE. of Abbeville.

* **GUESS**. *n. f.* [from the verb.] Conjecture; judgment without any positive or certain grounds.

The enemy's in view, draw up your pow'rs:
Hard is the *guess* of their true strength and forces.

Shak.

—His *guess* was usually as near to prophecy as any man's. *Fell.*—

A poet must confess

His art's like physick, but a happy *guess*. *Dryd.*
—It is a wrong way of proceeding to venture a greater good for a less, upon uncertain *guesses*, before a due examination. *Locke.*—We may make some *guess* at the distinction of things, into those that are according to, above, and contrary to reason. *Locke.*—

This problem yet, this offspring of a *guess*,

Let us for once a child of truth confess. *Prior.*

No man is best by accident, or *guess*,

True wisdom is the price of happiness. *Young.*

(1.) * **To GUESS**. *v. n.* [*gissen*, Dutch.] 1. To conjecture; to judge without any certain principles of judgment.—

Incapable and shallow innocents!

You cannot *guess* who caus'd your father's death.

Shak.

Let not your ears despise my tongue for ever,
Which shall possess them with the heaviest sound,
That ever yet they heard.

—Hum! I *guess* at it. *Shak. Macbeth.*

—He that, by reason of his swift motions, can inform himself of all places and preparations, should he not very often *guess* rightly of things to come, where God pleaseth not to give impediment? *Raleigh's Hist.*—

There issue swarming bands

Of ambush'd men, whom, by their arms and drefs,

To be Taxcellan enemies I *guess*. *Dryden.*

—The same author ventures to *guess* at the particular fate which would attend the Roman government. *Swift.*—

Nor can imagination *guess*,

How that ungrateful charming maid

My purest passion has betray'd. *Swift.*

2. To conjecture rightly, or upon some just reason.—One may *guess* by Plato's writings, that his

meaning, as to the inferiour deities, was they who would have them might, and they would not, might let them alone; but that self had a right opinion concerning the true *Stillingfleet*.

(2.) * **To GUESS**. *v. a.* To hit upon a point; to determine rightly of any thing a certain direction of the judgment.—If Xenophon able to call every common soldier by his name in his army, it may be *guessed* he got not the wonderful ability by learning his lessons by heart.

* **GUESSE**. *n. f.* [from *guess*.] Conjecture; one who judges without certain knowledge is the opinion of divers good *guessers*, that the fit will not be more violent than advancing the *Pope*.—

If fortune should please but to take
crochet;

To thee I apply, great Smedley's success

To give thee lawn sleeves, a mitre and

Whom would'st thou resemble? I leave
guesser.

* **GUESSINGLY**. *adv.* [from *guessing*.] Conjecturally; uncertainly. Not in use.—

I have a letter *guessingly* set down.

* **GUEST**. *n. f.* [*gast*, *gist*, Sax. *gwest*,] 1. One entertained in the house or at the table of another.—They all murmured, saying, that it was not fit to be *guist* with a man that is a sinner.

Methinks a father

Is, at the nuptial of his son, a *guist*

That best becomes the table. *Shak. Ham.*

Tell my royal *guist*

I add to his commands my own request.

2. A stranger; one who comes newly to a place. O desarts, desarts! how fit a *guist* art thou to me, since my heart can people you with wild beasts, which in you are wanting? *Shak.*

Those happiest smiles

That play'd on her ripe lip, seem'd not to
What *guists* were in her eyes; when parted
As pearls from diamonds dropt.

* **GUESTCHAMBER**. *n. f.* [*gast* and *chamber*.] Chamber of entertainment.—Where is the *chamber*, where I shall eat the passover with my disciples? *Mark* xiv. 14.

* **GUESTRIT**. *n. f.* [from *gast* and *rit*.] A gift due to a guest.—

Ulysses so dear

A gift esteem'd it, that he would not
In his black fleete that *guist-rit* to thee.

GUETA, a town of Spain, in New Castile.

GUETTARDA, in botany; a genus of plants in the heptandria order, belonging to the monandria class; and in the natural method to the 5th order, *Tricoccae*. The male corolla cleft into 7 parts, not imbricated. The female calyx cylindrical; the corolla cleft into 7 parts; one pistil, and a dry plum.

GUETTAU, a town of Austria, 9 miles N. of Freystadt.

GULUGHION, a town of France, in the dep. of Saone and Loire, 11 miles E. of Bourges.

GUEUX, a town of France, in the dep. of Maine, 6 miles W. of Rheims.

GUFFIN. See **GIFEN**.

GUGGLE. *v. n.* [*gorgoliare*, Ital.] To row water running without intermission out of a narrow mouthed vessel.

GLINGEN, a town of Wurtemberg, on the Neckar, 22 miles SSE. of Heidelberg.

GUENECOURT, a town of France, in the department of Vosges; 4½ miles NW. of Bruyères.

GUAN, one of the LADRONE ISLANDS.

GLAU, a town of Silesia in Nieße.

GLIR, a town of Silesia, 5 m. NE. of Militsh.

GLIRAU, 2 towns of Silesia; 1. in Glogau, 18 m. E. of Glogau: 2. in Nieße, 6 miles W. of Glogau.

GUAYANA, a very extensive country of S. America, bounded on the E. and NE. by the Atlantic Ocean, and the Oroonoko; on the S. by the Amazon, and on the W. by Grenada and New Andalusia. Terra Firma, from which it is separated by the W. and N. by the Oroonoko. It extends 200 miles in length, from NE. to SW.; from the mouth of the Oroonoko to that of the Amazon, and from 300 to 600 in breadth. Geographers divide it into two parts, calling the country along the coast *Carribbeano Province*, and the interior *Guiana Proper*: the last is called **EL DORADO** by the Spaniards, on account of the immense quantity of gold it is supposed to contain. The Portuguese, French, and Dutch, have all formed settlements along the coast.

The coast between Cape North and Cape South is possessed by the natives. Along the coast, the land is low, marshy, and subject to inundation by the rivers which descend from the inland mountains. Hence the atmosphere is suffocating, moist, and unhealthful, especially where the forests have not been cleared away. The Europeans are forced to live in the most disagreeable parts, and fix their colonies at the mouths of the rivers, amidst stinking marshes, and the putrid exhalations of the salt morasses, for the convenience of export and importation. The inhabitants are of three sorts, the natives, who are of a reddish brown; or the mixed progeny of the natives and Europeans; or a mixed progeny of the natives and Europeans.

The natives are divided into different tribes, more or less civilized and polished, as they are more or less remote from the settlements of the Europeans. They allow polygamy, and have no divisions of lands. The men go to war, hunt, and fish; the women look after domestic concerns, spin, weave, in their fashion, and plant cassava and maize, the only plants which are cultivated by the natives. Their arms are bows and arrows; sharp iron arrows, blown through a reed, which is used in hunting; and clubs made of a heavy wood called *Iron-wood*. They eat the dead bodies of those that are slain in war, and sell for slaves those they take prisoners; their wars are chiefly undertaken to furnish the Europeans with slaves. All the different tribes go naked. On particular occasions they wear caps of feathers; in cold is wholly unknown, they cover no part of their bodies but that which distinguishes the sex. They are cheerful, humane, and friendly; but timid, when heated by liquor, and drunkenness is a common vice among them. Their houses are made of 4 stakes set up in a quadrangular form, with poles, bound together by split nibbles,

and covered with the large leaves called *troelias*. Their life is ambulatory; and their houses, which are put up and taken down in a few hours, are all they have to carry with them. When they remove from place to place, which, as they inhabit the banks of rivers, they do by water in small canoes, a few vessels of clay made by the women, a flat stone on which they bake their bread, and a rough stone on which they grate the roots of the cassava, a hammock and a hatchet, are all their furniture and utensils; most of them, however, have a bit of looking-glass framed in paper, and a comb. Their poisoned arrows are made of splinters of a hard heavy wood, called *cacario*; they are about 12 inches long, and somewhat thicker than a coarse knitting needle: one end is formed into a sharp point; round the other is wound some cotton to make it fit the bore of the reed through which it is to be blown. They will blow these arrows 40 yards with absolute certainty of hitting the mark, and with force enough to draw blood, which is certain and immediate death. Against this poison no antidote is known. The Indians never use these poisoned arrows in war, but in hunting only, and chiefly against the monkeys; the flesh of an animal thus killed may be safely eaten, and even the poison itself swallowed with impunity. This country, except its sea coast, and lands adjacent to its rivers, has hitherto remained unknown to all but its original natives; and even of these, it is only the Dutch territories that foreigners have any knowledge of; for those of the Spaniards, French, and Portuguese, are inaccessible to them. This country, on account of the diversity and fertility of its soil, and of its vicinity to the equator, which passes through it, affords almost all the productions of the different American countries between the tropics, besides a variety peculiar to itself.

I. GUIANA, DUTCH, (as it has been hitherto called, though it may now be called **BRITISH**;) was first discovered by Columbus, in 1498. It lies between 7° of N. and 5° of S. lat. and between 53° and 60° of lon. W. It is bounded on the N. and E. by the Atlantic; on the W. by the Oroonoko and the Negroe; and on the S. by the Amazon. It was formerly the property of the English, who made settlements at Surinam, where a kind of corrupt English is still spoken by the negroes. The Dutch took it in the reign of Charles II, and it was ceded to them by treaty in 1674, in exchange for what they had possessed in the province, now the state of New York. It consists of 4 settlements, viz. **BERBICE**, **DEMERARA**, **ISSEQUESTO**, and **SURINAM**; which have all been taken by the British during the present war. (See these articles.) The land for 50 miles up the country from the sea-coast is flat; and, during the rainy seasons, covered 2 feet high with water. This renders it inconceivably fertile, the earth, for 12 inches deep, being a stratum of perfect manure: an attempt was once made to carry some of it to Barbadoes; but the wood ants so much injured the vessel, that it was never repeated. The excessive richness of the soil is a disadvantage, for the canes are too luxuriant to make good sugar; and therefore, the first and second crops are converted into rum. There are some trees on this part; but they are small and low,

low, consisting chiefly of a small species of palm, intermixed with a leaf near 30 feet long and 3 wide, which grows in clusters, called *Troelia*; and, at the edges of running water, with mangroves. Farther inward the country rises; and the soil, though still fertile, is less durable. It is covered with forests of valuable timber, that are always green; and there are some sandy hills, but no mountains. In this country the heat is seldom disagreeable; the trade winds by day, the land breezes in the evening, and the invariable length of the nights, with gentle dews, refresh the air, and render it temperate and salubrious. There are two wet seasons and two dry, of three months each, in the year, and during more than a month in each wet season, the rain is incessant. The dry seasons commence six weeks before the equinoxes, and continue six weeks after. The wet seasons are more wholesome than the dry, because the rains keep the waters that cover the low lands, next the sea fresh and in motion; but during the dry season it stagnates, and, as it wastes, becomes putrid, sending up very unwholesome exhalations. Blossoms, green and ripe fruit, are to be found upon the same tree in all seasons. There are some fine white and red agates in Guiana, which remain untouched; and mines of gold and silver, which the Dutch would not suffer to be wrought.

II. *GUIANA, FRENCH, Old Cayenne, or Equinocial France*, extends from Cape Orange, about 240 miles along the coast, to the Marani; where the Dutch territory begins, and extends to the mouth of the Oroonoko. This part of Guiana is said to be mountainous. The present French government have made it a receptacle for exiles. In Jan. 1801, 80 *Jacobins* were banished to it, without even the form of a trial!

III. *GUIANA, PORTUGUESE*, is that part of Guiana which lies S. of Cape North. It has been united to *BRASIL* and is now considered as part of that country.

(1.) *GUIAQUIL*, a river of Peru.

(2-4.) *GUIAQUIL*, a city, bay, and harbour of Peru, and capital of an audience of the same name. The city is two miles in extent, has 3 fortis, and contains 20,000 inhabitants. Lon. 79. 15. W. Lat. 2. 9. S.

GUIARA, a sea port town of S. America, on the Caracas coast. The British attempted to take it in 1739 and 1741; but were repulsed both times. Lon. 66. 5. W. Lat. 10. 35. N.

GUIBARRA, a river of Ireland, in Donegal, which runs into the Atlantic, 13 miles N. of Lillie Begs.

(1.) *GUICCIARDINI*, Francis, a celebrated historian, born at Florence in 1482. He professed the civil law with reputation, and was employed in several embassies. Leo X. gave him the government of Modena and Reggio, and Clement VII. that of Romagna and Bologna. Guicciardini was also lieutenant general of the pope's army, and distinguished himself by his bravery on several occasions; but Paul III. having taken from him the government of Bologna, he retired to Florence, where he was made counsellor of state and was of great service to the house of Medici. He at length retired into the country to write his history of Italy, which he composed in Italian, and

which comprehends what passed from 1532. This history is greatly esteemed, continued by John Baptist Adami. He died in 1540.

(2.) *GUICCIARDINI*, Lewis, nephew preceding, wrote a History of the Low and Memoirs of the affairs of Europe, to 1560. He wrote with great spirit a persecution of the duke d'Alva, for who prisoned him. He died in 1583.

GUICHE, a town of France, in the Saone and Loire, 10 miles NNE. of C.

GUICQUELLAU, a town of France, dep. of Finisterre; 3 miles NW. of L.

* *GUIDAGE*. *n. f.* [from *guide*.] given to a guide. *Answerth.*

* *GUIDANCE*. *n. f.* [from *guide*.] government.—They charge me with the guidance of wiser men. *Spenser*.—As I lived under the guidance of reason alone, the assistance of supernatural light, it probable that miracles, or a messenger dead, would persuade them. *Atterbury*.—A particular application must be left to Christ, under the guidance of God's holy spirit, who knows our necessity before we ask, and grants in answer. *Rogers*.—

This to the young—but thy experience
Wants not the guidance of a former
—A prince ought not to be under the influence of either faction, because from his office of presiding over the head of a party. *Swift*.

(1.) * *GUIDE*. *n. f.* [from *guide*, French verb.] 1. One who directs another in a journey.—Thou gavest them a burning pillar of fire, a guide of the unknown journey. *Wyl.*

Can knowledge have no bound, but advance

So far to make us wish for ignorance?
And rather in the dark to grope our way
Than, led by a false guide, to err by day.

2. One who directs another in his conduct.

While yet but young, his father of
And left him to an happy guide.
—They have all the same pastoral guidance, authorized, sanctified, and let upon appointment of God by the direction of rit, to direct and lead the people of G same way of eternal salvation. *Pearson*.
tor; regulator.—Who the guide of us only the God of nature? In him we live and are. Those things which nature itself are by divine art performed, using natural instrument: nor is there any such thing divine in nature herself working, but in of nature's work. *Hooker*.—

Some truths are not by reason to be
But we have sure experience for our

(2.) *GUIDES*, in military language, 1. the country people in the neighbourhood of an encampment; who give the army information concerning the country, the roads by which to march, and the probable route of the enemy.

* *To GUIDE*. *v. a.* [from *guide*, French verb.] To direct in a way.—When the spirit of truth shall guide you into all truth. *Jo. viii.*

served to *guide* them to their neighbours
Decay of Piety.—Whoſoever has a faithful
guide him in the dark paſſages of life,
 his eyes in another man's head, and
 ver the worſe. *South*. 2. To influence.
 reſe, or ſuch like ſecular maxims, when
 at the intereſt of this world *guides* men,
 times conclude that the ſlighteſt wrongs
 be put up. *Kettiewell*. 3. To govern
 1; to inſtruct.—For thy name's ſake
 and *guide* me. *Pſ. xxxi. 3.* 4. To regu-
 ſuperintend.—Women neglect that which
 ſigns them as their proper buſineſs, the
 the houſe. *Decay of Piety*.

 ſt his dagger into his body, and there-
 of reaching his vitals, opened an im-
 the unknown cauſe of all his pain, and
 bed himſelf into perfect health and eaſe,
 great reaſon to acknowledge chance
 ſurgeon, and Providence for the *guide*
 . *South*.

Alexander, an eminent Italian poet,
 via in 1650. At Rome, he attracted
 of Q. Chriſtina of Sweden, who retain-
 her court; he alſo obtained a conſider-
 ce from pope Innocent XI. and a pen-
 he duke of Parma. For a good office
 ſtate of Milan with prince Eugene, he
 ed among the nobles and decurions of
 and died in 1712. His exterior form
 urable; he was ſhort and crooked, his
 arge, and he was blind of his right eye.
 were published at Verona in 1716.

ZZOLO, a town of the Ciſalpine re-
 the department of Miucio, and late
 ſantua.

IDO ARETIN. See ARETIN, N° 2.

DO RENI. See RENI.

UIDON. *n. ſ.* [Fr.] A ſtandardbearer;
 Obſolete.

GUIDON is a flag born by the king's
 broad at one extreme, and almoſt
 the other, and ſlit or divided into two.
 ſign or flag of a troop of horſe guards.
 o, § 20, N° ii.

DON, (§ 1. *def.* 1.) the officer who
 uidon, is that in the horſe guards which
 s in the foot; and takes place next be-
 net.

PART II.

(4.) GUIDONS, [*guidones*, or *ſchola guidonum*,]
 were a company of prieſts eſtabliſhed by Charle-
 magne, at Rome, to conduct and guide pilgrims
 to Jeruſalem, to viſit the holy places: they were
 alſo to aſſiſt them in caſe they fell ſick, and to
 perform the laſt offices to them in caſe they died.

GUIDORE, a river of Ireland in Donegal.

(I.) GUIENNE, the largeſt ci-devant province of
 France, was bounded on the N. by Saintogne,
 Angoumois, and Limofin; on the E. by Limofin,
 Auvergne, and Languedoc; on the S. by the Py-
 renees, Lower Navarre, and Bern; and on the
 W. by the ocean. It was 225 miles long and 200
 broad; and was divided into the Upper and
 Lower. This extenſive province was anciently
 called AQUITAINE, and is now divided into the
 departments of Aveiron, Dordogne, Gers, Gi-
 ronde, Landes, Lot, Lot and Garonne, Lower
 and Upper Pyrenees. The principal rivers are,
 the Garonne, the Adour, the Tarn, the Aveiron,
 and the Lot. Bourdeaux was the capital.

1. GUIENNE, LOWER, contained Bourdelois, Pe-
 rigord, Agenois, Condomois, Bazadois, Landes,
 Proper Gaſcony, and the diſtrict of Labour.

2. GUIENNE, UPPER, comprehended Querci,
 Rouergue, Armagnac, the territory of Com-
 minges, and the county of Bigorre.

(II.) GUIENNE, PROPER, a ci-devant province
 of France included in the above extenſive province
 (N° I.) but extending only 90 miles in length and
 80 in breadth. It now forms the departments of
 Gironde, and Lot and Garonne.

GUIFONI, a town of the French republic in
 Cortica 13½ miles S. of Corte.

GUIGNEN, a town of France, in the dep. of
 Ile and Vilaine; 18 miles NNE. of Rhedon.

GUILANDINA, the NICKAR TREE: A genus
 of the monogynia order, belonging to the decan-
 dria claſs of plants; and in the natural method
 ranking under the 33d order, *Lomentaceæ*. The
 calyx is monophyllous and ſalver-shaped; the
 petals, inſerted into the neck of the calyx, nearly
 equal; the ſeed-veſſel a legumen. There are 3
 ſpecies:

1. GUILANDINA BONDUCA, the yellow nickar.

2. GUILANDINA BONDUCELLA, the gray nickar.
 Theſe are climbing plants, natives of the Weſt
 Indies, where they riſe to 12 or 14 feet: the
 flowers come out at the wings of the ſtalks; and
 are compoſed of 5 concave yellow petals. They
 are ſucceeded by pods about 3 inches long and
 two broad, cloſely armed with ſlender ſpines,
 opening with two valves, each incloſing two hard
 ſeeds about the ſize of childrens marbles, of a
 yellowiſh colour. See N° 3.

3. GUILANDINA MORINGA, the morunga nic-
 kar, is a native of Ceylon, and ſome places
 on the Malabar coaſt. It riſes to 25 or 30 feet,
 having flowers produced in looſe bunches from
 the ſides of the branches, and compoſed of an un-
 equal number of petals. Theſe plants, being na-
 tives of warm climates, require to be kept through
 the winter in a ſtove in this country. They are
 propagated by ſeeds; but thoſe of the BONDUCA
 are ſo hard, that unleſs they are ſoaked ſome days
 in water before they are put into the ground, or
 placed under the pots in the tan-bed to ſoften
 their covers, they will remain for years without

T t t t

vegetating

vegetating. The roots of the *Mnateria* are scraped when young, and used by the inhabitants of Ceylon and Malabar as those of horse radish are in Europe. The wood dyes a beautiful blue colour. It is the *lignum nephriticum*, or nephritic wood, of the dispensatories; and is brought over in large, compact, ponderous pieces, without knots, of a whitish or pale yellow colour on the outside, and dark coloured or red tish within; the bark is usually rejected. This wood imparts to water or reddish spirit a deep tincture; appearing when placed between the eye and the light, of a golden colour; in other situations blue; pieces of another wood are sometimes mixed with it, which give only a yellow colour to water. It has scarcely any smell, and very little taste. It has been recommended in difficulty of urine, nephritic complaints, and all disorders of the kidneys and urinary passages.

(1.) * GUILD, *n. f.* [*gild/si*, Saxon, a fellowship, a corporation.] A society; a corporation; a fraternity or company, combined together by orders and laws made among the members by their prince's licence. Hence the common word *guild* or *guildhall* proceeds, being a fraternity or commonality of men gathered into one combination, supporting their common charge by mutual contribution. *Constr.*—

Towards three or four o'clock

Look for the news that the *guild* hall affords.

Shak. Rich. III.

—In woollen cloth it appears, by the use ancient *guilds* that were settled in England for this manufacture, that this kingdom greatly flourished in that art. *Hale's Origin of Mankind.*—

As when the long ear'd milky mothers wait

At some sick wife's triple bedded gate,

For their defrauded absent souls they make

A moan so loud, that all the *gild* awake. *Pope.*

(2.) GUILD, (from the Saxon verb *gildan*, to pay), signifies a fraternity or company, because every one was *gild*er, i. e. to pay something towards the charge and support of the company. It was a law among the Saxons that every freeman of 14 years of age should find sureties to keep the peace, or be committed; upon which certain neighbours, consisting of ten families, entered into an association, and became bound for each other, either to produce him who committed an offence, or to make satisfaction to the injured party: that they might the better do this, they raised a sum of money among themselves, which they put into a common stock; and when one of their pledges had committed an offence, and was fled, then the other nine made satisfaction out of this stock, by payment of money, according to the offence. Because this association consisted of ten families, it was called a *decennary*; and from hence came out later kinds of fraternities. But as to the precise time when these *guilds* had their origin in England, there is nothing of certainty to be found; since they were in use long before any formal licence was granted to them for such meetings. It seems to have been about the close of the 11th century, says Anderson, in his *History of Commerce*, vol. i. p. 73, that merchant *guilds*, or fraternities, which were afterwards styled corporations, came first into the general use in many

parts of Europe. Mr Madox, in his *Forma*, chap. i. § 9 thinks, they were taken from the Saxons, and that they might be brought to England by the Normans.

(3.) GUILD, *Gild*, or *Gild*, a word used in ancient writers, for a congregation or assembly committed.

(4.) GUILD, in the royal boroughs of England is still used for a company of merchants, or freemen of the borough. See *REG. CO.*

(5.) GUILD, *D. an. or.* See *DIA.* ii. Every royal borough has a *guild*, who is the next magistrate below the judges of controversies among men and trade; disputes between inhabitants of buildings, lights, watercourses, and other ancient rights; at which his brethren *guild* are bound to attend; manages the *guild* of the *guild*; and receives and collects.

(1.) GUILDFORD, or *Guldborough*, a borough town of Surrey, on the Wye, near the mouth of an old creek. In the Saxons times a royal villa, where many of the Anglo-Saxons used to pass their festivals. It is a corporation consisting of a mayor, recorder, aldermen, and has sent two members to parliament since the commencement of the great rebellion. London to Chertsey on Portsmouth has this town, which has always been famous for its inn, and excellent accommodations; and affixes are often held here. Its commodity was cloth, of which there are still small remains. Here is a school founded by Edward VI: an almshouse endowed with worth 300l. a year; and two charity schools for 30 boys and 20 girls. There were 3000 but one of them fell down in April 1740. is a fine circular theatre for horse races, town, which began when the Newmarket are ended. K. William III founded a 100 guineas to be run for here every May used to honour the race with his presence once King George I. The Wye is made to the town, and by it a great quantity of is carried to London, not only from the neighbourhood, but from Suffolk and Hampshire 30 miles off. Guildford is 30 miles SW. from London. Lon. 0 30. W. Lat. 51. 16. N.

(2.) GUILDFORD, a town of the United States in Connecticut 12 miles E. of New Britain 201 NE of Philadelphia. Lon. 2. 6. E. city Lat. 41. 19. N.

(3.) GUILDFORD, a county of N. Carolina bounded on the E. by Orange county, N. Carolina, S. by Roxborough, and W. by counties; containing 6,674 citizens in 1516 slaves. Martinville is the capital.

(4.) GUILDFORD, a town of N. Carolina above county. 117 miles WNW. of I. Lon. 79. 46. W. Lat. 36. 8. N.

(5.) GUILDFORD, a town of N. Carolina 8. of Yixonton.

GUILD-HALL, or *Gild Hall*, the great judicature for London. In it are kept the court, the sheriff's court, the court of court of conscience, court of common chamberlain's court, &c. Here also the fit upon *negotium*, &c.

n. f. [guille, gille, old French, the
Deceitful causing; insidious ar-
riving subtilty —

ing words he courted her awhile,
lovely, and oft sighing sore,
his heart did court with divers guile;
his looks, and sighs she did abhor.

Spenser.

FREE, a town of France in the dep.

Alos, 9 miles NNW. of Embrun.

by prince Eugence in 1692. Lon. 6.
41. N.

John, of Welsh extraction, was
ordshire, about 1565. Having com-

ication at Brazen Nose college, Ox-

me a member of the college of arms
and was made rouge croix pursuivant,

he died in 1621. He published, in
rated work, intitled *the Display of*

fol. which has gone through many
the fifth, which came out in 1679,

treatise of honour civil and military,
hn Loggan.

GUILLOTIERE, a village of France in the dep.
of Rhone and Loire, near Lyons. It was put in
a state of siege, along with the commune of Ly-
ons, by decree of the Directory, on the 3d Feb.
1798.

GUILLOTINE, *n. f.* an engine of decapitation,
decreed by the French National Assembly, to be
the sole punishment of persons condemned to
death, on the 20th of March, 1792; so named
from Dr Guillot, a member of the Assembly, who
proposed it as an instrument of *mercy*, by giving
the criminal a more expeditious death than any
other means can afford. Its effect it must be al-
lowed is instantaneous. A minute description of
it is unnecessary, as *fig. 4.* and *5. Pl. CLXXI.* will
convey a sufficient idea of it. This instrument is
not a new invention. It was used in Scotland a-
bout the time of the reformation, when it was
called *the Maiden*; (See MAIDEN;) and is still
kept in the lower part of the Parliament House
at Edinburgh, where it is shown as a curiosity.
Some say it was invented and first used at Halifax
in Yorkshire.

To GUILLOTINE, *v. a.* To behead with that
engine; a new verb, introduced by the use of it.

GUILLOIN, a town of France in the dept. of
Yonne, 7 miles E. of Avalon.

* GUILT. *n. f.* [gilt, Saxon, originally signi-
fied the fine or mulct paid for an offence, and af-
terward the offence itself.] 1. The state of a man
justly charged with a crime; the contrary to in-
nocence.—It was neither guilt of crime, nor rea-
son of state, that could quench the envy that was
upon the king for this execution. *Bacon's Henry*
VII.—When these two are taken away, the possi-
bility of guilt, and the possibility of innocence,
what restraint can the belief of the creed lay upon
any man? *Hammond.* 2. A crime; an offence.—

Close pent up in guilts

Rive your concealing contents, and ask

These dreadful summoners grace. *Shak. K. Lear.*

* GUILTY. *adv.* [from guilty.] Without
innocence; without clearness of conscience.—

Bloody and guilty; *guiltily* awake,

And in a bloody battle end thy days:

Think on lord Hastings, and despair and die. *Shak.*

* GUILTINESS. *n. f.* [from guilty.] The state
of being guilty; wickedness; consciousness of
crime.—He thought his flight rather to proceed
of a fearful *guiltiness* than of an humble faithful-
ness. *Sidney.*—

The last was I that felt thy tyranny;

O, in the battle think on Buckingham,

And die in terror of thy *guiltiness*. *Shak. R. III.*

I should be guiltier than my *guiltiness*. *Shak.*

* GUILTLESS. *adj.* [from guilt.] innocent;
free from crime.—

I am in this commanded to deliver

The noble duke of Clarence to your hands:

I will not reason what is meant hereby,

Because I will be *guiltless* of the meaning. *Shakesp.*

Many worthy and chaste dames thus,

All *guiltless*, meet reproach. *Shakesp. Othello.*

—Then shall the man be *guiltless* from iniquity,
and this woman shall bear her iniquity. *Num. v. 31.*

Thou, who do'st all thou wishest at thy will,

And never willest aught but what is right,

my.—I would not have had any hand in his death, of whose *guiltlessness* I was better assured than any man living could be. *King Charles.*

* **GUILTY.** *adj.* [*giltig*, Sax. one condemned to pay a fine for an offence.] 1. Justly chargeable with a crime; not innocent.—Is there not a ballad of the king and the beggar?—The world was *guilty* of such a ballad some three ages since. *Shak.*

Mark'd you not

How that the *guilty* kindred of the queen
Look'd pale, when they did hear of Clarence's
death! *Shakespeare.*

—We are verily *guilty* concerning our brother, in that we saw the anguish of his soul when he besought us, and we would not hear. *Gen. xlii. 21.*

With mortal hatred I persu'd his life,
Nor he, nor you, were *guilty* of the strife;
Nor I, but as I lov'd; yet all combin'd,
Your beauty and my impotence of mind. *Dryd.*
Farewel the stones

And threshold, *guilty* of my midnight moans.
Dryden.

—There is no man that is knowingly wicked, but is *guilty* to himself; and there is no man that carries guilt about him, but he receives a sting into his soul. *Tillotson.* 1. Wicked; corrupt.—

All the tumult of a *guilty* world,

Tost by ungenerous passion, sinks away. *Thomson.*

GUIMARAENS, an ancient and elegant town of Portugal, in Entre Duero e Minho, divid'd into the old and new town. The former is seated on an eminence, about 1100 paces in circumference, and defended by a barbican. The latter contains 13 squares, 17 streets, 8 gates, 6 churches, 6 convents, 4 hospitals, 4 bridges, and 6000 inhabitants. Its chief manufacture is linen. It lies 10 miles E. of Braga, and 165. N.E. of Lisbon. Lon. 8 22 W. Lat. 41 22 N.

ces spontaneously, and almost without
in, all the necessaries of life, grain, fruit,
and roots. Every thing matures to per-
fection and is excellent in its kind." One thing
surprised him, was the prodigious rapidity
with which the sap of trees repairs any loss they
suffer. "I was never (says he) more astonished,
on landing 4 days after the locusts had de-
stroyed the fruits and leaves, and even the buds
were gone, to find the trees covered with new
leaves, and they did not seem to me to have suf-
fered at all." Similar accounts are given of the
country of the rest of Guinea.

GUINEA, GENERAL DESCRIPTION OF. 1. Of
the country above mentioned. (§ 1.) the 1st is situated
on the river Senegal, which is said to be navigable more
than 500 miles, and is by travellers described to
be fertile and fruitful. Mr Brue, princi-
pal agent for the French African company, who
has lived many years in that country, after describing its
climate and plenty near the sea, adds, "The
country you go from the sea, the country on the
banks of the river is the more fruitful and well im-
proved with Indian corn, pulse, fruit,
&c. there are vast meadows, which feed large
herds of great and small cattle, and poultry are
plentiful; the villages that lie thick on the ri-
versides, the country is well peopled." *Afley's*

Vol. ii. p. 46. The same author in the ac-
count of a voyage he made up the river Gambia,
the mouth of which lies about 300 miles S. of the
Senegal and is navigable about 600 miles up the
river, says, "that he was surprized to see the
land so well cultivated; scarce a spot lay unim-
proved, the low lands divided by small canals
sown with rice, &c. the higher grounds
sown with millet, Indian corn, and pease of
several sorts; their beef excellent; poultry plen-
tiful and cheap, as well as all other necessaries

Mr Moor, who was sent from England
in 1735, in the service of the African company,
settled at James Fort on the Gambia, or in
other stories on that river, about 5 years, con-
firms the above account of the fruitfulness of the

Captain Smith, who was sent in 1726,
in the service of the African company to survey their settlements
along the whole coast of Guinea, says, "the
country about the Gambia is pleasant and fruitful;
all sorts of all kinds being plenty and exceeding

Voyage to Guinea, p. 31, 34. The coun-
try between the two above mentioned ri-
vers is large and extensive, inhabited principally
by three Negro nations known by the name
of FULIS, and MANDINGOS. The Jalofs
live in the middle of the country. See JALOFS.
The principal settlement is on both sides of
the river: great numbers of these people are also
found in the Mandingos; which last are mostly
on both sides of the Gambia. The Fulis
live on both sides of the river Senegal: their
country which is very fruitful and populous, ex-
tends 400 miles from east to west. They are
of a deep tawny complexion, appearing
to have some affinity to the Moors, whose country
lies to the north: they are good farmers,
and have great harvests of corn, cotton, tobacco,
&c. breed great numbers of cattle of all kinds.
The most particular account we have of these

people is from Moore, who says, "Some of these
Fuli blacks, who dwell on both sides the river
Gambia, are in subjection to the Mandingos, a-
mongst whom they dwell, having been probably
driven out of their country by war or famine.
They have chiefs of their own, who rule with
much moderation. Few of them will drink brandy,
or any thing stronger than water and sugar, being
strict Mahometans. Their form of government
goes on easy, because the people are of a good
quiet disposition, and so well instructed in what
is right, that a man who does ill is the abomina-
tion of all, and none will support him against
the chief. In these countries the natives are not
covetous of land, desiring no more than what they
use; and as they do not plough with horses and
cattle, they can use but very little; therefore the
kings are willing to give the Fulis leave to live in
their country, and cultivate their lands. If any
of their people are known to be made slaves, all
the Fulis will join to redeem them; they also sup-
port the old, the blind, and lame, amongst them-
selves; and as far as their abilities go, they sup-
ply the necessities of the Mandingos, great num-
bers of whom they have maintained in famine."

The author, from his own observations, says,
"They were rarely angry, and that he never
heard them abuse one another." The Mandingos
are said by Mr Brue "to be the most numerous
nation on the Gambia." See MANDINGOS. 2.

That part of Guinea known by name of the *Grain*
and *Ivory Coast* extends about 500 miles. See IVO-
RY COAST. 3. Next adjoining to the Ivory Coast

are the GOLD COAST and the SLAVE COAST. Au-
thors are not agreed about their bounds, but their
extent together along the coast may be about 500
miles. And as the policy, produce, and economy
of these two kingdoms of Guinea are much the
same, they will be found described together. See

SLAVE COAST. 4. Next adjoining to the Slave
Coast, is the kingdom of Benin, which, though
it extends but about 170 miles on the sea, yet
spreads so far in land as to be esteemed the most
potent kingdom in Guinea. See BENIN, N° 1

and 3. Artus says, "the natives are a sincere, in-
offensive people, and do no injustice either to one
another or to strangers." (*Collect. vol. iii. p. 228.*)

Smith confirms this account, and says, "that the
inhabitants are generally very good-natured, and
exceeding courteous and civil. When the Euro-
peans make them presents, which, in their coming
thither to trade, they always do, they endeavour
to return them doubly." Bosman tells us, "that
his countrymen the Dutch, who were often obli-
ged to trust them till they returned the next year,
were sure to be honestly paid their whole debts."

There is in Benin a considerable order in the go-
vernment; theft, murder, and adultery being se-
verely punished. Smith says, "their towns are go-
vern'd by officers appointed by the king, who
have power to decide in civil cases, and to raise
the public taxes; but in criminal cases, they must
send to the king's court, which is held at the town
of ORO, or GREAT BENIN. See BENIN, N° 3.

This town, which covers a large extent of ground,
is about 60 miles from the sea." Barbot tells us,
"that it contains 30 streets, 20 fathoms wide,
and almost two miles long, commonly extending

miles on the coast. Great numbers of the natives of both these kingdoms profess the Christian religion, which was long since introduced by the Portuguese, who made early settlements in that country. See ANGOLA and CONGO. In the Collections, it is said, that both in Congo and Angola, the soil is in general fruitful, producing great plenty of grain, Indian corn, and such quantities of rice, that it hardly bears any price, with fruits, roots, and palm oil in plenty. The natives are generally a quiet people, who discover a good understanding, and behave in a friendly manner to strangers, being of a mild conversation, affable, and easily overcome with reason. In the government of Congo, the king appoints a judge in every particular division, to hear and decide disputes in civil causes; the judges imprison and release, or impose fines according to the rules of custom; but in weighty matters, every one may appeal to the king, before whom all criminal causes are brought, in which he gives sentence; but seldom condemns to death. The town of Loango stands in the midst of four lordships, which abound in corn, fruit, &c. Here they make great quantities of cloths of divers kinds, very fine and curious; the inhabitants are seldom idle; they even make needle-work caps as they walk in the streets. The slave trade is here principally managed by the Portuguese, who carry it far up into the inland countries. They are said to send off from these parts 15,000 slaves each year. At Angola, about 10° lat. S. ends the trade for slaves.

(5.) GUINEA, HUMANITY AND CIVILITY OF THE NATIVES OF. M. Adanson speaking of the appearance of the country about the Senegal and Gambia, and of the disposition of the people, says, "which way soever I turned mine eyes on this pleasant spot, I beheld a perfect image of pure nature;

capas are those of Cape Blanco, Leon, Cape St Ann's, Cape Pal Points, Cape Formosa, Cape Mon Cape Lopas, Cape Lede, and chief bays are the Cyprian or Bite of Guinea. Of the rivers, the are those of Corazo and Ambri Lunde, the Cameron, the For the Sierra Leona, and the Sherb from E. to W. (except the Volt N. to S.) and falls into the Atla

(7.) GUINEA, PRODUCE OF. ry, and slaves, Guinea affords senega, gum tragacanth, and other gums and drugs.

(8.) GUINEA TRADE, HISTO most ancient account we have of ticularly that part situated on a negal and Gambia, is from the ancient authors, one an Arabia Moor. The first wrote in Arab century. His works, printed Rome, were afterwards translated printed at Paris, under the patronous Thuanus chancellor of title of *Geographia Nubiens*, count of all the nations lying Gambia. The other was written Moor, born at Granada in Spain were totally expelled from that sided in Africa, but being on a poli to Tunis, was taken by force who finding him possessed of several besides his own MSS. concluded of learning, and as such presented Leo X. This pope encouraged the Romish religion, and Africa was published in Italian.

but supported themselves in an equal state, the natural produce of the country, which had plenty of roots, game, and honey. That on or avarice never drove them into foreign wars to subdue or cheat their neighbours. They lived without toil or superfluities." The ancient inhabitants of Morocco, who wore mail, and used swords and spears headed with iron, coming amongst these harmless and simple people, soon brought them under subjection, divided that part of Guinea which lies on the Senegal and Gambia into 15 parts; those were the kingdoms of the negroes, over which they presided, and the common people were neglected. These Moors taught the negroes the Mahometan religion, and arts of life; particularly the use of iron, before unknown to them. About the 14th century, a native negro, called *Heli Ischia*, expelled the Moorish conquerors; but though the Moors threw off the yoke of a foreign nation, they only changed a Lybian for a negro master. *Ischia* himself becoming king, led the negroes to foreign wars, and established himself in power over a very large extent of country." Since that time, the Europeans have had very little knowledge of those parts of Africa, nor do they know what became of his great empire. It is probable that it fell to pieces, and that the natives retained many of their ancient customs; for in an account published by Moore, in his *Travels on the Senegal and Gambia*, we find a mixture of the Moorish and Mahometan customs, joined with the original simplicity of the negroes. It appears by accounts of ancient voyages, collected by Hackluit, and others, that it was about 50 years after the discovery of America, that the Portuguese attempted to sail round Cape Bojador, which lies between their country and Guinea: this, they effected; when landing on the west coast of Africa, they soon began to make incursions into the country, and to seize and carry off the natives. Early as 1434, Alonzo Gonzales, the first who is recorded to have met with the natives, being on the coast, pursued and attacked a number of them, and some were wounded, as was also one of the Portuguese; which the author records as the first blood spilt by Christians in those parts. Six years after, Gonzales again attacked the natives, and took 12 prisoners, with whom he returned to his ships: he afterwards put a woman on shore, to induce the natives to redeem the prisoners; but the next day 150 of the inhabitants appeared on horseback and camels, provoking the Portuguese to fight; which they not daring to venture, the natives discharged a volley of stones at them, and killed one off. After this, the Portuguese continued to send vessels on the coast of Africa: particularly in 1481, one of their falling on a village, whence the inhabitants fled, and, being pursued, 25 were taken. "The best that ran best (says the author,) taking most." In their way home they killed some of the natives, and took 55 more prisoners. Afterwards Dinisanes Dagrama, with two other vessels, landed on the island Arguin, where they took 54 slaves; then running along the coast 80 leagues farther, they at several times took 50 slaves; but 7 of the Portuguese were killed. Then being

joined by several other vessels, Dinisanes proposed to destroy the island, to revenge the loss of the seven Portuguese; of which the Moors being apprised fled, so that no more than 12 were found, whereof only four could be taken, the rest being killed, as also one of the Portuguese." Many more captures of this kind on the coast of Barbary and Guinea are recorded to have been made in those early times by the Portuguese; who, in 1481, erected their first fort at D'Elmina on that coast, from whence they soon opened a trade for slaves with the inland parts of Guinea. From the foregoing accounts, it is undoubted, that the practice of making slaves of the negroes owes its origin to the early incursions of the Portuguese, solely from an inordinate desire of gain. This is clear from their own historians, particularly Cada Mosto, about 1455, who writes, "That before the trade was settled for purchasing slaves from the Moors at Arguin, sometimes 4, and sometimes more Portuguese vessels, were used to come to that gulph, well armed; and landing by night, would surprise some fishermen's villages: that they even entered into the country, and carried off Arabs of both sexes, whom they sold in Portugal." And also, "That the Portuguese and Spaniards, settled on 4 of the Canary islands, would go to the other island by night, and seize some of the natives of both sexes, whom they sent to be sold in Spain." After the settlement of America, those devastations, and the captivating the miserable Africans, greatly increased. Anderson, in his *History of Trade and Commerce*, p. 336, speaking of what passed in 1508, writes, "That the Spaniards had by this time found that the miserable Indian natives, whom they had made to work in their mines and fields, were not so robust and proper for those purposes as negroes brought from Africa: wherefore they, about that time, began to import negroes for that end into Hispaniola, from the Portuguese settlements on the Guinea coasts; and also afterwards for their sugar-works." About 1551, towards the end of Edward VI's reign, some London merchants sent out the first English ship on a trading voyage to the coast of Guinea. This was soon followed by several others; but the English not having then any plantations in the West Indies, and consequently no occasion for negroes, they traded only for gold, elephants teeth, and Guinea pepper. This trade was carried on at the hazard of losing their ships and cargoes, if they had fallen into the hands of the Portuguese, who claimed an exclusive right of trade there. In 1553, capt. Thomas Windham traded along the coast with 140 men, in 3 ships, and sailed as far as Benin, to take in a load of pepper. Next year John Lock traded along the coast, as far as D'Elmina, when he brought away considerable quantities of gold and ivory. He speaks well of the natives, and says, "That whoever will deal with them must behave civilly, for they will not traffic if ill used." In 1555, William Towerion traded in a peaceable manner with the natives, who complained to him of the Portuguese at D'Elmina, saying, "They were bad men; who made them slaves if they could take them, putting irons on their legs." This bad example of the Portuguese was soon followed by some Englishmen; for Capt. Towerion says, "That in the

course of his voyage, he perceived the natives near D'Elmina unwilling to come to him, and that he was at last attacked by them; which he understood was done in revenge for the wrong done them the year before by one captain Gansh, who had taken away the negro captain's son and three others, with their gold, &c. This caused them to join the Portuguese, notwithstanding their hatred of them, against the English." (*Collection*, vol. i. p. 148.) Next year captain Towerfon brought these men back again; whereupon the negroes showed him much kindness. Soon after this, another instance occurred in the case of Capt. George Fenner, who being on the coast with 3 vessels, was attacked by the negroes, who wounded several of his people, and violently carried 3 of his men to their town. The captain sent a messenger, offering any thing they desired for the ransom of his men; but they refused to deliver them; letting him know, "That 3 weeks before, an English ship, which came in the road, had carried off 3 of their people; and that till they were brought again, they would not restore his men, even though they should give their 3 ships to release them." It was probably the bad conduct of these and some other Englishmen, which occasioned what is mentioned in *Hall's Naval History*, viz. "That when Capt. Hawkins returned from his first voyage to Africa, Q. Elizabeth sent for him, when he expressed her concern, lest any of the African negroes should be carried off without their free consent; which she declared would be detestable, and would call down the vengeance of heaven upon the undertakers." Hawkins made great promises, but did not perform them; for his next voyage to the coast seems to have been principally to procure negro slaves, and sell them to the Spaniards in the West Indies; upon which the same author has these remarkable words: "Here began the horrid practice of forcing the Africans into slavery: an injustice and barbarity, which, so sure as there is vengeance in heaven for the sword of crimes, was some time the destruction of all who act or who encourage it." This captain Hawkins, afterwards Sir John Hawkins, seems to have been the first Englishman who gave public countenance to this wicked traffic; for Anderson, (p. 401,) says, "That in 1562, Capt. Hawkins, assisted by subscription of many gentlemen, now fitted out 3 ships; and having learnt that negroes were a very good commodity to the Spaniards, he sailed to the coast of Guinea, took in negroes, and loaded with the most European, where he sold them and his English commodities, and loaded his 3 vessels with sugar, pepper, &c. with which he returned home, 1563, making a prodigious voyage." As it proved successful, the trade was continued, both by Hawkins and others, as appears from the *Journal of Captain Hawkins*, where it is said, "That on the 18th of October, Capt. John Hawkins, with two ships, of 100 and 120 tons, sailed for Africa; that on the 5th December, anchored at Cape Verde, where the captain named the boat, and sent 8 men to land to the country, to see if they could take any more; but the natives flying from them, they returned to their ships, and proceeded further down the coast. Here they had certain day, among their men affairs, in which (as the author says) to burn

and spoil their towns and take the inhabitants. The land they observed to be well cultivated, there being plenty of grain and fruit of many sorts, and the towns prettily laid out. On the 25th, being informed by the Portuguese of a town of negroes called *Bymba*, where there was not only a quantity of gold, but 140 inhabitants, they resolved to attack it, having the Portuguese for their guide; but by mismanagement they lost but 10 negroes, having 7 of their own men killed and 27 wounded. They then went further down the coast; when having procured a number of negroes, they proceeded to the West Indies, where they sold them to the Spaniards." It is said (p. 76,) "That in 1567, Francis Drake, while performing his voyage round the world, was with Sir John Hawkins in his expedition to the coast of Guinea, where taking in a cargo of slaves, he determined to steer for the Canbber Islands. How Q. Elizabeth suffered so grievous a mismanagement of the rights of mankind to be perpetrated by her subjects, and how she was persuaded, in the 30th year of her reign, to grant patents for carrying on a trade from the N. part of the Atlantic to 100 leagues beyond Sierra Leone, is hard to account for, otherwise than that it was but a misrepresentation made to her of the treatment of the negroes, and of the advantage it was expected they would reap from being made acquainted with the Christian religion. This was the case of Louis XIII. of France: who, Labat, (*Journal of the Isles of America*) tells us, "was extremely uneasy at a law by which the negroes of his colonies were to be made slaves; but it being brought to him as the readiest means of their conversion to Christianity, he acquiesced therein." Nevertheless, some of the Christian powers did not so easily give way in this matter. Innocent the 10th, "That cardinal Cibo, one of the pope's principal ministers of state, wrote a letter on behalf of the college of cardinals, to the missionaries, complaining that the pernicious and abusive abuse of selling slaves was yet continued, urging them to remedy the same if possible, but the missionaries saw little hopes of success, by reason that the trade of the country was every in slaves and ivory." It has been urged in justification of this trade, that by purchasing natives taken in battle, they save the lives of many human creatures, who otherwise would be sacrificed to the implacable revenge of the natives. But this pretence has been refuted by an appeal to reason and fact. For if the negroes, as is said, they should be cruelly put to death if they were not sent away; why, it is asked, do they manifest such reluctance and dread as they generally do, in being brought from their native countries, as is said in his Account, p. 38, says, "The Christians do not buy slaves, and will attempt any thing, though ever so desperate, to avoid it." Captain Phillips, in his account of a voyage he performed to the coast of Guinea, writes, "The negroes are so loth to leave their own country, that they have often leaped out of the canoe, or of a ship, into the sea, and kept under water till they were drowned, to avoid being taken on board. It had the fact even been otherwise, the shore would be urged with an extreme bad grace, which is

notorious that the very wars said to be productive of such cruelty were fomented by the infamous arts of the Europeans. See SLAVE TRADE.

(II, i.) * GUINEA. *n. f.* [from *Guinea*, a country in *Africa*, abounding with gold.] A gold coin valued at one and twenty shillings.—By the word gold I must be understood to design a particular piece of matter; that is, the last *guinea* that was coined. *Locke*.—

Ladies, whose love is constant as the wind :

Cits, who prefer a *guinea* to mankind. *Young*.

(ii.) *The* GUINEA anciently bore the impression of an elephant. Its value has varied; when first struck it was 20s.; from the scarcity of gold it was afterwards advanced to 21s. 6d. but it is now sunk to 21s. The pound weight troy of gold is cut into 44½ parts; each part makes a guinea.

(III.) GUINEA COMPANY. See COMPANY, § IV, ii, 1.

(IV.) GUINEA, NEW, a long and narrow island of the East Indies, very imperfectly known. It was supposed to be connected with New Holland, until Captain Cook discovered the strait which separates them. New Guinea, including Papua, its NW. part (which Bougainville conjectures is separated from it by a strait), reaches from the equator to 12° lat. S. and from 131° to 150° lon. E. In one part it does not appear to be above 50 miles broad. It was first visited by an European ship in 1529. Saavedra, a Portuguese, who made the discovery of the NW. part of this country, called it *Terra di Papuas* or *Papos*. Van Schouten, a Dutch discoverer, afterwards gave the name of *New Guinea* to its SW. part. Admiral Roggewain also touched here; and before him Dampier, 1st Jan. 1700. Capt. Cook made the coast of New Guinea, in lat. 6° 15' lon. 156° E. on the 3d Sept. and landed, accompanied by Mr Banks, Dr Solander, 9 sailors, and servants well armed, and advanced a little way up the country; but coming to the skirts of a thick wood, about a quarter of a mile from the boat, 3 Indians rushed out of it with a hideous shout; threw their darts, and showed such a hostile disposition, that the party returned to their boat, as they had no intention to invade the country, and it was evident nothing could be done upon friendly terms. When they got on board the boat, they rowed along the shore, and about 80 Indians assembled, resembling the New Hollanders, being stark naked, with their hair cropped short. All the while they were shouting defiance, and throwing something out of their hand which burnt exactly like gun powder, but made no report; what these fires were, or for what purpose intended, could not be guessed at. Those who discharged them had in their hands a short piece of stick, possibly a hollow cane, which they swung sidewise from them, and immediately fire and smoke issued, resembling the discharge of a musket, and of no longer duration, this was observed from the ship, and the people on board thought they had fire-arms. After looking at them attentively for some time, without taking any notice of their flashing and vociferation, the sailors fired some muskets over their heads. Upon hearing the balls rattle among the trees, they walked leisurely away, and the boat returned to the ship. Upon examining the weapons which the natives had thrown, they

were found to be light darts, about 4 feet long, very ill made, of a reed or bamboo cane, and pointed with hard wood, in which there were many barbs. They were discharged with great force, for at 60 yards distance they went beyond the party. The general opinion was, that they were thrown with a stick in the manner practised by the New-Hollanders. The land here is very low, as is every other part of the coast; but it is covered with a vast luxuriance of wood and herbage. Cocoa nut, plantain, and bread-fruit trees, flourish in perfection.

* GUINEADROPPER. *n. f.* [*guinea* and *drop*.] One who cheats by dropping guineas.—

Who now the *guineadropper's* bait regards,
Trick'd by the sharper's dice, or juggler's cards. *Gay*.

(1.) * GUINEAHEN. *n. f.* A fowl, supposed to be of *Guinea*.

(2.) GUINEA HEN. See NUMIDA, N° 2.

(1.) * GUINEAPEPPER. *n. f.* [*capsicum*, Lat.] A plant. *Miller*.

(2.) GUINEA PEPPER. See CAPSICUM.

(1.) * GUINEAPIG. *n. f.* A small animal with a pig's snout, brought, I believe, from *Africa*.

(3.) * GUISE. *n. f.* [The same with *wise*, *guise*, French; *wisa*, the *w* being changed, as is common into *g*.] 1. Manner; mein; habit; cast of behaviour.—

His own fire, and master of his *guise*,

Did often tremble at his horrid view. *Spenser*.

Thus women know, and thus they use the *guise*,

T' inchant the valiant and beguile the wife.

Fairfax.

—Lo you! here she comes: this is her very *guise*; and, upon my life, fast asleep: observe her, stand close. *Shak. Macbeth*.—

They stand a horrid front

Of dreadful length, and dazz'ing arms, in *guise*
Of warriors old, with order'd spear and shield,
Awaiting what command their mighty chief
Had to impose. *Milton's Paradise Lost*.

U u u u

By their *guise*

Just men they seem, and all their study bent
To worship God aright. *Milton's Par. Lost.*

Back, O shepherd, back;

Here be without duck or nod,

Other trippings to be trod,

Or lighter tocs and such court *guise*,

¶ As Mercury did first devise. *Milton.*

—Their external shapes are notoriously accommodated to that law or *guise* of life that nature has designed them. *Mor. 2. Practice; custom; property.*

I have drunk wine past my usual *guise*;

Strong wine commands the fool, and moves the wise. *Chapman.*

This would not be slept;

Old *guise* must be kept. *Ben Jonson.*

The swain reply'd, it never was our *guise*

To slight the poor, or aught humane despise. *Pope.*

3. External appearance; dress.—When I was very young, nothing was so much talked of, as rickets among children, and consumptions among young people: after these the spleen came in play, and then the scurvy, which was the general complaint, and both were thought to appear in many various *guises*. *Temple.*—The Hugonots were engaged in a civil war, by the specious pretences of Rome, who, under the *guise* of religion, sacrificed so many thousands to their own ambition. *Sayst.*

GUISHDEN, a river of Ireland, in Mayo.

GUISONI, a town of Corsica.

GUISOPA, a town of Spain, in Catalonia.

(1.) * GUITAR. *n. f.* (*guitarra*, Ital. *guitarre*, Fr.) A stringed instrument of music.—
Ballads and songs, and lighter fare,
Tune the Italian tear's *guitar*. *Prior.*

(2.) The GUITAR has 5 double rows of strings; of which those that are brass are in the middle, except it be for the burrell, an octave lower than the fourth. It was first used in Spain, where it is still greatly in vogue. There are few Spaniards who cannot play on it, to serenade their mistresses at night.

(1.) GULA, the gullet. See ANATOMY, § 278.

(2.) GULA, or GULELE. See OGBE.

* GULCH. } *n. f.* (*from gul's, Lat.*) A lit.

* GULCHIN } the gullet, *Skinner*.

GULDE, a river of Denmark.

GULDENSTÄDT, John Anthony, M. D. was born at Riga, April 26, 1741, and in 1761 was admitted into the medical college of Berlin. He completed his studies at Frankfort upon the Oder, where, in 1767, he received his degree. Being invited to Peterburg, in 1768, he was created adjunct, and in 1770, member of the imperial academy, and professor of natural history. In June 1761, he set out upon his travels, and was absent 7 years. From Moscow, where he continued till March 1769, he passed to Voronez, Tzintzin, Astracan, and Kulik, near Persia. In 1770 he examined the districts watered by the Terek, Sunik, and Arak, in the E. extremity of Caucasus; and in 1771 penetrated into Colcheta, in the highest part of the same mountain; where he collected vocabularies of the languages spoken in those regions, and enquired into the history of the people, and discovered some traces of Chris-

tianity among them. Having visited Cabarda and the N. of Caucasus, he proceeded to Georgia, and was admitted to prince Hædun, who was encamped ten miles from Teflis, and whom he followed in spring to Kiketi, and explored the S. district inhabited by the Tatar Tartars in the company of a Georgian knight, whom he had cured of a dangerous disease. In July he passed into Imeretia; traversed the middle chain of mountains Caucasus, crossed the confines of Mingrelia, Middle Georgia, Eastern and Lower Imeretia; and after encountering many imminent dangers, returned to Kiketi the 18th Nov. where he passed the winter, collecting various information concerning the neighbouring Tartar tribes of Caucasus, particularly the Lesgees. In the following summer he returned to Cabarda Major, continued his enquiries near Bistun, the highest point of the high Caucasus; inspected the mines of Mafk, and went to Tcherkash upon the Don. From there he made expeditions to Azat and Tzarg, and thence along the new limits to the Dræg, which nullified this year's route at Kremes (Shuk, or Key) Rishia. In the following spring, he was proceeding to Crim Tartary; but receiving an order to recall, he returned through the Ukraine to Moscow and St Petersburg, where he arrived March 1775. Upon his return, he began to arrange his papers; but before he could finish them, his illness was seized with a violent fever, which carried him off in March 1781. A list of his writings is given in Core's Travels, Vol. I. p. 161.

GULDENSTEIN, two towns of Prussia, in the life of Fuen; and 2. in Holstein.

GULE OF AUGUST, the day of St Peter ad vincula, which is celebrated on the 18 of August. It is called the *gule of August*, from *gula*, a throat, because one Quirinus, a tribune, having a daughter diseased in her throat, went to Pope Alexander, the sixth from St Peter, and desired of him to see the chains that St Peter was chained with under Nero; which request being granted, he, on kissing the chains, was cured of her disease; whereupon the Pope instituted this feast in honour of St Peter. Hence the day was called either that of St Peter ad vincula, from what wrought the miracle; or the *gule of August*, from the part whereon it was wrought.

(1.) * GULES. *adj.* [perhaps from *gula*, the throat.] Red; a barbarous term of heraldry.—

Follow thy drum;

With man's blood paint the grounds; *gules, gules,*

Religious canons, civil laws are cruel;

Then what should war be? *Shak. Timon*

He whole sable arms,

Black as his purpose, did the knight relent,

When he lay couched in the ominous horse,

With heraldry more dismal; head to foot,

Now is he total *gules*. *Shak.*

(2.) GULES, a corruption of the French word *gules*, which in heraldry signifies red, is represented in engraving by perpendicular lines. It serves to denote martial prowess and hardihood for the ancients used this colour to make themselves terrible to their enemies, to stir up malignity, and to prevent the seeing of blood, by its

likeness

likeness of the colours; for which reason perhaps it is used by the English. This colour is by the generality of the English herald ranked below a zine. But the elegant French heralds preferred azure.

(1.) * **GULF**. *n. f.* [*gulf*, Italian.] 1. A bay; an opening into land.—The Venetian admiral withdrew himself farther off from the island Corfu, into the *gulf* of the Adriatick. *Knelles*. 2. An abyss; an uncalculable depth.—

Thence turning back in silence soft they stole,
And brought the heavy cone with easy pace
To yawning *gulf* of deep Avernus' hole. *Spens.*
I know thou'd'st rather

Follow thine enemy in a fiery *gulf*,
Than flatter him in a bower. *Shak. Coriolanus*.
—This is the *gulf* through which Virgil's Alecto shoots herself into hell: the tail of waters, the woods that encompass it, are all in the description. *Addison on Italy*.—The sea could not be much narrower than it is, without a great loss to the world: and must we now have an ocean of mere flats and shallows, to the utter ruin of navigation, for fear our heads should turn giddy at the imagination of gaping abysses and untathomable *gulfs*? *Bentley*. 3. A whirlpool; a sucking eddy.—

England his approaches makes as fierce
As waters to the sucking of a *gulf*. *Shak. II. V.*
4. Any thing insatiable, as the mouth or stomach.
Scull of dragon, tooth of wolf,
Witches mummy; raw and *gulf*
Of the ravening salt sea shark;
Root of hemlock, digg'd i' th' dark. *Shak.*

(2.) A **GULF**, (*y* 1, *g* 1.) is a capacious bay between two promontories, sometimes taking the name of a *sea*, when very extensive; but particularly when it only communicates with the sea by a strait. Such are the Euxine or Black Sea, called the *Gulf of Constantinople*; the Adriatic Sea, or the *Gulf of Venice*; the *Gulf of Lyons*, near France, and the *Gulf of Sierra* near Barbary. All these are in the Mediterranean. There are the *Gulfs of Mexico*, St Lawrence, and California, in N. America; the *Gulf of Persia*, or the *Red Sea*, between Persia and Arabia; the *Gulf of Bengal* in India; and the gulfs of Cochinchina and Kamtschatka, near these countries.

* **GULFY**. *adj.* [from *gulf*.] Full of gulfs or whirlpools; *vorticosus*.—

River arise; whether thou be the son
Of utmost Tweed, or Ouse, or *gulfy* Dun. *Milt.*

At their native realms the Greeks arriv'd,
All who the war of ten long years surviv'd,
And escap'd the perils of the *gulfy* main. *Pope*.

High o'er a *gulfy* sea the Pharian isle
Fronts the deep roar of disemboguing Nile. *Pope*.

(1.) * **GULL**. *n. f.* [from the verb] 1. [*Mer-gus*.] A sea-bird. 2. A cheat; a fraud; a trick.—I should think this a *gull*, but that the white-bearded fellow speaks it. *Shak. Much Ado*.—Either they have these excellencies they are praised for, or they have not; if they have not, 'tis an apparent cheat and *gull*. *Government of the Tongue*. 3. A stupid animal; one easily cheated.—

Being fed by us you us'd us so,
As that ungentle *gull*, the cuckow bird,
Useth the sparrow. *Shak Henry IV.*

Why have you suffer'd me to be imprison'd
Kept in a dark house, visited by the priest,
And made the most notorious geck and *gull*
That e'er invention play'd on. *Shak*

That paltry story is untrue,
And forg'd to cheat such *gulls* as you. *Hudibr*

(2.) **GULL**. in ichthyology. See **LARUS**.

* *To GULL*. *v. n.* [*guller*, to cheat, old F.]
To trick; to cheat; to defraud; to deceive.—
I do not *gull* him into a ray word, and make it
a common recreation, do not think I have wit
enough to be straight in my bed. *Shak*.—

Yet love their forgeries did remove, and me
Thice to *gull* thine own mother for my love.

He would have *gull'd* him with a trick,
But Mart was too, too politick. *Hudibr*
—They are not to be *gull'd* twice with the same
trick. *L'Esfran*.—The Roman people were grossly
guiled twice or thrice over, and as often enslaved
in one century, and under the same pretence
reformation. *Dryden*.—

By their designing leaders taught,
The vulgar, *gull'd* into rebellion, arm'd. *Dryden*

For this advantage age from youth has won
As not to be out-riden, though out-run;
By fortune he was now to Venus trin'd,
And with stern Mars in Capricorn was join'd
Of his disposing in his own abode,
He loath'd the goddess, while he *gull'd* the god.

* **GULLCATCHER**. *n. f.* [*gull* and *catch*.]
cheat; a man of trick; one who catches silly people.—

Here comes my noble *gullcatcher*. *Shak*

* **GULLER**. *n. f.* [from *gull*.] A cheat; an impostor.

* **GULLERY**. *n. f.* [from *gull*.] Cheat; imposture. *Ainsworth*.

(1.) * **GULLET**. *n. f.* [*goulet*, Fr. *gula*, Lat.]
1. The throat; the passage through which the
food passes; the meat pipe; the oesophagus.—

It might be his doom,

One day to sing

With *gullet* in string. *Denham*

—Many have the *gullet* or feeding channel which
have no lungs or windpipes; as fishes which have
gills, whereby the heart is refrigerated; for such
thereof as have lungs and respiration are not without
whizzon, as whales and cetaceous animals.
Brown's Vulgar Errors. 2. A small stream or
lake. Not in use.—

Nature has various tender muscles plac'd,

By which the artful *gullet* is embrac'd. *Blackmore*
—The liquor in the stomach is a compound of
that which is separated from its inward coat, the
spittle which is swallowed, and the liquor which
distils from the *gullet*. *Sirbutnot*.—The Euxine
sea and the Mediterranean, small *gullets*, if com-
pared with the ocean. *Heylyn*.

(2.) **GULLET**. See **ANATOMY**, § 278.

GULL ISLE, an isle near Cape St John.

* *To GULLY*. *v. n.* [corrupted from *gurgler*.]
To run with noise.

* **GULLY HOLE**. *n. f.* [from *gully* and *hole*.] The
hole where the gutters empty themselves in the
subterraneous sewer.

* **GULOSITY**. *n. f.* [*gulosus*, Latin.] Greediness;
U u u u 2 nefs;

nesh; gluttony; voracity.—They are very temperate, seldom offending in ebriety, nor erring in gulosity, or superfluity of meats. *Brown.*

* **GULP.** *n. s.* [from the verb.] As much as can be swallowed at once.—In deep suspirations we take more large gulps of air to cool our heart, overwhelmed with love and sorrow. *Mare.*

As out as he can catch a gulp of air,
And peep above the seas, he names the fair.

Dryden.

* **To GULP.** *v. a.* [*galpen*, Dutch.] To swallow eagerly; to suck down without intermission.—He loosens the fish, gulps it down, and so soon as ever the morsel was gone wipes his mouth. *L'Estrange.*

I see the double flaggon charge their hand;
See them puff off the froth, and gulp again,
While with dry tongue I lick my lips in vain.

Gay.

GULPEN, a town of the French republic, in the dep. of Forets and late duchy of Limburg.

GULZOU, a town of Saxony, SE. of Cammin.

(1.) * **GUM.** *n. s.* [*gummi*, Lat. *u.*] 1. A vegetable substance differing from a resin, in being more viscid and less friable, and generally dissolving in aqueous menstrua; whereas resins, being more sulphurous, require a spirituous solvent. *Quincy.*

One whose eyes,
Albeit unused to the melting mood,
Drop tears as fast as the Arabian trees
Their medicinal gum.

Shak.

He opens spices, fruit, and precious gum,
Which from remotest regions hither come.
Her maiden train,

Who bore the vests that holy rites require,
Inceuse, and od'rous gums, and cover'd fire.

Dryden.

2. [*Goma*, Saxon; *gumme*, Dutch.] To stethy covering that invets and contains the teeth.—

The babe that milks me,
Pd pluck my nipple from his boneless gums.

Shak.

Sh' untwists a wire, and from her gums
A set of teeth completely comes.

Swift.

(2.) **GUM** is of no particular smell or taste. It becomes viscous and tenacious when moistened with water; totally dissolves in water into a liquid, more or less glutinous in proportion to the quantity of the gum; not dissolving in vinous spirits or in oils; burning in the fire to a black coal, without melting or catching flame; suffering no dissipation in the heat of boiling water. The true gums are gum arabic, gum tragacanth, gum senega, the gum of cherry and plum trees, and such like. All others have more or less of resin in them.

(3.) **GUM**, in gardening, a kind of gangrene incident to fruit-trees of the stone kind, arising from a corruption of the sap, which, by its viscosity, not being able to make its way through the fibres of the tree, is, by the protrusion of other juice, made to extravasate and ooze out upon the bark. When the disease is farround the branch, it admits of cure; but when only on one part of a bough, it should be taken off to the quick, and over covered clapped on the wound, covered over with a linen cloth, and tied down. *M.*

Quintinie directs to cut off the morbid branch, or three inches below the part affected.

(4.) **GUM AMMONIAC.** See **AMMONIAC.**

(5.) **GUM ARABIC** is the produce of a tree of Mimosa. See **MIMOSA**, N° 11. Its chief use in medicine is from its glutinous quality, which serves to incr. Tate and obtund the acid humors, and thus is useful in coughs, alvine fluxes, hæmorrhages, gripes, &c. In a dysuria the mucousness of gum arabic is more cooling than the other mucopurulent gums. One ounce of gum arabic renders a pint of water considerably glutinous: 4 oz. give it a thick consistence; but for mucilage, one part of gum to two parts water is required, and for some purposes an equal proportion will be necessary. Dr Percival's *Essays*, Vol. I. p. 319. See the curious account, by Mr Henry, of the process by which this gum has of dissolving and keeping suspended in water not only resinous but also solid substances, which should seem not likely to be all affected by it. Mr Hættelquist in his Travels relates an instance of the extraordinary medicinal virtues of this gum; which happened to the English ship *Caravan*, in 1740, whose provisions were consumed, when they had still two months to go. They were then obliged to search for nutriment among their merchandise where with the young men port nature; and found nothing more proper than gum arabic, of which they had carried a considerable quantity along with them. This served to support above 1000 persons for two months; and the *Caravan* at last arrived at Cairo without any loss of people either by hunger or disease.

(6.) **GUM, ELASTIC.** See **RESIN, FLAM.**

(7.) **GUM, ELEM.** See **AMYRIS**, § 2. 3.

(8.) **GUM GUAIACUM.** See **GUAIACUM.**

(9.) **GUM GUTTE.** See **CHEMISTRY**, § 10.

(10.) **GUM KINO.** See **KINO.**

(11.) **GUM LACCA.** See **COLLEA**, and **LACCA.**

(12.) **GUM SENECA** is a gum extremely resembling gum arabic. See **SENECA.**

(13.) **GUM TRAGACANTH.** See **ASTRAGALUS.**

* **To GUM.** *v. a.* [from the noun.] To mix with gum; to smear with gum.—The eyelids apt to be gummed together with a viscous humor. *Histman's Surgery.*

GUMBINNEN, a town of Lithuania.

GUMIFL. a town of Spain in Old Castile.

GUMINEN, a town of the Helvetic rep. in the canton of Bern, 5 miles W. of Bern.

GUMMA, a sort of venereal excrement on the periosteum of the bones.

* **GUMMINESS.** *n. s.* [from *gummy*.] state of being gummy; accumulation of matter. The tendons are involved with a great quantity and collection of matter. *Histman's Surgery.*

* **GUMMOSITY.** *n. s.* [from *gummosus*.] nature of gum; gumminess.—Sugar and inake windy liquours, and the elastic firm particles are detained by their innate gummy nature.

* **GUMMOUS.** *adj.* [from *gum*.] Of the nature of gum. — Old relations concerning English; and relations about the amber of Prussia, that amber is not a gummous or resinous stone, drawn out of trees by the sun's heat, but a natural fossil. *Woodward's Nat. Hist.*

* **GU**

adj. [from *gum*.] 1. Consisting of nature of gum.—From the utmost branches there issueth out a *gummy* angeth downward like a cord.

gummy stores Arabia yields. *Dryd.*

most species of fire-arms; pistols and
almost the only ones excepted from
ation. They are divided into great
as: the former including all that we
on, ordnance, or artillery; the lat-
musquets, carabines, musquetons,
s, fowling-pieces, &c. (See these
is not known when these weapons
invented. Though, comparatively
introduction of guns into the western
world is but of a modern date; yet it
at in some parts of Asia they have
though in a very rude and imperfect
many ages. Philostratus mentions
the Hyphasia in the Indies, which was
impregnable, and that its inhabitants

were relations of the gods, because they threw
thunder and lightning upon their enemies. Hence
some imagine that guns were used by the eastern
nations even in the time of Alexander the Great;
but however this may be, many of our modern
travelers assert, that they were used in China as
far back as A. D. 85, and have continued in use
ever since. The first hint of the invention of guns
in Europe is in the works of ROGER BACON, who
flourished in the 13th century. In a treatise writ-
ten by him about 1280, he proposes to apply the
violent explosive force of gun-powder for the
destruction of armies. In 1320, Bartholomew
Schwartz, a German monk, is said to have in-
vented gun-powder, though it is well known, that
this composition is described by Bacon in some of
his treatises long before the time of Schwartz.
The following is said to have been the manner in
which SCHWARTZ invented gun-powder. Having
pounded the materials for it in a mortar, which
he afterwards covered with a stone, a spark of
fire accidentally fell into the mortar and set the
mixture on fire; upon which the explosion blew
the stone to a considerable distance. Hence it is
probable that Schwartz might be taught the sim-
plest method of applying it in war; for Bacon
seems rather to have conceived the manner of using
it to be by the violent effort of the flame unconfined,
which is indeed capable of producing astonishing
effects. See GUNPOWDER, § 4. The figure and name
of *mortars* given to a species of old artillery, and
their employment (which was throwing great
stone bullets at an elevation), very much corrobo-
rates this conjecture. Soon after the time of
Schwartz, we find guns commonly made use of
as instruments of war. Great guns were first
used. They were originally made of iron bars
soldered together, and fortified with strong iron
hoops; some of which are still to be seen, *viz.*
one in the Tower of London, two at Woolwich,
and one in the royal arsenal at Lisbon. Others
were made of thin sheets of iron rolled up toge-
ther and hooped; and on emergencies they were
made of leather, with plates of iron or copper.
These pieces were made in a rude and imperfect
manner, like the first essays of many new inven-
tions. Stone balls were thrown out of them, and
a small quantity of powder used on account of
their weakness. These pieces had no ornaments,
were placed on their carriages by rings, and were
of a cylindrical form. When or by whom they
were made is uncertain; the Venetians, however,
used cannon at the siege of Claudia Jussia, now
called *Chioggia*, in 1366, which were brought
thither by two Germans, with some powder and
leaden balls; as well as in their wars with the
Genoese in 1379. Edward III. made use of can-
non at the battle of Cressy in 1346, and at the
siege of Calais in 1347. Cannon were made use
of by the Turks at the siege of Constantinople,
in 1394, and in 1452, that threw a weight of
100 lb. but they generally burst at the 1st. 2d. or
3d. shot. Lewis XII. had one cast at Tours, of
the same size, which threw a ball from the Bastile
to Charenton. One of those famous cannon was
taken at the siege of Dieu in 1546, by Don John
de Castro; and is in the castle of St Julio da Bar-
ra, 10 miles from Lisbon: its length is 20 feet 7
inches.

inches, diameter at the centre 6 feet 3 inches, and it discharges a ball of 100 lb. It has neither dolphins, rings, nor button; is of a curious kind of metal; and has a large Indian inscription upon it, which says it was cast in 1400.

(3.) GUNS, NAMES, SIZES AND WEIGHTS OF. Formerly the cannon were dignified with uncommon names. In 1501, Lewis XII. had 12 brass cannon cast, of an extraordinary size, called after the names of the 12 peers of France. The Spanish and Portuguese called them after their saints. The emperor Charles V. when he marched before Tunis, founded the 12 Apostles. At Milan there is a 70 pounder, called the *Pomontelle*; and one at Bois le duc, called the *Devil*. A 60 pounder at Dover-castle, called *Queen Elizabeth's pocket-pistol*. An 80 pounder in the Tower of London (many years in Edinburgh castle), called *Mont Meg*. An 80 pounder in the royal arsenal at Berlin, called the *Thunderer*. An 80 pounder at Malaga, called the *Terrible*. Two curious 60 pounders in the arsenal at Bremen, called the *Messengers of bad news*. And lastly, an uncommon 70 pounder in the castle of St Angelo at Rome, made of the nails that fastened the copper-plates which covered the ancient Pantheon, with this inscription upon it: *Ex clavis trabalibus porticus Agrippæ*. In the beginning of the 15th century the following more universal names took place, viz. Cannon royal, or carthoun = 48 pounders, about 90 cwt. Bastard cannon, or $\frac{1}{2}$ carthoun = 36 pounders, 79 cwt. $\frac{1}{4}$ Carthoun = 24 pounders 65 cwt. Whole culverins = 18 pounders, 50 cwt. Demi culverins = 9 pounders, 30 cwt. Falcon = 6 pounders 25 cwt. Saker = 5, 6, and 8 pounders, 13, 15 and 18 cwt. Basilisk = 48 pounders, 85 cwt. Serpentine = 4 pounders, 8 cwt. Aspice = 2 pounders, 7 cwt. Dragon = 6 pounders, 12 cwt. Syren = 60 pounders, 81 cwt. Falconet = 3, 2, and 1 pounders, 15, 10, and 5 cwt. Moyses, which carried a ball of 10 or 12 ounces, &c. Rabinet, which carried a ball of 16 oz. At present cannon take their names from the weight of the ball they discharge. Thus a piece that discharges a ball of 24 pounds, is called a 24 pounder; one that carries a ball of 12 pounds, is called a 12 pounder; and so of the rest, divided into the following sorts, viz. Ship guns, consisting of 42, 36, 32, 24, 18, 12, 9, 6, and 3 pounders. Garrison guns, in 42, 32, 24, 18, 12, 9, and 6 pounders. Battering guns, in 24, 18, and 12 pounders. Field-pieces, in 12, 9, 6, 3, 2, $1\frac{1}{2}$, 1, and $\frac{1}{2}$ pounders.

GUNAIKOG, a town of Sweden, in the province of Warmeland, 34 miles NW. of Carlstadt.

GUNDANILLA, a town in Porto Rico.

(1.) GUNDELFINGEN, a town of Bavaria in Neuburg, on the Brentz, 10 miles NE. of Ulm, and 38 W. of Neuburg. Lon. 27. 58. E. of Ferro. Lat. 48. 34. N.

(2-4.) GUNDELFINGEN, a town, fort, and barony in Suabia, 21 miles W. of Ulm.

GUNDELIA, in botany: A genus of the polygama segregata order, belonging to the syngenesia class of plants; and in the natural method ranking under the 49th order, *Compositæ*. There is scarce any calyx, but quinqueflorous, with tubu-

lar hermaphrodite florets; the receptacle with scarce any pappus.

GUNDELHEIM, a town of Saxe-Necker, 30 miles E. of Heidelberg.

GUNDERSDORF, a town of Austria, NNW. of Vienna.

GUNELLUS. See BLENNIOUS, N.

GUNFLFET, a town in Essex, S. of

GUNILDA. See ENGLAND, § 11.

GUNNA, one of the Hebrides, 10

* GUNNEL, *n. f.* [corrupted from See GUNWALL.]

(1.) * GUNNER, *n. f.* [from *gun*.] One whose employment is to manage the guns in a ship.—

The nimble gunner

With hislock now the devilish cannon
And down goes all before him. *Shak.*

—They flew the principal gunners, and way their artillery *Hayward*.

(2.) A GUNNER is an officer appointed the guns, either by sea or land. In the London, and other garrisons, as well as this officer carries a field staff, and a bag horn in a string over his left shoulder. He is by the guns; and when there is any action of danger, his field staff is at his side. His business is to lay the gun, to point it to load and traverse her.

(3.) GUNNER, MASTER, a patent officer of ordnance, who is appointed to teach and learn the art of gunnery, and to certify the general the ability of any person to be one of the king's gunners. To certify he administers an oath not to serve, with any other prince or state, or teach any art of gunnery but such as have taken the

GUNNERA, in botany; a genus of the diandra order, belonging to the gynandria plants. The amentum consists of unisexual there is neither calyx nor corolla; the gyno-bidended, with two styles and one seed.

(1.) * GUNNERY, *n. f.* [from *gun*.] The science of artillery; the art of managing the

(2.) GUNNERY is the art of charging, discharging, and exploding fire-arms, as cannons, muskets, &c. to the best advantage.—It depends greatly on having the guns and the proper size and figure, and well adapted other. See ORDNANCE. As both the practice of GUNNERY are intimately connected with the subject of PROJECTILES, we refer the reader to that article: under which is the practical part of Gunnery, but what relates to the action of Gun Powder, the it communicates to bullets, the resistance the atmosphere opposes to their motion, the curves they describe, will be found fully treated.

(1.) * GUNPOWDER, *n. f.* [from *gun* and *powder*.] The powder put into guns to explode. It consists of about fifteen parts of nitre, parts of sulphur, and two of charcoal. The portions are not exactly kept.—*Gunpowder* is composed of three ingredients, saltpetre, small-umbelliferous. *Brown's Vulgar Errors*.

(2.) GUNPOWDER is a composition of sulphur, and charcoal, mixed together, in

culated; which easily takes fire, and, when expanded with great vehemence, by its elasticity. To this powder we owe all the action of guns, ordnance, &c. so that the military art in a great measure depends on it.

GUNPOWDER, DIFFERENT KINDS OF. The ingredients of gunpowder are mixed in various proportions according as the powder is intended for muskets, great guns or mortars: though these proportions seem not to be perfectly adjusted or fixed by competent experience. Schiænowitz, for mortars, directs 100 lb. of saltpetre, 25 of sulphur, and 25 of charcoal: for great guns, 100 lb. saltpetre, 15 of sulphur, and 18 of charcoal; for muskets and pistols, 100 lb. of saltpetre, 8 of sulphur, and 10 of charcoal. Michius extols a proportion of 1 lb. of saltpetre to 3 oz. of charcoal and 2 or 2½ of sulphur; than which, he affirms, no gunpowder can possibly be stronger. He adds, that the usual practice of making the powder weaker for mortars than guns, is without foundation, and renders the expence needlessly much greater: for whereas to load a large mortar with 4 lb. of common powder is required, and constantly, to load it 10 times, 240 lb. he shows, by calculation, that the same effect would be had with 24 lb. of the strong powder. On this subject, Benjamin Thompson, now Count Rumford, makes several judicious observations, in the *Philos.* Vol. 71. See PROJECTILES.

GUNPOWDER, FORCE OF. Though Gunpowder is commonly made use of for military purposes only in small quantities, and confined in certain vessels; yet when large quantities are fired at once, even when unconfined in the open air, it is capable of producing terrible destruction. The effects of damage done by the blowing up of mines, powder mills, &c. are too numerous to well known to be here taken notice of. The following is a relation of what even a moderate quantity of powder will accomplish, when fired in the open air. "The king of Navarre took Monsieur Captain Milon inclosed 500 pounds of powder in a bag, which he introduced, by a drain in the town, into the ditch between two principal gates; the end of the leader was hid in the ditch. Every thing being ready to play off this mine, the king gave us leave to go and see its effects; which were surprising. For one of the gates was thrown into the middle of the town, the other into the field fifty paces from the town; all the vaults were destroyed, and a passage made in the wall for three men to enter abreast, by which the town was taken."—For further accounts of the force of large quantities of powder, see LINE.

GUNPOWDER, INVENTION OF. See GUN, § 2.

GUNPOWDER, MEDICAL VIRTUE OF. Dr Boerhaave says, that the flame affords a very healing virtue in the height of the plague, because the acrid vapour of nitre and sulphur corrects the virus; and that the same vapour, if received in a close pent up place, kills insects.

GUNPOWDER, METHOD OF MAKING. Dr Boerhaave's receipt is as follows: Take 4 oz. of refined nitre, 1 oz. of brimstone, and 6 dr. of charcoal; reduce these to a fine powder, and continue burning them for some time in a stone mortar with

a wooden pestle, wetting the mixture between whiles with water, so as to form the whole into an uniform paste, which is reduced to grains, by passing it through a wire sieve fit for the purpose; and in this form, being carefully dried, it becomes gunpowder. For greater quantities mills are usually provided, by means of which more work may be performed in one day than a man can do in 100. The nitre is refined thus: Dissolve 4 lb. of rough nitre, by boiling it in as much water as will commodiously suffice for that purpose: then let it shoot for 2 or 3 days in a covered vessel of earth; with sticks laid across for the crystals to adhere to. These crystals being taken out, are drained and dried in the open air. To reduce this salt to powder, dissolve a large quantity of it in as small a proportion of water as possible; then keep it constantly stirring over the fire till the water exhales and a white dry powder is left behind. To purify the brimstone, dissolve it with a very gentle heat; then scum and pass it through a double strainer. If the brimstone should take fire in the melting, the iron cover is fitted on close to the melting-vessel, and damps the flame. The brimstone is judged to be sufficiently refined if it melts, without yielding any fetid odour, between two hot iron plates, into a kind of red substance. The charcoal for making gunpowder is either that of willow or hazel, well charred in the usual manner, and reduced to powder. Thus the ingredients are prepared; but as these require to be intimately mixed, and as there would be danger of their firing if beat in a dry form, they are kept continually moist, either with water, urine, or a solution of sal ammoniac: They continue thus stamping them together for 24 hours; after which the mass is fit for corning and drying in the sun, or otherwise, so as to prevent its firing.

(8.) **GUNPOWDER, METHOD OF RECOVERING DAMAGED.** The powder merchants put part of the powder on a sail cloth, to which they add an equal weight of what is really good; and with a shovel mingle it well together, dry it in the sun, and barrel it up, keeping it in a dry and proper place. Others again, if it be very bad, restore it by moistening it with vinegar, water, urine, or brandy: then they beat it fine, searce it, and to every pound of powder add 1 oz. 1½ or 2 oz. according as it is decayed, of melted salt-petre. Afterwards, these ingredients are to be moistened and mixed well, so that nothing can be discerned in the composition, which may be known by cutting the mass; and then granulate it as at first. If the powder be in a manner quite spoiled, the only way is to extract the saltpetre with water by boiling, filtrating, evaporating, and crystallizing; and then with fresh sulphur and charcoal to make it up anew.

(9.) **GUNPOWDER, METHODS OF TRYING.** There are two general methods of examining gunpowder; 1st with regard to its purity: 2d. As to its strength. 1. Its purity is known by laying 2 or 3 little heaps near each other upon white paper, and firing one of them. For if this takes fire readily, and the smoke rises upright, without leaving any drops or feculent matter behind, and without burning the paper, or firing the other heaps, it is esteemed a sign that the sulphur and nitre were well purified,

purified, that the coal was good, and that the 3 ingredients were thoroughly incorporated together: but if the other heaps also take fire at the same time, it is presumed that either common salt was mixed with the nitre, or that the coal was not well ground, or the whole mass not well beat and mixed together; and if either the nitre or sulphur be not well purified, the paper will be black or spotted. 2. Several instruments have been invented to try the strength of gunpowder; but they have generally been complained of as inaccurate. Count Rumford in the *Philosoph. Transf.* Vol. 71. gives an account of an exact method of trying the strength of it. "As the force of the powder (says he) arises from the action of an elastic fluid that is generated from it in its inflammation, the quicker the charge takes fire, the more of this fluid will be generated in any given short space of time, and the greater of course will its effect be upon the bullet. But in the common method of proving gunpowder, the weight by which the powder is confined is so great in proportion to the quantity of the charge, that there is time quite sufficient for the charge to be all inflamed, even when the powder is of the slowest composition, before the body to be put in motion can be sensibly removed from its place. The experiment therefore may show which of the two kinds of powder is the strongest, when equal quantities of both are confined in equal spaces, and both completely inflamed; but the degree of inflammability, which is a property essential to the goodness of the powder, cannot by these means be ascertained. Hence it appears how powder may answer to the proof, such as is commonly required, and may nevertheless turn out very indifferent when it comes to be used in service. But though the common powder triers, may show powder to be better than it really is, they can never make it appear to be worse than it is; it will therefore always be the interest of those who manufacture the commodity to adhere to the old method of proof, but the purchaser will find his account in having it examined in a method by which its goodness may be ascertained with greater precision." To determine the goodness of powder by Count Rumford's method, it is necessary to have a barrel suspended by two iron rods, in such a manner, that it can easily move backward or forward by the vibration of the rods; and the space it moves through ascertained by marking it on a piece of ribbon. The barrel being then charged with powder, and fitted with a proper bullet, is to be fired, and the recoil marked upon the ribbon. The experiment is to be repeated 3 or 4 times, or oftener if there is any difference in the recoil; the extremes of which may be marked with black lines on the ribbon, and the word *proof* written in the middle line betwixt the two. But if the experiments are made with sufficient accuracy, there will commonly be very little difference in the length to which the ribbon is drawn out. Thus the comparative goodness of powder may easily be ascertained; for the stronger the powder is, the greater will be the recoil, and consequently the greater length to which the ribbon will be drawn out; and it is care is taken in proportioning the charge to the weight of the bullet, to come as near as possible to the

medium proportion that obtains in the determination of the goodness of powder from the result of this experiment can hold good in actual service. The bullet be made to fit the bore with very little, and it would be better if they were cast in mould and in the same parcel of lead; in their weights and dimensions would be accurately the same; and the experiment of course be more conclusive. The gunpowder might be half an ounce, and always be put up in a cartridge; and when it is loaded, it should be primed with powder, first taking care to prick the cartridge, thrusting a priming wire down the

(10.) GUNPOWDER, PHYSICAL CAUSE OF EXPLOSION OF. See PROJECTILES.

(11.) GUNPOWDER, STATUTES. It is enacted by 5 and 21 of Geo. 3. c. 20. that gunpowder be carried in a covered carriage; the barrels being locked; or in casks and bags of leather, persons keeping more than 200 pounds of gunpowder at one time, within the city of London and Westminster, or the suburbs, liable to forfeitures if it be not removed, justices of peace may issue warrants to seize, and remove the same.

(12.) GUNPOWDER TREASON. See § 41.

(1.) * GUNSHOT. *adj.* [gun and shot] by the shot of a gun.—The symptoms related to gunshot wounds. *Wise man.*

(2.) * GUNSHOT. *n. f.* The reach of a gun; the space to which a shot will go.—Those who are come over to the are supposed to be out of gunshot. *D.*

(3.) GUNSHOT WOUNDS. See § 1.

* GUNSMITH. *n. f.* [gun and smith] whose trade is to make guns.—It is in esteem with the *gunsmiths* for stocks.

GUNSMITHERY, *n. f.* the business of a smith, or the art of making fire arms, pistols, &c. See MUSKET, and PI.

* GUNSTICK. *n. f.* [gun and stick] a mer; or stick with which the charge is to a gun.—

Even a *gunstick* flying into fame

* GUNSTOCK. *n. f.* [gun and stock] to which the barrel of a gun is fixed; a bar is used for bows, pullies, screws, *gunstocks*. *Mort Husb.*

* GUNSTONE. *n. f.* [gun and stone] of cannon. They used formerly to form artillery.—

Tell the pleasant prince, this

* Hath turn'd his ball to *gunstones*.
Shall stand fore charged for the

year's

That shall fly with them.

GUNTER, Edmund, M. A. and excellent mathematician, born in 1581. He studied at Westminster where he graduated in 1606, and eminent for his knowledge in the was in 1613, chosen professor of Gresham college, where he distinguished by his lectures and writings. He m

useful instruments which bear his name; and published *Canon Triangulorum*: and a work on the Sector, Cross-staff, &c. He died at Gresham-college in 1626.

GUNTERSBERG, a town of Upper Saxony, in Anhalt-Bernburg, 52 miles WSW. of Dessau.

GUNTER'S LINE. See **LINE**.

GUNTER'S QUADRANT. See **QUADRANT**.

GUNTER'S SCALE, called by navigators simply the *gunter*, is a large plain scale, generally two feet long, and about an inch and a half broad, with artificial lines delineated on it, of great use in solving questions in trigonometry, navigation, &c.

GUNTOOR, a circar of Indostan, N. of the Carnatic, and S. of the Kistnah, extending 40 m. along the bay of Bengal. It belongs to Britain.

GUNTZ, a river, town, and fort of Hungary, 40 miles S. of Vienna.

GUNTZELSDORF, a town of Austria.

* **GUNWALE**, or **GUNNEL** of a Ship. *n. f.* That piece of timber which reaches on either side of the ship from the half deck to the fore castle, being the uppermost bend which finishes the upper works of the hull in that part, and wherein they put the stanchions which support the wattle trees; and this is called the *gunwale*, whether there be guns in the ship or no; and the lower part of any port, where any ordnance are, is also termed the *gunwale*. *Harris.*

GUNZ, a river of Suabia.

GUNZFURG, a town of Suabia, seated on the Gunz, at its confux with the Danube.

GUNZENHAUSEN, a town of Franconia, in Anspach, 10 miles SSE. of Anspach.

* **GURGE**. *n. f.* [*gorges*, Latin.] Whirlpool; gulf.—

Marching from Eden he shall find

The plain, wherein a black bituminous *gurge* Boils out from under ground. *Milton.*

* **GURGEON**. *n. f.* The coarser part of the meal, sifted from the bran.

GURGISTAN. See **GEORGIA**, N° I, § 1.

* **To GURGLE**. *v. n.* [*gorgogliare*, Italian.] To fall or gush with noise; as water from a bottle.

Then when a fountain's *gurgling* waters play,
They rush to land, and end in teals the day.

Pope.

Pure *gurgling* rills the lonely desert trace,
And waite their musick on the savage race.

Young.

GURGOVATZ, a town of Turkey, in Bulgaria.

GURIEL, a small kingdom of Asia, with its capital on the coast of the Black Sea.

GURK, a town of Carinthia, on the Gurk.

(1.) * **GURNARD**. **GURNET**. *n. f.* [*gournal*, French.] A kind of sea fish.—If I be not ashamed of my soldiers I am a sow'd *gurnet*: I have misus'd the king's press damnably. *Shak.*

(2.) **GURNARD.** See **TRIGLA**.

(1.) **GURRAH**, a town of Indostan, capital of Gurrah Mundella, 5 miles N. of the Nerbudda.

(2.) **GURRAH MUNDELLA**, a circar of Indostan, between Allahabad and Berar; 120 miles long, and from 40 to 80 broad.

GURRAMCONDA, a town of Indostan, in Mysore, 112 miles WNW. of Madras.

GURRY, a river of Perthshire in Athol.

GURTNAMACKIN, a river of Ireland, which

VOL. X. PART II.

risers near Longhrea, and after running below ground at different places, falls into Galway bay.

GURUNHUEL, a town of France, in the dep. of the North Coasts; 6 miles SW. of Guingamp.

* **GUSH**. *n. f.* [from the verb.] An emission of liquor in a large quantity at once; the liquor so emitted.—If a lung-vein be bursted, generally at the first cough a great *gush* of blood is coughed up. *Harvey.*

* **To GUSH**. *v. n.* [*goshelen*, Dutch.] 1. To flow or rush out with violence; not to spring in a small stream, but in a large body.—

A sea of blood *gush'd* from the gaping wound,
That her gay garments stained with filthy gore.

Spenser.

—The covering of this abyss was broken asunder,
and the water *gush'd* out that made the deluge,
Burnet.—

Incessant streams of thin magnetick rays
Gush from their fountains with impetuous force,
In either pole, then take an adverse course.

Blackmore.

On either hand the *gushing* waters play,
And down the rough cascade white dashing fall.

Thomson.

2. To emit in a copious effluxion.—

The gaping wound *gush'd* out a crimson flood.

Dryden.

Line after line *gushing* eyes o'erflow,
Led through a sac'ra' city of woe. *Pope.*

GUSSAGO, a town and district of the Cisalpine republic, in the dep. of the Mela, containing 13 communes, and 10,000 citizens in 1797.

* **GUSSET**. *n. f.* [*gousset*, French.] Any thing sewed on cloth in order to strengthen it.

GUSSOLENGO, a town of the Cisalpine republic, in the late province of Verona, on the Adige, 6 miles WNW. of Verona.

* **GUST**. *n. f.* [*gouss*, Fr. *gustus*, Latin.] 1. Sense of tasting.—

Destroy all creatures for thy sport or *gust*,
Yet cry, if man's unhappy, God's unjust. *Pope.*

2. Height of perception; height of sensual enjoyment.—

They fondly thinking to allay
Their appetite with *gust*, instead of fruit
Chew'd bitter ashes, which th' offended taste
With spattering noise rejected. *Milton.*

Where love is duty on the female side,
On theirs meer sensual *gust*, and sought with
surly pride. *Dryden's Fables.*

My sight and smell, and hearing were employ'd,
And all three senses in full *gust* enjoy'd. *Dryd.*

3. Love; liking.—

To kill, I grant, is sin's extremest *gust*;
But, in defence, by mercy 'tis made just. *Shak.*

—Old age shall do the work of taking away both the *gust* and comfort of them. *L'Estr.*—We have lost, in a great measure, the *gust* and relish of true happiness. *Tillotson.*

4. Turn of fancy; intellectual taste.—The principal part of painting is to find what nature has made most proper to this art, and a choice of it may be made according to the *gust* and manner of the ancients. *Dryden.*

5. [From *gustor*, Islandick.] A sudden violent blast of wind.—

She led calm Henry, though he were a king,
X x x x

As doth a sail, fill'd with a fretting gulf,
Command an argosie to stem the waves. *Shak.*
You may as well forbid the mountain pines
To wag their high tops, and to make a noise,
When they are fretted with the gulf of heav'n.

Shak.

—Presently come forth swarms and volleys of libels, which are the gulls of liberty of speech restrained. *Bacon.*

As when fierce northern blasts from th' Alps descend,

From his firm roots with struggling gulls to rend
An aged sturdy oak. *Drayton.*

Part stay for passage, 'till a gulf of wind

Ships o'er their forces in a shining short. *Dryd.*

Pardon a weak dissemper'd soul that swells

With sudden gulls, and sinks as soon in calms,

The sport of passions. *Addison.*

6. It is written in *Spenser* vitiously for *gulls*, sports.

For jolly knight he seem'd, and fair did fit,

As one for knightly gulls and fierce encounters fit.

Spenser.

* **GUSTABLE**, *adj.* [*gusto*, Latin.] 1. To be tasted.—This position informs us of a vulgar error, terming the gall bitter; whereas there is nothing *gustable* sweeter. *Harvey.* 2. Pleasant to the taste.—A *gustable* thing, seen or smelt, excites the appetite, and affects the glands and parts of the mouth. *Derham.*

* **GUSTATION**, *n. f.* [*gusto*, Latin.] The act of tasting.—The gutlet and conveying parts partake of the nerves of *gustation*, or appetizing un-a-sapor. *Brown.*

(1.) **GUSTAVIA**, in botany: a genus of the polyandria order, belonging to the monadelphous class of plants. There is no calyx; the petals are very numerous; the berry multilocular; the seeds appendaged.

(2.) **GUSTAVIA**, a town of Sweden, in the island of St Bartholomew.

(3.) **GUSTAVUS I.** king of Sweden, son of Eric Vasa, duke of Gripsholm. Christian II. K. of Denmark having made himself master of Sweden, confined Gustavus at Copenhagen; but he making his escape, wandered long in the forests, till the cruelties of the tyrant having occasioned a revolution, he was first declared governor of Sweden, and then, in 1523, elected king. He introduced Lutheranism into his dominions, and died in 1560. See SWEDEN.

(4.) **GUSTAVUS ADOLPHUS, THE GREAT**, K. of Sweden, was born at Stockholm in 1594. and succeeded his father Charles IX. in 1611. He espoused the cause of the Protestants in Germany, who were oppressed by Ferdinand I. He was a great warrior, and gained many victories, (See SWEDEN.) but was killed in the battle of Lutzen, where his troops got the victory, and defeated two of the emperor's armies, in Nov. 1632.

(5.) **GUSTAVUS III.** See SWEDEN.

* **GUSTFUL**, *adj.* [*gust* and *full*.] Tasteful; well-tasted.—What he defaults from some dry insipid tin, is but to make up for some other more *gustful*. *Decay of Pity.*

* **GUSTO**, *n. f.* [Italian.] 1. The relish of any thing; the power by which any thing excites sensations in the palate.—Pleasant *gusto*; gratify the appetite of the luxurious. *Devo.* 2. Intellectual

taste; liking.—In reading what I have writ them bring no particular *gusto* along with *Dryden.*

GUSTOW, a town of Pomerania.

GUSTROW, a town of Mecklenburg.

* **GUSTY**, *adj.* [from *gust*.] Stormy; turbulent.

Once upon a raw and *gusty* day

The troubled Tyber chasing with his sh

GUSUM, a town of Sweden, in E. Got

* **GUT**, *n. f.* [*Intestina*, German.] 1. A pipe teaching with many convolutions in stomach to the vent.—This lord wears in his belly, and his *guts* in his head. *Shak.* should have a lay of wire strings below, in the belly, and then the strings of *guts* cross upon a bridge, that by this means the upper stricken should make the lower rebound. —The intestines or *guts* may be inflamed with acrid or poisonous substance taken inwardly, but not on fast. 2. The stomach; the seat of food: proverbially.—

And cram'd them 'till their *guts* did

With cawdle, custard, and plum-cake.

With false weights their servants *gut* cheat,

And pinch their own to cover the deceit.

3. Gluttony; love of gormandizing.—

Apiculus, thou did'st on thy *guts* bestow

Full ninety millions; yet, when this war

Ten millions still remain'd to thee; while

Fearing to suffer thirst and famishment,

In poison'd potion drank't. *Hakewell.*

* **TO GUT**, *v. a.* [from the noun.] 1. To

cerate; to draw; to exenterate.—The fish

have the most part of their fish: some are

splitted, powdered and dried. *Carver's C.*

2. To plunder of contents.—

In Nero's arbitrary time,

When virtue was a guilt, and wealth a

A troop of cut-throat guards were sent

The rich men's goods, and *gut* their pal

—Tom Brown of facetious memory, having a proper name of its vowels, used it as he pleased. *Addison*

GUTA, a town of Hungary, 25 m. E. of Pr

GUTHALUS, or **GUTTALUS**, in ancient geography, is thought to be the **VIARDUS** of Pto now called the **Odra**.

(1.) **GUTHRIE**, William, a celebrated geographer, famous for his Geographical Grammar born in Aberdeenshire, in 1701, and died at Aberdeen. He died in 1769.

(2.) **GUTHRIE**, a parish of Scotland, in Shire, consisting of two parts, 6 miles distant each other, and containing 2681 acres; of 1072 were under oats, barley, pease, flax, &c. potatoes, and sown grass, in 1792. The rest under moss, moor, wood, and water. The population, stated by the rev. Mr William Muir in his report to Sir J. Sinclair, was 1771, and decreased 13, since 1755. There are vestiges of a Roman camp in the parish, 13 acres in extent. The *vallum* and *fossa* are yet distinct. The

is an ancient and strong building, erected by Sir Alex. Guthrie, who was slain at Flodden. It is still entire. Its walls are 60 feet high and 10 thick. It has a prodigious massive iron door.

(1.) GUTTA, *n. f.* a Latin term for drop.

(2.) GUTTA. See ARCHITECTURE, *Index*.

(3.) GUTTA ANGLICANA, *English Drops*, a chemical-preparation esteemed of great virtue against vapours and lethargic affections, and purchased at 500*l.* by king Charles II. from the inventor, Dr Goddard. It is a spirit drawn by the retort from raw silk, and rectified with an essential oil.

(4.) GUTTA ROSACEA, in medicine, a red or pimped face; a distemper which, tho' not always owing to hard drinking, is most incident to tipplers.

(5.) GUTTA SERENA, a disease in which the patient, without any apparent fault in the eye, is deprived of sight. See MEDICINE, *Index*.

* GUTTATED. *adj.* [from *gutta*, Lat. a drop.] Besprinkled with drops; bedropped. *Dr.*

GUTTEMBERG, John, one of the inventors of printing, was born at Mentz in 1408, where he died in 1468. He was descended of a noble family. See PRINTING.

* GUTTER. *n. f.* [from *guttur*, a throat, Lat.] 1. A passage for water; a passage made by water.—These *gutter* tiles are in length ten inches and a half. *Moxon*.—Rocks rise one above another, and have deep *gutters* worn in the sides of them by torrents of rain. *Addison on Italy*. 2. A small longitudinal hollow.

* To GUTTER. *v. a.* [from the noun.] To cut up small hollows.—

Tempests themselves, high seas, and howling winds,

The *gutter'd* rocks, and congregated sands,
Traitors ensteep'd to clog the guiltless keel,
As having sense of beauty, do omit

Their mortal natures, letting safe go by

The divine Desdemona. *Shakesp. Othello*.

My cheeks are *gutter'd* with my fretting tears.

Sandys.

First in a place, by nature close, they build
A narrow flooring, *gutter'd*, wall'd, and til'd.

Dryden.

(1.) * To GUTTLE. *v. a.* [from *gut*.] To swallow. A low word.—The fool spit in his porridge, to try if they'd hiss: they did not hiss, and so he *guttled* them up, and scalded his chops. *L'Estr.*

(2.) * To GUTTLE. *v. n.* To feed luxuriously; to gormandize. A low word.—

His jolly brother, opposite in sense,

Laughs at his thrift; and, lavish of expence,

Quaffs, crams, and *guttles* in his own defence.

Dryden.

* GUTTLER. *n. f.* [from *guttle*.] A greedy eater.

* GUTTULOUS. *adj.* [from *guttula*, Lat.] In the form of a small drop.—Ice is plain upon the surface of the water, but round in hail, which is also a glaciation, and figured in its *guttulous* descent from the air. *Brown's Vulgar Errors*.

* GUTTURAL. *adj.* [*gutturalis*, Latin.] Pronounced with the throat; belonging to the throat.—The Hebrews have assigned which letters are labial, which dental, and which *guttural*. *Bacon*.—In attempting to pronounce the nasals, and some of the vowels spirally, the throat is brought to labour, and makes that which we call a *guttural* pronunciation. *Holder*.

* GUTTURALNESS. *n. f.* [from *guttural*.] The quality of being guttural. *Dr.*

GUTTY, in heraldry, a term used when anything is charged or sprinkled with drops. In blazoning, the colour of the drops is to be named.

* GUTWORT. *n. f.* [*gut* and *wort*.] An herb.

(1.) GUY, Thomas, an eminent bookseller, son of T. Guy, coal-dealer in Southwark. He set up trade about 1668, with a stock of 200*l.* The English bibles being then very badly printed, Mr Guy contracted with the university of Oxford for their privilege of printing them, and carried on a great trade in them, for many years. Thus he began to accumulate money, and being a single man, and very penurious both in living and dressing, he daily increased his store. The bulk of his fortune, however, was acquired by purchasing sea-men's tickets during Q. Anne's wars, and South Sea stock, in 1720. To show what great event spring from trivial causes, the public owe the dedication of the greatest part of his immense fortune to charitable purposes, to the indiscreet officiousness of his maid-servant, whom he had agreed to marry; but previous to his nuptials, had ordered the pavement before his door, to be mended as far as to a particular stone which he pointed out. The maid, looking on the paviers at work, remarked a broken place that they had not repaired; but they told her that Mr Guy had directed them not to go so far. "Well, says she, do you mend it; tell him I bade you, and he will not be angry." But the poor girl had presumed too much on her influence over her careful lover, with whom a few extraordinary shillings expence turned the scale totally against her. The men obeyed; Guy enraged to find his orders exceeded, renounced his matrimonial scheme, and commenced a building of hospitals. He was 76 years of age when he formed the design of building the hospital which bears his name, and lived to see it roofed in, dying in 1724. The charge of erecting this vast pile amounted to 18,793*l.* and he left 219,499*l.* to endow it; a much larger sum than had ever been dedicated to charitable uses in this kingdom by any one man. He erected an almshouse with a library at Tanworth in Staffordshire, for which he was representative in parliament, for 14 poor men and women; and left 125*l.* a-year for their pension.

(2.) * GUY. *n. f.* [from *guide*.] A rope used to lift any thing into the ship. *Skinner*.

(3.) GUY is also a large slack rope, extending from the head of the main-mast to the head of the fore-mast, and having 2 or 3 large blocks fastened to the middle of it; to sustain the tackle used to hoist in and out the cargo of a merchant ship.

GUYON, J. M. de la Mothe. See MOTHE.

GUY'S CLIFF, in Warwickshire, a great cliff on the W. side of the Avon and N. side of Warwick where in the time of the Britons was an oratory, and in that of the Saxons an hermitage, to which Guy earl of Warwick, retired, cohabited with the hermit, and built a chapel. This hermitage was kept up till the reign of Henry VI. when Rich. Beauchamp earl of Warwick established a chantry here, and, in memory of Guy, erected a large statue of him in the chapel 8 feet in height.

GUZ, an Indian measure, = 1 yard English.

GUZERAT, a peninsula of Indostan, 170 miles

long, and 140 broad, formed by the Arabian sea, and the gulf of Cambay. It is the richest province in the Mogul's empire.

GUZMAN, Dominic de, founder of the Dominican order of monks, was born at Calaroga in Old Castile, 1170. He preached with great fury against the Albigenes, when Pope Innocent III. made a crusade against that unhappy people; and was inquisitor in Languedoc, where he founded his order, and got it confirmed by the Lateran council in 1215. He died at Bologna in 1221, and was canonized. See DOMINICANS.

GUZNOORGUL, a prov. of Asia, in Cuttore.
(1.) * To **GUZZLE**. v. a. To swallow with immoderate gust.—

The Pylian king

Was longest liv'd of any two legg'd thing;

Still *guzzling* must of wine.

Dryden.

(2.) * To **GUZZLE**. v. n. [from *gut*, or *gust*, to *gustle*, or *gustle*] To gormandize; to feed immoderately; to swallow any liquor greedily.—

Well season'd bowls the gossip's spirits raise,
Who while she *guzzles* chats the doctor's praise.

Roscommon.

—They fell to lapping and *guzzling*, till they burst themselves. *L'Estrange.*—

No more her care shall fill the hollow tray,
To fat the *guzzling* hogs with floods of whey. *Gay.*

* **GUZZLER**. n. f. [from *guzzle*.] A gormandizer; an immoderate eater or drinker.

GWALIOR. See **GUALIOR**.

OWINIAD. See **SALMO**.

GY, a town of France, in the dep. of Up. Saone.

GYALGUR, or **GAWILA**, a town of Indostan, in Berar, 10 miles NNW. of Ellichpou, and 75 W. of Dengu.

GYARUS, one of the Cyclades, E. of Delos, 12 miles in compass. It was a desert island, and allotted for a place of banishment by the Romans.

* **GYBE**. n. f. [See **GIBE**.] A taunt; a sarcasm.—Ready in *gybes*, quick answer'd, saucy, and as quarrelous as the weazel. *Shak. Cymbeline.*

* To **GYBE**. v. n. To sneer; to taunt.—

The vulgar yield an open ear,

And common courtiers love to *gybe* and sneer.

Spenser.

GYBING, the act of shifting any boom sail from one side of the mast to the other. By a boom sail is meant any sail whose bottom is extended by a boom, the fore end of which is hooked to its respective mast; so as to swing occasionally on either side of the vessel, describing an arch, of which the mast will be the centre. As the wind or the course changes, it becomes necessary to change the position of the boom, with its sail, which is accordingly shifted to the other side of the vessel as a door turns upon its hinges. The boom is pushed out by the effort of the wind upon the sail, and is restrained in a proper situation by a strong tackle communicating with the vessel's stern, called the *sheet*. It is also confined on the fore part by the *Guy*.

GYEY, a town of France, in the department of Upper Maine.

GYGEUS, or **COLOUS**; a like of Lydia, 40 stadia, or 5 miles, from Sardis.

GYGES, a Lydian, to whom Candaules king of the country showed his wife naked. See **LYDIA**.

Plato says, Gyges descended into a chasm of earth, where he found a brazen horse, which he opened, and saw within the body the soul of a man, from whose finger he took a ring. This ring, when he put it on his finger, rendered him invisible; and by means of it introduced himself to the queen, murdered her husband, married her, and usurped the crown.

GYGONIUS LAPIS. See **ROCKING STONE**.
GYMNASIARCHA, in antiquity, the chief of the gymnasium. He had two deputies; him; the **XYSTARCHA**, and the **GYMNASIARCH**.

GYMNASIUM, (from *gymnos*, naked,) in Grecian antiquity, a place fitted for performing exercises of the body, &c. so called because put off their clothes, to practise with freedom. *Gymnasia* were first used at Athens, but were afterwards common in all Greece; and imitated, augmented, and improved at Rome. There were 3 principal *gymnasia* at Athens; the Academy, the Lyceum, and the *Stoa*. Vitruvius describes the structure of the ancient *gymnasia*, lib. v. c. 11. They called **PALÆSTRÆ**, from wrestling, which was one of the most usual exercises; and the also called them **THERMÆ**, because the bath was a principal part of them. They performed exercises in Homer's time in drawers; which were not laid aside before the 3d Olympiad.

Pythagoras is said to have been the first who introduced the practice; for having been wounded in drawers entangling him, he threw them off, and the rest afterwards imitated him. They were a knot of buildings united, sufficient to hold many thousands of people, and having room for philosophers, rhetoricians, the professors of all other sciences to give lectures; and wrestlers, dancers, and a who had a mind to exercise; at the same time without the least disturbance or interruption. They consisted of 12 parts, viz. 1. The porticos, where the philosophers, rhetoricians, mathematicians, physicians, and other virtuous men gave public lectures, and where they also rehearsed their performances. 2. The *Stoa*, where the youth assembled very early, to perform their exercises in private without any interruption. 3. The coryceum, apodyterion, or *gymnasium*, a kind of wardrobe, where they stripped to bathe or exercise. 4. The *strophæion*, or unductarium, appointed for the which either preceded or followed the bath, wrestling, pancratia, &c. 5. The *stadium* or *conistra*, in which they covered themselves with sand or dust, to dry up the oil. 6. The *palæstra*, properly so called, where they practised wrestling, the pugillate, pancratia, and other exercises. 7. The *sphaeristerium*, court, reserved for exercises when it rained. 8. Large unpaved alleys, which divided the space between the portico walls wherewith the edifice was surrounded. 9. The *xystræ* or porticos for the wrestlers to use in bad weather. 10. Other *xystræ* or *gymnasia* for fine weather, some of which were open and others planted with trees. 11. The *apartments*, consisting of several different apartments.

GYMNASIUM, a large space of a semicircular

th sand, and surrounded with seats for
ators. For the administration of the
, there were different officers: the prin-
e, 1. The gymnasiarcha. 2. The xystarcha. 3. The
ymnastes. And, 4. The pædotriba. See
les. Under these 4 officers were a num-
balterns. The gymnastic exercises may
d to two general classes; as they depend
the action of the body alone, or as they
ternal agents or instruments. The lat-
ed chiefly in mounting the horse, driving
ot, and swimming. The former were
two kinds; ORCHESTRICE, and PA-
E; which see.

MASTES, a deputy under the gymnasi-
o was master of the ceremonies.

GYMNASTICALLY. *adv.* [from *gymnastick*.]
lly; fitly for strong exercise.—Such as
ty and vigour are not *gymnastically* com-
or actively use those parts. *Brown*.

GYMNASTICK. *adj.* [*γυμναστικός*; *gym-*
French.] Pertaining to athletick exer-
cising of leaping, wrestling, running,
the dart, or quoit.—The Cretans wisely
eir servants *gymnasticks* as well as arms;
our modern footmen exercise themselves
ilft their enervated lords are softly lolling
harians. *Arbutb. and Pope*.

GYMNASTICS, GYMNASTICÆ, or the GYM-
art, the art of performing exercises of the
ether for defence, health, or diversion.

GYMNASIUM. Several modern writers have
f this art. M. Burette has given the histo-
nnastics in the *Mem. of the R. Acad. of*
On the first establishment of society, men,
prised of the necessity of military exer-
repelling the insults of their neighbours,
games and proposed prizes to animate
th to combats of divers kinds. And as run-
ping, throwing the javelin, driving a ball,
quoit, wrestling, &c. were exercises suited
anner of fighting in those days; so the
d to excel in them, in the presence of the
to sit as judges, and dispensed prizes to
uerors; till what was originally only a
t, became at length a matter of such im-
, as to interest great cities and entire na-
ts practice. Hence arose an eagerness to
hopes of being one day crowned con-
n the public games, which was the highest
mortal could arrive at: nay, they ima-
at even the gods were not insensible of what
so captivated with; and, in consequence,
ed the greatest part of these exercises in-
religious and funeral ceremonies. The
art, as appears from Homer's *Iliad*, lib.
e he describes the games at the funeral of
, was known at the time of the Trojan
om that description, it appears, that they
iot-races, boxing, wrestling, foot-races,
s, throwing the discus, drawing the bow,
ing the javelin; and that even then the
art wanted little of perfection. When
s there was no gymnastic art in Homer's
d that it began to appear no earlier than
is to be understood of medicinal gym-
nasty. See § 3.

GYMNASTICS, MEDICINAL. According to

Plato, one Herodicus, a little prior to Hippocrates,
was the first who introduced this art into physic;
and his successors, convinced of its usefulness, im-
proved it. Hippocrates has given instances of it,
where he treats of exercise in general, and of the
particular effects of walking, with regard to health;
also of the different sorts of races on foot or horse-
back; leaping, wrestling, the exercise of the sus-
pended ball, chironomy, unctious, frictions, roll-
ing in the sand, &c. But as physicians did not adopt
all the gymnastic exercises in their practice, it
came to be divided between them and the masters
of martial and athletic exercises, who kept schools,
the number of which was greatly increased in
Greece. The Romans, adopting the military and
athletic exercises of the Greeks, advanced them
to the utmost pitch of magnificence. But the
declension of the empire involved the arts in its
ruin, and, among others gymnastics and medicine;
which last unhappily then relinquished the title it
had to the former, and has neglected to resume it
ever since.

* GYMNICK. *adj.* [*γυμνικός*; *gymnique* French.]
Such as practise the athletick or gymnastic exerci-
ses.—

Have they not sword-players, and ev'ry sort
Of *gymnick* artists, wrestlers, riders, runners?

Milton.

GYMNOPYRIS, in natural history, a name
given by Dr Hill to pyritæ of a simple internal
structure, not covered with a crust. See PYRITES.
Of these there are only two species: 1. A green
variously shaped kind. 2. A botryoide kind. The
first is the most common of all the pyritæ, and ap-
pears under a great diversity of shapes. It is very
hard and heavy, readily gives fire with steel, but
will not at all ferment with aquafortis. The 2d
is very elegant, its usual colour is an agreeable
pale green; but what most distinguishes it is, that
its surface is always beautifully elevated into tu-
bercles of various sizes, resembling a cluster of
grapes.

GYMNOSOPHISTS, [*γυμνoσoφισται*, Greek, *i. e.*
a naked philosopher,] a set of Indian philosophers,
famous in antiquity, so called from their going
naked. They, however, did not absolutely go na-
ked; but only clothed themselves no farther than
modesty required. There were some of these sages
in Africa; but the most celebrated of them were
in India. In general, the Gymnosophists were
wise and learned men; their maxims and discour-
ses, recorded by historians, do not savour of a bar-
barous education, but are the result of great sense
and deep thought. They kept up the dignity of
their character to so high a degree, that it was never
their custom to wait upon any body, not even u-
pon the princes. They believed the immortality
and transmigration of the soul: they placed the
chief happiness of man in a contempt of the goods
of fortune and the pleasures of sense, and gloried
in having given faithful and disinterested counsels
to princes and magistrates. It is said, that when
they became old and infirm, they threw them-
selves into a pile of burning wood, in order to
prevent the miseries of an advanced age. One of
them, named *Calamus*, thus burnt himself in the
presence of Alexander the Great. Apuleius de-
scribes the Gymnosophists thus: "They are all
devoted

distinguished by its thinness
and by the reticulated skin
light colour, with which its
rina begins about 6 or 7 inches
the head; and, gradually dark
as it goes along, reaches dark
it is thinnest. The fourth
soft, and wavy fin, which takes
inches at most below the
down the sharp edge of the
ty of the tail. The situation
singular; being an inch more
toral fins. Externally it resembles
rima; but the formed excels
size of a quill of a common

the flower, and bears both the floral. See BOTANY, *Index*. The class, says Linnæus, have a monoe, arising from the unusual situation of fructification.

GOVERNMENT. *n. f.* [γυβερνησια; *nch.*] Petticoat government; fe-

RACY, denotes also a state where the supreme command. Such n, &c.

subgenus of falcons. See FALCO. *adj.* Of gypsum, or plaster.

EGYPTIANS, an outlandish tribe called *Bohemians* in France, and n; who, disguising themselves in smearing their faces and bodies, anting language, wander up and etence of telling fortunes, curing use the people, trick them out of steal all they can come at. They d of commonwealth of wander- id jugglers, who made their first ermany, about the beginning of . Munster, who is followed and spelman, fixes the time of their 117; but as he owns, that the first w were in 1529, it is probably an for 1517; especially as, when Sul- ered Egypt in 1517, several of the to submit to the Turkish yoke, ler one ZINGANEUS; whence the em ZINGANEES; but being at ed and banished, they agreed to parties all over the world, where ill in the black art gave them an on in that age of superstition and very few years they gained such profelytes, (who imitated their complexion,) that they became l even formidable to most of the

Hence they were expelled from and from Spain in 1591. And of England took the alarm much 1630, they are described by Stat. . 10. "as an outlandish people es Egyptians, using no craft nor dize, who have come into this from shire to shire, and place to mpanies, and used great, subtile, s to deceive the people; bearing at they by palmistry could tell n's fortunes; and so many times ility have deceived the people of l also have committed many nei- l robberies." Wherefore they are the realm, and not to return un- isonment, and forfeiture of their ls; and upon their trials for any y may have committed, they shall a jury *de medietate lingue*. And nacted, by statutes 1st and 2d Ph. and 5th Eliz. c. 20. that if any l be imported into the kingdom, l forfeit 40l. And if the Egypti- main one month in the kingdom, being 14 years old, whether na- t or stranger, which hath been

seen or found in the fellowship of such Egyptians, or which hath disguised him or herself like them, shall remain in the same one month at one or several times, it is felony without benefit of clergy. Sir M. Hale says, that at one Suffolk assizes, no less than 13 persons were executed upon these statutes a few years before the restoration. But, to the honour of humanity, there are no instances more modern than this of carrying these laws into practice; and the last sanguinary act is itself now repealed by 23 Geo. III. c. 54. In Scotland they seem to have enjoyed some share of indulgence; for a writ of privy seal, dated 1594, supports John Faw, lord and earl of Little Egypt, in the execution of justice on his company and folk, conform to the laws of Egypt, and in punishing certain persons there named, who rebelled against him, left him, robbed him, and refused to return home with him. James's subjects are commanded to assist in apprehending them, and in assisting Faw and his adherents to return home. There is a like writ in his favour from Mary Q. of Scots, in 1553; and in 1554, he obtained a pardon for the murder of Ninian Smith. So that it appears he had staid long in Scotland, and from him this strolling people received the name of *Faw's Gang*, which they still retain. A very circumstantial account of this singular race of men has been lately given in an *Inquiry* concerning them, written by H. M. G. Grellman, and translated by Mr Raper. It is incredible how this swarm of banditti have spread over the earth. They wander about in Asia, and Africa, and most of the European nations. Spain is supposed by Mr Twiss to contain 40,000, by others 60,000; and by some 120,000. But in Sept. and Oct. 1800, they were almost totally extirpated by the plague. They abound in Italy, and are scattered through France, Germany, Denmark, Sweden, and Russia. Europe contains more than 700,000 of these vagabonds. For near 4 centuries they have wandered through the world; and in every region, and among every people, whether barbarous or civilized, they have continued unchanged. Their origin has been generally believed to be from Egypt. Thomaſius, Salmon, and Sig. Griselini, have endeavoured to prove it. M. Grellman, however, traces it from Indostan, and the cause of their emigration from the bloody wars of Timur Beg in India, in 1408-9.

GYPHOPHILA, in botany, a genus of the digynia order, in the decandria class of plants; in the natural method ranking under the 22d order, *Caryophyllei*. The calyx is monophyllous, campanulated and angulated; the petals are 5, ovate, and sessile; the capsule globose and unilocular.

GYPHUM, PLASTER STONE, or ALABASTER, a natural combination of the calcareous earth with vitriolic acid. See ALABASTER. The properties of gypsum, according to Cronstedt, are, 1. It is looser and more friable than calcareous earth. 2. It does not effervesce with acids, or at most in a very slight degree. 3. It falls into powder in the fire very readily. 4. When burnt without being made red-hot, its powder readily concretes with water into a mass which soon hardens; but without any sensible heat being excited in the operation. 5. It is nearly as difficult of fusion as limestone; and shows almost the same effects upon other

other bodies with limestone, though the acid of vitriol seems to promote the vitrification. Magellan, however, says, that most of the gypsa, particularly the fibrous, melt in the fire pretty easily by themselves. 6. When melted with borax, it puffs and bubbles very much, and for a long time during the fusion. Magellan says, when a small quantity of any gypsum is melted with borax, the glass becomes colourless and transparent; but some sorts of sparry gypsa, melted with borax, yield a fine yellow transparent glass, resembling the topaz; but if too much of the gypsum is used in proportion to the borax, the glass becomes opaque. 7. When burnt with any inflammable matter, it emits a sulphureous smell, and may thus be decomposed, as well as by either of the fixed alkaline salts: In this last method there ought to be 5 or 6 times as much salt as gypsum. 8. The residuum shows some signs of iron. The species are, 1. *Friable gypseous earth*, white, found in Saxony. 2. *Indurated gypsum of a solid texture*, or *Alabaster*, the particles of which are not visible. This is sometimes found unsaturated with vitriolic acid. It is easily cut, and takes a dull polish. It is of several kinds. See ALABASTER, § 1—3. Fabroni tells us, that various fine alabasters are met with in Italy: 24 quarries of them, each of a different colour, being worked out at Volterra. 3. *Gypsum of a scaly texture*, or common plaster of Paris. See PLASTER. 4. *Fibrous gypsum*, or *plaster-stone*, has two varieties, viz. with coarse or with fine fibres. It is white. 5. *Selenites*, or *sparg-like gypsum*, by some also called *glacies mane*, and confounded with the clear and transparent mica. It is of two kinds, clear and transparent, or yellowish and opaque, and abounds every where. 6. Crystallized gypsum, or gypseous drusen. This is found composed of wedge-shaped and sometimes of capillary crystals, sometimes white, and some yellowish. 7. Stalactical gypsums of many different forms and colours. In large pieces it commonly varies between white and yellow, and likewise in its transparency. It is used as alabaster in several works. England abounds with gypseous substances. There are plenty in Derby, Nottingham, and Somerset shires; so fine as to take a polish, like alabaster. A very fine semipellucid alabaster is found in Derbyshire. Fine fibrous tales are also found in many other places. Very fine gypseous drusen is found in Sheppey Isle, and some exceedingly beautiful, large, and clear as crystal, in the fat rocks at Nantwich in Cheshire. The selenites rhomboidal abounds in England, particularly in Shotoverhill, in Oxford, though rare in other counties. Sheppey affords spar-like gypsa, of a fibrous nature, and acerting like the radiations of a star on the septaria, and thence called *Stella septaria*. See CRYSTALLIZATION, § I, viii.

* GYRATION, *n. f.* [*gyro*, Latin.] The act of turning any thing about.—This effluvium attenueth and impelleth the neighbour air, which, returning home, in a *gyration* carrieth with it the obvious bodies into the electric. *Brown*.—If a burning coal be nimbly moved round in a circle with *gyrations*, continually repeated, the whole circle will appear like fire; the reason of which is,

that the sensation of the coal in the lever of that circle remains impressed on the lens until the coal return again to the same place.

* GYRE, *n. f.* [*gyras*, Latin.] A circle described by any thing moving in an orb.—

Ne thenceforth his approved skill to
Or strike, or hurlen round in warlike gyre
Remember'd he; ne car'd for his
But rudely rag'd.

Does the wild haggard tow'r into the
And to the South by thy direction fly?
Or eagle in her gyres the clouds embrace
He fashion'd those harmonious orbs,
In restless gyres about the Arctick pole.
Quick and more quick he spins the globe
Then falls, and in much foam his soul

* GYRED, *adj.* Falling in rings.—

Hamlet, with his doublet all unbraced
No hat upon his head, his stockings loose
Unarter'd, and down gyred to his ankle
GYRFALCO. See FALCO, N° 31.

GYRINUS, in zoology, a genus of the coleoptera order. See PLATE CLXXI. The antennæ are cylindrical, stiff, and form the head; the eyes are 4, two on the upper part and two on the under part of the head. Three species.

GYRINUS NATATOR, the common one, is one third of an inch long; of a bright blue colour; the feet yellow, flat, and large. It runs with great celerity in circles on the surface of the water, and is very difficult to catch.

GYROMANCY, *n. f.* [from *gyro*, round, and *manus*, magic,] a kind of divination performed by walking round in a circle.

GYRON, in heraldry, an ordinary of straight lines, issuing from divers parts of the chevron, and meeting in the Fesse point.

GYRT, a town of Sweden, in E. Gothl.
GYSIORN, a town of Lunenburg, over Aller. Lon. 50. 45. E. Lat. 51. 50. N.
GYSSONE, a town of Corsica.

* To GYVE, *v. a.* [from the noun.] To shackle; to enchain; to enslave.—as little a web as this, will I enslave as you as Cassio. Ay, smile upon her, do. I'd thee in thine own courtship. *Shak. Othello*

* GYVES, *n. f.* [*gewyn*, Welsh] Fetters for the legs.—The villains warched wide the legs, as if they had gyves on. *Shak.*

And knowing this, should I yet stay,
Like such as blow away their lives,
And never will redeem a day,

Enamour'd of their golden gyves? *Ben Jonson*
—The poor prisoners, boldly starting up
off their chains and gyves. *Kneller.*

Gyves and the mill had tam'd thee.
But Telamon ruth'd in, and hap'd to
A rising rout, that held his fasten'd feet
So down he fell, whom spawling on the
His brother from the wooden gyves un-

GYZEH, a town of Egypt, near which the French removed the national office from that city, in March 1800.
